Henceforth it was Badjkam's idea to revolt against Ibn Rāʾiḳ and take his place. Perturbed by developments, Ibn Rāʾiḳ had just become reconciled with al-Barīdī. So as to detach the latter from Ibn Rāʾiḳ and make sure of his support, Badjkam now promised that once he became master of the capital, he would give him the governorship of Wāsiṭ which, shortly before, al-Barīdī had unsuccessfully attempted to take from Badjkam by force. An agreement to this effect was concluded. Moreover the former *wazīr* Ibn Muḳla, wishing to revenge himself on Ibn Rāʾiḳ, who had confiscated his property, started to correspond with Badjkam, encouraging him in his resolve, and recommended him to the Caliph al-Rāḍī as a successor to Ibn Rāʾiḳ. Al-Rāḍī adopted Ibn Muḳla's views and secretly encouraged Badjkam, as can be seen from an account given by the historian al-Ṣūlī, a confidant of the Caliph and of Badjkam (42-44, trans. i, 89-90), though he nevertheless handed Ibn Muḳla over to Ibn Rāʾiḳ. In Dhu 'l-Ḳaʿda 326/September 938, Badjkam, who had marched on the capital on the pretext of coming to ask for the pay for his troops, entered Baghdād, in spite of the efforts of Ibn Rāʾiḳ, who had tried to stop him on the Nahr Diyāla by flooding it with the waters of the Nahrawān canal and destroying a bridge. At Baghdād, whilst Ibn Rāʾiḳ sought refuge in flight, the Caliph at once appointed Badjkam *amīr al-umarāʾ*.

Badjkam, the *amīr al-umarāʾ*, had to contend with the Ḥamdānid of Mawṣil, Ḥasan b. ʿAbd Allāh, who was not fulfilling his financial obligations. At the beginning of the year 327/October-November 938, Badjkam marched against him with the Caliph, and entered Mawṣil after having crushed Ḥamdānid resistance below the town, but was unable to take Ḥasan, who fled into the Djazīra, where Badjkam pursued him to no avail. Badjkam's troops were unremittingly harrassed at Mawṣil. Thereupon, as Ibn Rāʾiḳ had taken advantage of these circumstances to make a sudden irruption into Baghdād, Badjkam negotiated with the Ḥamdānid and likewise with Ibn Rāʾiḳ. A treaty was concluded at the end of 938 with the Ḥamdānid who offered to pay over an initial sum as part of the tribute. Ibn Rāʾiḳ agreed to leave Baghdād and to accept as compensation the governorship of the Ṭarīḳ al-Furāt, the Diyār Muḍar, the *djund* of Ḳinnasrīn and the *ʿawāṣim* [*q.v.*]. He left Baghdād on the 28th of January 939 and the Caliph and Badjkam returned to the capital at the beginning of February 939.

Badjkam then had to parry the menace from the Būyids which overshadowed Lower ʿIrāḳ, and this led to a closer though ephemeral understanding between Badjkam and al-Barīdī. The latter received the governorship of Wāsiṭ and carried out a successful operation against the Būyid in Susiana. He then obtained the office of *wazīr*, but remained at Wāsiṭ, his functions at Baghdād being performed only by a delegate. In 328/939-940, Badjkam married one

of his daughters. The Būyid had not relinquished his ambitions and had obtained the support of another of his brothers, Ḥasan (Rukn al-Dawla), master of the Djibāl. The latter marched on Wāsiṭ and set up his camp on the left bank of the Tigris opposite the town, though he was obliged to withdraw, when the arrival of Badjkam and the Caliph was announced. On the other hand, the army sent against the same Ḥasan in the Djibāl by Badjkam was defeated.

It was not long, however, before dissension arose between Badjkam and al-Barīdī, who did not conceal his intention of becoming *amīr al-umarā'* and who was very careful not to support the expedition sent by Badjkam into the Djibāl. At the end of 328/August 940, Badjkam removed him from the office of *wazīr* and decided to carry out an expedition against Wāsiṭ. For some time he had been worried by the behaviour of al-Barīdī and, in July, he abandoned the plan he had formed of going to fight the Būyid in the Djibāl and returned hastily to Baghdād. Then he marched against Wāsiṭ and entered the town abandoned by al-Barīdī. Badjkam remained there until his death. He was there when the Caliph al-Rāḍī died in Rabīʿ I 329/December 940. The Caliph al-Muttaḳī confirmed him in the office of *amīr al-umarā'*. In April 941, Badjkam left Wāsiṭ at the request of his lieutenants, who were operating against the forces of al-Barīdi in the region of Madhār to the south-east of Wāsiṭ, and who had suffered a reverse. It was his intention to join them, but upon arriving at Bādhbīn, he received the news that al-Barīdī had been defeated. He decided to go back. On the way, whilst hunting, he met a party of Kurdish brigands, whom he engaged in combat. He received a blow from the lance of a Kurd who struck him from behind, and died on the 21 Radjab 329/21 April 941.

Badjkam, the Turkish slave, had received his training at the hands of Mākān, to whom he was always very grateful. He understood Arabic, though he hesitated to speak it for fear of making mistakes, and employed an interpreter. He was, however, respected by men of letters, and enjoyed the company of men like al-Ṣūlī and the physician Sinān b. Thābit, who have left us invaluable recollections of him and to whom he granted generous pensions. Covetous of power and money, he did not hesitate to resort to dissimulation and ruse, corruption and torture to attain his ends; he was at times cruel, though his bravery was legendary, and was more upright in character than Ibn Rā'iḳ: so it was that the Caliph al-Rāḍī preferred him to Ibn Rā'iḳ. He was attentive to the well-being of his subjects and had gained the affection of the people of Wāsiṭ, though those of Baghdād held him of less account. He founded a guest-house (*dār ḍiyāfa*) at Wāsiṭ at a time of famine and a hospital at Baghdād. He offered the Ḳarāmiṭa large sums of money to restore the Black Stone to Mecca, but without success. At the request of the Shīʿis he had the mosque of Barātha, which had been destroyed on al-Muḳtadir's order, rebuilt. From the time he spent in Iranian lands, he retained the custom of celebrating the Iranian feasts such as the Sadhak and the Nawrūz. On the coins struck in his effigy, see al-Masʿūdī, *Murūdj*, viii, 341.

BĀDJŪRĪ (or Baydjūrī), Ibrāhīm b. Muḥammad, a Shāfiʿī scholar and author. Born in 1198/1783 in Bādjūr, a village in the Manūfiyya province of Egypt (ʿAlī Pasha Mubārak, *al-Khiṭaṭ al-Djadīda*, Būlāḳ 1306, ix, 2), he studied at al-Azhar, became a very successful teacher there, Rector (*shaykh al-Azhar*) in 1263/1846, and died in 1276/1860. The most popular items in his very extensive but wholly derivative literary production are: (1) a *Risāla fī ʿIlm al-Tawḥīd*; (2) *al-Mawāhib al-Laduniyya*, a commentary on the *K. al-Shamā'il* of al-Tirmidhī; (3) a gloss on the commentary of Muṣannifek on the *Burda* of al-Būṣīrī; (4) a gloss on the *Fatḥ al-Ḳarīb* of Muḥammad b. al-Ḳāsim al Ghazzī, a commentary on the *Taḳrīb* or *Mukhtaṣar* of Abū Shudjāʿ (transl. by E. Sachau, *Muhammedanisches Recht*, Stuttgart and Berlin 1897; cf. C. Snouck Hurgronje, 367 ff.); (5) a commentary on the *ʿAḳīda al-Ṣughrā* or *Umm al-Barāhīn* of al-Sanūsī; (6) a gloss on a commentary on the *Djawharat al-Tawḥīd* of Ibrāhīm b. Ibrāhīm al-Lāḳānī; (7) a gloss on the commentary of al-Shinshawrī on the *Urdjūza* of al-Raḥbī, known as Ibn al-Mutaḳḳina (transl. by J. D. Luciani, *Traité des successions musulmanes*, Paris 1890); (8) a gloss on al-Akhḍarī's commentary on his own *al-Sullam al-Murawnaḳ*; (9) a commentary on the *Kifāyat al-ʿAwāmm* of his teacher al-Faḍālī; (10) a commentary on the *Mawlid* of al-Dardīr; (11) a commentary on *al-Tarṣīf fī ʿIlm al-Taṣrīf* by ʿAbd al-Raḥmān b. ʿĪsā al-Murshidī; (12) a gloss on a commentary on the *Farā'id al-Fawā'id fi 'l-Istiʿāra* of al-Laythī al-Samarḳandī; (13) a commentary on a versification of the *Ādjurrūmiyya* of Ibn Ādjurrūm.

BADR, or Badr Ḥunayn, a small town south-west of Medina, a night's journey from the coast, and at the junction of a road from Medina with the caravan route from Mecca to Syria. It lies in a plain, 5 m. (8 km.) long and 2½ m. (4 km.) broad, surrounded by steep hills and sand-dunes, and was a market centre.

Here occurred on 17 (or 19 or 21) Ramaḍān, 2 A.H. (= 13 or 15 or 17 March, 624) the first great battle of Muḥammad's career. Though there is a wealth of detail in the early sources, it is difficult to give a clear account of the battle and the events which led up to it. It is generally held that the earliest and most reliable version is that contained in a letter from ʿUrwa b. al-Zubayr to the caliph ʿAbd al-Malik (preserved in al-Ṭabarī, i, 1284 ff.), though even this

has some material which seems to be legendary. Muḥammad received information that a rich caravan was returning from Syria to Mecca, led by Abū Sufyān b. Ḥarb, chief of the clan of Umayya. He collected a force of slightly over 300 men (about 80 Emigrants, the rest Anṣār), and marched to the neighbourhood of Badr in hopes of intercepting the caravan. Abū Sufyān on his side had sent a request to Mecca for a force to protect the caravan while it traversed the region easily accessible from Medina. Since the Meccans are said to have spent over a week on the way from Mecca to Badr, Abū Sufyān must have sent his request some time beforehand, though the sources assert that he only did so after hearing of Muḥammad's preparations.

The Meccan force, commanded by Abū Djahl of the clan of Makhzūm, consisted of about 950 men from all the clans of Ḳuraysh. Before they reached Badr they received a message from Abū Sufyān to say that, by forced marches along a route closer to the coast than the usual one, he had eluded the Muslims. Abū Djahl, however, despite the disapproval of some senior men and the withdrawal of the contingents from the clans of Zuhra and ʿAdī decided to go forward to Badr and make a display of strength. He and his supporters doubtless considered that they were so strong that Muḥammad would not venture to attack (cf. Ḳurʾān viii, 47/49).

Muḥammad does not appear to have known of the expedition under Abū Djahl until the evening before the battle when some of his men captured a Meccan water-carrier at the wells of Badr. The camp of the Meccans was still out of sight behind a hill. This fortuitous encounter may have made it easier for Muḥammad to persuade all his followers to fight, since in the circumstances it would have been dishonourable to withdraw. On the following morning Muḥammad moved quickly and seized the wells, filling all with sand except that nearest the enemy, where he stationed his men. The enemy was thus forced to fight for his water supply willy-nilly. All that can be said of the course of the battle is that there appear to have been some single combats followed by a general melée. What is certain is that the Meccans suffered a catastrophic defeat. Nearly seventy of them were killed (including Abū Djahl and a dozen of their leaders) and nearly seventy taken prisoner and later ransomed for considerable sums; only about fifteen Muslims were killed.

This was a disaster for Mecca, but not a crippling one. The loss of many leading men was grave, but perhaps the most serious aspect was the loss of prestige. To recover prestige it was essential that they should punish Muḥammad. For the Muslims it seemed a vindication of their faith, brought about for them by God (cf. Ḳurʾān viii, 17, 42/43); they believed that He had sent his angels to their assistance viii 9,12).

Muḥammad spent much time in prayer and received assurances that he would be victorious (viii, 7, 9). The Muslims looked on this as the punishment long foretold for the unbelievers. According to a probable suggestion (R. Bell, *The Origin of Islam in its Christian Environment*, London 1926, 118 ff.; *Introduction to the Qurʾān*, Edinburgh 1953, 136-8), the word *furḳān* applied to Badr means 'deliverance from judgement' (cf. Ḳurʾān, viii, 29, 41/42). The Muslims were thus confirmed in their faith and led to exaggerate their own importance—an exaggeration which resulted in a spiritual crisis after the reverse at Uḥud (Ḳurʾān, viii, 65/66; contrast 66/67). Muḥammad himself from this time onward was in a much stronger position in Medina. The self-confidence induced in the Muslims by their victory, and the prestige they thus acquired, were factors without which Islam could hardly have developed as it did. Those who had fought at Badr as Muslims—the Badriyyūn—came to be regarded as an aristocracy of merit, and in most versions of the *dīwān* of ʿUmar are said to have constituted the highest class of Muslims.

Muḥammad undertook a second expedition to Badr in Shaʿbān or Dhu 'l-Ḳaʿda 4 A.H. (= Jan. or April 626) in accordance with a promise given to Abū Sufyān as he retired from Uḥud. Both Muḥammad and the Meccans had much larger forces, but there was no fighting, though the Muslims did good trade.

Badr is mentioned by the geographers of Arabia; e.g., Yāḳūt, i. 524 f.; al-Bakrī, 141f.; al-Muḳaddasī, 82 f.; al-Masʿūdī, 237. The traveller J. L. Burckhardt examined the site with the battle in mind (*Reisen in Arabien*, 1830, 614-19).

BADR (Pīr), Shaykh Badr al-Dīn Badr-i ʿĀlam, a saint of the Djunaydiyya order, venerated by the people of Bihar and Bengal. In Bengal he enjoys the reputation of sharing with Pānč Pīr of Sonargaon the dominion of the waters. While putting to sea the sailors of Bengal utter the invocation: "*Allāh, Nabi, Pānč Pīr, Badr, Badr.*" Pīr Badr originally belonged to Meerut (in Uttar Pradesh) where his great grandfather, Shaykh Fakhr al-Dīn Zāhid (d. 704/1304) had established a great mystic centre. His grandfather, Shaykh Shihāb al-Dīn Ḥaḳḳ-gū was killed by Muḥammad b. Tughluḳ (725-752/1325-1351) for criticising his religious views. Pīr Badr received his spiritual training at the feet of his father, Fakhr al-Dīn II, and the Suhrawardī saint, Sayyid Djalāl al-Dīn Bukhārī. Shaykh Sharaf al-Dīn Yaḥyā invited him to Bihar but he reached there after the former's death in 782/1380. He first married into a Hindu family of Bihār and later entered into matrimonial relationship with the ruling house of Djaunpur. During his travels in East Bengal he converted a large number of Hindu sailors to Islam. He also helped in the establishment of Muslim power at Sonargaon. He sojourned for sometime in Čittagong where his *čilla*, in the western quarter of Bakhshī Bazar, is regarded as the palladium of the city and is visited by Hindu and Muslim sailors alike. Authority over the seas and rivers is considered a special spiritual attribute of his family. Fakhr al-Dīn Zāhid is reported to have rescued a party from sinking into the river Yamunā. It is said that Pīr Badr reached Čittagong 'floating on a rock'. He died on 27 Radjab 844/22 December 1440 in Bihār where his mausoleum is known as Čhotī Dargāh (the mausoleum of Sharaf al-Dīn Yaḥyā Manerī being known as Bari Dargāh).

BADR B. **ḤASANWAYH** [see ḤASANWAYH, BANŪ].

BADR AL-**DAWLA** [see ARTUḲIDS].

BADR AL-**DĪN** [see LUʾLUʾ].

BADR AL-**DĪN** B. **ḲĀḌĪ SAMĀWNĀ**, eminent Ottoman jurist, Ṣūfī and rebel. Badr al-Dīn Maḥmūd b. Ḳāḍī Samāwnā was born in 760 AH/3 Dec. 1358 in Samāwnā (which corresponds to the former Greek εἰς ʾΑμμόβουνον near Adrianople). He was the eldest son of the judge Ghāzī Isrāʾīl, who was one of the oldest fighters for the faith of his time, and traced his ancestry back to the Saldjūḳs. His mother was Greek, and took the name Melek after her conversion to Islam. Badr al-Dīn spent his youth in Adrianople (which had been conquered in spring 1361). He was taught the basis of Islamic religion and law by his father and, later on, by the jurists Yūsuf and Shāhidī. His subsequent studies took him to Brusa, in the company of his friend Mūsā Čelebi, better known as Ḳāḍīzāde-i Rūmī, a brilliant mathematician and astronomer. Up to 1381, he studied logic and astronomy in Konya under a certain Fayḍ Allāh. After that, Badr al-Dīn went to Jerusalem, where he worked under the otherwise not particularly well known Ibn al-ʿAṣkalānī (not the famous Ibn Ḥadjar al-ʿAskalānī), then he went to Cairo, attracted by the teaching of such famous scholars as Mubārakshāh al-Manṭiḳī, the physician Ḥādjdjī Pasha, the philosopher and lawyer ʿAlī b. Muḥammad al-Sayyid al-Sharīf al-Djurdjānī, and a certain ʿAbd al-Laṭīf. In about 1383, Badr al-Dīn went on the pilgrimage to Mecca. After his return to Cairo, the Mamlūk sultan Barḳūḳ appointed him as tutor to his son Faradj, who was to succeed him. By some fateful chance, Badr al-Dīn met the Ṣūfī Shaykh Ḥusayn Akhlāṭī at the Mamlūk court, and under his overpowering influence he (a former opponent of the Ṣūfīs) himself accepted Ṣūfism. After some years of monastic life in Cairo, Badr al-Dīn travelled to Tabrīz in 1402-3—possibly attracted by the fame of the Ṣafawiyya in Ardabīl—and there he came to the notice of Tīmūr Lang, who had just returned from Anatolia and attempted to take Badr al-Dīn with him to Central Asia. This he avoided by fleeing. He became Shaykh of his monastery and successor to Ḥusayn Akhlātī (who had died in the meantime), but as a result of differences with his brethren he decided to leave Cairo and undertake a missionary journey to Asia Minor and Rumelia. He succeeded in gaining the sympathy of the princes of Konya and Germiyān, and also in attracting Ḥāmid b. Mūsā al-Ḳayṣarī, a member of the Ṣafawid order and later teacher of Ḥādjdjī Bayrām Walī [*q.v.*]. Following the success of his Ṣūfī convictions, Badr al-Dīn gradually developed into an open heretic: he propagated the idea of common ownership, and developed in a consistent and daring way the ideas of the heretic Muḥyī al-Dīn b. al-ʿArabī [*q.v.*]. The crowds of impoverished people whom he attracted in Asia Minor must have been considerable. Christians, too, came over to him, and it is said that he was in touch with the Genoese ruler of Chios. Finally, Badr al-Dīn landed again in Adrianople, where he retired for seven years to lead a life of solitude and study. Around 1410, and against his will, he was made military judge by the claimant to the Sultanate, Mūsā, but after the victory of Sultan Meḥemmed I near Čamurlu (1413), he was dismissed from his post and banished to Izniḳ under rather humiliating circumstances. There he wrote and taught, and Aḳ Shams al-Dīn [*q.v.*]—who later became famous as Shaykh of the Bayrāmiyya—is said to have been one of his pupils for a short time. It was probably there, too, that he became connected (in ways which are not yet clear) with the communist underground movement of a certain Bürklüdje Muṣṭafā, and a certain Torlaḳ Hū Kemāl, which led to the extensive rebellion in 1416, as whose ideological head Badr al-Dīn appears. Whilst on the one hand the biography of Badr al-Dīn (which was written by his grandson Khalīl) asserts his complete innocence in all these events, the official Ottoman historians, on the other hand, accuse him of active participation—even of leadership in the rebellion. At the time when Bürklüdje Muṣṭafā and Torlaḳ Hū Kemāl started their attack in western Asia Minor (where, to begin with, they had considerable success), Badr al-Dīn left Izniḳ and reached Rumelia with the secret help of the discontented prince of Sinope. After the rebellion of Bürklüdje Muṣṭafā and Torlaḳ Hū Kemāl had been most cruelly suppressed, the revolt in Rumelia also collapsed and Badr al-Dīn was caught by troops of the Sultan and dragged to Serres in Macedonia, where Sultan Meḥemmed I was fighting the "false Muṣṭafā" (Düzme Muṣṭafā [*q.v.*]). After a somewhat questionable trial, Badr al-Dīn was publicly hanged as a traitor in Serres on 18 Dec. 1416. The rôle played by Badr al-Dīn in this rising is still by no means clear. It is certain, however, that his ideology was in sympathy with it, and that his ideas did have an enduring influence. There is documentary evidence that there were followers of the Badr al-Dīn movement in Rumelia even under Süleymān the Magnificent. After the death of their hero, many of them turned to the now politically active Ṣafawiyya, whilst others merged into sundry sects, especially the Bektāshiyya. The most famous of Badr al-Dīn's descendants—beside his three sons Aḥmad, Ismāʿīl and Muṣṭafā—was his grandson Khalīl (the son of Ismāʿīl) who was Badr al-Dīn's biographer.

As a writer, Badr al-Dīn was extremely prolific. He wrote close on 50 extensive works, most of them on matters of law. His most important Ṣūfī works are the *Wāridāt* and the *Nūr al-Ḳulūb*.

Bibliography: F. Babinger, *Schejch Bedr ed-Dīn, der Sohn der Richters von Simāw* in: *Der Islam*, xi (1921), 1ff. and the supplements in: *Der Islam*, xvii (1928), 100 ff., and *Beiträge zur Frühgeschichte der Türkenherrschaft in Rumelien* (14th-15th century) *Südosteuropäische Arbeiten* No. 34, Brünn-Munich-Vienna 1944, 80 ff.; M. Babinger 1943); idem, *Zur Geschichte des Derwischordens der Bajrāmijje* in: *Südostforschungen* xv (1956) 237 ff. (concerning the connexions between Badr al-Dīn and the Ṣafawiyya, Khalwatiyya and Bayrāmiyya). Further matter in the above-mentioned works.

(H. J. KISSLING)

BADR AL-**DJAMĀLĪ**, a Fāṭimid commander-in-chief and vizier. The formerly brilliant Fāṭimid empire was on the verge of downfall under the incapable Caliph Mustanṣir (427-487/1036-1094). The Saldjūḳs were pressing forward into Syria, in Egypt

the Turkish slave-guards were fighting with the negro-corps, a seven years' famine was exhausting the resources of the country; all state authority had disappeared in the general struggle; hunger and disease were carrying off the people, licence and violence were destroying all prosperity and it appeared as if the Fāṭimid kingdom must disappear in a chaos of anarchism. Then, on the call of the Caliph, the Syrian general Badr al-Djamālī took command of the government as well as of the army and with great though brutal vigour brought order into affairs again and indeed a second period of splendour to the Fāṭimid empire.

Badr was an Armenian slave of the Syrian *amīr* Djamāl al-Dawla Ibn ʿAmmār, whence his name al-Djamālī. He must have been born about the beginning of the 5th/11th century, for at his death in 487/1094 he was over 80 years old. Even before he became vizier he had made a great name for himself in Syria. He was twice appointed Governor of Damascus, but fell into difficulties each time on account of his stringent measures with the pampered troops. He then became commander-in-chief of ʿAkkā and in this capacity had to fight against the troops of Malik-shāh. He had an Armenian bodyguard for himself and the soldiers he commanded were also to be relied on. He took them with him on being summoned by the Caliph in 466/1073 to deliver him out of the hands of the despotic Turkish officials. The latter never suspected the reason of Badr's coming to Egypt, fell into the trap prepared for them and were all murdered in one night. Badr thereby became master of the situation. Now followed his appointment as commander-in-chief or *Amīr al-Djuyūsh* (in the popular language *Mirgūsh*), as chief justice, chief preacher and vizier. The most popular of these titles was the first; the Djabal al-Djuyūshī is still a common appellation of the Muḳaṭṭam commanding Cairo on the spur of which Badr built a mosque, a *mashhad* in which according to popular belief at the present day the Sīdī Djuyūshī lies buried. After quieting the capital he re-established order to the east then to the west of the Delta. Alexandria had to be taken by storm. The task of conquering Upper Egypt was also difficult as the Arab tribes had set themselves up as independent there. In Syria he was not so fortunate. Affairs were mismanaged here, and Damascus fell into the hands of the Saldjūḳs about the end of the year 468/1076. The Fāṭimids were never to regain it. In the following year the victorious Saldjūḳ general Atsïz appeared before Cairo itself, but Badr had time to collect his troops and drive back the Saldjūḳs. In spite of repeated attempts in the years 471/1078-9, 478/1085-6, and 482/1098-90, he was not successful in regaining Damascus and Syria, and at his death only a few towns in the South of Syria were still in the possession of the Fāṭimids. His strength in Syria was weakened by unrest constantly breaking out in Egypt, inspired by one of his sons.

Of his activity as a governor we know little, but it is praised on all sides. Under his rule the annual revenue of Egypt from taxation was increased from about 2 to about 3 million dīnārs. These large receipts enabled him to put into practice the lessons learned from the Saldjūḳ invasion. Cairo was invested by him with its second wall, and the three strong city gates which are admired to this day, the Bāb Zawīla (Zuwayla), the Bāb al-Naṣr and the Bāb al-Futūḥ, were built. In Rabīʿ I 487/March-April 1094 Badr's active and successful career came to its close, after he had arranged that his son al-Afḍal Shāhānshāh [*q.v.*] should succeed him in all his offices. The Caliph Mustanṣir, who had then been reigning for 60 years, died a few months later.

(C. H. BECKER)

BADR AL-KHARSHANĪ, amīr, probably a native of Kharshana in Cappadocia, sometimes designated (through a factitious genealogy?) by the name of Badr b. ʿAmmār al-Asadī. Chamberlain to the caliph al Ḳāhir and in high favour under al-Rāḍī, he followed the *amīr al-umarā* Ibn Rāʾiḳ ([*q.v.*]; Canard, *Histoire de la dynastie des Hamdânides*, Algiers 1951, 411-24), when the latter was charged with the government of Djazīra and Syria-Palestine. Badr became lieutenant of Ibn Rāʾiḳ, received the government of the *djund* of Jordan, and resided at Tiberias (beginning of 328/end of 939); about this time he was extolled by the panegyrist al-Mutanabbī [*q.v.*]. During the conflict between Ibn Rāʾik and the Ḥamdānid amīr of Mawṣil Nāṣir al-Dawla, Badr too returned to ʿIrāḳ, won short-lived favour under the caliph al-Muttaḳī, but had to flee as the result of intrigues and take refuge at al-Fusṭāṭ, in Egypt, with Muḥammad the Ikhshīdid [*q.v.*]. He died there at the end of 330/942.

BADRA, a small town of east-central ʿIrāḳ (43° 53′ E, 33° 7′ N), near the Persian frontier, with a population of 6000, practically all Shīʿī Muslims of mixed Arab and Lurish blood. It is the headquarters of a *ḳaḍāʾ* (with dependent *nāḥiya* of Zarbāṭiyya) in the *liwāʾ* of Kūt al-Amāra. Apart from one new official quarter, Badra shows little modern development, with narrow streets, poor houses, and salty water. Grain cultivation and fruit and date gardens are extensive, and the "Baydrāyā" date famous; irrigation is from the Gallāl stream, rising in Persia.

The town has continuity with medieval Bādarāyā (that is, Bayt Darāyā, a tribe-name), which is frequently mentioned in Syriac literature and by the Arab geographers; with Bākusāyā it fell in the district of Bandanīdjīn, east of the Nahrawān [*q.v.*] canal-system and on the borders of Djibāl province. It had greater medieval than modern development, was considered a seat of learning, and was the

scene of a settlement by Khusraw I Anūsharwān of captives from northern Syria. Mounds near and in modern Badra represent the older city, which was ruined by floods, pestilence or war.

(S. H. Longrigg)

BADRKHĀNĪ, Thurayyā (1883-1938) and Djalādat (1893-1951), sons of Amīr Amīn ʿAlī, eldest son of Badr-khān (died 1868), Prince of Bohtān (Djazīrat Ibn ʿUmar) of the ʿAzīzān family, who fought against the Turks for the independence of Kurdistān (1836-1845). The two brothers, born at Maḳtala (Syria) died, the first in Paris and the second, as the result of an accident, in Damascus. Both devoted their lives to the Kurdish national cause, Thurayyā in the sphere of organisation and political propaganda and Djalādat mainly in the cultural field.

Thurayyā, after having obtained the Diploma in Agronomical Engineering at the University of Constantinople, began to lead a turbulent life, in which is mirrored the history of the national struggle of his people. In 1904 he was found guilty of plotting against the security of Turkey and sent to prison. He spent two and a half years in prison and in exile. After the Young Turks' *coup d'état*, he returned to Constantinople and started his newspaper "*Kurdistān*" in Kurdish and Turkish. In 1919, the newspaper was suspended and he was again thrown into prison, and condemned to death for having taken part in the preparation of a military revolt. He was pardoned and in 1910 banished. In 1912, however, he returned to the capital, where he organised a secret Kurdish revolutionary committee. He was condemned to death, and for the third time saw the inside of a prison. He made his escape and finally left Turkey in 1913. During the 1914 war, Thurayyā recommenced the publication of his newspaper in Cairo, where he also organised a Committee for Kurdish independence, which played a rôle in the drawing up of the Treaty of Sèvres (1919-20). As this diplomatic instrument, which envisaged an international Kurdish statute, remained a dead letter, Thurayyā resumed his revolutionary activities after the signing of the Treaty of Lausanne (1923), and in 1927, together with his supporters, he joined the National Kurdish League *Khoybūn*, which had just come into being. He returned to Syria in 1929, but in 1930 (the year of the great Kurdish revolt in Turkey) he was prohibited from living in the territories under French mandate and was obliged to expatriate himself to Paris, where he represented the *Khoybūn*. Among other things, the Kurdo-Armenian reconciliation dates from this period, and found in him a convinced and clever architect. In general terms, Amīr Thurayyā was the first Kurdish patriot to conduct a campaign in accordance with a programme and with modern political arguments, both by word of mouth and in print. Several pamphlets by him in various foreign languages are known.

Djalādat's career was less eventful than that of Thurayyā. He held a master's degree in Law of the University of Constantinople and completed his studies in Munich. In 1927, he was elected the first president of the Khoybūn. In 1930, he took part in an attempted Kurdish rising in Turkey, which he entered with Hādjō Aghā. After the failure of this undertaking he settled in Damascus. There he devoted himself to literary work and from 15 May 1932 to 1935, and again in 1941-43, published the review *Hawār* (Summons), in French and Kurdish. (Djalādat produced a Kurdish alphabet in Latin characters, which began the work of unification of *Kurmāndjī* Kurdish). Furthermore, the review contributed to the rebirth of the popular literature, sought to reconcile the tribal chieftains and the men of letters, whom the former held in suspicion, and prepared educational material, publishing "booklets" (spelling-books, readers and books on religion; in all 12 appeared). During the last war, Djalādat also published the review *Runāhī* (Light).

BĀDŪRAYĀ, under the ʿAbbāsid Caliphate a district south-west of Baghdād, the land south of the Nahī Ṣarāt, a branch of the Euphrates canal Nahr ʿĪsā [*q.v.*]. The Ṣarāt separates it from the Ḳaṭrabbul district; the southern part of the western half of Baghdād (the so-called town of al-Manṣūr) as well as the suburb of Karkh were situated within the bounds of the district of Bādūrayā; the latter formed, like the district of Ḳaṭrabbul, a subdivision of the circle of Astān al-ʿĀlī.

(M. Streck *)

BĀDŪSBĀNIDS (Pādusbānids), minor Caspian dynasty, noteworthy for its longevity (45-1006/665-1599) as well as for that of its princes, some of whom reigned for 50 years. Its power in Ṭabaristān (Māzandarān) extended to Rustamdār, Rūyān, Nūr and Kudjūr. Its origins are traced to Gāwbāra who came from Armenia in the time of Yazdigird III, who appointed him governor. He had two sons, Dābūya and Bādūsbān, established respectively in Gīlān and Ṭabaristān, the former being the eponymous ancestor of the Dābūwand dynasty (40-144/660-701), and the latter that of the Bādūsbānids. The history of this latter dynasty is given in an excellent résumé by Rabino [see afrāsiyābids], including a genealogical table with some forty names with numbers indicating their order. There exists, furthermore, a *Tarīkh-i Rūyān* (*T.R.*) by Mawlānā Awliyā Allāh of Āmul, written foi Fakhr al-Dawla Shāh Ghāzī b. Zīyār (died 786/1384) which does not cover the whole of the period of the dynasty as described in Rabino. On the other hand, it contains abundant details on the internal life of the dynasty, so that these two sources, therefore, admirably complement each other. We learn, for example, that two major revolts took place in Ṭabaristān against the Arab occupation; one in the time of ʿUmar b. al-ʿAlā, was the joint work of the *iṣfahbad* Shahrwīn Bāwand and Shahrīyār Bādūsbān

with Wandād Hormizd of the Sūkhrā clan (*T.R.*, 46); the other broke out at Djālūs (Čālūs) and was savagely repressed (*T.R.* 52). These risings appear to have been provoked by the burden of excessive taxation.

In some cases, for example the revolt of Māzyār [*q.v.*], religious movements have served as a pretext. Shīʿism was only imposed as late as the middle of the 9th/15th century by Kayūmarth (no. 36 in Rabino). The resistance opposed by Iranian national feeling to all foreign usurpation is less evident in respect of the Īlkhāns. Their reign is portrayed as a period of well-being (*T.R.*, 122). Nevertheless, the destruction caused by the Mongols (*T.R.*, 130) and by Tīmūr (Rabino) is not passed over in silence.

The protection of the Saldjūḳids was sought from time to time: Hazārasp sought that of Toghrul, for example (*T.R.*, 103). Khwārizm (*T.R.*, 106, 107), the Ṣaffārids (*T.R.*, 70) and the Sāmānids (*T.R.*, 74, 76) are mentioned in various episodes, the latter for the most part in connexion with the ʿAlid Sayyids. As for the internal struggles, which are purely of local interest, the Bādūsbānids were sometimes in alliance with their neighbours and sovereigns, the Bāwand, and at other times were against them. After a number of conflicts with the Buwayhids, a *modus vivendi* was found which maintained the peace (nos. 13, 14 in Rabino).

The Ismāʿīlīs, heretics (*malāḥida*), are the object of violent diatribes (*T.R.*, 90), but when needed, their help was sought (*T.R.*, 100, 10). Both the Bāwand (Shams al-Mulūk) and the Bādūsbānids (Shahrākīm b. Nāmāwar) contributed to their final defeat by the Mongols at the siege of Gird-i Kūh (*T.R.*, 110). Other characteristic features are the Iranian custom of wearing the hair long (curled or plaited) and special head-dresses (*T.R.*, 135) as well as non-Muslim personal names: Shīrzād, Bahman, Rūzāfzūn, Farīdūn, Gudarz, Pashang, Iridj, etc. The name Bādūsbān should be connected with Bāwand and Bāḥarb. Note *awlād-i dūsbān* (*T.R.*, 35). There are verses cited in the Ṭabarī dialect (*T.R.*, 111, 114), Arabic (*T.R.*, 121, 129) and Persian (*T.R.*, 74, 75, 77, 108). The Muslim aspect appears in the names of pious men (*T.R.*, 7, 54, 93, 112, 116) and of religious foundations. As regards geography, there is ample toponymic data. Attention must be drawn to the old name of Māzandarān, *farshwād-djard* (*T.R.*, 27, 28) (V. Minorsky disputes this).

(B. Nikitine)

BADW. I. Pastoral nomads of Arabian blood, speech, and culture are found in the Arabian Peninsula proper and in parts of Iran, Soviet Turkestan, North Africa, and the Sudan. This article is limited to their way of life in their home territory. Unlike primitive hunting and gathering, pastoral nomadism is a sophisticated system of exploiting land incapable of cultivation. Later to arise than agriculture, pastoralism utilises seven species of domestic animals: the sheep, goat, and ox, domesticated in Neolithic times as part of the herding and sowing complex of Western Asia; the ass, domesticated by early Bronze Age times for transport; and the camel, horse, and water buffalo, introduced during historic times.

Hunting peoples living off gazelle, oryx, ibex, ostrich, bustard, and quail were probably the desert's sole occupants until about 5,000 B.C. As Neolithic cultivators began to settle the edges of the waste, its seasonal wealth of herbage enticed shepherds and goatherds to lead their flocks out a certain distance during the winter and spring. After the camel had been introduced around 1100 B.C. full-time nomads found it possible to live out on the desert throughout most of the year, summering at wells or on the edges of oases and perennial streams. With the riding horse, introduced after 500 B.C., and perhaps as late as the time of Christ, Arabian camel nomads acquired an animal from whose back they could fight each other efficiently, and the golden age of Arabian life on the desert could begin.

The enormous number of unexplored archaeological sites in the Arabian desert, the advance of dessication since the introduction of the camel, and historical references in pre-Islamic literary sources indicate that the Arabian nomads for the most part are descended from farmers, traders, and caravan men who took to pastoralism during the early centuries of this era, as both business and the landscape deteriorated, just as cowboys and pastoralists in the United States, Canada, and Australia are descended from agricultural and urban peoples who took advantage of newly opened territories. The period during which Arabian nomadic life developed and crystallised lay between the time of Jesus and that of Muḥammad.

Four kinds of nomadism are practised in Arabia. In the Djibāl al-Ḳarā, in Ẓufār, on the Indian Ocean, peoples who speak Semitic languages of the Mahri-Socotran group graze hump-backed cattle on grass provided by the abundant rainfall of the summer monsoon. In cultivated regions of southern ʿIraḳ special families of herdsmen raise water-buffaloes, pasturing them in reaped and fallow fields. These people live in semi-cylindrical houses of poles and matting, which they move about seasonally over short distances. On the desert fringes, and particularly in the neighbourhood of Kuwayt, whole clans and tribes of shepherds mounted on donkeys drive their sheep and goats from pasture to pasture. Out in the middle of the desert the Bedouin proper herd their camels, migrating to the areas of recent rainfall in winter and spring and remaining near sources of permanent water in summer.

These four kinds of nomadism are dependent on the different physiological needs and capacities of the animals herded. Humped cattle need green grass and daily water, water-buffalo streams or irrigation ditches to wallow in. While sheep and goats can graze on died vegetation part of the year, they move slowly and cannot be kept more than a day or two from water. Camels can go as long as seventeen days without water in 100° F. heat, and can drink 30 gallons at a time. Their ability to withstand the rigours of the desert are due not only to their capacity for holding water but also to their ability to preserve it: a camel can tolerate an increase of up to eleven degrees F. over normal body temperature without much water loss through sweating. They also store energy in the form of fat in their humps. The Arabian horse, when it is kept

on the desert, is watered on transported water, and fed grain, being treated with the same solicitude as human beings. Sheep, goats, cattle, water-buffaloes, and camels all produce milk. Goat hair is used for tents, sheep and camel wool for clothing. All these animals are eaten, except horses. The horse provides nothing but the kinds of transport directly concerned with warfare and prestige. As social status combined with independence is the most important of all considerations to a desert Arab, the horse is honoured accordingly.

The most ancient dwellers on the desert are the Ṣulaba [*q.v.*], probably descended from early hunters, and representing a phenotypically homogeneous desertadapted Mediterranean racial strain. In northern Arabia they dwell among the noble Bedouin, whom they serve as guides, tinkers, and workers in wood. At times they also hunt. Their women provide entertainment. Second in probable antiquity are the shepherd tribes, as for example the S̲h̲arārāt and the Muntafiḳ confederations. These are in the most part dependent on the camel nomads because of their relative immobility and hence defencelessness. Individuals of these tribes serve the camel nomads as hired herdsmen. Members of the noble tribes own camels, drive and ride them on migrations, and guard and defend them while grazing. In the heat of summer they sometimes pick dates in oases, or even go pearl-fishing.

These tribesmen are also served by blacksmiths, mostly negroid, who come out from the settled places, and by Negro slaves. Shopkeepers from the towns sometimes set up special tents in the Bedouin camps to vend their wares, while travelling agents of large camel-purchasing companies buy up young camels which will be collected upon reaching the desired state of maturity. Much of this business takes place at camel markets like that of Burayda in Nad̲j̲d. Members of the noble tribes often visit the cities of Saʿudi Arabia, Jordan, Syria, ʿIraḳ and Kuwayt where some of them maintain town houses. Many have taken to settled life, and some have risen to high offices in the various Arab countries.

The material culture of the Bedouin is designed around mobility. The black tent of goat-hair is loosely woven, to permit circulation of air, yet its fibres swell when wet to keep out the rain; in summer it provides an area of much-needed shade, open on the sides to the breeze; in winter, with sides and rear closed it is warm. Except for special tents used only as *dīwāns*, or reception halls, it is divided by a curtain into a family section, occupied by women and children, and the guest section in which the head of the household receives his male friends. Kitchen utensils are of metal and wood, but each family usually owns a set of small porcelain coffee cups carefully packed in a compartmented wooden box. Arab clothing, loose and flowing, is warm in winter and cool in summer, as it protects the skin both from the cold and from the hot, dry wind; the man's headcloth, and the woman's headdress and veil, also help to keep dust and sand out of the eyes, nose, and ears. Most of the Bedouin's outfit is purchased, including the cotton cloth for his underclothing, his tools, and his containers. So is much of his food, including wheat, rice, dates and coffee. Only milk and meat are produced locally.

Like other Semites, the Bedouins lay great stock in genealogies, and consider kinship of paramount importance in human relations. The preferred mating being with the father's brother's daughter, descent is patrilineal. Divorce is easy, polygyny both serial and contemporary. Bedouin women, often unveiled, in many cases married more than once, have more freedom than their sisters of the towns and oases. Beyond the immediate family is a group of kin which usually goes out to pasture together; several such groups will spend the hot season together; this is usually the limit of the kin responsible for mutual vengeance. Beyond this is the tribe, finally the confederation. Among the Bedouin proper, also called Aʿrāb, two main lineages are recognised, those descended from Ḳaḥṭān, who lived before Abraham, and the ʿArab al-Mustaʿriba, descended from Ishmael, son of Abraham and Hagar, who was daughter of a king of Ḥid̲j̲āz. The Bedouin proper include the ʿAnaza confederation, of which the Ruwalā is the best known tribe, the S̲h̲ammar, the Āl Murra in and on the borders of the Empty Quarter, the ʿUd̲j̲mān, and the Banū K̲h̲ālid. All of these tribes follow a strict code of chivalry when fighting one another.

Being mobile camel-owners, these aristocrats are concerned chiefly with the use of winter and spring grazing lands, the locations of which vary from year to year with the whim of the rains. In each camp the work is done mostly by dependents — slaves, Ṣulaba, hired herdsmen, and blacksmiths, all of whom are considered non-combatants. A Bedouin s̲h̲ayk̲h̲ entertains lavishly in a large tent where food is always available to his followers and guests. The ritual of coffee drinking is highly formalised and nearly always in progress. Members of other tribes fleeing vengeance seek the protection of his "face". Travellers cross his territory under the protection of his guards. In inter-tribal warfare, which most frequently arises over pasture rights, he will often lead his men into battle in person. Bravery, generosity, and good judgment are the qualities traditional in such a leader, who does not inherit his office directly, but is chosen, often after a sharp contest, from the paramount family. Before trucks, buses, railroads and airplanes took over the desert carrying trade, the Bedouins guided, protected, and raided caravans, including the huge pilgrim processions.

The Bedouins are Muslims, characteristically Sunnite. Many (especially in Eastern Arabia) follow the Mālikī code, but the Wahhābīs universally follow the Ḥanbalī. The Bedouins generally are said to spend less time and effort in religious devotions than townsmen but the conditions are sometimes reversed. In some of their rituals can be seen a survival of veneration for ancestors.

The political situation of the Bedouins varies from period to period. When the central governments to which the tribal territories are officially assigned are weak, the paramount S̲h̲ayk̲h̲s rule virtually as kings, and even cities have paid them tribute. At times when the central governments are strong, their authority becomes purely local. At the present time Bedouins are found within the political boundaries of Saʿudi Arabia, Yaman, Aden Protectorate, Masḳaṭ, Trucial Oman, Kuwayt, ʿIraḳ, Syria, Lebanon, Jordan, Israel, Egypt and the North African states. For the most part these governments endeavour to keep their nomads at home. In some countries this effort has been implemented by programmes to settle some of them on newly irrigated land, and new water-tanks along the Tapline are used by a number of tribes, including the Ruwalā.

Part of one tribe, the Dawāsir, whose home in southern Nad̲j̲d, moved to the Persian Gulf and onto the island of Baḥrayn. In 1923 they crossed

back to the mainland, and settled in al-Khubar and Ḍammām. During the last three decades some of the Dawāsir, having worked for the Arabian American Oil Company, have set up in businesses of their own, including construction and transportation.

Today the Bedouins are in a state of transition. Some still concern themselves with camel breeding for the meat, skin, and wool markets; others are truckers, machinists, and skilled operators of oil producing machinery, and are sending their children to school and college. They are showing themselves just as adaptable to the machine age as they were to life on the desert when an earlier opportunity called them.

(CARLETON S. COON)

II. THE HISTORY OF THE ORIGIN OF NOMADISM IN ITS GEOGRAPHICAL ASPECT

(a) Goat and Sheep Nomadism.
(b) The Nomad on Horseback.
(c) Bedouin Nomadism in Arabia.
(d) The Appearance of Camel Nomadism in North Africa.

(a) *Goat and Sheep Nomadism.*

The expressions "nomad" and "nomadism" lose their scientific practicability, if they are not used in their restricted meaning: "roaming from place to place for pasture" (*Concise Oxford Dictionary*). Nomadism is unsettled roaming, pasturing herd animals. Roaming gatherers and hunters as well as a population with a shifting agriculture (*ladang*, *milpa*, see Gourou) should not be called nomadic. If we follow the succession of "agricultural origins" of the Old World in C. O. Sauer's conception (1952) taken over and elaborated by the authors in two papers (1956, 1957), nomadism in this restricted sense began much later than planting and breeding "household animals", *i.e.* dog, pig, and fowl. (Sauer distinguishes between household animals and herd animals).

The still hypothetical sequence of creative centres of domestication and cultivation, according to Sauer's interpretation, began along the river banks and coasts of moist tropical forest round the Bay of Bengal, where a rather sedentary fishing folk, which in addition hunted and collected plants and mussels, began to breed these "household animals" (dog, pig, fowl) and to plant tubers and fruit shrubs and trees (cf. also E. Hahn, Hettner, Menghin, Werth 1950, 1954, Dittmer, Smolla).

Cultivation of seed plants ("millets"—this is a term including the diverse species of small seed cereals—as well as pulse and oil plants) was then added in the winter-dry forest, which is easily burnt down, and in the wooded steppe, at first in India. These plants supply proteins and oil, making man more independent of animal food, especially of fish.

In this progressive succession of cultures, in which man became "the lord of creation", the next step seems to have been the breeding of goats and (then) sheep in the mountain areas north-west of India, round the Hindukush. This was probably incited by a near contact between seed-planters and mountain hunters, among whom the wild goat or sheep was a holy animal. A culture thus resulted in which herding was added to seed-planting and hunting. It may be regarded as a primary stage of

farming, as a goat and sheep farming culture ("*Kleinvieh-Bauerntum*"), if we understand the meaning of farming to be a combination of tilling and herding.

Results of the ethnological expedition of A. Friedrich (Jettmar 1957b) strongly support this hypothesis, especially for the goat. In the remote valleys of the Shin of Gilgit, the *markhor*, the wild goat with screw-shaped horns, and the ibex are holy animals, "herded by goddesses". The domestic goat, an offspring of the wild goat of the same region, partakes in this holiness. The economy of the Shin consisted in a scanty growing of millet, but an intensive breeding of goats and an important hunting of the *markhor* and ibex. Jettmar brings several indications for the thesis that the domestication of the goat took place in these regions. The experience of domestication—of this tremendous intervention in the balance of nature—must have always implied a profound religious emotion. Jettmar calls this a religious shock of domestication (cf. E. Hahn).

The growing of the two-rowed barley (*Hordeum spontaneum*) as the first large seed grain ("*Halmgetreide*") may have already been developed in that region. Probably in this stage, if not earlier, small-scale irrigation was started.

But only the thesis of the following great step, which largely diversified social and economic modes of living, is more or less archaeologically proved up to now: in the highlands and the mountains of Western Asia, somewhere between Western Iran and Syria, cattle were bred and primitive wheat (emmer, *Triticum dicoccum*; einkorn, *T. monococcum*; and possibly spelt, *T. spelta*) was grown as an addition to the basic goat and sheep farming. It was the foundation of a complete farming culture ("*Vollbauerntum*"), which later became the basis of early civilisation in Mesopotamia and Egypt.

These four main nuclei of creative cultures which reared animals and plants were based on one another. They may be looked at as only one moving centre, appearing near the Bay of Bengal and progressing finally to the highlands and mountains round Mesopotamia. Each of these four stages sent out waves of dispersion over large parts of the world. In comparison with these creative centres, all other regions seem to have been more or less stagnant areas, where elements of these waves were taken up or transformed or rejected, according to cultural or climatic circumstances.

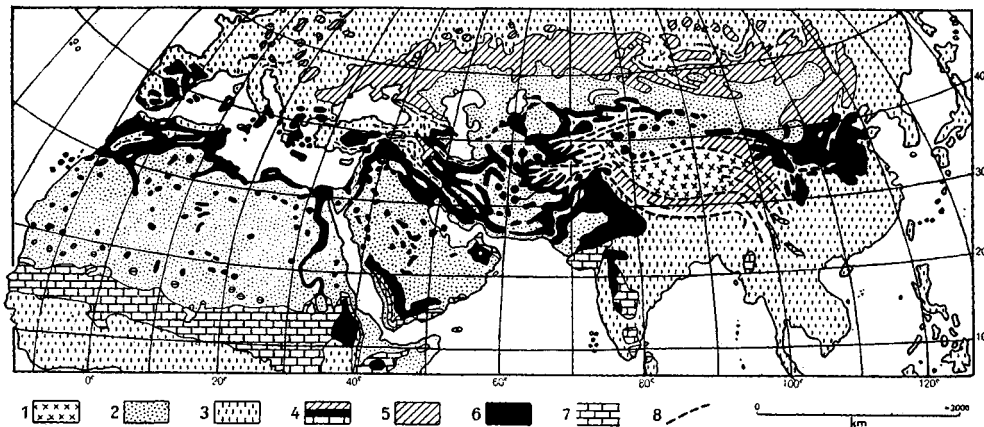
The first data we can use for inserting this succession into a frame of absolute time are the radiocarbon data for the pre-pottery settlements with complete farming near Ḳalʿat D̲jarmo in the hills east of Kirkūk, c. 4750 B.C., a settlement without irrigation (Braidwood), and those of the fortified irrigating settlement of Jericho, in the 7th millennium. W. F. Albright doubts the latter date (oral communication). The emmer grown at Ḳalʿat D̲jarmo was still nearer to the wild form than to the later cultivated form (Helbaek, Schiemann by letter). This might show that no very long time had passed since the beginning of emmer cultivation. The oldest strata of oasis settlement known in Jericho are said to go back into the early 7th millennium B.C., but we are not yet informed by Kenyon and Zeuner about the domesticated animals (except the goat) and cultivated seed plants there. The Natufian culture of Palestine (Garrod, Bate) is probably older than the oldest strata of Jericho. Like Sauer and Albright (1949, 129), we suppose that seed agriculture, probably growing some species of millet, was already carried out during the Natufian stage (cf. Clark, Narr 1956).

On the other hand we now know with considerable certainty that the 9th millennium B.C. was a very cold period globally (glacial advance of "Salpausselkae" in North rn Europe, of "Schlern" in the Alps, of "Mankato" in North America as far as the Great Lakes, of the moraines round the piedmont lakes of East Patagonia), in which the snow line was about 800 metres and more lower than at present (Caldenius, Firbas, Deevey, Gross, Kathjens, Butzer). But from about 5500 to 2500 B.C. temperatures were higher all over the globe than they are now, so that the snow line, timber line and potential cereal line were situated about 400 metres above the present ones (Thermal Maximum, *Mittlere Wärmezeit*). It seems improbable to me that a herding culture took its origin in the mountains north-west of India in a time of glacial advance or of very heavy glaciation. I suppose that this happened in the period of glacial retreat, perhaps in its first half. This glacial retreat took place throughout the whole period from 8100 to 5500 B.C. Temperatures rose rather quickly, and the timber line and cereal line climbed up to those high elevations mentioned above. But natural oases in the deserts round the mountain chains of Central Asia always became smaller and scarcer, as they were fed by rivers derived from retreating glaciers continually diminishing in size. Towards and during the Thermal Maximum, a sheep breeding culture was able to spread over Tibet, where the climate was much more favourable then. This culture was not purely nomadic (cf. Hermanns, Kussmaul). It probably began to grow the sixrowed barley (*Hordeum vulgare, i.e., hexastichum*), the wild form of which probably is *Hordeum agriocrithon*, which has been found round Lhasa and in Eastern Tibet, (Freisleben, Schiemann 1948, 1951). It seems that the cultivated varieties of six-rowed barley all derive from this form. They spread over China and India; and from India they seem to have taken their way to South Arabia and Abyssinia (which became a secondary centre of variation) and thence to Upper Egypt, where cultivated emmer had entered from Syria and was grown in Upper Egypt beside six-rowed barley in the late 5th millennium B.C. (Caton Thompson and Gardner, Brunton, Libby, Arnold, Kees).

It seems that the route from the Hindukush and Eastern Iran by South Arabia to Africa has been of great importance for the spreading of cultures—and also of tribes (Poech)—during long periods, and especially during the periods of the spreading of early seed planting as well as of goat and sheep farming. There are no wild goats in Arabia and Abyssinia. But the veneration and ritual hunt of of the ibex was also spread in these countries. The idolisation of the ibex was common in South Arabia in the last millennium B.C. The ibex god Taʾlab was protector of goats and sheep (Beeston, Höfner). Up to date, ibex hunting has been a ritual act in Ḥaḍramawt (van der Meulen - von Wissmann 177 f.). The ibex seems to have had a similar position in the Badarian and early Naḳāda cultures of Upper Egypt after 4000 B.C. (Brunton, tables), in the latter beside the bull. We must also mention that Agatharchides (about 130 B.C.; C. Müller, *Geogr. Graec. Min.*, i, 153) describing the nomadic Troglodytes near the western coast of the Red Sea (known as Blemmyes and Bed̲jā), writes that they call bulls and rams their father, cows and sheep their mother.

The early cultures of goat and sheep farming with millets and of a complete cattle farming with large-seed cereals were more or less restricted to the climates and vegetations from light forest and wooded steppe to semi-desert as well as to the natural and artificial oases. All of these mostly have a light and rich soil, which is easily cultivated (map 1). The wooded steppe is good for both agriculture and pasture. The dry steppe is a rather good pasture. It is arable, but agriculture depending on rainfall is endangered in dry years. The desert steppe or semi desert is too dry for this kind of agriculture. It can be used, however, as a meagre pasture for goats and sheep, but not for cattle. Good pasture is also found in highlands above the cereal line.

In areas of desert steppe where oases do not exist or are scarce, pastoral folk herding sheep and goats, but not cattle, could branch off from the steppe-farming tribes and become independent nomads. However, such nomadic people breeding had either to depend on oases or other settled areas or to herd in tillable regions of the Fertile Crescent. On the attitude of the Egyptians towards this roaming population and on their frontier control in the East cf. Kees, 64 ff., 106 f., esp. papyrus Petersburg 1116 A, l. 51 f. "He (the Asiatic) never lives in the same place and his feet are wandering since the time of Horus, he fights and is neither victor, nor is he defeated". The difference between nomads, semi-nomads, partial nomads, steppe farmers and farmers of small oases was much smaller and occupational overlapping was more common than in later periods (see W. F. Albright, 1946, 181 ff., esp. 1949, 239 ff. on the Israelites in the desert, the patriarchs and the ʿApiru or K̲habiru). In many of these cases, it is better to speak of pastoralism than of nomadism.

In no part of Asia does there ever seem to have spread any complete cattle nomadism, such as exists in parts of Africa south of the Saḥārā, except yak nomadism in the highlands above the timber line


Map 1. Oasis and steppe regions of the Dry Belt of the Old World, classified according to their thermal conditions.

1-highland desert; 2-desert, semi-desert; 3-forest; 4-oasis, steppe and wooded steppe; 5-steppe with cool summer and cold winter; 6-oasis and steppe with long, hot summer; 7-steppe, tropical, no frost; 8-mountain chain.

g̲hanam in the semi-desert must always have lived an impoverished life compared with tribes of moister zones or of regions interspersed with oases. In these latter regions, parts of a tribe may have been agricultural, other parts pastoral ("partial nomadism"). Thus a pure nomadism was carried out by a branch of a steppe-farming or even oasis-farming clan or social unit. (This way of living somewhat resembles South-European transhumance.) W. F. Albright (1946 a, b, 1949, 147, 154, 162 f., 257) supposes that the Semitic neighbours of the Sumerians were such pastoral tribes, partly nomadic, when the Sumerians, at the outset of civilisation, began to irrigate Lower Mesopotamia. The western Semites (Amorites) pressed on the Babylonians mainly from 2100 to 1900 B.C. These ancient nomads differed from any modern form of society in Arabia, Bedouin, semi-nomad or Ṣlaib (Ṣulaba). They possessed goats, sheep and donkeys. Hunting and robbing the harvest were important for them. They travelled and attacked on foot. This made a complete crossing of the desert impossible for them, except in spring. They did not dare to move more than a day's journey (30 km.) from a watering place. In summer they in Tien-shan and Tibet. Cattle are not fitted for semi-desert grazing. They also find difficulty in grazing in winter in a steppe with a frozen snow cover, as in West Siberia (cf. Potapov, and Hančar, 390).

We have recognised that pastoral life has been an essential part of the farming cultures since their origin. We saw that the earliest domestication of herd animals and pasturing was probably developed in the Hindukush area by seed planters surrounded by mountain hunters of ibex and wild goat (and perhaps sheep), and that this was an invention correlated with deep religious emotion, an invention by which these seed planters became steppe farmers. Because of the pastoral branches of their clans, these steppe farmers must have been of greater mobility and more migratory than the seed planters had been. But only in places, where herdsmen of sheep and goats entirely split off from their kinship or group and gave up agriculture, may we speak of complete nomadism.

When an oasis became more extensive and its settlement larger, its population became increasingly sedentary. The new excavations of pre-pottery Jericho show that such irrigating villages were fortified like towns very early, in Jericho perhaps

in the 7th millennium (Kenyon, Zeuner). This may have been the first germ of what became early civilisation in the 4th millenium B.C. in the delta oases of Mesopotamia, where large irrigation schemes needed collaboration, centralisation and the formation of states, where mass labour was required as well as division, specialisation and intensification of labour, and where technical inventions sprang up (wheel, cart, plough). As a result of this development, the intensity of contrast between steppe farming and oasis civilisation was continually growing, while the common offspring is displayed by the Magna Mater and bull idols worshipped in both of them.

Meanwhile steppe farming with all its pastoral traits had spread via Asia Minor to south-eastern Europe and to the light oak forests of Central Europe (Danubian culture, since c. 4000 B.C., according to radiocarbon data). And since the 3rd millennium it began to infiltrate from the Tripolye culture (west of the Dnieper river) into the wooded steppes of Russia and Siberia, which then were occupied by an advanced hunting population (Hančar). All these regions were unfit for oasis economy because of their cool or short summers (map 2).

I think it is a quality of the largely hypothetical sequence of creative centres, which step by step gain and enlarge the domination by man of other organisms, that it corresponds excellently with the succession of cultures presented by several ethnologists, *e.g.*, by Dittmer. It also has the advantage of making parallel inventions largely unnecessary (Sauer).

We cannot treat here the hypothesis of Flor, W. Schmidt, Pohlhausen and others, in which the reindeer represents the earliest domesticated herd animal, so that nomadism begins among hunters breeding the dog, in the boreal conifer forest (taiga, muskeg) of Eurasia and spreads to the south. Since lately Jettmar (1952/3) and others have shown that impulses for reindeer domestication came from horse breeding, which itself was a rather late acquirement (compare below), the number of adherents of this hypothesis became small. The foundation of Hančar's suggestion that the reindeer was employed as a trailing and riding animal about 5,000 B.C. (547 and table 63) has broken down too. Jettmar (1957a) and Okladnikov show that the finds in the Lena region manifesting the riding of the reindeer are not from the 2nd millennium B.C., as Hančar supposed, but from 700-500 B.C. (cf. below).

(b) *The Nomad on Horseback.*

Among the Equines, the African donkey (*Equus* subgen. *Asinus*) and the South-West and Central Asiatic onager (*Equus* subgen. *Hemionus*) were early in use as transport animals. Hančar's opinion is that the find of bones of one onager in Ḳalʿat Djarmo (about 4750 B.C.) is important in this connexion. According to Hančar, a subordinate breeding of the horse (*Equus* subgen. *Caballus*), which was wild in the steppes and light forests of the North, can be recognised in the early 3rd millennium B.C. in the Tripolye farming culture in the wooded steppe between the Carpathians and the Dnieper river.

A decrease of temperature and probably an increase of precipitation (cf. Tolstow, and Butzer's different view) since about 2400 B.C. depressed the snow line in Central Asia and thus considerably enlarged the oasis areas of Tūrān, so that farming and herding as well as oasis civilisation could expand in that region (which before had been a desert of greater aridity). At least for some centuries, this desert seems to have lost its function as a strong barrier (Wissmann 1957). The advanced hunters of the North and the farmers and the oasis civilisation of the South came into contact along an extensive border. It seems that by this meeting an amalgamation took place, and a new vital and vigorous culture was growing, in which, since the early 2nd millennium, the horse, the war-chariot (with its origin probably some re in the South-West Asiatic highlands round Armenia), and Indo-European peoples played an important rôle. During this process, the veneration of the deer, which had had a central position in the religious perceptions and the myths of the northern hunters, was replaced by that of the horse, which was also brought into contact with the old South-west Asiatic chthonic fertility and bull (*bucranion*) worship (Kussmaul 1953b).

If we take this broad cultural process as a whole, we may say that by it civilisation was often relieved from oasis seclusion, where it had been in danger of stagnating and of becoming barren. Here also, we can distinguish steppe-farming and oasis-farming branches. When the Shang, who belonged to this cultural complex (Kussmaul 1953a), occupied China from Central Asia about 1500 B.C. and became its ruling class, they had been mainly oasis farmers (Eberhard, Franke, Bishop, Wissmann and Kussmaul 1956, 1957). The Aryans however, when destroying the Indus civilisation in about the same period, must have been steppe farmers, but cannot be called nomads.

According to excavations, the breeding of the Bactrian camel as a transport animal seems to have been started in Tūrān in the second half or the last quarter of the 3rd millennium B.C. (Walz, and especially Hančar). This is a few centuries earlier than the time in which we know of horse breeding in this region. Even in Mesopotamia, reliable proofs of horse domestication only begin about 2000 B.C. or shortly before (Boessnek, Hančar).

In the northern wooded steppe and marginal light forest with its rich black soil (*chernosem*) from Russia to Siberia, agriculture gradually became important beside hunting and herding. In the middle of the 2nd millennium, even Western Siberia was inhabited by a comparatively dense farming population (*Andronovo culture*). In such a region without oases, pure steppe farming with large herds offers good conditions for a social gradation as well as the formation of clans, of a warlike nobility and of dynastic leadership (Kussmaul). This farming in the black soil belt was then penetrating more and more into the open steppe, where inevitably its pastoral and migratory branch was increased and strengthened (Hančar).

However, the first people to find out that fighting on horseback was of great advantage were probably that kind of farming tribes with a strong pastoral branch, which lived in highlands and mountain basins, where the war chariot must have been of comparatively little use. This perhaps took place in Transcaucasia or even in the Carpathians (Kussmaul, Jettmar). Probably, these tribes still remained what we have called steppe-farmers. Hančar considers the northern border of the Tien-shan Mountains and the Altai Mountains as the regions of origin of horse riding (397). But Jettmar 1957 shows clearly that Hančar's main argument in this question broke down (cf. above). Reindeer riding was begun later than horse riding. In most other questions, Hančar's important basic work remains untouched.

Only when horse-riding spread into the open steppe of the North, that incisive revolution sprang up which we may call equestrian nomadisation. Once aware of the great superiority of fighting on horseback over the older ways of fighting, especially in war chariots, "North Iranian" tribes, probably between the rivers Volga and Irtysh, the Scythians and their neighbours, the Sakians, gave up steppe-farming life entirely and specialised in the breeding of herd animals, especially horses. Perhaps about 900 or 800 B.C. they became the first horse-riding

nomads, the first archers on horseback (Hančar, 390 f.). They were the first to break into the neighbouring countries, disseminating panic among sedentary populations. When we use the word nomad, we usually think of this equestrian type. This disastrous transformation overwhelmed not only the open steppe but also the wooded steppe with its dense farming population. It even attracted hunting tribes of the taiga forest to join the new way of life. The distinct social gradation of the steppe farmers now became the base for the appearance of leaders of high political and military ability in assembling hordes of growing size. The poorer farmers and hunters were probably forced to join the "aristocracy" of horse-breeders, so that a horde organisation, unknown before, was brought about which grew by raiding, sacking, killing and enslaving other populations, and by winning over vassals, especially other hordes of horsemen, owing to admiration or fear. The warm climate and the refined oasis civilisation of the South, known to some returned men through their service as mercenaries, as well as the mild climate and open plains of the West, ending in Roumania and Hungary, attracted invasions.

It is improbable that the predecessors of the Scythians in Southern Russia, the Cimmerians, were completely nomadic already. They seem to have been steppe farmers with a strong pastoral branch and with dangerous mounted warrior bands (Kussmaul 1953a, ii 302, Hančar 101). Perhaps the early Medes can be mentioned in this connexion, at the time when they superseded the highland farmers of Īrān (cf. von der Osten). Even the Achaemenids did not abandon knightly ideals, "horse-riding, archery, and love of truth".

Eastward, through the gap of Dzungaria along the foot of the Altai Mountains, nomadisation worked like a chain-reaction of explosions. The "North Iranians", especially the Scythians, were followed by the Wu-sun, who probably lived in Central and Eastern Tien-shan. We may suppose that in this period herdsmen, hunters and farmers of the open and wooded steppes surrounding Mongolia were forced to take up nomadic life. It is possible that the pressure of the Wu-sun against the population of the oasis chain of Kan-su caused the last invasion of a farming people into China, the Zhung, which led to the breakdown of the dynasty of the Western Chou (770 B.C.). The first nomadism to be traced in Chinese reports is that of the Hsiung-nu from about the 5th century B.C. These were neither Iranians nor "Proto-Turks". According to Ligeti, their language seems to have been isolated. The Yenissei-Ostyaks may have taken over features of the Hsiung-nu language, when both were neighbours. In their habitat between ancient China and the Gobi Desert, the Hsiung-nu had taken over en bloc a considerable group of elements of the culture of the North Iranian nomads. Some of the traits of the life of the Hsiung-nu prove their former dependence on China. Others show their old cultural relations to the non-nomadic primitive tribes of Manchuria (Kussmaul). During centuries of fierce wars, in which the Chinese defended themselves against the Hsiung-nu and built the Great Wall, again the Chinese took over a part of the cultural elements derived from the North Iranians, *e.g.*, iron, cavalry, trousers, the concept of heaven as a tent. There is an old Chinese proverb: Horseback forms state.

Map 3 shows how the spark of nomadisation caught one tribal organisation after the other along the borderland between forest and desert north-east of China during and after the time of the Hsiung-nu empire. Agrarian and urban China, itself in a country of loess and steppe, counterbalanced or endured the pressure or became vassal or partly subdued or even marginally transformed into pasture, all this during long periods of alternate defence and retreat and of regaining ground for agriculture. As the object of this article is a synopsis of the history of the origin of nomadism, we cannot deal with the growth of more or less short lived nomadic realms and empires, which in their tendencies saw a model in the universalistic and cosmological state doctrine of the Chinese Empire. Nor can we deal with those tremendous migrations and invasions into the West, during which the Dry Belt served as a corridor, through which the invaders broke into the countries of old oasis civilisation in South-west Asia or into the beginnings of forest civilisation in mediaeval Central and Western Europe, where they were one cause of the Migration of Nations (Grousset, Spuler).

All these movements destroyed what had been left of steppe farming in the plains of the open and wooded steppe. The hilly and mountainous regions surrounding Mongolia in the north, however, with a pattern of steppe, meadow and forest, became areas of retreat and regeneration of a population which made its living by hunting, by cattle-breeding, and also by farming (cf. Lattimore). The ruins of a defence wall cutting off the north-eastern corner of the steppes of Mongolia near the Gan and Argun rivers (Plaetschke) show that such a farming population must have been quite numerous sometimes. We may trace on map 3 how again and again in such hilly border regions of the forest new nuclei of horde formation sprang up among hunting, herding and farming groups, who led a simple life under hard conditions. In these we find some able man, endowed with the gifts of leadership, organising a heterogeneous horde by raiding, robbing and winning vassals. Sometimes the name of a clan, little known before, became the name of a growing power or even of a vast empire. By some lucky chance, a *Secret History of the Mongols* has been preserved (Haenisch), which is the story of the life of Čingiz K͟hān and his clan, and of how he founded the Mongol Empire. It was written by a Mongol in A.D. 1240 as a plain first hand report. In the time of his forefathers, the semi-sedentary clan living in the Kentei Mountains owned but a few horses, cattle and sheep. There was some scanty agriculture. Wild vegetables were collected. Hunting on horseback was important. However, the neighbours in the open steppes outside the mountains were true horse-riding nomads with large flocks and herds. Some had become sated with raiding and addicted to the luxuries of civilisation with which they had become familiar during their raids. From hiding places in the valleys and forests of the Kentei hills, the incipient clan of Čingiz K͟hān robbed among the rich nomads of the plains. The booty consisted of horses, cattle and sheep, women, children and servants. Thus the clan turned entirely nomadic, growing by the acquisition of new vassals, an association taking its name from the leader's clan, growing in strength according to the looting ability of the leader. Finally, well-known tribes and peoples lost their independence as well as their name and merged with the great "Mongol" unit.

Virtually no region on the margin of the dry belt

of Mongolia, which once had been the cradle of such a fast growth of nomadism and then had been thoroughly nomadised, ever repeated the formation of a new nomadic aggregation.

The empty spaces of the Dry Belt were terribly enlarged by the destructive incursions and migrations of the mounted nomads. Steppe farming was annihilated in Eurasia except in mountainous regions, if we do not include in this term the agriculture of North China and parts of India. Oasis civilisation was disastrously weakened and reduced. It is true that the larger nomadic states contributed to the interchange of materials and ideas across the continent. But this interchange would certainly have been stronger in a peaceful development. Yet we do not know to what extent suffering may be necessary to save from degeneration and decay that which is sound and good in man's mind.

(H. von Wissmann and F. Kussmaul)

(c) *Bedouin Nomadism in Arabia.*

There are indications that the wild one-humped camel (the wild dromedary) lived in North Africa and the Near East until the 3rd millennium B.C., and that it became extinct later on except in Arabia. We do not know when this process of extermination ended in North Africa.

A cord made of camel hair has been found from the 3rd dynasty in Egypt. An Egyptian relief published by James (1955) shows the dromedary among wild animals. Judging from its style, it belongs to the New Kingdom. The camel was domesticated neither in the valley of the Nile, where the local climate is detrimental for its health, nor in any desert region of North Africa. This question is treated thoroughly by Walz (1951).

Agatharchides (in two versions, cf. C. Müller, *Georgr. Graec. Minor.* i, 179) and Artemidorus (Strabo xvi, 4, 18) give reports of the Red Sea coast of Arabia which inspire confidence. In these reports they also write that, in the hinterland of the coast of present Northern Ḥidjāz, there are herds of wild animals, of "cattle", onagers (ἄλλων ἡμιόνων; ἀμύθητος ἀριθμὸς ἡμιόνων καὶ βοῶν), wild camels (καμήλων ἀγρίων), deer and gazelles, and also numerous lions, "panthers" and wolves. All three descriptions were probably taken over from one original perhaps of Ariston, c. 280 B.C. (cf. Tarn, *op. cit.* report, later, 14). Musil (1926, 302 ff.) believes that these camels probably were not really wild ones. (He mistakes onagers, "half-asses", for mules, and is right in saying that mules cannot be wild.) Littmann

1 forest

2 wooded steppe, good for pasture and agriculture

3 dry steppe, good pasture, rain-agriculture endangered

4 semi-desert, meagre pasture

5 desert

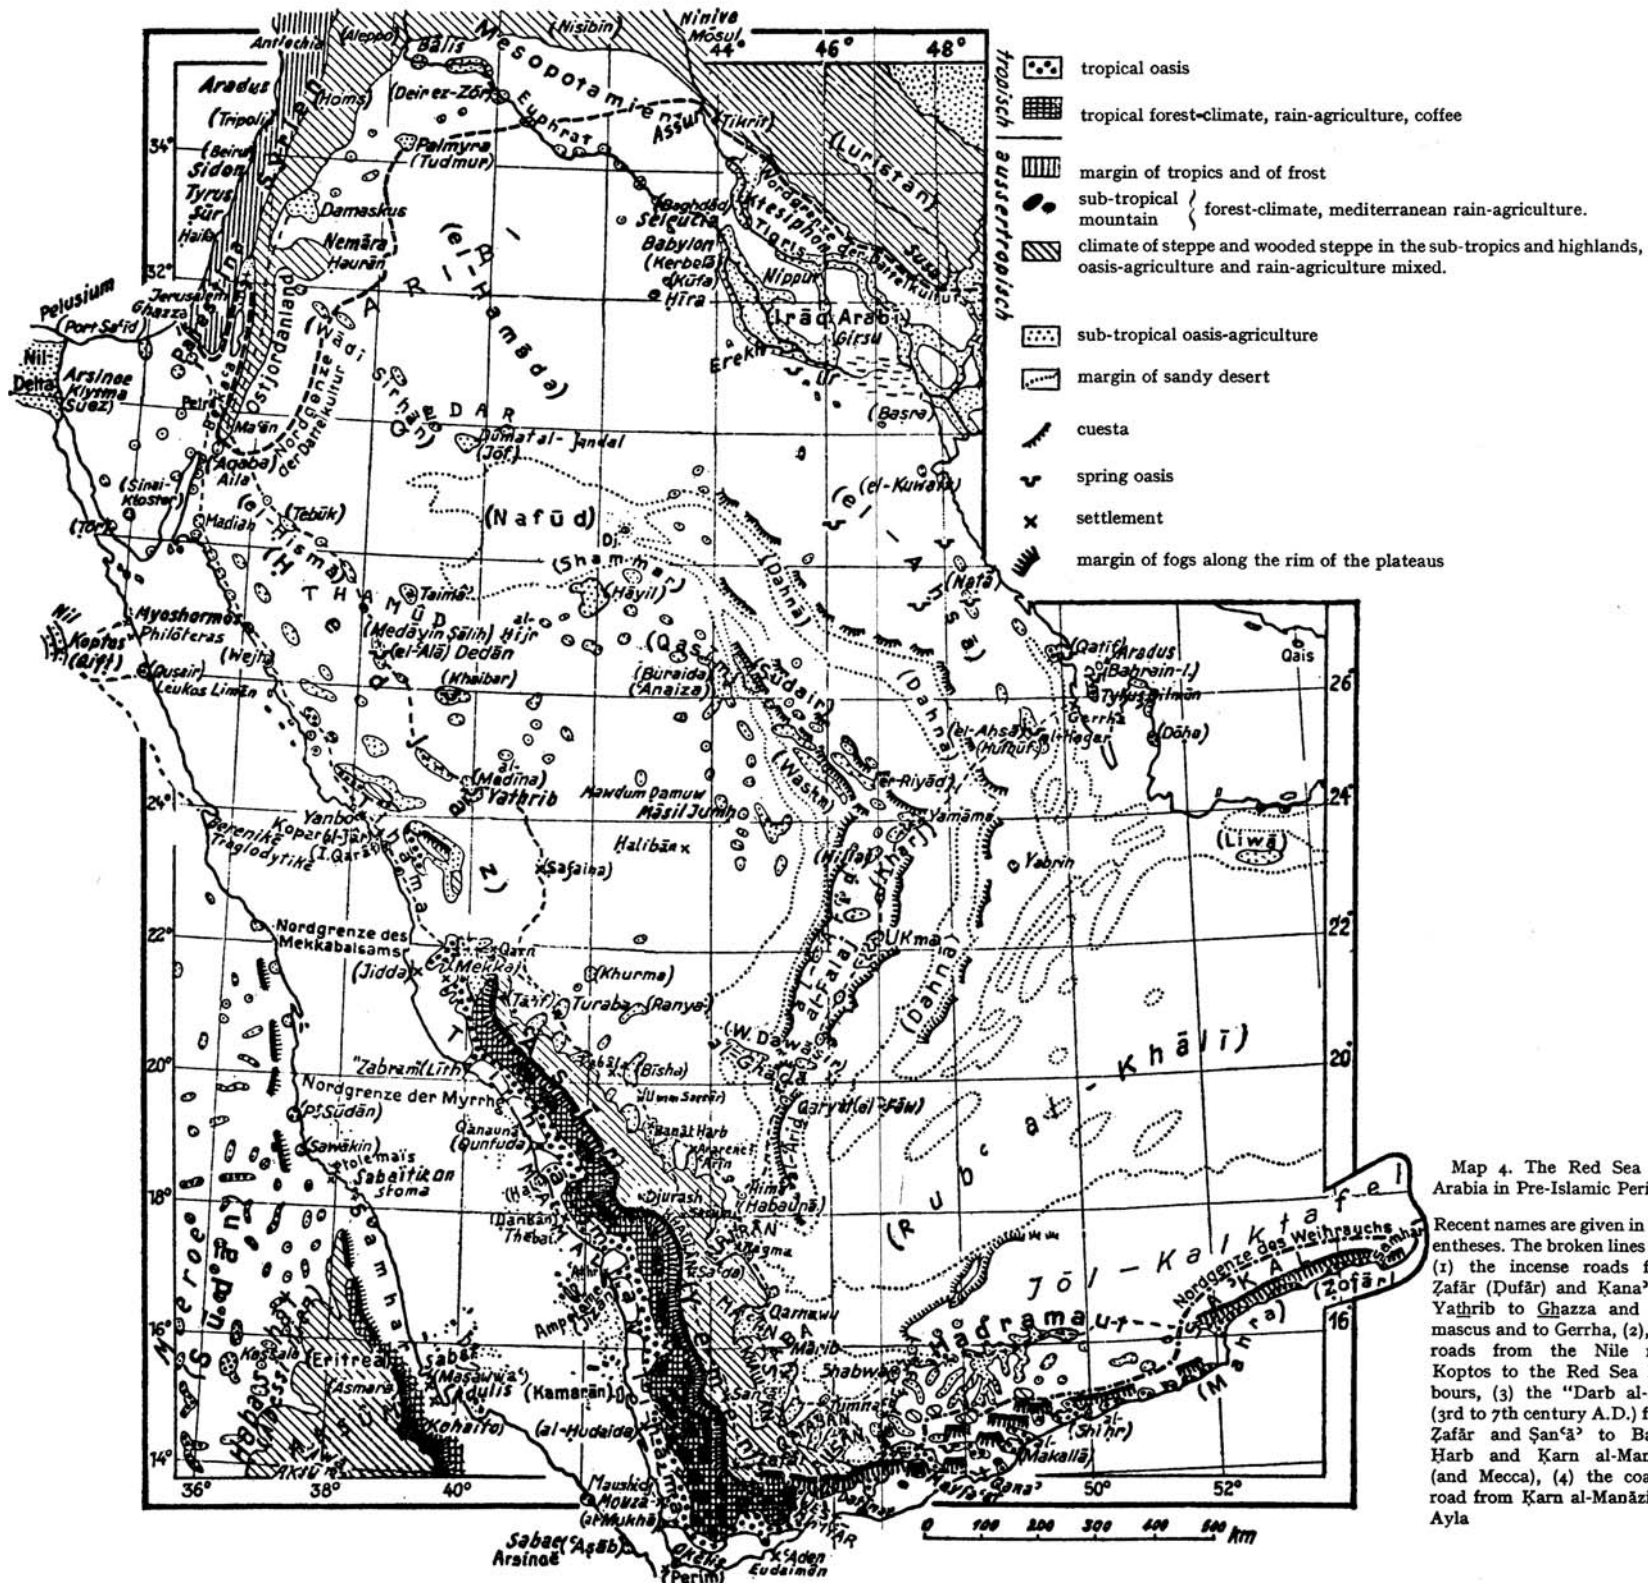
Map 2. The zones of vegetation and the oases of the Dry Belt of Inner Asia.

Map 3. The spreading of explosive outbursts of horse-riding nomadism with feudal state-building. The previous population had an economy of agriculture, herding and hunting, concentrated in the wooded steppes (cf. map. 2). The Roman numerals show the succession of the outbursts. The dates are approximate.


Map 4. The Red Sea and Arabia in Pre-Islamic Periods.

Recent names are given in parentheses. The broken lines are: (1) the incense roads from Ẓafār (Ḍufār) and Ḳanaʾ via Yathrib to Ghazza and Damascus and to Gerrha, (2), the roads from the Nile near Koptos to the Red Sea harbours, (3) the "Darb al-Fīl" (3rd to 7th century A.D.) from Ẓafār and Ṣanʿāʾ to Banāt Ḥarb and Ḳarn al-Manāzil (and Mecca), (4) the coastal road from Ḳarn al-Manāzil to Ayla

(1940, 3) has demonstrated that the rock-drawings which are found in connexion with Thamūdean (cf. below) graffiti show—besides domesticated animals: *camels*, horses and dogs—hunted animals in great quantities: gazelles, "wild cattle" (oryx), ibexes, wild boars, hares, ostriches, lions, wolves, hyenas. Only once is a goat shown. No sheep and no domesticated cattle are drawn. The nomads between Midian and the Ḥawrān must have been fervent hunters, but not much interested in sketching their *ghanam* (goats and sheep). Also Xenophon (*Anabasis*, i, 5, 1 ff.) speaks of onagers, wild cattle (oryx), ostriches and bustards, and he describes the hunting of onagers on horseback. So perhaps there still were also wild dromedaries in desert Arabia in the 3rd century B.C.

We cannot tell where in Arabia the one-humped camel was first domesticated. Albright supposes that this was done in South Arabia, somewhere round the great southern desert (1958, note 5). Nothing is known about the dromedary as a domesticated herd animal before the 11th century B.C. (Albright, Walz 1951, 1956, against Dussaud 207): Judges, 6-8 says that Midianites, Amalekites, and the sons of the east made ingressions on camel's back into Palestine across the Jordan river. This was about in the first half of the 11th century B.C., and, according to Albright and Walz, is the earliest date for a mention of the domesticated dromedary. It is the time when iron was introduced into Palestine. Albright (Arch. 1953, 227, note 31) is of the opinion that the dromedary was effectively domesticated in Arabia between the 16th/15th and the 13th/12th centuries B.C. The spreading of Semites to South Arabia goes probably back to a still earlier time: the reliefs of the Punt expedition of Hatshepsut (about 1495 B.C.) show that the Orientalid sub-race of the Mediterranean races (Mediterranean *sensu stricto*—Orientalid—Iranian—Indid—Gondid; cf. von Eickstedt, Biasutti, Coon, Field 1956, Pöch), which must have been a very old race among the North Arabian Semites (Moscati), was already represented then in South Arabia, at least among the reigning class (Dr. Hella Poech, oral comm.). This agrees with the supposition of Conti Rossini (101, cf. 47) that the names of the chiefs of Punt mentioned by Hatshepsut and by Ramses II were Semitic (Parihu—*fariḥ*; Nahas—*naḥḥās*; cf. Brunner-Traut, 307; Wissmann 1957). That Punt was located at least partly on the Arabian side of the sea also becomes probable, I think, when we draw conclusions from the somatical features of people of Punt in Egyptian reliefs as early as the 5th dynasty (Sahurē, cf. Kees, 59). These features are similar to those of the Egyptians (cf. Pöch 1957).

W. F. Albright estimates that, in the desert climate along the interior foot of the highlands of Yaman, civilisation was beginning about the 15th century B.C. He assumes that this was due to an immigration from the north. His dating is partly based on the fact that the excavation in Hadjar b. Ḥumayd (cf. below) has shown that 4-5 metres of probably agricultural (irrigational) silt had been deposited before the foundation of that settlement. This foundation took place c. 1000 B.C. While 8 metres of silt were deposited during the existence of the settlement from c. 1000 B.C. to c. 200 A.D., the lower 4-5 metres may represent about half a millennium (R. Le Baron Bowen, 67, 117; Albright 1958).

It is peculiar that camel-riding and horse-riding both seem to have begun to spread in the second half of the 2nd millennium B.C., camel-riding from Arabia, horse-riding probably from the mountains of Transcaucasia. Hančar suggests that an increasing demand for sumpter animals for the transport of metals may have been a stimules to the intensification of horse breeding in mountain regions (397). Also the breeding of the one-humped camel in Arabia must have been accelerated in connexion with a growing demand for transport between South Arabia on one side, the Mediterranean lands and Mesopotamia on the other, a transport of frankincense, myrrh, precious stones and gold from South Arabia, of Indian and East African goods from the South and of cloth, products of civilisation and *objets d'art* (Segall 1957) and perhaps iron wares from the north. The introduction of waterproof plaster for irrigation works and cisterns in South Arabia, which had spread before in Syria since about 1200 B.C., must have impelled agricultural development "probably not before the 10th century B.C." (Albright 1958).

While the excavations of N. Glueck in Ezion-Geber (Smithson. Inst., Ann. Rep. 1941. Publ. 3651, 1942) prove that the reports of the navigation of Solomon and Ḥīrām to the gold land of Ōfīr refer to historical facts, the story of the queen of Saba' (Shebā), which is told in relation with the Ōfīr expeditions in 1 Kings 9-10, must also have some historical background (cf. Albright 1958, 3). At least it shows that camel caravans were travelling between South Arabia and Palestine in the 10th century B.C. Saba', Ofīr and Ḥawīlā are named one after the other as brothers in Genesis 10 (9th or 8th century, cf. Albright, *Arch.* 1953, 327), beside Ḥaṣarmāweth, among the sons of Yoḳṭān, son of 'Ēber. I can support the hypothesis that the gold-land of Ōfīr (1 Kings 9-10, 22[49]; 1 Chron. 29[4]; 2 Chron. 8[18], 9[10]; Job 22[24], 28[16]; Psalms 45[10]; Isaiah 13[12]) was in south-west Arabia on the Red Sea coast: in 'Asīr round Dhahabān (Sprenger, Moritz, Delbrueck 12, Wissmann 1957, 1959; cf. Glaser 357-384, Albright Arch. 1953, 212, note 14). In Somaliland, where some authors put Ōfīr, the outcrop of crystalline rock and of its dikes, the matrix of gold, is much smaller than in 'Asīr (cf. *Carte Géol. Afr.* 1952). On Saba' sending gold cf. 1 Kings 10, Isaiah 60[6], Ezech. 27[22], Psalm 72[15] (but cf. J. Ryckmans 1958).

The most plausible identification of the gold-land of Ḥawīlā of Gen. 2[11], 10[7], 10[29], 25[18], 1. Sam. 15[7] in my opinion as well as that of Niebuhr, C. Ritter, Sprenger, Moritz and others, is that with Khawlān. This name is known from inscriptions, from al-Hamdānī, and is still used today. North Khawlān bordered on Ōfīr. South Khawlān adjoined Saba'. That North Khawlān was highly renowned in Greece for its rich gold mines, probably at about 400 B.C., is explicitly stated by Agatharchides (C. Müller, *Geogr. Graec. Minor.*, 184 f; Wissmann 1957, esp. 1959).

In the genealogy of Genesis 10, the South Arabians are considered as being descendants of both Kūsh and 'Ēber. The descendants of 'Ēber and his son Yoḳṭān were settled as far as "Sefār, the mountain towards the East". Commonly, this Sefār is thought to be Ẓafār, the capital of the Ḥimyar in Yaman. But this town was probably founded about 109 B.C. (cf. below), when the Ḥimyar had occupied this region. It lay on a hill in the highlands of south-west Yaman and is not "a mountain towards the east". Fresnel, C. Ritter, Rödiger, Tkač and others suppose —and I believe they are right—that Sefār was Ẓafār (or Ḍufār), a town and region east of Ḥaḍramawt and Mahra-Land, which, however, is not known by this name in pre-Islamic inscriptions or literature, but only since the early Arab geographers. It is the best frankincense region of South Arabia. The eastern

mountain promontory and cape of this region is really the last region from which in antiquity ships left the coast to use the monsoon in the direction of India (Schoff, Frisk, *l.c.* later). It is also the last area of South Arabia towards the East with a settled, non-nomadic population. East of it, the great desert touches the sea as far as ʿUmān (cf. Lagarde 61, note; Vollers, *Ztschr. f. Assyr.* 22, 223 f. is of the opinion that Sefār of Gen. 10 is to be identified with Safārī in Baḥrayn. But this "*balad*" [Yāḳūt 3, 96, citing Ibn al-Faḳīh] was neither frontier place nor mountain.)

I think one may conclude that the "Table of Peoples" (Yahwist[8]) means by the "sons of Yoḳṭān" the agricultural peoples of South Arabia (map 4); and I suppose that in Gen. 25^{18}, the camel nomads of central and north-west Arabia were comprehended as the sons of Yis͟hmāʿēl, and in Gen. $37^{25, 28}$ and Judges 8^{24} as Yis͟hmāʿēlites. Gen. 25^{18}: "And they (the sons of Yis͟hmāʿēl) lived from Ḥawīlā as far as S͟hūr, which is east of Egypt, on the way to As͟hūr". They lived, it seems, in the triangle of desert-steppe between the agricultural countries of South Arabia (K͟hawlān), Egypt and Assyria (cf. Skinner, *Internat. Crit. Comment.*, and Kautzsch-Bertholet).

Certainly, troops mounted on an animal so well adapted to the desert, capable of enduring thirst so well and of travelling long distances so quickly, as is the camel, must have enjoyed great superiority when fighting against war-chariots drawn by horses. Albright says (*Stone Age* 1946, 120; *Arch.* 1953, 97): "Arab nomadism is conditioned by the domestication of the camel, which makes it possible for Bedu to live entirely on their herds of camels, drinking their milk, eating camel curds and camel flesh, wandering through regions, where only the camel can subsist, and making rapid journeys of several days, if need be, through waterless desert. The camel eats desert shrubs and bushes, which even sheep and goats will not touch".—Over long distances a riding camel is three times as quick as a horse. It can cover 300 km. in one day. The load of a caravan camel may weigh as much as 200 kg., that of a horse up to 150 kg. Arabia has not only bred races of transport camels and of riding camels of the lowlands but also stocks of mountain camels capable of going on fairly steep paths, as in ʿAsīr (Tamisier ii, 31, 47, 197) or in ʿAwāliḳ country and Ḥaḍramawt (own experience). When coming from the plains to an *ʿaḳaba* (pass) of the mountains, the camels of a caravan must be changed near the foot of the *ʿaḳaba* from one breed to an other. In Arabia, only the western slope of the Yaman highlands seems to be too moist for camel breeding. We must consider that, before the time of camel domestication, the donkey (and perhaps the onager) was the only transport animal in Arabia (cf. above). It is peculiar that the Bactrian camel, which had been domesticated in Tūrān about a millennium earlier than the time when the domestication of the calmer dromedary must have taken place in Arabia, never became important for riding but only for transport.

It looks as if the domestication of the dromedary went hand in hand with its employment for riding. This cannot be said of any other animal. Since excavations in Arabia did not go down to strata of early periods, our knowledge is based only on historical data. We are not yet able to see the source of an impulse for this domestication. Walz (1956) opposing Wiesner (1955) insists on the statement that the domestication of the one-humped camel was totally independent of the breeding of the Bactrian camel and the horse. It seems, however, that parallel inventions are rare in prehistory and history (Sauer *l.c.*, 2). The horse was in use in Mesopotamia since at least about 2000 B.C.; but troops riding on horseback are not mentioned there before 1130 (Nebuchadnezar I of Babylonia; Thomson in Pauly-Wissowa, vii, 109 ff.). As the Bactrian camel was bred in southern Tūrān since at least about 2100 B.C., it is improbable that it was not brought to Mesopotamia and farther south now and then in those turbulent periods of the early and middle 2nd millennium B.C. This may have given an impulse for the domestication of the one-humped camel.

A camel's head, part of a pottery jar found in the excavation of Had͟jar b. Ḥumayd in Bayḥān (ancient Ḳatabān) in South Arabia by W. F. Albright, was approximately dated by him to belong to the 8th (or 9th) century B.C. (van Beek 1952, 17, Walz 1956, footnote 54, Albright, letter 1957). The publication of a radiocarbon date for a low stratum of Had͟jar b. Ḥumayd (van Beek 1956) shows that Albright's preliminary palaeographical dating of a monogram found during this excavation is not too early but may be perhaps even a century late.

A relief of a dromedary rider from Tell Ḥalāf is from the 9th century (Walz). The first cuneiform records of camel-riding nomads seem to be the "Aramaean Bedouins" fighting against a vassal of Assur Naṣirpal in 880 B.C. A little later, 854 B.C., "Gindibu the Arab", from an Aribi district, fought against Salmanassar III, leading a troop of thousand camels. The article AL-ʿARAB (1) by A. Grohmann contains a summary on the Aribi country and the Arabs in the 9th to 7th centuries B.C. from cuneiform data. In this period, Aribi is the northernmost part of Arabia between Syria and Mesopotamia, including the Palmyrene and Wādī Sirḥān. The Arabs are its nomadic and oasis inhabitants. The central oasis Adummatu is, according to Grohmann and Musil (1927 531 f.), Dūmat al-D͟jandal in the D͟jawf. The "kings" are chiefs partly of oasis settlements, partly of nomadic tribes. This state of affairs is also meant in Jeremiah 25^{24}: "The kings of Arabia and all the kings of the Arabs who live in the desert". (The first mention of ʿArāb in the Bible is in Isaiah in the late 8th cent. B.C.). Bāzu, against which Assarhaddon undertook a long expedition in 676 B.C., is, according to Weidner's latest discoveries, in Eastern Arabia, in the hinterland of Dilmūn (Baḥrayn), not as Musil (1927, 482 f.) thought, in Wādī Sirḥān (Albright, letter).

It is evident that the caravan roads, especially the "incense road" from G͟hazzat on the Mediterranean and from Damascus by Maʿān (Musil 1926, 243), Daydān (al-ʿUlāʾ) and Yat͟hrib (al-Madīna) to Ragmat (Nad͟jrān), Maʿīn and Sabaʾ (cf. Albright 1953, Wissmann 1957, Segall 1957) played an important political rôle, *e.g.*, when in 732 B.C. queen Samsī of Aribi joined a great coalition including the state of Sabaʾ, the king of Damascus, the important oasis of Taymāʾ and tribes near Taymāʾ and Daydān against Tiglath-Pilesar III. The first sovereign of Sabaʾ named in cuneiform inscriptions, probably a *mukarrib* (priest-king), brings tribute to Sargon II in 715 B.C. (cf. Albright, in *BASOR* 143, 1956, 10; idem, 1958; Wissmann 1957). The tributes received by Assyrian kings in this period from different queens and kings of the northern half of Arabia show that long-distance caravan traffic must have been considerable. Cattle, gold, silver, lead, iron, elephant skins, ivory and cloth were transported (Caskel 1954).

It must be emphasised that South Arabia, which was represented by Saba' since at least the 10th century (cf. Albright, in *BASOR*, 1952, note 26, 1958), was a country with a numerous and farming population and with but little and unimportant nomadism, a country producing aromatic goods, especially frankincense (Exodus 30[34], 1 Kings 10, Isaiah 60[6], Jer. 6[20], cf. J. Ryckmans 1958). South Arabia certainly introduced Indian and East African wares to its ports, and it must have already monopolised the traffic on the "incense roads" to the north-west and by central Arabia to the north-east (map 1) in this period to some degree. (On the strength of Saba' in the 8th to 6th centuries, cf. von Wissmann 1957). Perhaps the Chaldaeans lived in ʿUmān in those periods and mediated between Saba' and Mesopotamia (and India?), before they occupied Mesopotamia, where Chaldaean kings begin in 625 B.C. (cf. Albright, in *BASOR*, 1952).

Albright suggests (cf. van Beek 1952) that no time was more opportune for the commercial expansion of Saba' westwards into Ethiopia than about the 10th century B.C. "Egypt, which previously enjoyed exclusive trading rights in Ethiopia and Punt by land and by sea, was unable to maintain its commercial relations with the south after the fall of the New Empire." According to Albright, *boustrophedon* Sabaean inscriptions in the temple 'Awa[m] or modern Yeḥā on the plateau of northern Ethiopia east of Aksūm (Littmann 1913, Nos. 27-32 and D. H. Müller, *Epigraph. Denkmäler*, Yeha 5) palaeographically belong to the 5th century (letter from W. F. Albright, March 1957, cf. Conti Rossini 102). An inscription on the base of a rather archaic statue recently found in Maḳallē (Caquot and Drewes) seems to be somewhat earlier. So, even in the new chronologies of A. F. L. Beeston (in *BSOAS* 1954) and Pirenne (1956 b), who emphasise a "rejuvenation" of the early South Arabian chronology, the 5th century B.C. would not be too early. Sabaean colonisation was already firmly established in this region at that time. The probable name of the temple of modern Yeḥā, 'Awa[m], was also the name of the great oval temple of the state god of Saba' near Mārib. In a remarkable *boustrophedon* inscription on an incense altar of Maḳallē in Abyssinia (Caquot and Drewes, 30-32), a "mukarrib of Daʿmat (place near later Aksūm) and Saba'" dedicates (the altar?) to Almaḳah, which was the main state god of South Arabian Saba'. J. Ryckmans suggests that, in a period before the first known Sabaean inscriptions of Mārib and Ṣirwaḥ (which probably date, from the 8th century B.C.; Wissmann 1957), the centre of Saba' was in the mountains and highlands of present southern Yaman, round Dj̲abal Baʿdān and Dj̲abal Ḥumaym (—Dh̲āt Baʿdān and Dh̲āt Ḥumaym were the most important sun goddesses of Saba'—), and that the region of Mārib in the north-east as well as North Abyssinia in the West were both colonised from this area (J. Ryckmans 1958; cf. Albright 1958).

Glaser (387 ff.) and von Wissmann-Höfner suppose that Ḳana' and ʿAdan, the best natural ports of South Arabia on the Indian Ocean, are named as Kannē and ʿĒden in Ezekiel 27[23] (early 6th cent. B.C.). Ezekiel says: "Ḥārān and Kannē and ʿĒden" (M:) "merchants of Sh̲ebā" or (S:) "they were thy merchants". Mostly all three places are identified in Northern Mesopotamia, where an ancient Ḥārān is well known (cf. Cooke, *Int. Crit. Comment.*). Isaiah 37[12] and 2 Kings 19[12] mention this northern Ḥārān along with the Bēnē ʿĒden: "Gozan, Ḥārān, Reṣef (in Palmyrene) and Bēnē ʿĒden in Tel'assar". But al-Idrīsī mentions Ḥārān al-Ḳarīn in South Arabia between North Kh̲awlān and "Bīs̲h̲at Buʿtān", (which name is a mistake for Bays̲h̲; Grohmann ii, 1933, 131). The location is in the Tihāma lowlands north of the present northern frontier of Yaman, somewhere near present Abū ʿArīsh. Ritter (*Arabien* i, 189, 193) and Büsching supposed that this is the Ḥārān mentioned in Ezekiel. The difficulty is that Ḳudāma and Ibn Kh̲urradādh̲bih do not mention a place of this name on that route, but al-ʿUrs̲h̲s̲h̲ (Abū ʿArīs̲h̲s̲h̲) instead. I suspect that there is some mistake in al-Idrīsī's text. But there are different places named ḤRN in Ancient South Arabian inscriptions: Ḥirrān near Ḳaʿṭaba north of ʿAden, Ḥirran south-west of Maʿīn and Ḥirrān north of Dh̲amār (on the last cf. W. B. Harris, 272 ff.). Perhaps the Septuagint (S) translators changed the text from "merchants of Sh̲ebā" into "they were thy merchants", because they knew the northern, but not the southern Ḥārān and ʿĒden and therefore could not understand the meaning. In connexion with "merchants of Shebā", one should consider that Saba' (Sh̲ebā) was a state, not a town, and that the three places mentioned may have belonged to this state.

Ezekiel 38[13]: "Sh̲ebā, Dedh̲ān, merchants of Tarsh̲īsh̲" (Tartessos or Sardinia) shows opposite outposts of Ezekiel's *terra cognita*. (Dedh̲ān is the Daydān of South Arabian inscriptions.)

Considering this important position of South Arabia in this period and its central place in the oldest seafaring area, that of the Indian Ocean, we must keep in view that the North and Central Arabian home of camel nomadism was surrounded by civilised agrarian countries, on all sides where it was not touched by the sea.

The difficulties of crossing the desert with long distances between watering-places could only be mastered after the domestication of the camel. The desert routes of greatest importance for traffic were those between Mesopotamia and Syria. But also the difficulties in crossing Arabia from Mesopotamia and from the Mediterranean coasts to the fertile highlands of South Arabia could more easily be overcome by camel caravans. The springs and wells of the northern part of Arabia became important as resting places of caravans and as commercial and political centres. As the nomads were breeding the camels needed for the caravans, their tribes were interested in a peaceful traffic and it was expedient for them to join coalitions among each other and with the oasis town kingdoms on the main routes.

Since Tiglath-Pilesar III (748-725), north-western Arabia, including the northern part of the incense road from Daydān to Gh̲azzat may have become more tightly bound to Assyria, and later to Neo-Babylonia, after each conquest. It seems to be of great importance for the cultural and religious development of the "Arabs", that Nabūna'id (Nabonidus) of Babylonia conquered Taymā' in 550 B.C. and that he reigned there for eight years and made an expedition as far as Yath̲rib. He built a palace and temple in Taymā' and made this place the centre of an archaistic religion and cult round the Aramaean moon god Sīn, perhaps with the sun disc resting in the crescent as the main symbol of this religion (Musil, 1928, 224 ff., Moortgat, Segall). There should be investigations on the close resemblances between this cult and that of South Arabia and Ethiopia. SYN was the state god of Ḥaḍramawt since the earliest inscriptions of this state. (Albright

1952, note 8, brings reasons for an early introduction of this god into Ḥaḍramawt). ʿĒzānā of Abyssinia changed the crescent and disc for the cross on his coins when he turned to Christianity (4th cent. A.D.) (Littmann 1913, i, 60).

The exceptional temporary position of Taymāʾ may have stimulated the other town states of the oases of Arabia Deserta to partake to some degree in the civilisations of the surrounding countries in the north-east, the north-west and the south, while trying to preserve or to re-establish always again a certain amount of independance. Different scripts were used and developed. Even the clansmen of the nomadic tribes knew how to write. Nevertheless, pure camel nomadism was common. Agatharchides and Artemidorus (Diod. in C. Müller, *Geogr. Graec. Minor.* 184, Strabo xvi, 4, 18) in their accounts on the tribe of the Debai in the lowlands (Tihāma) of ʿAsīr write: "They live merely from their camels. From these they fight, on these they travel. Their food is camel milk and camel meat".

The scripts of the rock graffiti of the nomads of Arabia Deserta, which are spread from near the Ṣafāitic area south of Damascus and from the Sinai peninsula to the borders of Naḏjrān in South Arabia, form a unit though with strong regional (and probably temporal) variations. They have been classified as T̲h̲amūdean scripts, although but a part of these graffiti have been written by the tribe of T̲h̲amūd in its area round Daydān (Littmann 1940, van den Branden, J. Ryckmans 1956). In many respects these scripts are (and remained?) more archaic than the scripts of the settled populations, which were altered by their adaptation for monumental inscriptions (cf. J. Pirenne 1955, 44 ff.). Related graffiti are even found in South Arabia especially along the desert margins (cf. Höfner, and Jamme 1955). That all "Thamūdean" inscriptions seem to have been written by nomads shows that the nomadic tribes must have had some awareness of interdependence and a certain spirit of solidarity and that their life was separated and rather independent from the oasis town states.

It is evident that this situation of camel nomadism in Arabia was very different from what we know of horse-riding nomadism in the northern steppes of Eurasia. One main reason for the strong difference certainly is that the long and hard winters of the north do not permit more than one extensive crop and hinder the development of oases, although humidity is greater. Where the sub-tropical desert is dotted with oases of restricted size as in many parts of Arabia north of the line from Wādī Bays̲h̲ to Naḏjrān and to the Rubʿ al-K̲h̲ālī, it seems that a balance of power could result there to some degree between the nomadic tribes on the one hand and the merchant town states on the other, while probably the farmers of the oases had often to live in bondage to townsmen or to nomads.

The history of nomadism in Arabia is closely connected with the word Aʿrāb. In Semitic languages and pre-Islamic times, this word was only used for inhabitants of the Bedouin and oasis regions north of the Rubʿ al K̲h̲ālī. It especially meant the camel nomads but also included the oasis dwellers. Even Muḥammad used the word *aʿrāb* only for Bedouin. Only the Greeks have transmitted this name to the whole peninsula, probably already after the expeditions of Darius (Scylax). Theophrastus (372-287) calls Arabia τῶν Ἀράβων χερρόνησος (*Hist. Plant.* ix, ch. 2, § 2). Eratosthenes (late 3rd century B.C., Strabo XV, 4, 2) gives its division into Arabia Eudaimōn and Arabia Erēmos (Arabia Felix and Arabia Deserta of the Roman period). But already Euripides mentions "Arabia eudaimōn" in his Bacchae (16-18), and Aristophanes (Aves 144 f.) a "polis eudaimōn on the Erythraean Sea", both in the late 5th century B.C. The South Arabians never called themselves ʾAʿrāb.

We have no knowledge about the pre-Islamic history of the nomadic tribes south of the Rubʿ al-K̲h̲ālī, north and east of Ḥaḍramawt and west of ʿUmān. To day, they are genuine camel nomads possessing some *g̲h̲anam*, just as those of the North. They still have holy rocks and holy places near wells, where they bury their dead (van der Meulen, own experience, Thesiger). But they do not live in tents. They have tropical clothing and south-semitic dialects. In mountain regions they use caves for shelter. They do not possess horses. Unlike the northern *badw* they have stayed outside of known coalitions.

The fate of camel nomadism in Arabia was closely connected with that of caravan trade. So the decline of this trade must have been of great importance for the nomad. This decline slowly set in in the 4th or 3rd century B.C., when the tolls, which had to be paid on the road were constantly increased because of the political division of South Arabia into different states (Pliny xii, 14, 65). It became stronger when, from round 115 B.C., the straits of Bāb al-Mandab were opened for direct traffic from Egypt to India. The overland incense traffic almost vanished, when this oversea traffic from the Roman Empire to India became important from about 48 B.C. (Strabo, ii, 5, 12, *ibid.*, xvii, 1, 13, Pliny, vi, 23, 104). This must have been a hard blow for the kingdoms of South Arabia and even more for the Bedouins who took part in the overland traffic and sold camels for this.

The name Arrhabitai (Aʿrāb) was used by the great Abyssinian (Aksūm) king who erected the Monumentum Adulitanum (cf. below, section d), of which we know the Greek version, probably before the middle 2nd century A.D. This is in his account of the submission of the Ḥiḏjāz and ʿAsīr north of the Sabaean and south of the Roman frontiers. Here "Arrhabitai" seems to signify the population of the hinterland of the Kinaidokolpitai who, according to Cl. Ptolemy, lived on the coast of Ḥiḏjāz and of ʿAsīr.

Aʿrāb Bedouins had begun to interfere in the conflicts in South Arabia towards the 2nd cent. A.D. (J. Ryckmans 1951, 215 f., 1956). In the inscription Nāmī 71 to 73, ʾAʿrāb and Kh-m-y-s are mentioned together several times. Perhaps Kh-m-y-s (K̲h̲umays ?, probably derived from k̲h̲ums) means the regular army (M. Höfner, letter), while Aʿrāb means contingents of northern Bedouins on camels and on horseback. The inscription Nāmī 71 to 73 belongs to the third century A.D. (king Alhān Nahfān; cf. Mordtmann-Mittwoch 218-220). The inscription "Ryckmans 535", belonging to the same period, shows that camels and horses were used in the South Arabian armies (G. Ryckmans, in *Muséon*, 1936, 154 f.; on the chronology of this period, cf. v. Wissmann 1957). It should be investigated if there are earlier convincing indications of camel troops in South Arabia (cf. v. Wissmann-Höfner, 10, 46). (The inscription "Ingrams 1" does not point to such conditions. The preliminary translation we used in v. Wissmann-Höfner, 333, was wrong; cf. Drewes).

In 328 A.D., the inscription of al-Namāra, east of

Djabal Ḥawrān, in the Syrian desert (*RES* 483), tells us: "This is the grave of Imraʾ al-Ḳays (mrʾ/Ḳys) b. ʿAmr, the king of al the Aʿrāb, who..... and advanced successfully (?) to the siege of Nadjrān, the capital of Shammar" (Lidzbarski). We see that Imraʾ al-Ḳays calls himself king of all Aʿrābs, although he is not in possession of Nadjrān on the north-eastern margin of agricultural South Arabia, but perhaps king of most of those Bedouin tribes who live in tents, i.e. Aʿrāb. Nadjrān is at that time a town of "Shammar", probably Shammar Yuharʿish (cf. Pirenne 1956, Jamme 1957, J. Ryckmans 1957, 22, note, Pirenne 1957, 59, note 4), who assumed the title of "King of Sabaʾ and Dhū Raydān and of Ḥaḍramawt and of Yamnat" (Dhū Raydān stands for the Ḥimyar. Yamnat probably is a name of the coastal region south of Ḥaḍramawt; Wissmann 1959). This title means that Shammar was or claimed to be king of the entire agricultural country of South Arabia.

In the early 5th century, when great parts of Northern Arabia belonged to the domain of the South Arabian king Abikarib Asʿad, who according to tradition undertook a campaign into Persian territory, the title was enlarged and now was worded as follows: "King of Sabaʾ and Dhū Raydān and Ḥaḍramawt and Yammat and of their (*pluralis majestatis*) ʾAʿrāb in the highlands (Central Arabia) and the Tihāma (lowlands of Ḥidjāz and ʿAsīr)". Again only inhabitants of Desert Arabia are meant by *aʿrāb* (cf. map 4).

The constant wars between Rome and Persia and between Ethiopia and Sabaʾ and the economic decline of the Mediterranean regions, the rising competition of sea traffic—from which South Arabia had become eliminated—against overland traffic and trade, the decay of feudalised South Arabia and its internecine feudal and religious wars in the 3rd to 6th centuries A.D. gave rise to great insecurity in Arabia (cf. Beeston 1954, Sidney Smith, J. Ryckmans 1956 b). In the regions of steppe climate in the fertile cresent, nomadic tribes intruded into country of rain agriculture. Even oasis areas decayed or were given up entirely, especially in South Arabia along the borders of the desert, and in Ḥaḍramawt (cf. v. Wissmann-Höfner, 121 f, Le Baron Bowen), where camel nomadism penetrated from the north by invasions as well as by gradual infiltration. A renowned example is the neglect, bursting and dilapidation of the dam of Mārib, the old capital of Sabaʾ, and the total breakdown of this town and its oasis. In Yaman and ʿUmān, the strong feudalisation of the highland farmers, the *ḳabāʾil*, in their fortified castle-like dwellings, led to an extreme dissipation of power and even to anarchy, as well as to tribal organisation and to feuds similar to those of the barbarised camel nomads. Gradually the nomadic population became more and more migratory over long distances in Arabia. Such migrations of entire tribes were mainly directed from South to North. In the South a part of the farming population became nomadic, while in the north the wars between Rome and Persia probably attracted such nomads, as could not sell their camels for the declining caravan trade, to serve in camel troops on the side of one of the two opponents. The Arab proverb: "Al-Yaman is the womb (the cradle) of the Arabs, and al-ʿIrāḳ is their grave", already suits this period. Nevertheless there have also been migrations in the opposite direction, like that of the Kindites into Ḥadramawt in the 6th century A.D. which according to al-Hamdānī amounted to more than 30,000 men (Forrer, 134 ff.). With the decline of power of the surrounding states, which were based on agriculture and had a much higher population density, Bedouin influence was rising. Caskel (1953) demonstrates that, before this period of barbarisation, the social and economic way of living, which we call Bedouin, did not fully obtain the character familiar to us by the descriptions of Doughty, v. Oppenheim and Lawrence. Writing now disappeared among the nomads, but oral tradition flourished.

It would be interesting to know when the combined use, during a *ghazw*, of the camel for the riding over long distances and of the horse for final attack, was employed for the first time, a skilful practice which was still carried out by ʿAbd al-ʿAzīz b. Suʿūd. King Malchus (Malik) II of the Nabataeans (al-Anbāṭ) sent 1000 horses and 5000 foot for the assistance of Titus in his attack on Jerusalem about 67 A.D. (Hitti, 68). The rock-drawings accompanying the Ṣafāitic inscriptions in the Ḥarra south-east of Damascus (2nd to 4th centuries or longer; cf. Littmann 1940) show that these true Bedouins made their razzias combining horse and camel. We also hear from Ammianus Marcellinus (4th cent. A.D.) that the Blemmyes made their raids in that way (xiv, 4, 3).

In South Arabia, the horse seems to have been always of smaller importance than in the north. Nevertheless we hear that among the presents sent by Yithʿaʾamar of Sabaʾ to Sargon in 715 B.C. there were horses. The Periplus Maris Erythraei (until 80 A.D.) tells that horses were shipped from Egypt to Mouza (Maushidj; cf. Wissmann 1959) by the Greek merchants. Strabo (XVI, 4, 2 and 26), when giving a short but good report on the agriculture of South Arabia, says that horses were lacking, and that their functions were carried out by camels. We have but few presentations of horses from South Arabia, which seem to be importations or copies from the north or to belong to late periods. Probably the horse only became of greater importance in South Arabia since Bedouin troops were used, *i.e.*, since at least the 3rd century A.D. The inscription G. Ryckmans 535 (in *Muséon*, 1956, 140 ff.) from the late 3rd century A.D. tells us that horses and camels were used in South Arabian armies, and that there were horsemen beside the regular troops.

d) *The Appearance of Camel Nomadism in North Africa.*

It is surprising that the state and civilisation of the great river oasis of Égypt blocked for so long a period the spread of camel breeding and camel nomadism. It exercised a strong frontier control and showed an aversion against the Asiatic nomad. There is no specifically Egyptian word for "camel" (Albright 1950; cf. Préaux).

It has been supposed that the Sabaeans introduced the camel into the lowlands of North Ethiopia, when they colonised this country, perhaps some time in the beginning of the last millennium B.C., bringing with them the plough, terracing, and artificial irrigation. We have mentioned above that the colony was firmly established and probably old in the 5th century B.C. Even Conti Rossini supposed such an early introduction of the camel (103, 106). Yet he did not find any proof. There is no mention of the camel in the "Sabaean" inscriptions of Ethiopia (cf. above); but this again does not mean much, as the number of these inscriptions is still small. However, we may not forget that even today the camel has not been introduced into the highlands of Ethiopia, but has only spread in the lowlands and on the lower slopes. Near the harbours of northern Ethiopia, this area is a narrow strip of land, just as in Western Yaman.

There is one piece of information and one linguistic fact from which we may probably conclude that the Sabaeans did not introduce the camel to the African side of the Red Sea: Agatharchides (perhaps about 130 B.C.) gives a good and detailed description of the nomadic Troglodytes behind the African coast of the Red Sea north of Ethiopia (the later Blemmyes or Bedjā). He does not mention any breeding of camels but only of cattle and goats (Diodor., cf. C. Müller, *Geogr. Graec. Minor.* i, 153). Probably Agatharchides has taken over his story from a much earlier description (cf. von Wissmann 1957).

The linguistic fact is that the name of the camel in the Geʿez language as well as in all the Semitic languages of Ethiopia is *gamal* as in the North Semitic languages and in Egypt, while ancient South Arabia merely used the word "*ʾibil*" for it (Höfner by letter). It is only in one single inscription of the 3rd century A.D. (G. Ryckmans, Nr. 535) and then in the 6th century A.D. (Yūsuf Dhū Nuwās, G. Ryckmans, Nr. 507) that the word "*gamal*" turns up in South Arabian inscriptions. The first known mention of the camel in the Ethiopic language is in the 4th century A.D. in Littmann, *Aksum* 9 (1913).

We do not hear anything of the presence of the camel from hieroglyphs or from Greek or Roman authors or any sculpture or rock drawing either in Egypt or in any part of North Africa in the Hellenistic period. There is one exception, however: When Ptolemy II Philadelphus (285-246) repaired the old roads from Koptos on the Nile to the Red Sea (173 km.) and opened a longer road from the same place to his new harbour town Berenikē Troglodytikē (380 km.) by founding eleven stations, he did this not only for foot passengers but also for merchants travelling on camels (Strabo XVI, 4, 24, XVII, 1, 45, 65. Pliny, h.n. VI, 102, 168; Berenikē Troglodytikē in 23° 51 in the Bay of Sikkhat Bandar al-Kabīr). Strabo says that Koptos became a town belonging to Arabs as well as Egyptians, and that Arabs worked in the mines between Koptos and Myos Hormos. Pliny also mentions Arab tribes in the region of Berenikē. Philadelphus had reopened the canal between the Nile and the Red Sea. He founded naval bases along the western coast of the Red Sea (cf. below). It is probable that the caravan camels and their Arab owners were introduced by Philadelphus and were transported by him to Philotera, to Myos Hormos and to Berenikē Troglodytikē over sea from the coast of Northern Ḥidjāz (Ritter II, 703). Ptolemy II seems to have put this coast of Northern Ḥidjāz under his influence by establishing friendly relations with Daydān on the incense road, thus being able to divert the incense traffic which until that time had followed the road from Sabaʾ and Maʿīn to Ghazzat on the Mediterranean, from Daydān to a new harbour on the Red Sea (T-sh-y-t ?) and then by boat to Egypt (cf. Tarn, appendix by Sidney Smith; Delbrueck). As Daydān was a colony of the kingdom of Maʿīn, which had developed north of Sabaʾ, the sarcophagus inscription of an incense trader of Maʿīn, living in Memphis, probably of 264 B.C. (Albright 1953, note 12), confirms this connection. This trader brought myrrh and other wares to Egypt on his own ships, and he brought byssos clothes to Arabia (Rhodokanakis, Kortenbeutel). As Ptolemy II and his successors were able to transport elephants on large boats on the Red Sea, they were easily able to transport camels. The Arabs who were brought to Egypt with their camels probably knew how to write the so-called Thamūdean script of northern Ḥidjāz. Numerous Thamūdean inscriptions have been found in the eastern desert of Egypt, especially along the roads (Littmann 1940, 3, Green, J. Pirenne by letter).

We now may ask again, how the camel was brought to Ethiopia. There are two possibilities, I think. It was introduced either by Ptolemy II or his successors, or by the kings of the Ḥabashāt, of Aksūm, in about the 2nd century A.D.

Ptolemy II founded the fortified town of Ptolemaïs Thērōn on the northernmost part of the Ethiopian coast (cf. the stele of Pithom in Egypt). One of the stelae found in Adulis south of modern Maṣawwaʿ by Cosmas Indicopleustes (Winstedt) reported that Ptolemy III Euergetes (246-221) and his father hunted elephants in that region. We do not know when *Berenikē hē kata Sabas* (Strabo xvi, 4, 10, Berenikē Epidirēs of Pliny VI, 29, 170; Conti Rossini against Kortenbeutel) was founded near modern ʿAssab, and when this southern Berenikē was replaced by a colony called Arsinoē (Conti Rossini 60 ff., map, Strabo xvi, 4, 14, Pitschmann, Arsinoē, Pauly-Wissowa). We only recognise that the Ptolemies put the whole African coast of the Red Sea more and more under their naval influence and power. Ptolemaic shipping and trade were under strict state control. Before this time, Sabaʾ may have had still influence in its old Ethiopian colony, especially on the coast, in spite of its difficult position in South Arabia between the new strong states of Maʿīn in the North and Ḳatabān in the South, Ḳatabān reaching as far as Aden and the Bāb al-Mandab straits. There was a Sabaïtikon Stōma south of Ptolemaïs Thērōn (Artemidorus according to Strabo), there was a place called Sabat (Shabat ?) opposite the island of Maṣawwaʿ (Strabo, Pliny, Cl. Ptolemy), and there was "the wealthy town of Sabai", probably in the bay of modern ʿAssab (Strabo xvi, 4, 8-10, cf. Conti Rossini, Map pl. 16). On account of the internecine wars in South Arabia, the Ptolemies must have found it rather easy to interfere on the Ethiopian coast. As they

transported elephants in large boats from this coast to Egypt; they may have brought camels to the inhabitants of this coast from Northern Ḥidjāz. Before about 115 B.C., the Ḳatabānian harbour of ʿAden was an important place of trans-shipment, where freights came from Egypt and India (cf. von Wissmann 1957). When at that time the new state of Ḥimyar replaced Ḳatabān in ʿAden and ʿAden was destroyed, Ptolemaic ships were more and more successful in sailing directly to India.

It seems that the kingdom of Aksūm (Ethiopia), which is for the first time mentioned in the Periplus of the Erythraean Sea (about 82-96 A.D.), was a powerful state already at that time and learned much from Graeco-Roman navigation in the Red Sea. Then a king of Aksūm, who probably lived in the mid 2nd century A.D. (Winstedt; Mommsen, *Römische Geschichte* V, 599; Mordtmann-Mittwoch 6) according to the Monumentum Adulitanum, which he erected, built a great empire from the frontiers of Egypt to Somaliland (cf. Dittenberger, 287-296; Littmann 1913, i, 42 ff.). He conquered the coast of Arabia and its hinterland from Leukē Kōmē in Northern Ḥidjāz as far south as the frontier of the Sabaean kingdom (Wādī Baysh in southern ʿAsīr; Wissmann *l.c.*, 1959). He mentions that he used a navy for this conquest. His name is not known. The Monumentum shows that Aksūm had become a sea power at that time, perhaps supported by Rome. The Monumentum was written in the Greek language and script. Already in the first century A.D. (Periplus) Aksūm had cultivated the Greek language. So it may also have been the king of the Monumentum Adulitanum, who introduced the camel to Ethiopia from his colony in Northern Ḥidjāz. That period must have been a time of quickly rising national consciousness in Ethiopia, in which an official Ethiopian script was probably developed, based on the monumental and cursive Sabaean scripts and influenced by the Greek (left to right, numerals) and the "Thamūdean" script (cf. J. Ryckmans 1955, Ullendorff, Drewes). In the third century, the South of the Red Sea seems to have been under Ethiopian supremacy, while direct trade between the Roman Empire and India had become reduced (Sir M. Wheeler, Wissmann 1957).

The first African people who became camel breeders after those Arab tribes, which had been probably introduced to Berenikē Troglodytikē and Myos Hormos by Ptolemy II, seem to have been the Blemmyes or Bedjā (Pauly-Wissowa, "Blemmyes", by Sethe). According to Strabo xvii, 786, 819, and Ethiopian inscriptions, they lived south-east of Syene between the Nile and the Red Sea. In Strabo's time they were "not very numerous or warlike" (xvii, 1, 53), breeding sheep, goats and cattle. They were no danger for the Empire then. In the following centuries, however, they must have learned camel breeding from their Arab neighbours to such a degree that they became real, and "excellent", raiding camel nomads. Under Decius (249-251 A.D.), their camel razzias became difficult for the Roman Empire. Twenty years later, they were already completely masters of the roads between the Nile and the Red Sea. The trade from Egypt to India on that route had become totally dependent on the good will of the Blemmyes (cf. Bensch, 264 f.). Under Probus (276-284) the Blemmyes temporarily occupied Koptos and Ptolemaïs. Diocletian had to pay tributes to them in 296 on the frontier near Syene. This emperor had called the "Nobatae" (Nobades, i.e. Nubians ?) for help against the Blemmyes and had given them the Dodekaschoinos as a base of settlement (Procopius, Persian War XIX. Pauly-Wissowa, s.v. "Nubai").

In the fourth century A.D., the Blemmyes and the Arab tribes of Egypt with their camels and now also horses became always more dangerous to the Empire by their raids (Ammian. Marcellin. xiv, 4, 3). The Empire had to draw up troops of camel riders against them. At the time of emperor Valens (rd. 370), new Arab tribes migrated across the Isthmus of Suez and occupied the northern part of the "Arabian" Desert east of the Nile, probably as far as the latitude of Thebes. They must have reinforced camel nomadism and fighting on camel's back in the regions round Egypt.

On the rock drawings he discovered in the "Arabian" Desert east of the Nile, H. A. Winkler recognised a "Blemmyan" group, in age between that of cattle breeders and that of the Islamic era. That this group must be dated in this period seems to be certain (Greek and Coptic letters, Hellenistic influence, typical brands). It mostly shows armed people (with bow, spear, sword and rectangular shield) riding on camels or also on horseback. Here, the camel is the main livestock, shown beside horse, donkey and cattle. Winkler says (1938, 41): "In all the former rock drawings peace prevails. In the pictures of the camel-owners all is war. And war they brought, wherever they went".

The author of this article is not qualified to describe the development of nomadism in the dry belts of Africa. When taking the rock drawings as a basis, it looks as if there has been an early period of cattle-breeders, not only in the steppes of the Sūdān and East Africa, but also in the regions of the Ṣaḥārā. Even if we admit that the climate may have periodically been a little moister than at present, it may be doubted whether horned cattle were the main livestock in those desert regions, for which they are not well fitted, although it may be that cattle were introduced earlier than sheep and goats. It seems probable to me that, when nomadic life was completely installed, cattle as holy animals were represented on the rocks although they were of secondary importance in the nomadic economy compared with the goats and the sheep. We may remember that the "Thamūdean" rock drawings in Western Arabia show the hunted animals and the camel, but very little of goats and sheep, although we can be sure that the nomads of those regions then possessed flocks of these animals.

According to Lhote 1953, rock drawings show that in the area of Ghadamēs, Fezzān, Tasīlī and Ahaggar, the horse and a war chariot were introduced in an early period, according to Lhote's hypothesis about 1200 B.C. by "Sea Peoples" from the Aegaean region. Among those war chariot people riding was developed at some time later on without rein and snaffle, just in the way ancient authors describe horse riding of the North African nomads of their own time (Strabo, Polybius, Silius Italicus). In the middle of the 3rd century B.C. riding had fully replaced the use of the war chariot in North African wars. Nomadic razzias were carried out on horseback.

It is curious that we know nothing about the ways the camel was introduced into North-West Africa and the Ṣaḥārā. In literature the camel appears for the first time there in Caesar's *De bello Africano* (c. lxxiii, 4) for the year 46 B.C., when 22 camels were among the booty taken from king Juba. But Juba was a man with wide and varied scientific, especially geographical, interests, and a collector in

the Hellenistic style. It seems probable that he had imported these animals to try out their usefulness in North Africa. Only in Cyrenaica the camel may have been bred in greater numbers in that period: It is shown on coins of the mint of L. Lollius, a commander in Cyrenaica under Pompey. Then there is a hiatus. From the 2nd or perhaps 3rd century, a statuette of a camel rider and a relief showing a hippodrome with a race of chariots drawn by camels were found in the necropolis of Hadrumetum (Sousse, Tunisia). The next indication in literature, however, is for the year 363 A.D. The Roman *comes* of the province of Africa demands 4000 transport camels from the inhabitants of Leptis Magna on the Syrte (Ammian. Marcellin. xxviii, c. 6, 5, xxix, 5, 55). About 400 A.D. there is the report of Synesius that herds of camels and horses then formed the wealth of the inhabitants of Cyrenaica. In the 5th century reports on camel breeding become always more abundant in North Africa, mainly in the regions round the Syrtes.

Most authors, especially Gautier (190 ff.), Gsell and others have concluded from these rather meagre sources that the camel was eventually introduced to North Africa across the Mediterranean Sea. When, however, we consider the position of the Blemmyes in Upper Egypt in the 3rd century A.D. (cf. above), the chain of oases west of Egypt also seems to be a probable route. Besides, we must not forget that any way south of the Libyan Desert remained outside the area of which we have historical reports.

Perhaps future linguistic research as well as excavations may give us help in solving these questions. In the language of the Bedjā (Blemmyes) the main name of the camel is *ḳām* (*kắm*), in northern Nubia it is *kam* (*kamti*) (Professor Dr. O. Rössler by letter). The Tibbu call the camel *góni*, and this name seems to have been spread by them far over the eastern part of the Sūdān, where Tibbu are told to have introduced the camel (Bensch 171 according to Barth). So in the Mandāra Mountains (northern Cameroons) the camel is called *gôme*, the male camel *elde gôme* (Barth, ii, 534, footnote). Even the Masai call the camel *en-tomes* (Nandi, *tombes*). In the Berber languages including that of the Tawārik, a main designation of the camel is *algh*ə*m* or *alem*. From *algh*ə*m* the Haussa name *raḳumi* and the Nupe name *ṛakum* are certainly derived (O. Rössler). All these names do not seem to be derived from Arab names, but there are other names showing such an etymology.

(H. von Wissmann)

III. Pre-Islamic Arabia

(a) Sources.
(b) History.
(c) Political Relationships.
(d) Moral Outlook.
(e) Religion.

(a) *Sources*. Our knowledge of the Bedouin in pre-Islamic Arabia is derived mainly from two sources. Firstly, there has been preserved a certain amount of pre-Islamic poetry. Secondly, there are commentaries on this poetry and on old Arab proverbs, composed by Muslim scholars of the second Islamic century and later, and containing much traditional material about events in pré-Islamic times; this

material was also collected by other scholars in special works. The authenticity of pre-Islamic poetry has been denied by modern scholars, notably by D. S. Margoliouth and Ṭaha Ḥusayn, but their theories have not been accepted by the majority of scholars who, while admitting some falsifications, consider that on the whole pre-Islamic poetry has been faithfully transmitted (cf. A. J. Arberry, *The Seven Odes*, London 1957, 228-45). Similarly, the historical traditions, though once regarded by Western scholars as worthless, are now mostly held to have some factual basis and to reflect the conditions of life in the Djāhiliyya, even though they are insufficient for a proper history. In certain points this traditional material is confirmed by statements of the Ḳur'ān or inferences from these, and is both confirmed and supplemented by the numerous inscriptions found in Arabia by modern archaeologists.

(b) *History*. From the dawn of history nomads from the Arabian steppe have been pressing on the surrounding lands of settled civilisation. At some periods the pressure has been greater and the penetration of the settled lands deeper, and the nomads have been said to come in "waves". In pre-Christian times Hebrews, Aramaeans, Arabs and Nabataeans entered Syria and ʿIrāḳ, while in the six centuries before the Hidjra there was further pressure from Arabs and Palmyrenes. The nomads would come first of all to raid, but frequently they would themselves settle (*e.g.*, the Tanūkh in ʿIrāḳ about 225 A.D.). Close relations between settled nomads and those still in the desert facilitated trade. Only nomads could conduct caravans of merchandise across deserts, and only strong bodies of nomads could guarantee the safe transit of such caravans. Thus in the history of the Byzantine and Sāsānian empires the nomads appear in the two rôles of raider and trader.

The two empires tried in various ways to defend themselves from the hostile and predatory incursions of nomads. The most effective way was found to be the employment of semi-nomadic rulers on the imperial frontiers to ward off from the settled lands raiding parties from the heart of the steppes. In ʿIrāḳ this rôle was played by the Lakhmid kings of al-Ḥira from about 300 A.D. to the end of the dynasty in 602. On the Byzantine frontier the corresponding rôle was played by the Ghassānids, but they were later in attaining importance (it was in 529 that Justinian granted certain titles to the Ghassānid king), and apparently had only a camp for capital, not possessing any city comparable to al-Ḥīra. This system of defence was altered shortly before the Muslim invasions. In al-Ḥīra a Persian resident controlled the Arab chief who succeeded the Lakhmids, while the Byzantine subsidies to the Ghassānids seem to have ceased with the Persian invasion (613-629) and not to have been restored afterwards.

While it is clear that the nomads of Arabia were extensively involved in commerce, the details have not yet been closely studied. The nomads were in contact not only with the Byzantine and Persian empires, but also with the Ḥimyarite kingdom in South Arabia (until it was overthrown by the Abyssinians about 525). The prosperity of South Arabian civilisation was dependent on trade, and with a decline in its trade (perhaps through the loss of control of the Red Sea) the civilisation declined. Arab tradition speaks of the bursting of the dam of Ma'rib as marking the break up of South Arabian culture, but archaeological discoveries point to a series of breakdowns of the irrigation system, and the presumption is that these are symptoms of the decline of South Arabia and not its cause. Arab tradition further connects with the bursting of the dam of Ma'rib the northward movement of many nomadic tribes (together with their abandonment of a settled life, it would seem). At the same time overland trade by camel caravan between the Yemen, Syria and ʿIrāḳ began to flourish, and by 600 A.D. this was largely under the control of the Ḳuraysh of Mecca. The Ḳuraysh themselves had the city of Mecca as headquarters and to this extent were no longer nomads, but their commerce required alliances and other relationships with many nomadic tribes. The convoying and guaranteeing of caravans thus made important contributions to the livelihood of the nomads, and the fairs at which the merchandise brought by the caravans changed hands enabled the nomads to obtain many goods not produced in the steppe. Altogether the nomadic economy of pre-Islamic Arabia was far from being insulated and autarkic.

(c) *Political Relationships*. The social and political units among the Arabian nomads were groups of varying sizes. Western writers usually refer to these as 'tribes' or, in the case of the smaller groups and subdivisions, 'sub-tribes' and 'clans', but those terms do not correspond exactly to Arabic terms. There are a number of words in Arabic for such social and political units, but the commonest usage is to refer to a tribe or clan simply as Banū Fulān ('the sons of so-and-so').

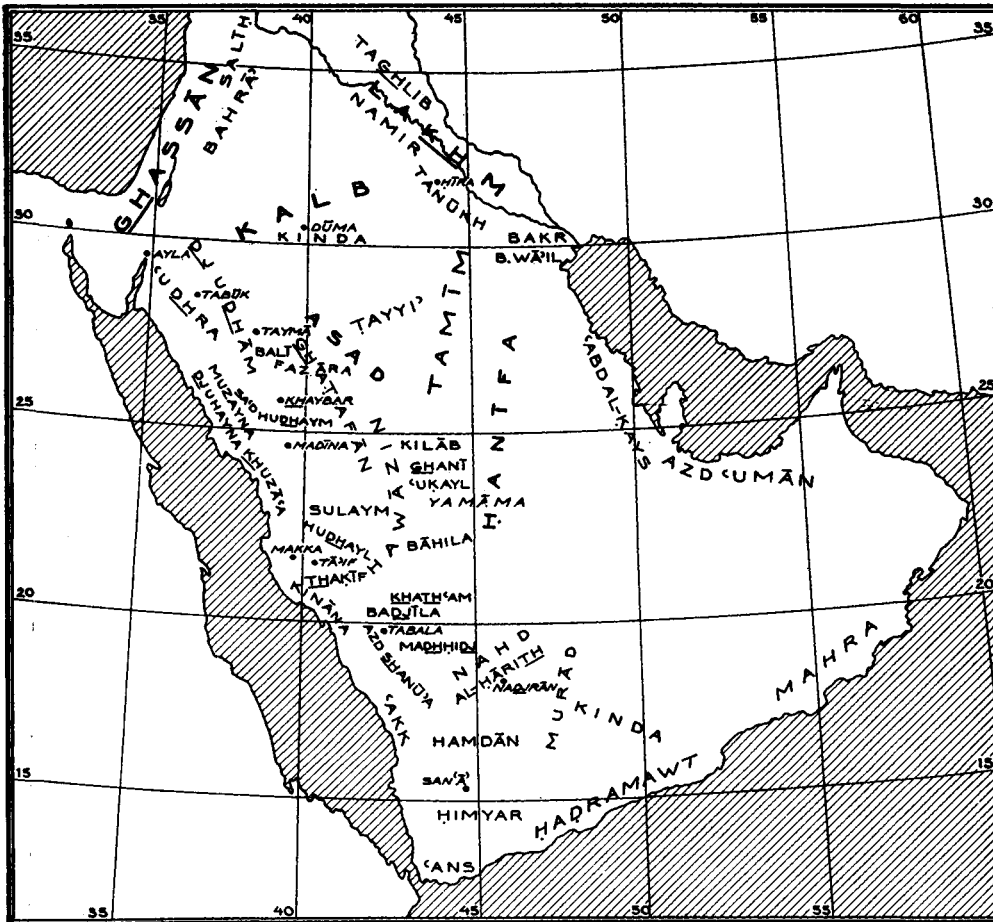
The structure of these pre-Islamic tribes has not yet been adequately studied in the light of recent advances in social anthropology. They are presented in Arab tradition as being primarily constituted by kinship in the male line, though there are certain exceptions to this. A person not related to a group by blood (not a *ṣaḥīḥ* or *ṣamīm*) could enjoy some of the privileges of membership, above all protection. He might do so as an 'ally' (*ḥalīf*), a 'protected neighbour' (*djār*), or a 'client' (*mawlā*). The parties to an 'alliance' (*ḥilf*) were formally equal, but when a single individual lived as an ally among a tribe or clan, he tended to fall into a subordinate or dependent position. 'Neighbourly protection' (*djiwār*), on the other hand, implied some superiority, at least of a temporary kind, in the person granting it; it could be either temporary or permanent. The status of 'client' was acquired by a slave on his emancipation. Attached to the tribe were slaves; male Arabs could become slaves through being captured in raids when children; and there were also Abyssinian slaves. A man could be expelled from his tribe for killing a kinsman or for conduct harmful to the tribe, and might wander alone (as a *ṣuʿlūk*) or else attach himself to another tribe as *djār*, etc.

There are strong reasons, however, for thinking that the traditional view that the members of the tribe or clan in the strict sense were patrilineally related is not a complete account of the matter, even though some tribes were so constituted. Firstly, there are numerous traces of matriliny among certain Arab tribes in Muḥammad's time, and also some facts which suggest that it was being superseded by patriliny. Though it is uncertain how extensive matriliny was and what it involved in practice, there is sufficient evidence to cast doubts on the value of the purely patrilineal genealogies found in the works of the later Muslim scholars. It seems possible that, in some cases where matriliny prevailed, the later

scholars, finding no patrilineal genealogy for a member of the group, argued that he must have been a *ḥalīf*; perhaps this is how to explain the fact that the head of the clan of Zuhra et Mecca was a *ḥalīf* (al-Akhnas b. Sharīḳ).

Secondly, it has been argued that some of the tribal names were originally the names of groups with a local or political basis, and did not indicate common descent (cf. Nallino, *Raccolta di Scritti*, iii, 72-79). This has probably happened in some cases, and it is then the later genealogists who have transformed group names into eponymous ancestors; but

Some of the weaker tribes near Mecca had thus become largely dependent on Ḳuraysh. Some still weaker ones had banded themselves together and were known as the Aḥābīsh, probably meaning "mixed multitudes" (the view of Lammens that the Aḥābīsh were Abyssinian slaves contradicts statements in Ibn Hishām, 245, and Ibn Saʿd, i/1, 81 and has little to recommend it; cf. Montgomery Watt, *Muhammad at Medina*, 81 and M. Hamidullah in *Studi Orientalistici in Onore di Giorgio Levi della Vida*, i, 434-47).

The affairs of a tribe were usually settled in an


TRIBAL ARABIA

Prepared by P. Cachia

it would be hazardous to explain all genealogies in this way. What may be taken as certain is that the structure of desert tribes was constantly changing. Some tribes would prosper, would become too numerous to function effectively as a unit, and would split up into two or more sub-tribes. This is probably the explanation of the fact that the Arabs of Muḥammad's time had names for certain groups consisting of several tribes (cf. Nallino, *op. cit.*, 76). On the other hand, where a tribe did not prosper, it dwindled in number, and then had a choice between becoming dependent on some stronger tribe, allying itself with other weak tribes or simply disappearing.

assembly or meeting (*madjlis*) of all the members. All might speak, but most weight attached to the words of men of recognised authority. The leader or chief of the tribe, the *sayyid*, was appointed by acclamation in the assembly. He usually came from the family considered most honourable, but there was no law of primogeniture. In the harsh conditions of the desert it was essential that the chief should himself be able to lead effectively and a minor could not have done this. The *sayyid* had certain duties, especially in respect of the relations of the tribe (or clan) to other tribes (or clans). He could make treaties which bound the tribe, and was responsible

for ransoming prisoners and for seeing that blood-wit was paid. He usually also claimed the right of entertaining strangers, and he was expected to help the poor of his tribe. In return for these duties he had the privilege of receiving a fourth part of any spoils taken in raids. Disputes between members of a group would normally be referred to their *sayyid*. Disputes between members of groups which had no common *sayyid* often led to fighting, but sometimes were referred to an arbiter (*ḥakam*); there were one or two men in different parts of Arabia who were outstanding for their wisdom and impartiality, and these were frequently asked to arbitrate. Apart from such voluntary submission to the decision of an arbiter and from membership of an alliance of tribes, each main tribe was an independent political unit. Occasionally the *sayyid* of a strong tribe through the force of his personality and through military prowess, established his ascendancy over a number of other tribes, so that they entered into alliance with him and carried out his orders; but this was resented, and the alliance broke up on the removal of the forceful personality.

(d) *Moral Outlook*. The life of the Badw was set in natural conditions of great harshness. At most times the means of sustenance were less than sufficient for the population. There was therefore a constant tendency for the strong to seize the means of sustenance, especially the camels, of the weak. This led to the organisation of the nomads into tribes and clans with a high degree of group solidarity. The larger groups were stronger, but the need to scatter at certain times to find pasturage for the camels made it difficult for groups beyond a certain size to act effectively as units. Hence, as noted above, the tendency of large and prosperous tribes to split up.

The razzia (*gh̲azw*, *gh̲azwa*) or raid to capture camels was almost a sport with the Badw, and bloodshed was avoided. When hostility deepened, however, raiding changed its character; adult males were killed, and women and children captured and then held to ransom or sold as slaves. The *lex talionis* was universally recognised, and served to check wanton and irresponsible killing, since it was a matter of honour for a tribe to protect or avenge its members and those attached to it. In the older days a life had to be avenged by a life, but in Muḥammad's time there was a tendency, which he tried to develop, of substituting for the life the payment of a blood-wit (*diya*), normally a hundred camels for an adult male. It was sometimes felt, however, to be unmanly thus 'to substitute milk for blood'.

The qualities admired by the Badw were those required for success in the hard life of the steppe. Loyalty to the kinship-group had a high place, and involved readiness to help one's kinsman against a stranger on any occasion. With this was coupled fortitude or manliness (*ḥamāsa*), which denoted 'bravery in battle, patience in misfortune, persistence in revenge, protection of the weak and defiance of the strong' (R. A. Nicholson, *A Literary History of the Arabs*, Cambridge 1930, 79).

The poets played an important rôle in the life of the pre-Islamic Arabs. The ode (*ḳasīda*) usually contained either *mafāk̲h̲ir*, boastings, that is, praise of one's own tribe for its fortitude and other virtues, or *mat̲h̲ālib*, revilings (also *hid̲j̲āʾ*, satire), that is, dispraise of one's enemies. It was held that human excellence or the lack of it was to a large extent inherited. A hero's deeds showed the heroic qualities of his family, clan and tribe. Great store was thus set on the reputation of the group. The power of the poet to convince his tribe of its own worth and to lower the morale of the enemy was very great. Poets had probably more power in pre-Islamic Arabia than the press in modern times. The Arabs felt there was something supernatural or magical about them.

Although descent counted for so much, it is not clear (as noted above) to what extent this was reckoned patrilineally and to what extent matrilineally. Four types of pre-Islamic marriage are described by al-Buk̲h̲ārī (67, 37, 1; translated in Montgomery Watt, *Muhammad at Medina*, 378); two of these, though provision for determining paternity is described by al-Buk̲h̲ārī, seem to belong to a primarily matrilineal system. The sources, moreover, suggest that al-Buk̲h̲ārī's account is not exhaustive. Certainly it was common for the woman to live with her kinsmen, and for her husband merely to 'visit' her for short periods—for example, when their tribes happened to be camped close to one another.

(e) *Religion*. Pre-Islamic poetry suggests that for the nomadic tribes a quasi-religious dynamic was produced by a belief in the human excellence of the tribal stock. Regard for honour or reputation (*ḥasab*) was the driving force in much of their activity. In this sense it may be said that the real religion of the Badw was a tribal humanism. The widespread belief in fate among the Arabs was not so much a religious belief as a factual belief, *viz*. a belief that the world was so constituted that, as often as not, human efforts to avert disaster would be thwarted by circumstances. Fate was not worshipped as a deity.

Apart from this there were a number of cults observed by the Arabs, each centred at a particular shrine (see arts. AL-LĀT, MANĀT, etc.). Some of these were of social importance, since round the shrines was a sacred area (*ḥaram*), while the institution of the sacred month was administered from the Kaʿba at Mecca. Such sacred times and places, in which blood feuds temporarily ceased, made it possible for many Badw to come together for trade and other purposes. On the whole, however, these cults seem to have little religious importance, properly speaking, in the life of the Badw.

Christianity had spread widely in Arabia when Muḥammad began to preach, and some nomadic groups were at least nominally Christian. Judaism was also found, and some of those called 'Jews' in the records were probably Arabs who had adopted Judaism; but, though they had close relations with Badw, none of them appears to have been nomadic.

BAENA [see BAYYĀNA].

BAEZA [see BAYYĀSA].

BAGGĀRA [see BAḲḲĀRA].

BĀGH [see BUSTĀN].

AL-**BAGHAWĪ**, ABŪ MUHAMMAD AL-ḤUSAYN B. MASʿŪD B. MUḤ. AL-FARRĀʾ (or IBN AL-FARRĀʾ), a doctor of the Shāfiʿī school, traditionist, and commentator on the Ḳurʾān. His *laḳabs* were Rukn al-Dīn and Muḥyi ʾl-Sunna. He came from the village of Bagh or Baghshūr near Harāt (cf. al-Samʿānī, f. 86a). Al-Farrāʾ (furrier) comes from his father's occupation. He studied *fiḳh* under the *ḳāḍī* al-Ḥusayn b. Muḥammad al-Marw al-Rūdhī, becoming his favourite pupil; and heard traditions from a number of traditionists. He was noted for piety and asceticism, and observed ceremonial purity while teaching. Although he wrote on various subjects, the work for which he is most famous is his *Maṣābīḥ al-Sunna* (or *al-Dudjā*), which consists of a collection of traditions arranged according to their subject-matter. In each chapter he first gives traditions which are sound (*ṣaḥīḥ*) meaning by these traditions from the *Ṣaḥīḥ*s of al-Bukhārī and Muslim; then traditions which are good (*ḥasan*), meaning traditions which he has taken from the books of Abū Dāʾūd, al-Tirmidhī, and other *imāms*. In many chapters he also includes traditions which have only one authority at some stage of the *isnād* (*gharīb*), and even traditions which are weak (*ḍaʿīf*). But he claims that he includes none which are rejected (*munkar*), or spurious (*mawḍūʿ*). The *isnāds* are dispensed with, but the arrangement according to the degree of authority is a sufficient guide to what is accepted. Al-Baghawī declares that his purpose was to provide material for religious people which would help them to live a life pleasing to God. Editions have been published in Būlāḳ, 1294, and Cairo, 1318. This work has been very popular, especially in the edition arranged by Walī al-Dīn (d. 743/1342) with the title *Mishkāt al-Maṣābīḥ*. It has frequently been printed; an English translation was published by A. N. Matthews (Calcutta 1809-10), and another, with some arrangement of the text, by Maulana Fazlul Karim with the Arabic and English in parallel columns (Calcutta 1938-9). Al-Baghawī's other extant works are listed in Brockelmann. He died in Marw al-Rūdh in 516/1122, but Ibn Khallikān mentions also 510/1117. Al-Dhahabī says he may have been eighty years of age, but al-Subkī suggests that he may have been nearly ninety.

BAGHBŪR [see FAGHFŪR].

BĀGHČE SARĀY (Turkish: «Garden Palace»), in Russian orthography : BAKHČI-SARAY, the capital of the Krim Tatar state throughout the entire (including the dependent) rule of the Girāy dynasty [*q.v.*] from about 1423 to 1783, lies in lat. 44° 45′ N. and long. 33° 55′ E., 32 km. south-west of Simferópol′, in a narrow, 7 km. long, gorge of the Čürük Ṣu ("Foul Water"). Bāghče Sarāy arose between the old administrative centre of the Crimea, Eski Yurt, in the west, where the Krim Khāns were buried until the 10th/16th century and the ancient Karaite settlement, Čufut Ḳalʿe ("fort of the Jews") in the east (in Karaite: Ḳïrḳ Yer, "40 Places"); it developed from an extensive burial ground that the most important of the Krim Khāns, Menglī Girāy [*q.v.*] began in 1503-1504 (909 A.H., according to an inscription) with the building of a "Garden Palace", completed in 1519. Around this palace there developed gradually a new settlement which was named after it Bāghče Sarāy and was constructed in a loose and haphazard fashion, a characteristic that has remained true of the site even down to the present time. The remnants of older Christian buildings are said to have been used for the construction of a stone mosque and a dervish cloister. The Zindjirli ("Chains") *madrasa*, established at that time, has survived even until today (*Ḳrym Medjmūʿasï*, Istanbul 1918, no. i, 16-19 and no. x, 188 ff.; Bodaninskij, 19 ff.; Seydamet, 36-40). Thereafter the two neighbouring settlements fell gradually into decay. Yet the name Ḳïrḳ Yer was still retained on the coinage; only from 1644 does the name Bāghče Sarāy appear on coins, that town continuing to be thereafter the sole mint in the land. A peace was concluded at Bāghče Sarāy in 1092/1681 between the Krim Tatars, the Turks and the Russians, the Dnieper being recognised as the frontier between their respective dominions. By this peace the Krim Tatars and the Turks at last agreed to the incorporation of the Ukraine territories on the left bank of the river and the Cossack lands into the Muscovite state.

When Bāghče Sarāy was devastated in the course of a Russian incursion (1736), a quarter of the town, including the palace, the chief mosque and the precious library that Selīm Girāy I (four times Khān between 1671 and 1704) had founded, suffered destruction. Only 124 bound volumes of documents survived; they were later deposited at St. Petersburg by V. D. Smirnov (cf. K. Inostrancev, in *Zapiski Vost. otd. Arkh. ob-va*, vol. xviii, p. XVIII). The town was rebuilt, however, in the following years, during a period of renewed cultural efflorescence in the Crimea. The palace arose once more and was extended (1737-1743); it is now surrounded on three sides by a wall surmounted with various buildings. A new Council Hall (*Dīwān*) was erected in 1743, adorned with rich decoration, sculptures, arcades and paintings. The library was revived with the aid of bequests from Istanbul.

As a consequence of the peace of Küčük Ḳaynardja [*q.v.*] in 1774 the numerous Greek-Orthodox and Armenian elements in the population of the town (about one third of the inhabitants) were resettled in 1779, against the wish of the Tatars, on territories already at that time under Russian rule, i.e., northward on the Sea of Azov and in the region of Rostov on the Don (New Nakhdjovān: Nakhičeván, in Russian). The result was that Bāghče Sarāy became an almost exclusively Tatar town and this distinctive character was expressly confirmed after the incorporation of the Crimea into Russia by Catherine II in 1783. Bāghče Sarāy, in 1787, numbered 5,776 inhabitants (3,166 of them, men; the women, as it would seem, being in part passed over in silence in the census) living in 1561 dwelling-houses; there were also 31 stone mosques, one Orthodox and one Armenian-Gregorian church, two synagogues, two baths and 16 caravanserais. 110 wells were fed, through underground canals, from 32 springs in the mountains. In 1794 Čufut Ḳalʿe still had 1162 Karaites, with two synagogues and a school; only in the 19th cent. did this town become almost wholly deserted. Bāghče Sarāy, in 1881, numbered 13,377 inhabitants, amongst whom were 697 Karaites and 210 Rabbanite Jews, together with a very small number of Greeks, Armenians and Gipsies; the population had fallen by 1897 to 12,955.

The town retained its importance even in the

19th century. It developed a great craft activity (famed morocco leather in red and yellow, candles, soap, agricultural implements, shoes, treatment of sheepskins, and, in the 20th cent., essential oils). Bāghče Sarāy was, moreover, the centre of national and cultural aspirations in the Crimea. Here, from 1883, the notable Russo-Turkish pioneer Ismā'īl Bey Gaspīralī (Russian: Gasprinsky, 1851-1914) published the important paper *Terdjümān* ("Interpreter"), the language of which was intended to form a compromise between the various Turkish dialects and thus to further co-operation between those who spoke them; in actual fact the language of the paper was very largely Ottoman (cf. G. Burbiel, *Die Sprache Ismā'īl Bey Gaspyralys*, Thesis, Hamburg 1950 (typescript); G. von Mende, *Der nationale Kampf der Russlandtürken*, Berlin 1936 (Index); Cafer Seydamet, *Gaspīralī Ismail Bey*, Istanbul 1934). In the following year Gaspīralī founded at Bāghče Sarāy a model school which became, until 1905, the pattern for some 5000 Muslim primary schools in Russia. The palace of the Khāns, on the occasion of a visit of Catherine II, had already been restored by G. Ye. Potyomkin and was thereafter maintained, on archaeological grounds, as the "sole great example of Tatar building within the Russian state".

Bāghče Sarāy became once more an administrative centre in the time of Crimean independence (1918-1920). During the German occupation of 1941-1944 it attained, however, no political importance. None the less, Bāghče Sarāy suffered heavily, when Soviet troops retook the town in April 1944; the palace of the Khāns was damaged, but is now restored (in part?) and serves both as an Oriental Museum and (since 1950) as a monument in honour of the Russian general Suvorov, who had his headquarters here. As a result of the forcible "re-settlement" of the Krim Tatars (1944-1945) Bāghče Sarāy has wholly lost its former character. The present number and composition of the inhabitants are no longer given in the *Bol'shaya Sovyetskaya Enciklopediya*, iv (1950), 333; nor are details to be found there on the other conditions now prevailing in the town.

BAGHDĀD. Baghdād is situated on both banks of the Tigris, at 33° 26 18″ Lat. N. and 44° 23 9″ Long. E. respectively. Founded in the 8th century A.D. it continued to be the centre of the 'Abbāsid Caliphate till its fall, and the cultural metropolis of the Muslim world for centuries. After 1258 it became a provincial centre and remained under the Ottomans the centre of the Baghdād *wilāyet*. In 1921 it became the capital of modern 'Irāk.

History.

The name Baghdād is pre-Islamic, related to previous settlements on the site. Arab authors realise this and as usual look for Persian origins (cf. Makdisī, *al-Bad'*, iv, 101; Ibn Rusta, 108). They give different hypothetical explanations, the most common of which is "given by God" or "Gift of God" (or the Idol). (see Khaṭīb, i, 58-9 (Cairo); Yākūt, i, 678-9; Abu 'l-Fidā', i, 292; Ibn al-Djawzī, *Manākib*, 6; Bakrī, i, 169; Ibn al-Faķīh, Mashhad MS. f. 29 *b*). Modern writers generally tend to favour this Persian derivation (cf. Salmon, *Introduction*, 23-4; Le Strange, *Baghdad*, 10-11; Streck, *Landschaft*, i, 49-50; Herzfeld, *Paikuli*, 153; W. Budge, *By Nile and Tigris*, i, 178; *JRIA*., i, 46-94). Others tend to give the name an Aramaic origin meaning, "the home or enclosure of sheep" (Y. Ghanīma and A. Karmalī in *Lughat al-'Arab*, iv, 27; vi, 748. Note Ṭabarī's reference to Sūķ al-Baķar, "the cow market", on the site of Baghdād (iii, 277). Delitzsch favours an Aramaic origin without explaining the meaning (Delitzsch, *Paradies*, 206, 238).

A legal document of the time of Hammurabi (1800 B.C.) mentions the city of Bagdadu (Schorr, *Altbabylonische Rechtsurkunden* No. 197 l. 17.) This indicates that the name was in use before Hammurabi and definitely before any possible Persian influence. Bag and Hu are rendered by the same sign. However a boundary stone from the time of the Kassite King Nazimaruttaš (1341-1316 B.C.) mentions the city Pilari on the bank of "Nah. Sharri" in the district of Bagdadi (De Morgan, *Délégation en perse*, i, 86-92). This with the mention of Bagdatha several times in the Talmud makes Bag the more acceptable reading (Obermeyer, *Landschaft Babylonien*, 1929, 147 ff.; Jewish Encyc., *Baghdad*). Another boundary stone of the reign of the Babylonian king Marduk-apaliddin (1208-1195 B.C.) mentions the city Baghdād (*Délégation en Perse*, iii, 32-39).

Adad-nirari II (911-891 B.C.) plundered places amongst which was Bagda(du) (*Synchronistic History*, iii L. 12 = K BI, 200). In the 8th century B.C. Baghdād became an Aramaean settlement. Tiglatpilasser III (745-727 B.C.) mentions Bagdadu in connexion with an Aramaean tribe (Delitzsch, *Paradies*, 238).

From this it is only fair to admit that the origins of the name are not clear. The fact that Bag was adopted by the Iranians about the 8th century B.C. to denote "God", and that it figured in personal names does not change the situation (*Reallexikon*, i, 341).

Al-Manṣūr called his city Madīnat al-Salām (city of peace), in reference to paradise (Ķur'ān, vi, 127; x, 26). This was the official name on documents,

coins, weights etc. Variations of the name, esp. Bughdān and appelations such as Madīnat Abī Dja'far, Madīnat al-Manṣūr, Madīnat al-Khulafā' and Al-Zawrā' were used (Ibn al-Faḳīh, f. 29*b*; Yāḳūt, i, 678; Ibn Rusta, 108). Zawrā' seems to be an old name as the *Fakhrī* states (*al-Fakhrī*, 145; cf. Mustawfī, *Nuzha*, 41). For later explanations see Mas'ūdī, *al-Tanbīh* (Cairo), 312; Yāḳūt, ii, 954). Arab authors state that al-Manṣūr built his city where many pre-Islamic settlements existed, the most important of which was the village of Baghdād, (see Ṭabarī, ii, 277; and i, 2067; Ibn Djawzī, *Manāḳib*, 7; Ya'ḳūbī, *Buldan*, 237), on the west bank of the Tigris north of Ṣarāt (Ṭabarī, iii, 277). Some consider it of Badūryā and refer to its annual fair (Khaṭīb, i, 25-7; Ibn Djawzī, *Manaḳib*, 6; Ya'ḳūbī, *Buldān*, 275) and this would help to explain why Karkh was later the quarter for merchants. A number of old settlements, chiefly Aramaean, were on the western side in the vicinity of Karkh. Among these is Khaṭṭābiyya (by Bāb al-Shām), Sharafāniyya, and north of it Wardāniyya which became within al-Ḥarbiyya quarter, Sūnāya near the junction of Ṣarāt with the Tigris (later al-'Atīḳa) Ḳaṭuftā at the corner where the Rufayl canal flows into the Tigris, and Barātha where the Karkhāya canal branches from the 'Īsā canal. Three small settlements were between the Karkhāya canal and Ṣarāt, *i.e.*, Sāl, Warthālā (later Ḳallā'īn quarter) and Banāwrā. Karkh itself (Aramaic *karkha* meaning a fortified town) takes its name from an earlier village, which Persian traditions attribute to Shāpūr II (309-379 A.D.) (Mustawfī, 40; see Ṭabarī, iii, 278 9; Khaṭīb, 27, 33, Ibn al-Athīr, ii, 342-3, Yāḳūt, iii, 613 and Ibn al-Djawzī, *Manāḳib*, 7).

According to Xenophon the Achaemenids possessed vast parks in the district of Baghdād (at Sittake). Arab authors refer to two such gardens (cf. Khaṭīb, 28; Mustawfī, 40). Near the mouth of the 'Īsā canal, there was a Sasanian Palace (*ḳaṣr Sābūr*) where al-Manṣūr later built a bridge. The old Ḳanṭara (*al-ḳanṭara al-'atīḳa*) across the Ṣarāt canal, south-west of the Kūfā gate, was Sasanian. On the eastern side, Sūḳ al-Thalāthā' and Khayzurān cemetery were pre-Islamic. There were some monasteries in the area which are pre-Islamic like Dayr Mārfathion (al-Dayr al-'Atīḳ) where al-Khuld palace was built, Dayr Bustān al-Ḳuss, and Dayr al-Djāthalīḳ near which Shaykh Ma'rūf was buried. (Ṭabarī, iii, 274, 277; Ibn al-Faḳīh, f. 36-37a; Khaṭīb, 46, 28; Mas'ūdī, *al-Tanbīh*, 312; Dhahabī, *Duwal*, i, 76; Mustawfī, 40).

None of these ancient settlements attained any political or commercial importance, so that the city of al-Manṣūr may be regarded as a new foundation. Baghdād is very often confused with Babylon by European travellers in the middle ages and sometimes with Seleucia, and appears in their accounts as Babel, Babellonia, etc. The erroneous application of the later name to Baghdād is likewise common in the Talmudic exegetic literature of the Babylonian Geonim (in the 'Abbāsid period) as well as in later Jewish authors. Pietro della Valle who was in Baghdād (1616-7) was the first to refute this error, widely spread in his time. Down to the 17th century the name Baghdād was generally known in the West in the corrupted form Baldach (Baldacco) which might be derived from the Chinese form of the name (cf. Bretschneider, *Medieval Researches*, i, 138; ii, 124; Travels of Marco Polo, ed. Frampton, 29, 126).

The 'Abbāsids turned to the east and looked for a new capital to symbolise their *dawla*. The first caliph, al-Saffāḥ, moved from Kūfa to Anbār. Al-Manṣūr moved to Hāshimiyya near Kūfa, but he soon realised that the turbulent pro-'Alid Kūfa was a bad influence on his army, while Hāshimiyya was vulnerable as was proved by the Rāwandiyya rising (cf. Yāḳut, i, 680-1; Ṭabarī, iii, 271-2; Fakhrī (Cairo), 143). He looked, therefore, for a strategic site.

After careful exploration, he chose the site of Baghdād for military, economic and climatic considerations. It stood on a fertile plain where cultivation was good on both sides of the river. It was on the Khurāsān road and was a meeting place of caravan routes, and monthly fairs were held there, and thus provisions could be plentiful for army and people. There was a net of canals which served cultivation and could be ramparts for the city. It was in the middle of Mesopotamia, and enjoyed a temperate and healthy climate and was fairly safe from mosquitoes (Ya'ḳūbī, 235-8; Ṭabarī, iii, 271-5; Yāḳūt, i, 679-80; *Manāḳib*, 7-8; Muḳaddasī, *Aḥsan al-Taḳāsīm*, 119-120; Ibn al-Athīr, v, 426-7; Ibn al-Djawzī, 7; Ya'ḳūbī, ii, 449; *Fakhrī*, 143-5). Apocryphal stories about its merits and al-Manṣūr's destiny to build it found circulation later (cf. Ya'ḳūbī, *Buldān*, 237; *Fakhrī*, 144; Ṭabarī (Cairo), vi, 234-5; Ibn al-Djawzī, *Manāḳib*, 7-8).

Baghdād was to succeed Babylon, Seleucia and Ctesiphon and to outshine them all.

Ya'ḳūbī (278-891), and Ibn al-Faḳīh (290/903), give early detailed descriptions of Baghdād by quarters, while Suhrāb (c. 900 A.D.) describes the net of canals in the area. The city with its fortifications and its inner plan looks like a big fortress. There was first a deep ditch, 40 *dhirā'* (= 20.27 m.) wide, surrounding the city, then a quay of bricks, then the first wall 18 *dhirā'* (= 9 m.), at the base, followed by a space 56.9 metres in width (= 100 *dhirā'*, see for measures Rayyis, *Kharādj*) left empty for defensive purposes. Then came the main wall of sun-burnt bricks—34.14 metres high, 50.2 metres wide at the bottom and 14.22 metres at the top—with great towers numbering 28 between each two gates except those between the Kūfa and Baṣra gates which numbered 29. On each of the gates a dome was built to overlook the city, with quarters below for the guards. Then came a space 170.70 metres wide where houses were built. Only officers and loyal followers (*mawālī*) were allowed to build here, and yet each road had two strong gates which could be locked. Then came a simple third wall enclosing the large inner space where only the caliph's palace (Bāb al-Dhahab), the great mosque, the *dīwāns*, houses of the sons of the caliph, and two *saḳīfas*, one for the chief of the guard and the other for the chief of police, were built. To ensure control of the city and to facilitate communications internally and with caravan routes externally, the city was divided into four equal parts divided by two roads running from its equidistant gates. The Khurāsān gate (also called Bāb al-Dawla) was to the N.E., the Baṣra gate to the S.W., the Syria gate to the N.W. and the Kūfa gate to the S.E. To get to the inner circle, one had to cross the ditch and to pass five doors, two at the outer wall, two huge doors at the great wall and one door at the inner wall (see Ya'ḳūbī, *Buldān*, i, 238-242; Ṭabarī, iii, 322-3, Ibn al-Djawzī, *Manāḳib*, 9-10; Khaṭīb, 9-12; Ibn al-Athīr, v, 427-8, 439; Ya'ḳūbī, ii, 449; Ibn al-Faḳīh, MS, f. 33a).

Ancient imperial traditions are also noticeable in the plan. The seclusion of the caliph from his people, the grandiose plan of the palace and the mosque to show the greatness of the new *dawla*, the division of the people in separate quarters which could be

locked and guarded at night—all testify to that.

Al-Manṣūr granted some devoted followers and captains tracts of land by the gates outside the city, and gave his soldiers the outskirts (*arbāḍ*) to build and granted some of his kinsfolk outlying places (*aṭrāf*) (Yaʿḳūbī, ii, 449-50; cf. Ibn Ḥawḳal, i, 240).

The glory of the Round City was the Green Dome, 48.36 metres high, towering over the palace with a mounted horseman on top. It fell in 329/941 on a stormy night, probably struck by a thunderbolt (Ṣūlī, *Rāḍī*, 229, Ibn al-Djawzī, *Muntaẓam*, vi, 317-18; *Manāḳib*, 11; Abu 'l-Maḥāsin, iii, 270; Khaṭīb, 11). However its walls lasted much longer, and they finally crumbled in 653/1255 A.D. (Ibn al-Fuwaṭī, 303, Sibṭ Ibn al-Djawzī, *Mirʾāt al-Zamān*, viii, 67). Marble and stone were used in the building of the Bāb al-Dhahab, and gold decorated its gate. It continued to be the official residence for about half a century, and though Rashīd neglected it, Amīn added a new wing to it and built a "*maydān*" around it. During the siege of Baghdād in 198/814 it suffered much damage. Then it ceased to be the official residence and was neglected (cf. Ibn al-Fuwaṭī, 303).

The mosque (Djāmiʿ al-Manṣūr) was built after the palace and thus was slightly divergent from the Ḳibla (cf. Ṭabarī (Cairo), vi, 265, Ibn al-Athīr, v, 439). In 191/807 Rashīd demolished it, and rebuilt it with bricks. It was enlarged in 260-1/875 and finally in 280/893. Muʿtaḍid added another court to it and renewed parts of it (*Muntaẓam*, v, 21, 143). The mosque had a minaret (Khaṭīb, v, 125) which was burnt in 303/915 (*Muntaẓam*, vi, 130), but was rebuilt again (cf. Ibn al-Djawzī, *Muntaẓam*, vii, 284). It continued to be the great mosque of Baghdād during the period of the caliphate. It was flooded in 653/1255 and survived this and the Mongol invasion.

The plan of Baghdād reflects social ideas. Each quarter had a responsible personage, and generally had a homogeneous group, ethnically (Persian, Arabs, Khwārizmians), or by vocation. Soldiers had their homes outside the walls, generally north and west of the city, while merchants and craftsman had their centres south of the Ṣarat in Karkh (see Ibn al-Faḳīh, MS. f. 37b; 33b, 29b).

Markets play a prominent part in the plan of Baghdād. Initially, along each of the four ways from the great wall to the inner wall were high arched rooms (*ṭāḳāt*) where shops were put, thus constituting four markets (cf. Ṭabarī, iii, 322). Besides, the Caliph ordered that each of the four sections outside the wall should have ample space for markets, so that each section should have a great market (Yaʿḳūbī, *Buldān*, 242). Safety considerations prompted al-Manṣūr in 157/773 to order the removal of markets from the Round City to Karkh. He wanted to keep the turbulent populace away from the city and to ensure that gates of quarters are not left open at night for the markets, and to guard against possible spies infiltrating into the city. He drew a plan for the markets to be built between the Ṣarāt and ʿĪsā canals (Ṭabarī, iii, 324-5; Ibn al-Djawzī, *Manāḳib*, 13-4; Yāḳūt, iv, 254).

Each craft or trade had its separate market or road (*darb*). Among the markets of Karkh, were the fruit market, the cloth market, the food market, the money—changers' market, the market of book-shops, the sheep market (Yaʿḳūbī, *Buldān*, 241, 245, 246, 253; Iṣṭakhrī, 84, Ibn Ḥawḳal, 242; Khaṭīb, 22, 31, 67, Ibn al-Djawzī, *Manāḳib*, 26-28). With the growth of the city we hear of merchants from Khurāsān and Transoxania, Marw, Balkh, Bukhārā, Khwārizm, and they had their markets at Ḥarbiyya quarter, and each group of these merchants had a leader and a chief (Yaʿḳūbī, *Buldān*, 246-248). It seems that each craft had its chief chosen by the government (see Dūrī, *Taʾrīkh al-ʿIrāḳ al-Iḳtiṣādī*, 81).

There is a tradition that al-Manṣūr wanted to pull down a part of the white Palace in Ctesiphon to use the bricks in his buildings, but that he stopped because expenditure did not justify the operation. Another report attributes to al-Manṣūr the idea of repairing that palace, but says that he did not have the time to carry it through. Both traditions are reminiscent of the Shuʿūbiyya controversy. The city was built mainly of sun-burnt bricks.

Yaʿḳūbī reports that the plan was drawn in 141/755 (Yaʿḳūbī, *Buldān*, 238) but work started on 1 Djumādā 145/2 Aug. 762 (Khwārizmī's report in Khaṭīb 2; cf. Wiet, Yaʿḳūbī, 11, n. 4). Four architects worked on the plan of the city. Ḥadjdjādj b. Arṭāt was the architect of the mosque (Ṭabarī (Cairo), vi, 265, 237; Yaʿḳūbī, 241). Al-Manṣūr assembled 100,000 workers and craftsmen to work in the construction (Yaḳubī, 238, Ṭabarī, iii, 277). A canal was drawn from Karkhāya canal to the site to provide water for drinking and for building operations (Yaʿḳūbī, 238). It seems that in 146/763 the palace, mosque and dīwāns at least were completed and al-Manṣūr moved to Baghdād (Ṭabarī, iii, 313, Khaṭīb, 2). By 149/766 the Round City was completed (Ṭabarī, iii, 353; Khaṭīb, 2-3).

The 'Round City' of al-Manṣūr is a remarkable example of town planning. It was circular so that the centre was equidistant from the different parts and could be easily controlled or defended. Arab traditions consider this design unique (Yaʿḳūbī, 238; Ibn al-Faḳīh, f. 33b; Khaṭīb, 67; Dhahabī, *Duwal*, i, 76). However, the circular plan is not unfamiliar in the Near East. The plan of Uruk is almost circular (V. Christian, *Altertumskunde*, ii, table 13). Assyrian military camps are circular enclosures. Creswell enumerates eleven cities that were oval or circular, amongst which are Ḥarrān, Agbatana, Hatra and Dārābdjird. Dārābdjird bears a remarkable resemblance to the city of Manṣūr in its plan (Creswell, *Early Muslim Arch.* (short), 171-3; Meissner, *Babylonien und Assyrien*, i, table 161).

It is likely that the architects of the Round city knew of such plans. Ibn al-Faḳīh indicates that the choice of the plan was between the square and the circle and that the latter is more perfect (*Buldān*, MS, f. 33b). It is however more probable that the idea of the circular fort was responsible for the plan. Ṭabarī states "al-Manṣūr made four gates (for the city) on the line of military camps" (Ṭabarī (Cairo), vi, 265).

There are different reports on the dimensions of the city of al-Manṣūr. A report makes the distance from the Khurāsān gate to the Kūfa gate 800 *dhirāʿ* (= 405.12 metres) and from the Syrian gate to the Baṣra gate 600 *dhirāʿ*, (= 303.12 metres), (Khaṭīb, 9-11; Ibn al-Faḳīh, MS, f. 33b). Another report from Wakīʿ makes the distance between each two gates 1200 *dhirāʿ* (= 608.28 m.) (Khaṭīb, 11). Both reports underestimate the size of the city. A third report given by Rabāḥ, one of the builders of the city, gives the measurement as one mile between each two gates (or 4000 *dhiraʿ mursala* or 1848 metres: D. Rayyis, 278; Khaṭīb, 8. This estimate is given in Ibn al-Djawzī, *Manākib*, 9; Yāḳūt, i, 235; Abu 'l-Maḥāsin, i, 341; Irbilī, *Tibr*, 54). This is confirmed by the measurement carried by the orders of Muʿtaḍid and reported

by Badr al-Muʿtaḍidī (Khaṭīb, 5; Abu 'l-Maḥāsin, i, 341). This makes the diameter of the city 2352 metres. Yaʿḳūbī's estimate of the distance between each pair of gates outside the *khandaḳ* as 5000 black *dhirāʿ* (or 2534.5 metres) becomes probable in this light (*Buldān*, 238-9).

Various reports are given of al-Manṣūr's expenditure on the city. One report makes the cost 18 million, understood to mean dīnārs (Khaṭīb, 5; Ibn al-Djawzī, *Manāḳib* 34; Yāḳūt, i, 683; Irbillī, *Tibr*, 543). A second puts it at a hundred million dirhams (Abu 'l-Maḥāsin, i, 341). However the official report based on caliphal archives states that al-Manṣūr spent on the Round City four million, eight hundred and eighty three dirhams (Ṭabarī, iii, 326; Muḳaddasī, *Aḥsan al-Taḳāsīm*, 121; Khaṭīb, 5-6; see also Ibn al-Athīr, v, 419; Ibn al-Djawzī, *Manāḳib*, 34). This is understandable if we take into account the low cost of labour and provisions and the strictness of al-Manṣūr in supervising his accounts.

In 157/773 al-Manṣūr built a palace on the Tigris below the Khurāsān gate, with spacious gardens, and called it al-Khuld. The place was free of mosquitoes and noted for the freshness of its air. The name was reminiscent of paradise (Ṭabarī, iii, 379; Khaṭīb, 14; Yāḳūt, ii, 783; Ibn al-Djawzī, *Manāḳib*, 12; Ibn al-Athīr, vi, 71; Ibn al-Faḳīh f. 37b).

Strategic considerations, al-Manṣūr's policy of dividing the army, and lack of space soon led the caliph to build a camp for his heir al-Mahdī on the East side of the Tigris. The central part was the camp of al-Mahdī (later called Ruṣāfa after a palace built by al-Rashīd), where his palace and the mosque were built, surrounded by the houses of officers and followers. The commercial side was soon expressed in the famous *sūḳs* of Bāb al-Ṭāḳ. The military side is shown by a wall and a ditch surrounding the camp of al-Mahdī. Work started in 151/768 and ended in 157/773. Ruṣāfa was almost opposite the city of al-Manṣūr (Yaʿḳūbī, *Buldān*, 251-3; Iṣṭakhrī, 83-4; Khaṭīb, 23-5; Ibn al-Djawzī, *Manāḳib*, 12-13; Muḳaddasī, 121; Abu 'l-Maḥāsin, ii, 16; Yāḳūt, ii, 78).

Baghdād expanded rapidly in buildings, commercial activities, wealth and population. People crowded into east Baghdād, attracted by al-Mahdī's gifts, and later by the Barmakids who had a special quarter at the Shammāsiyya gate (Yaʿḳūbī, *Buldān*, 251; *Aghānī* (Būlāḳ), vi, 78, v, 8; Ibn Khallikān (Būlāḳ), ii, 311). Yaḥyā the Barmakid built a magnificent palace and gave it the modest name Ḳaṣr al-Ṭīn (*Aghānī*, v, 8). Djaʿfar built a great luxurious palace below eastern Baghdād, which was given later to al-Maʾmūn. At the time of al-Rashīd, the eastern side extended from the Shammāsiyya gate (opposite the Ḳaṭrabbul gate) to Mukharrim (its southern limit is the modern Maʾmūn bridge) (Yaʿḳūbī, *Buldān*, 253-4). On the other side al-Amīn returned from the Khuld palace, where al-Rashīd resided, to Bāb al-Dhahab, renewed it and added a wing to it and surrounded it by a square (cf. Djahshiyārī, Cairo 1938, 193, Ibn al-Athīr, xi, 152). Queen Zubayda built a mosque on the Tigris (called after her) near the Royal palaces and another splendid mosque at her Ḳaṭīʿa north of the city (Yāḳūt, iv, 211; Ibn Khallikān, 188; *Mustaṭraf* (Būlāḳ ed.), i, 289). She also built a palace called al-Ḳarār near al-Khuld (cf. Khaṭīb, i, 87).

The western side expanded between the Ḳaṭrabbul gate in the north and the Karkh quarter, which in turn extended as far as great ʿĪsā canal (this flowed into the Tigris at the present Tulūl Khashm al-Dawra); to the west it almost reached Muḥawwal (*Mashriḳ*, 1934, 89; cf. poem in Yāḳūt, i, 686; Masʿūdī, vi, 454, Ṭabarī, iii, 874, 876). Poets extol the beauty of Baghdād and call it "paradise on earth". Its wonderful gardens, green countryside, its splendid high palaces with sumptuous decorations on the gates and in the halls, and their exquisite rich furniture were famous (cf. Ṭabarī, iii, 873, 874; Ḳālī, *Amālī*, ii, 237; Yāḳūt, i, 686).

Baghdād suffered a severe blow during the conflict between al-Amīn and al-Maʾmūn. War was brought to the city when it was besieged for fourteen months (Masʿūdī, vi, 456). Exasperated by the stubbornness of the defence, Ṭāhir ordered the destruction of the houses of the defenders, and many quarters "between the Tigris, Dār al-Raḳīḳ, (north of the Khurāsān gate), the Syrian gate, the Kūfa gate up to Ṣarāt, the Karkhāya canal and Kunāsa" were devastated (Ṭabarī, iii, 887). The work of destruction was completed by the rabble and the lawless volunteers and the *ʿayyārūn*. The Khuld palace, other palaces, Karkh, and some quarters on the east side suffered heavily. "Destruction and ruin raged until the splendour of Baghdād was gone", as Ṭabarī and Masʿūdī put it (see Ṭabarī, iii, 870-879, 925-6; Masʿūdī, vi, 454-459; Ibn al-Athīr, vi, 188 ff.). Chaos and trouble continued in Baghdād until the return of al-Maʾmūn from Marw in 204/819. Al-Maʾmūn stayed at his palace, enlarged it considerably to add a race-course, a zoo, and quarters for his devoted followers (Yāḳūt, i, 807). Then he gave this palace to Al-Ḥasan b. Sahl —to become al-Ḥasanī palace—who bequeathed it to his daughter Būrān. Baghdād revived again under al-Maʾmūn. Al-Muʿtaṣim built a palace on the eastern side (Yaʿḳūbī, 225; cf. Khaṭīb 47). Then he decided to look for a new capital for his new Turkish army. Baghdād was too crowded for his troops and both the people and the old divisions of the army were antagonistic to his Turks and he feared trouble. During the period of Sāmarrā (836-892) Baghdād missed the immediate attention of the caliphs (cf. Yaʿḳūbī, ii, 208; Irbillī, 161) but it remained the great centre of commerce and of cultural activities.

Baghdād also suffered from Turkish disorders, when al-Mustaʿīn moved there from Sāmarrā and was besieged by the forces of al-Muʿtazz, throughout the year 251/865-6. At this period, Ruṣāfa extended to Sūḳ al-Thalāthāʾ (up to modern Samawʾal St.). Al-Mustaʿīn ordered the fortification of Baghdād; the wall on the eastern side was extended from the Shammāsiyya gate to Sūḳ al-Thalāthāʾ, and on the western side from Ḳaṭīʿāt Umm Djaʿfar around the quarters up to Ṣarāt, and the famous Ṭāhir Trench was dug around it (Ṭabarī, iii, 1851). During the siege, houses, shops and gardens outside the eastern wall were devastated as a defensive measure (Ṭabarī, iii, 1571) and the eastern quarters of Shammāsiyya, Ruṣāfa and Mukharrim suffered heavily.

In 278/892 al-Muʿtamid finally returned to Baghdād. He had asked Būrān for the Ḥasanī palace, but she renewed it, furnished it to suit a caliph and handed it to him (cf. Ibn al-Djawzī, *Muntaẓam*, v, 144). Then in 280/893, al-Muʿtaḍid rebuilt the palace, enlarged its grounds and added new buildings to it, and built prisons on its grounds (*maṭāmīr*). He added a race-course and then surrounded the area with a special wall. It was to be Dār al-Khilāfa and remained, with additions, the official residence (Khaṭīb, 52; Ibn al-Djawzī, *Muntaẓam*, vi, 53; *Manāḳib*, 15; Tanūkhī, *Nishwār*, viii, 15; Abu 'l-Maḥāsin, iii, 85; Irbillī, 173).

Then he laid the foundations of the Tādj palace on the Tigris nearby, but later saw much smoke from the city. He decided to build another palace, two miles to the north-east. He built the magnificent and

lofty al-Thurayyā, linked it with an underground passage to the Ḳaṣr (al-Ḥasanī), surrounded it with gardens, and brought water to it from the Mūsā canal (see the description of Ibn al-Muʿtazz, *Dīwān* (Beirut ed. 1913), 138-9). He also ordered, in order to keep the air pure, that no rice and palm trees be cultivated around Baghdād (see Ibn al-Djawzī, *Muntaẓam*, v, 142). The Thurayyā lasted in good condition till 469/1073-4 when it was swept by the flood and ruined (Ibn al-Djawzī, *Manāḳib*, 15; Yāḳūt, i, 808). The ruin of the Round City started now. Al-Muʿtaḍid ordered the demolition of the City wall; but when a small section was pulled down, the Hāshimites complained, as it showed ʿAbbāsid glory, so al-Muʿtaḍid stopped. People however gradually extended their houses at the expense of the wall and this led ultimately to the demolition of the wall and the ruin of the City (Tanūkhī, *Nishwār*, i, 74-5).

Al-Muktafī (289-295/901-907) built the Tādj with halls and domes, and a quay on the Tigris. He built a high semi-circular dome on its grounds, so that he could reach its top mounted on a donkey. (Khaṭīb, 48; Irbillī, 175, Yāḳūt, i, 80; Ibn al-Djawzī, *Muntaẓam*, v, 144). In 289/901 al-Muktafī pulled down the palace prisons and built a Friday mosque (Djāmiʿ al-Ḳaṣr) which became the third Friday mosque, until the time of al-Muḳtadir (Ibn al-Djawzī, *Muntaẓam*, vi, 3, Khaṭīb, 62).

Al-Muḳtadir (295-320/908-932) added new buildings to the Royal palaces and beautified them fabulously; he paid special attention to the zoo (*ḥayr al-wuḥūsh*) (cf. Khaṭīb, 48, 53). Khaṭīb's detailed description for the year 305/917-18 is striking. The strong wall surrounding the palaces and the secret passage from the audience hall of al-Muḳtadir to one of the gates were necessary defensive measures (see Khaṭīb, 51) Among the wonders was *dār al-shadjara*, a tree of silver, in a large pond with 18 branches and multiple twigs, with silver or gilt birds and sparrows which whistled at times. On both sides of the pond were 15 statues of mounted horsemen which moved in one direction as if chasing each other (54). There was a mercury pond 30 × 20 *dhirāʿ* with four gilt boats and around it was a fabulous garden. The zoo had all sorts of animals. There was a lion-house with a hundred lions. There was the Firdaws palace with its remarkable arms. Twenty three palaces were counted within the Royal precincts (cf. Khaṭīb, 53-55; Ibn al-Djawzī, *Muntaẓam*, vi, 144).

Baghdād reached its height during this period. The eastern side extended five miles (1 mile = 1848 m.) from Shammāsiyya to Dār al-Khilāfa in the 4th/10th century (Iṣṭakhrī, 83). Ṭayfūr (d. 893) reports that al-Muwaffaḳ ordered the measurement of Baghdād before 279/892; its area was found to be 43,750 *djarīb* of which 26,250 *djarīb* were in east Baghdād and 17,500 *djarīb* in west Baghdād (Ibn al-Faḳīh, f. 44b; cf. Ibn Ḥawḳal, i, 243). Another version of Ṭayfūr makes eastern Baghdād at the time of al-Muwaffaḳ 16,750 *djarīb* (1 *djarīb* = 1366 sq.m.) and western Baghdād 27,000 *djarīb*; this is more probable, as west Baghdād was still more important then. Another version puts the area at 53,750 *djarīb*, of which 26,750 *djarīb* were east and 27,000 *djarīb* west (Khaṭīb, 74). It is more likely that the last figure represents the period of al-Muḳtadir when much expansion took place in east Baghdād. In all these reports the length of Baghdād on both sides was almost the same. For the first figure, considering the length of Baghdād as stated by Iṣṭakhrī and by Ṭayfūr, Baghdād was, in 279/892, about 7¼ km. in length and 6½ km. in width, while under al-Muḳtadir (320/932) it was about 8½ km. in length and 7¼ km. in width.

Baghdād's geographical position, its active people (cf. Djāḥiẓ, *Bukhalāʾ*, 39, Tanūkhī, *Faradj*, ii, 11), the encouragement of the state to trade (cf. Yaʿḳūbī, 590) and the prestige of the caliphate, soon made Baghdād the great centre of commerce (see Dūrī, *Taʾrīkh al-ʿIrāḳ al-Iḳtiṣādī*, 143-157). Markets became an essential feature of its life, in Ruṣāfa and esp. in Karkh. Each trade had its market, and among those were the fruit market, the cloth market, the cotton market, the market of booksellers which had more than a hundred shops, the money-changers' market and the *ʿaṭṭārīn* market in Karkh. Markets for foreign merchants were at Sūḳ Bāb al-Shām. On the eastern side, there was a variety of markets including Sūḳ al-Ṭīb for flowers, a food market, the goldsmiths' market, the sheep market, a booksellers' market, and a market for Chinese merchandise (Yaʿḳūbī, *Buldān*, 241, 246, 248, 254; Iṣṭakhrī, 48, Khaṭīb, 22, 65 ff., 36, 69; Ibn al-Djawzī, *Manāḳib*, 26, 27-8; Ibn Ḥawḳal, 242). Since the time of al-Manṣūr a *muḥtasib* was appointed to watch over markets, to prevent cheating and to check on measures and weights (cf. Khaṭīb, 20; Ṣābī, *Rasāʾil*, 114, 141-2; Māwardī, 141-2). The *muḥtasib* also supervised baths and possibly watched over mosques (Khaṭīb, 78). He also prevented subversive activities.

Each market or craft had a chief appointed by the government. In a craft there were the *Ṣāniʿ* and the *Ustādh* (cf. Ikhwān al-Ṣafā, i, 255; cf. Essays of Djāḥiẓ (ed. Sandūbī), 126). Baghdād exported cotton stuffs and silk textiles esp. kerchiefs, aprons, turbans, crystals turned on lathes, glazed-ware, and various oils, potions and electuaries (*Ḥudūd al-ʿĀlam*, 11a; Muḳaddasī, 128). Baghdād manufactured shirts of different colours, turbans of thin texture and celebrated towels (Dimashḳī, *Tidjāra*, 26). Its thin white cotton shirts were peerless (Ibn al-Faḳīh, 254). The *saḳlaṭūn* (silk stuff), the *mulḥam* and *ʿattābī* stuffs (of silk and cotton) of Baghdād were famous (*Ḥudūd al-ʿĀlam*, 38; Nuwayrī, i, 369; Abu 'l-Ḳāsim, 35; Muḳaddasī, 323; Ibn Ḥawḳal, 261). Excellent swords were made at Bāb al-Ṭāḳ (ʿArīb, 50). It was famous for its leather manufacture and for the manufacture of paper (cf. Ibn al-Faḳīh, 251).

A great incentive to commerce and industry was the development of the banking system in Baghdād as shown in the activities of the *ṣarrāf*s and *djahbadh*s. The *ṣarrāf*s had their own markets esp. in Karkh (cf. Djahshiyārī, 228) and primarily served the people, while *djahbadh*s served mainly the government and its officials.

Baghdād grew international in population. Its inhabitants were a mixture of different nations, colours and creeds, who came for work, trade, as recruits for the army, slaves, and for other careers. It is noticeable that the populace began to play an important part in its life (see Ibn al-Athīr, viii, 85-6; Miskawayh, i, 74-5; Iṣfahānī, *Taʾrīkh* (Berlin), 130). On their revolt against the rise in prices in 307/919, and their efforts to keep order in 201/816 during the confusion which followed the murder of al-Amīn (see Ṭabarī, iii, 1009-1010; Ibn al-Athīr, vi, 228-9 and vii, 13-14). The activities of the *ʿayyārīn* and *shuṭṭār* began at this period (see Ṭabarī, iii, 1008, 1586; Masʿūdī, vi, 457; 461 ff.).

It is difficult to give an estimate of the population of Baghdād. Estimates of mosques and baths are obviously exaggerated (300,000 mosques and 60,000 baths under al-Muwaffaḳ, 27,000 baths under al-Muḳtadir, 17,000 baths under Muʿizz al-Dawla,

5,000 under Aḍud al-Dawla, 3,000 baths under Bahā' al-Dawla; Khaṭīb, 74-6; Ibn al-Faḳīh, f. 59b; Hilāl al-Ṣābī, *Rusūm Dār al-Khilāfa*, MS. 27-30). Baths were counted in 383/993 and found to number 1500. Traditions stress that each bath serves about 200 houses (Ibn al-Faḳīh f. 59b, 60a; Hilāl al-Ṣābī, MS. 29). If the average number in a house was five, then the population of Baghdād was about one million and a half. Al-Muḳtadir ordered Sinān b. Thābit to examine doctors and to give licences only to those qualified, and the result was that 860 doctors were given licences (Ibn al-Athīr viii, 85; Ibn Abī Uṣaybiʿa i, 221 f., 224, 310; al-Ḳifṭī, 194 f.). If we add doctors serving in government hospitals and those who did not have licences, the number would probably reach a thousand. The number of people who prayed on the last Friday of the month at the mosque of Manṣūr and that of Ruṣāfa were judged by measuring the area for prayer to be 64,000 (Ibn al-Faḳīh, f. 62a; see also Ṭabarī, iii, 1730). The number of boats about the end of the 3rd/9th century was calculated to be 30,000 (Ibn al-Djawzī, *Manāḳib*, 24). From those figures and the area of Baghdād we can estimate the population of Baghdād in the 4th/10th century at a million and a half. Itlīdī, a contemporary, gives this estimate too.

There were aristocratic quarters such as Ẓāhir, Shammāsiyya, al-Ma'mūniyya and Darb ʿAwn. There were poor quarters like Ḳaṭīʿat al-Kilāb, and Nahr al-Dadjādj (Abu 'l-Ḳāsim al-Baghdādī, 23, 106). Houses were of two stories, and those of the common people were of one storey. Those of the rich had baths and were usually divided into three quarters surrounded by a wall—the ladies' quarters, the reception rooms, and the servants' quarters. Special attention was paid to gardens (*Aghānī*, ii, 73, iii, 31, ix, 144, v, 38, xvii, 129; Hilāl al-Ṣābī, *Rusūm*, 32). Carpets, divans, curtains and pillows were noted items of furniture (Abu 'l-Ḳāsim, 36). Fans and specially cooled houses and *sardābs* were used in summer (see Dj. Mudawwar, *Haḍārat al-Islām*, 117, 30). Inscriptions and drawings of animals and plants or human faces decorated entrances (*ibid.*, 29; Abu 'l-Ḳāsim, 7, 36).

A special feature of the life of Baghdād is the vast number of mosques and baths as indicated.

Baghdād was the great centre of culture. It was the home of Ḥanafī and Ḥanbalī schools of law. It was the centre of translations, in Bayt al-Ḥikma and outside, and of some scientific experimentation. Its mosques, especially Djāmiʿ al-Manṣūr, were great centres of learning. The large number of bookshops which were sometimes literary salons, indicates the extent of cultural activities. Its poets, historians, and scholars are too numerous to mention. One can refer to the History of Baghdād by Khaṭīb to see the vast number of scholars, in one field, connected with Baghdād. Not only caliphs, but ministers and dignitaries gave every encouragement to learning. The creative period of Islamic culture is associated with Baghdād. Later in this period, public libraries as centres of study and learning were founded, the most famous being the Dār al-ʿIlm of Abū Naṣr Sābūr b. Ardashīr. When the *madrasa* appeared, Baghdād took the lead with its Niẓāmiyya and Mustanṣiriyya and influenced the *madrasa* system both in programme and architecture.

Much attention was paid to hospitals, especially in the 3rd/9th and 4th/10th centuries. Of these, the Bīmāristān al-Sayyida (306/918), al-Bīmāristān al-Muḳtadirī (306/918) and al-Bīmāristān al-ʿAḍudī (372/982) were famous. Ministers and others also founded hospitals. Doctors were at times subject to supervision (see above).

Under al-Rashīd there were three bridges in Baghdād (Yaʿḳūbī, ii, 510). The two famous ones were by Bāb Khurāsān, and at Kārkh (cf. Yaʿḳūbī, ii, 542, Djahshiyārī, 254; Ṭabarī, iii, 1232). Al-Rashīd built two bridges at Shammāsiyya, but they were destroyed during the first siege (Ibn al-Djawzī, *Manāḳib*, 20; Ibn al-Faḳīh f. 42a). The three bridges continued to the end of 3rd/9th century (Ibn al-Faḳīh, f. 42a). It seems that the northern bridge was destroyed and Iṣṭakhrī talks of two bridges only (Ibn al-Djawzī, *Manāḳib* 20, Iṣṭakhrī, 84). In 387/997 Bahā' al-Dawla built a bridge at Sūḳ al-Thalāthā' (Mishraʿat al-Ḳattānīn) to become the third bridge. This indicates a shift of emphasis from N. Baghdad to Sūḳ al-Thalāthā' (Ibn al-Djawzī, *Muntaẓam*, vii, 171; cf. Ibn al-Djawzī, *Manāḳib*, 20; Khaṭīb, 71-2).

Life in Baghdād was stable until al-Amīn. The first siege brought out turbulent elements in the *ʿāmma*. Flood and fire also began to play their rôle from the last quarter of the 3rd/9th century. Flood in 270/883 ruined 7,000 houses in Karkh. In 292/904 and 328/929 Baghdād suffered considerably from flood (Ṭabarī, iii, 2105; Ibn al-Athīr, viii, 371, Abu 'l-Maḥāsin, iii, 157 and 266). In 373/983 flood swept beyond the Kūfa gate and entered the city (Ṣūlī, *Rāḍī*, 278; Khaṭīb, 16). The neglect of canals, especially during the '*Amīr al-Umarā*' period (324 334/935-945), was responsible for floods and for the ruin of the Bādūrayā district (Miskawayh, ii, 1.9; Ṣūlī, *Rāḍī*, 106, 225, 137-8). Consequently, whereas scarcities and plague were rare before 320/932 they were recurrent after that (cf. Ibn al-Athīr, vii, 177, 187, 338). The scarcity of 307/919 was a result of monopoly and was quickly overcome. Scarcities occurred in 323/934, 326/937, 329/940 (with plague), 330/941, 331/942 (with plague), 332/943, 337/948 and life became unbearable (Ṣūlī, *Rāḍī*, 61, 104, 236, 251; Ibn al-Athīr, viii, 282, 311; Iṣfahānī, *Ta'rīkh*, 125; Abu 'l-Maḥāsin, iii, 270, 274).

In 308/920 and 309/921 Karkh suffered considerably from fire (Ibn al-Athīr, viii, 89, 95). In 323/934 the fire of Karkh swept over the quarters of the *ʿaṭṭārīn* (the drug sellers), the ointment sellers, jewellers and others and its traces could be seen years after (Ṣūlī, *Rāḍī*, 68).

The Buwayhid period was rather hard for Baghdād. Muʿizz al-Dawla (in 335/946) first repaired some canals at Bādūrayā and this improved living conditions (Miskawayh, ii, 165). A period of neglect followed and many canals which irrigated west Baghdād were in ruins. ʿAḍud al-Dawla (367-372/977-982) had them cleared up, and rebuilt bridges and locks (Miskawayh, ii, 406; iii, 69; Ibn al-Athīr, viii, 518). Then we hear no more of such activities.

Building activities were limited. In 350/961 Muʿizz al-Dawla built a great palace at the Shammāsiyya gate with a large Maydān, a quay, and beautiful gardens. For this palace he took the seven iron doors of the Round City and spent about a million dīnārs (11 million dirhams). However, it was pulled down in 418/1027 (Tanūkhī, *Nishwār*, i, 70-1; Ibn al-Athīr, viii, 397-8; ix, 256). ʿAḍud al-Dawla rebuilt the house of Sabuktakīn, chamberlain of Muʿizz al-Dawla, at upper Mukharrim, added spacious gardens to it, and brought water to it by canals from Nahr al-Khāliṣ at great expense. It became the Dār al-Imāra or official residence of the Buwayhids (Khaṭīb, 58-9; Ibn al-Djawzī, *Muntaẓam*, vii, 77-8; cf. Miskawayh, iii, 124).

ʿAḍud al-Dawla found Baghdād in bad shape. He ordered that its houses and markets be renewed and spent much money in rebuilding its Friday mosques; he repaired quays by the Tigris, and ordered the wealthy to repair their houses on the Tigris and to cultivate gardens in ruined places which had no owners. He found the central bridge narrow and decayed and had it renewed and broadened (Ibn al-Athīr, viii, 558; Ibn al-Djawzī, *Muntaẓam*, vii, 114; Miskawayh, ii, 404-406). In 372/982 he built the ʿAḍudī Hospital, appointed doctors, supervisors, storekeepers to it, and provided it with plenty of medicines, potions, instruments and furniture. *Waḳf*s were allotted to it for its upkeep (Ibn al-Djawzī, *Muntaẓam*, vii, 112-114).

However, Baghdād declined under the Buwayhids (Tanūkhī, *Nishwār*, i, 66 makes it in 345/956 one tenth of its size under al-Muḳtadir). The city of al-Manṣūr, was neglected and had no life then (Muḳaddasī, 120). Most of the quarters of W. Baghdād were in bad shape and had shrunk. The most flourishing section of W. Baghdād was Karkh, where the merchants had their places of business. Thus the western side is now called Karkh (Ibn Ḥawḳal, i, 241-2; Muḳaddasī, 120).

The eastern side of the city was more flourishing, and dignitaries generally resided there (cf. Ibn Ḥawḳal, 240). Here, the bright spots were the Bāb al-Ṭāḳ where the great market was, the Dār al-Imāra at Mukharrim and the caliph's palaces at the southern end (cf. Muḳaddasī, 120; Ibn Ḥawḳal, i, 240-1; Iṣṭakhrī, 84). Odd houses reached Kalwādhā. Ibn Ḥawḳal saw four Friday mosques: the mosque of al-Manṣūr, the Ruṣāfa mosque, the Barāthā mosque, and the mosque of Dār al-Ṣulṭān (241). Then in 379/989 and 383/993, the Ḳaṭīʿa mosque and the Ḥarbiyya mosque became Friday mosques (Ibn al-Djawzī, *Muntaẓam*, vii, 671, Khaṭīb, 53-4, Ibn al Djawzī, *Manāḳib*, 21-2, Ibn al-Athīr, ix, 48).

Ibn Ḥawḳal saw two bridges, one out of order (i, 241). It seems there were three bridges at the time of Muʿizz al-Dawla (one at the Shammāsiyya gate (near his palace), the other at Bāb al-Ṭāḳ and the third at Sūḳ al-Thalāthāʾ. The first was transferred to Bāb al-Ṭāḳ, making two there, then one went out of order (cf. Ibn al-Djawzī, *Manāḳib*, 20).

Baghdād suffered much from the turbulence of the *ʿāmma*, from sectarian differences encouraged by the Buwayhids, and from the *ʿayyārūn*. Our sources talk much of the ignorance of the *ʿāmma*, their readiness to follow any call, their good nature and their lawlessness (cf. Masʿūdī, v, 81, 82-3, 85-7; Ghazālī, *Faḍāʾiḥ*, 53, Ibn al-Djawzī, *Manāḳib*, 31-2; Baghdādī, *Firaḳ*, 141). In 279/892 al-Muʿtaḍid forbade *ḳuṣṣāṣ* and fortune-tellers to sit in the streets or mosques, and forbade people to congregate around them or to indulge in controversies (Ibn al-Djawzī, *Muntaẓam*, v, 122, 171). Before the Buwayhids, the Ḥanbalīs were the source of trouble. They tried at times to improve morals by force (cf. Ibn al-Athīr, viii, 229-30, 84-5, 157-8; Ṣūlī, *Rāḍī*, 198). At this period, sectarian troubles multiplied and caused much loss in property and people. The Buwayhids made the 10th of Muḥarram a day of public mourning, ordered the closing of markets, and encouraged the populace to make processions with women beating their faces (cf. Ibn al-Djawzī, vii, 15). On the other hand, the Ghadīr on 18 Dhu 'l-Ḥidjdja was made a day of celebrations. This led the Sunnīs to choose two different days, each eight days after the ones mentioned (cf. Ibn al-Athīr, ix, 110). Conflicts between the Shīʿīs and the Sunnīs became usual occurences at this period, starting from 338/949 when Karkh was pillaged (Ibn al-Djawzī, *Muntaẓam*, vi, 363). In 348/959, fights between the two groups led to destruction and fire at Bāb al-Ṭāḳ (*ibid*, 390). In 361/971 troubles in Karkh led to its burning and 17,000 people perished, 300 shops, many houses and 33 mosques were burnt down (Ibn al-Athīr, viii, 207; cf. Ibn al-Djawzī, *Muntaẓam*, vii, 60). In 363/973 fire burnt much of Karkh (Miskawayh, ii, 327). In 381/991 troubles broke out and fire recurred in many quarters (Ibn al-Athīr, ix, 31). In 1016 the Nahr Ṭābiḳ, Bāb al-Ḳuṭn and much of the Bāb al-Baṣra quarters were burnt (Ibn al-Athīr, ix, 102; see also viii, 184, ix, 25-6, 32, 58). In 422/1030 many markets were ruined during the troubles (Ibn al-Djawzī, *Muntaẓam*, viii, 55). More damage and confusion was caused by the *ʿayyārūn* who were especially active throughout the last quarter of the 4th/10th cent. to the end of this period (on their activities during the two sieges of Baghdād see Ṭabarī, iii, 877, 1008-1010, 1552, 1556-7; Masʿūdī, vi, 450 ff.). Historians misunderstand their activities and show them as robbers and thieves. But their movement is a product of their hard living conditions and of political chaos. Their rise was against the wealthy and the rulers, and this explains why their activities were directed primarily against the rich, the markets, the police and the dignitaries (cf. Tanūkhī, *Faradj*, ii, 106, 107-8; Ibn al-Djawzī, *Muntaẓam*, vii, 174, 220; Ibn al-Athīr, ix, 115). They had moral principals such as honour, and help to the poor and to women, co-operation, patience and endurance. The *Futuwwa* later was somewhat related to their movement (cf. Ibn al-Djawzī, *Talbīs Iblīs*, 392; Ḳushayrī, *Risāla*, 113-4; Ibn al-Djawzī, *Muntaẓam*, viii, 77; Tanūkhī, *Faradj*, ii, 180). In the 4th/10th century they were organised, and among the titles of their chiefs were al-Mutaḳaddim, al-Ḳāʾid, and al-Amīr, and they had special ceremonies for initiation (see *Muntaẓam*, viii, 49, 151, 78, Miskawayh, ii, 306, Ḳushayrī, *op. cit.*, 113; Tanūkhī, *Faradj*, ii, 109). However they were divided into Shīʿīs and Sunnīs (Ibn al-Djawzī, *Muntaẓam*, viii, 78-9).

The *ʿayyārūn* kept people in constant terror for life and property. They levied tolls on markets and roads or robbed wayfarers and constantly broke into houses at night. They spread havoc by sword and fire and burnt many quarters and markets esp. Bāb al-Ṭāḳ and Sūḳ Yaḥyā (in east Baghdād) and Karkh, as those were the quarters of the wealthy. People had to lock the gates of their streets, and merchants kept vigil at night. Disorder and pillage made prices high (Ibn al-Djawzī, *Muntaẓam*, vii, 151, 220, viii, 21-2, 44, 47-50, 54-5, 60, 72-5, 79, 87, 142, 161). A preacher prayed in 421/1030 "O God! Save the state from the populace and the rabble" (Ibn al-Djawzī, *Muntaẓam*, viii, 44). Burdjumī, a notorious *ʿayyār* leader, practically ruled Baghdād for four years 422-425/1030-1033, and spread havoc (*ibid*, 75-6). The government was powerless (cf. 49) and they were left to levy taxes and tolls to avoid their terror (*ibid.*, 78). Many people left their quarters and departed for safety (*ibid.*, 142). Their terror continued till the advent of the Saldjūḳs (*ibid.*, 161).

In 447/1055 Tughril Bey entered Baghdād, and the Saldjūḳs reversed Buwayhid policy and encouraged the Sunnīs (cf. Abu 'l-Maḥāsin, v, 59). In 450/1058 Basāsīrī, a rebel, seized Baghdād in the name of the Fāṭimids (cf. Abu 'l-Fidāʾ, ii, 186; Ibn al-Ḳalānisī, 87). He was defeated and killed by the Saldjūḳ forces in 451/1059 (Abu 'l-Fidāʾ, ii, 187-8). During this period Baghdād assumed a shape which thereafter changed but little.

In 448/1056 Tughril Bey enlarged the area of Dār

al-Imāra, pulled down many houses and shops, rebuilt it and surrounded it with a wall (Ibn al-Djawzī, viii, 169). In 450/1058 it was burnt down and rebuilt again (Ibn al-Djawzī, *Muntaẓam*, vii, 778). It became known as Dār al-Mamlaka. It was rebuilt in 509/1115, but was accidentally burnt in 515/1121 and a new palace was built (Ibn al-Djawzī, *Manāḳib*, 16; *Muntaẓam*, ix, 223). Malikshāh enlarged and rebuilt the mosque of Mukharrim, which was near the palace, in 484/1091 and was hence called Djāmiʿ al-Sulṭān. It was repaired in 502/1108 (Ibn al-Djawzī, *Muntaẓam*, ix, 159), and was finally completed in 524/1129 (Abu 'l-Fidāʾ, ii, 211; Ibn al-Djawzī, *Manāḳib*; 23; Abu 'l-Maḥāsin, v, 135).

Life centered in E. Baghdād around the caliphal palaces. Al-Muḳtadī (467-487/1074-1094) encouraged building; and the quarters around the palaces—such as Baṣaliyya, Ḳaṭīʿa, Ḥalaba, Adjama, etc. flourished. He also built the Riverain-palace (Dār Shāṭiʾiyya) by the old Tādj palace (Ibn al-Djawzī, *Muntaẓam*, viii, 293; Ibn al-Athīr, x, 156; cf. Le Strange, 253; cf. Ibn al-Fuwaṭī, 21). In 524/1129 the Tādj palace was pulled down and rebuilt (Ibn al-Djawzī, *Muntaẓam*, x, 14). These quarters were not walled and they suffered much from the flood in 1070. In 488/1095 al-Mustaẓhir built a wall around the so called Ḥarīm quarters. Then in 517/1123 al-Mustarshid rebuilt it with four gates and made it 22 *dhirāʿ* in width. The flood of 554/1159 surrounded the wall, made a breach in it, and ruined many quarters. The breach in it was repaired and a dyke was begun, and completed later around the wall (cf. Ibn al-Djawzī, *Manāḳib*, 34; idem, *Muntaẓam*, x, 189-190). Other attempts to rebuild the wall or repair it took place under al-Nāṣir and al-Mustanṣir (Ibn Fuwaṭī, 16, 111). This wall set the limits of East Baghdād till the end of Ottoman period.

Baghdād was in decline during this period and lived on its past glory. From the 2nd half of the 5th/11th century, there were many changes in its topography. Many quarters in western Baghdād were ruined, and waste land replaced previous gardens or houses (cf. Khaṭīb, 67 and Tanūkhī, *Nishwār*, i, 74-5). This probably explains the increase in the number of Friday mosques. The old quarters of Shammāsiyya, Ruṣāfa and Mukharrim were neglected (cf. Ibn Ḥawḳal, 241).

Benjamin of Tudela, who visited Baghdād around 567/1171, talks of the greatness of the caliphal palace, with its wall, gardens, a zoo and a lake. He speaks highly of the ʿAḍudī Hospital with its sixty doctors, and a sanatorium for the mad. He found 40,000 Jews in Baghdād with 10 schools for them (*Itinerary*, ed. and tr. A. Asher, New York, 1840-2, i, text 54-64, tr. 93-105; Arabic tr. by E. H. Haddad, Baghdād 1945, 131-8). Ibn Djubayr described Baghdād in 581/1185. He noticed the general decline, and criticised the arrogance of its people (218). Much of the eastern side was ruined, yet it had seventeen separate quarters, all with two, three or eight baths (225). The caliphal quarters, with magnificent palaces and gardens, occupied about a quarter or more of the area (226-7). This side was well populated and had excellent markets (228). Ḳurayya was the largest quarter, (very likely between the modern al-Aḥrās bridge and Raʾs al-Ḳarya) and near it the suburb (*rabḍ*) of Murabbaʿa (probably by Sayyid Sulṭān ʿAlī now). It had three Friday mosques, Djāmiʿ al-Sulṭān, north of the wall, and the Ruṣāfa mosque about a mile north of the latter (228-9) and Djāmiʿ al-Khalīfa. There were about thirty *madrasas* (colleges), all housed in excellent buildings with plenty of *wakf* and endowments for their upkeep and for the students' expenses. The most famous *madrasa* was the Niẓāmiyya which was rebuilt in 1110 (229).

He describes the wall, built by al-Mustarshid, surrounding Sharḳiyya as having four gates—1. Bāb al-Sulṭān to the north (later called Bāb al-Muʿaẓẓam). 2. Bāb al-Ẓafariyya (N.E.), later, Bāb al-Wasṭānī. 3. Bāb al-Ḥalaba (E.), later Bāb al-Ṭillisim. 4. Bāb al-Baṣaliyya (S.), later al-Bāb al-Sharḳī. The wall surrounded Sharḳiyya in a semi-circle reaching the Tigris at both ends (229). He talks of the populous quarter of Abū Ḥanīfa, while the old quarters of Ruṣāfa, Shammāsiyya, and most of Mukharrim were ruined (cf. 226; Ibn Ḥawḳal, 241). In western Baghdād ruin spread everywhere. Of quarters here, he mentions Karkh as a walled city, and the Bāb al-Baṣra quarter which contained the great mosque of al-Manṣūr and what remained of the old city (225). By the Tigris was the Shāriʿ quarter which constituted with Karkh, Bāb al-Baṣra and Ḳurayya the largest quarters of Baghdād (225). Between al-Shāriʿ and the Bāb al-Baṣra was the quarter of Sūḳ al-Māristān, like a small city, with the famous ʿAḍudī hospital which was well staffed and provisioned (225-6). Of other quarters he noticed the Ḥarbiyya quarter as the northernmost, and the ʿAttābiyya, famous for its silk-cotton *ʿattābī* cloth (226). Ibn Djubayr (229) talks of 2000 baths and eleven Friday mosques in Baghdād.

At the time of al-Mustarshid (512-29/1118-1134) there was one bridge near the ʿĪsā canal, later moved to Bāb al-Ḳurayya. During the period of al-Mustaḍī (566-575/1170-1179) a new bridge was made at Bāb al-Ḳurayya, and the old one was returned to its place by the ʿĪsā canal. Ibn Djubayr saw the first bridge only, but confirms that there were usually two bridges and Ibn al-Djawzī, who wrote just before the fall of Baghdād, confirms this (Ibn al-Djawzī, *Manaḳib*, 20; Ibn Djubayr, 225).

Half a century later, Yāḳūt (623/1226) gave some useful data. He shows western Baghdād as a series of isolated quarters each with a wall and separated by waste land of ruins. Ḥarbiyya, al-Ḥarīm al-Ṭāhirī in the north, Čahār Sūdj with Naṣīriyya, ʿAttābiyyīn and Dār al-Ḳazz south-west, Muhawwal to the west, Ḳaṣr ʿĪsā to the east, and Ḳurayya and Karkh in the south are the noted quarters.

In East Baghdād, life centered in the quarters around Ḥarīm Dār al-Khilāfa which occupy about a third of the area enclosed in the walls. Of the large flourishing quarters were Bāb al-ʿAzadj with its markets, al-Maʾmūniyya next to it, Sūḳ al-Thalāthāʾ, Nahr al-Muʿallā and Ḳurayya (Yāḳūt, i, 232, 441, 444, 534, 655, ii, 88, 167, 234, 459, 512, 783, 917, iii, 193-4, 197, 231, 279, 291, 489, iv, 117, 252, 255, 385, 432, 457, 713-4, 786, 841, 845).

Friday mosques increased in Gharbiyya (W. Baghdād) at this period, indicating the semi-independent status of quarters. Ibn al-Djawzī mentions six between 530/1135 and 572/1176 in addition to Djāmiʿ al-Manṣūr (Ibn al-Djawzī, *Manāḳib*, 23, see also Ibn al-Fuwaṭī). The mosques of Karkh were repaired by Mustanṣir (Ibn al-Fuwaṭī, 15), and Djāmiʿ al-Ḳaṣr was renewed in 475/1082, and again by al-Mustanṣir in 673/1235 (Ibn al-Djawzī, *Muntaẓam*, ix, 3; Le Strange, 269). The Ḳamariyya mosque (still present) was built in 626/1228 (Ibn al-Fuwaṭī, 4).

The strength of Ṣūfism is shown by the large number of *Ribāṭ*s [*q.v.*] built during the last century of the caliphate. They were built by the caliphs or their relatives (cf. Ibn al-Fuwaṭī, 2, 74, 75, 79, 80, 87, 117, 261, Ibn al-Djawzī, *Muntaẓam*, ix, 11, Ibn al-Athīr, xi, 77, 33, xii, 27, 67-8).

Much attention was given to the founding of *madrasas* (colleges). This movement could be explained initially by the religious revival among S͟hāfiʿīs, and by political and administrative needs; but it was continued as a cultural movement. Ibn D̲j̲ubayr saw thirty *madrasas* in east Bag͟hdād (Ibn D̲j̲ubayr, 229; see also M. D̲j̲awad, in *Review of the Higher Teachers' College*, Bag͟hdād, vol. v, 110 ff., vol. vi, 86 ff.). Other *madrasas* were founded after Ibn D̲j̲ubayr's visit (cf. Ibn al-Fuwaṭī, 24-5, 53, 128, 308, Ibn al-At͟hīr, xi, 211). The most famous were the Niẓāmiyya founded in 459/1066, the *madrasa* of Abū Ḥanīfa founded in the same year (Ibn al-D̲j̲awzī, *Muntaẓam*, viii, 245-6, still existing as Kulliyat al-S͟harīʿa) and al-Mustanṣiriyya, founded by al-Mustanṣir in 631/1233 and continued till the 17th century. All those *madrasas* specialised in one of the four schools of law, except the Mustanṣiriyya and the Bas͟hīriyya (founded in 653/1255) which taught the *fiḳh* of the four schools (see Ibn al-Fuwaṭī, 308; Ibn al-D̲j̲awzī, *Muntaẓam*, viii, 245-6, 246-7; Ibn al-At͟hīr, x, 38; Ibn al-Fuwaṭī 53-4, 58-9; cf. ʿAwwād in *Sumer*, i, 1945). There was a *maktab* (school) for orphans established by S͟hams al-Mulk (son of Niẓām al-Mulk) (Iṣfahānī, *Seljuks*, 124-5). In 606/1209 guest-houses (*dār ḍiyāfa*) were built in all quarters of Bag͟hdād to serve the poor in Ramaḍān (Ibn al-At͟hīr, xii, 286; other references, *ibid.* 184; Ibn al-Fuwaṭī, 94).

Bag͟hdād suffered at this period from fire, flood and dissension. In 449/1057 Kark͟h and Bāb Muḥawwal quarters and most of the markets of Kark͟h were burnt down. In 451/1059 much of Kark͟h and old Bag͟hdād was burnt (Ibn al-D̲j̲awzī, *Muntaẓam*, viii, 81; Ibn al-At͟hīr, x, 5). The quarters and markets near the Muʿallā canal and Dār al-K͟halāfa were burnt more than once (Ibn al-At͟hīr, x, 35, 67, 318; Ibn al-D̲j̲awzī, *Muntaẓam*, viii, 241, ix, 61, 148, 184, x, 35). In 551/1156 fire spread from neighbouring quarters to Dār al-K͟hilāfa and neighbouring *sūḳs* (Ibn al-At͟hīr, xi, 143; there were other fires in those quarters in 560/1164, 569/1173, 583/1187 Ibn al-At͟hīr, xi, 270, 372; *Muntaẓam*, x, 212).

The *ʿayyārūn* were fairly active in Sald̲j̲ūḳ days. They pillaged shops and houses and caused insecurity (see between 449/1057 and 537/1142 Ibn al-D̲j̲awzī, *Muntaẓam*, viii, 139, 234; Ibn al-At͟hīr, x, 204, 383, xi, 29, 26, 59, 63).

The troubles of the *ʿāmma* and their sectarian fights (Ḥanbalīs against S͟hāfiʿīs and Sunnīs against S͟hīʿīs) continued to give rise to much bloodshed and destruction. Ibn al-At͟hīr reports a temporary conciliation in 502/1108 and adds "Evil always came from them (*i.e.*, the *ʿāmma*)" (x, 329; see also x, 80, 259, 104, 108-109, 112, 117-8). This was short-lived, and quarrels and fights continued and became terrible under al-Mustaʿṣim (Ibn al-At͟hīr, x, 360, xi, 271, 344, xii, 133, 216). In 640/1242 fights took place between the Maʾmūniyya and Bāb al-Azad̲j̲ quarters which involved the Niẓāmiyya market, and between Muk͟htāra and Sūḳ al-Sulṭān quarters, and between Ḳaṭuftā and Ḳurayya (in W. Bag͟hdād) quarters; many were killed and shops pillaged (Ibn al-Fuwaṭī, 175-7; cf. Ibn Abi 'l-Ḥadīd, ii, 554). By 653/1255 things had deteriorated considerably. Fights took place between Ruṣāfa (Sunnī) and K͟huḍayriyyin (S͟hīʿī), and soon people of Bāb al-Baṣra supported Ruṣāfa while Kark͟h supported the others (Ibn al-Fuwaṭī, 298-9). These quarrels also indicate the spirit of competition between quarters which increased by the lack of government control. When fights renewed between Kark͟h and Bāb al-Baṣra, the soldiers sent to stop it, pillaged Kark͟h and that made the situation worse (*ibid.*, 267-277). The climax came in 654/1256, when someone was killed by the people of Kark͟h, and the soldiers, sent to keep order, were joined by crowds of the *ʿāmma* and pillaged Kark͟h, burnt several places in it, killed many and took away women. Reprisal followed, but the tragedy was not forgotten (*ibid.*, 314-315). The *ʿayyārūn* were very active at this time. They pillaged shops, robbed houses at night and even the Mustanṣiriyya was twice robbed (Ibn al-Fuwaṭī, 378, 254, 260, 262).

The government was too weak to keep order. Floods recurred, indicating the weakness of government and the neglect of irrigation. In 641/1243 floods reached the Niẓāmiyya and its neighbourhood and ruined some quarters. In 646/1248 floods surrounded east Bag͟hdād, destroyed a part of the wall, and reached the quarters of Ḥarīm. It also flooded Ruṣāfa and many of its houses fell. West Bag͟hdād was submerged, and most houses fell except part of Bāb al-Baṣra and Kark͟h. Houses on the river collapsed. Floods entered Bag͟hdād in 651/1253, and again in 653/1255 when a great number of houses collapsed and cultivation was damaged. The worst flood was in 654/1256 when both sides were surrounded by water and the flood even entered the markets of east Bag͟hdād, Dār al-K͟hilāfa and the Niẓāmiyya (Ibn al-Fuwaṭī, 186-7, 267, 229-233, 277, 304, 317-19). Thus nature and man joined hands to eclipse Bag͟hdād.

Two years later, Bag͟hdād was invaded by the Mongols. On 4 Ṣafar 656/10 Feb. 1258 the Caliph al-Mustaʿṣim made an unconditional surrender. Its people were put indiscriminately to the sword, for over a week. Large numbers of the country people who flocked to Bag͟hdād before the siege shared its tragic fate. Estimates of the number killed vary between 800,000 and two million, the estimate mounting with the lapse of time (*Fak͟hrī*, 130; Ibn al-Fuwaṭī, 281; D͟hahabī, *Duwal*, ii, 121; Ibn Kat͟hīr, *Bidāya*, xiii, 202). The Chinese traveller Ch'ang Te states (1259) that several tens of thousands were killed; his information is obviously from Mongol sources (Bretschneider, *Medieval Researches*, i, 138-9). It is thus difficult to give any figure, but it probably exceeded a hundred thousand. Many quarters were ruined by siege, looting or fire, and the mosque of the caliphs, and the shrine of Kāẓimayn were burnt down (Ibn al-Fuwaṭi, 327-330; Ibn al-ʿIbrī, 27). Bag͟hdād was however spared from complete devastation, and the *fatwā* exacted from the *ʿulamāʾ* that a just *kāfir* is better than an unjust *imām* probably helped. Before leaving, Hülegü ordered the restoration of some public buildings. The supervisor of *waḳf* rebuilt the D̲j̲āmiʿ al-K͟hulafāʾ and saw to it that schools and the *ribāṭs* were reopened (Ibn al-ʿIbrī, 475; Ibn al-Fuwaṭī, 337). Culture suffered much, but it was not uprooted. Bag͟hdād became a provincial centre in all respects.

Until 740/1339-40 Bag͟hdād remained under the Īlk͟hānids and was administered by a governor with a *S͟hiḥna* and a military garrison (cf. Ibn al-Fuwaṭī, 331).

The Mongols registered the population of Bag͟hdād in tens, hundreds, and thousands for the sake of taxation. A poll-tax was imposed on all except the aged and children; it continued to be levied for about two years (Ibn al-Fuwaṭī, 339; cf. D̲j̲uwaynī, (trans. Boyle), i, 34). Bag͟hdād began to revive gradually, as its administration was chiefly entrusted to Persians; much of this is due to the policy of ʿAṭāʾ Malik al-D̲j̲uwaynī, governor for about 23 years (657/1258-681/1282). Under him, the minaret of D̲j̲āmiʿ al-K͟hulafāʾ and the Niẓāmiyya market

were rebuilt, and the Mustanṣiriyya was repaired and a new water system added (Ibn al-Fuwaṭī, 371). The mosques of Shaykh Maʿrūf and Ḳamariyya were repaired (*ibid.*, 408; ʿAzzāwī, *Taʾrīkh al-ʿIrāḳ*, i, 267, 296).

Some of the old schools resumed work, especially the Niẓāmiyya and Mustanṣiriyya, the Bashīriyya, the Tatashiyya and Madrasat al-Aṣḥāb (cf. Ibn Baṭṭūṭa, Cairo 1918, i, 140-1; Ibn al-Fuwaṭī, 182, 385, 396; ʿAzzāwī, *Taʾrīkh*, i, 318). Djuwaynī's wife founded the ʿIṣmatiyya school for the four schools of law, and a *ribāṭ* near it (Ibn al-Fuwaṭī, 377). The Īlkhān Takūdar (881/1281) sent a message to Baghdād asking for the return of endowments to schools, and mosques, as under the ʿAbbāsids, probably a pious wish (Karmalī, *al-Fawz*, 12). The Īlkhāns' policy led to outbreaks against non-Muslims. They patronised Christians, and exempted them from the *djizya*. They rebuilt churches and opened schools. This led to an outbreak against them in 665/1263. The Jews rose to prominence under Arghūn (683-690/1284-1291) through Saʿd al-Dawla the Jewish finance minister, who appointed his brother governor of Baghdād. In 690/1291 Saʿd al-Dawla was killed and the populace in Baghdād fell on the Jews. Under Ghāzān, non-Muslims suffered through dress distinctions, the reimposition of the poll-tax and the attitude of the mob, and many adopted Islam (cf. ʿAmr Ibn Mattī, *Kitāb al-Madjdal*, 120-122, 125; Ibn al-Fuwaṭī, 354; 465-6; 483; Waṣṣāf, ii, 238; Karmalī, *op. cit.*, 14-15, 21; ʿAzzāwī, i, 349, 513). Uldjaytū stirred up trouble when he vacillated between Shīʿism and Sunnism. The Īlkhāns tried to impose the *čao* (paper money) [*q.v.*], but it was very unpopular in Baghdād and was finally abolished by Ghāzān in 697/1297 (Ibn al-Fuwaṭī, 477, 492).

During this period we have the accounts of three geographers: Ibn ʿAbd al-Ḥaḳḳ (c. 700/1300), Ibn Baṭṭūṭa (727/1327 and Mustawfī (740/1339).

The author of the *Marāṣid* states that nothing remained of western Baghdād except isolated quarters, the most populated of which was Karkh (201). He mentions the Ḳurayya quarter, the populous Ramliyya quarter, the Dar al-Raḳīḳ market, Dār al-Ḳazz standing alone where paper was manufactured, and the Bāb Muḥawwal quarter which stood as an isolated village (*Marāṣid* (Cairo ed.), 146, 201, 507, 773, 1088). He refers to the ʿAḍudī hospital, and indicates that nothing remained of al-Ḥarīm al-Ṭāhirī, Nahr Tābiḳ and Ḳatīʿa quarters, while Tūthā quarter looked like an isolated village (*Marāṣid*, 280, 837, 397, 1403). Of East Baghdād, the *Marāṣid* states "when the Tartars came, most of it was ruined. They killed its people and few were left. Then people from outside came" (201). He states that the Ḥalaba, Ḳurayya and Ḳatīʿat al-ʿAdjam were populous quarters (*Marāṣid*, 417, 1088, 1110).

Ibn Baṭṭūṭa follows very closely after Ibn Djubayr. However he mentions two bridges in Baghdād and gives new details about the excellent baths in the city (Cairo ed. 1908, i, 140-1). He states that mosques and schools were very numerous, but they were in ruins (*ibid.* i, 140).

Mustawfī's data is significant. His description of the wall of East Baghdād agrees with that of Ibn Djubayr. It had four gates, and encloses the city in a semi-circle with a circuit of 18,000 paces. Western Baghdād, he calls Karkh; it was surrounded by a wall with a circuit of 12,000 paces. He found life easy in Baghdād and people pleasant, but their Arabic was corrupt. He found Shāfiʿīs and Ḥanbalīs dominant in Baghdād, though adherents of other sects were numerous. *Madrasas* and *ribāṭs* were numerous, but he noted that Niẓāmiyya was "the greatest of them all" while Mustanṣiriyya was the most beautiful building, (*Nuzha*, 40-42). It is possible that the Sitt Zubayda tomb belongs to this period, and the lady concerned could be Zubayda, the grand-daughter of the eldest son of Mustaʿṣim (ʿAzzāwī, i, 406).

In 740/1339 Ḥasan Buzurg established himself in Baghdād and founded the Djalāyirid dynasty which lasted till 813/1410. The Mardjān mosque dates from this period. From its inscriptions, we know that Mardjan, a captain of Uways, started building the *madrasa* with its mosque under Ḥasan Buzurg and finished the building under Uways in 758/1357. This *madrasa* was for the Shāfiʿīs and Ḥanafīs (text of inscriptions in Ālūsī, *Masādjid*, 45 ff.; Massignon, *Mission*, ii, 1 ff.). Only the gate of the *madrasa*—or mosque later—remains now.

Beyond this we hear of flood, siege or troubles which caused much damage and loss.

Baghdād was twice taken by Tīmūr, first in 795/1392-1393 when the town escaped with little damage, and second in 803/1401 when its population was indiscriminately put to the sword, and many of its public (ʿAbbāsid) buildings and quarters were ruined. This was the devastating blow to culture in Baghdād. In 807/1405 Aḥmad the Djalāyir returned to Baghdād, restored the walls destroyed by Tīmūr, and tried to repair some of the buildings and markets, but his time was short.

In 813/1410 Baghdād passed to the Ḳara Ḳoyunlu Turkomāns who held it till 872/1467-8, to be followed by Āḳ Ḳoyunlu Turkomāns. Baghdād sank still deeper under the Turkomāns and suffered considerably from misrule. Many of its inhabitants left the city, and the ruin of the irrigation system accounts for the recurrence of flood with consequent devastation. Under the year 841/1437 Maḳrīzī says "Baghdād is ruined, there is no mosque or congregation, and no market. Its canals are mostly dry and it could hardly be called a city" (Maḳrīzī, *Sulūk*, iii, 100. see ʿAzzāwī, iii, 79 ff.; Karmalī, 61 ff.). In addition, tribalism spread and tribal confederations begin to play their turbulent rôle in the life of the country.

In 914/1507-8 Baghdād came under Shāh Ismāʿīl Ṣafawī, and a period of Perso-Ottoman conflict for the possession of Baghdād opened, typified in the Baghdādī song "between the Persians and the Rūm, what woe befell us". On Shāh Ismāʿīl's orders, many Sunnī shrines, esp. those of Abū Ḥanīfa and ʿAbd al-Ḳādir Gīlānī, were ruined, and many of the leading Sunnīs were killed. However, he started building a shrine for Mūsā al-Kāẓim. He appointed a governor with the title *Khalīfat al-Khulafāʾ* (ʿAzzāwī, iii, 336-343). Many Persian merchants came to Baghdād and increased commercial activity. After a brief space in which the Kurdish chief Dhu 'l-Faḳār seized Baghdād and announced his allegiance to Sulṭān Sulaymān Ḳānūnī, Shāh Ṭahmāsp seized the town again in 936/1530. In 941/1534 Sulṭān Sulaymān entered Baghdād. He built a dome on the tomb of Abū Ḥanīfa, with the mosque and *madrasa*, rebuilt the mosque, *tekke* and tomb of Gīlānī and had guest-houses for the poor at both mosques. He also had the shrine and mosque of Kāẓimayn, started by Shāh Ismāʿīl, completed (*Sulaymān-nāma*, 119, Ewliya Čelebi, iv, 426; Ālūsī, *Masādjid*, 117; ʿAzzāwī, iv, 28 ff.). He ordered landed property to be surveyed and registered, and organised the administration of the province (Ewliya Čelebi, iv, 41). The administration was entrusted to a governor (pasha), *defterdār* (for

finances), and a Ḳāḍī. A garrison was stationed in Baghdād with the janissaries as its backbone.

Few buildings were erected during the following period. In 978/1570 Murād Pasha built the Murādiyya mosque in the Maydān quarter. The Gīlānī mosque was rebuilt. Čigalazāde built a famous inn, a coffee house and a market. He also built Djāmiʿ al-Ṣaghā or Djāmiʿ al-Khaffāfīn, and rebuilt the Mawlawī *tekke*, known now as the Āṣafiyya mosque (ʿAzzāwī, iv, 116, 128-132; cf. Ālūsī, *Masādjid*, 30-1, 62-4). Ḥasan Pasha built the mosque known after him, also called Djāmiʿ al-Wazīr (*Gulshan-i Khulafā* 66; Ewliya Čelebi, iv, 419). He also made a rampart and a ditch around Karkh to protect it from Bedouins.

Europeans travellers begin to visit Baghdād at this period. They speak of it as a meeting place of caravans, and a great centre of commerce for Arabia, Persia and Turkey. Caesar Frederigo (1563) saw many foreign merchants in the city. Sir Anthony Sherley (1590) saw "excellent goods of all sorts and very cheap" (Purchas, viii, 384). It had a bridge of boats tied by a great chain of iron and when boats passed up or down the river, some of the boats of the bridge were removed until the traffic had passed (Ralph Fitch in 1583, Hakluyt, iii, 282-3). Rauwolf (1574) saw streets narrow and houses miserably built. Many buildings were in ruins. Some public buildings like the Pasha's residence and the great bazaar or exchange were good. Its baths were of low quality. The eastern side was well fortified with a wall, and a ditch, while the western side was open and looks like a great village (Rauwolf, *Travels*, in Ray's collection, London 1605, i, 179 ff.). The city walls were built of bricks and had subsidiary works including four bastions on which heavy bronze guns in good conditions were mounted (Texeira, *Travels*, Hakluyt ed., 31). The circuit of the walls is given as two to three miles. John Eldred (1583) noticed that three languages were spoken in Baghdād, Arabic, Turkish, and Persian (Hakluyt, iii, 325). Ralph Fitch (1583) found Baghdād not very great but very populous. The Portuguese traveller Pedro Texeira (1604) estimated houses in east Baghdād at twenty to thirty thousand. There was a mint in Baghdād in which gold, silver and copper coins were struck. There was a school of archery and another of musketry maintained by the government (*Travels*, Hakluyt ed., 31).

Following the insurrection of Bakr the Subashī, Shāh ʿAbbās I conquered Baghdād in 1032/1623. School buildings and Sunnī shrines, including the mosques of Gīlānī and Abū Ḥanīfa, suffered destruction. Thousands were killed or sold as slaves and others were tortured (Kātib Čelebi, *Fadhlaka*, ii, 50; *Khulāṣat al-Āthār*, i, 383; ʿAzzāwī, iv, 178-182). In this period the Sarāy (government house) was built by Ṣafī Ḳulī Khān, the Persian governor. Baghdād was regained by the Ottomans in 1048/1638 under the personal command of Sulṭān Murād IV. He had the shrines, especially the tombs of Abū Ḥanīfa and Gīlānī, rebuilt. On his departure, the Bāb al-Tillisim was walled up and continued thus until it was blown up by the retreating Turks in 1917. His Grand Vizier put the Ḳalʿa (castle) in good repair.

Further information comes from travellers of this period, like Tavernier (1652), Ewliya Čelebi (1655) and Thevenot (1663). The wall around east Baghdād was almost circular in shape. It was 60 *dhirāʿ* high and 10-15 *dhirāʿ* broad, with holes for guns. It had large towers at the principal angles, of which four were famous at this period—and smaller towers at short distances from each other. On the large towers brass cannons were planted. The wall was completed on the river side for proper defence (the map of Naṣūḥ al-Ṣilāḥī drawn for Sulṭān Sulaymān in 1537 already shows this wall. A. Sousa, *Atlas of Baghdād*, 12). There were 118 towers in the wall on the land side and 45 on the river side (Ḥādjdjī Khalīfa (1657), *Djihān-nümā*, 457 ff.; Ker Porter (1819) reports 117 towers of which 17 were large (*Travels*, 265); cf. Buckingham, *Travels*, 372). The wall had three gates on the land side, (as the Tillisim gate was walled up): Bāb al-Imām al-Aʿẓam in the north at 700 *dhirāʿ* from the Tigris, Ḳaranlïk Ḳapu (Bāb Kalwādhā) or the dark gate in the south at 50 *dhirāʾ* from the Tigris, and Aḳ Ḳapu (al-Bāb al-Wasṭānī) or the white gate in the east. The fourth gate was at the bridge. Ewliya Čelebi measured the length of the wall and found it 28,800 paces in slow walking or seven miles (1 mile = 4,000 paces), while Ḥādjdjī Khalīfa makes its length 12,200 *dhirāʿ* or two miles (Niebuhr and Olivier consider the length of East Baghdād two miles). Wellsted thought the circuit of the walls 7 miles. Felix Jones, who surveyed Baghdād in 1853, gives the circuit of the walls of East Baghdād including the river face as 10,600 yards or about 6 miles (Olivier, *Voyage*, ii, 379-80; Wellsted, *Travels*, i, 255; Felix Jones, 318; cf. Rousseau, 5 and Tavernier, 84).

The wall was surrounded by a ditch, sixty *dhirāʿ* in width, with water drawn from the Tigris. At the north-western corner of the wall stood the Ḳalʿa (inner castle), from the Bāb al-Muʿaẓẓam to the Tigris; it was encompassed by a single wall with little towers upon which cannon were planted. Barracks, stores of ammunition and provisions as well as the treasury and the mint were there. The Sarāy, where the Pasha resided, stood below the castle; it had spacious gardens and fair kiosks. On the other end of the bridge at Karkh stood a castle called Ḳushlar Ḳalʿasī or Birds' castle, with a gate on the bridge (Ewliya Čelebi, iv, 416; Ḥādjdjī Khalīfa, *Djihān-Nümā*, 457-50; Tavernier, 64; Thevenot, *Voyage*, ii, 211). Ewliya Čelebi refers to the numerous mosques of Baghdād and mentions nine important mosques. Of the schools, two were the largest, the Mardjāniyya and Madrasat al-Khulafāʾ (Mustanṣiriyya). Of the many inns two were good. He mentions eight churches and three synagogues, and gives exaggerated figures for *tekkes* (700) and *ḥammāms* (500). The bridge of boats had 37-40 boats according to the height of the river, and some boats in the middle could be removed either for safety at night, or for river traffic, or as a military precaution. The main languages of the city were Arabic, Turkish and Persian. Baghdād had the best carrier-pigeons.

However Baghdād was still in decline; its population was at the low figure of 15,000 (Tavernier, *Travels*, London 1678, 85-6; Ewliya Čelebi, *Siyāḥat*, iv, 420 ff.; Thevenot, *Voyage*, ii, 211).

Baghdād was governed by 24 pashas between 1048/1638-1116/1704 and there was no room for real improvement. The pashas were semi-autonomous, and the power of the janissaries was great. The power of the tribes rose and gradually became a threat to the life of the city.

Little was done beyond repairs to the city walls or mosques. Küčük Ḥasan Pasha (1642) built three towers near Burdj al-ʿAdjam. Khāṣṣakī Muḥammad Pasha rebuilt Ṭabiyat al-Fātiḥ and repaired the walls after the flood of 1657. Aḥmad Bushnāḳ repaired the towers especially Burdj al-Djāwīsh (Čaʾush) and built Burdj al-Ṣābūnī (1687). Mosques received some attention. Deli Ḥusayn Pasha (1644) rebuilt the

Ḳamariyya mosque. Khāṣṣakī Muḥammad (1657) built the Khāṣṣakī mosque at Raʾs al-Ḳarya. Ṣiliḥdār Ḥusayn Pasha (1671) rebuilt al-Faḍl mosque which became known as Djāmiʿ Ḥusayn Pasha and surrounded the shrine of ʿUmar Suhrawardī by a wall and brought water to it by a canal. ʿAbd al-Raḥmān Pasha (1674) repaired the Djāmiʿ Shaykh Maʿrūf and completed the dam started by his predecessor to protect Aʿẓamiyya from flood. Kaplan Muṣṭafā (1676) rebuilt Djāmiʿ al-Shaykh al-Ḳudūrī which became known as Djāmiʿ al-Ḳaplāniyya. ʿUmar Pasha (1678) repaired the mosque of Abū Ḥanīfa and allotted new *waḳfs* to it. Ibrāhīm Pasha (1681) renewed Djāmiʿ Sayyid Sulṭān ʿAlī, and Djāmiʿ al-Sarāy. Ismāʿīl Pasha (1698) rebuilt Djāmiʿ al-Khaffāfīn (ʿAzzāwī, iv, 27, 64, 109, 116, 143, *Gulshan-i Khulafā*, 102, 103, 105, 106, Ālūsī, *Masādjid*, 37, 57-8). Aḥmad Bushnāḳ (1678) built the famous Khān Banī Saʿd, while Ṣiliḥdār Ḥusayn Pasha built a new bazaar near the Mustanṣiriyya.

The beginning of the 18th century saw the *eyalet* of Baghdād terribly disorganised, the janissaries masters of the city, the Arab tribes holding the surrounding country, and peace or security for trade non-existent. The appointment of Ḥasan Pasha in 1704, followed by his son Aḥmad, inaugurated a new period for Baghdād. They introduced the Mamlūks (*Kölemen*) to check the janissaries and laid the foundation for Mamlūk supremacy which lasted till 1831. The janissaries and Arab tribes were controlled, order was restored and the Persian threat averted. Ḥasan Pasha rebuilt the Sarāy Mosque (Djadīd Ḥasan Pasha). He abolished taxes on firewood and on foodstuffs, and relieved quarters from exactions following murders (*Gazetteer of the Persian Gulf*, vol. i, pt. I, 1193-4; Sulaymān Fāʾiḳ, *Ḥurūb al-Irāniyyin*, MS. f. 18-19; idem, *Tāʾrīkh al-Mamālik*, MS. f. 4; *Ḥadīḳat al-Zawrāʾ* (abridged), MS. 9; *Gulshan-i Khulafā*, 225). Aḥmad Pasha continued on the lines of his father and enhanced greatly the prestige of Baghdād. Nādir Shāh besieged Baghdād twice, in 1737 and 1743, and though the city suffered much in the first siege, Aḥmad Pasha held out and saved the city. When Aḥmad Pasha died in 1747, Constantinople tried to reimpose its authority on Baghdād but failed, because of Mamlūk opposition. In 1749 Sulaymān Pasha was the first Mamlūk to be made governor of Baghdād. He was the real founder of Mamlūk rule in ʿIrāḳ. Henceforth the sultan had to recognise their position and generally to confirm their nominee to the governorship. Ḥasan Pasha, who was brought up at the Ottoman court (slave household), wanted to follow its example; he established houses and initiated the training of Circassian and Georgian Mamlūks and sons of local magnates in them. Sulaymān now expanded this and there were always about 200 receiving training in the school to prepare officers and officials. They are given a literary education and training in the use of arms, the art of chivalry and sports, and finally some palace education, to create an élite for government (Sulayman Fāʾiḳ, *Taʾrīkh al-Mamālik*; *Dawḥat al-Wuzarāʾ*, 8). A governing class was formed, trained, energetic, and compact. But their weakness came from jealousies and intrigues. Sulaymān Pasha subdued the tribes and assured order and security, and encouraged trade. ʿAlī Pasha followed in 1175/1762 and ʿUmar Pasha in 1177/1764 (*Taʾrīkh-i Djewdet*, i, 339-40). In 1766 the establishment of a British residency in Baghdād was sanctioned by Bombay (*Gazetteer*, i, 1225). In 1186/1772 a terrible plague befell Baghdād and lasted six months; thousands perished, others migrated, and commercial activities came to a standstill (*Gazetteer*, i, 324).

Security made Baghdād a great commercial centre. An eye-witness wrote in 1774, "this is the grand mart for the produce of India and Persia, Constantinople, Aleppo and Damascus; in short it is the grand oriental depository" (*Gazetteer*, i, 1243).

Dissension and weak leadership among the Mamlūks led to a period of troubles, of tribal chaos, and the Persian conquest of Baṣra. It ended when Sulaymān Pasha the Great became governor (1193/1779) and combined Baghdād, Shāhrizūr and Baṣra. The tribes were checked, peace was restored and Mamlūk power revived (*Taʾrīkh-i Djewdet*, ii, 146, 157, 158; Ṣūfī, *Taʾrīkh al-Mamālīk*, 19 ff., 54 ff., S. Fāʾiḳ, *Taʾrīkh al-Mamālīk*, f. 16-7).

Sulaymān Pasha repaired the walls of east Baghdād, and built a wall around Karkh and surrounded it with a ditch. He rebuilt the Sarāy. He also built the Sulaymāniyya school and renewed the Ḳaplaniyya, Faḍl and Khulafāʾ mosques. In addition, he built the Sūḳ al-Sarrādjīn. His *kahya* started building the Aḥmadiyya mosque (Djāmiʿ al-Maydān) to be completed by the *kahya's* brother (ʿUthmān b. Sanad, (abridg. ed.), 70-73, 76-7). His last year (1802) saw a plague in Baghdād (*Gazetteer*, i, 1285; Yāsīn Efendi al-ʿUmarī, *Gharāʾib al-Athar*, 64). Ḳüčük Sulaymān (1808) abolished execution except when religious courts decided it, and forbade confiscations and cancelled dues to courts, and allotted salaries to judges (S. Fāʾiḳ, *Taʾrīkh al-Mamālīk*, f. 16; *Dawḥat al-Wuzarāʾ*, 250).

Dāwūd Pasha came (1816) after a troubled period. He controlled the tribes and restored order and security. He cleared up some irrigation canals, established cloth and arms factories, and encouraged local industry. He built three large mosques, the most important being the Ḥaydar-Khāna mosque. He founded three *madrasas*. He also built a *sūḳ* by the bridge. He organised an army of about 20,000 and had a French officer to train it. His energetic and intelligent administration brought prosperity to the city. However, he had to impose heavy taxes in Baghdād. Dāwūd's fall and the end of the Mamlūks came about as a result of Maḥmūd II's centralising and reforming policy, aided by a terrible plague, scarcity, and flood, which affected most of the city population (1247/1831) (*Ḥadīḳat al-Zawrāʾ* (abridg. ed.), MS. f. 43-44, 53, 55-56; A. R. Suwaydī, *Nuzhat al-Udabāʾ*, MS. f. 41-42; *Mirʾāt al-Zawrāʾ*, 59; S. Fāʾiḳ, *Taʾrīkh al-Mamālik*, MS. f. 39-52; *Gazetteer*, i, 1316; Frazer, *Travels*, i, 224-5; *Handbook of Mesopotamia*, i, 80-1).

The administrative system of Baghdād was copied on a small scale from that of Constantinople. The Pasha held supreme military and administrative power. As the head of the administration was the *katkhudā* (or *kahya*) who was like a minister. He was assisted by the *defterdār*, who was director of finances, and by the *dīwān efendisi* or chief of the chancellery. There was the commander of the palace guards and the aghā of the janissaries. There was the ḳāḍī as the head of the judiciary. The Pasha called the *dīwān* which included the *kahya*, the *defterdār*, the *ḳāḍi*, the commander and other important personages, to discuss important issues. In the palace there were houses, with teachers and instructors (*lālāt*) to educate the Mamlūks (Djewdet, ii, 287, iii, 204, ʿUthmān b. Sanad, 31-2, 56, 39; Rousseau, 25 ff.). The Mamlūk army was of 12,500 and in case of need it could be raised to

30,000 by local levies and contingents from other parts of the *wilāyat* (S. Fā'iḳ, *Mamālik*, f. 51-2).

European travellers of this period give some data on Baghdād. Some notice that the walls were constructed and repaired at many different times, the old portions being the best (Buckingham, *Travels* (1827), 332; see Felix Jones, *Memoir*, 309). The enclosed area within the walls (east) according to Felix Jones' measurement was 591 acres (cf. Dr. Ives, *Journey*, London 1778, 20; Rousseau, *Description*, 5). The wall on the river seems to have been neglected and houses were built on the bank (Olivier, *Voyage* (1804), ii, 379). A large part of the city within the walls, particularly in the eastern side, was not occupied. The section near the river was well populated but even there gardens abounded so that it appeared like a city arising from amid a grove of palms (Niebuhr, ii, 239; Buckingham, 373, Wellsted, *Travels* (1840), i, 255). The Sarāy was spacious, enclosing beautiful gardens, and was richly furnished (Rousseau, 6; Ker Porter, 263).

The western side Karkh, was like a suburb with numerous gardens. It was defenceless at first, (Rousseau, 5; Ives, 28), until Sulaymān Pasha the Great built its wall. It had four gates—Bāb al-Kāẓim (N.), Bāb al-Shaykh Maʿrūf (W.), Bāb al-Ḥilla (S.W.), and Bab al-Kraimāt (S.). The walls were 5,800 yards long, enclosing an area of 246 acres (F. Jones, 309). (Ker Porter (1818) found it well furnished with shops along numerous and extensive streets (Ker Porter, ii, 255; al-Munshī' al-Baghdādī, *Riḥla*, 31). Moreover it was not so populated as the eastern side, and generally inhabited by the common people (Niebuhr, ii, 244; Rousseau, 4). The bridge of boats was 6 ft. wide and people use it or use "guffas" to cross the river (Ker Porter, ii, 255; Niebuhr, ii, 243; al-Munshī' al-Baghdādī, 243).

The population gradually increased in this period. Rousseau (c. 1800) estimates it at 45,000, Olivier at 80,000, while the inhabitants put the figure at 100,000 (Rousseau, 8; Olivier, ii, 385); Buckingham (1816) made the estimate 80,000 (*Travels*, ii, 380)). Ker Porter (1818) puts the figure at 100,000 (*Travels*, 265). Al-Munshī' al-Baghdādī echoes local views in saying that there were 100,000 houses in Baghdād of which 1,500 were Jewish and 800 were Christian (*Riḥla*, 24). By 1830 the estimate is brought to 120,000-150,000 (Frazer, i, 224-5 and Wellsted). There was a mixture of races and creeds. The official class was Turkish (or Mamlūk), the merchants primarily Arab, and there were Persians, Kurds and some Indians (Buckingham, 387; Niebuhr, ii, 250; Ker Porter, ii, 265; Wellsted, i, 251). There were numerous bazaars in Baghdād especially near the bridge, and the grand ones were vaulted with bricks, while the others were covered with palm trees. There were many *khāns*, 24 *ḥammāms*, five great *madrasas*, and twenty large mosques and many small ones (Buckingham, 378-9; Ives, 273; al-Munshī' al-Baghdādī, 31; Niebuhr, ii, 230; Wellsted, i, 257; Olivier, ii, 382).

The streets were narrow, and some had gates closed at night for protection. Houses were high, with few windows on the streets. The interior consists of ranges of rooms opening into a square interior court usually with a garden. *Sardābs* were used to avoid heat in summer, while open terraces were convenient for the late afternoon. In summer people slept on the roof (cf. Buckingham, 380). Baghdād had some industries especially tannery and the fabrication of cotton, silk and woolen textiles (Rousseau, 9-10).

From 1831 to the end of the Ottoman period, Baghdād was directly under Constantinople. Some governors tried to introduce reforms. Meḥmed Rashīd Pasha (1847) was the first to try to improve economic conditions. He formed a company to buy two ships for transport between Baghdād and Baṣra, the success of which led to the corresponding British project. Nāmiḳ Pasha (1853) founded the *damir-khāna* which could repair ships (Chiha, 54, 58-9; *Gazetteer*, i, 1360, 1365-6, 1372). Midḥat Pasha (1869-1872) introduced the modern *wilāyet* system. The *wālī* had a *muʿāwin*, or assistant, a *mudir* for foreign affairs, and a *ma'mūn* or secretary. The *wilāyet* was divided into seven *sandjaks* headed by *mutaṣarrifs*, Baghdād being one of them (*Gazetteer*, i, 1442, 1447-8). He abolished some obnoxious taxes—the *iḥtisāb* (octroi duty) on all produce brought to the city walls for sale, the *ṭālibiyya*, a tax on river crafts, *khums ḥaṭab*, or 20% on fuel, and *rūs 'bkār*, a tax on irrigation wheels for cultivation, and replaced it by a *ʿushr* on agricultural produce (*Gazetteer*, i, 1442). In 1870 Midḥat founded a tramway linking Baghdād with Kāẓimayn, and it continued for 70 years (ʿAlī Ḥaydar Midḥat, *Life*, 51). He established (1869) the first publishing house, the *wilāyet* printing press in Baghdād, and founded *al-Zawrā'*, the first newspaper to appear in ʿIrāḳ as the official organ of the provincial government; it continued until March 1917 as a weekly paper (ʿAzzāwī, vii, 241; Ali Haydar Midhat, *The Life of Midḥat Pasha*, London 1903, 47 ff.; Ṭarrāzī, *Arabic Press*, i, 78; *Handbook of Mesopotamia*, i, 81). With the exception of a few French Missionary schools, there were no modern schools in Baghdād. Between 1869-1871, Midḥat established modern schools, a technical school, a junior (*Rushdi*) and a secondary (*Iʿdādi*) military schools, and a junior and secondary civil (*Mulkī*) schools (*Zawrā'* No. 182; ʿAzzāwī, viii, 21; *Sālnāme-i Baghdād* (1900), 454; Chiha, 100-102). Midḥat pulled down the city walls as a step towards its modernisation. He completed the Saray building started by Nāmiḳ Pasha (Chiha, 66).

The education movement started by Midḥat continued after him. The first junior girls' school was opened in 1899 (*Sālnāme*, 1318). Four primary schools were opened in 1890, and a primary teachers' school in 1900 (*Sālnāme-i Maʿārif*, Istanbul 1900; S. Fayḍī, *Niḍāl*, 58-9). By 1913 there were 103 schools in ʿIrāḳ, 67 primary, 29 junior (*Rüshdī*), 5 secondary and one college, the law college (*Lughat al-ʿArab*, 1913, 335). Five printing presses were founded between 1884-1907. Newspapers appeared in Baghdād after 1908 and by 1915, 45 papers were issued by different people.

Wālīs followed Midḥat in quick succession and little was achieved. In 1886 conscription was established (for Muslims only). In 1879 the hospital built by Midḥat was finally opened (*Zawrā'*, No. 810). In 1902, a new bridge of boats, wide enough for vehicles to pass, and with a cafe on the south side, was constructed (Ālūsī, 25; *Handbook*, ii, 374). In 1908 Baghdād sent three representatives to the Ottoman Parliament (ʿAzzāwī, viii, 165). In 1910 Nāẓim Pasha constructed a bund surrounding east Baghdād to protect it from floods (ʿAzzāwī, viii, 200-1). He was the last energetic *wālī*.

Administration was headed by the *wālī* assisted by a council, about half of which consisted of elected members, and the rest were appointed (*ex-officio*). About two of the elected members were non-Muslims. The *wālī* was assisted by a *ḳā'im maḳām* (*Zawrā'*, No. 1369; *Sālnāme* 1292 A.H.). Among important offices were the *Maʿārif* directorate, the *Tapu* directorate, the registration office, and the civil

courts (*Sālnāme* (1300), 82-96). Until 1868, Bag͟hdād was the centre of the three *eyālets* of Mawṣil, Baṣra and Bag͟hdād. In 1861, Mawṣil became separate and in 1884 Baṣra was separated and Bag͟hdād became the centre of three *Mutaṣarriflik*s (Chiha, *Province*, 85).

The plague and flood of 1831 left terrible marks on Bag͟hdād. Most of the houses of East Bag͟hdād were ruined and two thirds of th space within the walls was vacant, while most Kark͟h was ruined. The walls on both sides had great gaps opened by the flood. The city was in a miserable state compared to the days of Dāwūd Pas͟ha (Frazer, *Travels*, i, 269, 233-4, 252).

Southgate (1837) noticed that the city was slowly recovering from the calamity, and put the population at 40,000. But he saw the *madrasa*s neglected and their allowances not properly used (Southgate, *Narrative*, 2 vols. 1851, II, 180, 165-6; *Handbook of Mesopotamia*, i, 80-1).

When Felix Jones surveyed Bag͟hdād (1853-4) things had improved. He mentions 63 quarters in East Bag͟hdād, 25 quarters in Kark͟h, most of which still retain their names (*Memoir*, 339; cf. Frazer, 233-4).

The population of the city increased steadily after the middle of the 19th century. In 1853 they were about 60,000 (Felix Jones, 315, 329). In 1867, the male population of Bag͟hdād is given as 67,273 (*Lug͟hat al-ʿArab*, 1913). In 1877 they were all estimated at 70 to 80 thousand (*Persian Gulf Gazetteer*, 8; Geary, *Through Asiatic Turkey*, 1878, i, 126). In the 1890s the estimate was 80 to a 100 thousand (Harris, *From Batum to Baghdad*, 299; Cowper, *Through Asiatic Turkey*, 270). In 1900 they were put at 100,000 (Chiha, *Province*, 165; see *Sālnāme* (1320 A.H.), 136-7, 181).

Another estimate for 1904 is given at 140,000 (*Handbook of Mesopotamia*, i, 89). By 1918, the population is given as 200,000 (*Handbook*, ii, 334; Alūsī, *Ak͟hbār Bag͟hdād*, 280-1; cf. R. Coke for the figure 185,000 in 1918, *Bag͟hdād*, 298). Travellers were impressed with the great admixture of races, the diversity of speech and the rare freedom enjoyed by non-Muslims and the great toleration among the masses (Jones, 339; Olivier, ii, 388-9). This mixture left its imprint on the dialect of Bag͟hdād (ʿAbd al-Laṭīf, *Ḳāmūs Lahdjat Bag͟hdād* MSS.).

However, Arabic was the common language. The Arab population was increased by the advent of tribal elements (Geary, *op. cit.* i, 136, 214). Usually people of one creed or race congregated in a particular quarter (cf. F. Jones, *Memoir*, 339). The Turks generally occupied the northern quarters of the city, while Jews and Christians lived in their ancient quarters north and west of Sūḳ al-G͟hazl respectively. Most of the Persians lived on the west side but Kark͟h was mainly Arab (F. Jones, 339; *Persian Gulf*, 9, 79-80; *Handbook*, ii, 381; Southgate, ii, 182). Though people of the three religions spoke Arabic their dialects differed (*Lug͟hat al-ʿArab*, 1911, 69-71).

At the turn of the century there were still some industries. Among the textiles of Bag͟hdād were silk stuffs, cotton fabrics, stuffs of wool-silk mixture, striped cotton pieces, and coarse cotton cloth for head-scarves and cloaks, sheets and women outer garments. The silk fabrics of Bag͟hdād were famous for their colour and workmanship. An excellent dyeing industry existed. Tanning was one of the principal industries, and there were about 40 tanneries at Muʿaẓẓam. Carpentry and the manufacture of swords were advanced. There was a military factory for textiles (*Handbook*, i, 231; *Sālnāme* (1300), 79, 136).

The Bag͟hdād bazaars were covered, or uncovered like Sūḳ al G͟hazl. At the eastern bridgehead was the chief place for trade in the bazaars of the Sarāy, Maydān, S͟hordja and the cloth bazaar rebuilt by Dāwūd Pas͟ha. Some bazaars had crafts with their own guilds and usually the bazaar was named after it, such as Sūḳ al-Ṣafāfīr (coppersmiths) Sūḳ al-Sarrādjīn (saddlery), Sūḳ al-Ṣāg͟hā, (silversmiths), Sūḳ al-K͟haffāfīn (shoemakers) etc. (Ewliya Čelebi, iv, 22; *M.G.T.B.*, i, 22-3).

There were two important streets, one from the North Gate to near the bridge, and the other from the South Gate to the end of the main bazaar. In 1915 the North Gate was connected with the South Gate by a road, now known as Ras͟hīd street (*Handbook*, i, 377; *Sālnāme* (1318 A.H.), 599-600).

In 1922 Nāmiḳ Pas͟ha tried to repair some of the streets (*Sālnāme* (1318 A.H.), 60). In 1307/1889 Sirrī Pas͟ha transfered the Maydān to an open square with a garden (see *Sālnāme* (1321), 76).

In 1285/1869 Midḥat formed a municipal council by election and orders were issued to clear the streets. In 1879 municipalities were formed and orders were issued for achieving cleanliness and drainage (*Zawrāʾ*, No. 231, No. 878, No. 817, No. 1774, *Lug͟hat al-ʿArab*, i, 17; *Sālnāme* (1300), 136). Lighting with kerosene lamps was adopted and given to a contractor, but in fact only streets with notable residents were lit (*Zawrāʾ*, No. 490, no. 837) (see further BALADIYYA.)

At the beginning of the 20th century the city of Bag͟hdād covered an area of about four sq. m. The remains of the city wall on the East side demolished by Midḥat formed with the river a rough parallelogram about 2 miles long with an average width of over a mile. About a third of this area was empty or occupied by graveyards or ruins, and towards the south much space was covered by date groves. Kark͟h began further upstream than East Bag͟hdād but it was much smaller in length and depth (*Handbook*, ii, 276). In 1882 there were 16,303 houses, 600 inns, 21 baths, 46 large mosques (*djāmiʿ*) and 36 small mosques (*masdjid*), 34 children's *maktab* and 21 religious schools, 184 coffee-shops and 3,244 shops (*Sālnāme* (1300), 136). In 1884 the figures were: 16,426 houses, 205 inns, 39 baths, 93 *djāmiʿ* and 42 *masdjid*s and 36 children's *maktab*s (*Sālnāme* (1302), 335).

In 1903 Bag͟hdād had 4,000 shops, 285 coffee-shops, 135 orchards, 145 *djāmiʿ*, 6 primary schools, 8 schools for non-Muslims and 20 convents (*tekke*), 12 bookshops, one public library, 20 *maktab*s for boys, 8 churches, 9 tanneries, one soap factory, 129 workshops for weaving, 22 textile factories (*Sālnāme* (1321), 179). By 1909 houses reached 90,000 in number. There were 3 private printing presses, 6 churches and 6 synagogues (*Sālnāme* (1324), 223).

S͟hukrī al-Alūsī described 44 mosques in East Bag͟hdād and 18 in Kark͟h (Alūsī, *Masādjid*; Massignon, *Mission*, ii, 63-5).

The temperature in Bag͟hdād ranged from 114° to 121° F. in summer, and from about 26° to 31° F. in winter, but it sometimes rose to 123° F. in summer and fell to 20° F. in winter.

Bag͟hdād produced some distinguished poets during the Ottoman period, like Fuḍūlī [*q.v.*], D͟hihnī [*q.v.*], Ak͟hras and ʿAbd al-Bāḳī al-ʿUmarī; historians like Murtaḍā, G͟hurābī and M. S͟hukrī Ālūsī; jurists like ʿAbd Allāh Suwaydī and Abu 'l-T͟hanā al-Alūsī (see Alūsī, *al-Misk al-Adhfar*, Bag͟hdād 1930).

Modern Bag͟hdād has changed considerably, especially since the thirties. It has expanded to link

up with Aʿẓamiyya and Kāẓimayn to the north, with the eastern bund to the east, with the great bend of the Tigris to the south, and with the al-Maṭār al-Madanī and with nearby suburbs like Manṣūr and Maʾmūn cities. There are 76 quarters in Karkh and Rusāfa, 8 in Aʿẓamiyya, 4 in Karradh Sharkiyya and 6 in Kāẓimayn (Sousa, *Atlas Baghdād*, 21-5). The population of the Baghdād municipality in 1947 was 466,733; it had mounted to 735,000 by 1957.

Traditional styles of building gave way to houses, built on western lines, in areas beyond the old city, while the old sections are being gradually transformed. The bridge of boats is gone, and four permanent bridges have been constructed.

The process of modernisation, both material and social, is too rapid to be recorded here.

Bibliography: The sources have been mentioned in the article. In addition to the major works of historians like Ṭabarī, Masʿūdī, Yaʿkūbī, Ibn al-Athīr, geographers like Ibn Rusta, Ibn al-Fakīh (Mashhad MSS.), Ibn Ḥawkal, Yaʿkūbī, Mukaddasī, Yākūt, *Marāṣid al-Iṭṭilāʿ*, *Ḥudūd al-ʿAlam* and Mustawfī, and travellers like Ibn Djubayr, Ibn Baṭṭūta and Benjamin of Tudela, the following should also be mentioned: Ibn al-Sāʿī, *Al-Djāmiʿ al-Mukhtaṣar*, ed. Muṣṭafā Djawād, Baghdād 1934; Ibn al-Djawzī, *Manāķib Baghdād*, Baghdād 1921; idem, *al-Muntaẓam*, Ḥaydarābād, Deccan, 1357-9 A.H.; Miskawayh, *Tadjārib al-Umam*, vols i-vii (ed. and transl. by Amedroz and Margoliouth, 1920-1; Suhrāb, *ʿAdjāʾib al-Akālīm al-Sabʿa*, ed. Hans von Mzik, Leipzig 1930; al-Shābushtī, *Kitāb al-Diyārāt*, ed. Gurgis ʿAwwād, Baghdād 1951; Hilāl al-Ṣābī, *Rusūm Dār al-Khilāfa*, Dept. of Ant. BAGHDĀD KHĀTŪN, daughter of the *amīr al-umarā* Amīr Čūbān, niece of the Īlkhānid ruler of Persia Abū Saʿīd (*regn.* 717-736/1317-1335) (her mother was Abū Saʿīd's sister), and wife of Amīr Ḥasan the Djalāʾirid, commonly known as Shaykh Ḥasan Buzurg, whom she married in 723/1323. In 1325 A.D. Abū Saʿīd, quoting as precedent the *yāsā* of Čingiz Khān, attempted to force Shaykh Ḥasan to divorce Baghdād Khātūn in order that he might marry her himself, but was frustrated by Amīr Čūbān. In October or November 1327 A.D. Amīr Čūbān was treacherously put to death at Harāt by Ghiyāth al-Dīn the Kurt at the instigation of Abū Saʿīd, who was then able to carry out his design and marry Baghdād Khātūn. Baghdād Khātūn attained a position of great influence, and was given the *laķab* of Khudāwandigār ("sovereign"). In 732/1331-2 Shaykh Ḥasan was accused of conspiring with his former wife Baghdād Khātūn to murder Abū Saʿīd. This caused an estrangement between Abū Saʿīd and Baghdād Khātūn, but the following year, when the accusation was proved to have been false, he restored her to favour. In 734/1333-4 Abū Saʿīd married Baghdād Khātūn's niece Dilshād Khātūn, and promoted her above his other wives. This aroused the jealousy of Baghdād Khātūn, and, when Abū Saʿīd died suddenly on 13 Rabīʿ II 736/30 November 1335, Baghdād Khātūn was suspected of having poisoned him, and was put to death by the amīrs. Another version is that she was put to death because she had corresponded with Özbek, khān of the Golden Horde, and had incited him to invade Persia.

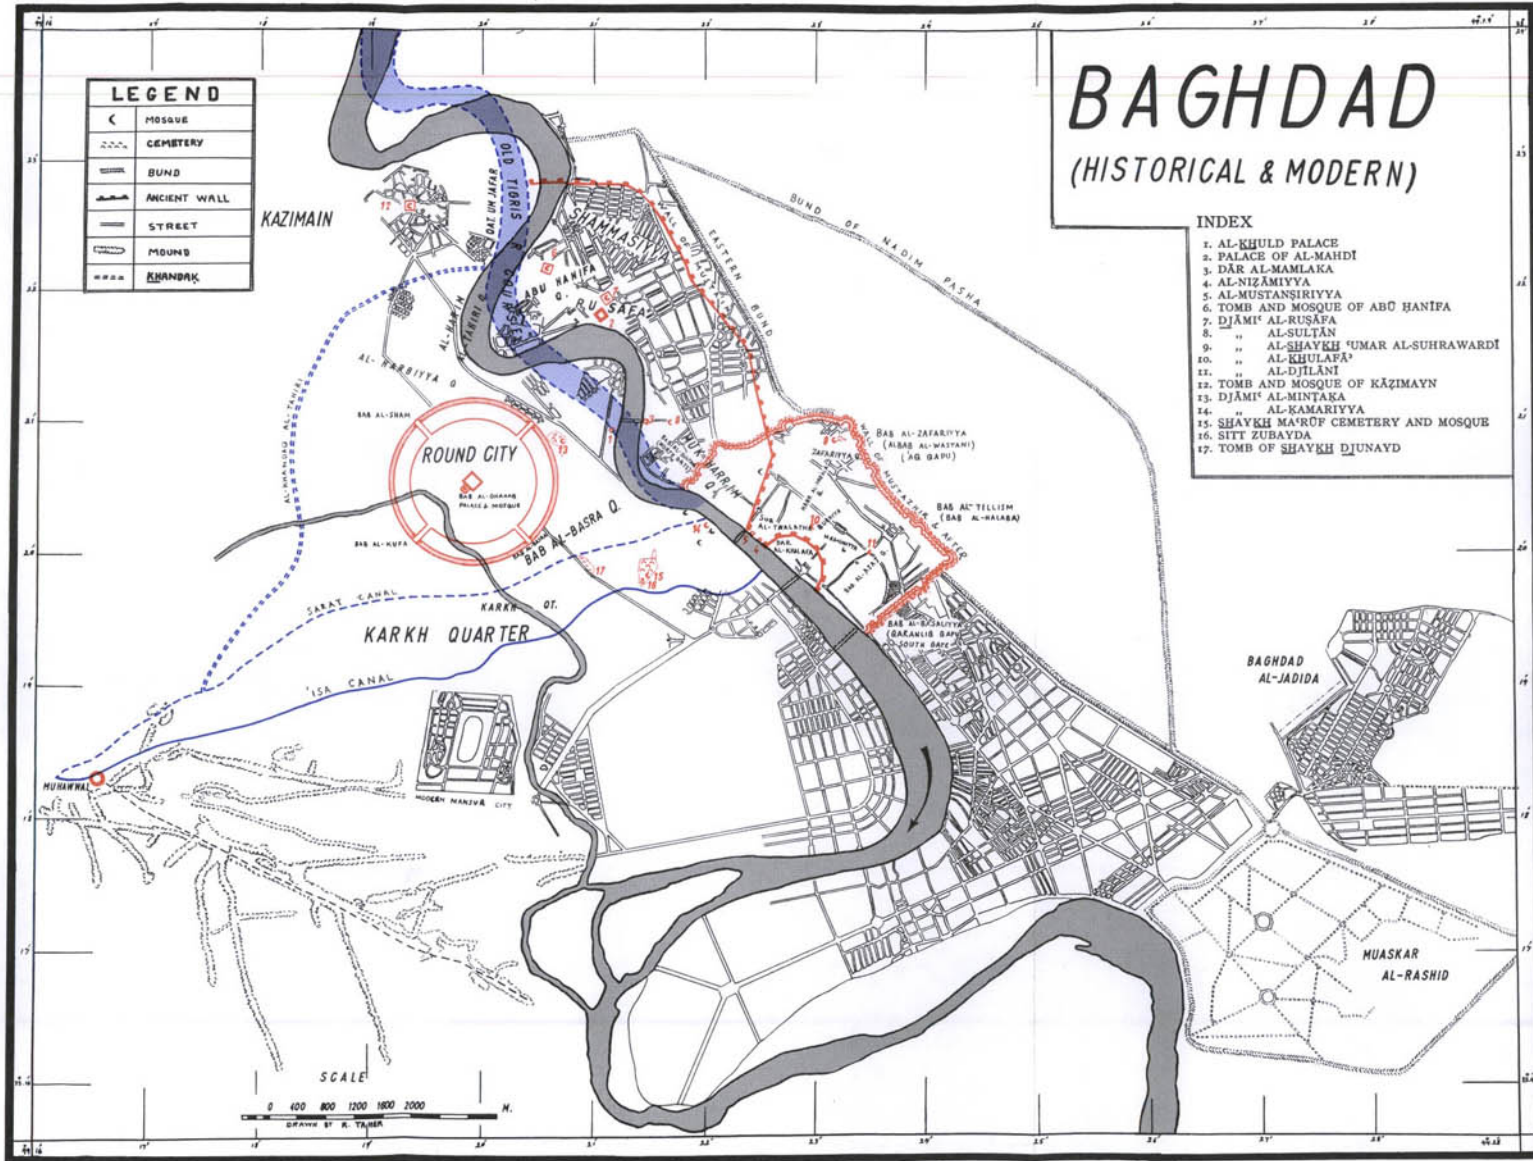
Bibliography: Ḥāfiẓ Abrū, *Dhayl-i Djāmiʿ*

The site of the Round city was determined by old canals, especially the ʿĪsā canal and the Ṣarāt canal. The bed of the ʿĪsā canal is still known as ʿĪsāwī or Dāwūdī, and the canal which flows into the city could be seen until the present Khirr canal, but the lower part is obliterated. But we know that the main bridge in the 5th/11th century was at Mashraʿat al-Rawāya by the ʿĪsā canal, and this *mashraʿa* was opposite Sūḳ al-Thalāthāʾ below the modern Maʾmūn bridge (Ibn al-Djawzī, *Muntaẓam*, viii, 169; idem, *Manāḳib Baghdād*, 20; cf. Massignon, *Mission*, ii, 104-5). However, I have resorted to the application of the spectrograph on the Area survey of Baghdad and found the course of the ʿĪsā canal to the Tigris as indicated on the map (at modern Shawwāka), which agrees with the above remarks.

The Ṣarāt canal flowed into the Tigris near the Bāb al-Shaʿīr. According to Ibn al-Faḳīh (Mashhad MS.), the Bāb al-Shāʿīr was near the Sharīʿa where boats coming from Mosul stopped. Sharīʿas did not change and the Sharīʿa referred to could only be at present day Ḳamariyya.

The Round City had its southern limit near tne Ṣarāt canal and it was at the junction of this canal with the Tigris. The village of Sunāya was outside its wall, near the northern section (cf. Ibn al-Djawzī, *Manāḳib*, 24), and this village was very probably where present day Minṭaḳa is. Therefore Minṭaḳa is the eastern limit of the Round City, which was not directly on the Tigris. Aḥmad b. Ḥanbal put Baghdād between the Ṣarāt canal and the Bāb al-Tibn, thus considering the Trench of Ṭāhir as the northern boundary. This Trench included al-Ḥarīm al-Ṭāhirī and left only Ḳaṭīʿat Umm Djaʿfar beyond (Khaṭīb, 79; *Manāḳib*, 28). As the al-Ḥarīm al-Ṭāhirī Quarter was mostly swept by the Tigris through its change of course (as the author of the *Marāṣid* states) its limit could not be higher than 33° 22′ N. Lat. and thus the Round City must have its northern limit at about 33° 21′.

Mahdī Camp (Ruṣāfa) was almost opposite the Round City. The Shammāsiyya quarter was opposite the Ḥarbiyya quarter, while the Shammāsiyya Gate was almost opposite the Ḳaṭrabbul Gate (Iṣṭakhrī, 83; Ṭabarī, iii, 1576). Shammāsiyya was north and east of the quarter of Abū Ḥanīfa. Below Abū Ḥanifa's quarter was the Caliphal Cemetery and next came the Ruṣāfa mosque. Digging and soil analysis indícate that this Cemetery was slightly above the former Royal Sporting Club. The Ruṣāfa mosque was about a mile north of Djāmiʿ al-Sulṭān at Upper Mukharrim which could not be above modern ʿAywāḍiyya and so the Mosque would be at the northern limit of Sāḥat ʿAntara.

Mustanṣiriyya was the southern limit of Mukharrim and the beginning of the Sūḳ al-Thalathāʾ, which terminated at the Djāmiʿ al-Khulafā (traceable by the Sūḳ al-Ghazl minaret). Thus the Royal palaces (Ḥarīm Dār al-Khilāfa) start and extend over Ḳurayya — which still keeps its name — and end at the suburb (*rabḍ*) at Murabbaʿa — which also still keeps its name, (cf. Ibn Djubayr). This puts Harīm Dār al-Khilāfa between about Samawʾal street and Djāmiʿ Sayyid Sulṭān ʿAlī. In digging the foundations of the new building of the Rāfiḍayn Bank, about fifty yards from Samawʾal St., a kitchen was struck, very likely that of Dār al-Khilāfa (Djahshiyārī, Cairo 1938, 189, 195; Ibn al-Athīr, x, 73; Yāḳūt, i, 587; iii, 195; cf. Massignon, *Mission*, 89; *Sūmer*, ii, 197). The limit of the Mustaʿīn wall eastwards corresponds approximately to the Nāẓim Pasha Band as is shown from digging foundations of new houses.


al-Tawārīkh-i Rashīdī (ed. K. Bayānī), Tehran 1317/1938, index; Ibn Baṭṭūṭa (ed. Defrémery and Sanguinetti), Paris 1854, ii, 117 ff.; *Ta'rīkh-i Shaikh Uwais* (ed. J. B. van Loon), The Hague 1954, 57, 59; C. D'Ohsson, *Histoire des Mongols*, The Hague and Amsterdam 1835, iv, 667 ff., 714 f., 720; H. Howorth, *History of the Mongols*, London 1876-1888, iii, 605 ff., 622 ff.; ʿAbbās al-ʿAzzāwī, *Ta'rīkh al-ʿIrāḳ* . . . , Baghdād 1935, 493-6, and index; B. Spuler, *Die Mongolen in Iran*[2], Berlin 1955, index. (R. M. SAVORY)

AL-**BAGHDĀDĪ**, ʿABD AL-ḲĀHIR B. ṬĀHIR, ABŪ MANṢŪR AL-SHĀFIʿĪ, d. 429/1037. His father took him to Nīshāpūr for his education and there he made his home. Most of the scholars of Khurāsān were his pupils and he could teach 17 subjects, especially law, principles, arithmetic, law of inheritance and theology. He left Nīshāpūr because of rioting by Turkmens and went to Isfarā'īn where he soon after died. He was learned in literature as well as in law, was rich, helped other scholars and his books on law, arithmetic (one survives) and the law of inheritance were highly praised. He wrote several books on theology; *Kitāb al-Milal wa 'l-Niḥal* is lost; *Uṣūl al-Dīn*, a systematic treatise, beginning with the nature of knowledge, creation, how the Creator is known, His attributes, etc. is rather like *al-muḥaṣṣal* of Muḥammad b. ʿUmar al-Rāzī, but gives the views of the sects on each subject. It cannot be identified with any of the books named by al-Subkī. The tone throughout is objective, unlike that of his other book *al-Farḳ bayn al-Firaḳ*. This takes each sect separately, judges all from the standpoint of orthodoxy and condemns all which deviate from the strait path. It is not a plain tale of facts, like Shahrastānī's *Kitāb al-Milal wa 'l-Niḥal*, but a polemic. In spite of a chapter heading "Socrates and Plato" it deals only with Islam though it brands some aberrations as unworthy of the name. It ends with an exposition of orthodox belief. Two books, which presumably went into greater detail, The *Errors of Abu 'l-Hudhayl* and the *Errors of Ibn Karrām*, are lost. It is fair to say that he draws from doctrines, which he condemns, conclusions never envisaged by their authors.

Bibliography: Al-Subkī, *Ṭabaḳāt al-Shāfiʿiyya* iii, 238 ff. Ibn Khallikān, § 402; *ZDMG* 65, 349 ff., *MO* 19, 187ff.; Brockelmann, I. 385, S I 666. (A. S. TRITTON)

AL-**BAGHDĀDĪ**, AL-KHAṬĪB [see AL-KHAṬĪB, AL-BAGHDĀDĪ].

BAGHL, mule (pl. *bighāl*, fem. *baghla*; but some think that *baghl* denotes the hybrid without distinction of sex, and that *baghla* is a singulative form which applies both to the male and female); the same word denotes both the hinny, the offspring of a stallion and a she-ass (cf. however *kawdar* in al-Masʿūdī, ii, 408; *contra*: al-Djāḥiẓ, *Bighāl* 120; al-Damīrī, s.v.; cf. al-Djāḥiẓ, *Tarbīʿ*, ed. Pellat, index, s.v.), and the mule, the offspring of a he-ass and a mare, the morphological characteristics of the two varieties being midway between those of the he-ass and those of the stallion, with however a tendency to be influenced by the mother's side. Ḳārūn (Korah; see al-Damīrī) or Ṭahmūrath (see al-Ṭabarī/Balʿamī, trans. Zotenberg, i, 101) was the first to bring about this cross-breeding, but the Ḳur'ān (xvi, 8) naturally attributed the creation of the mule to God. Muḥammad himself possessed mules (notably Duldul, which lived up to the time of Muʿāwiya), so that although the *ḥadīths* forbidding the consumption of the flesh of the mule (like that of the ass) may be authentic, those concerning the interdict on the mating of asses and mares have less chance of being so; at all events, it was not observed, and the mule industry did not suffer by reason of it. The postal service used these animals, and eminent men and women of noble birth did not disdain to ride on them, in spite of their stubbornness and obstinacy, because their even gait and surefootedness made them valued mounts.

Men of an inquiring mind have been especially interested in this hybrid and its sterility; the Arab zoologists, however, thought that the she-mule was by nature fertile, but that it could not retain the male (*lā taʿlaḳ*), or that it was too small-boned to give birth without losing its life; in order to prevent accidents of this sort it was sometimes "sewn up" (*maktūba*). But al-Damīrī relates that in 444/1052 a she-mule gave birth to a black filly and a white mule.

The size of its head and penis, its longevity (due to continence), its sterility, its obstinacy and other characteristic traits of the mule are proverbial, and the words *baghl* and *baghla* enter into a large number of everyday expressions (for an account of the she-mule of Abū Dulāma, which became proverbial by reason of its defects, see M. Ben Cheneb, *Abū Dolāma*, Algiers 1922; al-Djāḥiẓ, *Bighāl*, 100 ff.). Certain parts of the body of the mule, notably its teeth, hair, hooves, and blood, were used in the preparation both of drugs, and of charms and amulets. To see a mule in a dream was interpreted as a sign of a voyage, or of longevity, degeneracy, sterility, etc.

In addition to the other meanings collected by the Arabic dictionaries and Dozy, it is worth noting that the word *baghla* (pl. *baghalāt*) denoted in Egypt female slaves born of unions between Ṣaḳāliba and another race (see al-Djāhiz, *Bighal*, 66).

Bibliography: In addition to the usual works on zoology (in this category the dictionary of Damīrī is a fundamental work), pharmocopoeia, oneiromancy, etc. (see for example the bibliography of the article AFʿĀ), which give a certain amount of information, particular attention is drawn to the fact that mules, doubtless because of their curious origin, prompted Djāḥiz to write a special study, *al-Ḳawl fi 'l-Bighāl* (ed. Ch. Pellat, Cairo 1375/1955), which is a sort of supplement to the *K. al-Ḥayawān*, and in which the author quotes chiefly anecdotes and verses illustrating the character and usefulness of these animals. (CH. PELLAT)

BAGHLĪ [see DIRHAM].

BAGHRĀS, the ancient Pagrae, guarded the Syrian end of the Baylān pass on the road from Antioch to Alexandretta across the Amanus, and was thus a place of transit and a strategic position of importance. This region, which had been laid waste at the time of the first wars between the Arabs and the Byzantines, was furnished with colonists by Maslama; this initiated a recovery, and Hishām built a small fort there; it was naturally included in the region of the *ʿawāṣim* [*q.v.*] organised by Hārūn al-Rashīd behind the Syro-Cilician *thughūr*, and there existed there at the time of al-Balkhī a hospice for travellers, which is said to have been founded by Zubayda. The actual fortification of Baghrās was the work of Nicephorus Phocas who had reconquered Cilicia and was planning the reconquest of Antioch (357-8/968), and Michael Bourtzes set out from Baghrās when the following year he in fact occupied Antioch. Baghrās was occupied, without striking a blow, by Sulaymān b. Ḳutlumish and then by the

Crusaders. About the middle of the 6th/12th century it was captured by the Templars, but in 1188 was seized for a short time by Ṣalāḥ al-Dīn, in 1191 was taken by the Armeno-Cilician Leo, and was only surrendered by the latter to the Templars in 1216. The Templars evacuated the town in 1268 following the capture of Antioch by the Mamlūk sultan Baybars. From then onwards Baghrās protected the frontier of the Mamlūk state against the Armeno-Cilician kingdom, as long as the latter continued to exist, and formed a special military command depending on the province of Aleppo. Baghrās is still mentioned incidentally in the operations conducted by the Mamlūk sultans for the protection of their northern frontier up to the time of the Ottoman conquest, after which it fell into ruins. Only a small village exists there to-day. The fortress, which has never been the object of a proper archaeological investigation, was of average importance, and seems to have been the work of the Byzantines and Mamlūks rather than of the Templars or Armenians.

BAGIRMI, name in the 19th century of a negro Muslim State, situated on the right bank of the Shari, S.E. of lake Chad. In Barth's time (1852) the capital was Massenya. There were a certain number of tributary regions within its orbit, lying between 10° and 12° N. and 15° and 18° E. This historical name is no longer in official use to-day; only a district of Massenya exists, the other tributary regions having been either attached to the district of Bousso or to that of Melfi.

The regions which once bore the name Bagirmi form a vast plain at an elevation of 1000 ft., sloping gently away towards Lake Chad. The level expanse of alluvial soil is only broken by barren dunes and in the East, in the canton of Bekakire, by isolated rocks. These regions are situated at the extreme limits of the Sahel and Sudan savannah zones. The year is divided into two seasons, a dry season, cold in winter, very hot in the spring and autumn, and the other, the summer, hot and damp. Rainfall fluctuates around 700 mm. (28 ins.), but there is excessive evaporation. The Shari is the only permanent river; the others (Baḥr Errguig, Baḥr Nara) only flow from August to December.

The region's economy is based on cultivation and stock breeding. The main crop is millet (bulrush millet and guineacorn), which forms the basic food; maize, cultivated around the oases, provides a complementary crop in the intervening periods. In addition, peas, manioc, gombo, sesame and peanuts are also grown. Cotton growing has been introduced in the S.E. part of the region, along the river Shari. Pasturage, though of mediocre quality, makes possible the breeding of cattle, sheep and goats.

The population is made up of very diverse elements: negroes (Bagirmese, Bornuese, Sara, Massa), Arabs (Yessié, Dekakiré, Ouled Moussa), Fulani and Bororo Fulani; in 1956, the total number of the inhabitants of the region amounted to 70,500 with a population density of 6.4 per sq. m.

The sedentary negroes (with the exception of the Massa, cattle herdsmen) live by crop raising, food gathering and fishing. The nomadic Fulani migrate as far as the Logone and Lake Chad, the Bororo Fulani as far as the Ati and Musoro districts. The semi-nomadic Arabs move between their villages, where in the rainy season they cultivate the ground, and the banks of the Shari, to which they resort at the end of the dry season.

With the exception of the Massa and the Sara, who have remained animists, these peoples were converted to Islam three hundred and fifty years ago under the influence of Fulani missionaries and Hausa merchants. Islam, however, has only made a somewhat superficial impression.

The state of Bagirmi, founded in the 16th century, at the outset enjoyed considerable prosperity; then, at the beginning of the 19th century, as the result of wars with the Wadai, it began to decline. In 1870 the Sulṭān of the Wadai took Massenya and expelled the Sulṭān Abū Sekkine. The latter's successor, Gaourang, threatened by Rabah (see *Bornu*), placed himself under the protection of France (1897), which resulted firstly for the Bagirmi in the terrible reprisals of Rabah, then, when the latter had been defeated and killed at Kousseri (22 April 1900), in the final pacification under French administration. The Sulṭān was retained for outward appearances, but his authority limited to the Massenya canton. Massenya, the capital, was an important town in Barth's time, enclosed by walls 7 miles in circumference. It was partly destroyed in 1870 and then abandoned at the time of Rabah's invasion. It was rebuilt once more 20 km. (12½ m.) to the S.E. It is, however, no more than a large village with a population of 1,700 inhabitants. Indeed the whole district lies remote from the main currents of trade. Only a small proportion of the local produce—ground-nuts, butter, skins—, is taken to the markets at Bongor, Bokoro and Fort Lamy.

BĀH, one of a number of terms in the Arabic language denoting coitus. *Fiḳh*, in the main, uses the term *waṭʾ*. In principle, *bāh* is *ḥarām* (as well as sexual indulgences of a minor character) if the partners are not married to each other, or united by the bond of ownership (master and slave-concubine); if this is not the case, the penal law intervenes to punish *zināʾ*—most commonly by death (see ḤADD, ZINĀʾ, MUḤṢAN), at least in theory. On the other hand, according to a celebrated *ḥadīth*, *waṭʾ* performed in a legal manner is an "alms" in the eyes of God. *Fiḳh* considers most practices permissible for the married couple, with perhaps a restriction regarding *waṭʾ fī duburihā*. *Bāh* is, in principle, permitted at all times, except in certain circumstances of a ritual character (by day

during the month of Ramaḍān, or when one is in *iḥrām* during the *ḥadjdj* [*q.v.*]. On the other hand, a well-known text of the Ḳur'ān says: "Your wives are a tilth for you, so go to your tilth as you will" (ii, 231), and the Ḳur'ānic prohibition (ii, 230) of intimate relations during the menstrual period is not enforced by penalties, at least not in this world. *Fiḳh* does not forbid the sight of the partner's nakedness, but on the other hand, according to tradition, the Prophet in the matter of *waṭ'* behaved with the greatest modesty, both in this respect and in others. As regards the legality of contraceptive practices, see the article ʿAzl. *Fiḳh* does not place any interdict on relations with a partner who has not reached the age of puberty provided that the act is physically possible. The schools are not in agreement on the question whether the wife can demand the performance of the conjugal duty: in the Mālikī school, the forsaken wife has the right to claim a divorce. On the other hand, the husband can always require his wife to be at his service, because *waṭ'* constitutes the very essence of *nikāḥ* [*q.v.*]; *fiḳh* is here in agreement with etymology (*nikāḥ*—marriage, and coitus).

(G. H. Bousquet)

BAHĀ' ALLĀH. — Founder of the new religion which took the name of Bahā'ī from his own name (literally, 'Glory, Splendour, of God'). In Persian it is known commonly as *Amr-i Bahā'ī*, 'Bahā'ī Cause', or *Amr Allāh*, 'Cause of God'; the adjective *amrī* is used of publications, matters and facts pertaining to the Cause, *e.g.*, *nashriyyāt-i amrī* 'religious publications', etc. Bahā' Allāh is generally called by his disciples *Djamāl-i Mubārak*, 'The Blessed Beauty' and *Djamāl-i Ḳidam*, 'The Ancient Beauty'. His name was originally Mīrzā Ḥusayn ʿAlī Nūrī (from Nūr, in Māzandarān, the place of origin of his family). He was born at Tehran on 2 Muḥarram 1233/12 November 1817 of a noble family which had given several ministers to the Persian court. According to the Bahā'ī tradition, and to what he himself declares in his writings, he never attended any school. His was a profoundly religious personality, and he relates in one of his works (*Lawḥ-i Ra'īs*) how, right from his infancy, he was moved to religious thinking after a performance of puppets which, after the show with all its ostentation was over and they had been redisposed in their box, suggested to him the thought of the fallibility and the vanity of human power. After the declaration of the Mission of the Bāb [*q.v.*] in 1260/1844, he was one of his first disciples, and shared the fate of the Bābīs. Bahā' Allāh never knew the Bāb personally and, to judge by a phrase in the *Kitāb al-Shaykh*, 122, he had never even read the *Bayān*, which he knew by heart. In 1852, after the attempt on Nāṣir al-Dīn Shāh, he was arrested and thrown into the prison at Tehran known as *Siyāh Čāl* ('the black hole'), where he stayed from August of that year until 12 January 1853. In his work *Kitāb al-Shaykh* ('book of the Shaykh', known also as *Lawḥ-i Ibn-i Dhi'b*, 'Epistle of the Son of the Wolf') he narrates the story of his journey, fettered, from Niyāwarān to Tehran, and his interesting mystical experience in the prison in the long nights he passed without sleep on account of the heavy chains which fastened his neck, hands and feet. It seemed to him, he tells us, that he heard a voice which cried to him, 'Truly, We shall succour Thee, by the means of Thee Thyself and Thy pen. Be not afraid . . . Thou art in security. Soon God will raise up the treasures of the earth, namely those men who shall succour Thee for love of Thee and Thy name, by which God shall bring to life the hearts of the Sages'. At other times it seemed to him that a great torrent of water was running from the top of his head to his chest 'like a powerful river pouring itself out on the earth from the summit of a lofty mountain'. The Bahā'īs consider this experience as the first beginnings of the prophetic mission of their founder. Banished with all his family to ʿIrāḳ after all his possessions had been confiscated, he dwelt at Baghdād, where his spiritual influence over the Bābī exiles continued to increase, whereas that of his half-brother Mīrzā Yaḥyā—known by the name of Ṣubḥ-i Azal, which the Bāb had given him [v.s.v. bāb]—was on the decline. From 1854 to 1856 Bahā' Allāh took himself to Kurdistān, where he lived as a nomadic dervish on the outskirts of Sulaymāniyya. When he returned to Baghdād, his growing influence, and the numerous visitors he received even from Persia, caused the Persian consul to request his immediate exile to Constantinople. A short while before his departure on 21 April 1863, in the garden of Nadjīb Pāshā near Baghdād—called by the Bahā'īs *bāgh-i riḍwān*—Bahā' Allāh declared himself, to a select number of his followers, to be He Whom God Shall Manifest (*man yuẓhiruhu 'llāh*) as predicted by the Bāb. The exiles arrived at Constantinople in August, and after some months were sent to Edirne where they arrived in December. At Edirne Bahā' Allāh openly declared his prophetic mission, sending letters (known, like all Bahā' Allāh's letters, by the name of *lawḥ*, pl. *alwāḥ*, 'tablets') to various sovereigns, inviting them to support his Cause. At this time the great majority of Bābīs came out in his favour. The dissensions with the minority, who followed Ṣubḥ-i Azal, gave rise to some incidents, which impelled the Ottoman government to banish those who henceforth called themselves Bahā'īs to Acre (ʿAkkā), and the others to Cyprus. In August 1868 Bahā' Allāh and his family arrived at ʿAkkā. A stricter imprisonment in the fortress lasted until 1877, after which Bahā' Allāh was authorised to transfer himself to a country house which he had rented at Mazraʿa. From 1288/1871 to 1290/1874 Bahā' Allāh was engaged on writing the fundamental book of his religion, *Kitāb-i Aḳdas*, the "Most Holy Book". About 1880 he was allowed to transfer to the neighbourhood of Bahdjī, not far from ʿAkkā, where he died, after an illness lasting some days, on 29 May 1892. In 1890 he had received at Bahdjī Professor E. G. Browne, the only European who met him personally and on whom Bahā' Allāh made a deep impression. For the doctrine of Bahā' Allāh see bahā'ī.

The death of Bahāʾ Allāh is described in Nabīl Zarandī, *Taʾrīkh-i Ṣuʿūd-i Ḥaḍrat-i Bahāʾ Allāh*, Cairo 1342/1924 (with a *Mathnawī* of the same author on the Bahāʾī history; containing also Bahāʾ Allāh's testament, *Kitābu ʿAhdī*).

(A. Bausani)

BAHĀʾ AL-DAWLA [see BUWAYHIDS],

BAHĀʾ AL-DĪN AL-ʿĀMILĪ [see AL-ʿĀMILĪ].

BAHĀʾ AL-DĪN ZAKARIYYĀ, commonly known as Bahāʾ al-Ḥaḳḳ, a saint of the Suhrawardī order, was born at Kot Karor (near Multān) in 578/1182-83 according to Firishta. He was one of the most distinguished *khalīfas* of Shaykh Shihāb al-Dīn Suhrawardī [*q.v.*] and is the founder of the Suhrawardī order in India. After completing his study of the Ḳurʾān according to its seven methods of recitation at Kot Karor, he visited the great centres of Muslim learning in Khurāsān, at Bukhārā and Medina, and in Palestine—in order to complete his study of the traditional sciences. While in Medina he learnt *ḥadīth* with an eminent traditionist, Shaykh Kamāl al-Dīn Yamanī, and spent several years in religious devotions at the mausoleum of the Prophet. After visiting the graves of the Israelite prophets in Palestine, he reached Baghdād and became a disciple of Shaykh Shihāb al-Dīn Suhrawardī. At this time he was, as his master said, 'dry wood ready to catch fire', and so after seventeen days' instruction, the latter appointed him his successor and ordered him to set up a Suhrawardī *khānaḳāh* in Multān. He lived and worked in Multān for more than half a century and his *khānaḳāh*—a magnificent building where separate accomodation was provided for all inmates and visitors—developed into a great centre of mystic discipline in medieval India. He died in Multān on 7 Ṣafar 661/21 December 1262.

Shaykh Bahāʾ al-Dīn's order flourished most vigoriously in Sind and the Pandjāb, though he had attracted some disciples from Harāt, Hamadān and Bukhārā. As a mystic teacher he was known for his *nafs-i gīrā* (intuitive intelligence) which helped him in apprehending and controlling the minds of his disciples. He differed from contemporary Čishtī mystics in several matters: (i) He did not allow all sorts of people to throng round him. The *Djawāliḳs* and *Ḳalandars* seldom obtained access to him. "I have nothing to do with the generality of the public", he is reported to have remarked. (ii) He lived in an aristocratic way and had granaries and treasuries in his *khānaḳāh*. (iii) He did not observe continuous fasts but ate and drank in the normal manner. (iv) While among the Čishtīs the custom of *zamīn-būs* prevailed, he never permitted anybody to bow before him. (v) He believed in keeping close contact with the rulers and the bureaucracy. (vi) He did not believe in mystic songs (*samāʿ*).

Bahāʾ al-Dīn exercised great influence on mediaeval politics. He helped Iltutmish (607-633/1210-1235) in establishing his hold over Multān and accepted from him the honorific title of *Shaykh al-Islām*. In 644/1246 when the Mongols besieged Multān and the ruler of Harāt joined them, the Shaykh offered 100,000 *dīnārs* to the invaders and persuaded them to raise the siege.

The Shaykh lies buried in Multān in an imposing tomb, surmounted by a hemispherical dome and decorated with fine enamelled tiles.

Bibliography: No Suhrawardī accounts of Shaykh Bahāʾ al-Dīn Zakariyyā were available even in the early 16th century when Shaykh Djamālī brought into his *Siyar al-ʿĀrifīn*, Delhi 1311 A.H. all he could get from the Čishtī sources. For originals see, Ḥasan Sidjzī, *Fawāʾid al-Fuʾād*, Newal Kishore 1302 A.H., 5, 6, 10, 29 ff.; Ḥamīd Ḳalandar, *Khayr al-Madjālis* (ed. K. A. Niẓāmī), Aligarh 1956, 131, 137, 283; Mīr Khurd, *Siyar al-Awliyā*, Delhi 1302 A.H., 77, 91, 158; Sayf b. BAHĀʾ AL-DĪN ZUHAYR, Abu 'l-Faḍl b. Muḥammad b. ʿAlī al-Muhallabī al-Azdī (generally known by the name of al-Bahāʾ Zuhayrʾ, celebrated Arab poet of the Ayyūbid period, born 5 Dhu'l-Ḥidjdja 581/27 February 1186 in Mecca. Whilst still very young, he went to Egypt, where at Ḳūṣ (Upper Egypt) he studied the Ḳurʾān and letters, finally settling at Cairo towards 625/1227. Al-Bahāʾ Zuhayr was in the service of al-Ṣāliḥ Ayyūb, son of the sultan al-Kāmil, and in 629/1232 accompanied him on an expedition to Syria and Upper Mesopotamia. In 637/1239, whilst returning to Egypt after his father's death, al-Ṣāliḥ was betrayed by his troops at Nābulus and handed over to his cousin al-Nāṣir Dāwūd, who imprisoned him. The poet remained faithful to his master in adversity and spent sometime at Nābulus. When al-Ṣāliḥ ascended the throne of Egypt, he appointed him *wazīr* and showered honours upon him. In 646/1248, he is to be found at al-Manṣūra at the side of his sovereign, who was fighting against the seventh Crusade (St. Louis). As the result of a misunderstanding, the poet fell into disgrace, and, in the death of his master, went to Syria, where he addressed his best panegyrics to the sovereign of Damascus, al-Nāṣir Yūsuf, but without success. He returned to Cairo a disappointed man; there he experienced solitude and poverty, and died in 656/1258.

His *Dīwān*, preserved in Paris (MS 3173 of the B.N.) and elsewhere, and edited in Cairo (1314), is known. Palmer produced a fine edition with an English translation. In this *Dīwān* he is shown as being a poet very often sincere and a true musician in verse. His choice of words, of form, manner and metre, the effects of rhythm and harmony,

everything shows a very mature taste. Without rejecting the poetics of his time or his rhetoric with its numerous figures, the poet in him scarcely allows a glimpse of the rhetorician.

BAHĀʾ AL-ḤAḲḲ [see BAHĀʾ AL-DĪN ZAKARIYYĀʾ].

BAHĀDUR. A word common to the Altaic languages, equally well represented in Turkish, Mongol and Tunguz dialects. Its adjectival meaning is "courageous, brave", but it is universally used as a substantive with the meaning "hero". It also frequently occurs as a surname and an honorific title.

The earliest occurrence is in the Chinese history of the Sui Dynasty, written in the early 7th century. The Chinese transcription 莫賀咄 *mo-ho-to* suggests a trisyllabic **baγatur* which, transcribed βαγατούρ, was in use also among the Proto-Bulghars in the 9th century. An Uyghur runic ms. which could originate in the 8th-10th centuries has *bātur* and it is this bisyllabic form which is general in Turkish dialects. *e.g.* Osmanli *batur*, Kazakh, Bashkir *batir*, Özbek *botir*, Tuvin *mādir*, Chuvash *pattăr*, etc. Some Turkish dialects have the trisyllabic form, e.g., Coman *baγatur*, but it is possible to see in them borrowings from Mongol. Beside the form already mentioned, Özbek has also *baqodir*.

The word is attested in the earliest Mongol documents (13th century), always in the trisyllabic form, though the Chinese sources of the Mongol epoch usually transcribe 拔都 *pa-tu* for *bādu[r]*. Classical Mongol has *baγatur*, and variants exist probably in all the dialects. *e.g.* Kalmuck *bātr*, modern literary Khalkha *bataar*, Monguor *Bātʾuṛ*. Among Tunguz forms one could mention Manchu *baturu*, Evenki *bahatir*, Even *bāgtir* and *bukatiṛ*.

It is impossible to state the directions in which borrowings were made, but it seems probable that either the Turkish or the Mongol trisyllabic forms were original, and that the Tunguz forms are, originally, Mongol loan-words. Inter-borrowings within the same group must have been frequent.

Bahādur is, clearly, a word of civilisation. It travelled far into the north and can be met in various Samoyede and Finno-Ugrian languages, in Siberia as well as in Europe, *e.g.* Ostiak *matur*, Hungarian *bátor* (11th century). These, and some of the Slavonic forms, *e.g.* Russian *bogatir* are borrowings from Turkish or Mongol. Persian *bahādur*, borrowed from Mongol, had a wide-spread use as a title or a surname among Muslim dynasties. As it was also used by the Great Mughals, it penetrated into Anglo-Indian, in the sense of a "haughty or pompous personage, exercising his brief authority with a strong sense of his own importance" (Yule, *Hobson-Jobson*).

The word found its way into Western European sources. Roger, Canon of Várad, writing in 1244, gives *Bochetor* as the name of one of the Mongol generals taking part in the campaign against Hungary. The Portuguese ambasador to Tīmūr, Clavijo (1404), has *Bahadur*. (D. SINOR)

BAHĀDUR KHĀN [see FĀRŪḲĪ].

BAHĀDUR SHĀH [see NIẒĀM SHĀH].

BAHĀDUR SHĀH I. Muḥammad Muʿaẓẓam was the second son of the Emperor Awrangzīb ʿĀlamgīr by his second wife Raḥmat al-Nisāʾ, Nawāb Bāʾī, daughter of Rādjā Rādjū of Radjawri in Kashmir. She was also the mother of Prince Muḥammad Sulṭān, who died in prison, 1087/1676, and Badr al-Nisāʾ Begum (1647-1670), who was a *Ḥāfiẓ*. She died in 1691. Muʿaẓẓam was born at Burhānpur in the Deccan on 30 Radjab 1053/14 October 1643. His full titles were: Abū Naṣr Sayyid Ḳuṭb al-Dīn Muḥammad Shāh ʿĀlam Bahādur Shāh Bādshāh. From the time of his elder brother's defection to Shāh Shudjāʾ in 1068/1658 he was the prospective heir apparent, and was regarded as such on Muḥammad Sultān's death in 1087/1676 In Shaʿbān 1086/October 1675 he received the title of Shāh ʿĀlam.

From 1663 he was actively employed by his father in the Deccan and against the Kingdom of Bidjāpūr. In 1093/1683-4 he led an army through the Konkan to Goa, then being besieged by the Maratha rādjā Shambādjī. But having fallen out with the Portuguese, he found his supplies cut off and made a disastrous retreat. He was then employed against Bidjāpūr and the Ḳuṭb Shāhī dynasty of Golkonda. Awrangzīb, already suspicious of Prince Muʿaẓẓam's lack of rancour against his rebel son Akbar, interpreted an attempted mediation between his father and Abu ʾl-Ḥasan of Golkonda as a plot against himself. Muʿaẓẓam, now known as Shāh ʿĀlam, was arrested with his sons on 4 March 1687. At first treated with great rigour, the Prince found the severity of his treatment gradually relaxed, until in April 1695 he was released and appointed *Ṣubadār* of Agra. In 1699 he became governor of Kābul province which he held at the time of his father's death, his eldest sons holding Taṭṭha and Multān.

On receiving the news of his father's death on 18 Dhu ʾl-Ḥidjdja 1118, 22 March 1707, Prince Muʿaẓẓam moved with great speed. He proclaimed himself by the title of Bahādur Shāh when near Lahore, offered to honour his father's will by leaving his brother Aʿẓam Shāh the Deccan provinces, and arrived near Agra on June 12. On 18 Rabīʿ I 1119/18 June 1707, Aʿẓam Shāh and his son Bīdār Bakht were killed in a great battle near Jajau and Bahādur Shāh was master of the empire. Kām Bakhsh, the youngest son of Awrangzīb, was defeated and killed near Ḥaydarābād, Deccan, on 3 Dhu ʾl-ḳaʿda 1120/13 January 1709.

The short reign of Bahādur Shāh was occupied by three problems, the Marathas, the Radjputs and the Sikhs. On the advice of Dhu ʾl-Fiḳār Khān, Shāhū, the grandson of Shīwadjī, was released and sent back to Māhārashtrā with a Mughal *manṣab* of 7000. His arrival there provoked a civil war between his supporters and those of Tāra Bāī, the regent widow of his uncle Rādjā Rām.

In the cold weather of 1707-8 Bahādur Shāh regulated the succession of Amber and reduced the Rādjpūt Rādjā of Jodhpūr to submission. But while campaigning against Kām Bakhsh the revolt flared up again. On his return in 1710 the emperor found himself confronted with a Sikh rebellion and had to make a compromise settlement with the Rādjpūts. The last Sikh *gūrū*, Govind Singh, was a supporter of Bahādur Shāh, but was murdered in the Deccan in 1708. The Sikh revolt in the north was then

revived by a man known as Banda who killed Wazīr Khān, seized Sirhind and terrorised the east Pandjāb. Bahādur Shāh stormed Lohgarh and defeated but did not capture Banda in 1710-11. The last few months of his life were spent in Lahore where he died on 20 Muḥarram 1124/27 February 1712. The throne was immediately disputed between his four sons, Muʿizz al-Dīn Djahāndār Shāh, ʿAẓīm al-Shān, Rafīʿ al-Shān and Djahān Shāh, the first of whom was successful.

Irvine describes Bahādur Shāh as "although not a great sovereign .... a fairly successful one". He was courteous, learned, pious, brave, capable and equable in temper. He was generous and found it difficult to refuse a request, a trait which earned him the nickname of *bī-khabar* or heedless one. Not much is known of Bahādur Shāh's family life, but the names of three wives have survived: Mihr al-Nisā Begum, who accompanied her husband's body to Delhi, ʿAzīz al-Nisā Khānum and Nūr al-Nisā Begum.

(T. G. P. SPEAR)

BAHĀDUR SHĀH II, the last Mughal Emperor of India. He reigned as titular sovereign from 1253/1857 to 1274/1857 He was in fact, a pensionary of the East India Company, his actual authority being restricted to the limits of the Red Fort or *Ḳalʿa-i muʿallā* of Delhi. Mughal authority, by virtue of which the British held Bengal from 1765, was never formally disowned by them, but the Charter Act of 1833 asserted British sovereignty over British held territories in India. On May 11, 1857, Delhi was seized by mutinous troops from Meerut who compelled the unwilling Bahādur Shāh, then nearly 82, to accept nominal leadership of the revolt. After four months of unenthusiastic headship he retired to Humāyūn's Tomb on the assault of Delhi by the British in September. With his favourite wife Zīnat Maḥāl and their son Mīrzā Djewān Bakht he surrendered to Lieut. Hodson on a promise of his life. After much indignity and a trial of doubtful legality he was exiled by the British Government to Rangoon in Burma, where he died on 13 Djumādā I 1279/7 November 1862. Descendants of his are still to be found there.

Bahādur Shāh was born on 27 Shaʿbān 1189/24 October 1775. He was the second son of Akbar Shāh II (1221-1253/1806-1837) and Lāl Bāī. He was eleventh in direct succession from the emperor Bābur. In 1827 he was described as "the most respectable, the most accomplished of the Princes" by Charles Metcalfe, then Resident of Delhi. He had a tall spare figure, a dark complexion with strongly marked aquiline features. Like his grandfather Shāh ʿĀlam, he was a poet of some note, using the pen-name of Ẓafar. The poet Dhawḳ was his literary preceptor and Ghālib attended his Court. His plaintive *ghazals* were long current in Delhi. He was also a calligrapher and musician of merit, and showed taste in repairing buildings and laying out gardens. His full title was Abu 'l-Muẓaffar Sirādj al-Dīn Muḥammad Bahādur Shāh.

BAHĀDUR SHĀH GUDJARĀTĪ, sulṭān of Gudjarāt 932/1526-943/1537. Second son of Muẓaffar Shāh II (917/1511-932/1526), Bahādur Shāh, on bad terms with his elder brother Sikandar, left Gudjarāt in 931/1525 and, travelling via Čitor and Mewāt to the court of Ibrahīm Lodī was present, as an onlooker, at the battle of Panipāt between the sultān of Dihlī and the Mughal Bābur.

Hearing of the death of his father and the accession of Sikandar, Bahādur Shāh hastened towards Gudjarāt to be greeted at Čitor with the news of the assassination of Sikandar by Khwūsh Ḳadam, ʿImād al-Mulk. Rapidly gaining support from the Gudjarātī Muslim nobles, Bahādur Shāh assumed the insignia of the sultanate at Anhalwāra-Patan on 26th Ramaḍān, 932/6th July 1526.

Bahādur Shāh was the last vigorous sultan of independent Gudjarāt. In 935/1528 he attacked Burhān Niẓām Shāh of Aḥmadnagar in alliance with Muḥammad II of Khāndēsh and ʿAlā al-Dīn ʿImād al-Mulk of Berār occupying Aḥmadnagar in 936/1529. The Niẓām Shāh appears to have accepted the overlordship of Gudjarāt until 938-9/1532 at least, but statements in the Arabic and Persian histories that he read the *khuṭba* and struck coins in the name of the Gudjarāt sultan have not found corroboration in the discovery of such coins.

In 937/1531 Bahādur Shāh attacked Maḥmūd II of Mālwa, occupying Mandū. In 938/1532-3 he captured the Rādjpūt strongholds of Ujjain, Bhīlsā and Rāīsīn together with their chief Silhādī. In Ramaḍān 941/March 1535 Gudjarāt forces, at the second attempt, captured Čitor.

Meanwhile however, in the autumn of 941/1534 war had broken out between Bahādur Shāh and the Mughal Humāyūn; Bahādur Shāh had given refuge to the Lodī Afghāns and to Muḥammad Zamān Mīrzā son-in-law to Bābur, who had escaped from confinement by Humāyūn in the fort of Bayāna.

Defeated by the Mughals at Mandasōr and Mandū, and with much of his treasure captured by Humāyūn at the fall of Čāmpānīr in Ṣafar 942/August 1535, Bahādur Shāh turned to the Portuguese for help.

In 937/1531, the Portuguese, under Nuno da Cunha, governor of Goa, had been defeated in their attempt to capture Dīw. In Djumādā II 941/

December 1534, however, in return for a promise to aid Bahādur Shāh against the Mughals, the Portuguese obtained Bassein and in Rabīʿ II/October 1535 the right to build a fort at Dīw where Bahādur Shāh himself had taken refuge. The nominal Portuguese assistance to the Gudjarāt sultan did not prevent Humāyūn from capturing Bahādur Shāh's capital of Aḥmadābād.

Humāyūn's withdrawal from Gudjarāt in 942/1536 to face the threat from Sher Khān enabled Bahādur Shāh to recover most of his dominions from the now disunited, dispersed and disaffected Mughal forces.

Bahādur Shāh then turned to recover the rights surrendered to the Portuguese at Dīw. In an atmosphere fraught with mutual suspicion of bad faith, Bahādur Shāh rashly visited Nuno da Cunha on his flagship at Dīw and, hurriedly returning to the shore after sensing treachery, was slain by the following Portuguese forces. His death occurred on 3 Ramaḍān 943/13 February 1537.

(P. Hardy)

BAHĀʾĪ MEḤMED EFENDI, Ottoman jurist and theologian. Born in Istanbul in 1004/1595-6, he was the son of ʿAbd al-ʿAzīz Efendi, a Ḳāḍī-ʿasker of Rumelia, and the grandson of the historian Saʿd al-Dīn. Entering upon the *cursus honorum* of the religious institution, he became *mudarris* and molla and was appointed ḳāḍī first in Salonica and then, in 1043/1633-4, in Aleppo. A heavy smoker, he was reported by the Beylerbey Aḥmed Pasha, with whom he was on bad terms, and in 1044/1634-5 was dismissed and exiled to Cyprus as a punishment for what was then regarded as a serious offence. Towards the end of 1045 (early 1636) he was pardoned and in Muḥ. 1048/May-June 1638 appointed Molla of Syria; in Ṣafar 1054/April 1644 he was transferred to Edirne, and in Rab. I 1055/May 1645 became Ḳāḍī of Istanbul. After brief terms as Ḳāḍī-ʿasker of Anatolia and of Rumelia, he was appointed Shaykh al-Islām for the first time in Radjab 1059/July-Aug. 1649. According to the prejudiced evidence of his rival Karačelebizāde, he was chosen because he was so enfeebled by excessive indulgence in narcotics that the Grand Vezir and the Sulṭān Wālide thought they would be able to do as they pleased with him. His subsequent vigour, and his firmness in resisting certain of their demands, give the lie to this accusation. The favour which he showed to the Mewlewī and Khalwatī orders soon brought him into conflict with the orthodox religious party, which also objected to his approval of tobacco and coffee and his toleration of the dervish use of music and dancing. His fall, however, was due not to their efforts but to other causes. In Djum. I 1061/April-May 1651, in the course of a dispute which arose out of a question of jurisdiction involving the British Consul and the Ḳāḍī of Izmir, Bahāʾī Efendi placed the British ambassador in Istanbul under house arrest. For this breach of diplomatic usage he was dismissed and exiled to Midilli. He remained, however, at Gelibolu and Lampsaca, and was reinstated in Ram. 1062/Aug. 1653; he continued in office until his death, of a quinsy, on 13 Ṣafar 1064/3 Jan. 1654. He was buried in Fātiḥ.

Bahāʾī was known both as a poet and as a scholar, and left a number of poems and fetwās. His best-known ruling was that in which he pronounced smoking lawful, thus ending the prohibitions and repressions of the early 17th century. He was himself a heavy smoker, and his contemporary Ḥādjdjī Khalīfa remarks of him that had it not been for this self-indulgence he might have become one of the most eminent scholars of the country. Bahāʾī's authorisation of smoking, however, was due, according to Ḥādjdjī Khalīfa, not to his own addiction but to a concern for what was best suited to the condition of the people, and to a belief in the legal principle that the basic rule of law is licitness (*Ibāḥa aṣliyya*).

(B. Lewis)

AL-**BAHĀʾĪ** [see AL-ʿĀMILĪ].

BAHĀʾĪS, adherents of the new religion which was founded by Bahāʾ Allāh [*q.v.*], and of which the forerunner, according to Bahāʾī doctrine, was the Bāb [*q.v.*]. The foremost authority on the Bahāʾī religion, and its disseminator in Europe and America, was ʿAbbās Efendī, the eldest son of the founder, better known among the Bahāʾīs as ʿAbd al-Bahāʾ (Servant of Bahāʾ). Born on 23 May 1844 at Tehran, he accompanied his father on his journeys and in his exile, and at his death was recognised by the great majority of the Bahāʾīs as the authorised exponent and interpreter of his father's writings Centre of the Covenaut and "Model of Bahāʾī Life", in accordance with Bahāʾ Allāh's will (*Kitāb ʿAhdī*); this will, however, was contested by ʿAbd al-Bahāʾ's brother Muḥammad ʿAlī, who set up a rival group within the Bahāʾī organisation and contrived to compromise his brother with the Ottoman authorities, who were hostile to the Bahāʾīs. He was released from prison in 1908 under the amnesty granted by

the new Ottoman Government of the Young Turks, and in 1910 began his three great missionary journeys. The first was to Egypt (1910), the second to Europe (Paris and London, 1911), and the third to America and Europe (1912-13). From New York he made his way across the entire United States in eight months to Los Angeles and San Francisco, stopping in the main towns and preaching in evangelical churches, synagogues, masonic halls, etc. In September 1912 he returned to Europe, and from England went again to Paris, then to Germany, Austria and Hungary. Finally at the end of 1913 he returned from Paris to Palestine. The first Bahāʾī group in America had formed as early as 1894, and on 10 December 1898 the first American Bahāʾī pilgrims arrived at Acre. ʿAbd al-Bahāʾ's journey, one of the objects of which had been to counter the propaganda of his brother's supporters, also notably strengthened the community of American adherents. In addition to this he formed Bahāʾī groups in the European countries he passed through. In 1920 the British Government appointed him Knight of the Order of the British Empire. He died on 28 November at Ḥayfā and was buried beside the Bāb, in the great mausoleum which was completed in 1957. In his will he had appointed Shoghi Efendi (Shawḳī Efendī) Rabbānī, the oldest of his grandsons (the eldest son of his eldest daughter) as "Guardian of the Cause of God" (*Walī-yi Amr Allāh*). Shoghi Efendi, who died on 3 Nov., was born at Ḥayfā in the last years of the last century. He studied at Oxford and in 1936 married the American Mary Maxwell, who took the name Rūḥiyyè Khānum. From 1923 onwards he lived in Ḥayfā in Israel, the world administrative centre of the faith.

The Bahāʾī religion, while it claims to be "scientific" and opposed to dogma, has more clearly defined theological, philosophical, and social doctrines and forms of worship than some Orientalists have thought. I give them briefly below on the basis of the sources cited in the bibliography.

Religious doctrines. 1. God. A completely transcendent and unknowable entity. "Every road to Him is barred". The Bahāʾīs are opposed to mystic pantheism. Mystics have only given form to their own imaginings. "Even the loftiest souls and the purest hearts, however high they may fly in the realms of science and mysticism, can never pass beyond that which has been created inside themselves" (*mā khuliḳa fī anfusihim bi-anfusihim*) (*Lawḥ-i Salmān*).

2. Creation. The unknowable essence of God makes itself manifest and creates that which is not God. The Bahāʾī idea of the beginning of things falls between that of creation and that of emanation. We could speak of *eternal creation*, seeing that the Bahāʾī texts tend to keep the term *khalḳ* (creation), but at the same time maintain that since the attribute of *khāliḳ* (creator) is co-eternal with God, there has never been a time when the world did not exist. Thus the world is eternal (*Lawḥ-i Ḥikmat*).

3. A special form of the manifestation of God is that which features in the Prophets (The Bahāʾī technical term is *maẓāhir-i ilāhiyya*, divine manifestations, rather than *rusul* or *anbiyā*). Thus the concept of *ḥulūl* (incarnation in the full sense of the word) is not accepted. In this connexion the letter of Bahāʾ Allāh to Nāṣir al-Dīn Shāh (*Lawḥ-i Sulṭān*) is particularly interesting, as is the *Kitāb al-Shaykh*, in which he describes his own mystic experience in the prison of Siyāh Čāl at Tehran. The Prophet has two differing conditions: he is a man, but also a very clear mirror in which God is reflected. Thus in a certain sense it is not wrong to call him God, by way of abbreviation. The status of such a being as could be called "prophetic" is radically different from that of man; it falls between man's status and that of God. According to Bahāʾī doctrine no man, however perfect he may become, will be able to attain prophetic status (or better, that of "manifestation"), just as no animal, perfect as it may be of its kind, can aspire to human status. The manifestation of God through the Prophets never ceases. The manifestations of the Divine are successive. The first prophet is Adam, then come the traditional prophets of Judaism, Christianity and Islam. Zoroaster also is considered a true prophet, though the Buddha and Confucius are seen rather as great masters of the spiritual life. After Muḥammad come the Bāb (considered by the Bahāʾīs as a true independent manifestation of God whose specific mission lasted only nine years), and Bahāʾ Allāh. The Bahāʾīs allow that other prophets better adapted to advanced stages of human progress may come after him, but "not before a thousand years" (*Aḳdas*). The prophetic periods are grouped together in larger cycles; with the Bāb the cycle begun by Adam ends and the Bahāʾī cycle begins. The latter is destined, according to doctrine, to last at least 500,000 years. It is thus inexact to consider the Bahāʾī religion as syncretistic. Although it accepts all the prophetic religions as essentially true, it claims that it is the one best adapted to the present time, and that it includes in itself all its predecessors.

4. Man. Bahāʾī psychology is somewhat complex. ʿAbd al-Bahāʾ (*Mufāwiḍat*) distinguishes five types of "spirit": animal spirit, vegetable spirit, human spirit, the spirit of faith, and the Holy Spirit. The spirit of faith is given by God, and alone confers true "eternal life" on the human spirit (we are thus a long way from a purely philosophical conception of the immortality of the soul). "Faith" is essential to Bahāʾī spiritual life. The text of the first verse of the *Aḳdas* runs as follows: "The first commandment of God to his servants is knowledge of the Dawn of His revelation, and the Dayspring of His Decree (*i.e.*, of the Prophet), who is his appointed Representative in the created world (*fī ʿālam al-amr waʾl-khalḳ*). He who has attained this knowlege has attained all good. He who knows it not is of the world of error, even though he performs all (good) works". Faith in God (which, God being by definition unknowable, can only be faith in His manifestation, the Prophet) confers immortality on the believer, who continues in the worlds beyond his eternal journey towards the unknowable Essence of God (excessive interest in these worlds on the part of Bahāʾīs is discouraged; they are explicitly forbidden to take part in spiritualist meetings). Paradise and Hell are symbols, the first of which stands for the true believer's journey towards God, and the second the fruitless path towards annihilation of him who knowingly rejects the Faith and performs evil works. In the context of this progressive view of the world beyond Bahāʾīs are allowed, and advised, to pray for the dead. Equally, the idea of reincarnation in this world is firmly rejected.

On the phenomenon of man Bahāʾī doctrine accepts the theory of evolution, not, however, as propounded by Darwin, but rather in the traditional mystic sense already present in the *mathnawī* of Mawlānā Djalāl al-Dīn Rūmī [*q.v.*]. "Man was always man throughout his evolution", even though

he may have passed through a series of stages of development.

Moral and social principles. The Bahāʾīs accept the ancient formula attributed to ʿAlī: "All private matters belong to the human sphere, all concerns of society to the divine". Hence the great emphasis in Bahāʾī doctrine on the improvement of society, a task which is the charge of the Bahāʾī world administration (see below).

The moral and social tenets of the Bahāʾīs are classified by ʿAbd al-Bahāʾ under the following twelve headings: 1. Unity of the human race. 2. Need for an independent search for Truth. 3. Essential unity of all religions. 4. Need for religion to promote unity. 5. Need for science and religion to be in harmony. 6. Equal rights and duties for the two sexes. 7. Opposition to all kinds of prejudice: national, religious, political, economic, etc. 8. Attainment of world peace. 9. Obligation to provide universal education, accessible to all. 10. Solution on a religious basis of the social problem, with the abolition of the extremes of excessive wealth and degrading poverty. 11. Use of an auxiliary international language. 12. Constitution of an International Tribunal.

The forms of administration and organisation which we now describe in brief conduce according to the Bahāʾīs to the realisation of these aims:

The Bahāʾī religion has no public ritual, nor any sacraments or private rites of a sacred character. The only religious duties of the Bahāʾīs are: 1. To assemble every 19 days on the first day of each Bābī month (the Bāb's calendar was adhered to by Bahāʾ Allāh) for a communal celebration, called by the Western Bahāʾīs the "19th day's Feast", and by the Persians *ḍiyāfat-i rūz-i nūzdahum.* It consists of readings of prayers and sacred texts (and even of passages from the Bible, the Ḳurʾān, and other sacred texts if desired), followed by deliberations more properly administrative in character, when the community's financial affairs are reviewed, important announcements are made, etc. A small meal is then taken together, "even if nothing more than a glass of water", in accordance with the Bāb's decree. 2. To fast 19 days, *i.e.,* the entire Bābī month of ʿAlāʾ, from 2 to 21 March, the Bahāʾī New Year's Day. The fast is of Islamic type, requiring abstention from all food and drink, etc., from dawn till sunset. 3. To practise complete abstention from all alcoholic drink. 4. To pray three times a day, morning noon, and evening, according to short, set formulae. The obligatory prayers (written in Arabic by Bahāʾ Allāh) may be recited in any language. Some are preceded by ablutions, which are much simpler than Islamic ablutions, consisting only of washing the face and hands and reciting two very short prayers.

Apart from this the *Aḳdas* lays down precise rules for the division of inheritances (a portion of which falls to the teachers), levies a tax of 19 per cent on revenues, and prescribes numerous other rules and penal, civil and religious laws, which are followed in part only by the eastern Bahāʾīs. Marriage is monogamous: although the *Aḳdas* allows bigamy, the provision was cancelled by ʿAbd al-Bahāʾ ("Model of Bahāʾī Life", on the basis of an explicit declaration by Bahāʾ Allāh). For a marriage to be valid the onsent of the couple's parents is required. Divorce is allowed, but discouraged.

The controlling bodies of the Bahāʾī community are of two kinds, administrative and instructional, the first being made up of elected councils and the second of persons and associations appointed from above. The two types come together at the summit of organisation in the person of the Guardian (*Walī-yi Amr Allāh*). The administrative bodies are as follows: 1. The local spiritual assembly (*Bayt al-ʿAdl-i Maḥallī*). These are formed wherever there are at least nine Bahāʾīs. They are of nine members elected by universal suffrage. Election is considered as an act of worship, and the Bahāʾī concept, unlike that underlying the electoral system of the parliamentary democracies, does not imply responsibility of the elected towards their electors, since the latter are merely instruments of the will of God. Elections are held each year during the period from 21 April to 2 May (Riḍwān festival). At the present time there are local assemblies in more than 200 countries throughout the world. 2. Where there is a sufficient number of local assemblies a "Convention" of 19 members elected by universal suffrage elects a national spiritual assembly (*Bayt al-ʿAdl-i Millī* or *Markazī*) also of nine members, not necessarily from among its own members but from all adherents of the faith. There are at the present time more than twenty of these. 3. When sufficient national assemblies have been formed their members will elect a universal spiritual assembly (not necessarily from among themselves but from all adherents).

This assembly will be called *Bayt al-ʿAdl-i ʿUmūmī,* Universal House of Justice. Its president will be the Guardian, by virtue of his office, and for the term of his life. The task of the Universal House of Justice will be to function as supreme administrative body and court, and in addition to frame in accordance with the needs of the time laws not laid down by the *Aḳdas* or the other writings of the Founder; these laws it will have the power to abrogate should need arise.

The jurisdiction of the different Assemblies is absolute within their sphere of competence and fully binding on all believing Bahāʾīs, who should in theory bring before their Assembly even their private affairs and differences (in the first instance the local Assembly would be concerned, subsequently the national if the question proved insoluble).

Alongside these elected administrative systems, which are graded from the bottom up, is the instructional system, graded from the top down and made up of appointed members. At its head is the Guardian, whose powers, however, are interpretative only and not legislative. He has legislative powers only as a lawful member of the Universal House of Justice, on the same basis as the other members. The Guardian's position is hereditary, but his eldest son is not necessarily appointed his successor. He names his successor in his life-time from among the members of his family. Immediately below the Guardian in the instructional order come the "Hands of the Cause of God" (*Ayādī-yi Amr Allāh*), of whom he appoints a varying number. The "Hands of the Cause" elect among themselves a Council of nine members whose duty is to assist the Guardian and confirm his choice of successor. The Hands of the Cause appoint their own subsidiaries in their turn, who assist them in their work of instruction and dissemination of the doctrine and spirit of the Faith ("Auxiliary Boards").

The Bahāʾīs consider such a complex administrative system as of divine origin. This system is in fact outlined in the *Aḳdas,* with additions and improvements by ʿAbd al-Bahāʾ, and by the present Guardian, Shoghi Efendi, in the matter of appointing assistants for the Hands of the Cause. For the Bahāʾīs such a system is not merely a means of internal administration of the Community's affairs, but the

prototype of the ideal world government of the future, which will eventually arise after a long process of peaceful evolution. The Bahā'īs do not accept the separation of Church and State, but maintain that in the absence of priests and sacraments the Bahā'ī fusion of religion and administration will take on a different character from that of the traditional theocracies. Every Bahā'ī is thus formally forbidden to belong to a political party or to secret societies and obedience to due authority is obligatory. The Bahā'ī religion having a strong pacifist trend, members of the Bahā'ī community are advised to avoid military service, at least in lands where conscientious objection is recognised by law. We could also speak of a strong trend towards vegetarianism, based on a short speech made by ʿAbd al-Bahā', during his stay in America, in which he states that he favours the creation of a way of life in which it would no longer be necessary to kill other living beings for food; but he would not force others to accept his view. Likewise he speaks critically of hunting. He advises strongly against smoking, without formally forbidding it.

Although the Bahā'īs have no public form of worship the *Aḳdas* recommends the erection of *Mas͟hriḳ al-Ad͟hkār* (literally "place where the uttering of the name of God arises at dawn"), a kind of temple of circular plan surmounted by a dome of nine sections, and open to the faithful of every creed, all being free to pray there as and when they wish. ʿAbd al-Bahā' emphasises that to every temple there should be attached a high school for giving instruction in the different sciences, a hospital, an orphanage, a dispensary, and other institutions useful to society. On 10 May 1912 he himself laid the first stone of the *Mas͟hriḳ al-Ad͟hkār* at Wilmette (Illinois), on the shore of Lake Michigan near Chicago. This impressive structure cost more than two million dollars and was officially consecrated in the presence of the Guardian's wife in June 1953. Long previously, in 1902, another *Mas͟hriḳ al-Ad͟hkār* had been erected at ʿIs͟hḳābād in what is now Soviet Türkmenistan but we have no exact information on the present state of this building. Other Bahā'ī buildings are the *Ḥaẓīrat al-Ḳuds* (literally Enclosures of Holiness), which are administrative centres of no sacred character, and finally the tombs of the Founders, all grouped together at the world centre of the Faith near Mount Carmel in Israel. The tomb of Bahā' Allāh is at Bahd͟ji and the bodies of the Bāb and ʿAbd al-Bahā' rest in the great mausoleum called *Maḳām-i Aʿlā*, on the slopes of Mount Carmel. The Bahā'īs also consider as sacred localities the *Riḍwān* garden near Baghdād (see *Bahā' Allāh*), and the house of the Bāb at S͟hīrāz, etc. The mausoleum of the Bāb (*Maḳām-i Aʿlā*), surrounded by splendid gardens, is the goal of frequent pilgrimages by European and Eastern Bahā'īs.

It is very difficult to give figures for the numbers of professing Bahā'īs in their communities in the different countries of the world. The central core is in Persia, where different estimates of their number vary from more than a million down to about five hundred thousand. In the city of Tehran there are about thirty thousand. The United States of America come next (about ten thousand), and in Europe, Germany (one thousand); Bahā'īs in other countries can be counted in hundreds. In Iran even now (1958 they are not a recognised religious minority and often suffer persecutions of varying severity. Among other things they are forbidden to print books and newspapers. All official Bahā'ī publications in Persia are cyclostyled. Recently (1955-58) great progress has been made in Africa (especially Uganda) where the number of Bahā'īs exceeds three thousand.

Bibliography: Apart from the works cited under Bahā' Allāh, see; On ʿAbd al-Bahā': S. Lemaître, *Une grande figure de l'Unité, ʿAbdu 'l-Bahā'*, Paris 1952; M. H. Phelps, *Life and teaching of Abbas Effendi*, London 1912 (German trans. *Abdu 'l-Baha Abbas, Leben und Lehre*, Stuttgart 1922); Lady Blomfield, *The Chosen Highway*, London 1940; M. Hanford Ford, *The Oriental Rose, or the Teachings of Abdul Baha*, New York 1910. Account of his journey to Europe and America: Maḥmūd Zarḳānī, *Kitāb Badā'iʿ al-Āt͟hār fī Asfār Mawlā al-Ak͟hyār*..., Bombay 1914-1921 (2 vols.). His chief works: *Makātib-i ʿAbd al-Bahā'*, Cairo 1910-1921 (3 vols.); *al-Nūr al-Abha fī Mufāwiḍāt Ḥaḍrat ʿAbd al-Bahā'* (records of conversations, collected by Laura Clifford Barney in Acre), Cairo 1920; (English trans. by L. Clifford Barney, *Some answered questions*, London 1908; French trans. by I. Dreyfus, *Les Leçons de Saint Jean d'Acre*, Paris 1929); *K͟hiṭābāt-i Mubāraka-yi Ḥaḍrat-i ʿAbd al-Bahā' dar Awrūpā wa-Amrīkā*, Tehran 99 (Bahā'ī era)/1942; *al-Risāla al-Madaniyya*, Cairo 1329/1911 (a works written by ʿAbd al-Bahā' before 1292/1875, English trans. by Dāwūd, *The Mysterious forces of civilization*, Chicago 1918); *D͟javāb-i Prōfessōr-i Almānī Dr. Forel* (Reply to Professor Forel), Cairo 1922; *Alwāḥ wa Waṣāyā-yi Mubāraka-yi Ḥaḍrat-i ʿAbd al-Bahā'*, Cairo 1342/1924 (important on the question of the succession). — Anthologies: *Tablets of ʿAbdu 'l-Bahā'* ed. Windust, New York 1930 (3 vols.); *The wisdom of ʿAbdu 'l-Bahā'*, New York 1924; *ʿAbdu 'l-Bahā' on Divine Philosophy*, ed. Chamberlain, Boston 1918; *Selected writings of ʿAbdu 'l-Bahā'*, Wilmette 1942.

Of the works of Shoghi Effendi, who writes in English as well as in Arabic or Persian, the most important in English is *God passes by*, Wilmette 1945. Noteworthy for its rich and elegant Perso-Arabic style is the *Lawḥ-i Ḳarn*, Bombay n.d., a letter sent to the eastern Bahā'īs on the occasion of the first centenary of the foundation of the Faith (1944).

On Bahā'ī doctrine: J. E. Esselmont, *Bahá'-ulláh and the New Era*, London 1923 (with several other enlarged editions, the last printed at Wilmette in 1946); R. Jockel, *Die Glaubenslehren der Bahá'i-Religion*, Darmstadt 1951 (cyclostyled), containing a very large bibliography of eastern and occidental works; Abu 'l-Faḍā'il Gulpāyagānī (or Abu 'l-Faḍl D͟jarfād͟hḳānī) has produced interesting and stimulating controversial work in Arabic and Persian. We may cite from his writings: *al-Ḥud͟jad͟j al-Bahiyya*, Cairo 1343/1925 (English trans. by ʿAlī Ḳulī K͟hān, *The Bahā'ī proofs*); *Mad͟jmūʿa-yi Rasā'il*, Cairo 1339/1920.

The *Mā'ida-yi Āsmānī*, Tehran 104 (Bahā'ī era/1947, (6 vols.), is a vast anthology of the Founders' doctrinal writings.

Miscellaneous statistics and information on the life of Bahā'ī communities throughout the world are given in the biennial publications sumptuously edited in America, *The Bahā'ī World* (12 volumes published up to the present time, from 1925 to 1957). (A. Bausani)

BAHĀR [see kayl].

BAHĀR, Muḥ. Taḳī (1885-22 April 1951), Persian poet and politician, born at Mas͟hhad of a family originating from Kās͟hān. In 1904, on the

death of his father, the poet Ṣabūrī, Muẓaffar al-Dīn S̲h̲āh conferred upon him the *laḳab* borne by his father, *Malik al-S̲h̲uʿarāʾ-i Āstāna-i Raḍawi-i Mas̲h̲had*. From 1906 Bahār joined the camp of the Liberals (*aḥrār*) and his first works appeared in *al-Ḥabl al-Matīn*, published in India; moreover he very soon started his own review *Naw Bahār* (1909), which quickly became famous, firstly at Mas̲h̲had and then in Tehran, where he established himself permanently after a short exile in Constantinople (1915-6). Upon his return, he founded a club (*and̲j̲uman*) bearing the name *Dānis̲h̲kada*, with the review of the same name. He was several times a deputy in the Mad̲j̲lis, but retired from political life after the *coup d'état* of 25 February 1921 and devoted himself to the study of the old poets. After teaching the science of style at the Teachers' Training College and then at the University, he returned to political life and was Minister for National Education in an ephemeral cabinet (1946); he was also elected President of the national section of the Stockholm Peace Movement.

He is considered in Persia to be the greatest poet of his time. He is extolled for the charm of his intellect, his brilliant qualities as a conversationalist and for his gift of impassioned oratory. He succeeded in reviving Persian poetry, dormant since the Mongols, and in discovering the masters of the Ṣaffārid and Sāmānid periods. He knew only his mother-tongue, but that he knew to perfection.

The work left by Bahār is rich and varied (his last works were published in the review *Yag̲h̲mā* between 1946 and 1951). It is greatly to be regretted, however, that his work on prosody, *Taṭawwur-i Naẓm*, was not completed and that his *dīwān*, written in his own fine calligraphy, has only been printed in part. His main work deals with style and was published in 3 volumes from 1942 to 1948. He also composed *risālas* on Firdawsī, Mānī and al-Ṭabarī; *manẓūmas* (*čahār k̲h̲iṭāba, kārnāma-i zandān*); translations from Pahlawī and a novel. In addition, he wrote a brief history of the political parties, of which the first volume alone has been published. Finally he collaborated in publishing linguistic works and manuals (*dastūr-i zabān-i fārsī*, 2 vols.) as well as in the edition of certain books, (*Taʾrīk̲h̲-i Sīstān*, *Mud̲j̲mal al-Tawārīk̲h̲ wa 'l-Ḳiṣaṣ*, etc.).

Bibliography: Notice by M. ʿAlī Maẓāhirī giving a résumé of his lecture on Bahār; Īrad̲j̲-i Afs̲h̲ār, *Nat̲h̲r-i fārsī-i muʿāṣir*, 1330; Sir E. Denison Ross, *La Prose persane, la poésie persane*, 1933, Soc. des Ét. Iran.; T. Rypka, *Dějiny Perské ..... literatury*, Prague 1956, index. (B. Nikitine)

BAHĀR-I DĀNES̲H̲ [see ʿināyat allāh ḳanbū].

BAHĀRISTĀN [see d̲j̲āmī].

BAHĀRLŪ, name of a Turkish tribe in Persia. In particular, the name refers to the ruling family of the Ḳarā-Ḳoyūnlū federation of Türkmen tribes (also called Bārānī). It is most probable that the name ("those of Bahār") is connected with the village of Bahār (Ibn al-At̲h̲īr, x, 290: *W. hān*, read *Vahār*) situated at 13 kms. north of Hamadān. According to Ḥamd Allāh Mustawfī, *Nuzha*, 107 (Eng. transl. 106) the castle of Bahār served as residence to Sulaymān-s̲h̲āh b. Parčam Īwāʾī, who later became one of the three chief ministers of the caliph al-Mustaʿṣim and was executed by the Mongols of Hülegü k̲h̲ān (2 Ṣafar 656/Feb. 8 1258), cf. D̲j̲uwaynī, (Annex), iii, 290. See especially the excursus on the family of Sulaymāns̲h̲āh by M. Ḳazwīnī, *ibid.*, iii, 453-64. The *nisba* Īwāʾī clearly points to Sulaymān-s̲h̲āh's connexion with one of the basic Og̲h̲uz tribes: *Ivā* (or *Īvā*), see Maḥmūd Kās̲h̲g̲h̲arī, *Dīwān Lug̲h̲at al-Turk*, i, 56. The reasons of Sulaymān-s̲h̲āh's expatriation from his principality of Bahār to Bag̲h̲dād are unknown, but there are definite indications that even before the arrival of the Mongols the Īvā had spread northwards towards Erbil and Marāg̲h̲a. The K̲h̲wārazm-s̲h̲āh D̲j̲alāl al-Dīn had to repress their depredations on the roads leading to Tabrīz (winter 623/1226), see Ibn al-Athīr, xii, 302; Nasawī, 126. The presence of an Īvāʾī is mentioned even in K̲h̲ilāṭ (627/1230). These stages lead us to the region where the Ḳarā-Ḳoyūnlū federation of tribes was formed. Even the emblem on some Ḳarā-Ḳoyūnlū coins reminds one of the tribal *tamg̲h̲ā* of the Iva. On the other hand the connexion of the Ḳarā-Ḳoyūnlū rulers with Hamadān is confirmed by the survival of their epigons in those parts. For a long time the region of Hamadān was called *Ḳalam-raw-i ʿAlī S̲h̲akar*, after the name of the important Ḳarā-Ḳoyūnlū amīr.

At present splinters of the Bahārlū tribe are scattered throughout southern Persia, see Sykes, *Ten thousand miles*, 81, 302.

Bibliography: See V. Minorsky, *The clan of the Qara-qoyunlu rulers* in *Mélanges F. Köprülü*, 1953, 391-5, and *BSOAS*, 1955, xvii/1, 69-71. (V. Minorsky)

BAHĀWALPŪR, a town in West Pakistan with a population of 60,000, situated near the left bank of the river Sutled̲j̲, at a distance of about 500 miles north of Karachi, with which it is connected by means of a railway. It has a museum, a library and several educational institutions, and is the administrative, commercial and educational centre of the region in which it lies.

Formerly, it was the capital of the Bahāwalpūr state, which was founded by the Dāʾūdpota family of Sind. The town itself was founded by the second ruler of the dynasty, Muḥammad Bahāwal K̲h̲ān, in 1748. The ruling dynasty has sometimes been called ʿAbbāsiyya after a certain local ancestor ʿAbbās; the name has nothing to do with the ʿAbbāsids of Bag̲h̲dād or Egypt. The ruling family became independent of the Afg̲h̲ān kings towards the end of the 18th century, and made a treaty with the British in 1838. The state had an area of 15,918 square miles, and stretched for about 300 miles along the left bank of the Sutled̲j̲, the Pand̲j̲nad and the Indus, extending into the desert for a mean distance of 40 miles. The chief crops were then, as now, wheat, rice, cotton and millet, which were entirely dependent on irrigation from the boundary rivers. According to the census report of 1941, the total population of the state was 1,341,209, and the majority of the people were Muslims — D̲j̲āts, Rad̲j̲-pūts and Balučīs. The state of Bahāwalpūr ceased to exist as a separate political entity in 1955, when it was incorporated in West Pakistan.

Bibliography: S̲h̲ahāmet ʿAlī, *The History of Bahāwalpūr*, London 1848; *Bahawalpur State* (*Panjab States Gazeteers*, vol. xlv) Lahore 1935; Dawlat Ram, *Mirʾāt Dawlat ʿAbbāsiyya*, Amritsar 1851; M. ʿAzīz al-Raḥmān, *Ṣubḥ Ṣādiḳ* 2nd ed., 1943; M. Aʿẓam Hās̲h̲imī, *D̲j̲awāhir ʿAbbāsiyya* (Persian; still in MS); C. H. Aitchison, *Collection of Treaties, Engagements and Sanads relating to India*, ix, Calcutta 1892. (Sh. Inayatullah)

BAḤDAL b. Unayf b. Wald̲j̲a b. Ḳunāfa belonged to the clan of the Banū Ḥārit̲h̲a b. D̲j̲anāb, which was also called *al-Bayt* or the aristocracy of Kalb. A Christian like the great majority of his tribe, his chief claim to fame is that he was the father of

Maysūn, mother of Yazīd I. His nomad clan lived to the south of the ancient Palmyra, whither Maysūn afterwards brought the young Yazīd, and where the Umayyads reunited after the congress of Djābiya and the battle of Mardj Rāhiṭ. Baḥdal was thus the founder of the great prosperity of the Kalbites while the Umayyad dynasty lasted, though he did not himself take an active part in politics. As one of his sons was accused of being a Christian under the caliphate of Yazīd I, Baḥdal must have died a a Christian, probably before the battle of Ṣiffīn, in which one of his sons commanded the Ḳuḍāʿa of Damascus, and at an advanced age. His sons succeeded him and became the first persons in the state; in consequence the partisans of the Umayyads were called Baḥdaliyya. His grandson Ḥassān, guardian of the sons of Yazīd I, after the death of Muʿāwiya II even dared to cherish the project of succeeding him. The undue preponderance of the Baḥdalites and the Kalbites contributed largely to the division of the Arabs into two parties, that of Ḳays and that of Yemen, after the battle of Mardj Rāhiṭ.

(H. LAMMENS)

BAHDĪNĀN, BĀDĪNĀN, the Kurdish territory to the north and north-east of the Mawṣil plain. From the latter years of the ʿAbbāsid Caliphate, circa 600/1200, until the middle of the 13th/19th century the area was a principality ruled from ʿAmādiya ([*q.v.*], Kurdish *Āmēdī*). It included ʿAḳra (Kurd. *Ākrē*), Shūsh, and the Zēbārī lands on the Great Zāb river to the east and Dahūk, and occasionally Zākhū, to the west. The principalities of Bōhtān and Ḥakārī bounded it in the north, and that of Sōrān in the south.

The eponymous Bahāʾ al-Dīn family came originally from Shams al-Dīnān (Kurd. *Shamdīnān*, [*q.v.*]). Sharaf al-Dīn Bitlīsī, *Sharaf-nāma*, i, 106 ff., relates the history of the principality for two centuries from the time of the Tīmūrid Shāhrukh to 1005/1596. The Amīr Ḥasan, under the aegis of Shāh Ismāʿīl Ṣafawī, extended his rule to Dahūk and the Sindī area north of Zākhū. His son Sulṭān Ḥusayn was confirmed in authority by Sulṭān Sulaymān the Magnificent. Ḥusayn's son Ḳubād was deposed and killed by a Mizūrī tribal force, but his son Saydī Khān regained power with Turkish help. At the beginning of the 11th/17th century the ruler of Ardalān, under Shāh ʿAbbās, placed a governor in ʿAmādiya for a short time. There is then little record of the state for another century. Under Ottoman suzerainty the family appears to have reached its zenith with the reign of Bahrām Pasha the Great, 1138-81/1726-67. Bahrām's son Ismāʿīl Pasha, 1181-1213/1767-97, had to cope with his rebellious brothers, who established themselves at various times in Zākhū and ʿAḳra. Murād Khān, son of Ismāʿīl, was driven from ʿAmādiya by his cousin Ḳubād, with the help of the Bābān pasha of Sulaymāniya. Once again the Mizūrī tribe rose to bring about the downfall of a Ḳubād in 1219/1804 and ʿĀdil Pasha, son of Ismāʿīl, was confirmed in power by the Djalālī pasha of Mawṣil. He was succeeded in 1223/1808 by his brother Zubayr. In 1249/1833 Muḥammad Pasha Kōra, the "Blind Pasha" of Rawāndiz, captured ʿAḳra and ʿAmādiya, deposing the ruler Saʿīd Pasha, and proceeded to take Zākhū. Although his sway only lasted a few years the Bahdīnān family never fully recovered its power and in 1254/1838 the area was finally incorporated in the *sandjāḳ* of Mawṣil.

The name Bahdīnān is still applied to the area occupied by the following great Kurdish tribes: Barwārī, Dōskī, Gullī, Mizūrī, Raykānī, Silayvānī, Sindī, and Zēbārī.

Bibliography: S. H. Longrigg, *Four Centuries of Modern Iraq*, Oxford 1925; Ṣiddīḳ al-Damlūdjī, *Imārat Bahdīnān al-Kurdiyya*, Mosul 1952.

(D. N. MACKENZIE)

BĀHILA. A settled and semi-settled tribe in ancient Arabia. The centre of their territory, Sūd Bāhila (Saud? — "corrected" in Hamdānī by an uninformed copyist into Sawād), extended on both sides of the direct route (described by Philby in *The Heart of Arabia*, vol. ii) from Riyad to Mecca. It is sufficiently well defined by the localities al-Ḳuwayʿ, Djazālā = Juzaila, al-Ḥufayr = Hufaira and the mountains al-Ḳatid = al-Djidd and (Ibnā) Shamāmi = Idhnain Shamal. The clan Djiʾāwa (Djāwa) lived further westward at the western foot of the Thahlān = Dhalan and in the south-east corner of the later Ḥimā Ḍariya near the Ghanī, another group further to the south in the oasis of Bīsha. To this group may have belonged the Banū Umāma, guardians of the sanctuary of Dhu ʾl-Khalaṣa near the neighbouring Tabāla. An old verse (ʿĀmir b. al-Ṭufayl, Suppl. 16.2) runs: ". . . . I will . . . . not visit the fair, even though Jasr and Bāhilah journey thereto to sell their wares" (Jasr also in the oasis of Bīsha). What kind of wares? Pottery? — clay was rare in Arabia.

The genealogy of the tribe is somewhat complicated: Bāhila is the mother of one son of Mālik b. Aʿṣur and, through *nikāḥ al-maḳt* with the other son, Maʿn by name, the mother of two of the latter's sons and foster-mother of ten other sons. These other sons stem from two different mothers. Such artifices are familiar to the genealogists. Here only their accumulation is remarkable. This accumulation points indeed to the local separation of the groups of the Bāhila and also to a political opposition between the two greatest of their clans, the Ḳutayba and the Wāʾil. The connexion with Aʿṣur makes of the Bāhila, who are also called, moreover, Bāhila b. Aʿṣur, brothers of the Ghanī. As we have seen above, they were in fact neighbours, of the Ghanī. Unfortunately, the period when the sobriquet Ibnā Dukhān for both these tribes originated is not certain. The Bāhila stood partly under the protection of the Kilāb and partly under that of the Kaʿb branch of the ʿĀmir b. Ṣaʿṣaʿa. Only one warrior from amongst them is known, al-Muntashir, and this one because Aʿshā Bāhila (no. 4) made an elegy over him. We know of another episode from al-*Nābigha al-Djaʿdī*, no. ix. Both instances lie shortly before the rise of Islam. Two documents of the Prophet have been handed down in Ibn Saʿd, i. 11, 33, the first for the Bāhilites in Bīsha, the second for a chieftain of the Wāʾil.

The history of the tribe becomes clear for the first time under Islam. Their exodus from Arabia was directed predominantly towards Syria (even the Bāhila in Khurāsān came there mainly with troops from Syria) and, for the rest, towards Baṣra. Bāhila (and Ghanī) tribesmen had a substantial share in the war of revenge fought by the Ḳays against the Kalb after the battle of Mardj Rāhiṭ (cf. Wellhausen, *Das arabische Reich und sein Sturz*, 126). The Bāhila also developed an abundance of talents of

all kinds. The most important are the philologist al-Aṣmaʿī and the general Ḳutayba b. Muslim. A second exodus of the Bāhila from Arabia is to be distinguished from that of the *muhādjirūn* — an exodus which brought a part of those who had remained behind in Arabia to the lower Euphrates, firstly towards al-Ḥufayr a short distance before Baṣra; from there they penetrated into the sandy tract of al-Ṭaff, which was situated over against the Baṭāʾiḥ, and after the Zoṭṭ had settled [in the Baṭāʾiḥ] in 837, they began to infiltrate into the Baṭāʾiḥ. In 871 the Bāhila there suffered punishment from troops which were on the march to meet the Zandj. The result was that the Bāhila took the side of the Zandj. Nothing more is known about them. Hamdānī (p. 164) is the last who mentions the Bāhila in their native territory; yet this passage is hardly earlier than the parallel passage about Sūd (Saud) Bāhila (*ibid.*, 147 ff.), the original source of which is set by de Goeje in about the year 250/864. Before that time there occurred the over-running of central Arabia by the Numayr. Only vague traces of a change of dwellings the Bāhila in central Arabia are found in the literature.

BAHDJAT MUṢṬAFĀ EFENDI, Ottoman scholar and physician, grandson of the Grand Vezir Khayrullah Efendi and son of Khʷādja Meḥmed Emīn Shukūhī. Born in 1188/1774, he entered upon the ladder of the religious institution, becoming a *mudarris* in 1206/1791-2. Specialising in medicine, he rose rapidly, and in 1218/1803 became chief physician to the Sultan (Ḥekīmbashî or, more formally, *Reʾīs-i Eṭibbā-i Sulṭānī*). In 1222/1807 he was dismissed from this office, but was reappointed in 1232/1817. In 1237/1821 he was disgraced and banished, but was reinstated in the same year. In 1241/1826, after the destruction of the janissaries, he served as a member of the palace council presided over by Maḥmūd II. Besides these he also held a series of important religious and legal appointments, including those of Molla of Izmir (1221/1806) and of Egypt (1236/1820-1), Ḳāḍī-ʿasker of Anatolia (1237/1821-2) and of Rumelia (1247/1831-2). He died in Dhu ʾl-Ḳaʿda 1249/March-April 1834 and was buried at Üsküdar.

Bahdjat Efendi was one of the last physicians of the old school, who combined the study of medicine with those of theology and law, and its practice with an *ʿilmiyye* career. At the same time he was one of the pioneers of the new medicine, of European type, in Turkey. It was under his supervision, and that of his brother the Ḥekīmbashî ʿAbd al-Ḥaḳḳ Molla, that a new hospital and also a new medical school were opened, with imported European teachers. He is said to have studied European languages under the chief dragoman Yaḥyā Efendi, and although his own medical work, as exemplified in his *Hazār Asrār*, remained largely traditional, he was responsible for a number of important translations of Western medical and scientific books, including Jenner's booklet on vaccination, Buffon's Natural History, and other works on cholera, syphilis, and milk-scab. His interest in the West was also shown by his Turkish translation of the history of the French occupation of Egypt by Al-Djabartī.

AL-**BĀHILĪ**, ʿABD AL-RAḤMĀN B. RABĪʿA, i.e. of the Bāhila tribe, Arab general, called Dhū ʾl-Nūr (Ṭabarī, i, 2663) or, according to Ibn al-Athīr (*Kāmil*, ed. Cairo, A.H. 1303, iii, 50), Dhu ʾl-Nūn, from the name of his sword. He commanded the van of Surāḳa b. ʿAmr, who was directed to Darband (Bāb al-Abwāb) by ʿUmar in 22/642 (Ṭabarī, *loc. cit.*). The main incident reported in the proceedings of the Muslims, now in force at the Caucasus for the first time, was an interview between ʿAbd al-Raḥmān b. Rabīʿa al-Bāhilī and the Persian commandant at Darband, who made his submission (Ṭabarī, i, 2663-2664; cf. 2667, 2669-2671). A treaty granted to him, together with 'the inhabitants of Armenia and the Armans', witnessed by ʿAbd al-Raḥmān and Salmān b. Rabīʿa al-Bāhilī, his younger brother (Ibn ʿAbd al-Barr, *Istiʿāb*, 400), is cited by Ṭabarī (i, 2665-2666). On the death of Surāḳa in the same year ʿAbd al-Raḥmān succeeded to the chief command and received instructions from ʿUmar to proceed northward against the Khazars. He advanced through the passes at the east end of the Caucasus as far as Balandjar, which seems to have been raided repeatedly within the next few years (Ṭabarī, i, 2667-2668; 2890). In 32/652 he was again in Khazaria, besieging Balandjar (Ṭabarī, i, 2889 ff.; also 2668 ff.). After sharp engagements round the city, the Khazars made a sortie and were joined by their other forces. The ensuing battle was a total Muslim defeat. ʿAbd al-Raḥmān was struck down as he tried to rally his men. His brother Salmān b. Rabīʿa took up the standard and managed to lead off some of the survivors to Bāb al-Abwāb. The Khazars are said to have preserved the body of ʿAbd al-Raḥmān and made use of it in prayers for rain (Ṭabarī, i, 2669, 2890). His defeat and death mark the end of the first Arab-Khazar war. According to some (Balādhurī, *Futūḥ*, 204; Ibn Ḳutayba, *Maʿārif*, ed. Wüstenfeld, 221) Salmān b. Rabīʿa al-Bāhilī was the Arab general killed at Balandjar.

AL-**BĀHILĪ**, ABŪ NAṢR AḤMAD B. ḤĀTIM AL-BĀHILĪ, Arab philogist and author, a pupil of al-Aṣmaʿī, Abū ʿUbayda and Abū Zayd, belonging to the school of Baṣra, lived first in Baghdād, then in Iṣfahān and finally settled in Baghdād again where he died in 231/855. As a rule he followed in his works the footsteps of his predecessors and like them wrote a book on trees and plants, camels, cereals and palm-trees, horses, birds and locusts, of which latter he was the first to treat. His works on proverbs, on proper names, and on the errors in the language of the common people, must also have contained many notes of great value to us, but unfortunately like all his other writings they have perished.

AL-BĀHILĪ, AL-ḤUSAYN [see AL-ḤUSAYN AL-KHALĪʿ].

BAḤĪRA [see BUḤAYRA].

BAḤĪRA, a she-camel or a ewe with slit ears. The Ḳurʾān and ancient poetry (cf. Ibn Hishām, 58) show that the ancient Arabs used to carry out certain religious ceremonies with respect to their cattle, which consisted firstly in letting the animal go about loose without making any use of it whatever, and secondly in limiting to males permission to eat its flesh (after it had died). In the various cases the animals bore special names (*Baḥīra, Sāʾiba, Waṣīla, Ḥāmī*; on these names cf. Wellhausen as cited below). The lexicographers are not quite agreed on the point in which cases a camel or sheep had its ear slit. According to some, it was after it had borne ten young ones, according to others when its fifth young one was female etc.—The Ḳurʾān abolished these customs and stigmatised them as arbitrary inventions, Sūra v, 102: "God has made neither *baḥīra* nor *sāʾiba*, nor *waṣīla*, nor *ḥāmī*; but the unbelievers have invented lies against God, and the greater part of them do not understand"; Sūra vi, 139: "and they say: these cattle and fruits of the earth are sacred; none shall eat thereof but whom we wish (so they say); and [there are] cattle on whose backs it is forbidden [to ride] etc."; verse 140: "and they say: that which is in the bellies of these animals, is only for our men and forbidden to our wives; but if it be born dead then both partake of it. He will reward them for their attributing [these things to him] for He is wise and knowing".

BAḤĪRĀ. the name of a Christian Monk. Ibn Saʿd and Ibn Hishām offer two parallel traditions, confirmed by al-Ṭabarī (i, 1123 ff.), according to which Muḥammad, when either nine or twelve years old, whilst accompanying the Meccans' caravan to Syria, in the company of Abū Bakr or Abū Ṭālib, found himself in the presence of a Christian monk or hermit, who is said to have revealed the young man's prophetic destiny, either by finding on him the stigmata of prophecy, or by noting the miraculous movement of a cloud, or the behaviour of a branch, which persisted in affording him shade, irrespective of the course of the sun. The recluse acquainted Abū Bakr (or Abū Ṭālib) with these marvels, admonishing him to preserve the child from the malice of the Jews (Ibn Saʿd) or from the violence of the Rūm (al-Ṭabarī, third tradition, 1123). The monk, says Ibn Saʿd, was called Baḥīrā (Aram. *Bakhīra*, the elect). Though Ibn Saʿd, coinciding with al-Ṭabarī, declares that the monk knew Muḥammad because he had found the announcement of his coming in the unadulterated (*tabdīl*) Christian books, which he possessed, (this myth in another later form in the Pseudo-Wāḳidī, *Kitāb Futūḥ al-Shām*, Cairo 1954, 16, 1. 9-12), the *Mafātīḥ al-Ghayb* of al-Rāzī (iv, 436, i 30 ff.) says, commenting on the word *Ḳassīsīn*, (Ḳurʾān v, 82), that it meant the "Chiefs of the Christians" and that according to ʿUrwa b. Zubayr, it was one of these who remained in the authentic tradition of the Gospels, inspite of the corruption introduced into them by the other Christians, by effacing the announcement of Muḥammad's mission (cf. the long polemic on the word *faraklīṭ*). In 851, in his *Risālat fiʾl-Radd ʿala ʾl-Naṣārā*, Djāḥiẓ (cf. Pellat, in *RSO*, 1952, 57-8) stresses (Finkel, *Three Essays*, Cairo 1924, 14, 1. 17) that the Christians, of whom the passage of the Ḳurʾān (v, 82) speaks with benevolence, are not members of the Byzantine Church, either Jacobite or Melkite, but merely those of the type of Baḥīrā or of "the monks who served Salmān al-Fārisī". The outcome of all this was that, both at the end of the 2nd/8th century and in the first part of the 3rd/9th century, the tradition, as it then stood, concurred in recognising in the monk Baḥīrā, the witness, chosen at the heart of the most important scriptural religion, of the authenticity of the Prophet's mission. Thus Islam provided a remedy for the absence of a textual promise concerning its founder, and this point, as is known, formed one of the essential arguments of the Christian polemic.

The tradition assumed a material form to the extent that the town of Boṣrā, where the meeting is said to have taken place, at a very early date showed the "monastery of Baḥīrā", and still continues to do so (al-Harāwī, *Guide des lieux de Pèlerinage*, ed. J. Sourdel-Thomine, Damascus 1953, 17; (transl. 43) H. C. Butler, *Ancient Architecture in Syria, Bosra*, 265-270).

Djāḥiẓ's attitude shows that, for a Muslim of the 3rd/9th century, Baḥīrā was a historical personage, in spite of all the objections raised (Sprenger, ZDMG, xii, 238-249). The age at which Muḥammad met this witness, 12 years of age, is the same as that of Jesus at the time of his first supernatural undertaking, the discussion with the doctors (Luke ii, 42-49), and here can be seen an attempt at polemical influence.

Whilst Baḥīrā is a witness and a guarantor in the Muslim tradition, for the Christian polemic against Islam, both in Arabic and in Greek, he is the heretical monk, whom Muḥammad met at the beginning of his career, and who became his inspirer and involuntary accomplice (*Anon. contre Mahomet*, in *Patr. Graeca*, civ, 1449b) in the composition of the Ḳurʾān, this "false Scripture". The name given him varies according to the authors' sources of information and according to their allegiance. ʿAbd al-Masīḥ b. Isḥāḳ al-Kindī calls him Sergius and says that he subsequently had himself called Nestorius (ed. Anton Tien, 76-77). Further on, in what appears to be an interpolation of the primitive "apologia", this personage is duplicated: "Sergius surnamed Nestorius and John surnamed Baḥīrā". It must be noted that al-Masʿūdī (*Murūdj*, i, 146) on the other hand, makes a synthesis of the two names Sergius and Bahira. The Byzantine polemists after the 3rd/9th century knew the name Baḥīrā, which they wrote Baeira or Pakhyras (Bart. d'Edesse, in *P.G.*, CIV, 1429 ff.). Whilst for ʿAbd al-Masīḥ b. Isḥāḳ al-Kindī he is a Nestorian, he is an iconoclast (*Ann. de l'Inst. de Philologie et Hist. Or.*, Brussels, iii, 1935, 9) in the famous "Apocalypse of Baḥīrā" (R. Gottheil, *A Christian Baḥira Legend*, in *ZA*, 1898-1903). As a heretic, he is referred to both as a Jacobite (Anonymus, in *P.G.*, CIV, 1446) and as an Arian (Const. Porphyr. *De Adm. Imp.*, in *P.G.*, CVIII, 192 = Euth. Zigab., *P.G.*, CXXX, 1333 c. Sometimes his allegiance is not specified (Theophanes, in *P.G.*, CVIII, 685, b-c = Cedrenus, *P.G.* CXXI, 809 a-b). For all the Christian authors, his work coincides with what is veracious in the Ḳurʾān, whilst all the erroneous statements derive from subsequent compilers, such as ʿUthmān (Barth. of Edessa, in *P.G.* CVI, 1428-32) or even

contemporaries, perverse Jews (ʿAbd al-Masīḥ, ed A. Tien, 77-8, cf. *ZDMG*, xii, 699-708).

The Apocalypse of Baḥīrā, which exists in Syriac and Arabic, the textual history of which still remains to be established, and the chronology of which is disputed (cf. G. Levi della Vida and J. Bignami-Odier, (see bibl.), 132, no. 3 and 133 no. 1, with A. Abel, *Ann. Inst. Phil. et Hist. Or.* Brussels 1935, iii, 7-9 and *Studia Islamica*, ii, 1954, 29 and n.), places the monk in the centre of a pamphlet, which assembles the indications of the ancient Danielesque apocalypse of the Pseudo-Methodius (Kmosko, in *Byzantion*, 1931, 273-296), and cleverly combines them with the Christian arguments on the apocryphal origin of the Ḳurʾān and with the various aspects of the doctrine of the Mahdī (Graf, *Gesch. der Arab. Christ. Lit.*, *Studi e Testi*, Roma, 133, 147-9). This work met with success in the Christian circles of the Orient, and up till the period of the Crusades, which even resulted in its being translated into Latin (Levi della Vida and Bignami-Odier, *op. cit.* 132-3 and 139-48, M.-T. d'Alverny and G. Vajda, in *al-Andalūs*, xvi, 1951, i, 118, 130 ff.). But even before the Crusades, the main theme of the false prophet inspired by a "wise man" was known in the West, as is attested by the work in verse, directed against Islam, under the name of *Historia Machumeti*, attributed to Hildebert (Guy Cambier, *Embricon de Mayence* (1010-1077) *est-il l'auteur de la Vita Machumeti?*, *Patr. Lat.*, cxxii, 1343-1366, Latomus, 3, Brussels 1957 and U. Monneret de Villard, *Lo Studio dell' Islam in Europa nel xii e xiii secolo*, *Studi e Testi*, 110, 34-5).

(remarkable bibliographical information).

(A. Abel)

BAHISHI [see Djanna].

BANĪẒAT al-BĀDIYA [see Malik Hifnī Nāsif].

BAHLŪL (Amīr), the name of three notable Kurdish figures, according to M. E. Zakī (*Mashāhīr*, 144): 1. A member of the Sulaymāniyya family, amīr of the Mayyāfariḳīn branch, son of Alwand Bey b. Shaykh Aḥmad. He was for a long period in the service of Iskandar Pasha, the *wālī* of Diyārbakr. Subsequently, he was for a time in command of the fortress al-Iskandariyya (between al-Ḥilla and Baghdād), and after that the sultan Yawuz Selīm entrusted to him the stronghold of Mayyāfāriḳīn. A man of great personal bravery, he perished in a fight with Shāhsuwār Bey. 2. Son of Amīr Djamshīd, chief of the Dunbulī, tribe and resident at Tauris. Died in 760/1359. 3. Son of Amīr Farīdūn, also a chief of the Dunbulī, governor of Ṭabaristān and Dāghistān. A contemporary of Shaykh Ḥaydar Ṣafawī, and one of his most loyal supporters, he fell in the battle between Ḥaydar and Shāh Khalīl Aḳ Ḳoyunlu in 880/1475-6.—There is also a Bahlūl Pasha who was the Turkish governor at Bāyazīd up to 1236/1821. He was dismissed in that year, and died four years later. Wagner (ii, 297 ff.) devotes several pages to him in a commendatory vein.

Bibliography: M. E. Zakī, *Mashāhīr al-Kurd wa Kurdistān*, Baghdād 1945; M. Wagner, *Reise nach Persien und dem Lande der Kurden*, Leipzig 1852.

(B. Nikitine)

BAHLŪL LŌDĪ [see Delhi Sultanate].

BAHMAN [see Taʾrīkh].

BAHMANĪS. A line of eighteen Muslim sultans who ruled, or claimed to rule, in the Deccan from 748-933/1347-1527, after a group of Muslim nobles led by Ismāʿīl Mukh had successtully rebelled against the sultan of Dihlī, Muḥammad b. Tughluḳ. The more vigorous Ḥasan Gangu supplanted Ismāʿīl and was proclaimed Sulṭān ʿAlā al-Dīn Ḥasan Bahman Shāh. (On the latter's origin see Major W. Haig, *Some Notes on the Bahmanī Dynasty*, *ASB* LXXIII Pt. 1 (Extra No.) 1904, 463; *Proceedings of Indian History Congress*, 1938, 304-8; H. K. Sherwani, *Gangu Bahmani*, in *Journal of Indian History*, xx, Pt. 1, April 1941, 95 ff.).

Table of the Bahmanī sultans.

(a) Sulṭāns with their capital at Aḥsanābād-Gulbarga:

ʿAlāʾ al-Dīn Ḥasan Bahman Shāh	748/1347
Muḥammad I	759/1358
ʿAlāʾ al-Dīn Mudjāhid	776/1375
Dāwūd I	779/1378
Muḥammad II	780/1378
Ghiyāth al-Dīn Tahamtan	799/1397
Shams al-Dīn Dāwūd II	799/1397
Tādj al-Dīn Fīrūz	800/1397

(b) Sultans with their capital at Muḥammadābād-Bīdār:

Shihāb al-Dīn Aḥmad I	825/1422
ʿAlāʾ al-Dīn Aḥmad II	839/1436
ʿAlāʾ al-Dīn Ḥumāyūn	862/1458
Niẓām al-Dīn Aḥmad III	865/1461
Shams al-Dīn Muḥammad III	867/1463
Shihāb al-Dīn Maḥmūd	887/1482
Aḥmad IV	924/1518
ʿAlāʾ al-Dīn	927-1521
Walī Allāh	929/1523
Kalīm Allāh	932/1526

(Coins and inscriptions suggest the last named *roi fainéant* may have lingered in exile claiming the throne until 943/1536-7. See E. E. Speight, *Coins of the Bahmani Kings of the Deccan*, in *IC*, ix, 1935, 168 ff.; and *Inscriptions of Bīdjāpūr*, *Mem. Arch. Sur. of India*, No. 49).

During most of its history the Bahmanī Kingdom was limited to the table-land of the Deccan. Geographically, the Vindhya range may be said to be the northern edge of Southern India with the Narbada river flowing almost parallel to it. But the country south of this quasi-barrier may be divided into three distinctive parts: (i) Malwā, with its general slope towards the West; (ii) the Deccan table-land proper which, along with Berār, forms the pivot of the lavaic crescent where the ancient undisturbed rock begins to extend over the centre of the peninsula; and (iii) what is called "South India" which extends from the northern edge of the Mysore plateau and the line of the Tungabhadra southwards. The lavaic uplands end abruptly in the Western Ghāts which

have always tended to form a natural limit to the ambitions of the rulers of the Deccan table-land. Although the Bahmanīs early managed to reach the sea at Dābul and Čowl they could never rule the coastal plain beyond the Ghāts effectively, and the south-western extremity of this lavaic country, Goa, had to be conquered and reconquered a number of times. While the table-land has a sheer fall of nearly 4,000 feet in the West, it has a very gentle slope eastward, and it takes more than 300 miles to reach the same level as the eastern coast line. It may be mentioned here that the importance of Golconda, which played such an important part during the later medieval period of Deccan history, and with it, of Ḥaydarābād, lies in the fact that Golconda and a part of Greater Ḥaydarābād stand on the last prominent spurs of the table-land before the undulating plain begins. The effective southern limit of the Bahmanī kingdom was the river Tungabhadra, the natural geographical limit of the Deccan, but it should be remembered that the Krishna—Tungabhadra Doāb was always a bone of contention between the Bahmanīs and their southern neighbours, the Rāyas of Vid̲j̲ayanagar in much the same way as it had been a bone of contention between the Western Čalukyas and Rashtrakutas, and between the Yādavas and Hoysalas in ancient times.

The Bahmanī sultans continually struggled to extend the area of their military and revenue paramountcy and this involved them in war against the sultanates of Malwā and Gud̲j̲arāt in the north and Vid̲j̲ayanagar in the south and in efforts, complicated by the intervention of Vid̲j̲ayanagar and the Hindu chiefs of Orissa, to assert their suzerainty in Telangāna, south and east of the Godavarī.

In the north, a successful war between S̲h̲ihāb al-Dīn Aḥmad I and Hus̲h̲ang S̲h̲āh of Malwā over Kherla in 832/1428 followed in 834/1430-31 by an unsuccessful war against Gud̲j̲arāt in alliance with the Rad̲j̲a of Jhalawār ended in stalemate. In 866/1461-2, Maḥmūd K̲h̲ald̲j̲ī of Malwā, in alliance with the Gad̲j̲apati Rad̲j̲a of Orissa, Kapilendra, succeeded in occupying Bīdar itself; the Bahmanīs were saved by the intervention of Maḥmūd S̲h̲āh Bēgada of Gud̲j̲arāt. War again occurred in 872/1468 over Mahūr and Ellichpūr, but although Khērla was temporarily occupied by the Bahmanī forces, a peace, which proved to be lasting, restored the *status quo ante*, between Malwā and the Bahmanīs.

In the south, confict over the fertile Krishna-Tungabhadra Doab with Vijayanagar was endemic. War occurred in 750/1349, 755/1354, 767/1365, 800/1398, 808/1406, 823/1420, 825/1422, 847/1443 and 886/1481 with varying fortunes, and the Doab region remaining a no-man's-land between the two powers, until after the accession of the Vidjayanagar ruler, Krishna Deva Rāya in 915/1509, when the region was virtually incorporated into the Vid̲j̲ayanagar dominions.

In the west, despite Bahmanī claims to Dābul and Čowl, the Bahmanīs were unable to control the coastal region west of the Ghāts and were impotent to prevent continuing depradations by the Rad̲j̲as of Khelna and Sangameshwar, until the *wazīr*, Maḥmūd Gawān, succeeded in occupying Sangameshwar and Goa in 876/1471 and 876/1472.

In the east, the Bahmanīs raided Telangāna successfully in the reign of Muḥammad I and again in 820/1417 and 827/1424 when Warangal was captured, and a Bahmanī governor established, but the local Hindu chiefs could usually rely upon help from Orissa. The Orissan general Hamvīra captured Warangal in 864/1460, but succession troubles in Orissa enabled the Bahmanis in campaigns between 882/1477-8 and in 885/1480, to extend their hegemony, though briefly, to the Bay of Bengal. Telangāna was then divided into two provinces centring on Warangal and Rajahmundry.

While ʿAlāʾ al-Dīn Ḥasan Bahman S̲h̲āh was the founder of the dynasty it was Muḥammad I who organised it. The central Government was divided into three main departments dealing with civil, military and judicial matters respectively. The civil department was centered in the *wakīl-i salṭanat* or Prime minister who was assisted by *wazīrs* or ministers and *dabīrs* or secretaries. In the same way the judiciary consisted of the *ḳāḍīs* or judges and the *muftīs* or interpreters of law, while peace and security of the cities was kept by the *kōtwāl* or Commissioner of Police and *muḥtasib* or the censor of public morals. On the military side the Commander-in-Chief had a number of subordinate officers at headquarters such as the officer at the head of *bārbardārān* who mobilised irregular forces in times of emergency, the *bak̲h̲s̲h̲ī* or the paymaster, the officer in charge of the *k̲h̲āṣṣa k̲h̲ēl* or the body-guard of the sulṭan, a well-equipped and well-drilled force of 4,000 soldiers, and the officer in charge of 200 *yakka-d̲j̲awānān* or *silāḥdārān* who handled the sultan's personal arms.

The whole kingdom was divided into four *aṭrāf* or provinces and each *ṭaraf* or province was placed under a *ṭarafdār* or governor. The *ṭarafdār* was originally responsible both for the civil and the military administration of the province and the *ḳilʿadārs* or commanders of the forts were placed under him. The four provinces of the Kingdom were centered round Dawlatābād, Berār, Aḥsanābād—Gulbarga and Muḥammadābād—Bīdār (which included the small part of Telangāna which was under the Bahmanīs in the beginning). Out of these the province of Gulbarga, which was centered round the capital of the state, was naturally regarded as the most important and its *ṭarafdār* was generally one who enjoyed the fullest confidence of the ruler.

The century which followed the establishment of the dynasty saw a great expansion of the kingdom which finally extended from sea to sea, and Maḥmūd Gāwān, who was now *wazir*, set to work not only on the redivision of the kingdom but also on the reform of the whole provincial administration. Firstly he redivided the kingdom into eight in place of four *aṭrāf*. Berar was divided into two charges, namely Gāwil and Mahūr, part of the area surrounding Junnar was removed from Dawlatābād province and formed into a separate *ṭaraf*, Rad̲j̲āmandrī was created a province distinct from the rest of Telangāna and Bid̲j̲āpūr was carved out of the old province of Gulbarga. The power of the *ṭarafdār* was also greatly curtailed. A *ṭarafdār* was previously supreme in both civil and military affairs of his province and could not only appoint *ḳilʿadārs* but also increase or decrease the number of soldiers on permanent duty according to his will and thus spend or save as much money as he liked out of the *d̲j̲āgīr* set aside for military expenses. Maḥmūd Gāwān curtailed the power of the *ṭarafdārs* considerably. It was decreed that in future *ḳilʿadārs* would be appointed by the central government and a *ṭarafdār* was entitled to have only one fort under his direct command. Moreover every person who was responsible for the payment of salaries of soldiers was made accountable for the money he drew

from the *djāgīr* or *manṣab* as the case may be.

Another method by which the sulṭān was brought in direct relationship with the work of the provinces was that under which a large tract of land was set aside in every province as the royal demesne. Orders were also issued for a systematic measurement of land, fixation of boundaries all over the state and a general enquiry about the record of rights and assessment of revenue.

All these schemes however, proved to be still-born when Maḥmūd Gāwān was murdered. Another attempt in the same direction was made twenty years later in 901/1495-96 by the minister Ḳāsim Barīd, the progenitor of the Barīd-shāhis of Bīdār [*q.v.*]. Under these reforms the smaller *manṣabdārs* were ordered to enrol themselves in the royal bodyguard and were henceforth called *sarkārdārs* or *ḥawāladārs*. This was only a half-hearted measure and affected only the small *djāgīrdārs* and *manṣabdārs* while the great nobles were left untouched. The great power and authority which the *ṭarafdārs* were left to enjoy after the nullification of earlier reforms was one of the causes of the disintegration of the Kingdom and its resolution into five succession states, namely Bidjāpūr, Aḥmadnagar, Golconda, Berār and Bīdar [*q.v.*].

The large influx of Persians and others from overseas created a peculiar political problem in the Deccan, for it divided the Muslim population of the State into two contending groups, viz. the *dakhnīs* or the older colonists and the *āfāḳīs* (sometimes called the *gharīb al-diyār*) or the new settlers. Their struggles were largely responsible for the downfall of the Bahmanī Kingdom.

MONUMENTS. ʿAlāʾ al-Dīn Ḥasan Bahman Shāh's new kingdom at Gulbarga was open to attack from all sides, by the Rādjās of Vidjayanagara, Telangāna and Orissa, by the Gōndhs, and by the rival sultans of Khāndesh, Mālwā and Gudjarāt; the first buildings of the new régime are consequently entirely military, surrounding the kingdom: to the north, Eličpur, Gāwilgaṛh, Narnālā (Bahmanī inscriptions, T. W. Haig, *EIM* 1907-8, 11) in Berār, also Māhūr; on the west, Parenda, Naldrug, Panhālā and Gulbarga itself; in the centre, Bīdar, Golkondā and Warangal; on the south-west, Mudgal and Rāyčūr. Many of these were existing Hindū, often Gōndh, fortifications hastily occupied and modified; some were rebuilt later by Aḥmad Shāh Walī al-Bahmanī after his transformation of Bīdar [*q.v.*] fort, and during the reign of Muḥammad III in consequence of Maḥmūd Gāwān's policies. (References in Ferishta, *passim*).

Gulbarga. The fortifications are well preserved, with double walls 16 m. thick, surrounded by moat often 30 m. wide, well provided with bastions —many with barbettes added later for the use of artillery—and hornworks, large and compound crenellations, machicolations and barbizans. The one major structure standing intact within the walls is the Djāmiʿ Masdjid, built 769/1367 by a hereditary Persian architect, Rafīʿ b. Shams b. Manṣūr al-Ḳazwīnī (inscr., Haig, *EIM* 1907-8, 2), of a type unknown elsewhere in India, without open *ṣaḥn* but completely roofed over forming a pillared hall whose only illumination comes from the open side aisles and the clerestory of the central dome. The side aisles are characterised by their very wide span with unusually low imposts, an arch pattern used elsewhere in Gulbarga. Two mosques of nearly the same period at Delhi [*q.v.*] are partially covered; but this type was not imitated, presumably since the *līwān* and *minbar* were obstructed from the view of most of the congregation. The other Bahmanī monuments at Gulbarga are the two groups of tombs. The first, near the south gate of the fort, includes those of ʿAlāʾ al-Dīn (759/1358), Muḥammad I, to whom the Shāh Bāzār Masdjid, an unpretentious building in the contemporary Tughlukian style of Delhi, is attributed (776/1375), and Muḥammad II (799/1397); the first two of these show the battering walls and weak semicircular dome of the Delhi Tughlaḳian style; that of Muḥammad II shows a similar dome, stilted below the haunch, to that of the Djāmiʿ Masdjid. To the east of the city is the *Haft Gunbad*, including the tombs of Mudjāhid and Dāʾūd c. 781/1380, Ghiyāth al-Dīn (c. 799/1397) and Fīrōz (c. 823/1420); some of these are two adjacent domed chambers on a single plinth. That of Ghiyāth al-Dīn shows some Hindū influence in the *miḥrāb*, and that of Fīrūz in the carved polished black stone exterior pilasters, the dripstones and brackets; the interior of the latter is quasi-Persian in its paint and plaster decoration similar to the contemporary Sayyid and Lōdī tombs at Delhi. Of other buildings, the *dargāh* of Banda Nawāz (*Rawḍa-i Buzurg*), c. 816/1413, shows the characteristic wide arch with low imposts.

Bīdar. The Bahmanī tombs at Ashtūr, 1½ miles east of the town, are on a larger scale, with loftier and sometimes more bulbous domes, than those at Gulbarga. None of these has battered walls, and none is double. The finest, that of Aḥmad Shāh Walī (d. 839/1436), shows the characteristic later Bahmanī arch, stilted above the haunch, and is of great importance on account of its superb calligraphic decoration which includes two *shadjrās* of the saint Niʿmat Allāh al-Kirmānī [*q.v.*]. That of ʿAlāʾ al-Dīn II (862/1458) has striking encaustic tile-work and, unusually, some arches struck from four centres. That of Maḥmūd, 924/1518, has its walls decorated with arched niches one above the other, more characteristic of post-Bahmanī architecture. The Djāmiʿ Masdjid, called also Solah Khamba (= 'sixteen pillar') *masdjid* and Zanānī *masdjid* (827/1423-4), of the reign of Aḥmad I but erected during Prince Muḥammad's viceregency before the transfer of the capital — the earliest Muslim building at Bīdar — and the royal palaces (Takht Maḥal, etc.; cf. Sayyid ʿAlī Ṭabāṭabā, *Burhān-i Ma'āthir*, Persian MSS. Soc. ed., 70-1), and the *madrasa* of Maḥmūd Gāwān, all works executed under the Bahmanīs, are, in view of their subsequent redecoration and rebuilding by the Barīdīs [*q.v.*], described under Bīdar [*q.v.*]. The *Čānd minār* at Dawlatābād [*q.v.*] dates from the time of ʿAlāʾ al-Dīn, and it may be observed that the earliest ʿĀdil Shāhī building at Bīdjāpur [*q.v.*], Āsen Beg's *masdjid* (918/1512-3) bears an inscription indicating Maḥmūd Shāh Bahmanī as ruler — presumably still acknowledged as paramount in spite of Yūsuf's recent independence.

The walls of Bīdar fort are Bahmanī; those of the town date from the Barīd Shāhīs.

BAHMANYĀR, ABU 'L-ḤASAN BAHMANYĀR B. AL-MARZUBĀN, a famous pupil of Avicenna, died in 458/1067. Avicenna's *K. al-Mubāḥathāt* mainly consists of philosophical questions raised by Bahmanyār and answered by the master. Since he was a Zoroastrian, Bahmanyār's acquaintance with Arabic was imperfect. His *Mā baʿd al-Ṭabīʿa* and *K. fi-Marātib al-Wudjūd* were published in Leipzig in 1851 (and in Cairo in 1329 A.H.). His comprehensive interpretation of Avicenna's philosophy called *K. al-Taḥṣīl* (or *al-Taḥṣīlāt*) and consisting of logic, metaphysics and physics plus cosmology, was also published in Cairo in 1329 A.H. An extract (*faṣl*) also exists (see Brockelmann, SI, 828) from his work on the existence of souls and active intelligences. Bayhaḳī (*Tatimma*, 91) also mentions a *K. al-Zīna* on logic by him, a work on ultimate happiness, and one on music, and adds that he wrote many other treatises.

AL-**BAHNASĀ**, a famous town in mediaeval times, in Middle Egypt, situated between the Baḥr Yūsuf and the foothills of the Libyan range, 15 km. west of Banī Mazār, a railway station 198 km. south of Cairo. It is the ancient Oxyrhynchus, in Coptic Pemdje.

During the Byzantine period it was a flourishing city, renowned for its churches and numerous monasteries. According to a Coptic legend, the Virgin and the Child Jesus are supposed to have stayed there during the Flight from Egypt. Certain Muslim exegetes have found a verse of the Ḳur'ān (XXIII, 52), to corroborate this tradition, which is of Christian origin.

At the time of the Arab invasion, it was a fortified place with thick walls; the Greek garrison seem to have exhibited dauntless courage in its defence, which was long remembered, since their resistance inspired a popular romance, the *Conquest of Bahnasā*.

At first the capital of a pagarchy (*kūra*), the place enjoyed an astonishing prosperity in the Middle Ages. Bahnasā gave its name to a province at the time of the administrative reorganisation carried out at the behest of the Fāṭimid *wazir* Badr al-Djamālī at the end of the 5th/11th century. Ibn Baṭṭūṭa describes it as a great city surrounded by numerous gardens. Khalīl Ẓāhirī still speaks of it as a large town, but it is already suggestive to note that Ibn al-Djīʿān, who knew the province, passes the town over in silence. Henceforth it was never anything more than an insignificant township, which, in the 19th century was included in the province of Banī Suēf (Suwayf), before belonging to that of Minya. The sands had covered it: about the year 1890, debris of all kinds, granite columns, fragments of capitals, of sculpture, pottery and bricks could be seen lying on the ground there; it is now no more than a confused heap of ruins, according to a recently published guide-book.

This lamentable situation may well be the result of the progressive deforestation of the region. Under the Fāṭimids and the Ayyūbids, the forests, classed as domain, were exploited by a State administration to furnish wood for naval construction: Maḳrīzī is here relying on an account by Ibn Mammātī, but adds: "This has all completely disappeared and one no longer hears anyone speak of this organisation, as private persons have had the trees cut down."

The town's prosperity was above all assured by its woven products. All kinds of cloths were manufactured there, from the most precious fabrics, such as silks figured with gold, down to the most ordinary wares: curtains, tent coverings, ships' sails. Fabrics of great size were woven there in wool, linen and cotton, with pictures in fast colours, portraying all kinds of beasts, "from the insect to the elephant". According to Idrīsī, fabrics originating from Bahnasā bore the name of the town and it is a fact that in the Museum of Muslim Art in Cairo there is preserved a piece of multi-coloured wool, with pictures of small hares framing a human head on which the name of Bahnasā can be read. Ibn Baṭṭūṭa still praises its excellent woollen cloth in the middle of the 8th/14th century.

BAḤR [see ʿARŪḌ].

BAḤR (Ar.), sea and also large perennial river.— The articles which follow treat of the principal seas known to the Arabs, but it is convenient to note here that in Islamic cosmology, on the basis of a conception generally related on the authority of Kaʿb al-Aḥbār [*q.v.*], the mountain Ḳāf [*q.v.*], which encircles the terrestial sphere, is itself surrounded by seven concentric intercommunicating seas; these seas bear respectively the following names: Nīṭas (or Bayṭash), Ḳaynas (or Ḳubays), al-Aṣamm, al-Sākin, al-Mughallib (or al-Muẓlim), al-Mu'annis (or Marmās) and finally al-Bāḳī. But it is probable that these names correspond to geographical realities;

in fact Nīṭas (and its variant form) is an orthographic corruption of Bunṭus (= πόντος = the Black Sea); and Ḳaynas (and its variant) derives from Uḳiyānūs (= ὠκεανός = the [Atlantic] Ocean); for the other names, a tentative identification will be found in P. Anastase-Marie de St. Elie, *Nus͟hū' al-Lug͟ha al-ʿArabiyya*, Cairo 1938, 83-4, and al Ḏj̲āḥiẓ. *Tarbiʿ* (ed. Pellat), s.v. *Bunṭus*.

Bibliography: Ḳazwīnī, *Cosmog.*, 104; Kisāʾī, *Ḳiṣaṣ al-Anbiyʾā*, Leiden 1922-3, 9; see also the bibliography to the article ḲĀF. (Ed.)

AL-**BAḤR** AL-**ABYAḌ** [see BAḤR AL-RŪM].

BAḤR ADRIYĀS, name of the Adriatic in Arabic geographical works. (Ed.)

AL-**BAḤR** AL-**ASWAD** [see BAḤR BUNṬUS, ḲARA DENIZ].

BAḤR AL-**BANĀT** i.e, "the Maidens' Sea", a name given by the Arabs to the Archipelago off the west coast of the Persian Gulf. Idrīsī calls it Baḥr al-Kit͟hr.

Bibliography: Ritter, *Erdkunde*, xii, 390, 589ff.

BAḤR BUNṬUS, the Pontus Euxinus, or Black Sea, for which BAḤR NĪṬAS (NĪṬAS͟H) is a stereotyped error (same ductus of letters with different pointing and vocalisation). From the names of adjacent peoples or cities it was also called Baḥr al-K͟hazar or Sea of the K͟hazars (Ibn K͟hurradād͟hbih, 105, perhaps by confusion with the Caspian, Baḥr al-K͟hazar, [*q.v.*]), Baḥr al-Rūs (Sea of the Russians), Baḥr al-Burg͟har or Baḥr al-Burg͟haz (Sea of the Bulgars), Baḥr Ṭarābazunda (Sea of Trebizond), Baḥr Nīṭas͟h al-Armanī (the Armenian Pontus), Baḥr al-Ḳusṭanṭīniyya (Sea of Constantinople) and Daryā-yi Gurziyān or Sea of the Georgians (only in *Ḥudūd al-ʿĀlam*). The name al-Baḥr al-Aswad (Black Sea) appears only in later times.

According to Masʿūdī (*Tanbīh*, 66-67), writing in 345/956, it extends from Lāziḳa (Greek Lazikē) in the E. to Constantinople, a distance of 1300 miles, with a breadth of 300 miles. It is connected with the lake or sea of Māyuṭis (Sea of Azov, [see BAḤR MĀYUṬIS]). Among the rivers which flow into it are the Ṭanāis (Don) and the Danube. From Baḥr Bunṭus issues K͟halīd͟j al-Ḳusṭanṭīniyya (Strait of Constantinople), *i.e.*, Bosporus, Sea of Marmora and Dardanelles, which issues in Baḥr al-Rūm or Sea of the Greeks (Mediterranean). The length of the strait is 350 miles. In a parallel account written earlier (*Murūd͟j*, i, 260-262) Masʿūdī gives the length of Baḥr Bunṭus as 1100 miles and the course of the Don as about 300 *farsak͟hs*. The same general account is found in Ibn Rusta, 85-86 (about 290/903). It was thought by some, *e.g.*, Ibn K͟hurradād͟hbih (103) that Baḥr Bunṭus issued from Baḥr al-K͟hazar (Caspian). Masʿūdī denies this (*Murūd͟j*, i, 273), saying simply that the two seas are connected (*Tanbīh*, 67). According to *Murūd͟j*, ii, 18 ff., the route from Baḥr Bunṭus to Baḥr al-K͟hazar was via K͟halīd͟j Nīṭas (Strait of Kertch), the Don and the Volga, using the Don-Volga portage, *i.e.*, the route called elsewhere the 'K͟hazarian Way'. Masʿūdī himself, who shows much greater interest in Baḥr Bunṭus than geographers of the Balk͟hī-Iṣṭak͟hrī school, speculated on a direct connexion between the Black Sea and the Atlantic. This view was later held by al-Bīrūnī (Ḳazwīnī, *ʿAd͟jāʾib*, 104).

apAs time passed new place-names on Baḥr Bunṭus Mipear, *e.g.*, after the Sald͟jūḳ conquest of Asia Sānor the cities, formerly Greek, Sinūb (Sinope) and msūn (Amisus) mentioned by Abu 'l-Fidāʾ. Similarly Nuwayrī can mention the Ḳipc͟hāḳ cities, Sūdāḳ and Ḳrim, the first of which, built in the 7th/13th century, for a time gave its name to the sea (Baḥr Sūdāḳ). For Ottoman times, see ḲARA DENIZ.

Bibliography: In addition to the references in the article, Yāḳūt, i, 306-307, 401, 499, 746: Abu 'l-Fidāʾ, *Taḳwīm*, 13, 392-393; Nuwayrī, *Nihāyat al-Arab*, i, 246-247; *Ḥudūd al-ʿĀlam*, 32, 181-183. (D. M. DUNLOP)

BAḤR FĀRIS, the Persian Gulf, in which Masʿūdī includes the Gulf of ʿUmān; Iṣṭak͟hrī and Ibn Ḥawḳal apply the name to the whole Indian Ocean (Baḥr al-Hind). The *Ḥudūd al-ʿĀlam* distinguishes the K͟halīd͟j-i ʿIrāḳ, the Persian Gulf, from the K͟halīd͟j-i Pārs, the Gulf of ʿUmān and the Arabian Sea. Masʿūdī gives its width at the narrowest place as 150 *mīl*; the Strait of Hormuz is actually some 29 miles across. In the Muslim geographers the modern al-Aḥsāʾ was called Baḥrayn, the name Uwāl being given to one of the islands now called Baḥrayn, Hindarābī was Abrūn, Kis͟hm was Lāft, D͟jazīra Banī Kāwān, or Barkawān, and S͟hayk͟h S͟huʿayb was Lāwān, Lān or Lār.

Masʿūdī relates that one ʿAbd al-Masīḥ, aged 350, told K͟hālid b. al-Walīd that he had seen al-Nad͟jaf covered by the sea, and ships sailing to the mouth of the Euphrates below al-Ḥīra. Masʿūdī evidently believed the geographical fact if not the story. Most scholars have assumed that silt brought down by the rivers has been gradually filling up the Baḥr Fāris. The history of ʿAbbādān seems to support this. Muḳaddasī and the *Ḥudūd al-ʿĀlam* speak of it as on the coast, Nāṣir-i K͟husraw as 2 leagues from the sea at low tide, and Ibn Baṭṭūṭa as 3 miles from the sea; it is now over 30. It has, however, been claimed (G. M. Lees and N. Falcon, *The Geological History of the Mesopotamian Plains*, *GJ*, 1952) that, though the level of the land has risen locally and though rivers have changed their courses, (see DID͟JLA, FURĀT, KĀRŪN), the area between the Arabian massif and the Persian mountains is one of tectonic subsidence, mitigated but not counteracted by the deposit of silt. The Tigris and Euphrates leave most of their silt in the marshes above al-Ḳurna and the Baḥr Fāris is materially affected only by the silt carried by the Kārūn. There is no geological evidence that the head of the Baḥr Fāris has been N.W. of its present position since the Pliocene Age; it is even possible that it has been further to the S.E. in historical times. (See also correspondence in *GJ*, 1954).

The position of the Baḥr Fāris has given it great but varying importance. Its history is very imperfectly known. A number of local chronicles are still in MS. and the story of the competition of the alternative trade routes through the Red Sea and across Central Asia has yet to be studied. Only the salient facts are given here; for further details see the articles on individual ports. Commerce was flourishing before the Arab conquest and Persians were already engaged in trade with China. The identification of the "Po ssu" of Chinese records with Persians has been questioned, as the name can also refer to a Malayan people. It is, however, established by a reference (*Chou T'ang Shu*, viii, 19) to a Po ssu embassy of 103-4/722, which brought lions as a gift; the lion is not found in Malaya. The revolt of Huang Ch'ao and his sack of Canton (264-5/878) dislocated the trade. Voyages from Persia to China appear to have ceased in the 4th/10th century. There is no indisputable evidence that Chinese ships came to the Baḥr Fāris before the Ming voyages of the early 9th/15th century. In early Muslim times the chief port was Sīrāf, near Ṭāhirī. It declined under the

later Būyids and hegemony passed to the Arab Banū Ḳayṣar of Ḳays (originally Kī͟s͟h, Kīs), afterwards subject to the Salg͟hurid Atabegs of Fārs. In 626/1229 the ruler of Hormuz, a vassal of Kirmān, captured Ḳays. The Banū Ḳayṣar then came to an end and in the next century the primacy of Hormuz was unchallenged. Following an attack by Čagatay bands in 699/1300, the capital was moved from the mainland to the island of D͟jirūn. Thus, as the commercial importance of ʿIrāḳ declined, the trading contre of the Baḥr Fāris was displaced to the south.

The importance of Hormuz, which was visited by Odoric of Pordenone and Marco Polo, among many others, was well known in mediaeval Europe. About 893-4/1488-9 it was visited by Covilhã, the agent of the King of Portugal, who was collecting information about the trade routes of Asia. It is not known whether his report reached Lisbon (see BAḤR AL-ḲULZUM). The Portuguese were more successful in the Bar Fāhris than in the Red Sea, partly because it was nearer to their base in India, and partly because neither Persia nor the Ottoman empire controlled its coasts effectively. Even Baṣra was often semi-independent under Muntafiḳ s͟hayk͟hs. Albuquerque received the submission of Hormuz in 913/1507, but the disaffection of his captains forced him to withdraw. He established effective control in 921/1515 when he murdered the powerful *wazir*, Raʾīs Ḥāmid, and built a strong fort. The Portuguese intermittently held Baḥrayn and intervened in the affairs of Baṣra. After the Ottoman capture of Bag͟hdād (941/1534) Turkish influence began to be felt in al-Aḥsāʾ, especially at al-Ḳaṭīf. ʿAbbās I encouraged potential rivals to the Portuguese, and English and Dutch factories were founded during his reign. In 1031/1622 he constrained an East India Company fleet to assist him in taking Hormuz. The S͟hāh then founded Bandar ʿAbbās, known to Europeans as Gombroon, and Hormuz decayed rapidly. The Portuguese still visited Baṣra and for a time held a fort at D͟julfa (Raʾs al-K͟hayma), but they practically disappeared from the Baḥr Fāris when they lost their foothold in ʿUmān in the middle of the century. At this time the Dutch enjoyed commercial supremacy which they began to lose to the English under the last Ṣafawids. In the anarchy of Ḥusayn's reign the ʿUmānīs captured Baḥrayn and Kis͟hm, from which Nādir S͟hāh expelled them; his own intervention in ʿUmān ended in disaster (1157/1744). In 1179/1766 the pirate chief of Bandar Rīg captured the last Dutch stronghold in the Baḥr Fāris, K͟hārak. Towards the end of the century Arab dynasties, the Āl K͟halīfa and Āl Ṣabbāḥ respectively, established themselves in Baḥrayn and Kuwayt; the latter profited commercially from the Persian occupation of Baṣra (1190/1776-1193/1779). The influence of the French, now the only rivals of the British, was eliminated when they lost Mauritius (1225/1810).

British intervention in the politics of the Baḥr Fāris. aimed at suppressing the slave trade and the piracy which became better organised with the extension of Wahhābī influence. The principal pirates were Raḥma b. D͟jābir of Kuwayt, and Sulṭān b. Ṣaḳr of the Ḳawāsim (D͟jawāsim); this tribe held what came to be called the Pirate Coast. The pirate fleet came to include 63 large ships and was able to threaten Būs͟hīr, which had now displaced Bandar ʿAbbās as the chief port of the Baḥr Fāris. In 1224/1809 the Indian Government sent a force which bombarded Raʾs al-K͟hayma and drove the Ḳawāsim inland. They returned about a year later and resumed their depredations. In 1235/1819 a strong force from Bombay, joined by an ʿUmānī contingent, again captured Raʾs al-K͟hayma, and destroyed the forts and shipping along the coast. The chiefs and the S͟hayk͟h of Baḥrayn then (1235/1820) signed a treaty renouncing piracy and slave-raiding. This was followed by supplementary treaties and in 1269/1853 they accepted maritime peace in perpetuity under British protection. At first the most important state was the Ḳawasim principality of Raʾs al-K͟hayma with which al-S͟hāriḳa (S͟hard͟ja) was closely connected and at times united. In the half century after the permanent treaty the dominant personality on the coast was Zayd b. K͟halīfa, the Banū Yās S͟hayk͟h of Abū Ẓabī; commercially the most prosperous port became Dubayy, belonging to the cognate Āl Bū Falasa. The other states were ʿAd͟jmān, Umm al-Kuwayn, and after 1285/1868 Ḳaṭar. Kalbā and Fud͟jayra on the coast of the Gulf of ʿUmān were for a short time recognised as having separate status; the former was incorporated in al-S͟hāriḳa in 1951. In recent years the presence, or suspected presence of oil on land or under the sea bed has given significance to frontiers which have rarely been defined with precision.

Bibliography: The bibliography of the Baḥr Fāris is very large and cannot be given in detail. To the Muslim geographers summarised by le Strange and Schwarz, *Iran*, should be added the *Ḥudūd al-ʿĀlam*. On sources for the mediaeval history of the Baḥr Fāris, W Hinz, *Quellenstudien zur Geschichte der Timuriden*, in *ZDMG*, 1936, 361-3, 379-81; J. Aubin, *Les Princes d'Ormuz au XVᵉ siècle*, in *JA*, 1953, with many further references and some extracts from the *Mad͟jmaʿ al-Ansāb* of Muḥammad S͟habānkāraʾī. The principal European travellers are mentioned in A. T. Wilson, *The Persian Gulf*, Oxford 1928, which summarises, rather inaccurately, the modern history of the region. For trade and navigation, G. Ferrand, *L'élément persan dans les textes nautiques arabes*, *JA*, 1924; *Instructions nautiques et routiers arabes et portugais*; Hadi Hasan, *History of Persian Navigation*; G. F. Hourani, *Arab Seafaring*. The chief Portuguese sources are Barros, Couto, Castanheda, Correa, Barbosa, the letters of Albuquerque, the *Comentarios* of Albuquerque the younger, Tome Pires, and (written in Spanish) Teixeira and Faria y Souza. On the Dutch, H. Terpstra, *De Opkomst der Westerkwartieren van de Oost-Indische Compagnie*; H. Dunlop, *Bronnen tot de Geschiedenis der Oostindische Compagnie in Perzië*. On pearling and modern sailing conditions, A. Villiers, *Sons of Sinbad*. For general description in modern times, S. B. Miles, *Countries and Tribes of the Persian Gulf*, and Wilson, *op. cit.* On the first English traders, Sir W. Foster, *England's Quest of Eastern Trade*, and much source material in *The English Factories in India*. On the period of British power two valuable sources which have been somewhat neglected are *Selections from the Records of the Bombay Government*, New Series, no. xxiv, and the *Annual Report on the Administration of the Persian Gulf Political Residency and Muscat Political Agency*; the published reports cover the years 1874/5-1904/5. Subsequent reports were not made available to the public. For laws and treaties, C. U. Aitchison, *A Collection of Treaties, Engagements and Sanads relating to India and neighbouring countries*, vol. xii, 137-186; *Persian Gazette*, vol. 1 no. 1, supp. no. 1, Oct., 1953. Some further geographical books in the Bibl. of AL-

ʿARAB, DJAZĪRAT. (Cf. RAʾS AL-KHAYMA, AL-SHARIḲĀ; DUBAYY, ABŪ ẒABĪ) (C. F. BECKINGHAM)

BAḤR AL-GHAZĀL: (1) A tributary of the Baḥr al-Djabal (upper White Nile) forming an outlet-channel for an extensive swampy area. The swamps are fed by numerous rivers (e.g. Tondj, Djūr) originating in the Nile-Congo divide, and by the Baḥr al-ʿArab which forms the southern limit of Baḳḳāra [*q.v.*] nomadism. The Baḥr al-Ghazāl channel extends 144 miles from Mashraʿ al-Rīk (the name is variously spelt and derived) to its confluence with the Baḥr al-Djabal at Lake No, which it enters from the west at lat. 9° 29′ N.

(2) The region formed by the basin of the streams which ultimately supply the Baḥr al-Ghazāl channel. This is a rough triangle bounded on the north by the Baḥr al-ʿArab, on the south-west by the Nile-Congo divide and on the south-east by the river Rohl or Naʿām. The permanent swamp (Ar. *sadd*) in the lower courses of these streams (as in the Baḥr al-Ghazāl channel and the Baḥr al-Djabal) forms a barrier, as the Arabic implies, which long sealed the region from access by the Nile. The western part of the region consists of ironstone plateau, between which and the *sadd* lies an area of flood-plain. The indigenous pagan negroids are, in the north and east, mainly semi-nomadic, cattle-herding Dinka. Tribes of the plateau include, in its northern portion (Dār Farīt), the Farūḳī and the Kreish; further south and now divided by the frontier of the Belgian Congo are the Azande (Niam-Niam; Ar. *Namānim*).

(3) A province of the Republic of the Sudan, approximating to the above region, with an area of 82,530 sq. miles and a population of 991, 022. It is divided into four districts and has its capital at Wau. *History of the region*: Burckhardt (1814) mentions Dār Fartīt as an area supplying the Dār Fūr slave-trade. Penetration of the Baḥr al-Ghazāl from the Nile began after the expeditions of Salīm Ḳabūdān to the Baḥr al-Djabal (1839-42). Traders, including Europeans, entered the Baḥr al-Ghazāl from the Nile in the 1850s seeking ivory, but as this became difficult to obtain, slave-raiding proved a profitable alternative. The penetration of ivory-traders into Dār Fartīt helped the slave-traders (*djallāba*) from Kordofān and Dār Fūr. The slave-trade grew after 1860, when the Europeans sold their stations to their "Arab" assistants. These men, Ṣaʿīdīs, Copts, and others, who came by the Nile (*al-Baḥr*) were known as *Baḥḥāra*. They had armed retainers, usually Danāḳla recruited in the north or slave-troops (*bāzinḳir*), and fortified stations (*zarības*). They were virtually sovereign in the areas where they held a monopoly of trade.

The leading figure in the western Baḥr al-Ghazāl was the Sudanese, al-Zubayr Raḥma Manṣūr. Setting up as an independent trader in 1858, he moved westwards into unexploited country, ultimately reaching the Niam-Niam, where he formed a private army. Expelled from their territory, he established his rule over Dār Fartīt (1865). In 1866 he made an agreement with the Rizayḳāt Baḳḳāra in the north which opened the trade-route to Dār Fūr via Shakkā. Khedive Ismāʿīl was now seeking to suppress the slave trade and to bring both the Baḥr al-Djabal and the Baḥr al-Ghazāl under Egyptian control. In 1869 the administration at Khartoum authorised an expedition under an adventurer from Dār Fūr named Muḥammad al-Bulālī (or al-Hilālī), which was defeated by al-Zubayr. His prestige grew and the importance of the north-western outlet which he controlled increased as a result of Sir Samuel Baker's expedition to the Baḥr al-Djabal (1869-73). However, while al-Zubayr was fighting the Niam-Niam (1872), the Rizayḳāt attacked traders on the Shakkā route, Al-Zubayr's consequent hostilities against the Rizayḳāt led to an embroilment with their suzerain. Sulṭān Ibrāhīm of Dār Fūr. Al-Zubayr thereupon concerted plans with the Egyptian authorities to attack Dār Fūr. He was appointed governor of the Baḥr al-Ghazāl and Shakkā. In 1874 Dār Fūr was conquered.

The next year al-Zubayr went to Cairo, where he was detained by the Khedive. His son, Sulaymān, remained in the Baḥr al-Ghazāl, where Egyptian authority was ineffective. In 1877 C. G. Gordon, the governor-general, appointed Sulaymān governor of the Baḥr al-Ghazāl. A quarrel with a rival resulted in Sulaymān's revolt. He was defeated and killed in 1879 by Gordon's Italian assistant, R. Gessi, who succeeded him as governor and strove to pacify the province until his recall in 1880. Gessi's successor, the Englishman, F. M. Lupton, was confronted with the repercussions of the Mahdist revolt. After the Mahdī's capture of al-Ubayyiḍ and victory at Shaykān (1883), he was cut off from assistance. Many of his officers were northern Sudanese who sympathised with the Mahdī. In April 1884 Lupton surrendered the provincial headquarters, Daym al-Zubayr, to a Mahdist force under Karam Allāh Kurḳusāwī. No effective Mahdist administration was established and Karam Allāh withdrew his army to Dār Fūr in 1886.

The Baḥr al-Ghazāl then became an object of European imperial expansion. Two expeditions from the Congo Free State entered Dār Fartīt in 1894 and the chief of the Farūḳī tribe accepted Congolese protection. Thereupon the Mahdist governor of Dār Fūr, Maḥmūd Aḥmad, sent al-Khatīm Mūsā to expel the Europeans, who had however already withdrawn since the Franco-Congolese agreement of August 1894 brought the Baḥr al-Ghazāl within the French sphere of expansion. A French expedition under J.-B. Marchand crossed the region and reached the White Nile at Fashoda in July 1898, whence they withdrew in December in consequence of the Anglo-Egyptian reconquest of the Sudan. An Anglo-French agreement (21 March 1899) marked the relinquishment of French claims to the Baḥr al-Ghazāl, the Congo-Nile watershed being the dividing-line between the two spheres of influence. The frontier was defined finally in 1924.

The re-establishment of administration began with the arrival of an expedition under W. S. Sparkes at Mashraʿ al-Rīk in December 1900. The following years saw the opening of communications as the *sadd* was cleared and roads made. Patrols for exploration and pacification were sent out and government posts established. Roman Catholic missionary activity began in the western Baḥr al-Ghazāl in 1903; the Anglicans started work in the eastern areas in 1905. The missions laid the foundations of an educational system, which has been increasingly subject to governmental control since 1925. Sporadic tribal troubles occurred for many years, otherwise the recent history of the Baḥr al-Ghazāl has been uneventful.

Bibliography: See R. L. Hill, *A Bibliography of the Anglo-Egyptian Sudan*, London, for material to 1937, and *A Biographical-Dictionary of the Anglo-Egyptian Sudan*, Oxford, 1951, for short notices of leading personalities. There are numerous articles, especially on tribes, in *Sudan Notes and Records*, Khartoum, 1918 —. Annual

bibliographies appear in this periodical from 1948. Al-Zubayr's life in Na^cūm Shuḳayr, *Ta'rīkh al-Sūdān*, Cairo 1903, iii, 60-88, has been translated and annotated by M. Thilo, *Ez-Zibêr Raḥmet Paschas Autobiographie, ein Beitrag zur Geschichte des Sudan*, Bonn and Leipzig, 1921. On the Belgian penetration, see L. Lotar, "La Grande Chronique du Bomu", *Memoires, Section des Sciences Morales et Politiques, Institut Royal Colonial Belge*, Brussels, and A Abel, *Traduction de documents arabes concernant le Bahr-el-Ghazal, Bull. de l'Acad. royale des Sci. coloniales*, xxv, 1954, 1385-1409. A useful general work is M. F. Shukry, *The Khedive Ismail and Slavery in the Sudan*, Cairo 1938. (P. M. HOLT)

BAḤR AL-HIND is the usual name amongst the Arabs for the Indian Ocean, which is also called Baḥr al-Zandj from its W. shores or—the part for the whole—al-Baḥr al-Ḥabashī. The expression Baḥr Fāris also sometimes includes the whole ocean.

According to Ibn Rusta, 87, its E. shores begin at Tīz Mukrān, its W. at ʿAdan. Abu 'l-Fidā', *Taḳwīm*, transl. ii, 27 = text, 22, gives Baḥr al-Ṣīn as its E boundary, al-Hind as the N. and al-Yaman as the W., while the S. is unknown.

The various parts of the ocean bear special names derived from various lands and islands. If we neglect the N. arms, Baḥr al-Ḳulzum and Baḥr Fāris in the narrower sense, which are dealt with in separate articles, we have first Baḥr al-Yaman stretching along the S. coast of Arabia with the Khuryān Muryān (Kuria Muria) islands and Suḳuṭrā. On the African coast we have, beginning at the strait of Bāb al-Mandab, first the land of Barbarā, i.e. Somaliland to the harbour of Marka, then the land of the Zandj [see BAḤR AL-ZANDJ] with the towns of Barawa, Malinda, Munbasa and the island of Zanzibar, i.e. roughly Kenya and Tanganyika Territory as far as the island of Ḳanbalū. Sufāla is joined tc Ḳanbalū, and finally at an uncertain distance is al-Wāḳwāḳ (Madagascar).

If one sets out from Baḥr Fāris at Tīz Mukrān, one comes to the coast of al-Sind with the delta of the Indus (Mihrān) and the commercial town of al-Daybul. On the shores of Baḥr Lārawī (*i.e.* the sea of Lār or Gudjarāt on the W. coast of India) lie the towns of Kanbāya (Cambay), Sūbāra, Ṣaymūr and Sindābūra (Goa). The archipelago of al-Dībadjāt (the Laccadives and Maldives) separates Baḥr Lārawī from Baḥr Harkand (Bay of Bengal with the waters to the S.). 'Harkand' has been explained as a miswriting in Arabic for Tamralipti (Reinaud) or Harikel (Marquart, cf. *Ḥudūd al-ʿĀlam*, 241). Idrīsī simply notes that the name is Indian (Jaubert, i, 63).

The last port on the Malabar coast is Kūlam Malī (Quilon), the outermost of its islands is Sarandīb (Ceylon). The route to the E. Indies appears to have lain straight across Baḥr Harkand to the island of al-Rāmnī which is washed by the waters of Baḥr Harkand and the Baḥr Shalāhiṭ. Al-Rāmnī (al-Rāmī, al-Rāmīn = al-Lāmarī, whence the sea there is called Baḥr Lāmarī) is Sumatra, to be more accurate N. W. Sumatra (Cf. J. Sauvaget, *Relation de la Chine et de l'Inde*, 34), while Shalāhiṭ is S. Malacca. Voyagers sailing to China must have kept somewhat further N., for they touched at the islands of Lanḳabālūs or Landjabālūs (the Nicobars) to the N. of which are placed the Andamān islands, and from there reached Kalāh Bār (Kedah) on the Malay peninsula. The strait of Malacca is therefore called Baḥr Kalah (Kalāh Bār), while Baḥr Shalāhiṭ, when it is distinguished from it, appears to be the sea adjoining it on the S. We have now reached the land of the Maharādj, the centre of which is the land of al-Zābadj. This name originally denoted Central and S. Sumatra, where Srıbuza (Ferrand's reading) = Palembang is to be sought for, then its use was extended to include Java (Djāba) and in its political application it includes a series of smaller islands and the coast of Malacca. Beyond these islands is Baḥr Kardāndj or Kadrandj, the Gulf of Siam, which is continued on the coast of Ḳimār (Khmer = Cambodia) in Baḥr Ṣanf (Champa), the sea of Annam and the waters adjoining it on the S. Passing the island of Ṣundurfūlāt (?Hai-nan), we reach the Baḥr Ṣankhay (China Sea), where Khānfū (Hang-Chu, Canton) is the great emporium for the trade with the West. The knowledge of the Arabs concerning al-Shīlā, al-Sīlā (Korea) and the Wāḳwāḳ islands (?Japan) was vague and limited.

The notions of the Arabs of the 10th century concerning Baḥr al-Hind become more and more vague as one goes to the E. and S. and the interpretation of their statements more uncertain. In many cases they have merely followed their Greek predecessors. They have in addition utilised the accounts of their own voyages. Details from different sources were never properly assimilated to form a uniform picture. Sometimes Baḥr al-Hind appears to pass into the 'Sea of Darkness', in which mariners driven out of their course are said to be tossed about for ever. Sometimes it is believed that it joins the 'Black Sea' or 'Sea of Pitch' (al-Baḥr al-Ziftī) on the N. of Asia. Sometimes again E. Asia and S. Africa appear to be connected, as the use of the name al-Wāḳwāḳ [*q.v.*] for Japan (or Sumatra, cf. *Ḥudūd al-ʿĀlam*, 228) as well as for Madagascar shows. This idea is supported by Idrīsī, according to whom the Zābadj islands are opposite to the land of the Zandj.

The voyages of the Persians and Arabs, who availed themselves of the monsoons, had as their starting-place the Persian Gulf. Sīrāf and Ṣuḥār are important harbours there. The most important commercial centres appear to have been the land of the Zandj, to which merchants sailed even from al-Zābadj—Madagascar was ultimately colonised from the Malay islands—and al-Zābādj itself, which had relations with China. The commerce of the Muslims with China came to a standstill in 264/878 after the sack of Canton in the course of a rebellion (Abū Zayd al-Ḥasan al-Sīrāfī in G. Ferrand, *Voyage du marchand arabe Sulaymân*, 75 ff.; cf. Masʿūdī, *Murūdj*, i, 302-308). But trade relations seem to have recovered to some extent, and became active again under the Mongols, as Ibn Baṭūṭa's account of his voyage shows.

(R. HARTMANN-[D. M. DUNLOP])

BAḤR KHWĀRIZM [see ARAL SEA].

BAḤR AL-KHAZAR, 'the Sea of the Khazars', the common Arabic designation for the Caspian, which was also called AL-BAḤR AL-KHAZARĪ, 'the Khazar Sea', and has had a number of other names, al-Baḥr al-Khurāsānī, 'the Khurāsānian Sea'; Baḥr Djurdjān, 'Sea of Djurdjān'; Baḥr Ṭabaristān, 'Sea of Tabaristān', etc., local names often being applied to the whole (cf. al-Masʿūdī, *Murūdj*, i, 263). Al-Dimashḳī mentions that in his time (circa 723/1320) the Turks called it Baḥr Ḳurzum, 'Beaver Sea' (ed. Mehren, 147), hence as we learn from Ḥamd Allāh Mustawfī (*Nuzha*, 239, transl. 231) some people misnamed the Caspian Baḥr al-Ḳulzum, which properly signifies the Red Sea (Sea of Clysma). Al-Muḳaddasī refers to the Caspian simply as al-Buḥayra, 'the Lake' (*BGA*, iii, 353, 361), perhaps identifying it with the Aral Sea (Buḥayra Khwārizm). The prevailing designation, Baḥr al-Khazar, refers to the kingdom of the Khazars, who in the early Middle Ages occupied the shores of the sea N. of the Caucasus to the mouth of the Atil (Volga) and yet further N. and E. Geographers of the school of al-Balkhī devote the greater part of their account of Baḥr al-Khazar to a description of the Khazar kingdom.

Under the Caliphate the Muslim possessions on Baḥr al-Khazar never extended beyond the Caucasus in the W. and Djurdjān in the E. and included, as one travelled S. then E. from Bāb al-Abwāb [*q.v.*], Shirwān, Adharbāydjān with Muḳān, Djīlān (Djīl), Ṭabaristān (later called Māzandarān) and Djurdjān. N. of the Atrak which marked the boundary of the last-named province lay the desert of the Ghuzz Turks, and beyond that again, perhaps on the other side of the Ust Urst plateau, were the lands of the Khazars.

The principal rivers entering Baḥr al-Khazar were the Djām (Djim, Emba) and Djaykh (Ural) in the N., the Atil (Volga) in the N.-W., and the combined stream of the Kur (Cyrus) and Aras (Araxes) in the W., with the Djurdjān and Atrak in the S.-E. corner. It is a remarkable fact, apparently well established (cf. Le Strange, 455-8), that from the time of the Mongol invasion of Khwārizm in 617/1220 for several centuries the main stream of the Djayḥūn (Oxus, Amu Darya), which till then had flowed into the Aral Sea, passed to the Caspian. The river thus resumed its ancient course, known from accounts of the campaigns of Alexander the Great. Since some time in the 16th century it has changed course once again, and now flows into the Aral Sea as formerly.

The principal islands of the sea, as given by Ibn Ḥawḳal and the *Ḥudūd al-ʿĀlam*, were Siyāhkūh or Siyāhkūya, usually taken as present-day Mangishlak, and the 'Island of Bāb al-Abwāb', which cannot now be identified with certainty (cf. *Ḥudūd al-ʿĀlam*, 193). With the exception of its S. and part of its W. shores the coast-line of Baḥr al-Khazar is generally low. The ranges of the Great Balkhān and Little Balkhān E. of Krasnovodsk, though not very high, are a conspicuous feature on the landward side. A modern estimate of the length of the Caspian is 760 miles. Al-Masʿūdī gives 800 miles in length, in breadth 600 miles or more (*al-Tanbīh*, 60), but the latter figure is greatly exaggerated. Al-Masʿūdī is well aware of the fact that Baḥr al-Khazar is unconnected with Baḥr Māyuṭis (Sea of Azov) and Baḥr Nīṭas (Black Sea) (*Murūdj*, i, 273-4).

For a long time the Khazars served as middlemen between the peoples of the North and the inhabitants of the lands of Islam. There is plenty of evidence of mercantile activity in both directions, for which the water-way was the Atil (Volga) and Baḥr al-Khazar itself. Eventually Russian warships began to make the descent of the Atil through Khazar territory to the Caspian, and the presence of these marauders is a feature of the history of this part of the world for a considerable period from before A.D. 900. The Mongol invasions brought about the rise of new Muslim dynasties N. as well as S. of the Caspian. It is long since the Russian advance put an end to the power of the Khānates of the steppes, and at present Russia controls more of the coastline of the sea than did the Khazars at the zenith of their power.

(D. M. DUNLOP)

BAḤR AL-ḲULZUM, formerly much the commonest Arabic name for the Red Sea, from Ḳulzum [*q.v.*], the ancient Clysma, near Suez; the article is usually omitted when the name of the town is written alone, but retained when the sea is mentioned. It was also called Baḥr al-Ḥidjāz, a common name which survived to modern times, al-Khalīdj al-ʿArabī, and, in Turkish, Shāb deñizi (Şap denizi), "the Coral Sea". The names Khalīdj Ayla, strictly the Gulf of ʿAḳaba, and Baḥr al-Yaman, properly applicable to the southern part of the Red Sea only, were at times used for the whole sea. It was sometimes considered to end at the strait of Bāb al-Mandab, and sometimes, as by Yāḳūt, to include the Gulf of Aden, known as Khalīdj Barbarā or al-Khalīdj al-Barbarī. Owing to European influence it is now almost always called al-Baḥr al-Aḥmar or an equivalent (Kızıl Deniz, etc.).

The Baḥr al-Ḳulzum presents great difficulties to the navigator because of contrary winds, currents and submerged reefs. The northern part was considered more dangerous than the southern, the neighbourhood of Raʾs Muḥammad, the southern tip of the Sinai peninsula, being especially feared because of the meeting of winds from the Gulfs of Suez and ʿAḳaba. It has always been customary for local shipping to sail close to the shore and anchor at night. Because of these difficulties and the consequent risk of missing the monsoon that would take them home, ships from India rarely ventured as far

north as Suez, but generally unloaded their goods at Aden, Djidda or, in the 11th/17th century, at Mukhā. It was the caravan trade with Djidda that gave Mecca its commercial importance in the 9th/15th century. Much merchandise, however, was merely transshipped to smaller vessels; according to Abū Zayd the local craft used for this at Djidda were known as Ḳulzum ships. Arab navigators thus had wide experience of the Baḥr al-Ḳulzum and their nautical treatises show sound practical knowledge; Ferrand considered the relevant sailing directions in Ibn Mādjid's *Kitāb al-fawāʾid* to be unsurpassed, except for their errors of latitude, by any European directions for sailing ships for the area. The Muslim geographers give the length of the Baḥr al-Ḳulzum as 30 days' sail, or as from 1400 to 1500 *mīl*; this figure is fairly accurate, but their estimate of the maximum breadth, 700 *mīl*, is more than three times too great.

The whole area within the strait of Bāb al-Mandab was thought to have once been a fertile country, until a certain king cut a channel through which the ocean could flow and destroy his enemy's territory. Another legend connected with the Baḥr al-Ḳulzum is that there is a magnetic mountain south of Ḳulzum, because of which local ships had to be constructed without any iron parts. This is perhaps a fanciful explanation of the fact that the local craft of the Baḥr al-Ḳulzum and the western part of the Indian Ocean used to be made of planks, sewn, not nailed, together; this practice is now confined to small craft in the more remote places. The Baḥr al-Ḳulzum was also believed to contain an island inhabited by al-Djassāsa, "the spy", a creature which collected information for al-Djadjdjāl. The sea in which Pharaoh and his army were drowned was assumed to have been some part of the Baḥr al-Ḳulzum. According to Yāḳūt the incident took place at Ḳulzum, according to others, including Ḳalḳashandī, at Birkat al-Gharandal, on the coast between Ḳulzum and al-Ṭūr, known as Surandala or Arandara to mediaeval Christian pilgrims.

In spite of difficulties to navigation, the lack of good harbours and the aridity of the littoral, the position of the Baḥr al-Ḳulzum ensured its commercial importance. It must have been crossed in the south by the Semitic invaders of northern Abyssinia and again, some centuries later and in the reverse direction, by the Abyssinian invaders of S.-W. Arabia. In early Muslim times piracy was rife in this region. Under the Banū Ziyād of Zabīd, according to Masʿūdī, there was constant trade between the Arabian and African shores and there were Muslim settlements in Africa paying tribute to native rulers. Communication between the Baḥr al-Ḳulzum and the Nile valley and the Mediterranean was at one time facilitated by a canal, sometimes called the Pharaonic, or Trajan's canal, known to the Arabs as Khalīdj Amīr al-Muʾminīn, which entered the sea at Ḳulzum. Part of this canal, the Wādī Ṭūmīlāt, had once been a natural branch of the Nile extending to Lake Timsāḥ; as the level of the land rose it became useless for navigation. It was cleared several times in antiquity and again by ʿAmr b. al-ʿĀṣ, who used it to send corn ships to al-Djār, then the port of al-Madīna, in the time of ʿUmar b. al-Khaṭṭāb. The Khalīfa is said to have refused to let ʿAmr dig a canal from Lake Timsāḥ to the Mediterranean lest it should enable Byzantine ships to enter the Baḥr al-Ḳulzum ʿAmr's canal was navigable only when the Nile was high; it was again cleared in the time of al-Mahdī, but fell into disuse soon after, though water sometimes flowed along it when there was an exceptional flood.

The trade of the Baḥr al-Ḳulzum benefited from the increased power of Egypt under the Fāṭimids and the corresponding decline of ʿIrāḳ. The Crusades, stimulated the demand for oriental products in Europe, and this transit trade became a factor of great importance to Egyptian prosperity. In 578-9/1182-3 Renaud de Châtillon conveyed prefabricated ships from the Mediterranean coast to Ayla where they were assembled and launched to harry this commerce. The Franks attacked ʿAydhāb [*q.v.*] but were defeated at sea by Ḥusām al-Dīn Luʾluʾ and those who contrived to land in the Ḥidjāz were annihilated. According to Abū Shāma, Ṣalāh al-Dīn ordered that no prisoner should be allowed to survive, so that there should be no one who could give information about the passage of the Baḥr al-Ḳulzum. Later, attempts were made in Europe to ruin this trade by an embargo, but in spite of Papal injunctions, it was never applied effectively. In the early 8th/14th century Guillaume Adam advocated that a Christian naval force should occupy Suḳuṭrā [*q.v.*] and blockade the entrance to the Baḥr al-Ḳulzum. About 893/1488 Pero da Covilhã, who sailed from al-Ṭūr to Aden and later visited Mecca and al-Madīna, collected information about the trade route for the King of Portugal; he was himself detained in Abyssinia and it is not known whether his report ever reached Lisbon. Having reached India by sea in 903/1498, the Portuguese attempted forcibly to divert the entire transit trade of the Baḥr al-Ḳulzum and the Persian Gulf to the Cape route for their own profit. In the ensuing war against first the Egyptians and then the Ottoman Turks they secured naval supremacy in the Indian Ocean. In 919/1513 Albuquerque, who hoped to join the Abyssinians in an attack on Mecca, unsuccessfully besieged Aden and then entered the Baḥr al-Ḳulzum. His fleet was becalmed at Kamarān and suffered very heavy casualties. His successor had the same experience and, although in 947-8/1541 D. Estevão da Gama sailed within sight of Suez and landed a small force at Maṣawwaʿ (Massawa) to assist the Abyssinians against the Somali Muslim invader, Aḥmad Grañ, the Portuguese never seriously challenged Turkish domination within the strait of Bāb al-Mandab. After the middle of the 10th/16th century Portuguese ships did not often visit the Baḥr al-Ḳulzum and Portuguese travellers, mostly missionaries going to Abyssinia, usually sailed in disguise on native ships. Early in the 11th/17th century English (1018/1609) and Dutch (1025/1616) ships began to trade at Mukhā; they did not often sail further north. Though Mukhā [*q.v.*] attained temporary importance as an outlet for the coffee of al-Yaman (see KAHWA) the Indian and Far Eastern trade now mostly followed the Cape route. In the next century the need for rapid communication between London and Paris and the growing European possessions in India resulted in renewed interest in the Baḥr al-Ḳulzum route, of which a very early example is the journey of Daniel. A general realisation of its strategic and commercial significance may be said to date from Napoleon's Egyptian campaign and to have culminated in the opening of the Suez Canal (1286/1869).

Foster, *The Red Sea and adjacent countries at the close of the seventeenth century*, Hakluyt Soc., 1949. (C. H. Becker-[C. F. Beckingham])

BAḤR LŪṬ, "Lot's Sea", is the modern Arab name for the Dead Sea which is usually called by the Arab Geographers *al-buḥayra al-mayyita* "the Dead Sea", *al-buḥayra al-muntina* "the stinking Sea", *al-buḥayra al-maḳlūba* "the overturned Sea" (because it is situated in *al-arḍ al-maḳlūba*, "the land that has been overturned", the *arḍ ḳawm Lūṭ*), *buḥayrat Ṣoghar* (*Zoghar*) "the Sea of Zoghar", also "the Sea of Sodom and Gomorra". The Persian Nāṣir-i Khusraw (5th/11th century) appears to be the first geographer to know the name *buḥayrat Lūṭ*.

The name Baḥr Lūṭ refers to the story in Genesis xix which is often referred to in the Ḳurʾān though the sea itself is not named.

To the present day, names in the neighbourhood of the Dead Sea—e.g. Djebel Sudum (Usdum)—and legends current locally, recall the catastrophe related in Genesis xix. These are certainly founded less on popular than on learned tradition.

Geography. Between the steep and barren slopes of the "desert of Judah" and the mountainous land of Moab lies the Dead Sea, like a blue mirror 1150 feet below sea-level from north to south. Its length is about 50 miles, its mid-breadth 8 miles and it has no exit.

The deepest part of its bottom is 2600 feet below sea level. An isthmus (*lisān* "tongue") running out from its east shore separates the southern, quite shallow part from the northern basin. While on the East and West shores the mountains rise up from the shore to a height of over 3000 feet, in the north, at the mouth of the Jordan the land is low-lying, and in the south, where on the east shore of the *sabkha* Pentapolis (Genesis xiv and xix) is to be sought for, it only rises slowly into *al-Ghawr* and *al-ʿAraba*. The composition of its water, so extraordinarily rich in salt, is unsuited to organic life and is even an impediment to navigation. On only a few places on the shore, inhabited oases of almost tropical character have survived.

Geology. The Dead Sea fills the deepest part of the Great Syrian system of depressions which was formed at the close of the Tertiary period. In the periods of alternate drought and rain of the diluvial epoch, the great floods filled the greater part of the Jordan valley and a part of the ʿAraba with an inland sea; this was never connected with the Red Sea. There being no exit to this basin the water, which, to begin with, flowed partly from springs rich in minerals, came in course of time, by evaporation to contain a high percentage of salt of peculiar composition. In the dry period of historic times the sea has dwindled into the area it at present occupies. In the last century a gradual ri ing of the level of the sea has been definitely ascertained. Tectonic disturbances have affected the surrounding district down to the present day. It is to one of the most recent of these that the origin of the southern basin is due.

The procuring of asphalt from the Dead Sea, as in antiquity (cf. the name *lacus Asphaltitis*) seems to have been an important business in the middle ages, also. The asphalt was used as a protection against insects in vineyards. It was also used for many medicinal purposes. To the waters of the sea itself, healing powers were also ascribed.

The rich products of the oasis of Zoghār (near the modern *ghawr al-Ṣāfiya*) were borne across the Dead Sea. The Frankish Crusaders also sailed on it.

(R. Hartmann)

BAḤR AL-MAGHRIB [see baḥr al-rūm].

BAḤR MĀYUṬIS or Buḥayra Māyuṭis, the Classical Lake Maeotis, modern Sea of Azov. Other forms of the name are Māwṭīs (Māwṭīsh). Baḥr Māyuṭis is constantly mentioned with Baḥr Nīṭas, *i.e.*, Baḥr Bunṭus, [*q.v.*], to which it is joined by Khalīdj Nīṭas (Strait of Kertch).

According to Masʿūdī (*Tanbīh*, 66), Buḥayra

Māyuṭis is 300 miles long and 100 miles broad. These dimensions, which are considerably exaggerated, were earlier given by Ibn Rusta (86). Masʿūdī also states that it lies at the extremity of the inhabited world towards the N. in the vicinity of Tūliya (Thule). The opinion which places Thule N. of the Sea of Azov is shared by Ibn al-Faḳīh (8), according to whom one of the four principal seas (cf. article BAḤR AL-RŪM, 4th paragraph) is that which lies 'between Rome and Khwārizm (as far as) the island of Tūliya. No ship was ever placed upon it'. (Ibn al-Faḳīh reckons al-Baḥr al-Khazarī or Caspian separately). Elsewhere Masʿūdī says that the river Ṭanāis (Tanais, Don), which takes it rise in a great lake (unnamed) situated in the N., flows into Baḥr Māyuṭis after a course of about 300 *farsakhs* through cultivated countries (*Murūdj*, i, 261). The great lake in the N., with which Baḥr Māyuṭis is evidently confused, had already been mentioned by al-Kindī, his pupil al-Sarakhsī and others (*Murūdj*, i, 275). It came to be identified with Baḥr al-Warank, properly the Baltic. Hence in a Syriac map of about 1150 A.D. the Sea of Azov is called 'Warang Sea' (A. Mingana, cited *Ḥudūd al-ʿĀlam*, 182; cf. ʿĀlī *Kunh al-Akhbār*, i, 100).

Masʿūdī, who shows more interest in Baḥr Māyuṭis and Baḥr Nīṭas than geographers of the school of al-Balkhī, [*q.v.*], maintains that properly they form a single sea. He is concerned also to refute on the testimony of travelling merchants those who say that Baḥr al-Khazar, *i.e.*, the Caspian, communicates directly with Baḥr Māyuṭis (*Murūdj*, i, 273). There is only the river route, via the Strait of Kertch, the Don and the Atil (Volga), using the Don-Volga portage, *i.e.*, the so-called 'Khazarian Way' (cf. *Murūdj*, ii, 18 ff.). His own account of Baḥr Māyuṭis is by no means free from error, cf. above. He also appears to think that its waters are of greater extent and depth than those of Baḥr Nīṭas or Black Sea (*Murūdj*, i, 273), which is the reverse of the case. Confusion is also introduced by the fact that Masʿūdī occasionally speaks of Baḥr Māyuṭis as Baḥr al-Khazar (*e.g.*, *Tanbīh*, 138), following popular usage.

In later times Baḥr Māyuṭis was called Baḥr Āzāḳ, in Ottoman Turkish Azak Denizi.

Bibliography: In addition to the references in the article, *Ḥudūd al-ʿĀlam*, 180-183, and index.

(D. M. Dunlop)

AL-**BAḤR** AL-**MUḤĪṬ**, i.e. 'the Encircling Sea', also called Baḥr Uḳiyānūs al-Muḥīṭ, or simply Uḳiyānūs, the circumambient Ocean of the Greeks ('Ωκεανός). By some it was named al-Baḥr al-Akhḍar, 'the Green Sea'. It was regarded as enclosing the habitable world on all sides, or at least on three sides, W., N. and E. (Masʿūdī, *Tanbīh*, 26), since the S. boundary of the inhabited world was the equator. According to Kaʿb al-Aḥbār [*q.v.*] reported by Ḳazwīnī (*Cosmography*, ed. Wüstenfeld, i, 104), seven seas encircled the earth, of which the last enclosed all the others.

There was general agreement that the principal seas were directly connected with al-Baḥr al-Muḥīṭ, with few exceptions, notably the Caspian (Baḥr al-Khazar), but not the Black Sea (Baḥr Bunṭus or more usually Nīṭas, [*q.v.*]), which was supposed to be an arm or 'gulf' of al-Baḥr al-Muḥīṭ, like Baḥr al-Maghrib, Baḥr al-Rūm, Baḥr Warank (Baltic), Baḥr al-Zandj, Baḥr Fāris, Baḥr al-Hind and Baḥr al-Ṣīn (the last four corresponding to the Indian Ocean and part of the Pacific). In general, these arms or 'gulfs' were thought of as forming an Eastern and Western system (Yāḳūt, *Buldān*, i, 504), meeting or at least approaching each other at the isthmus of Suez. There was some doubt as to whether the 'gulfs' were supplied from al-Baḥr al-Muḥīṭ (the prevailing opinion), or *vice versa*, given that nearly all the rivers of the world flowed into it.

But while in theory al-Baḥr al-Muḥīṭ was the circumambient Ocean, it frequently signifies simply the Atlantic. From another point of view, the Atlantic adjacent to Spain and N. Africa formed part of Baḥr al-Maghrib (Ḳazwīnī, *Cosmography*, i, 123). In the sense of the Atlantic al-Baḥr al-Muḥīṭ is synonymous with al-Baḥr al-Muẓlim or Baḥr al-Ẓulma or al-Ẓulumāt (Sea of Darkness), applied to the N. Atlantic as descriptive of its bad weather and dangerous character (Jaubert, *Géog. d'Edrisi*, ii, 355-356, cf. Dimashḳī, ed. Mehren, 124). Conspicuous among the islands of al-Baḥr al-Muḥīṭ, apart from Thule (usually taken to be the Shetlands), which the Arabs knew from translations of Ptolemy, were the Fortunate Islands (Canaries) and Britain (Barṭāniyya, with variants). A persistent tradition, which seems to go back to a Classical source, gives the British Isles as 12 in number (Nallino, *Al-Battani*, text, 26; cf. Masʿūdī, *Tanbīh*, 68).

The Arabic authors agree that al-Baḥr al-Muḥīṭ is impassable for ships (*e.g.* al-Kindī, cited Yāḳūt, *Buldān*, i, 500, speaking apparently of the Arctic Ocean, cf. Masʿūdī, *Murūdj*, i, 275; Battānī, *loc. cit.*; Yāḳūt, *Buldān*, i, 504; Ibn Khaldūn, *Berbères*, T.I. Paris 1925, 187-8). Perhaps this assertion is to be taken as applying in principle to the mythical circumambient Ocean. It is in any case certain that Muslim ships sailed in Atlantic waters. After a descent of the Norsemen on Spain in 229/844 the Atlantic coast was patrolled by Umayyad squadrons, perhaps as far as the Bay of Biscay. In 355/966 the coast of Spain, at Lisbon and Ḳaṣr Abī Dānis (Alcacer do Sal), was attacked by Danish Vikings, who were met and defeated at Silves by the Umayyad fleet. In 387/997 the fleet brought the infantry of al-Manṣūr [*q.v.*] from the Atlantic port of Ḳaṣr Abī Dānis already mentioned to Burtuḳāl (Oporto) by sea. (For these events, see Lévi-Provençal, *Hist. Esp. Mus.*, i, Cairo 1944, 157, 218, 224, 393, 441).

In these instances coastal operations are presumably intended. Therea re also some indications of ocean voyages in the Atlantic. Apart from the reported journey of Yaḥyā al-Ghazāl to the court of the 'king of the Norsemen' after A.D. 844—variously localised in Jutland or Ireland—(refs. in Brockelmann, *GAL.*, Sup. I 148; also H. Munis, *Contribution à l'étude des invasions des Normands en Espagne*, in *Bulletin de la Société Royale d'Etudes Historiques, Egypte*, Vol. ii, fasc. 1, 1950), we read also of Khashkhāsh of Cordova, who embarked in ships upon al-Baḥr al-Muḥīṭ and returned with rich booty (Masʿūdī, *Murūdj*, i, 258, cf. Lévi-Provençal, *Hist. Esp. Mus.* iii, 342, n.), and of the Adventurers (*al-mugharrirūn* —so read) of Lisbon, who sailed for many days W. and S. into the Atlantic and after whom a street was named in their native town (Jaubert, Géog. d'Edrisi, ii, 26-7, cf. i, 200). An account of whaling in the neighbourhood of Ireland (Ḳazwīnī, *Cosmography*, ii, 388, quoting the 11th century Spanish geographer al-ʿUdhrī) may also be mentioned here.

(D. M. Dunlop)

BAḤR AL-**RŪM**, 'the Sea of the Greeks', or AL-BAḤR AL-RŪMĪ, 'the Greek Sea', i.e. the Mediterranean, both names being in use from an early date to denote especially the E. Mediterranean, where Byzantine fleets were liable to be encountered. As

the Muslim conquests extended, these names were applied to the whole Mediterranean, for which Baḥr al-Rūm is still in use. The Mediterranean was also called al-Baḥr al-S̲h̲āmī, or Baḥr al-S̲h̲ām, 'the Sea of Syria', and Baḥr al-Mag̲h̲rib, 'the Sea of the West'.

The sea thus variously named began, according to Arabic geographers, considerably to the W. of the Strait of Gibraltar (al-Zuḳāḳ) and was a gulf of the Western Ocean (al-Baḥr al-Muḥīṭ al-Mag̲h̲ribī). Legend had it that Baḥr al-Rūm was originally formed in what had hitherto been dry land, after the Strait had been cut, by the Banū Dalūka, descendants of a Queen Dalūka who was supposed to have ruled Egypt after the Pharaoh of the Exodus (al-Mas'ūdī, *Murūd̲j̲*, ii, 398), in order to interpose a barrier between themselves and the king of the Greeks (al-Ḳazwīnī, *'Ad̲j̲ā'ib*, 123), or the Strait was cut and al-Baḥr al-Rūmī was joined to al-Baḥr al-Muḥīṭ by Alexander the Great at the request of the original Spaniards (Is̲h̲bān), who wished to be separated from the Berbers (al-Nuwayrī, *Nihāyat al-Arab*, i, 231-232). A detailed account of the fabulous bridge which Alexander built on this occasion, with diagrams, is actually given by al-Dimas̲h̲ḳī (*Cosmographie*, ed. Mehren, 137).

Descriptions of Baḥr al-Rūm regularly begin in the W. and proceed E.-wards, usually along the S. shore from Salā or even al-Sūs al-Aḳṣā, past Ṭand̲j̲a (Tangier) and Sabta (Ceuta) to Ṭarābulus (Tripoli) and Alexandria, then past the mouths of the Nile, N. along the Syrian coast to Antākiya (Antioch) and its harbour al-Suwaydiyya, on to al-T̲h̲ug̲h̲ūr (the Frontiers), then continuing W.-wards along the coast of Bilād al-Rūm (Asia Minor) to Constantinople, al-Arḍ al-Ṣag̲h̲īra ('the Little Land', *i.e.*, mainland Greece), Balbūnus (the Peloponnese), Ḳallauriya (Calabria), al-Ankuwarda (Lombardy), Ifrand̲j̲a (France), and S. again towards al-Andalus (Spain) (*e.g.*, Ibn Ḥawḳal ed. Kramers, 190-1). It is understood that a man could in theory at least make the circuit of Baḥr al-Rūm till he reached a point in Spain opposite to where he started from, and that the countries lying to the S. of the sea are Muslim, while those to the N. are Christian. The dimensions of Baḥr al-Rūm are variously given. Al-Mas'ūdī offers one estimate: length, 5,000 miles, more or less; breadth, from 600 to 800 miles, but knows of another, said to be that of the celebrated al-Kindī and his pupil al-Sarak̲h̲sī: length, 6,000 miles; breadth, 400 miles (*al-Tanbīh*, 56, cf. *Murūd̲j̲*, i, 259). Ibn al-Faḳīh, 7, estimated the length of al-Baḥr al-Rūmī as 2,500 *farsak̲h̲s* from Anṭākiya (Antioch) to D̲j̲azā'ir al-Sa'āda (the Fortunate Isles, Canaries), breadth 500 *farsak̲h̲s*, and was quoted to that effect by al-Muḳaddasī, 14. Al-Mas'ūdī in one place mentions that practical sailors disagreed with the philosophers and increased the dimensions of al-Baḥr al-Rūmī (*Murūd̲j̲*, i, 282). (The actual length is about 2,400 miles; greatest breadth, about 1000 miles.) A nearly exact estimate of the length of the Mediterranean was made by the astronomer al-Marrākus̲h̲ī in the 7th/13th century (Abu 'l-Fidā', *Taḳwīm*, Introd., CCLXXVII).

Baḥr al-Rūm is always regarded as one of the earth's principal seas. Al-Muḳaddasī says that he knows only two, a Western, *i.e.*, the Mediterranean, and an Eastern, *i.e.*, the Indian Ocean, called by him al-Baḥr al-Ṣīnī, 'the Chinese Sea'. He mentions that to these al-Balk̲h̲ī added al-Baḥr al-Muḥīṭ, 'the Circumambient Ocean', and al-D̲j̲ayhānī a fourth and fifth, *viz.*, Baḥr al-K̲h̲azar, 'the Sea of the K̲h̲azars' (Caspian) and K̲h̲alīd̲j̲ al-Ḳusṭanṭiniyya, 'Gulf of Constantinople', *i.e.*, the approaches to the Black Sea. Al-Muḳaddasī points out that his own view corresponds with the Ḳur'ān (Sūra lv, 19 ff.): 'He has left unconnected the two seas which meet. Between them is a barrier which they do not transgress etc.' As al-Muḳaddasī, 16, puts it, the 'barrier' is the isthmus between al-Faramā' (Pelusium) and al-Ḳulzum (Clysma, mod. Suez), and it divides Baḥr al-Rūm from al-Baḥr al-Ṣīnī. He mentions that some interpreted another Ḳur'ānic text (Sūra xxxi, 26): 'If the trees in the world were pens, and the sea were filled thereafter by seven seas etc.' with reference to the five already mentioned *plus* al-Maḳlūba, 'the Inverted (Lake)' (Dead Sea) and al-K̲h̲wārizmiyya, 'the K̲h̲wārizmian (Lake)' (Aral Sea). Another more reasonable list of the 'Seven Seas' is: Green Sea or Eastern Ocean, Western Ocean, Great Sea or Indian Ocean, Mediterranean, Caspian, Black Sea and Aral Sea (*Ḥudūd al-'Ālam*, 51-3). Al-Mas'ūdī in one place follows al-D̲j̲ayhānī in giving five: Indian Ocean, Mediterranean, Caspian, Black Sea and Circumambient Ocean (*al-Tanbīh*, 50-241) and elsewhere says that most people reckon four (*Murūd̲j̲*, i, 271), Black Sea and Caspian presumably counting as one, but cf. Ibn al-Faḳīh, 4-8. However many the seas were taken to be, the general view was that the Ḳur'ānic "meeting of the two seas' (*mad̲j̲ma' al-baḥrayn*, Sūra xviii, 59/60) was at the isthmus of Suez, though some thought in this connexion of al-Zuḳāḳ (Strait of Gibraltar).

The different parts of Baḥr al-Rūm had special names, *e.g.*, Baḥr Tīrān, 'the Tyrrhenian Sea' (al-Rāzī); D̲j̲ūn al-Banādiḳiyyīn, 'the Gulf of the Venetians' (Ibn Ḥawḳal) or al-K̲h̲alīd̲j̲ al-Banādiḳī, 'the Venetian Gulf' (al-Idrīsī), in effect the whole of the Adriatic; K̲h̲alīd̲j̲ al-Ḳusṭanṭiniyya, 'Gulf of Constantinople', the approaches to the Black Sea. The Black Sea itself was Nīṭas, a stereotyped mistake for Bunṭus (Pontus), which perhaps survived in some MSS. The Sea of Azov was Māyuṭis (Maeotis). It was correctly realised that the two last-named seas were connected with each other and Baḥr al-Rūm, but uncertainty and error attended the attempts made to explain the relative positions of the Black Sea and the Caspian (Baḥr al-K̲h̲azar, [*q.v.*]) and *a fortiori* the Black Sea and the Baltic (Baḥr al-Warank, 'Sea of the Warangians') or the Arctic Ocean, of which the Arabs can scarcely have had direct information. The tendency to regard the seas last mentioned as connected with Baḥr al-Rūm is illustrated in the maps of Ibn Ḥawḳal.

Various islands of Baḥr al-Rūm came to be known at an early date. Ḳubrus (Cyprus) and Arwād (Aradus), the little island off the Syrian coast, were the first to be occupied, under Mu'āwiya, and before his death (60/680) Rhodes, Crete and even Sicily had been attacked. Several other Mediterranean islands are mentioned by Ibn K̲h̲urradād̲h̲bih, 112. The geographers of the tradition of al-Balk̲h̲ī give few islands in Baḥr al-Rūm. Al-Muḳaddasī, 15, in 375/985 speaks only of the three large islands Sicily, Crete and Cyprus. Al-Iṣṭak̲h̲rī, 70, earlier had mentioned the same three, with the addition of a fourth, D̲j̲abal al-Ḳilāl (cf. Yāḳūt, i, 392), identified by Reinaud (*Marāṣid al-Iṭṭilā'*, ed. Juynboll, v, 27) with Fraxinetum, now Garde-Freinet on the French mainland E. of Marseilles, from which between circa 894 and 972 the Arabs raided as far as Switzerland (cf. Lévi-Provençal, *Hist. Esp. Mus.*, chapter 5). This identification is confirmed by Ibn Ḥawḳal, ed. Kramers, 304, who mentions the place as being 'in the territories of France, in the hands of fighters for

the faith' (*bi-nawāḥī Ifrandja bi-aydī al-mudjāhidīn*). It appears on Ibn Ḥawḳal's map as an island (always in ed. 2 Djabal al-Fulāl, cf. also *Marāṣid*, i, 99) opposite a large river, evidently the Rhône. (On the same map Genoa also is shown as an island.) Other islands in the sea are mentioned by al-Ḳazwīnī (*ʿAdjāʾib*, 124-125). The best description which we have of them is in the text and maps of al-Idrīsī (see Bibliography).

Features of Baḥr al-Rūm which attracted attention were the comparative absence of tides and the recession of the coast, both noted by al-Masʿūdī (*al-Tanbīh*, 70, 132), the latter phenomenon at Ephesus (unconfirmed). Al-Masʿūdī notices the volcanic activity of Mt. Etna (Djabal al-Burkān, Aṭma Siḳilliyya, *Murūdj*, ii, 26; *al-Tanbīh*, 59). He also tells us that Hārūn al-Rashīd wished to join Baḥr al-Rūm to Bahr Ḳulzum (Red Sea), but was dissuaded from the attempt by Yaḥyā b. Khālid the Barmecide, who represented that if he did so, the the Greeks would pass through and interfere with the pilgrimage to Mecca (*Murūdj*, iv, 98-99).

Though at first the Greeks retained command of the sea even after their defeats on land, this was soon lost to them by a series of Muslim naval successes of which the Battle of the Masts (Dhāt al-Ṣawārī) is the most famous (fought off the Lycian coast in 34/655). It appears that former Byzantine naval installations in Syria and Egypt, and trained personnel, were now employed against them, to secure the command of the E. Mediterranean foi the Arabs. This they for the most part retained throughout the Umayyad and early ʿAbbāsid period, during which Constantinople was attacked repeatedly. There appears to have been some resurgence of Greek naval power in Hārūn's Caliphate (cf. *supra*), when the Byzantine warships which brought Muslim prisoners for ransom to al-Lāmis, Lamus (Cilicia) in 189/805 made a considerable impression (al-Masʿūdī, *al-Tanbīh*, 189). In 311 or 312/923 or 924 a Muslim fleet with units from al-Baṣra and Syria sailed from Ṭarsūs under an admiral (*mutawallī al-ghazw fiʾl-baḥr*) and operated successfully in the N. waters of al-Baḥr al-Rūmī, reaching Venetian territory and making contact with a detachment of Bulgars, some of whom returned with them to Ṭarsūs (al-Masʿūdī, *Murūdj*, ii, 16-17; Ibn al-Athīr, s. anno 311). Yet later under al-Muḳtadir (Caliph 295/908-320/932) Greek ships regularly made extensive raids on the coast of Syria, and it was in his Caliphate that the command of the E. Mediterranean was lost (Ibn Ḥawḳal, ed. De Goeje, 131-2; ed. Kramers, 197). By 345/956 apparently (al-Masʿūdī, *al-Tanbīh*, 141) the Muslims had no fleet in these parts.

In the W. of Baḥr al-Rūm, after the invasion of Spain in 92/711, some of the most spectacular Muslim exploits took place comparatively late. Mention has been made of the long occupation of Fraxinetum. Bari in S. Italy was captured in 226/840-841 by a freedman of the Aghlabids of N. Africa, who at this time were very active, and was practically an independent state for many years (Balādhurī, *Futūḥ*, 234-5, followed by Ibn al-Athīr, s. anno). In 228/842 during the siege of Massīnī (Messina) by an Aghlabid general the people of Nābal, or Nābul (Naples) requested protection, and joined forces with the Muslims (Ibn al-Athīr, s. anno). Shortly afterwards Rome and Venice were threatened, the former on more than one occasion. Malta fell in 255/869 (Ibn Khaldūn, iv, 201). As late as 323/934 Genoa was attacked and taken by an armament from Sicily, where the Fāṭimids were now in possession (al-Dhahabī, *Duwal al-Islām*, s. anno). Thereafter the Muslim threat to Italy subsided.

Baḥr al-Rūm was never a Muslim lake, since even at the heyday of their power the Arabs never controlled its northern shores. From the time of Charlemagne onwards there is evidence of Christian maritime enterprise. This gradually increased in importance as the centuries passed, in spite of the decline of Byzantium and the renewed Muslim advance, when the Ottoman Turks in the 10th/16th century came to control the coast of Baḥr al-Rūm, by them usually called the White Sea (Ak Deniz), from the Peloponnese to Algeria.

(D. M. Dunlop)

In the Ottoman Empire the Mediterranean was known as Ak-deniz, the White Sea, whence the Persian Baḥr-i Safīd and Daryā-i Safīd and, probably the colloquial Greek ἡ ἄσπρη θάλασσα. Iu Ottoman usage it included—and seems at times to have been restricted to—the Aegean sea, the islands of which were called Djezāʾir-i Baḥr-i Safīd. The name, which appears to have no Greek, Byzantine, or Islamic precedents, is of uncertain origin. It may have arisen in contrast to Kara-deniz, the Black Sea, on the other side of Istanbul. A full cartographic treatment of the Mediterranean Sea will be found in the famous Atlas presented in 930/1523 to Sulṭān Sulaymān by Pīrī Reʾis [*q.v.*]. There are also descriptions in the travels of Ewliyā Čelebi (*Seyāḥatnāme*, i, 40 ff. and viii, *passim*), in the maritime history of Ḥādjdjī Khalīfa (*Tuḥfat al-Kibār*, 3 ff., English trans. by J. Mitchell, 3 ff.), and in his *Djihānnumā* 76.

[Ed.]

BAḤR AL-ʿULŪM ("Ocean of the Sciences"), honorific title of Abu ʾl-ʿAyyāsh ʿAbd al-ʿAlī Muḥammad b. Niẓām al-Dīn Muḥammad b. Ḳuṭb al-Dīn al-Anṣārī al-Laknawī, a highly distinguished Indian savant of the 19th century. He claimed descent from the famous Khwādja ʿAbd Allāh Anṣārī Harawī, whose descendant Shaykh ʿAlaʾ al-Dīn (ʿAbd al-ʿAlī's tenth ancestor) came from Harāt to India, and now lies buried at Barnāwa (between Muthrā and Delhī). The next generation settled in Sihālī, a town near Lucknow. Under Awrangzīb the family shifted to "Farangī Maḥall", Lucknow, (for which see Raḥmān ʿAlī, *Tadhkira*[2] 168; cf. *al-Nadwa*). ʿAbd al-ʿAlī's grandfather Mullā Ḳuṭb al-Dīn (d. 1103/1691) and his father Mullā Niẓām al-Dīn (d. 1161/1748; Āzād, who met him in Lucknow in 1148/1736 praises him highly, see *Subḥat al-Mardjān*, Bombay 1303, 94) were noted men of learning, and were the real founders of the fame of the family in India—a family in which learning had flourished for centuries, from generation to generation. Born in Farangī Maḥall in 1144/1731-32, ʿAbd al-ʿAlī studied with his father, and completed the usual course of Islamic studies with him at the age of seventeen. After the death of

his father he continued his studies with Mullā Kamāl al-Dīn al-Sihālawī al-Fatḥpūrī (d. 1175/1761), a pupil of his father (see Brockelmann S II, 624). He started his career as teacher and author in Lucknow, but because of a Sunnī-Shīʿī dispute, had to quit Lucknow, and moved first to Shāh-djahānpūr, where he stayed for twenty years, then to Rāmpūr (cf. Nadjm al-Ghanī, *Akhbār al-Ṣanādīd*, Lucknow 1918, i, 600, 596), where he stayed for four years, later to Buhār (in Bardwān, Bengal), and finally to Madrās, at the invitation of the Nawwāb of Karnātak (Nawwāb Wālādjāh Muḥammad ʿAlī Khān (d. 1210/1795), originally of Gopamaū, near Lucknow). He went to Madrās accompanied by six hundred scholars (*ridjāl al-ʿilm*). The Wālādjāh showed him high regard, and showered favours on him and his companions, built a large *madrasa* for him, and gave stipends to his companions and pupils who collected there from far and near. The Nawwāb's successors continued to show him the same favour till the end of the rule of Wālādjāhīs and the establishment of British rule in Madrās, and even then the monthly provisions and gifts continued to be offered him, as also to the other teachers and students of his *madrasa*. He never returned to Lucknow, and died in Madrās on 12 Radjab 1225/13 August 1810, and was buried close to the Mosque of the Wālādjāhs in that city. (For his children see Alṭāf al-Raḥmān, *Aḥwāl* 64 f. and for his distinguished pupils, *Ḥadāʾiḳ, loc. cit.*). It was the Wālādjāh who gave him the title of *Baḥr al-ʿUlūm* (as usually stated, but cf. Alṭāf al-Raḥmān, *Aḥwāl*, 65, where it is stated that Shāh Walī Allāh Dihlawī [*q.v.*] gave him this title), also the title of *Malik al-ʿUlamāʾ*. The former is better known in North India, the latter in South India.

Apart from teaching him the religious sciences, his father had initiated him into esoteric sciences also (Alṭāf al-Raḥmān). He belonged to the mystic school of Ibn al-ʿArabī and had complete faith in the truth of the Shaykh's expositions as given in the *Fuṣūs* and the *Futūḥāt*. In fact his *Sharḥ Mathnawī-i Mawlawī-i Rūm* (Lucknow 1873, 3 vols.) only aims at explaining the "secrets" contained in the *Mathnawī* in the light of the Shaykh's above two works (see the Mullā's Arabic introduction to the *Sharḥ*). He also wrote a Commentary on a section of the *Fuṣūṣ* (viz. *al-Faṣṣ al-Nūḥī*, Brockelmann S I 793). Even on his death-bed he stated he was realising the truth of the Shaykh's doctrines (*Aghṣān*).

He is praised for his courage, generosity, self-denial and ascetic character. He spent most of his long life in teaching and writing, and wielded a profound influence on his contemporaries in India, whom he excelled in versatility of erudition and critical acumen. "The like of him was not to be seen in India of the later times" (*Nuzha*). His fields of specialised study were *fiḳh* and *uṣūl* on the one hand, and the philosophical sciences on the other. He wrote many works in Arabic—unusually good classical Arabic, and in Persian. As a rule they are, according to the fashion of his time, commentaries, glosses and super-glosses on most of the usual text books.

Some of his other more important works are given below:

a) *Philosophy*: *Sharḥ Sullam al-ʿUlūm* (the *Sullam* is a work on logic by Muḥibb Allāh Bihārī, (d. 1110/1707), Delhī 1891; *al-Taʿlīḳāt* (or *Minhiyya*) *ʿalā Sharḥ Sullam al-ʿUlūm* (Zubayd Aḥmad, 365); *al-Ḥāshiya ʿala 'l-Ḥāshiya al-Zāhidiyya al-Djalāliyya*, Lucknow 1872, (*JASB* vii, 695); *al-Hāshiya ʿalā al-Hāshiya al-Zāhidiyya al-Ḳuṭbiyya*, Delhi 1292/1875, Brockelmann S II 293; *al-Ḥāshiya ʿala 'l-Ṣadrā* (a super-gloss on Ṣadrā al-Shīrāzī's Commentary on Abharī's *Hidāyat al-Ḥikma*), Lucknow 1846 (Brockelmann S I 840, *JASB loc. cit.*); *Taʿlīḳāt ʿala al-Ufuḳ al-Mubīn* (Brockelmann S II 580); *al-ʿUdjāla al-Nāfiʿa* (Brockelmann S II 625 l. 4 where read 399 instead of 499).

b) *Dogma and Scholastic Theology* (*Kalām*). *al-Ḥāshiya ʿala 'l-Ḥāshiya al-Zāhidiyya ʿala al-Umūr al-ʿĀmma* (Zubayd Aḥmad, 338); *al-Hāshiya ʿalā Sharḥ al-ʿAḳāʾid al-Dawwānī* (*ibid.*); *Sharḥ Maḳāmāt al-Mabādī* (*ibid.*); *al-Ḥāshiya ʿalā Sharḥ al-Mawāḳif* (*ibid.*; Brockelmann S II 290) Lucknow 1876.

c) *Principles of Jurisprudence* (*Uṣūl al-Fiḳh*). *Fawātiḥ al-Raḥamūt* (*Sharḥ* of the *Musallam al-Thubūt* of Muḥibb Allāh Bihārī (d. 1119/1707 (Brockelmann S II 624); *Risāla al-Arkān al-Arbaʿa* (*fiḳh*) (Brockelmann S II 625); *Tanwīr al-Manār Sharḥ al-Manār* (in Persian) (Brockelmann SII 264); *Takmila Sharḥ-i Taḥrīr* (a Supplement to his father's Commentary on Ibn Humām's *Taḥrīr fī Uṣūl al-Dīn* (Zubayd Aḥmad 283, *JASB* vii, 695); *Sharḥ Fiḳh Akbar* (Rahmān ʿAlī[2], 123).

d) *Ḥadīth*. *Risāla fī Taḳsīm al-Ḥadīth* (Zubayd Aḥmad, 262).

e) *Mathematics*. *Sharḥ al-Midjiṣṭī* (Zubayd Aḥmad, 382).

f) *Ethics*: *Risāla al-Tawḥīd al-Kāfiya li 'l-Ṣūfī al-Muttaḳī* (in Persian) (Raḥmān ʿAlī 123, *Ḳāmūs al-Mashāhīr* s.v. ʿAbd al-ʿAlī).

g) *Arabic Grammar*: *Hidāya al-Ṣarf*.

(MOḤAMMAD SHAFĪʿ)

BAḤR AL-ZANDJ. By the Baḥr al-Zandj the Arabs mean the W. part of the Indian Ocean, Baḥr al-Hind [*q.v.*] which washes the E. coast of Africa from the Gulf of Aden *i.e.*, the Khalīdj al-Barbarī to Sufāla and Madagascar, which was as far as the scanty knowledge of the Arabs extended. The name is derived from the adjoining coast, which is called the Bilād al-Zandj or Zanguebar, 'land of the Zandj'. The name Zandj is applied by the Arabs to the black Bantu negroes, who are sharply distinguished from the Berbers and Abyssinians. The name Zandj is very old, even Ptolemy knows of Ζίγγις (or Ζήγγισα) ἄκρα and Cosmas Indicopleustes of τὸ καλούμενον ἐκεῖ Ζίγγιον, but Herzfeld's reading in an inscription of the Sāsānid Narsī *Zhandafrīk shāh* (*Paikuli*, I, Berlin, 1924, 119) is not now accepted (cf. W. B. Henning in *Studies presented to Vladimir*

Minorsky = *BSOAS.*, Vol. XIV, 1952, Part 3, 515). The name itself has been explained as from Persian *Zang, Zangi* (Zoroastrian Pahlawī *zangik* 'negro'), but perhaps it is of local origin. Nowadays it is applied to the island of Zanzibar and to a tributary of the Zambesi which bears the name of Zangue. The Arab notices of the coast and sea of the Zandj are more than scanty and partly contradictory. The sea was feared and avoided. Only the Arab travellers Masʿūdī and Ibn Baṭūṭa sailed across it, but they tell us more about the land and its people than about the sea itself. Whales and whaling are sometimes mentioned, and it is remarkable that the word used for whale (*wāl, uwāl*) resembles the form of the name in the languages of N. Europe (Sulaymān the Merchant, Arabic text edited by Langlès, 4, 138-141, in Reinaud, *Relation des voyages faits par les Arabes et les Persans etc.*, Paris 1845, transl. G. Ferrand, *Voyage du marchand arabe Sulaymân*, Paris 1922, 30, 132-133; cf. Masʿūdī, *Murūdj*, i, 234, 334). It is clear that the Arabs imagined the coast to run in quite a different direction from what it actually does. W. Tomaschek gave reconstructions of their cartographical notions in his *Die topographischen Capitel des indischen Seespiegels Moḥîṭ* (Vienna 1899). Notices by the Arab geographers of the sea and land of the Zandj were collected by L. Marcel Devic (*Le Pays des Zendjs*, Paris 1883). See also *Ḥudūd al-ʿĀlam*, 471 ff., and T. A. Shumovsky, *Tri neizvestnie Lotsii Akhmada ibn Mâdzhida, arabskogo Lotsmana Vasko da Gamii*, Moscow 1957. Navigation on this part of the Indian Ocean is regulated by the periodic monsoons, whence the ancient relations between S. Arabia and N.-W. India and the E. African coast. For further information see the articles BAḤR AL-HIND and ZANDJ.

(C. H. BECKER-[D. M. DUNLOP])

BAḤR AL-ẒULUMĀT [see AL-BAḤR AL-MUḤĪṬ].

BAHRĀʾ (*nisba* Bahrānī), a tribe of the Ḳuḍāʿa group, sometimes reckoned a part of Djudhām, which emigrated northwards to the Euphrates and then to the plain of Ḥimṣ. Like their Euphrates neighbours Taghlib and Tanūkh, they became Christian, but were converted after Taghlib, probably about 580. A deputation came to Muḥammad at Medina in 9/630 and became Muslims; but the tribe as a whole remained hostile and attached to Byzantium. In 8/629 Bahrāʾ had been among Heraclius' Arab allies who confronted Muḥammad's Muʾta expedition; in 12/633 they were summoned to help the people of Dūmat al-Djandal when Khālid b. al-Walīd approached; and they were in the Byzantine military coalition of 13/634, along with Kalb, Salīḥ, Tanūkh, Lakhm, Djudhām and Ghassān. However, they became Muslims when Syria was conquered.

Bibliography: Hamdānī, 132; *Mufaḍḍaliyyāt*, 417, 427; Ṭabarī, i, 1611, 2060, 2081, 2114, 2122; Wellhausen, *Skizzen*, iv, treaty no. 115; Wāḳidī (Wellhausen), 235, 311; Ibn Khallikān, no. 46; R. Dussaud, *Topographie historique de la Syrie*, Paris 1927, 146. (C. E. BOSWORTH)

BAḤRAIN [see AL-BAḤRAYN].

BAḤRAḲ, DJAMĀL AL-DĪN MUḤAMMAD B. ʿUMAR B. MUBĀRAK B. ʿABD ALLĀH B. ʿALĪ AL-ḤIMYARĪ AL-ḤAḌRAMĪ AL-SHĀFIʿĪ, S. Arabian scholar and Ṣūfī. b. 869/1465 in Saywūn, d. 930/1524 in India. After studies in ʿAden and Zabīd he was ḳāḍī of Shiḥr for some time, then settled in ʿAden and found favour with its governor, the Amīr Mardjān. After the death of his patron in 927/1521 he went to India and obtained the patronage of the sultan of Gudjarāt Muẓaffar Shāh, but he soon had to leave the court and died in Aḥmadābād, perhaps poisoned.

In his great literary production he treats of theological as well as profane themes. Apparently original works are: *Mawāhib al-Ḳuddūs fī Manāḳib Ibn al-ʿAydarūs* (cf. Serjeant, *Materials*, 586; on this teacher of his see art. ʿAYDARŪS, No. 2); *Ḥilyat al-Banāt wa ʾl-Banīn fīmā yuḥtādju ilayhi min Amr al-Dīn*; *ʿIḳd al-Durar fī ʾl-Īmān bi ʾl- Ḳaḍā wa ʾl Ḳadar*; *al-ʿIḳd al-Thamīn fī Ibṭāl al-Ḳawl bi ʾl-Taḳbīḥ wa ʾl-Taḥsīn*; *al-Tabṣira al-Aḥmadiyya fi ʾl-Sīra al-Nabawiyya*; *Tartīb al-Sulūk ilā Malik al-Mulūk* (cf. Brockelmann, I, 444); *al-ʿUrwa al-Wathīḳa ḳaṣīda* (*Wuthḳā*), with comm. *al-Ḥadīḳa al-Anīḳa* (Brockelmann, II, 555). Abridgements: *al-Asrār al-Nabawiyya* < *al-Adhkār al-Nawawiyya, i.e., Ḥilyat al-Abrār* (Brockelmann, I, 397); *Dhakhīrat al-Ikhwān* < *K. al-Istighnāʾ bi ʾl-Ḳurʾān*(?); *Mutʿat al-Asmāʿ* < *al-Imtāʿ fī Aḥkām al-Samāʿ* of al-Adfuwī (Brockelmann, S. II, 27); he also abridged al-ʿAskarī's *K. al-Awāʾil* (Brockelmann, S. I, 194), al-Sakhāwī's *al-Maḳāṣid al-Ḥasana* (Brockelmann II, 32) and al-Mundhirī's *al-Targhīb wa ʾl-Tarhīb* (Brockelmann, I, 627). Commentaries: *al-ʿAḳīda al-Shāfiʿiyya* on al-Yāfiʿī's famous *ḳaṣīda* (Brockelmann, II, 228); *Tuḥfat-al-Aḥbāb wa-Ṭurfat al-Aṣḥāb* on al-Ḥarīrī's *Mulḥat al-Iʿrāb* (Brockelmann, I, 489); *Nashr al-ʿAlam fī Sharḥ Lāmiyyat al-ʿAdjam* (Sarkis, 533; in reality an abridgement of al-Ṣafadī's comm.); on Ibn Mālik's *Lāmiyyat al-Afʿāl* (*ibid.*, cf. Brockelmann, I, 300; S. I, 526). In minor *risāla*s he treated of arithmetic, astronomy and medicine. Specimens of his poetry are given by al-ʿAydarūs and al-Saḳḳāf (v. infra).

Bibliography: Brockelmann, S. II, 554 f.; al-ʿAydarūs, *al-Nūr al-Sāfir*, 143-151; al-Saḳḳāf, *Taʾrīkh al-Shuʿarāʾ al-Ḥaḍramiyyīn*, i, 121 ff.; Sarkis, col. 532 f. (O. LÖFGREN)

BAHRĀM (derived, *via* the Pahlawī *varahrʾn*, from the Avestan *verethragna*), the name of the Zoroastrian god of victory (cf. Benveniste and Renou, *Vṛtra et Vṛθragna*, chap. 1, particularly 6 and 22); from his name is derived that of one of the principal sacred fires of Iran, Varhrān, or (more recently) Vahrām (*ibid.*, 72); he presides over the 20th day of the solar month which bears his name and which has kept it in the Persian calendar recorded by al-Bīrūnī (*ibid.*, 83; al-Bīrūnī, *Cronol.* 53).

This name Bahrām or Vahrām) was that of five rulers of the Sâsânid dynasty (the 4th, 5th, 6th, 12th, 14th). Very little is known about the reign of Vahrām I (273-276 A.D.); he gave the Zoroastrian clergy full powers against Mānī, who was executed, and died in 276 A.D. A bas-relief of Shāpūr depicts the investitute of Vahrām (A. Christensen, *L'Iran sous les Sassanides*², 226-7). Under his son and successor, Vahrām II (276-93 A.D.), war again broke out between Rome and Iran; the sudden death of the emperor Carus, who had reached Ctesiphon, compelled the Romans to retreat; nevertheless Vahrām ceded to them Armenia and Mesopotamia in order to obtain peace (283 A.D.) and free his hands to suppress the revolt of his brother who, as governor (*kushānshāh*) of Khurāsān, had ambitions of carving out a great kingdom for himself; Vahrām II appears on several bas-reliefs (Christensen, *op. cit.*, 228 f.). His son and successor, Vahrām III, was defeated by his great-uncle, during the four months of his reign (293 A.D.). Vahrām IV (388-99 A.D.), son of the great Shāpūr II, was a feeble prince, like his uncle and elder brother who had preceded him on the

throne; the feudal lords regained the initiative of which they had been deprived by Shāpūr II; under Vahrām IV, Armenia was partitioned between Rome and Iran which kept the larger portion. Vahrām V (420-38 A.D.), surnamed Gūr ("the onager") on account of his vigour, after spending his youth in the care of al-Mundhir I, the Lakhmid king of the Arabs of Ḥīra, had to regain the throne, with the aid of this king, from the nobles who had put his elder brother to death and proclaimed ruler a prince from a side branch of the family; he made himself popular by his benevolence to all, his tax remissions his bravery, his love-affairs and his hunting exploits (commemorated by poets and illuminators of manuscripts); he left the great dignitaries a large measure of initiative in the direction of affairs (notably to Mihr-Narsa); he himself led an expedition against the barbarians of the Marw district; because of persecution, many Christans took refuge on Byzantine soil; this caused a short war, unfavourable to Iran, as the result of which freedom of worship was granted to Christians in Iran, by treaty (422 A.D.); it is not known whether Vahrām V died a natural death, or as a result of a hunting accident.

In addition to these five kings, a usurper named Vahrām Čūbīn, who claimed to be descended from the Arsacid kings, became in 589 A.D. the leader of a formidable insurrection, during the reign of Hormizd IV, who was a distinguished prince, tolerant in matters of religion, but had set the feudal lords against him self because he firmly maintained his rights against them; Čūbīn, who had gained military successes against the peoples north and east of Iran, but had been dismissed after his defeat by the Byzantines, rebelled, and seized power after the assassination of the king; the latter's son, supported by the Byzantines, the Armenians and a section of the Persians, broke the long resistance of Vahrām, who took refuge among the Turks and was killed soon afterwards; his powerful personality ensured the perpetuation of his name: a popular romance, in the Pahlawī language, related his exploits, before the historians and poets of the Islamic period (see A. Christensen, *Romanen om Bahrâm Tschôbîn, Et Rekonstruktionsforsøg*, Copenhagen 1907). Several other personalities have borne this name (Christensen, *Sassanides*, index, s.v. *Vahrâm*).

Bibliography: Christensen's book supersedes earlier works, which he uses and quotes in the notes. For a history of Bahrām Gūr in verse, see Firdawsī, *Le Livre des Rois*, trans. J. Mohl, 1878, v, 442-558, vi, 1-64; Niẓāmī, *The Haft Paikar*, trans. C. E. Wilson, London 1924; on Bahrām Čūbīn, see Firdawsī, *op. cit.*, vi, 460-568, vi, 1190. (Cl. Huart-[H. Massé])

BAHRĀM, Christian Armenian general who served the Fāṭimids in Egypt and was *wazīr* of the sword from 529-31/1135-7 to the caliph al-Ḥāfiẓ (525-44/1130-49).

The circumstances and date of his entry into Fāṭimid service are unknown. Many Armenians, in the 5th/11th century, went to Egypt, taking advantage of the fact that the wazīrate was on several occasions held by men of Armenian origin such as Badr al-Djamālī (466-87/1074-94), his son al-Afḍal (487-515/1094-1121), the latter's son (525-6/1130-1) and Yānis (526/1131-2). Perhaps these circumstances brought Bahrām to Egypt. According to tradition, he came from a region where an important Armenian colony had been established, Tell Bāshir north-east of Aleppo. A nobleman of Tell Bāshir, he was driven from there by a revolution and had to leave the country. It seems that he came from a noble Armenian family which claimed to trace its descent to the Pahlavuni, and was the brother of the Armenian catholicos of Egypt, Gregory, who arrived in Egypt and was consecrated there in 1077 or 1078. At all events, Bahrām followed a military career, and became commander of an Armenian corps, and then governor of the western province of the Delta (al-Gharbiyya).

As a result of the rivalry between the Caliph's two sons Ḥaydara and Ḥasan, and the seizure of power by the latter in the capacity of *wazīr*, a military revolt broke out, and Ḥasan, unable to deal with it, summoned Bahrām to his aid. When Bahrām arrived with his Armenian troops, Ḥasan had already been assassinated. The Caliph entrusted the wazīrate to Bahrām, although he was a Christian (Djumādā II 529/March 1135), and the curious situation then obtained of a Christian, who was *wazīr* of the sword and absolute master in Egypt, bearing the titles of Sayf al-Islām and Tādj al-Dawla. The pro-Armenian policy of Bahrām, who encouraged the immigration of his compatriots and secured their installation in important posts, provoked a popular reaction and a military revolt led by the governor of al-Gharbiyya, Riḍwān. Bahrām, abandoned by the Muslim troops in his army, had to leave Cairo (Djumādā I 531/February 1137), and marched towards Ḳūṣ where his brother Vasak was governor. Vasak, however, had been assassinated by the populace, and Bahrām, after exacting a bloody revenge for murder of his brother, left Ḳūṣ. Riḍwān, who had been appointed *wazīr*, sent an army against him, but, by an arrangement to which the Caliph was doubtless not a stranger, Bahrām was allowed to retire to a monastery near Ikhmīm where he remained until 533/1139. As the Caliph was displeased with Riḍwān, he recalled Bahrām, who was by then a sick man, to Cairo, and installed him in his palace; he consulted him frequently, but did not give him the title of *wazīr*. Riḍwān was forced to flee.

Bahrām died in the palace on 24 Rabīʿ II 535/7 December 1140, mourned by the Caliph al-Ḥāfiẓ, who followed his funeral cortège as far as the Monastery of the Ditch, outside Cairo, where he was buried.

BAHRĀM SHĀH, sultan of Ghazna, c. 510-552/1117-1157, son of Masʿūd and great-great-grandson of Maḥmūd of Ghazna, was born not earlier than 477/1084. On the death of his father in 508/1115, Bahrām's elder brother Malik Arslān disposed of other claimants to the throne and obliged Bahrām to flee first to Tikīnābād, then to Kirmān and eventually to the court of the Saldjūḳ Sandjar where he found a welcome. Sandjar led an army against Malik Arslān, defeating him near Ghazna in Shawwāl 510/February 1117 and forcing him to withdraw to the Ghaznawid possessions in Hindūstān. Installed at Ghazna as a tributary by Sandjar, Bahrām defeated Malik Arslān, who had gathered forces from the Pandjāb, imprisoned him and in 512/1118, slew him. In 512/1119, Bahrām Shāh twice marched into the Pandjāb to subdue Muḥammad Abū Ḥatīm, governor of Lahore.

As a protégé of the Saldjūḳs and unable to draw upon the resources of a Maḥmūd to enable him to mount major expeditions in Hindūstān, Bahrām's rule appears to have been uneventful until 529/1135 when he attempted to throw off Sandjar's overlordship only to be compelled to acknow.edge it again within the year.

About 543/1148, a violent quarrel broke out between Bahrām and the chiefs of Ghūr and Fīrūzkūh. Bahrām poisoned the Ghūrid Ḳuṭb al-Dīn Muḥammad, whereupon the latter's brother Sayf al-Dīn Sūrī occupied Ghazna. Bahrām recaptured it and slew Sūrī with ignominy. In 546/1151 the latter's younger brother ʿAlāʾ al-Dīn Ḥusayn ('Djahān-Sūz') defeated Bahrām Shāh and burnt Ghazna. Bahrām took refuge in Hindūstān and although he was able to take advantage of an *imbroglio* between 'Djahān-Sūz' and Sandjar to re-occupy the remains of Ghazna before his death, the descendants of Maḥmūd of Ghazna were never again able to regain and keep their authority in the area around their old capital. (For a discussion of the chronological problems surrounding the last years of Bahrām Shāh's reign see Ghulām Muṣṭafa Khān's article, named in the bibliography).

Bahrām Shāh enjoyed a great reputation as a patron of the arts and figures in later *adab* literature. Among the *literati* who adorned his court were the poets Sayyid Ḥasan Ghaznawī, Sanāʾī, Masʿūd-i Saʿd-i Salmān and the translator into Persian of *Kalīla wa Dimna*, Abuʾ l-Maʿālī Naṣr Allāh.

BAHRĀM SHĀH B. TUGHRUL SHĀH, the Saldjūḳid, was raised to the throne of Kirmān by the Atabeg Muʾayyad al-Dīn Rayḥān in succession to his father on the latter's death in 565/1170 but soon afterwards had to make way for his elder brother Arslan Shāh [*q.v.*]. The two brothers thereupon fought with one another with varying success till the death of Bahrām Shāh in 570/1174-5.

Bibliography: Afḍal al-Dīn Kirmānī, *Badāʾiʿ al-Azmān fi waḳāʾiʿ Kirmān*, ed. Muḥammad Mahdī Balzānī, Tehran 1947, 50 ff.; Houtsma, *Receuil*, i, 35 ff.; *ZDMG*, xxxix, 378 ff. (ED.)

BAHRĀM SHĀH, AL-MALIK AL-AMDJAD, b. Farrukh Shāh b. Shāhānshāh b. Ayyūb, grand nephew of Ṣalāḥ al-Dīn, was appointed by the latter to succeed his father at Baʿlbak when the latter died in 578/1182 (ʿImād al-Dīn al-Iṣfahānī, *al-Barḳ al-Shāmī*, Bodl. MS. Marsh 425, 36r°, followed by Abū Shāma, *Rawḍatayn*[1], Cairo, 33-4), and kept Baʿlbak when the Ayyūbid territories were divided up after the death of Ṣalāḥ al-Dīn. From then on he seems always to have been a faithful vassal of the Ayyūbid ruling at Damascus (Ibn Wāṣil, *Mufarridj*, years 599, 603, 606, 618, 623). At the end of his life, however, he was faced with rivals who found support in the ambitions of al-Malik al-ʿAzīz ʿUthmān of Bānyās, son of al-Malik al-ʿĀdil; al-Nāṣir Dāʾūd of Damascus defended him against them, but, when al-Malik al-Kāmil and al-Malik al-Ashraf settled their differences in order to seize Damascus from Dāʾūd, Bahrāmshāh was sacrificed; after ten months of blockade, al-Ashraf annexed Baʿlbak, and Bahrāmshāh went to Damascus (626/1228); the following year he was assassinated by a slave who bore a grudge against him (Ibn Wāṣil,years 625-627; Sibṭ Ibn al-Djawzī, *Mirʾāt al-Zamān*, ed. Jewett, 441).

Among his contemporaries, Bahrāmshāh was famous less as a prince than as the most eminent man of letters among the Ayyūbids; he had a small court of scholars, and himself composed a *dīwān* of poetry, which has been preserved but not published (J. Rikabi, *La poésie profane sous les Ayyubides*, 221 and n. 3).

AL-**BAḤRAYN,** "the Two Seas", a cosmographical and cosmological concept appearing five times in the Ḳurʾān (once in the nominative, xxxv, 12). The two seas are described as being one fresh and sweet, and one salt and bitter (xxxv, 12; xxv, 53). Fresh meat and ornaments are taken from the two seas, and on them boats are seen (xxxv, 12). Ṭabarī (*Tafsīr*, xxv, 55) says the fresh and sweet denote the waters of rivers and of rain, the salt and bitter the waters of the sea.

The two seas are divided by a barrier, called a *barzakh* (xxv, 53; lv, 20) and a *ḥādjiz* (xxvii, 61). Muslim scholars provide several explanations for this concept, among which is the view that there is a sea in heaven and a sea on earth separated by a barrier (Ṭabarī, *Tafsīr*, xxvii, 61). Most views are more geographical, with the preponderant number assuming the two seas to be the Mediterranean and the Indian Ocean, including the Red Sea. The Ḳurʾān, however, mentions seven seas in xxxi, 27.

The junction of the two seas, *madjmaʿ al-baḥrayn*, is mentioned only once in the Ḳurʾān (xviii, 60). Some commentators regard the location as the meeting place of the Persian Sea and the Roman Sea (*v.* Bayḍāwī, Ṭabarī, Nasafī, Zamakhsharī, etc.).Others

have the two seas meeting at Bāb al-Mandab [*q.v.*], at the connexion between the Sea of Jordan and the Red Sea, or at the Straits of Gibraltar (*e.g.*, Ḳurṭubī). As Wensinck points out in "al-Khaḍir" in *EI*[1], "A far fetched explanation is that the union of the two seas means the meeting of Mūsā and al-Khaḍir, the two seas of wisdom".

After the capture of Constantinople, Meḥemmed II assumed the title *Sulṭān al-barrayn wa 'l-baḥrayn*, "Sulṭān of the two lands and the two seas", and this was among the titles used by succeeding Ottoman rulers.

Kramers, *Djughrāfiyā* in *EI*[1], Suppl.; *idem*, *Geography and Commerce*, in *The Legacy of Islam*, Oxford 1947; *idem*, *L'influence de la tradition iranienne dans la géographie arabe* and *La littérature géographique classique des Musulmans*, in *Analecta Orientalia*, Leiden 1954; A. J. Wensinck, *The Ocean in the Literature of the Western Semites*, Amsterdam 1918. (W. E. MULLIGAN)

AL-**BAḤRAYN** (officially written Bahrain) is a British protected state in the Persian Gulf consisting of an archipelago of the same name lying between the peninsula of Ḳaṭar and the mainland of Saudi Arabia, as well as another group of islands, of which Ḥuwār is the largest, just off the west coast of Ḳaṭar. The Ruler of al-Baḥrayn and the Ruler of Ḳaṭar disagree regarding the status of a small area surrounding al-Zubāra in north-western Ḳaṭar.

The variety of explanations, none of them convincing, of the name al-Baḥrayn in the Arabic sources indicates that its origin remains unknown. In pre-Islamic and early Islamic times the name applied to the mainland of Eastern Arabia, embracing the oases of al-Ḳaṭīf and Hadjar (now al-Ḥasā) [*qq.v.*]; later it was restricted to the archipelago offshore [*cf. History* below].

The largest island (Uwāl or Awāl in the older Arabic sources; now called al-Baḥrayn) is about 30 miles long and 12 miles at its greatest breadth. The capital, al-Manāma, on the northeastern coast, is connected by a causeway 1½ miles long with the town and island of al-Muḥarraḳ to the northeast. Other islands are Sitra, from which an oil loading wharf extends to deep water; al-Nabīh Ṣāliḥ; Umm al-Ṣubbān; Djidā, once a quarry and now a penitentiary; and Umm Naʿsān (also called al-Naʿsān).

The climate is hot and humid, though rainfall averages only about 7 cm. a year. A number of flowing springs (*ʿuyūn*) support an arc of relatively extensive cultivation along the coast of the northern half of the main island from al-Zallāḳ to Djaww, as well as on several of the other islands. Sweet water also bubbles up through the salt water of the Gulf from springs (*kawākib*) not far offshore. Dates, alfalfa, and vegetables are the principal crops, and some cows are kept for milking.

Geologically the island of al-Baḥrayn is an elongated anticlinal dome of sedimentary rocks. The centre of the island has a basin, 12 miles by 4, out of which the hill of al-Dukhkhān rises to a height of about 450 feet. Oil is produced here by the Bahrain Petroleum Co. (Bapco), owned by American interests. Production since 1367/1948 has averaged approximately 30,000 barrels a day, but the Bapco refinery processes over 200,000 barrels a day, most of which is crude oil shipped by submarine pipeline from Saudi Arabia. Bapco's offices and residences for foreign staff are at al-ʿAwālī.

Oil has replaced pearling as the principal industry of al-Baḥrayn. About 500 pearling boats worked out of al-Baḥrayn annually before the slump in pearl prices in 1348/1929 caused by the world-wide economic depression and the increasing use of Japanese cultured pearls. Now only a handful of boats are engaged in pearling, though fishing still affords a livelihood to many people, with most fish caught in tidal weirs. Boat building and repair and sail and net making remain minor industries, along with the manufacture of pottery, whitewash, and plaster.

A free port was opened in 1377/1958 to increase the entrepôt trade fostered by a 5% ad valorem customs rate for all but luxury items. An excellent natural harbour was created in 1375/1955 when a channel was dredged from the deep water of Khawr al-Ḳulayʿa to the open sea. The airport on al-Muḥarraḳ is served by scheduled international flights and is the headquarters of Gulf Aviation Co., in which the Government has an interest, and which flies to many points in the Persian Gulf.

The population of al-Baḥrayn in 1369/1950 was 109,650, with 61% in the towns of al-Manāma (39,648), al-Muḥarraḳ, and al-Ḥidd. There are Persian. Indian, and Pakistani communities, as well as over 2,000 Europeans and Americans. Muslims comprise 98% of the population, about half being Shīʿīs (mostly Djaʿfarī Twelvers, with some Shaykhīs) and the remainder, including the ruling family, Sunnīs (mainly Mālikīs, with some Ḥanbalīs). The Sunnīs are concentrated in the largest towns, and the Shīʿīs in the agricultural villages. The Shīʿīs here, as in al-Ḳaṭīf and al-Ḥasā in Saudi Arabia, are called *Baḥārina* (sing. *Baḥrānī*). To avoid confusion, Sunnī residents of al-Baḥrayn ordinarily now use the *nisba Baḥraynī* for themselves. The Shīʿīs appear to be descendants of early inhabitants of the area, and there seems to be no justification for the hypothesis that they are of Persian origin. A good number of the Sunnīs of al-Baḥrayn are Arabs or the descendants of Arabs onze resident on the Persian coast; such are known as Huwala.

History

For nearly a century investigators have sought the secrets of the early history of al-Baḥrayn in the burial mounds scattered to the number of perhaps 100,000 over the northern half of the main island. In 1296/1879 Capt. E. Durand opened one of the largest tumuli and several smaller ones; others were later probed into by Mr. and Mrs. T. Bent, F. Prideaux, and P. Cornwall. E. Mackay excavated and reported on a series of different types of tumuli. Several mounds, one of which was probably a temple complex, have been studied by members of a Danish archaeological expedition which began work in 1373/1953 under P. Glob and T. Bibby. The early excavators supposed that the tombs were of Phoenician origin, but this theory is no longer generally accepted. Materials found in the mounds, as well as those found by the Danish party in other sites such as near the ruined Portuguese fort of Ḳalʿat ʿAdjādj and at Bārbār, include bronze and iron objects, seal stones, alabaster vessels, ivory fragments, and bitumen-lined clay coffins. Similar tumuli occur in central Nadjd and along the Arabian coast, where a large one at Djāwān, north of al-Ḳaṭīf, excavated in 1371/1952 by F. Vidal, has been dated *c.* A.D. 100. The multitude of mounds spread over such an area indicates the persistence of mound building over a long period of time. Many of the mounds are certainly much older than Djāwān.

Various scholars follow H. Rawlinson (*JRAS* 1880) in identifying al-Baḥrayn with Dilmun of

the Mesopotamian cuneiform records, but this identification has not been established with certainty; *e.g.*, S. Kramer (*BASOR* 1944) considers southwestern Iran the most probable location of Dilmun.

Greek and Latin sources give meagre information on the ancient mainland coast of al-Baḥrayn, where the port of Gerrha lay, the exact site of which remains undetermined. The few South Arabian inscriptions discovered so far contribute little to the history of the region before Islam.

Arab tradition speaks of some of the Lost Arabs in al-Baḥrayn. Among the early historical tribes was al-Azd of Ḳaḥṭān, many of whose members moved on to Oman; other members joined the confederation of Tanūkh, said to have been formed in al-Baḥrayn. Among later emigrants were adherents of ʿAdnānite tribes such as Tamīm, Bakr, and Taghlib, the last two of which were receptive to Christianity. At the time of the Prophet, ʿAbd al-Ḳays [*q.v.*] of ʿAdnān had become the dominant element in the population.

The Sāsānids, beginning with Ardashīr I, intervened in al-Baḥrayn, which was subject to a Persian *marzbān* when the Prophet sent al-ʿAlāʾ b. al Ḥaḍramī eastwards to secure the land. When the *ridda* broke out and a descendant of the Lakhmids in al-Baḥrayn rejected the Caliphate, many of ʿAbd al-Ḳays under al-Djārūd, a converted Christian, did not desert Islam, and al-ʿAlāʾ defeated the rebels at Djuwāthā in al-Ḥasā. Muslim forces crossed over to the island of Dārīn opposite al-Ḳaṭīf and possibly to Uwāl as well.

In the 1st/7th century the Khawāridj under Nadjda b. ʿĀmir and Abū Fudayk [*qq.v.*] maintained a bastion of their power in al-Baḥrayn. Christianity and Judaism had not yet died out completely; the Nestorians were still active enough to hold a synod at Dārīn in A.D. 676. ʿAbbāsid rule was introduced during the next century, but the Arabic sources fail to tell much about its extent or effectiveness.

ʿAlī b. Muḥammad, the inaugurator of the revolt of the Zandj [*q.v.*], a man who may have stemmed from ʿAbd al-Ḳays, embarked on his career of turbulence in al-Baḥrayn before moving on to ʿIrāḳ. In 281/894-5 Muḥammad b. Nūr, the ʿAbbāsid Governor of al-Baḥrayn, led an expedition against the Ibāḍite Imamate of Oman.

The Ḳarmaṭians [*q.v.*] found devoted followers among both townspeople and Bedouins in al-Baḥrayn. In 317/930 the Black Stone was brought from Mecca to al-Baḥrayn, where it was kept for two decades. A victory by al-Muntafiḳ in 378/987-8 revealed the weakness of the Ḳarmaṭians, but they were still in control when Nāṣir-i Khusraw visited al-Baḥrayn 65 years later. In 450/1057-8 Abu ʾl-Bahlūl al-ʿAwwām Ibn al-Zadjdjādj of ʿAbd al-Ḳays defied them by reestablishing orthodox Islam on Uwāl in the name of the ʿAbbāsid Caliph. The tribe of ʿĀmir Rabīʿa of ʿUḳayl [*q.v.*], guardians of the island for the Ḳarmaṭians, suffered defeat in a naval battle at Kaskūs, an island off al-Ḳaṭīf. Within the next few years the final downfall of the Ḳarmaṭians came at the hands of a new dynasty indigenous to al-Ḥasā, the ʿUyūnids [*q.v.*] of ʿAbd al-Ḳays, aided by the Saldjūḳs of ʿIrāḳ.

Although no definite date can be set for the transfer of the name al-Baḥrayn from the mainland to the nearby archipelago, from this point on it may be convenient to restrict the history of al-Baḥrayn to the islands bearing this name today.

In the early period of the ʿUyūnids, who at times kept their capital at al-Ḳaṭīf, the islands of al-Baḥrayn came under their authority. When the unruliness of ʿĀmir Rabīʿa undermined the ʿUyūnid power, al-Baḥrayn became tributary to the Ḳayṣarids of Djazīrat Ḳays [*q.v.*] in the eastern Persian Gulf. In 633/1235 al-Baḥrayn and al-Ḳaṭīf were occupied by the forces of Abū Bakr b. Saʿd, the Salghūrid Atābeg of Fārs, but in 651/1253 al-Baḥrayn regained independence under the ʿUṣfūrids [*q.v.*], a clan of ʿĀmir Rabīʿa.

The Ṭībīs, merchant princes of Djazīrat Ḳays, brought al-Baḥrayn back within the orbit of their island, but their supremacy soon faded with the rise of New Hormuz farther east. About 730/1330 Tahamtam II of Hormuz annexed both Djazīrat Ḳays and al-Baḥrayn, and some 15 years later Tūrānshāh of Hormuz came to al-Baḥrayn in person. The first mention of al-Manāma, the present capital, occurs at this time.

In the mid-9th/15th century ʿĀmir Rabīʿa produced a new dynasty, the Djabrids [*q.v.*], the foremost of whom, Adjwad b. Zāmil, incorporated al-Baḥrayn in his domains and promoted the ascendancy of the Mālikī element over the Shīʿī. The splendid reign of this Bedouin prince carried the fame of al-Baḥrayn as far afield as Egypt and Portugal.

The Portuguese reached al-Baḥrayn from the Indian Ocean as early as 920/1514, but did not seize it until a few years later, when in alliance with Hormuz they overthrew Adjwad's uncle Muḳrim. Their fitful rule of about 80 years placed much reliance on Persian Sunnīs as local governors. In the mid-10th/16th century the Ottomans challenged Portuguese hegemony in the Persian Gulf, but their admirals, better corsairs than administrators, won no permanent foothold in al-Baḥrayn.

In 1011/1602 the Persians under Shāh ʿAbbās I took al-Baḥrayn, which they retained, with certain interruptions, for over 150 years. Persian sovereignty was not always accompanied by strong Persian influence, as the instruments of policy were often chiefs of the Huwala or other Arabs settled on the Persian coast, such as Djabbāra of Ṭāhirī and Nāṣir and Naṣr Āl Madhkūr of Būshahr in the 12th/18th century.

In 1197/1783 Aḥmad b. Khalīfa of Banū ʿUtba (al-ʿUtūb), Arabs who had migrated from Nadjd to Kuwayt and thence to al-Zubāra in Ḳaṭar, drove Naṣr Āl Madhkūr from al-Baḥrayn and inaugurated the rule of the House of Khalīfa, which has endured to the present. The energetic merchants of al-Baḥrayn with their valuable pearl resources contested the primacy recently won by Muscat in the transit trade of the Persian Gulf, thus provoking attacks by the Ibāḍite rulers of Muscat during the next 45 years. The first attack, in 1216/1801, brought Āl Saʿūd of Nadjd to the defence of Āl Khalīfa, but political domination by Āl Saʿūd was not prolonged and the Mālikī proclivities of the Sunnīs of al-Baḥrayn yielded little to the Ḥanbalism of Muḥammad b. ʿAbd al-Wahhāb.

Āl Khalīfa in 1235/1820 concluded with the British Government the first of a series of treaties which by 1332/1914 placed al-Baḥrayn fully under British protection, giving the British control of foreign affairs and exclusive rights in the development of natural resources. The growth of British influence has been the subject of repeated Persian protests for more than a century, and the Iranian Government still presses a vigorous claim to sovereignty over al-Baḥrayn. Although the Ottomans occupied the Arab-

ian coast and Ḳaṭar in the second half of the 13th/19th century and thus encircled al-Baḥrayn until the First World War, the presence of the British prevented them from absorbing the islands.

After an absence of over a millennium, formal Christianity returned to al-Baḥrayn in 1310/1893 when missionaries of the American Dutch Reformed Church founded a station. In 1351/1932 oil was discovered on the main island in the first of the prolific fields on the Arabian side of the Persian Gulf.

From 1354/1935 to 1378/1958 al-Baḥrayn was the principal British naval base in the Gulf, and in 1365/1946 the seat of the British Political Residency in the Persian Gulf was moved from Būs̲h̲ahr to al-Baḥrayn. S̲h̲ayk̲h̲ Salmān b. Ḥamad, who acceded to the rule in 1361/1942, concluded an amicable agreement with King Saʿūd of Saudi Arabia in 1377/1958 fixing a marine boundary between the two countries, the first precisely defined boundary in any of the waters lapping the Arabian Peninsula.

(G. RENTZ and W. E. MULLIGAN)

AL-BAḤRIYYA. a Mamluk regiment in Egypt. Most of the Ayyūbid sultans had mamlūks in their service, but it was only Sulṭān al-Ṣāliḥ Nad̲j̲m al-Dīn Ayyūb (637-47/1240-9) who recruited them in very great numbers. He seized the opportunity of the influx in the Muslim markets of Turkish slaves from the Ḳipčāḳ steppe and neighbouring areas who were uprooted from their homelands by the Mongol advance and created from amongst them a regiment of picked bodyguards numbering between 800 and 1000 horsemen. He called this regiment al-Baḥriyya because he stationed its members on the island of al-Rawḍa on the Nile river (Baḥr al-Nīl).

The Baḥriyya displayed at a very early date all the positive and negative characteristics of a mamlūk military society, viz. exceptional military ability and valour and unity against outsiders on the one hand, and internal dissension on the other. It was they who won the battles of al-Manṣūra (647/1249) and ʿAyn D̲j̲ālūt (658/1260), but six years before the last-named battle a split tore their ranks which threatened their very existence. A short time after Aybak, one of their number, became sultan they tried to dethrone him, but failed. As a result their leader, Aḳṭāy, was killed and some 700 of them had to escape from Egypt and entered the service of various Ayyūbid rulers in Syria and of the Sald̲j̲ūḳ ruler of Asia Minor.

After the death of Aybak group after group of the exiled Baḥriyya returned to Egypt, but they never regained their early position because of the ageing of their members and the thinning of their ranks. The last one of them died in 707/1307. The name Baḥriyya, however, persisted up to the 9th/15th century, for it was applied to various garrisons of the Syrian fortresses, the reason being that the original Baḥriyya performed garrison duties, especially in the reign of the Sulṭān Ḳalāʾūn.

The importance of the Baḥriyya regiment lies in the fact that its formation had ultimately led to the creation of the Mamlūk sultanate. It is wrong, however, to call the early part of Mamlūk rule (648/1250-784/1382), in which the Ḳipčāḳī element was predominant, by the name of "the Baḥrī period". The common name in Mamlūk sources for that period

is Dawlat al-Turk, to distinguish it from the Circassian period (784-922/1382-1517) which they call Dawlat al-Djarkas (see D. Ayalon, *Le régiment Bahriya dans l'Armée Mamelouke*, in RÉI 1952, 133-41).

(D. AYALON)

BAḤRIYYA, a group of oases in the Lybian desert. The Baḥriyya is the most northerly of the Lybian desert. The Wāḥāt Baḥriyya (also singular), *i.e.*, the northern oases, are distinguished from the Wāḥāt Ḳibliyya, the southern oases, *i.e.*, the Dākhla [*q.v.*] and Khārga [*q.v.*]. Between these two groups lie the little oases of Farafra (included in the Dākhla by some), or al-Farāfira, called al-Farfarūn by al-Bakrī and al-Yaʿḳūbī. The three large oases are also distinguished as inner, middle and outer; the inner is the Baḥrīyya which is also called the small. It is sometimes also called the Bahnasiyya as it used to be visited by the people of Bahnasā. Bahnasā al-Ṣaʿīd and Bahnasā al-Wāḥāt are distinguished as early as al-Bakrī (*Mughrib*, 14). According to Boinet Bey's *Dictionnaire Géographique*, the Baḥriyya is a district of the province of Minia. It contains about 6000 inhabitants, and consists of four townships: al-Bāwiṭ (ī), al-Ḳaṣr, Mandīsha, and al-Zabū.

The Baḥriyya, like the other oases, has the reputation of being exceedingly fertile and in the middle ages its dates and raisins were famous. Cereals, rice, sugar-cane and especially indigo were also cultivated there, and alum and green vitriol found, though the latter is not specially mentioned as being found in the Baḥriyya, since all the notices of this sort refer to all the oases together. The fertility of the oasis is due to hot springs containing various chemicals.

Only scanty information is available for the history of the Baḥriyya. In the year 332/943-4 the oases are said to have been under the rule of a Berber prince ʿAbd al-Malik b. Marwān and to have been independent. Under the Fāṭimids we hear of an Egyptian governor Abū Ṣāliḥ. In the time of al-Maḳrīzī and al-Ḳalḳashandī, that is, under the Mamlūks, they were not governed directly by the state but by feudal tenants. At all periods the oases have suffered from the predatory raids of Arab and Berber nomads while the more southern ones (perhaps also the Baḥriyya?) were sometimes the object of forays by the Kings of Nubia. It is only in modern times that they have been placed in closer relationship to the Egyptian government. In the seventies they were visited by Schweinfurth and since then European travellers have often gone there.

In earlier times the oases must have been very much more important than they are now, as witness the remains of several ancient temples, built by the Romans, and of a church of the 6th century A.D. The Coptic Church appears to have been in a flourishing condition till a late period. We hear of solemn processions with the body of one of the disciples which was carried through the streets in a shrine (*tābūt*) by a team of oxen. No doubt St. Bartholomew is meant (al-Bakrī, 14 should no doubt thus be emended,) or perhaps also St. George or both.

(C. H. BECKER)

BAḤRIYYA, I. The navy of the Arabs until the time of the Fāṭimids [see Supplement].

II. The navy of the Mamlūks. The Mamlūk sultanate came into being a long time after Christian Europe had established its uncontested naval supremacy in the Mediterranean. Throughout that sultanate's existence this supremacy had been much strengthened. Under such circumstances there was little chance for Mamlūk sea power to demonstrate its existence. Mamlūk naval activities occupy a prominent place in the sources, mainly in connexion with Sulṭān al-Ẓāhir Baybars' ill-fated expedition to Cyprus in 669/1270, with Sulṭān Barsbāy's expeditions to the same island and to Rhodes in the years 827-829/1424-6, 847/1443, and with the expeditions against the Portuguese in 913/1507 and 921/1515. Otherwise such activities are mentioned only on very rare occasions. Thus it is impossible in the present state of our knowledge to write the history and describe the structure and functioning of whatever navies the Mamlūks possessed. Source references to some technical aspects of Mamlūk naval power will be given in the bibliography.

The deficiency of Mamlūk sources in technical information on the navy is, however, largely compensated for by the insight they give us into the socio-psychological factors which dictated the Mamlūks' attitude towards the navy. As these factors have by no means been limited to Mamlūk society alone, their examination might be of benefit to the general history of Islam in the Middle Ages.

The two following and closely connected subjects will be briefly discussed here: (a) the attitude of the Mamlūks towards the navy and its consequences; (b) their policy towards their ports and coastal fortifications.

(a) As might be expected from a military society of horsemen the attitude of the Mamlūks towards the sea was extremely negative. Even Baybars I was no exception to this rule, in spite of his unusual grasp of wide strategical problems and in spite of the fact that he cared for the navy more than any other Mamlūk sultan and that in his days Mamlūk sea power had reached its peak. After the disaster which his flotilla suffered in 1270 off the coast of Limasol, he wrote a letter to the king of Cyprus in which he stressed the superiority of a victory on land won by horsemen over a victory on the sea won by oarsmen, and then he succinctly defined the essential difference between the might of Islam and the might of the maritime powers of Christian Europe as follows: "Your horses are ships, while our ships are horses" (*antum khuyūlukum al-marākib wa naḥnu marākibunā al-khuyūl*) (*Sulūk*, i, 594, note 3). Not less illuminating was his reaction immediately on receiving the tidings about that disaster. He thanked God for the light punishment He allowed the evil eye to inflict upon him after having won so many victories. For all he had to sacrifice in order to save his land army from the evil eye was a certain number of ships and their crews, which were composed of fellahin and of common people (*al-fallāḥīn wa 'l-ʿawāmm*) (*Khiṭaṭ*, ii, 194, ll. 24-29; *Sulūk*, i, 594, ll. 2-3; *al-Nahdj al-Sadīd*, in *Patrologia Orientalis*, xii, 542, ll. 2-5). There can hardly be any doubt that elements of higher social status than the two above-mentioned ones served in the navy as well,

but in all probability they did not include the Mamlūks, who occupied the highest rung in the social ladder. When Baybars' flotilla was wrecked off Limasol, the Franks succeeded in capturing the whole naval command of the Mamlūk sultanate, including the captains (*rayyis*) of all the three Egyptian ports: Alexandria, Damietta and Rosetta. A very long list of the prisoners' names had been preserved in Ibn Shaddād al-Ḥalabī's famous biography of Baybars (Edirne, Selimiye, 1557, chronicle of the year 673 A.H. cf. the Turkish translation by Şerefüddin Yaltkaya, Istanbul 1941, 46, where however the list of names is omitted). This list does not contain a single name of a Mamlūk. Of all the prisoners not even one was considered important enough to be honoured with a biography. Nor is that all: Mamlūk historical literature contains many thousands of biographies, none of which is dedicated to a naval commander. Al-Maḳrīzī's statement that the designation *usṭūlī* ("man of the navy") was considered an insult in the Ayyūbid period after Saladin's reign (*Khiṭaṭ*, ii, 197, 11. 2-2) is true for the Mamlūk period as well.

The scarcity of wood and metals also greatly contributed to the weakness of Mamlūk sea power. The "forests" of Egypt, always covering only a small area, practically disappeared under Mamlūk rule as a result of neglect. In north-western Syria and in the vicinity of Beirut there were small forests which supplied wood for shipbuilding. From about the middle of the 9th/15th century the Mamlūks imported great quantities of timber from Ildjūn in south-eastern Anatolia, which they carried in their own ships under the protection of heavy escorts of Mamlūk soldiers. The contemporary sources hardly mention imports of timber from Europe, which must however, have been considerable.

The only source of iron-ore in the whole Mamlūk sultanate was a small mine located near Beirut, the output of which was mainly absorbed by the local shipyard. Other metals were not to be found at all within the sultanate's boundaries.

Yet in spite of the great handicap caused to shipbuilding by the scarcity or absence of raw materials, this factor was only of secondary importance compared with the Mamlūks' aversion to the sea.

As a matter of fact a permanent Mamlūk navy did not exist at all. Whenever a flotilla was constructed, it was only to exact reprisals for a very damaging and humiliating act of aggression by the Frankish corsairs. When a new flotilla was built, the older one had already ceased to exist for a very long time. Under such circumstances it was impossible to maintain a naval personnel worthy of its name. No wonder, therefore, that the Franks attacked the coasts of Islam at will and got away unscathed. The attacks usually caught the Muslims unawares, and when they did sound the alarm it was, in most cases, a false one.

With the advance of the years Mamlūk sea power became even more insignificant, not only because of the general decline of the realm, but also—and mainly—because of the increasing employment of firearms in sea warfare. In the Mediterranean, the pressure of the Franks on the Muslim shores was greatly intensified. In the Indian Ocean small squadrons of a new type of ocean-going Portuguese ships armed with superior artillery easily annihilated the Mamlūk warships sent against them, and thus paved the way for European domination of the sea routes to India and the Far East for many centuries.

(b) The steadily deteriorating naval power of Islam drove the Muslims after many hesitations to the destruction of the Syro-Palestinian ports and coastal fortifications. As a result of the Crusades, the Muslims came slowly to realise that this was their only alternative. The destruction was started by the Ayyūbids, but was mainly accomplished by the Mamlūks. The turning-point was the battle of Ḥaṭṭīn (583/1187) and the events which followed it in the next few years. These proved to the Muslims that however decisive their victory over the Franks might be on land, the Franks could always easily turn the tables upon them by means of their naval supremacy. ʿAsḳalān, destroyed by the personal order of Saladin in 587/1191, was the first victim of that policy, which was followed up after that with unswerving determination.

When the Mamlūks rose to power, they wiped out one after the other the fortifications of the Syro-Palestininian coast, and destroyed many of its ports from about the middle of the 13th century and up to the year 722/1322, in which Ayās near Alexandretta had been conquered. Of the numerous coastal fortresses (*ḳilāʿ*, sing. *ḳalʿa*) none was left. A few towers (*burūdj*, sing. *burdj*) were constructed on the ruins of some of them, mainly in order to keep watch on the sea and resist the first onslaught of a possible Frankish attack.

In addition, the Mamlūks tried to strengthen their coastal defences by settling near the coast Kurds, Khwārizmians, Turcomans, Oirats, etc., who sought refuge in the sultanate and were called *Wāfidiyya*. This attempt, however, failed, generally speaking, for the *Wāfidiyya* soon assimilated with the local population and disappeared as a separate entity. Only the Turcomans are mentioned for quite a long period as guardians of the coast.

The port-towns of the Syro-Palestinian coast declined very greatly. Some of them entirely disappeared, others became small fishing ports and only very few recovered fairly quickly.

The most thoroughly destroyed and the most desolate part of the coast was the section stretching from the south of Sidon and up to al-ʿArīsh, *i.e.*, roughly speaking the shores of Palestine. ʿAsḳalān, Arsūf, Caesarea and ʿAthlīth, remained in ruins up to recent times. The revival of Haifa started many years after Mamlūk reign, whereas Jaffa and Acre were only insignificant hamlets under Mamlūk and early Ottoman rule. The nearness of that part of the coast to Jerusalem and the flatness and comparative wideness of the plain adjoining it—which make it an ideal area for landing troops from the sea—were undoubtedly the main reasons for its thorough destruction.

The only towns which recovered from the blow fairly quickly were Beirut and Tripoli, but their defences were far weaker than those which they had had in the past. Thanks to the historian Ṣāliḥ b. Yaḥyā, we know much more about Beirut's system of defence than about that of any other Syro-Palestinian port. The picture revealed of the weakness of that system is very depressing indeed (*Taʾrīkh Bayrūt*, 28-42, 45, 67-9, 90-4, 100-112, 134, 168, etc.).

The Egyptian coast, on the other hand, was left almost intact. In the first half of the 13th century Tinnīs was permanently destroyed, but Damietta was very soon rebuilt after having been destroyed. The reason for the preservation of the Egyptian ports and coastal fortifications were: first, that Egypt was invaded by the Crusaders only for very short periods; second, that trade with the outside world was vital

for the country's existence (economic considerations undoubtedly played a decisive rôle in the revival of Beirut and Tripoli as well); third, all the picked units of the Mamlūk army were concentrated in Egypt (or more precisely in Cairo). They could easily be rushed from the capital to any point on the Egyptian coast.

From the above it should not be concluded that the Mamlūks devoted much of their attention to the Egyptian coast. Alexandria and the other Egyptian ports were garrisoned by third-rate troops, including members of the declining non-Mamlūk regiment of the *ḥalḳa* and Bedouins of the neighbourhood, equipped with most primitive weapons. When the Royal Mamlūks were forced to garrison these ports in times of great danger, they stayed there only for very short periods. Even the most severe blow which the Franks inflicted on Alexandria in 1365 did not bring about any substantial change in its system of defence.

In the inner parts of their realm, and I mean mainly the mountain region of Syria and Palestine, the Mamlūks pursued a totally different policy. There they rebuilt systematically the fortresses which were damaged or destroyed either by the Mongols or as a result of the fighting with the Crusaders. The term *ḳalʿa*, which has entirely disappeared from the coast, is encountered very frequently in the interior even in remote and little known places.

AYALON)

iii. The Ottoman navy. From the foundation of the Ottoman state to the time of Bāyazīd I (1389-1402), the sea of Marmara and part of the Aegean seaboard lay within its boundaries. For the crossing into Rumelia, use had been made of transports belonging to the principality of Ḳarasi, stationed on the coast of the Ḳapīdaghī peninsula. The need for a fleet was felt in the first years of Bāyazīd's reign, when by occupying the principalities of Ṣārūkhān, Aydin, and Menteshe, which held the coast-lands of western Asia Minor, he reached the Mediterranean. The fleets of the occupied principalities were utilised, and at the same time an arsenal was established at Gallipoli, and naval activity began in the Aegean. Gallipoli was ranked as a *sandjaḳ* and became the centre of the Ottoman admiralty. Subsequently a number of other *sandjaḳs* were added to it, to form the *eyālet* of the Ḳaptan (Kapudan) Pasha. Ships were built not only at Gallipoli but also on the shores of the sea of Marmara, the Aegean and at some points on the Black Sea coast, and naval activity increased.

The first Ottoman sea-battle occurred in 819/1416, against the Venetians, the Ottoman Ḳaptan Pasha being Čalī Bey, *sandjaḳ beyi* of Gallipoli. In this battle, which took place between the island of Marmara and Gallipoli, the Ottoman navy was defeated and Čalī Bey was killed, while the Venetian admiral Pietro Loredano was wounded in the eye. The following year peace was made, through the mediation of the Byzantine emperor.

After this the Ottoman navy steadily progressed. First it brought under its influence some off-shore islands in the Aegean that had been colonised by the Genoese, and later, in 860/1456, it took the harbour of Enez and the islands of Imbros, Thasos, Samothrace, and Lemnos, and in 866/1462 Lesbos. Shortly after this date there began the series of hard-fought battles with Venice. The island of Euboea, an important Venetian base, was taken in 815/1470, and the Ionian islands in the last years of the reign of Meḥemmed II.

The Ottoman empire was already making its naval strength felt when Khayr al-Dīn ('Barbarossa'), the Bey of Algiers, entered its service. His skill brought it to the highest degree of maritime power, and with the battle of Preveza (4 Djum. I, 2 September 1538) it won the mastery of the Mediterranean. Defeat at Lepanto (979/1571) cost the Ottoman empire its fleet, but thanks to the *odjaḳlıḳ* system (whereby a given region was responsible for supplying an arsenal with

one particular ship-building commodity; *e.g.*, the island of Thasos had to provide pine-wood for the ship-yards of Lemnos: see I. H. Uzunçarşili, *Osmanlı devletinin merkez ve bahriye teşkilâtı* Ankara 1948, especially footnote to p. 449), a new fleet was created in so short a time as five months, and with the help of this the Venetians were compelled to make peace and sign a — for them — inglorious treaty.

Towards the end of the 16th century, the Ottoman fleet was weakened by the haphazard appointment of men with no naval experience to the *ḳaptan-pas̲h̲alïḳ*, the command of the naval forces. From the beginning of the 17th century the Venetian fleet replaced its oar-driven galleys by sailing galleons, while the Ottoman navy persisted in the use of oars. Partly for this reason and partly because the ships' crews were pressed men with no interest in seafaring, it had so little success that the islands of Tenedos and Lemnos fell into enemy hands.

Eventually, in 1682, during the grand vizierate of Ḳara Muṣṭafā Pas̲h̲a of Merzifon (1676-83), the principle was accepted that sailing galleons should form the basis of the fleet (a principle that had long been applied by the navy of Algiers, an Ottoman dependency). Thus a balance was achieved with the Venetians in the Mediterranean, and in 1106/1695 the island of Chios was recovered from them. A *ḳānūn* relating to galleons, their commanders and crews, was promulgated in 1701.

During the 2nd half of the 18th century no battle was fought against the Venetians, whose power had weakened, but the main naval activity in the western Mediterranean passed to the French and English fleets. In the course of the Russo-Turkish war which began in 1182/1768, the Russian fleet, which the English had developed in the Baltic, entered the Mediterranean and in 1184/1770 succeeded in virtually annihilating the Ottoman fleet in the harbour of Čes̲h̲me. After the treaty of Küčük Ḳaynard̲j̲a in 1188/1774, prominence was given to naval matters, and a school of engineering was opened in the Arsenal, staffed by experts brought from Europe. In the reign of Selīm III (1789-1807) great importance was attached to equipping the fleet by up-to-date methods, as a result of the zeal of Küčük Ḥusayn Pas̲h̲a. The school of naval engineering was enlarged, and a school of military engineering founded. In the reign of Maḥmūd II (1808-39) the navy was not neglected, but a variety of causes, internal and external, impeded its development. Nevertheless training was given at the school of naval engineering to commanders and naval architects. As a result of the revolt of the Peloponnese, and the help afforded to the rebels by Britain, France, and Russia, the Ottoman fleet was destroyed in Navarino Bay in 1243/1827. Despite this disaster naval activity did not cease, and in 1244/1828 a naval academy was opened on Heybeliada. The Ottoman navy attained a position of strength during the reign of ʿAbd al-ʿAzīz (1861-76), in consequence of the importance attached to it, as also to the army, by this sultan. In the time of ʿAbd al-Ḥamīd II (1876-1909) however, the fleet, that had been built up with great enthusiasm, fell into neglect, as part of the prevailing remissness; in the result, the Ottoman empire, which had long coastlines on three continents, suffered severe territorial losses.

In the period of oared vessels, the principal types of Ottoman ships were the *ḳādïrg̲h̲a* (galley), *ḳālïte* (galliot), and *firḳate* (frigate). The individual commanders were known as *reʾīs*, squadron-commanders as *ḳaptan*, and the commander-in-chief of the fleet as *Ḳapudān-i deryā*. The great galley of the *Ḳapudān-i deryā* or Ḳaptan Pas̲h̲a was called *bas̲h̲tarda*. The *ḳādïrg̲h̲as* were of two classes: *k̲h̲āṣṣa ḳadïrg̲h̲alarï* and *bey ḳādïrg̲h̲alarï*. The former were constructed by the government, the latter by the *sand̲j̲aḳ beyis* of the *eyālet* of the Ḳaptan Pas̲h̲a.

After the introduction of sailing vessels as the basis of the fleet, it was entrusted to three admirals under the *Ḳapudān-i deryā*. They were, in order of seniority, the *ḳapudāna* (Admiral), the *patrona* (Vice-Admiral), and the *riyāle* (Rear Admiral). The principal sailing vessels, in descending order of size, were the *ḳurvet*, the *firḳateyn*, and two kinds of galleon known as the *ikï ambarlï ḳapaḳ* and the *üč ambarlï*. The crews of galleons were called *ḳalyond̲j̲u*, and included *aylaḳd̲j̲ïs* (temporary sailors), *marinars* (who were prisoners of war), *g̲h̲abyars* (who attended to the sails), *ṣanʿatkārs* (craftsmen: painters, carpenters, blacksmiths, caulkers), and *sudag̲h̲abos* (gunners).

Next in rank to the Kaptan Pas̲h̲a in the Istanbul arsenal came the *tersāne ketk̲h̲udāsï* and the *tersāne emini*, and after them officers of the second and third rank. The accountant of the arsenal had the title of *D̲j̲ānib efendi*. Till the introduction of sail, the *tersāne ketk̲h̲udāsï* ranked as Vice Admiral and occupied himself with the discipline of the arsenal. The *tersāne emïni* was trained at the Bāb-i ʿĀlī and had control of supplies, income, and expenditure for the fleet and arsenal. This office was abolished in 1830 and its duties were entrusted to the Kaptan Pas̲h̲a.

In 1841 new ranks were instituted for both army and navy. In 1851 the Navy Ministry (*baḥriyye neẓāreti*) was created, with charge of the financial and administrative functions formerly exercised by the *tersāne emïni*. The title of *Ḳapudān-i deryā* was abolished and a fleet command council was set up. In June 1876 the title of *Ḳapudān-i deryā* was restored. Finally, in 1881, the offices of minister and commander-in-chief of the navy were combined in one man, of the rank of *müs̲h̲īr*. This arrangement continued till the end of the Ottoman empire.

In 1922, after the establishment of the government of the Grand National Assembly in Ankara, the Navy Ministry (*baḥriyye vekâleti*) was formed. In 1927, when this ministry was abolished, naval affairs were made the responsibility of the Ministry of National Defence, and have since been administered by a department headed by a permanent undersecretary (*müstes̲h̲ar*).

BAḤSHAL, ASLAM B. SAHL AL-WĀSIṬĪ AL-RAZZĀZ, author of a History of Wāsiṭ. Nothing is known of his life except the names of some of his authorities, among them Wahb b. Baḳiyya (155-239/772-853), supposedly his maternal grandfather (but cf. al-Khaṭīb al-Baghdādī, *Ta'rīkh Baghdād*, xiii, 488), and the approximate date of his death, between 288/901 and 292/904-05.

The History of Wāsiṭ has come down to us in an incomplete manuscript in Cairo (Taymūr, *ta'rīkh* no. 1483) which had an interesting history and possesses considerable association value. It is the oldest preserved history intended to serve as an aid for *ḥadīth* scholars in evaluating the reliability of transmitters. Starting with a rather brief discussion of the early history of Wāsiṭ and its environs, it deals with the religious scholars who had some connexion with Wāsiṭ and were also linked to the author by an uninterrupted chain of transmitters. The biographies are arranged chronologically according to generations of scholars (here *ḳarn*, for the more common *ṭabaḳa* "class"). They contain little personal information but restrict themselves as a rule to the name of the scholar, his authorities and students, and one (and, occasionally, more than one) of the traditions he transmitted. The work represents, if not the beginnings, at least an early simple stage of what was soon to become one of the most elaborate types of historico-biographical literature in Islam.

Bibliography: Yāḳūt, *Irshād*, ii, 256; Dhahabī, *Mīzān*, Cairo 1325, i, 98; Ṣafadī, *Wāfī*; Ibn Ḥadjar, *Lisān*, i, 388, cf. also his *Mu'djam al-Mufahras*, MS. Cairo, *muṣṭ. al-ḥadīth* no. 82, 102; Brockelmann, S I, 210; F. Rosenthal, *A History of Muslim Historiography*, Leiden 1952, 83, 144 f., 406. (F. ROSENTHAL)

BAḤTH, infinitive of the Arabic root *b.ḥ.th*; from its original meaning, "to rake, to dig, to turn over soil (in order to search for something)", there later developed its meaning of "to look for, examine, consider", in the intellectual and speculative sense. *Baḥatha* became in this respect almost a synonym of *naẓara*, and, in fact, the two terms *baḥth* and *naẓar* are often found in association (*e.g.*, Mas'ūdī, *Murūdj*, vi, 368; *ahl al-baḥth wa'l-naẓar*, "specialists in philosophic inquiry and controversy"). A *Kitāb al-Baḥth* formed part of the corpus of writings attributed to Djābir b. Ḥayyān, who dates from the 3rd/9th century (cf. Brockelmann SI, 429). Since that time, *baḥth*, with its plural *abḥāth*, appears in the titles of numerous works precisely in the sense of "study, examination, inquiry" (also in the form *mabḥath*, pl. *mabāḥith*, which denotes not only the object of the inquiry but the inquiry itself) and in this strengthened form it is often used in modern Arabic, in the technical and scientific sense of "study": *e.g.*, *Mabāḥith 'arabiyya* of Bishr Fāris, Cairo 1939. (F. GABRIELI)

BAHURASĪR [see AL-MADĀ'IN].

AL-**BAHŪTĪ**. SHAYKH MANṢŪR B. YŪNUS AL-BAHŪTĪ, frequently referred to by the name of AL-BAHŪTĪ AL-MIṢRĪ, is usually considered as one of the most eminent doctors of Ḥanbalism in the first half of the 11th/17th century, and also as the last major representative of this school in Egypt. A native of the village of Bahūt in the Mudīriyya Gharbiyya, al-Bahūtī belonged to a family which gave several other *'ulamā'*, who enjoyed a certain notoriety, to Ḥanbalism. The following are cited among the best known of his teachers: Muḥammad al-Mardāwī (died 1026/1617) *Mukhtaṣar*, 96), also an Egyptian Ḥanbalī, and the traditionist and lawyer 'Abd al-Raḥmān al-Bahūtī (*Mukhtaṣar*, 104), who was reputed to be well versed in the four major schools of *fiḳh*. Manṣūr al-Bahūtī also counted a Shāfi'ī among his teachers, 'Abd Allāh al-Danawsharī. Little is known of his life, except that he devoted himself in Cairo to teaching *fiḳh* and that he gave numerous legal opinions (*fatāwā*). His biographers praise his devotion and his charitable disposition. His teaching appears to have enjoyed great success; numerous students came to him for their training, in fact not only from Egypt, but from Syria and Palestine as well. Among his chief disciples two members of his own family are cited, Muḥammad al-Bahūtī and Muḥammad b. Abi'l-Surūr al-Bahūtī, and the Syrian Abū Bakr b. Ibrāhīm al-Ṣāliḥī. He died in Cairo in Rabī' II/105/July 1641, apparently at a very advanced age, and was buried in the *turba* of the *Mudjāwirūn*.

Manṣūr al-Bahūtī's work, which is still used today in Egypt for teaching Ḥanbalism, is devoid of any great originality on the part of the author. It stands, in the history of Ḥanbalism, as a prolongation of the work of Mūsā al-Ḥudjāwī (died 968/1560) (cf. Brockelmann, II, 325 and S II, 447) and that of Shaykh Taḳī al-Dīn al-Futūḥī, better known under the name of Ibn al-Nadjdjār (died about 980/1572) (cf. Brockelmann, S ii, 447). The Palestinian al-Ḥudjāwī, who was *muftī* in Damascus where he taught at the 'Umariyya and at the Mosque of the Umayyads, had composed a resumé of the *Muḳni'* of Muwaffaḳ al-Dīn b. Ḳudāma (died 620/1222), under the title of *Zād al-Mustanḳi'*, and a manual of Law, the *Iḳnā'*, which has become a classic in Ḥanbalism of the late period. Muḥammad al-Bahūtī wrote a commentary on the first of these works with the title *al-Rawḍ al-Murbi' bi-Sharḥ Zād al-Mustanḳi'* (Cairo 1352, 2 vols.). He also left a commentary on the *Iḳnā'* (published at Cairo in three volumes). Shaykh Tādj al-Dīn al-Futūḥī, who received his training in Cairo, combined the *Muḳni'* of Muwaffaḳ b. Ḳudāma and the *Tanḳīḥ* of Ḥasan al-Mardāwī (died 910/1504-5; *Mukhtaṣar*, 77-78), in a single manual entitled *al-Muntahā*, which speedily achieved considerable success. We are also indebted to Manṣūr al-Bahūtī for a *sharḥ* on the *Muntahā* (Cairo, 3 vol.) and for a *ḥāshiya*, gloss on the same text.

He also wrote a commentary on the *Mufradāt* of Muḥammad b. 'Alī al-Maḳdisī (died 820/1417; *Mukhtaṣar*, 65), a long poem in which the points of doctrine peculiar to Ḥanbalism are expounded. This commentary was published at Cairo, by the Salafiyya press, in 1343/1924 (and the actual text was again reprinted by the same publishers the following year, with brief notes taken from al-Bahūtī's commentary). Lastly, a commentary on the *Muḳni'* is attributed to him (cf. *RAAD*, xii, 631).

Bibliography: In addition to the references given in the body of the article: Muḥibbī, *Khulāṣat al-Athar fi A'yān al-Ḳarn al-Ḥādī 'Ashar*, Būlāḳ n.d., iv, 426; Djamīl al-Shaṭṭī, *Mukhtaṣar Ṭabaḳāt al-Ḥanābila*, Damascus 1339, 104-106; Brockelmann, II, 447; H. Laoust, *Le Précis de droit d'Ibn Qudāma*, Beirut 1950, liii. (H. LAOUST)

BAHW, an Arabic word primarily designating an empty and spacious place extending between two objects which confine it, has acquired, in the architecture of the Western Muslim World,

somewhat varied meanings, which are, however, related to the intial meaning of the word.

To this primary sense of the term, the *Lisān al-ʿArab* adds the following apparently derivative meaning: *bahw* is a tent or pavilion chamber situated beyond the rest, which suggests the idea of a pavilion differing from that which it preceeds both in situation and by its spaciousness and height.

One of the first examples of the use of the word which enables us to determine its meaning, is to be found in the description of the great mosque of al-Ḳayrawān by al-Bakrī. He speaks of the *Ḳubbat bāb al-bahw*, which de Slane translates: "Cupola of the door of the pavilion". We have no difficulty in identifying this cupola as the one which rises before the hypostyle chamber, in the middle of the narthex gallery opening on to the courtyard; it would, however, seem more appropriate to translate: "Cupola of the door of the central nave" and to recognise in *bahw* the term designating the axial nave leading to the *miḥrāb*, which differs clearly from the others by its spaciousness, its being closed by the largest door and preceded by the cupola.

The arrangement of the naves at right angles to the wall of the *ḳibla* and the adoption of a main nave occupying the centre, an arrangement which we are amply justified in considering as being inspired by pagan and Christian basilicas, is mainly encountered in the West, which explains why *bahw* almost exclusively belongs to the vocabulary of Western Muslim Architecture. Attested in al-Ḳayrawān in the 5th/11th century, the term is still used at Tunis to designate the central nave of the great mosque. The name *Bāb al-buhūr* given to the door preceding this nave is a most likely corruption of the original term.

In Spain, the term *bahw* seems to be less strictly used. It is to be found in the description given by al-Maḳḳarī of the Umayyad palace built by ʿAbd al-Raḥmān III at Madīnat al-Zahrāʾ. The main building of the palace comprised 5 naves extending lengthways. The central nave, larger than the other four, was closed by a door called *bāb al-bahw*. The throne of the sovereign was situated at the end of this nave and there he gave audience. There it was that al-Ḥakam II received King Ordono IV and caused him to be seated before him. However, the adjoining naves, also comprised in the ceremonial chamber, seem to have been to some extent confused with the central nave and are also at times referred to by the term *bahw*.

This confusion is emphasised by Ibn Bas̲h̲kuwāl, quoted by al-Maḳḳarī in relation to the great mosque of Cordova. Ibn Bas̲h̲kuwāl applies the word *bahw* to the 19 naves of the great mosque as an exception, being careful to add that they are normally called *balāṭ*, which is in fact the term most usually applied to the naves of a mosque. Al-Maḳḳarī, describing the mosque of Ucles, refers to the central nave by the expression *al-balāṭ al-awsaṭ*.

The sense of a nave extending lengthways and playing the role of a ceremonial chamber, as suggested by the description of the Umayyad palace, explains the use of *bahw* to indicate an audience chamber. There were two such chambers in the palace of Cordova to which Ibn al-K̲h̲aṭīb applies this term. According to al-Tid̲j̲ānī, at Gabès, in the castle built by Ibn Makkī, an audience chamber was provided with a *bahw* where the master of the palace was seated. We naturally identify this place of honour with the *iwān*, the central alcove, of Mesopotamian origin, which is to be encountered in the houses of Fusṭāṭ of the Ṭūlūnid period and which was likewise known to Eastern Barbary from the 4th/10th century. This deep recess, the place of honour, set into the back wall of a large chamber, still exists in Tunisian and Algerian houses: in Tunisia it bears the name *ḳbū*, in Algeria, however, the name *bahw* seems to be not unknown.

Bibliography: See especially the very complete work by A. Dessus Lamare, *Étude sur le bahwu, organe d'architecture musulmane*, in *JA* 1936, ii, 529-547. Main sources: Bakrī, *Description de l'Afrique septentrionale*, ed. and trans. de Slane, 1912-191; Maḳḳarī, *Analectes*, ed. Dozy, Dugat, Krehl and Wright, i, 1251 ff.; Ibn al-K̲h̲aṭīb, *al-Iḥāṭa*, Cairo 1319/1901-2. (G. Marçais)

BAIKAL, in eastern Turkish (by folk-etymology) *Bai kül*, 'the rich lake'; in Mongolian *Dalai nor*, 'the ocean lake'; the deepest lake (1741 m.), and the largest mountain lake in the world, between 51° 29′ and 55° 46′ north, and 103° 44′ and 110° 40′ east, surrounded by high mountain ranges, 635 km. long, and varying from 15 to 79 km wide, with an area of 31,500 sq. km. Flowing into it are the Selenga, the Barguzin and the upper Angara, and flowing out is the Angara at Yenisey. The Lake Baikal railway (307 km. long, with 40 tunnels) — a branch of the Trans-Siberian railway — was completed round the southern part of it (between the Angara exit and the Selenga delta) in autumn 1904.

It appears that Lake Baikal was not known to Muslim geographers in Mongol times. It is mentioned only by Ras̲h̲īd al-Dīn, *D̲j̲āmiʿ al-Tawārīk̲h̲* (ed. Berezin iii 180) (Trudl Vost. otd. Imp. Ark̲h̲eol. Ob-va XIII). Here, the people living on its shores are called Barḳūt (*-t* is the Mongol plural ending), and the region around it Barḳūd̲j̲īn (Tūkūm), which is recalled by the river Barguzin. The lake became known in Russia in the first half of the 17th century, and in western Europe shortly afterwards.

BAILO [see bālyōs].

al-**BAʿĪT̲H̲**, nickname of a satirical poet of Baṣra named K̲h̲idās̲h̲ b. Bis̲h̲r al-Mud̲j̲ās̲h̲iʿī. Though held to be the greatest orator of the Tamīm, Ibn Sallām places him in the second class of the great Islamic poets. The critics, however, consider that his relative obscurity was only due to the renown of D̲j̲arīr; al-Baʿīt̲h̲'s activity is in fact associated with that of the two rivals D̲j̲arīr and al-Farazdaḳ: for many years he exchanged invectives with the former, but was obliged to call the latter to his assistance, who, moreover, does not always treat him gently (he also refers to him by the nickname *Ibn ḥamrāʾ al-ʿid̲j̲ān* "son of the woman with the red perineum", an allusion to his mother's humble origin; she was a slave from Sid̲j̲istān). Yāḳūt places his death in 134/752, but as he adds: "during the Caliphate of al-Walīd b. ʿAbd al-Malik" (who reigned from 88 to 98/705-15), this date cannot be given credence.

(CH. PELLAT)

BAḲĀʾ WA-FANĀʾ. The Ṣūfic terms *fanāʾ* (passing-away, effacement) and *baḳāʾ* (subsistence, survival), refer to the stages of the development of the mystic in the path of gnosis. These categories, partly antithetical and partly complementary, are more or less equivalents of such other pairs as *sukr* (intoxication) and *ṣaḥw* (sobriety), *djamʿ* or *waḥda* (unity) and *tafriḳa* or *kathra* (separation, plurality), and *nafy* (negation) and *ithbāt* (affirmation).

The doctrine has been developed especially since the execution, in Baghdād in A.D. 922, of al-Ḥallādj who declared "I am God", when the Ṣūfīs turned to the task of a more sober description of the mystic experience in an effort to exonerate al-Ḥallādj from the un-Islamic idea of identifying the human ego with God and to demonstrate that Ṣūfism was not only truly Islamic but is the true Islam. Even though some Ṣūfīs, in their moment of ecstasy, have not been able to guard against utterances similar to that of al-Ḥallādj, especially in their poetry, they have usually categorically denied both the incarnation of God in man and the total mergence of the individual and finite human ego in God. Two allied definitions have been offered of *fanāʾ*: (1) the passing-away from the consciousness of the mystic of all things, including himself, and even the absence of the consciousness of this passing-away and its replacement by a pure consciousness of God, and (2) the annihilation of the imperfect attributes (as distinguished from the substance) of the creature and their replacement by the perfect attributes bestowed by God. It is quite obvious that *fanāʾ*, unlike the Indian Nirvana, is not a mere cessation of individual life, but the development of a more ample and perfect selfhood, thanks to the utter change of attributes wrought by the influence of God, and is more like the Greek ἔκστασις, provided one guards against the total fusion of man and God.

Accordingly, *baḳāʾ*, keeping the two definitions of *fanāʾ* in view, means (1) persistence in the new divinely bestowed attributes (*baḳāʾ biʾllāh*), and (2) a return to the mystic's consciousness of the plurality of the creaturaly world. The second follows from the first, since being with God means also being with the world which has been created by God and in which He is manifested, however imperfectly. The Ṣūfīs generally regard this state of *baḳāʾ* as being more perfect than that of mere *fanāʾ* and this is the meaning of their dictum that sobriety supervenes on intoxication. This "return" to the world—which is, they emphatically state, not a simple return to the pre-*fanāʾ* state of the mystic, since his experience has given him an altogether new insight—means to perceive its inadequacies and to endeavour to make it more perfect.

The doctrine of *baḳāʾ* throws into bold relief the distinction between the mystic and the prophetic consciousness. Whereas the ordinary mystic stops at *fanāʾ* and does not even wish to return to the world, it is the function of the prophet—the mystic par excellence,—to be constantly both with God and with the world, to transmute the course of history through the implementation of the religio-moral divine Truth.

Bibliography: Besides the works of the Ṣūfīs—of which the *K. al-Lumaʿ* of Abū Naṣr al-Sarrādj and the *Kashf al-Maḥdjūb* of al-Hudjwīrī, are the most important on the subject, the most helpful account in any Western language is in R. A. Nicholson's *The Mystics of Islam*, London 1914, especially the last chapter. According to al-Hudjwīrī, the author of the doctrine was Abū Saʿīd al-Kharrāz, but it was further developed by Djunayd and others no doubt under the criticism of the orthodoxy. A radical, forceful and lucid statement was developed, as a criticism of Ibn al-ʿArabī, by the 17th century Indian Shaykh Aḥmad Sirhindī whose Persian *Maktūbāt* have not been studied at all in the West.

(F. RAHMAN)

AL-BAḲʿA [see AL-BIḲĀʿ].

BĀḲALAMŪN [see ABŪ ḲALAMŪN].

BAḲAR. In medieval Arabic literature, the term is not confined to the prevalent meaning of *cattle* (*bos*), in contrast to more recent usage and to the application of corresponding forms in other Semitic languages. Arab authors distinguish between the domestic kind, *baḳar ahlī* (= cattle), and the wild kind, *baḳar waḥshī*, the latter being variously identified, either with the *mahā* (*Oryx beatrix*; Nuwayrī, ix, 322) or the *ayyil* ([*q.v.*]; so according to the description in Ḳazwīnī) or with a group of animals (referred to by Lane, 234, as *bovine antelopes*) which comprises, according to Damīrī, in addition to these two species, also the *yaḥmūr* (roedeer) and the *thaytal* (bubale antelope). The distinctive epithet, however, is not always added, so that *baḳar* alone (or its nom. unit. *baḳara*) may also stand for several wild animals. This applies, for instance, to ancient Arabic poetry (see, e.g., Djāḥiẓ, v, 218²) and its commentaries, to the respective data in the dictionaries (Ibn Sīda treats *baḳar* in the *Kitāb al-Wuḥūsh*!) and even to zoological writings (*e.g.*, Djāḥiẓ, ii, 199⁹; iv, 399³). In works on the solution of dreams, where *baḳar* holds an important place, it is difficult to determine the exact meaning in every case. Different traditions seem to have been intermingled also in pharmacological works. Here, the horns of *baḳar* are frequently mentioned, while some Arab authors describe the *baḳar ahlī* as a hornless animal. In the Ḳurʾān, where the term mainly occurs in biblical tales, the meaning is always cattle or cow. In addition, the term is found in ancient proverbs and in the *ḥadīth*.

BAḲAR, ʿĪD [see BAYRAM and ʿĪD].

BĀḲARGANDJ (Backergunge), formerly a district in East Pakistan with headquarters at Bārīsāl, (now itself a district comprising Bāḳargandj), lying between 21° 54′ N and 91° 2′ E; Area: 4,091 sq. m., of which 51 sq. m. are covered with water. The

population in 1951 was 3,642,185, of whom 2,897,769 were Muslims. The area was known as Bākla (Ismāʿīlpūr) and constituted a *sarkār* in Mughal times prior to its occupation by Āghā Bāḳar, a prominent person at the Mughal Court at Dacca, owing allegiance to the Nawāb of Murshidābād, and a land-owner of Buzurgummīdpūr, in 1154/1741 when he successfully suppressed a revolt of the local Hindu landlords. He took as his headquarters a flourishing market-town which he named Bāḳargandj (mart of Bāḳar) 13 miles to the south-east of Bārīsāl. On his death in 1167/1753 the entire estate passed on to Rāja Ballabh Rāy' of Bikrampūr, a *diwan* [*q.v.*] of the Nāib Nāẓim of Dacca. The area was several times raided by the Maghs, a predatory Burmese tribe, during the 12th/18th century. The Marāt'hās penetrated into Bāḳargandj in 1162/1747-9 but were repulsed with the aid of Portuguese settlers. An agriculturally rich area, it supplied Murshidābād with rice during the terrible famine of 1184/1770. It is also famous for its fruit orchards. In 1238/1828-9 the district was visited by Karāmat ʿAlī Djawnpūrī, a follower of Sayyid Aḥmad Brēlwī [*q.v.*], who along with Ḥādjdjī Sharīʿat Allāh and his son Dūdū Miā preached *djihād* against the Feringhees (Europeans). The movement collapsed with the death of Dūdū Miā in 1279/1862. The bulk of the population speaks a form of Bengālī, known as Musalmānī, with a preponderance of Arabic and Persian words.

The district, in addition to being subject to heavy floods and cyclones, is noted for a strange atmospheric phenomenon, the "Barisal Gunds", sounds resembling the discharge of cannon and occuring at regular intervals. The occurrence still remains unexplained.

(A. S. Bazmee Ansari)

BĀKHAMRĀ, a place in medieval ʿIrāḳ, the exact situation of which cannot now be fixed. According to al-Masʿūdī it belonged to the Ṭaff [*q.v.*], the frontier district between Babylonia and Arabia, and was 16 parasangs (about 60 miles) from Kūfa. Yāḳūt says it was nearer to Kūfa than to Wāsiṭ. Bākhamrā is famous in the history of the ʿAbbāsids for the decisive battle which took place there in 145/762 (while the Caliph was designing the new city of Baghdād) between the army of al-Manṣūr, commanded by ʿĪsā b. Mūsā, and the troops of the ʿAlid Ibrahīm b. ʿAbd Allāh in which the latter, after initial success, fell by an arrow-wound. The campaign thus terminated had represented a severe danger to al-Manṣūr's position. The Aramaic place-name means "wine-vaults", and recalls the analogous name of Ḳaryat al-ʿInab (grape-town) of a place in Palestine, North West of Jerusalem. Bākhamrā has no other claim to interest.

(M. Streck-[S. H. Longrigg])

BĀKHARZ (also known as Guwākharz), a region in Khurāsān between Harāt and Nīshāpūr (south of Djām on the river Harāt), regarded as being particularly fertile-; famous in the 10th century for its export of grain and grapes (and in the 14th century for its particularly good water melons as well). Mālīn (variants: Mālin and Mālān) was the capital of the region, and in the 10th century it had a population of considerable size. According to descriptions of that time, it was situated on the site of the Shahr-i Naw of today. The region included 128 villages, Djawdhaḳān among them. Yāḳūt explains the name (probably on the basis of folk-etymology) as Bād-har-rah ('wind in all places'). al-

Bibliography: Muḳaddasī 319; al-Faḳīh 278 Hamadhānī 318; Ibn Rusta 171; al-Yaʿḳūbī airo (= *BGA* III, V, VII twice); Yāḳūt, i, 458 (= Cbier edition 1906: ii, 28), ii, 145, iv, 398 (= Bar de Meynard, *Dict. de la Perse* 74 f.); Muḥammad Ḥasan Khān, *Mir'āt al-Buldān* i, 150; ʿAwfī, *Lubāb*, i, 68, ii, 156; Le Strange, 357.

(B. Spuler)

AL-BĀKHARZĪ, Abu 'l-Ḥasan (or Abu'l-Ḳāsim) ʿAlī b. Ḥasan b. ʿAlī b. Abi 'l-Ṭayyib, Arab poet and anthologist, a native of Bākharz. After receiving a good education in his father's house, he studied in particular Shāfiʿī *fiḳh* and, at Nīsābūr, attended the lectures of al-Djuwaynī (ʿAbd Allāh b. Yūsuf [*q.v.*], where he made the acquaintance of al-Kundurī [*q.v.*]; the latter, when he became *wazīr*, took him to Baghdād as a secretary; previously, he had for some time been an official at Baṣra. Subsequently, he was admitted to the chancellery, and later returned to his native place, where he was killed by a sabre stroke in Dhu 'l-Ḳaʿda 467/June-July 1075.

The most famous work of al-Bākharzī is a letter of solace addressed to his benefactor al-Kundurī, on the subject of his castration. His *dīwān* is lost, and only a few *muḳaṭṭaʿāt* have been published as an appendix to his *Dumyat al-Ḳaṣr wa ʿUṣrat Ahl al-ʿAṣr* (Aleppo 1349/1930); the latter work is an anthology which is a continuation of the *Yatīma* f al-Thaʿālibī [*q.v.*] and comprises seven sections: Bedouin poets and poets of the Ḥidjāz; Syria, Diyārbakr, Ādharbaydjān, Djazīra and Maghrib; ʿIrāḳ; Rayy and Djibāl; Djurdjān, Astarābādh, Dihistān, Ḳūmis, Khwārizm, Transoxania; Khurāsān, Ḳuhistān, Sidjistān, Ghazna; *adab* authors. Another selection of his poems, entitled *al-Aḥsan*, is preserved in MS. in London. His poetry, which was but little appreciated at Baghdād despite the flattering opinions of the critics, is on the whole mediocre and artificial.

Bibliography: Introd. of the *Dumya*; Samʿānī, *Ansāb*, 57b; Yāḳūt, s.v. *Bākharz*; idem, *Irshād*, v, 121-28 = *Muʿdjam*, xiii, 33-48; Ibn Khallikān, Cairo 1899, ii, 58-9; Browne, ii, 355 ff.; Brockelmann, S I, 466; ʿAlī Āl Ṭāhir, *La Poésie arabe en Irak et en Perse sous les Seldjoukides*, Sorbonne thesis 1954 (unpublished,) index.

(D. S. Margoliouth*)

AL-BAKHRĀ', ancient site of Palmyrena, well known in the Umayyad period. Al-Walīd II is known to have stayed there on several occasions and died there in 126/744. The Arab sources describe the military camp (*fusṭāṭ*) which the Persians are said to have erected there in former times and the inner castle (*ḳaṣr*) where the Companion al-Nuʿmān b. Bashīr lived and in which the Caliph, besieged by the rebels, took refuge. The site has been identified with the ruins of al-Bkhara, standing 25 km. to the south of Palmyra, visited and described by A. Musil in 1908, and, although the name is frequently deformed in the Arabic texts (especially into al-

Baḥrāʾ or al-Naḏjrāʾ), the reading al-Bakhrāʾ is not open to doubt since it is "guaranteed by the etymological speculations of the chroniclers, who derive it from the root *bakhara*" (H. Lammens). The traces of a vast walled enclosure, furnished with towers 159 m. by 105 m., are accompanied to the north and the south by remains of dwellings around numerous wells, bearing testimony to the fact that from Roman times here was to be found, if not an "ancient castle of the *limes*" as H. Lammens maintained, at least a "fortified watering place" (A. Poidebard) on the Bosra-Palmyra desert road, which subsequently became an Umayyad palace. It was not long before the site was abandoned and those mediaeval authors who still indicate the existence of a fortress (*ḥiṣn*) of al-Bakhrāʾ, are no longer able to place it exactly.

(J. SOURDEL-THOMINE)

BAKHSHĪ, a word figuring from Mongol times (13th century) in Iranian and Turkish literature, particularly in historical literature. Like the Uighuric original, it begins by denoting the Buddhist priest or monk (= Thibetan: Lama). During the time when the Īlkhāns (*q.v.*) were favourably disposed to, or gallawers of, Buddhism, the number and influence of the *bakhshī* in Iran was considerable. In Iran, central Asia, India and the Crimea — after the suppression of Buddhism in Iran (in 1295) — *bakhshī* denotes only a scribe who wrote Turkish and Mongol records (which were kept to begin with in Uighur script = generally *bitikči*). In the 16th century doctors (surgeons) were called by that name. Where lamas exist, *i.e.*, among the Kalmucks, Mongols, and Mandjurs, the name *bakhshī* retained its original meaning of 'Buddhist priest' up to the 20th century. Amongst the Turkomāns — and in the 15th and 16th centuries also amongst the Anatolian Turks — the name *bakhshī* came to mean a wandering minstrel; in Kirghiz it came to mean conjurer (Shaman), as also in the dialect forms *baḳsi* and *baḳsa*.

The etymology of the word *bakhshī* is disputed: it used to be almost generally accepted (*e.g.*, by W. Barthold and E. Blochet) as deriving from the Sanskrit word *bhikshu*, but this view has been opposed by P. Pelliot and others, who would derive it "almost certainly" from the Chinese *po-che* (*po-shī* 'wise', 'well read').

Bibliography: Cf. excursus in Rashīd al-Dīn, *Histoire des Mongols de la Perse*, edited by M. É. Quatremère, i (1836), 184-99; M. F. Köprülü in *IA* II (1944-49), 233-38 (with bibliography); B. Spuler, *Die Mongolen in Iran* [2], Berlin 1955, 184, 547 (with a bibliography concerning the etymology); W. Radloff, *Proben der Volksliteratur der türkischen Stämme Südsibiriens*, vol. iii/text, 46 ff.; R. Karutz, *Unter Kirgisen und Turkmenen*, Berlin, no date (1928?).

(B. SPULER)

BAKHSHĪSH, or *bakhshish*, verbal noun from the Persian *bakhshīdan*, 'to bestow', and used not only in Persian but also in Turkish and post-classical Arabic to denote a gratuity bestowed by a superior on an inferior, a 'tip', or a 'consideration' thrown into a bargain, and also, though improperly, of bribes, particularly those offered to judges or officials. A notable application of the term under the Ottoman régime was to the gratuity bestowed by a sultan at his accession on the chief personages of state and the Janissaries and other troops of the standing army—the *djulūs bakhshīshi*. This involved the Ottoman central treasury in vast expenditure, which in the period of Ottoman decline it could ill afford.

Bibliography: Seyyid Muṣṭafā Nūrī, *Netāʾidj al-Wuḳūʿāt*, ii, 98; Aḥmed Rāsim, *ʿOthmānlî Taʾrīkhī*, i, 359-361, notes.

(H. BOWEN)

BAKHT KHĀN, Commander-in-Chief of the 'rebel' native forces, with the unusual and pompous title of 'Lord-Governor Bahādur General Bakht Khān', during the military uprising (also known as the Mutiny) of 1857 in India, was born at Sulṭānpūr (Awadh) C. 1212/1797, where his father ʿAbd Allāh Khān, a lineal descendant of Ghulām Ḳādir Rohilla, had settled after the dispersal of the Rohillas following the death of Ḥāfiẓ Raḥmat Khān [*q.v.*]. ʿAbd Allāh Khān had married a princess of the deposed Awadh ruling family and thus claimed close relationship with Royalty (C. T. Metcalfe, *Two Native Narratives of the Mutiny in Delhi*, London 1898, 146). At the age of 20 (c. 1233/1817) he joined the 8th Foot Artillery, better known as the Bareilly Brigade, as a *Ṣūbādār*, in which capacity he served continuously for forty years until the outbreak of the Mutiny. He has been described as "a most intelligent character" always very "fond of English society". The field-battery, of which he was the Commander, had served at Djalālābād during the First Afghān War, winning many distinctions and decorations for outstanding service.

He leapt into prominence after the sudden and carefully planned sepoy-rising at Bareilly on 31 May 1857, when all British resistance collapsed and Khān Bahādur Khān, a grandson of Ḥāfiẓ Raḥmat Khān, was proclaimed the ruler of Rohilkhand as a viceroy of the Mughal Emperor. Bakht Khān then marched to Delhi at the head of his artillery brigade and practically assumed all power. It was at his instance that a *fatwā* declaring a *djihād* against the British was signed by the leading *ʿulamāʾ* of the capital including Ṣadr al-Dīn Āzurda [see ĀZURDA, ṢADR AL-DĪN] and Faḍl-i Ḥaḳḳ of Khayrābād [*q.v.*]. During the siege of Delhi he had some sharp and bitter encounters with the British and loyal forces, which ultimately succeeded in driving the rebels out of the city. With the fall of Delhi in September 1857, Bakht Khān left the town in disgust, failing to persuade the effete emperor Bahādur Shāh II [*q.v.*] to accompany him and his battered battalion to Awadh. His movements thereafter have not been precisely recorded. He is reported to have camped first at Djalālābād (Distt. Hardōī), then at Bilgrām [*q.v.*] and Mīrzā Ghāt. He is finally reported to have joined the forces of Bēgam Ḥaḍrat Maḥall at Lucknow, and was killed in action on 10 Ramadān 1275/13 May 1859. According to another version he fled to Nepal, disguised as a religious mendicant, and perished with other leaders of the revolt, now described by patriotic authors as the First War of Independence.

(A. S. Bazmee Ansari)

BAKHTĀWAR KHĀN, a favourite eunuch, confidant and personal attendant of Awrangzīb [*q.v.*] who entered his service in 1065/1654 while the latter was still a prince. In 1080/1669 he was appointed *Dārōghā-i Khawāṣṣān*. He died after a short illness at Aḥmadnagar on 15 Rabīʿ I, 1096/1685 after faithfully serving Awrangzīb for 30 years. His death was personally mourned by the Emperor who led the funeral prayers and carried the bier for some paces. His dead body wa brought to Delhi where he was buried in a tomb that he had built for himself in a township, named after him Bakhtāwarpūra, now called Bastī Nabī Karīm.

Bakhtāwar Khān was a great patron of art and learning. It was through his good offices that, among others, Shaykh Raḍī al-Dīn of Bhāgalpūr, one of the compilers of the *Fatāwā ʿĀlamgīriyya* [*q.v.*], gained access to the Court.

From his early youth he was an ardent student of history and had cultivated an elegant style of writing. The author of the *Ma'āthir-i ʿĀlamgīrī*, Muḥammad Sāḳī Mustaʿid Khān, was in the service of Bakhtāwar Khān as his private secretary and accountant.

It was Bakhtāwar Khān who was entrusted in the year 1085/1674 with the task of ensuring, through legal rules, that the royal astrologers would not prepare horoscopes and almanacs any more.

Towards the end of the *Mir'āt al-ʿĀlam* (1078/1667), a general history rich in biographical material, the writer, who is none other than Bakhtāwar Khān, gives a detailed account of his achievements. He claims the authorship of the following: (i) *Čār Ā'ina* or *Ā'ina-i Bakht* (1068/1657), containing an account of the four battles fought by Awrangzīb which won him the throne (Browne, *Suppt.* 145); (ii) *Riyāḍ al-Awliyā'* (1090/1679), lives of Muslim saints and notables in four *čamans* (*Rieu* iii, 985a; *Āṣāfiyya* 1:320 No. 115; Browne *Suppt.* 728 (Corpus 126); (iii) Selections from: *Ḥadīḳa* of Sanā'ī, *Manṭiḳ al-Ṭayr* of ʿAṭṭār, *Mathnawī* of Rūmī and *Tā'rīkh-i Alfī*. His *bayāḍ*, which contains select verses of eminent poets with their biographies and extracts from the writings and compilations of celebrated divines and mystics, is preserved in the Archaeological Museum of the Delhi Fort. He is also the author of *Ta'rīkh- Hindī*, a history of India from Bābur to Awrangzīb (Princeton 468, Storey 517). A book of Fatāwā, a compendium of Ḥanafī law and a literary *pot-pourri*, called *Hamdam-i Bakht*, were compiled for him by different authors.

Among the works of public utility founded and erected by him, he mentions the township of Bakhtāwarpūra, a number of mosques, caravanserais, including that of Bakhtāwarnagar, on the way to Farīdābād), some bridges and cubicles for students. He also laid out gardens, one in Lahore near the Shalīmār and the other in Agharābād, three miles from Shāhdjahānābād (Dehli).

Bibliography: *Ma'āthir-i ʿĀlamgīrī* (Bib. Ind.) 253 and index; *Mirʿāt al-ʿĀlam*, last *afzāyish*, *namūd* iii (as reproduced in OCM(S) Feb.-May, 1954); *Nuzhat al-Khawāṭir* v, 89; Storey 132-33; Bindrāban Dās: *Tadhkirat al-Umarā'* (*s.v.*); *Rieu*, i 125-6; Bānkīpūr Cat. vi 477; Elliot and Dowson, vii 150-3; *OCM*, Nov. 1928.

(A. S. Bazmee Ansari)

BAKHTĪ, Pen-name of Sulṭān Aḥmad I; cf. Gibb, *Ottoman Poetry*, iii, 208.

BAKHTIGĀN, the largest salt lake in the province of Fārs, Iran. It is located *ca.* 50 km. east of Shīrāz at an altitude of *ca.* 1550 m. The size of the lake varies with the seasons, but at the greatest it is *ca.* 100 km. N-S, and 30 km. E-W. The water is very salty and the lake is exceedingly shallow. The lake is the basin of the Kurr or Band-i Amīr River.

In mediaeval Arabic geographical literature we find scant mention of Lake Bakhtigān. Ibn Khurradādhbih, 53, refers to it as Lake Djūbānān, Iṣṭakhrī, 122, gives a variant Badjakān, and an alternate name Badjfūz, while Ibn Ḥawḳal (ed. Kramers), 277, has al-Bakhtikān. The five lakes (*buḥayrāt*) of Fārs province are listed by Iṣṭakhrī, Ibn Ḥawḳal and Muḳaddasī, 446, as follows: 1. Bakhtigān, belonging to the district (*kūra*) of Iṣṭakhr; 2. Dasht Arzan in the district of Sābūr; 3. Tawwaz in the Sābūr district at Kāzarūn; 4. Djankān near Shīrāz, Lake Mūr in Ibn Ḥawḳal; 5. Bāsfahūya (Muḳ.- Bāshfūya, Ibn Ḥawḳal has al-Basfariyya) in the Iṣṭakhr district.

At the present Lake Bakhtigān is called Nīrīz. The other lakes have been identified by Herzfeld as: 2. Lake of Dasht-i Ardjān; 3. the Lake of Famūr or Shīrīn or Kāzarūn; 4. the Lake of Shīrāz or Mahārlū. The name Bāsfūya is probably the name of part of Lake Bakhtigān and perhaps identical with Badjfūz. This lake has always had several sections connected by narrow arms of water, and the northern part was called Bāsfūya or Djubānān, while the south was properly Bakhtigān or Nīrīz. The lake has been surveyed by Capt. H. L. Wells.

Bibliography: In addition to the geographers above, cf. Yāḳūt (ed. Wüstenfeld), 3, 838; H. L. Wells, *Surveying Tours in Southern Persia*, *Proceedings RGS*, 5 (1883), 138; Le Strange, 277-9; Masʿūd Kayhān, *Djughrāfyā-yi mufaṣṣal-i Irān*, i, Tehran 1932, 89-92. (R. N. Frye)

BAKHTĪSHŪʿ [see BUKHTĪSHŪʿ].

BAKHTIYĀR, prince, son, heir apparent (344/955) and successor (356/967) of Mu'izz al-Dawla in ʿIrāḳ, with the *laḳab* of ʿIzz al-Dawla. He appears to have had little talent for government, which, unlike his father, he entrusted to *wazīrs* (chosen without any great discernment) so as to be free to amuse himself, though he still impeded the conduct of affairs by his impetuous verbal or active intervention. At the beginning of his reign he continued his father's policy of hostility to the Ḥamdānid Abū Taghlib of Mawṣil and to the autonomous chieftain

of the Baṭīḥa, ʿImrān b. Shāhīn. Furthermore, confronted with the new problem of Fāṭimid expansion in Syria, he drew close to the Ḳarāmiṭa, who now sought to counter it. Bakhtiyār, however, was incapable of maintaining discipline among his troops, a prerequisite for the stability of the regime. Quarrels between the Daylamites and Turks became embittered and ended in an open breach between Bakhtiyār and the latter, which was further complicated by popular struggles in Baghdad between Sunnīs and Shīʿīs, in which the *ʿayyārūn* [*q.v.*] intervened. He was then obliged to appeal to his cousin in Fars, ʿAḍud al-Dawla, who noting the incapacity of the prince whom he had saved, conceived the idea of taking his place and was only temporarily prevented from doing so by the opposition of his father, Rukn al-Dawla, head of the Būyid family; upon the latter's death, he was able to revive his plan and Bakhtiyār, who had ranged himself with Abū Taghlib and ʿImrān b. Shāhīn against him, was defeated and slain (366-7/967-8); the account of their struggles has been given in the article ʿAḍud al-Dawla. During the course of the struggle, the Caliph al-Muṭīʿ had been replaced by al-Ṭāʾiʿ, a protegé of the Turks, for which reason he did not support Bakhtiyār in earnest.

Bibliography: cf. the articles BUWAYHIDS and ʿAḌUD AL-DAWLA. The chief source is naturally Miskawayh, *Tadjārib al-Umam*, which is based on the lost History of Hilāl al-Ṣābī; among the secondary chronicles, special mention must be made of Yaḥyā of Antioch, *Patrol. Or. XXIII*, especially 354 f. An exceptional place, furthermore, is also occupied in our documentation by what has been preserved of the letters of al-Ṣābī (Abū Isḥāḳ), partial ed. Shakīb Arslān, Caliphal point of view) and of ʿAbd al-ʿAzīz b. Yūsuf, analysed by Cl. Cahen in *Studi Orientalistici ... Levi della Vida*, i, 83-98 (point of view of ʿAḍud al-Dawla); cf. also that of Ibn ʿAbbād, ed. ʿAbd al-Wahhāb ʿAzzām and Shawḳī Ḍayf, 1947, i, no. 7. (CL. CAHEN)

BAKHTIYĀR KHALDJĪ [see MUḤAMMAD BAKHTIYĀR KHALDJĪ].

BAKHTIYĀR-NĀMA, also known as the History of the ten Viziers, Muslim imitation of the Indian history of Sindbād or of the seven viziers [see *Sindibād*]. Like its prototype, the book consists of a story in the framework of which other tales are inserted, which are here closely connected with the basic story. The subject is brief; the son of King Āzādbakht is abandoned on the road, shortly after his birth, by his parents, who are fleeing; found and brought up by brigands, in the end he is taken prisoner by the king's soldiers. The King, who likes him, takes him into his service under the name of Bakhtiyār. When finally he has raised him to a high position, the King's viziers who are jealous, take advantage of an accident to slander him before the King; whereupon Bakhtiyār and the queen are thrown into prison. To save herself, the queen explains that Bakhtiyār wanted to seduce her. For ten days each of the ten viziers in turn tries to persuade the King to have Bakhtiyār executed; the latter, however, is constantly able to gain respite from execution by means of a story appropriate to his situation. As finally it is to take place on the eleventh day, the leader of the brigands who had reared Bakhtiyār, appears and informs the King that Bakhtiyār is his son. Thereupon the viziers are executed and Bakhtiyār becomes king in his father's place, who abdicates in his favour.

Originally the work was composed in Persian. Nöldeke (see *Bibliography*), in the course of examining the various versions and their chronology, which had already been established by R. Basset, published and translated extracts from the oldest known Persian version (MS. dated 695/1296)—composed in a masterly and resounding style, the author of which asserts that he composed the work for a prince of Samarḳand, not so far identified, but who lived, according to Nöldeke, during the second half of the 6th/12th century. The later versions, Arabic (one of which is inserted in the *One Thousand and One Nights*) and Persian, more simplified in style, differ in the order of the stories and the narrative details. With these can be placed the Uygur version (ms. of 838/1435) and the Persian versian in verse by Panāhī (9th/15th century; see *Bibliography*: Bertels). The Malay version and the Persian version in verse by Katkhudā Marzubān (1210/1795; Éthé, *Cat. Persian MSS. India Office*, no. 1726) are more recent. The purpose of the stories, taken as a whole, is to demonstrate the disadvantages and dangers of hasty decisions. Magical factors and the supernatural make virtually no appearance. The prose is generally free from excesses and prolixity.

Fuad Köprülü, in *IA* (s.v.). (J. HOROVITZ-[H. MASSE])

BAKHTIYĀRĪ. The Bakhtiyārīs are a conglomeration of mixed races who migrated in the 10th century A.D. from Syria to Īrān, where up to the 15th century they were known as the "Great Lurs"; they assert that they are not Iranian by origin. Although it is presumed that their ancestors migrated from Bactria, whence the word Bakhtiyārī, there is no confirmation of this hypothesis. They are probably of Kurdish descent.

By persuasion they are Shīʿī Muslims and their language is of Iranian origin, yet they speak a patois of their own. Their population has almost reached the 400,000 mark.

Their land is called the Bakhtiyārī country, and extends from Iṣfahān to Maydān-i Naftūn in Khūzistān, a mountainous region, where rich oil fields are situated.

The Bakhtiyārīs are divided into two major groups, the Haft-Lang and the Čahār-Lang. The most important, the Haft-Lang, consists of 55 subtribes, while the Čahār-Lang group has 24 subtribes. There is a sprinkling of Lurs and Arabs among them, for example: Mowri, Talikī, Bawadī,

Gandalī, Čarburī, Mīrzāwand, Livissī, Kutekī, etc.

Being a gregarious people, they live "on the country," trekking long distances twice a year in search of grass, and hence they are called also the grass-folk.

The wealthy khāns or chieftains have their own residences in town. They possess also summer resorts where they live during the hot season. Although destitute of any bookish education, they maintain their *mīrzās* or clerks. Nevertheless, they have recently awakened to the great importance of education, and are now sending their sons to Europe for an academic education; this tendency seems to be growing.

The Bakhtiyārī woman is unveiled and goes about freely within the tribal area. As a khān's wife, she will attend to certain tribal cases during the khān's absence, and her findings and decisions are lawful and binding.

The tribeswomen weave their tents and also *kilīms*, while their characteristic foot-gear, called *giwa*, is made by the tribesmen. Each tribal subdivision has its own so-called "healing man", who administers some herbs and in certain cases has recourse to incantations.

The Bakhtiyārīs have their own customs relating to birth, marriage, and death; divorce is practically unknown to them. They have their own particular poems, love songs and dirges, and also interesting games and a great variety of delightful folk-stories.

Bibliography: V. Melkonian, *The Bakhtiaris*, 2nd ed. Basra 1954; D. L. R. Lorimer, *The Popular Verse of the Bakhtiārī of S. W. Persia*, in *BSOAS*, xvi, 1954, 542-555, xvii, 1955, 92-110.

(V. Melkonian)

BĀĶĪ, Maḥmūd ʿAbd al-, Turkish poet. Born in Istanbul of modest family (933/1526). His father Meḥmed was a *müʾadhdhin* at the Fātiḥ mosque. After working as an apprentice to a saddler, Bāķī began his regular studies in a *madrasa* where he had the good fortune to have as teachers some of the leading scholars of the time and many brilliant fellow students, including the historian Saʿd al-Dīn. He greatly profited from these invigorating surroundings, and the appreciation and encouragement of the old poet Dhātī whose shop was a sort of literary club for men of letters. In 962/1555 the sultan Suleymān returned from his Persian campaign and the young poet submitted a *ķaṣīda* to him. This gave him an entrée into the court and upper-class circles of the capital. His rapid and brilliant academic career and the favour of the Sultan who sent his own poems to Bāķī to be corrected and asked him to write *naẓīras* to them aroused the jealousy of even his best friends and soon he found himself involved in the intrigues of the court. The death of Suleymān to whom he was deeply attached moved him profoundly and he wrote the famous elegy which is his masterpiece. After a temporary eclipse, Bāķī continued his rise in the *ʿulamāʾ* career, thanks partly to Soķullu's protection, and won the favour of Selīm II and his successor Murād III. On his return to Istanbul after a period of office as *ķāḍī* of Mecca then of Medina, he was made, with intervals of disgrace, successively *ķāḍī* of Istanbul, *ķāḍīʿasker* of Anadolu and later of Rumeli, and then was retired without becoming *Shaykh al-Islām*, a hope which he had long cherished. The new sultan Meḥemmed III appointed him again *ķāḍīʿasker* of Rumeli, recognising thus his long services and his great reputation as the most distinguished poet, the *Sulṭān al-Shuʿarāʾ*, of his time. The aging poet, whose ambition grew at the chance of reaching his goal, the highest office of his profession, took part in embittered court intrigues. The Grand Vezir Khādim Ḥasan Pasha strongly recommended Bāķī for the office of *Shaykh al-Islām*, but the Sultan preferred his own tutor Khodja Saʿd al-Dīn. Bāķī's death in 1008/1600 was widely mourned and he was given a State funeral, the *Shaykh al-Islām* leading the funeral prayer.

Serious, dignified and with a keen sense of justice in his professional career, Bāķī was, in his private life, a man of the world, gay, a bon vivant, sociable, extremely witty, fond of jokes, repartee and the exchange of satire, even with friends. These characteristics made him many enemies and rivals, but also secured many powerful friends and protectors, thus smoothing the way to rapid progress in his career.

Apart from a few treatises, mostly on religious matters, Bāķī's main work consists of his *dīwān*. Unlike most poets of the classical period he wrote no *mathnawīs*. The easy and happy life of the upper classes of the 16th century Istanbul, the colourful landscape, the gay and picturesque scenes of the pleasure resorts in and around the Capital are vividly reflected in Bāķī's poems. in his *ghazals*, minutely tooled with the care of a jeweller, he turns constantly to a favourite theme of *dīwān* poets: In this dream-like and swiftly changing world all is ephemeral: The beauties of nature, youth, happiness, high estate are all doomed to perish. So, love, drink, and be merry while you can. "Forgo not this opportunity, for the pleasures of this world are as fleeting as the season of roses". Unlike Fuḍūlī, Bāķī's temperament was not inclined towards religious enthusiasm and his lyrics do not lend themselves to mystical interpretation, although he often makes use of Ṣūfī terminology. Bāķī is the unequalled master of form. His perfect versification, meticulous choice of words, skilful use of onomatopoeic effect achieve a fascinating musicality which caused him to be recognised, by both his contemporaries and successors as the greatest *ghazal* writer of Turkish literature. In his hand the Turkish of Istanbul found its best expression in classical poetry. His great popularity and influence never diminished, and his pure and fluent style paved the way for Yaḥyā and Nedīm. In his prose works Bāķī avoided fashionable precious and ornate language, producing some of the best specimens of natural, unadorned, well-balanced style.

(Fahir İz)

BAĶĪ B. MAKHLAD, Abū ʿAbd al-Raḥmān, celebrated traditionist and exegete of Cordova, probably of Christian origin, born in 201/817, died in 276/889. Like many Spanish Muslims, he visited the principal cities of the Orient, where he frequented the society of representatives of various *madhāhib*, in particular Ibn Ḥanbal; on his return to Cordova, he displayed such independence in doctrinal matters

(some count him however as a Shāfiʿī and he is regarded as having introduced the Ẓāhirī doctrines into Spain) and opposition to *taḳlīd*, that he soon found himself regarded with hostility by the Mālikī *fuḳahāʾ*; he was even nearly condemned to death on a charge of heresy, and owed his escape solely to the intervention of the *amīr* Muḥammad I (238-73/852-86), who allowed him freely to dispense his eclectic teaching. His chief works, all of which are lost, are a commentary on the Ḳurʾān, which Ibn Ḥazm considered superior to that of al-Ṭabarī, and a *musnad* in which the traditions were classified according to their subject under the names, themselves arranged in alphabetical order, of the Companions who had handed them down. Baḳī, whose biography was written by the prince ʿAbd Allāh al-Zāhid, enjoyed at the end of his life a reputation for piety bordering on holiness, nd Ibn Ḥazm considered him, in the sphere of the Traditions, the equal of al-Bukhārī and other illustrious traditionists.

(CH. PELLAT)

KHWĀDJA **BĀḲĪ BIʾLLĀH**, ABU 'L-MUʾAYYID RAḌĪ AL-DĪN, also called ʿAbd al-Bāḳī or Muḥamma Bāḳī b. ʿAbd al-Salām Uwaysī Naḳshbandī, was born at Kābul on 5 Dhu 'l-Ḥidjdja 971/16 Dec. 1563 and died at Delhi on Saturday, 25 Djumādā II 1012/2 July, 1603. He received his early education from Ṣādiḳ Ḥalwāʾī, in whose company he went to Samarḳand to pursue his studies further. It was during his stay there that he cultivated a taste for *taṣawwuf*. On the invitation of some of his friends, who held high posts in India, he left for that country, but instead of entering the Imperial army, as intended, he began to search for mystics and *ṣūfīs*. After a short sojourn in India he returned to Mā Warāʾ al-Nahr to receive formal initiation into the Naḳshbandī order from Khwādja Muḥammad Amkangī, a great *ṣūfī* of his times. Back in India again in 1008/1599 he decided to settle down at Delhi. His influence soon spread and Aḥmad Sarhindī [*q.v.*] and ʿAbd al-Ḥaḳḳ Dihlawī [*q.v.*] accepted him as their teacher.

He is the author of: (i) *Silsilat al-Aḥrār*, a collection of his *rubāʿiyyāt*, which have been commented upon by Aḥmad Sarhindī (*Oriental College Magazine*, viii/4, 41); (ii) *Kulliyāt*, a collection of his poems, including a *mathnawī*, which has been partially reproduced in the *Zubdat al-Maḳāmāt* (p. 66), (MS. in the I.O., D.P. 1095). A collection of his letters (I.O. D.P. 1058*h*) has been published: (*Maktūbāt-i Sharīf-i Ḥaḍrat-i Khwādja Bāḳī biʾllāh Dihlawī*, Lahore 1923). A commentary on the Ḳurʾān is also attributed to him, but no MS. seems to exist.

BAḲĪʿ AL-**GHARḲAD** (also called Djannat al-Baḳīʿ or simply al-Baḳīʿ), is the oldest and the first Islamic cemetery of al-Madīna. The name denotes a field which was originally covered with a kind of bramble called *al-gharḳad*; there were several such Baḳīʿs in al-Madīna. The place is situated at the south-east end of the town, at a short distance from the Prophet's tomb, outside the town-wall, now demolished, through which a gateway, Bāb al-Baḳīʿ gave admittance to the cemetery (see the map of Madīna in Caetani, *Annali*, ii, 173). The first to be buried in al-Baḳīʿ, from among the *muhādjirūn*, was ʿUthmān b. Maẓʿūn (a Companion of the Prophet) who died in 5/626-7. The bramble-growth was cleared and the place consecrated to be the future graveyard of the Muslims who died at al-Madīna. The Prophet's daughters, his infant son Ibrāhīm, his wives (*ummahāt al-muʾminīn*) and his descendants, with the exception of al-Ḥusayn are also buried here. The burial-place of Fāṭima al-Zahrāʾ [*q.v.*] is, however, disputed. Among the other notables buried here are ʿUthmān b. ʿAffān, Mālik b. Anas [*qq.v.*], his teacher Nāfiʿ, Ḥalīma al-Saʿdiyya (the Prophet's wet-nurse) and al-ʿAbbās, an uncle of the Prophet. It gradually became an honour to be granted a last resting-place here among the *ahl al-bayt* [*q.v.*] the Imāms and Saints. The graves of the famous dead had grand cupolas and domes built over them; the domes of Ḥasan b. ʿAlī and al-ʿAbbās for example, rose to a considerable height, as Ibn Djubayr tells us. When Burckhardt visited the place after the invasion of the Wahhābīs, he found it one of the most wretched cemeteries of the East. Like the grave of Ḥamza at Uḥud and the first mosque in Islam at Ḳubāʾ, a Medinese suburb, al-Baḳīʿ is one of the sacred places which the pilgrims to al-Madīna consider it an act of piety to visit.

During the life-time of the Prophet al-Baḳīʿ was a very small place; the graves of ʿUthmān b. ʿAffān and Ḥalīma al-Saʿdiyya not being within its precincts. ʿUthmān b. ʿAffān was buried originally in Ḥashsh Kawkab, which was included in al-Baḳīʿ by the Umayyads much later. Even the enclosure where some of those killed during the Umayyad occupation of al-Madīna were buried fell outside its present

boundaries. The domes and mausolea destroyed by the early Wahhābīs in 1221/1806 were restored by ʿAbd al-Ḥamīd II [*q.v.*], sulṭān of Turkey, to be destroyed again in 1926 by ʿAbd al-ʿAzīz Āl Suʿūd. This action of the Saʿūdī monarch gave rise to a serious agitation in India, and a deputation was sent to Mecca to lodge a strong protest. The king, however, did not yield and the graves are still without any tombs; they have insignificant head-stones without any inscriptions or epitaphs. Rutter, who saw it in 1926, shortly after the second Wahhābī occupation, compares it with the ruins of a town affected by an earthquake. In 1954 cemented paths were laid, by the orders of King Saʿūd b. ʿAbd al-ʿAzīz, all over the cemetery for the use and convenience of visitors.

(A. J. Wensinck-[A. S. Bazmee Ansari])

BĀKĪKHĀNLĪ, ʿAbbās-Kuli Aghā, better known under the Russian form of the name, Bākīkhānov, and his literary pseudonym Kudsī, Ādharbāydjānī historian, poet and philosopher, son of Mīrzā Mamed Khān, ruler of Bākū, driven from his throne by his brother Muḥammad Kulī Khān. He was born on 10 June 1794 in the village of Emir-Hadjian in the Khānate of Bākū, and died in 1847 at Kūba. After a thorough education in Persian and Arabic, in 1820 Bākīkhānlī was appointed officer interpreter at Tiflis in the headquarters of General Ermolov, Commander in Chief of the Russian armies in the Caucasus. There he learned Russian, through which language he became well acquainted with western literature. Shortly afterwards, he undertook a long journey which led him to Shīrwān, Armenia, Dāghistān, Georgia, Turkey and Persia. During the Russo-Turkish and Russo-Persian wars, Bākīkhānlī, who was a convinced advocate of rapprochement with Russia, was a staff officer at General Paskievič's headquarters. In 1833 he made a second journey, visiting the Northern Caucasus, Russia, the Baltic States and Poland. From 1834 onwards, he devoted himself to literature and published a large number of works in Ādharī, Persian and Arabic. His most important work is : *Gülistān-i Irem* (1841) which traces the history of Dāghistān and Shīrwān from ancient times down to the treaty of Gulistān. A Russian translation of this valuable work was published in 1926 by the Association for the Study of Ādharbaydjān in Bākū, with a preface by S. Sīsoev and a biography of the author by M. G. Bakharnī; the Ādharī text appeared in 1951 at Bākū (Edition of the Academy of Sciences of the Ādharbaydjān *SSR*).

His other works are: *Riyāḍ al-Kuds* (in Ādharī), abridged biography of the principal Saints of Islam; *Kānūn-i-Kudsī*, Persian grammar; *Kashf al-Gharāʾib* (in Persian), containing a description of the discovery of America; *Tahdhīb-i Akhlāk* (in Persian), treatise on Ethics and Moral Philosophy according to Arab, Greek and European authors; *ʿAyn al-Mīzān* (in Arabic), treatise on scholasticism and logic; *Asrār al-Malakūt* (in Persian and Arabic), treatise on astronomy, published at Tiflis; *Naṣīḥat-nāma* (in Persian), collection of moral precepts.

Finally several poems in Arabic, Ādharī and Persian, some of which have been published in the newspaper *Feyūzat* of Bākū (no. 28 of 1907), as well as a translation of Krīlov's fables into Ādharī.

(A. Bennigsen)

AL-BĀKILLĀNĪ (i.e. the greengrocer), the ḳāḍī Abū Bakr Muḥammad b. al-Ṭayyib b. Muḥammad b. Djaʿfar b. al-Kāsim, in most of the sources Ibn al-Bākillānī, but in popular usage (and Ibn Khallikān) simply al-Bākillānī, Ashʿarī theologian and Mālikī jurisprudent, said to have been a major factor in the systematising and popularising of Ashʿarism.

The date of his birth is unknown. He died on 23 Dhuʾl-Kaʿda 403/5 June 1013. Born in Baṣra, he seems to have spent most of his adult life in Baghdād. Visits to Shīrāz and the Byzantine court are mentioned, and for a time he exercised the office of ḳāḍī outside the capital. He studied *uṣūl al-dīn* under disciples of al-Ashʿarī and is said to have attracted many to his own lectures. Various anecdotes are related to illustrate his skill in disputation. Kāḍī, writer, disputant, lecturer—these headings sum up his life as we know it from our rather inadequate sources.

A list of his works (to which the editors add three titles) is given by the ḳāḍī ʿIyāḍ. Six of these fifty-two works are known to be extant. The *Iʿdjāz al-Kurʾān*, printed several times, is regarded as a classic work on the subject. The *Tamhīd* is the earliest example we have of a complete manual of theological polemic. The *Inṣāf* contains two parts: a version of the Sunnī creed with brief explanations, and a detailed discussion of the increation of the Kurʾān, the *ḳadar*, the vision of God, and intercession (*shafāʿa*). The *Manāḳib* (incomplete) is a defence of the Sunnī position regarding the Imamate (Caliphate). The *Intiṣār* (incomplete) is chiefly concerned with textual integrity of the Kurʾān. The theme of the *Bayān* (incomplete) is the apologetic miracle which vindicates the claim to prophethood.

Study of these works does not enable us to define precisely the author's contribution to the development of Ashʿarī *kalām*. For we do not know enough about the work of his contemporaries and predecessors, e.g. Ibn Fūrak, Abū Isḥāḳ al-Isfarāʾīnī, and al-Ashʿarī himself. Thus it is now clear that much of what once might have been attributed to al-Bāḳillānī already existed in al-Ashʿarī's *Kitāb al-*

luma'. Ibn Taymiyya called al-Bāḳillānī "the best of the Ash'arī *mutakallimūn*, unrivalled by any predecessor or successor" (*Shadharāt*, iii, 169), but this praise is not disinterested. Ibn Khaldūn's assertions (*Muḳaddima*, iii, 40), and the affirmations of Macdonald (*Development of Muslim Theology etc.*, 200-201), seem to be unwarranted, since al-Bāḳillānī certainly did not introduce the doctrines of atomism and accidents. There is evidence of some originality in his discussion of the apologetic miracle. But the main virtues of his works appear to be those proper to careful and industrious compilation. His metaphysic is not profound, but he was clearly aware of the cardinal apologetic importance of such questions as the validity of tradition and the possibility of the apologetic miracle. Undoubtedly he did much to propagate Ash'arism, and he is mentioned fairly frequently by later writers.

Bibliography: I. Biography — al-Khaṭīb, *Ta'rīkh Baghdād*, v, 379-383; al-Ḳāḍī 'Iyāḍ, *Tartīb al-madārik etc.*, in Cairo ed. of *Tamhīd*, 242-259; al-Sam'ānī, 61b-62a; Ibn 'Asākir, *Tabyīn kadhib al-muftarī etc.*, Damascus 1347/1928-9, 217-226; Ibn Khallikān, 580; Ibn Farḥūn, *K. al-dībādj*, 244-5; Ibn al-'Imād, *Shadharāt*, a. 403 (III, 168-170). Cairo ed. of *Tamhīd*, 258, note 6. There is an annotated English translation of the parts of the *I'djāz* which deal with poetry: G. E. von Grunebaum, *A Tenth-Century Document of Arab Literary Theory and Criticism*, Chicago, 1950. III. General — Tritton, *Muslim Theology*, 177-182; Anawati et Gardet, *Introduction à la théologie musulmane*, 154-6; R. J. McCarthy, *The Theology of al-Ash'arī*, references *passim*, and useful for comparative study. A full-length study of al-Bāḳillānī is being prepared for publication.

(R. J. McCarthy)

AL-**BĀḲIR** (A.) the Splitter, i.e. the Investigator, a name of the Imām Muḥammad b. 'Alī [*q.v.*].

BAKKĀ', pl. *bakkā'ūn*, *bukkā'*, "weepers", ascetics who during their devotional exercises shed many tears. Older Islamic asceticism and mysticism are characterised by a strong consciousness of sin, by austere penance, humility, contrition and mourning. Laughter was denounced. An outward sign of this attitude is the act of weeping. The Ḳur'ān (Sūra xvii, 109: "and they fall down on their chins, weeping", and Sūra xix, 58: "when the signs of the Merciful were recited before them, they fell down, prostrating themselves, weeping"), and then, above all, the *ḥadīth* acknowledge and commend the shedding of tears during devotional exercises. The Prophet Muḥammad is said to have wept audibly at times in the course of the ritual prayers. A similar behaviour is reported of the first Caliphs Abū Bakr and 'Umar. Of weeping ascetics or those who at least commended the practice of weeping, a long list might be compiled from the *Ḥilyat al-Awliyā'* of Abū Nu'aym. To this class belonged such well-known names as Ḥasan al-Baṣrī, Ibn Sīrīn, Mālik b. Dīnār, Abu 'l-Dardā' (who even wrote a special work called *Kitāb al-Riḳḳa wa 'l-Bukā'*), Ibrāhīm al-Nakha'ī, Abū Sulaymān al-Dārānī, Fuḍayl b. 'Iyāḍ, Ḥabīb al-'Adjamī, 'Abd al-Wāḥid b. Zayd, Sufyān al-Thawrī, Dhu 'l-Nūn al-Miṣrī, Yaḥyā b. Mu'ādh al-Rāzī, etc. Yet there were but few who in fact bore the by-name of *al-bakkā'* or were at least designated as weepers, amongst them being Yaḥyā al-Bakkā' (in Baṣra; *Ḥilya* 2,347), Abū Sa'īd Aḥmad b. Muḥammad al-Bakkā' (*Ḥilya* 7,385), Muṭarrif b. Ṭarīf, Muḥammad b. Sūḳa, 'Abd al-Malik b. Abdjar, Abū Sinān Ḍirār b. Murra (these four in Kūfa: *Ḥilya* 5, 4 and 5, 91), Sayyār al-Nabādjī (designated as *bākī*; *Ḥilya* 10, 166), Haytham al-Bakkā', Ṣafwān b. Muḥriz (Djāḥiẓ, *Bukhalā'*, 5), Hishām b. Ḥassān (Wensinck, *Some Semitic Rites of Mourning*, 85 f.), Ibrāhīm al-Bakkā' (Sulamī, *Ṭabaḳāt*, 87). Famous for their weeping are also Ṣāliḥ al-Murrī, Ghālib al-Djahḍamī, Kahmas, Muḥammad b. Wāsi'. These *bakkā'ūn* did not, however, represent a special "class", as R. A. Nicholson (*E.R.E.* 2, 100), A. J. Wensinck (*Some Semitic Rites*, 86), L. Massignon (*Essai*, 167), H. Lammens (*L'Islam*, 152), Ch. Pellat (*Le milieu basrien et la formation de Ǧāḥiẓ*, 94) and R. Dozy (*Suppl.*, s.v. *bakkā'*) seem to suppose. *Bakkā'* continued rather to be an appellative term applicable to all those who wept copiously, and given to an individual only occasionally as a by-name; it is comparable to some degree with the term *ḥammād* found in *Ḥilya* 5, 69 as a designation for one who in joy and sorrow sings the praise of God. Therefore mention is also made of *bakkā'ūn* amongst the ancient Israelites (Ibn Ḳutayba, *'Uyūn al-Akhbār*, 2, 284; *Ḥilya*, 5, 164). Muḥammad b. Wāsi', himself a great weeper, deemed it absurd to call himself *bakkā'* (*Ḥilya*, 2,347).

Abu 'l-Dardā' gives three reasons for his weeping: fear of the fate that awaits us directly after death, the impossibility of striving further towards one's own salvation, and the uncertainty as to the verdict that will be made on the Day of Judgement (Djāḥiẓ, *Bayān*, 3, 151; var. Ibn Ḳutayba, *'Uyūn*, 2, 359). Yazīd b. Maysara enumerates in general seven reasons for weeping: joy, sorrow, anguish, pain, hypocrisy, gratitude to and fear of God (*Ḥilya*, 5, 235). Abū Sa'īd al-Kharrāz even names eighteen reasons, all of them subordinate, however, to three kinds of weeping: away from God, towards God, and with God (Sarrādj, *al-Luma' fi 'l-Taṣawwuf*, ed. Nicholson, 229).

In the centre of the weeping of the *bakkā'ūn* are the fear of God (*khashyat Allāh*), the Day of Judgement, doubt as to the verdict of God, the tortures of Hell. Often there is weeping over one's own sins, over specific personal weaknesses, over the wasted bygone years or the irrevocable past during the period of probation on earth; it can also arise from compassion for others, for those who err in their religion and for the dead who are no longer able to better their fate, or it arises from yearning for one's abode in Heaven, for God, and so on. They often wept in the expectation — and here too the *ḥadīth*, in a certain measure, could be adduced as an authority — of God's indulgence and kindness, of His protection on the Day of Judgement, of safeguard from Hell, of remission of one's own or even of other people's sins, of the attainment of Paradise, and of reward. Just as the beggar who can weep has a greater chance of success (Karl Hadank, *Die Mundarten von Khunsār*, etc., cix), so too the spiritual beggar, through weeping, hopes to arouse the compassion of God and thus, perhaps, to undergo

here and now some part of his future punishment. "Between Hell and Paradise", one text has it (*Ḥilya*, 7, 149), "there lies a vast desert that only the *bakkāʾ* traverses".

Prayer (including ritual prayer), thinking of God, reciting Ḳurʾān and *ḥadīth*, sermons, edifying stories, pious discourses, meditative contemplation — these constitute the occasions for weeping. We learn that the pious Muslim would pass the night and weep until morning in solitary meditation over one or the other of those passages of the Ḳurʾān that deal mainly with the punishment of the sinner. At times there is weeping in prayers of supplication, often at the Kaʿba, clinging to the *kiswa* or before the Black Stone, frequently too in burial grounds at the sight of the tombs. Ḳurʾān-readers (*ḳurrāʾ*), reciters of the *ḥadīth* preachers and narrators of edifying stories (*ḳuṣṣāṣ*, sing. *ḳāṣṣ*) during their performance give free course to their tears, and often incite their audience to weep, or they just make them shed tears. One *ḳāṣṣ* is said to have asked his audience, before each discourse: "Lend me your tears!" (*Ḥilya*, 5, 112). Special gatherings (*maḥāḍir*, sing. *maḥḍar*) were held, in which there was much weeping, followed by a meal (*Ḥilya*, 2, 347). Two pious Muslims, encountering each other, might enter into a discourse about religion and shed tears over it. Muḥammad b. Sūḳa and Ḍirār b. Murra are said to have met regularly each Friday for this purpose (*Ḥilya*, 5, 4 and 5, 91). Badīl, Shumayt and Kahmas came together on one occasion in the house belonging to one of them and said: "Let us weep today over the cool water (that we shall be lacking on the Day of Judgement)!" (*Ḥilya*, 6, 213). The long lament of a weeper (with the characteristic *wayḥi*) can be found in *Ḥilya*, 4,255-260, the much shorter lament of a supposed Israelite in *ʿUyūn*, 2, 284, and a religious discussion between three weepers in *Ḥilya*, 10,163.

The most incredible stories are reported concerning the amount of tears that a weeper was able to shed: one of them wept at times for three days and nights on end, others cried until their beards or their cushions were soaked, others again drenched entire sacks of sand with their tears. The tears of one weeper were heard splashing on his feet; another, after weeping, sat in such a puddle that he was thought to have carried out his ablutions there. One of them, pouring out tears on the ground, caused grass to sprout; another wept on purpose into a drain (*sarāb*). In some weepers the flow of tears furrowed deep lines in their cheeks, others had their eyelashes and eyelids fall off, others again had their ribs deformed, and their eyes became weak-sighted or blind. Cases of fainting and even of death are mentioned.

The ability to weep was held to be a special privilege (*faḍīla*) and a sign of true religious fervour and divine grace. "Not every seeker can weep" (ʿAbd Allāh Anṣārī Harawī, *Rasāʾil*, Tehrān 1319, 51). Abū Bakr, at the sight of some Yemenites who were weeping at a recital of the Ḳurʾān, called out: "Thus were we too, until our hearts were hardened" (Djāḥiẓ, *Bayān*, 3, 151). ʿĀmir b. ʿAbd Ḳays once struck himself in despair on the eyes and exclaimed: "Dry, paralysed, never to be wet again!" (*Bukhalāʾ*, 5). For Dārānī, the inability to weep is a sign of abandonment by God (Sulamī, *Ṭabaḳāt al-Ṣūfiyya*, Cairo 1953, 81). Yūsuf b. Ḥusayn al-Rāzī saw in the fact that he no longer wept during the reading of the Ḳurʾān a sign that his countrymen might perhaps be right to call him a *zindīḳ* (*Ḥilya*, 10, 240).

On the other hand, Thābit al-Bunānī regards the gift of weeping as a sign that God grants his prayers (*Ḥilya*, 2, 323). Muḥammad is said to have entreated God to grant him "two raining eyes that weep a flood of tears" (*Ḥilya*, 2, 296 f. and 2, 280; Wensinck, *Some Semitic Rites*, 89). In this connexion, the *ḥadīth al-tabākī*: "Weep or at least attempt to weep (or: at least pretend to do so)!" enjoys general acceptance.

Among the ascetics four objections or, at least reservations have been raised against the practice of weeping. First of all, weeping was not an action. Secondly, it could be considered as relieving the load of grief and an unburdening of the heart and as such was rejected. In this connexion Sufyān b. ʿUyayna is said to have developed the technique of holding back the tears in his eyes by raising his head and thus, he said, retaining his sorrow longer within him (*Ḥilya*, 9,327). Thirdly, weeping was something outward and could therefore be simulated. The false tears of Joseph's brothers (Sūra 12,16) are mentioned as an example of this danger. Reference was also made to the supposed *ḥadīth*: "The believer weeps in his heart, the hypocrite in his skull". Since weeping is an outward manifestation, it never receives in the Ṣūfī manuals a chapter to itself, but is treated only in passing in the chapters on sadness (*ḥuzn*), contrition (*khushūʿ*) and the like. The 27th chapter of ʿAṭṭār's *Mukhtārnāma* (*dar ṣifat-i girīstan*) is a special case, which does not necessarily belong here. Fourthly, many later Ṣūfīs have held it to be a sign of weakness to let themselves be overpowered by their feelings to the point of weeping.

This is not the place for a full account of the weeping of the Ṣūfīs in the *samāʿ* and at the tombs of saints, the shedding of tears amongst pilgrims at the sight of Mecca, in ʿArafa and at the tomb of the Prophet in Medina, the weeping of the Shīʿites over their Imāms or at their tombs, the weeping of the *tawwābūn* (those addicted to repentance) or of the Khawāridj, etc. But it may be indicated here that the weeping of the *bakkāʾūn* is one of the most evident links that bind together the pious asceticism of the Muslims with that of the Christians. From the early-Christian *gratia lacrimarum*, through the Coptic and Syrian monks (Shenute, Ephraem, John of Ephesus, Isaac of Nineveh, etc.), a direct line runs to the Islamic *bakkāʾūn* — an instance of the well-known bifurcate development: a common root in early Christianity, with, thereafter, one branch in Western Christendom (Augustine, Cassian, etc.), and the other in the East. The eastern current divides thereafter into three branches: one represents the Eastern Christian con- tinuation through Thomas of Margā down to Barhe- braeus, etc., the other is the Jewish offshoot (Wensinck) and the third constitutes the weeping in Islamic asceticism. Islam has, it is true, overlaid and indeed absorbed within itself other oriental forms of weeping (cf. the "weeping of the Magians" over Siyāwush, in Narshakhī's *Taʾrīkh-i Bukhārā*, ed. Schefer, 21; the weeping over Tammuz ?). Nonetheless, the Muslims themselves were well aware that their pious weeping had its origin in the Jewish-Christian sphere and illustrated it with such examples as the tears of Adam, Noah (Nūḥ: etymology *nāḥa*), Jacob, David, Solomon, John the Baptist, Jesus and numerous monks. The *ḥadīth al-tabākī* might even go back to an utterance of Isaac of Nineveh (translated by Wensinck, 235): "If thou art no mourner in thy heart, let at least thy face be clad with mourning".

The *bakkāʾūn* mentioned by Ibn Hishām, *Sīra*, ed.

Wüstenfeld, 2,895 f., do not fall into the category of the weepers discussed in this article.

BAḲḲĀL, etymologically "retailer of vegetables", this word has become the equivalent of the present English "grocer" taken in its widest sense. With the latter significance it has passed into Persian and Turkish, and, from Turkish, into the Balkan languages.

In its etymological meaning, the word was known in the Spanish Arabic of Valencia in the 7th/13th century, glossed by *olerum venditor*. But in the dialect of Granada (end of the 9th/15th century), it corresponded to the Castilan *regaton* (= *regrattier*) "retailer of foodstuffs in general", which was also rendered by *khaḍḍār*.

At the beginning of the 20th century, the *baḳḳāl* of the Moroccan towns was essentially a retailer of fats: oil, preserved butter, meat preserved in fat; he sold, in addition, honey, soft soap, olives in lemon juice, tea sugar and candles.

It is doubtful whether this extension of the word *baḳḳāl* is of long standing. Nearly everywhere, before the 20th century, the grocer (*sensu lato*) was named either after the basic foodstuff which he sold (with or without vegetables), or after certain methods of his trade.

Algiers had its *sakākiri* "sugar-seller"; Tunis its *ʿaṭṭār* [*q.v.*], literally "perfume-seller". As regards the Cairo of the first half of the 19th century, E. W. Lane only knew the *zayyāt* "seller of oil, butter, cheese, honey, etc.". In Syria, the usual term was *sammān* "seller of preserved butter".

Elsewhere, the grocer of the towns (*sensu lato*) was often considered as being the "shopkeeper", the fundamental "seller". At Granada, *baḳḳāl* and *khaḍḍār* were equivalent to *sūḳī* "market seller"; and the feminine *sūḳiyya* had as its Arabic synonym *khaḍḍāra* and as its Castilian equivalent: *havacera* "seller of beans". In earlier days, in Constantine and Tunis, the *sūḳī* used to sell oil, preserved butter, honey, dates, pickled olives, etc.

Considered as being the "shopkeeper" *par excellence*, the grocer also received the name of *ḥawāniti* (with variants) among the rural populations of Algeria and Constantine. The East, sporadically, used the terms *dakākinī* and *dukkāndjī*.

Arabic-speaking Spain had *muʿālidj*, lit. "treating, developing", with the sense of "retailer of fruit and vegetables". Dozy's translation, in his *Supplément*, should be corrected on this point.

The retailer of vegetables is called, according to the country, *khaḍḍār*, *khuḍrī* or *khuḍārī*. Spices are, in general, sold by the *ʿaṭṭār*, in addition to perfumes (*ʿiṭr*) and drugs; his trade comprises also small items of stationery, haberdashery and hardware.

For various reasons, the calling of grocer is often followed by people having the same ethnic origin.

In the towns of Morocco (except at Tetuan, until recently), the *baḳḳāl* is almost exclusively a Berber (pl. *shulūḥ*) of Sūs, of the Ammeln tribe. In Algeria, the people of the Mzāb enjoy the same *de facto* monopoly. In the East, the modern *baḳḳāl* is often a Greek.

BAḲḲAM (A.) Sappan wood, an Indian dye-wood obtained from the *Caesalpinia Sappan L.* Al-Dīnawarī remarks that the word frequently occurs in ancient Arabic poetry, although the tree concerned (in Lewin's ed. read *khashab shadjar* instead of *shadjar* according to later quotations) is not found in Arabia. It is a native of India and the country of the Zandj. Its stem and branches are red being used, in decoction, as a dye.

The word is said to derive from Sanskrit *pattanga* and probably entered Arabic through the Persian. Its foreign origin was recognised by the Arab philologists who based their view on the assertion that the paradigm concerned was not otherwise attested in the language. As an Arabic equivalent they generally indicate *ʿandam* which, however, rather denotes the dragon's-blood, a red gum exuding from certain trees. The wrong identification can be attributed to the fact that both *baḳḳam* and *ʿandam* were used as a red dye.

Muslim pharmacologists indicate several medicinal applications of the sappan wood. It brings about the cicatrisation of wounds, desiccates ulcers and stops bleeding. Its juice makes the skin tender and embellishes its colour. The root yields a poison which works quickly.

BAKKĀR, a fortified island in the river Indus lying between the towns of Sukkur and Rohri. Its importance was noted by Ibn Baṭṭūṭā who visited it during the reign of Muḥammad b. Tughluḳ. In 1522, Shāh Beg, the founder of the Arghūn dynasty, made

it his capital. When, in 1540, his son, Shāh Ḥusayn, refused to grant an asylum to the fugitive emperor Humāyūn the latter unsuccessfully attempted to capture this island fortress In 1574, in the time of Akbar, it was annexed to the Mughal empire. The best and fullest account of the Mughal conquest of Sind is to be found in the *Ta'rīkh-i Ma'ṣūmī* of Mīr Muḥammad Ma'ṣūm, an inhabitant of Bakkār. In 1736 Bakkār was captured by the Kalhora rulers of Sind. It later fell into the hands first of the Afghāns and then of the ruler of Khayrpur. It was occupied by the British in 1839 and became their chief arsenal in Sind during the First Afghān War (1839-42). From 1865 to 1876 it was used as a jail.

BAḲḲĀRA. Arabic-speaking nomads of the Sūdān, occupying territories from Lake Chad to the White Nile between 9° and 13° N. Their livelihood is the herding of cattle (*baḳar*), whence their name. The dry season is spent in the southern river-lands. With the rains, they move northwards to the seasonal grasslands. Grain sown on this journey is harvested on the return. Baḳḳāra origins are obscure; the genealogies reflect existing groupings rather than give evidence of descent. They are probably connected with the Djuhayna, who irrupted into Nubia from Egypt in the 14th century. From the Nile, nomadic groups apparently made their way by the 17th century to the lands between Waddāī and Lake Chad. Fusion with other elements from North Africa may account for the tradition of a Hilālī origin among some Baḳḳāra. Penetrating southwards into regions unsuitable for camel-breeding, they turned to cattle. Groups pushing eastwards, to the south of the cultivated areas of Waddāī, Dār Fūr and Kordofān, (which were under Islamised dynasties) formed an Arab wedge between these sultanates and the pagan tribes who retreated southwards. The Baḳḳāra were uneasy vassals of these sultanates to which they paid tribute, migrating on occasion beyond the power of their overlords. Slave-raids on the southern pagans and consequent intermarriage have affected the physical type of the Baḳḳara. During the 18th and 19th centuries, the powerful Rizayḳāt Baḳḳāra were under the suzerainty of Dār Fūr. Their quarrel with the Sudanese slave-trader, al-Zubayr Raḥma Manṣūr, led to the Egyptian conquest of Dār Fūr in 1874. The Baḳḳāra assisted Muḥammad Aḥmad al-Mahdī [*q.v.*] to overthrow Egyptian rule but proved refractory to the Mahdist administration. The Khalīfa 'Abd Allāh b. Muḥammad [*q.v.*], himself a Baḳḳārī of the Ta'āīsha tribe, used the Baḳḳāra as troops and selected from them his chief assistants. In 1888-9 he compelled the Baḳḳāra of Dār Fūr to migrate to Omdurman and its vicinity, both to support his power against the *awlād al-balad* [*q.v.*] and to bring them under closer supervision. This migration and their losses in fighting and epidemics weakened the Baḳḳāra. During the Reconquest (1896-8) many regained their old homelands as broken tribes. They gave little trouble to the Condominium government (1899-1955) and this régime saw the gradual resettlement of the Baḳḳāra and their integration into the administrative system.

BAḲLIYYA, name given to a group of Muslim dissenters in the Sawād of lower 'Irāḳ, associated with the Ḳarmaṭians. A certain Abū Ḥātim, about 295/907-8, is said to have forbidden them garlic, leeks, and turnips, as well as the slaughtering of animals, and to have abolished religious observances. They rose in the area of Kūfa and Wāsiṭ under several leaders, notably Mas'ūd b. Ḥurayth and 'Īsā b. Mūsā nephew of 'Abdān, at the time of Abū Ṭāhir's Euphrates expedition in 316/928-9. Their white banners bore Ḳur'ānic inscriptions recalling the liberation of the Israelites from Pharaoh's oppression. After initial successes they were put down by Muḳtadir's general Hārūn b. Gharīb. They were evidently also called Būrāniyya.

BAKR, the Ṣū Bāshī. A military commander and district-governor in central 'Irāḳ, Bakr achieved by 1029/1620, by unscrupulous brutality, an outstanding personal military and civil position under a weak Pasha of Baghdād. Successful in the field, he replied to a conspiracy of his enemies in the capital by strong counter-action, established effective control of the province, and petitioned the Sultan for official investiture as Beylerbeyi, which title he now assumed. It was refused, and an army from the nearest loyal province, Diyārbakr, marched on Baghdād to restore legitimacy and order. Fierce exchanges took place for some weeks between the loyalist and the usurping forces, after which Bakr decided, with cynical treachery, to invite Shāh 'Abbās of Persia to re-occupy 'Irāḳ, thus compelling Ḥāfiẓ Aḥmad, of Diyārbakr, with great reluctance, to confirm him as Pasha of the province, since he alone could now prevent a shameful cession of Ottoman territory. The loyalist forces withdrew, those of Persia approached the city. Bakr refused to open the gates, and after negotiations full of callous duplicity the Shah reduced it by siege. This was ended by the treacherous surrender of the city by the Ṣū Bāshī's own son. Baghdād was sacked, hundreds massacred and Bakr put to a terrible death; 'Irāḳ remained under Persian rule until its reconquest by Sulṭān Murād in 1048/1638.

BAKR b. WĀ'IL, ancient Arabic group of tribes in Central, East, and (later) Northern Arabia. The Bakr belonged to the same people—later known as Rabī'a—as the 'Abd al-Ḳays [*q.v.*]. Their place in the tribal genealogy is three grades lower than that of these. The Tha'laba (b. 'Ukāba) are to be re-

garded as the core of the Bakr. Joshua Stylites (§ 57) mentions them under the year 503 as being the leading tribe of the northern Arabian Kinda Empire, and shortly afterwards they appear in a South Arabian inscription (Ryckmans 510, *Le Muséon* 1953). In the genealogy of Bakr, the Tha'laba are on a level with the tribes of 'Idjl and Ḥanīfa b. Ludjaym, with the Yashkur b. Bakr three grades above them. The Tha'laba were themselves subdivided into the Banū Shaybān, Dhuhl, Taymallāt (Taymallāh), and Ḳays. The Bakr tribes lived in the area of al-Yamāma. At that time, this embraced al-'Irḍ = Wādī Ḥanīfa, and its tributaries Luḥā (Shaib Ha on the maps), Nisāḥ, and al-Sulayy, the district of al-Khardj to the south, and the district of al-Witr with its tributaries north of the watershed. Al-Ḥadjr, the capital of al-Yamāma (near al-Riyāḍ of today) was originally in the hands of the Ḥanīfa. Later on, members of other Bakr tribes settled there too. The second largest town, Djaww (Djaww al-Yamāma, later al-Khiḍrima), south-east of al-Ḥadjr, was also largely inhabited by the Ḥanīfa, who likewise owned the oases Ḳurrān and Malham on the far side of the watershed. Colonies of the Ḥanīfa could be found further to the north-west in the regions of al-Washm and al-Sudayr. The Dhuhl b. Tha'laba lived, in (Ḳaryat Banī) Sadūs, named after one of their sub-tribes, on a *wādī* which runs into the Witr, the Ḳays b. Tha'laba among other places, in Manfūḥa, to the south of Riyāḍ. There is also evidence of villages of the Yashkur, 'Idjl and Shaybān. Djaww and al-Ḥadjr were sites of an ancient culture, which is linked with the vanished tribes of Ṭasm and Djadīs in later legends. epics. Baityles (obelisks) could still be seen in Ḥadjr in early Islamic times, but in Djaww these had been destroyed during the raid by a member of the southern Arabian dynasty of Ḥassān (al-A'shā, no. 13, 16-21).

Date palms were cultivated in all oases, but in the 'Irḍ valley and in al-Khardj grain was grown. In good years corn was sent to Mecca, but in bad years it was not even sufficient for local consumption (Mutalammis, ed. Vollers, no. 5, 8; al-A'shā, no. 19, 24; 23, 22-23; Ibn Hishām, 997 f.). As the Bakr villages were rather close together, there were sometimes feuds between them during which the palm groves were burned down (al-A'shā, no. 15, 56-57; 38, 9-11; Yāḳūt, *s.v.* al-Muḥarraḳa, (below Sadūs). Some Bakr escaped these conditions by leaving and becoming mercenaries (Aws b. Ḥadjar, ed. Geyer, no. 14; *Mufaḍḍaliyyāt*, ed. Lyall, no. 119), many took up the nomadic life—which was later on embraced by considerable parts of their tribes.

It is possible that this movement was started by the appearance of the Kinda in the second half of the 5th century (amend art. 'ABD AL-ḲAYS, line 13: from 6th to 5th century). We have no definite information about the routes which the nomadic Bakr followed at that time, although later sources (Ryckmans 510; *Mufaḍḍaliyyāt*, 430, 13) indicate that they went to the west (and east?) of al-Yamāma. During this period there was a long feud between the Bakr and their brother tribe, the Taghlib, which only came to an end in the middle of the 6th century, in a peace concluded under the patronage of Mecca, in Dhu 'l-Madjāz, outside the Ḥaram (al-Ḥārith b. Hilliza, *Mu'allaḳa*, ed. Arnold, 66). The Yawm Kulāb I (a battle between two heirs of the Kinda empire, in about 530, at Thahlān, S.-W. of Duwādamī) is rightly regarded as an episode in that feud. Shortly afterwards, the Taghlib—whose zone of migration was then from Sādjir in the upper Sirr, to Naṭā'i near the Persian Gulf (*Mufaḍḍaliyāt*, 430, 13; Ḥārith, *Mu'.*, 79)—left central Arabia, and settled in the steppes on the near side of the lower Euphrates, where, possibly, some of them had already settled earlier on. The Bakr followed them, but they stopped before Baṭn Faldj. Place names mentioned then and afterwards by the poets seem to show that the routes taken by the nomadic Bakr in the following decades ran from north to south. The area which was later vacated by the Taghlib and Bakr on the near side of the Ṭuwayḳ bend was probably before 530 interspersed with Tamīm, whose home was along both sides of the Tasrīr. After 530, they spread over the Ṭuwayḳ to eastern Arabia. Since the nomadic routes of both groups crossed, peace had somehow to be maintained, and there is in the next decades in fact little mention of fights between the Bakr and the Tamīm.

A number of outstanding Shaykh families emerged in the period in which the changing relationships between the Bakr and the Taghlib, the Tamīm, and the kings of the Kinda and of al-Ḥīra, demanded leaders of political experience. The hero of E. Bräunlich's *Bisṭām ibn Qais* (Leipzig 1923) is a member of one of these families, the Dhu 'l-Djaddayn. Connexions with al-Ḥīra were responsible for an early development of poetry, especially amongst the Ḳays b. Tha'laba, as witness the works of al-Muraḳḳish (the legend concerning him appears for the first time in Ṭarafa, *Six Poets*, no. 13, 14-19, an imitation by a later poet of al-Ḥīra; *N.B.* the 'younger Muraḳḳish' never existed, as is evident from al-Farazdaḳ, *Naḳā'iḍ*, 200, 15, to mention only one witness), those of 'Amr b. Ḳamī'a [*q.v.*], who never journeyed to Byzantium with Imra' al-Ḳays, those of Ṭarafa, and those of al-A'shā, who lived on into the 7th century. Poetry also flourished among the Yashkur, to whom al-Ḥārith b. Ḥilliza belonged.

The nomadic Bakr entered a new period when the Taghlib vacated the steppes on the lower Euphrates, migrating up the river, after their chief, 'Amr b. Kulthūm had killed the king of al-Ḥīra, 'Amr b. Hind in 569-70. About 580, a poet says (*Muf.*, no. 41, 11): "And Bakr—all 'Irāḳ's broad plain is theirs: but if so they will, a shield comes to guard their homes from lofty Yamāma's dales". Some ten years later, the Tamīm, and especially the Yarbū', began to press forward, in order to pitch their tents in al-Ḥazn during the spring. This gave rise to mutual raids, some of which, taking place between 605 and 615) have been described by Bräunlich (in the above mentioned book). A great deal is known concerning the tribes of the nomadic Bakr at this period, and also something about the area they covered. The tribes concerned were the Shaybān, 'Idjl, Ḳays, and Taymallāt b. Tha'laba. The 'Idjl went as far as what later became the Kufan pilgrim route in the west, and as far as Tuḳayyid in the east; the Shaybān pitched their tents to the north and south of the line al-Kāẓima (near the Bay of Kuwayt)—Ra's al-'Ayn = al-Busayya (?)—Salmān, and the Ḳays b. Tha'laba south-east of these, between al-Musannāh (Yāḳūt, erroneously al-Muthannāh) and Ra's al-'Ayn (al-A'shā, no. 14, 20; 29, 24). The Taymallāt, Ḳays and 'Idjl formed the confederation of Lahāzim, in order not to be overwhelmed by the Shaybān. It is not exactly known where the northern Bakr wintered, but the Ḳays b. Tha'laba appear

to have alternated—at least in the eighties—between al-Yamāma and the north (al-Aʿshā, no. 32, an early poem, especially v. 48). The Shaybān occasionally went as far as the oases of Baḥrayn in eastern Arabia, whilst the ʿIdjl appear to have remained in the north. During the summer, the tribes congregated where water could be found on this side of the Ṭaff between ʿAyn Ṣayd and Abū Ghar. It is in this area that the famous battle of Dhū Ḳār, in which the Dhuhl b. Shaybān repelled the advance guard of the Persian knights of Hāmarz [q.v.] was fought around the year 605 (al-Aʿshā, no. 40). In spite of this, the Bakr soon came under Persian influence again. At the same time, the hostility between Bakr and Tamīm in the north spread to Central Arabia, where the prince of Djaww, Hawdha b. ʿAlī, of the Banū Ḥanīfa, a vassal of the Persians, was hard pressed by the Tamīm. until the Persian governor of Baḥrayn drastically broke their valour (see al-Aʿshā, no. 13, 62-69). This brings us up to Islamic times.

Christianity was accepted by some of the Bakr in the north as well as in the south, particularly among the ʿIdjl, and (within the Shaybān) among the Dhu 'l-Djaddayn. Al-Aʿsha and Hawdha b. ʿAlī were also Christians. The adherence of Yamāma to Musaylima [q.v.] shows that Christianity had not taken root there, but the position in the north was quite different: the case of the former Ghazu leader, Abdjar b. Djābir, who died a Christian in Kūfa in 641, can hardly have been exceptional among the ʿIdjili. The Dhu 'l-Djaddayn also retained their Christian faith. The paganism, about which there is an interesting passage in ʿAmr b. Ḳamīʾa, no. 2, 9-15, is hardly mentioned by the later poets, unless one counts al-Aʿsha, no. 39, 47, whilst the idol Muḥarriḳ in Salmān (Yāḳūt iv, s.v. Muḥarriḳ) is not mentioned in Ibn al-Kalbī's *K. al-Aṣnām*.

Muḥammad had tried to get in touch with Hawdha b. ʿAlī even before the conquest of Mecca, but his message met with a cool and haughty reception. His successor in al-Ḥadjr was Musaylima. Thumāma b. Uthāl of the *sira* and the *ridda* is, strangely enough, missing in the genealogy of Ibn al-Kalbī, which is based, in this respect, on a Bakrite authority. Information on the *ridda* in eastern Arabia, which spread from the Ḳays b. Thaʿlaba. can provisionally be found in Wellhausen, *Skizzen und Vorarbeiten*, vi, 20 ff. Meanwhile the Bakr in the north had taken advantage of the disputed succession in Ctesiphon (628-632) in order to raid the cultivated land (as they had done before Dhū Ḳār). A leader of the Dhuhl b. Shaybān, al-Muthannā b. Ḥāritha, distinguished himself on this occasion, and when he heard of the defeat of the *ridda*, he joined Islam, thereby consolidating his leadership. Together with Khālid b. al-Walīd he brought about conditions which later led to the capitulation of al-Ḥīra. When the Muslims were placed on the defensive, after Khālid's departure to Syria early in 634, he covered the retreat in the Battle of the Bridge, in the autumn of 634. His last great deed took place a year later at Buwayb, after which he succumbed to his wounds. Bakr (and Tamīm ?) also prepared the ground for the conquest of what later became the province of Basra. ʿIdjl and Ḥanīfa took part in the battle of Nihāwand in 642. The Bakr reached Khurāsān with troops from Baṣra, and in 715 there were 7000 of them there (Ṭabarī, ii, 1291). In both places they were partly responsible for the extension of the ancient tribal feuds, which continued there on a larger scale. Together with the ʿAbd al-Ḳays, they formed the Rabīʿa group in Baṣra, and later they joined the Azd ʿUmān who immigrated around 680. As the Tamīm in Baṣra were associated with the Ḳays group (ahl al-ʿĀliya), a rift again occurred. Hostility subsided, however, after some fighting between the two parties on the occasion of the death of Yazīd I in 684; and after Mālik b. Mismaʿ (a member of the leading family of the Ḳays b. Thaʿlaba) had declared himself in favour of the caliph ʿAbd al-Malik, in 690, the Bakr kept the peace. The position was rather different in Khurāsān, where a bloody feud broke out in 684 between Bakr and Tamīm, followed by permanent friction between the Rabīʿa-Azd and the Ḳays-Tamīm, which continued until here, too, the Bakr produced a sensible leader (Yaḥyā b. Ḥuḍayn). Their last remarkable personality was the general and statesman Maʿn b. Zāʾida [q.v.], of the Dhuhl b. Shaybān.

Whilst the Bakr disappeared early from the steppes of Baṣra, they remained for a longer time near Kūfa. The ʿIdjl retained their nomadic area, and later extended it towards the north-east; the Shaybān, however, migrated towards the north-west, as far as the waters of al-Laṣaf, not far from Kūfa, and later moved largely to the area of Mosul, in the north, where they settled along both banks of the Tigris. Three verses that have strayed into the *dīwān* of ʿAmr b. Ḳamīʾa (no. 16) describe the homesickness of a girl on this trek into foreign lands, to the Sātīdamā (possibly the Djabal Maḳlūb, opposite the town); and reports of Abū Mikhnaf (Ṭabarī, ii) concerning the noble leader of the Khāridjites, Shabīb b. Yazīd (of the Dhuhl b. Shaybān; killed in 697) describe the curious vacillation between Bedouin life and urban civilisation at that time. The Bakr spread thence to the north as far as Diyār Bakr (a late name) and Ādharbaydjān.

The Shaybān developed once again into a large nomad tribe. In spring and summer, they pitched their tents between the Upper and the Lower Zāb, in winter they moved as far as the area below Kūfa. During the 9th century, they carried out frequent raids into the plain of Mosul, which resulted in a campaign against them in 893, led by the caliph al-Muʿtaḍid. In the 11th century, they advanced into the cultivated land of ʿIrāḳ, but disappeared at the beginning of the next century. The name Rabīʿa began to supplant the tribal names Bakr and ʿAbd al-Ḳays in Baṣra and in Khurāsān, and the names Bakr and Taghlib in the eastern Djazīra = Diyār Rabīʿa. This also happened in Arabia. The royal family of Āl Suʿūd traces its family tree back to the Rabīʿa.

AL-BAKRĪ [see BAḲRIYYA and ṢIDDĪḲĪ].

AL-BAKRĪ, ʿABD ALLĀH [see ABŪ ʿUBAYD].

AL-BAKRĪ, ABU 'L-ḤASAN AḤMAD B. ʿABD ALLĀH B. MUḤAMMAD, appears to be the most acceptable form of the name of the alleged author, or final *rāwī*, of historical novels dealing with the early years of Islam, who also is credited with a *mawlid* and a fictional life of Muḥammad. The

earliest biography devoted to him is to be found in al-Dhahabī, *Mīzān*, Cairo 1325, i, 53. Al-Dhahabī indignantly describes al-Bakrī as a liar and inventor of untrue stories, whose books were available at the booksellers (and, presumably, enjoyed good sales). Considering the additional facts that a MS. of one of his works (Vatican Borg. no. 125) is dated in 694/1295 and that authors who lived as late as the end of the thirteenth century are quoted in the biography of the Prophet (Ahlwardt, *Verzeichniss der arab. Hss. . . . zu Berlin*, no. 9624), al-Bakrī would seem to have lived in the latter half of the thirteenth century. While this conclusion must remain highly speculative for the time being, there exist no cogent reasons for doubting the historicity of al-Bakrī's elusive personality. If the occasional epithet of "Baṣran Preacher" can be relied upon, he was active in ʿIrāḳ.

It is by no means certain that all the works attributed to al-Bakrī go back to one and the same author. For instance, the biography of Muḥammad quotes actual books and authors, while the other works are vague and confused in their references to sources and prefer fictitious names in the rare cases where transmitters are mentioned. Furthermore, it apparently was not yet known to al-Dhahabī, and a reference to it was added by Ibn Ḥadjar, *Lisān*, i, 202, in the biography he copied from al-Dhahabī. The relationship of the various works or recensions to each other has not yet been investigated, and in order to reach safe conclusions, it will be necessary to study all the numerous MSS. preserved in widely dispersed libraries.

Bibliography: Knowledge of al-Bakrī in the West begins with L. Marracci, cf. C. A. Nallino, *Raccolta di scritti*, ii, 115. Cf., further, R. Paret, *Die legendäre Maghāzī-Literatur*, Tübingen 1930, 155-58; Brockelmann, I, 445; S I, 616 (basic but disfigured by many mistakes). A *fatwā* forbidding the reading of his biography of Muḥammad, by Ibn Ḥadjar al-Haythamī, *al-Fatāwī al-Ḥadīthiyya*, Cairo 1353/1934, 116. See further MAGHĀZĪ and TAʾRĪKH. (F. ROSENTHAL)

AL-BAKRĪ, B. ABI 'L-SURŪR, name of two Arab historians of the notable family of Egyptian shaykhs of the Bakriyya *ṭarīḳa* (of the Shādhilī order).

1. MUḤAMMAD B. ABI 'L-SURŪR B. MUḤAMMAD B. ʿALĪ AL-ṢIDDĪḲĪ AL-MIṢRĪ, d. 1028/1619. His works include, in addition to a universal history in two parts (*ʿUyūn al-Akhbār, Nuzhat al-Abṣār*, also abridged under the title of *Tuḥfat* (or *Tadhkirat*) *al-Ẓurafāʾ*), several histories of the Ottoman Turks (*Fayḍ al-Mannān, al-Durar al-Athmān fī Aṣl Manbaʿ Āl ʿUthmān*, and *al-Minaḥ al-Raḥmāniyya* with an appendix on Egypt entitled *al-Laṭāʾif al-Rabbāniyya*), one on the Ottoman conquest of Egypt (*al-Futūḥāt al-ʿUthmāniyya*), and a work on the attempt of Muḥammad Pasha, *wālī* of Egypt, in 1017/1608-9 to suppress the tax called *ḥaḳḳ al-ṭarīḳ* (*al-Tafrīdj al-Kubrā fī Dafʿ* (or *Rafʿ*) *al-Ṭalba*).

Bibliography: Brockelmann, II, 388; S II, 412; Wüstenfeld, *Geschichtsschreiber*, no. 552; Babinger, 147; Ḥadjdjī Khalīfa, ed. Flügel, nos. 2619, 4981, 8458, 9325, 13152; Ismāʿīl Pasha Baghdādī, *Hadiyyat al-ʿĀrifīn*, Istanbul 1955, ii, 216. For his father Abu 'l-Surūr (d. 1007/1598-9), see Muḥibbī, *Khulāṣa*, i, 117.

2. MUḤAMMAD B. MUḤAMMAD B. ABIʾL-SURŪR, SHAMS AL-DĪN ABŪ ʿABD ALLĀH, son of the above, b. ca. 1005/1596, d. ca. 1060/1650. In addition to a universal history (*Samīr al-Aṣḥāb*) and two general histories of Egypt (*al-Rawḍa al-Maʾnūsa*, and *al-Rawḍa* (or *al-Nuzha*) *al-Zahiyya fī Wulāt Miṣr al-Ḳāhira al-Muʿizziyya*), a third history of Egypt entitled *al-Kawākib al-Sāʾira* covers in fuller detail the Ottoman period down to 1045/1634. This work, unpublished as yet, was translated by S. de Sacy (*Le Livre des Étoiles errantes*) in *Notices et Extraits des Manuscrits de la Bibliothèque du Roi*, i, 1788, 165-280 (a German translation from the French was published by G. Hanisch, Hildburgshausen 1791), and was used extensively by J. J. Marcel for his *Histoire d'Égypte* (Paris 1848), together with a continuation of the work to 1168/1754 by Muṣṭafā b. Ibrāhīm (cf. Marcel, *op. cit.*, XXV). His other works include a history of the Ottoman conquest of Egypt (*al-Tuḥfa al-Bahiyya*), an abridgement of al-Maḳrīzī's *Khiṭaṭ* entitled *Ḳaṭf al-Azhār* (this work is sometimes attributed to his uncle Muḥammad b. Zayn al-ʿĀbidīn b. Muḥammad b. ʿAlī, Shams al-Dīn Abu 'l-Ḥasan, d. 1087/1676: cf. Muiḥbbī, *Khulāṣa*, iii, 465), a biography of the Ṣūfī shaykh al-ʿAdjamī al-Kurānī (*al-Durr al-Djumānī*) and a Ṣūfī treatise (*Durar al-Aʿālī*).

Bibliography: Brockelmann, II, 383; S II, 409; Wüstenfeld, *Geschichtsschreiber*, no. 565; Babinger, 188; works mentioned in the article. (STANFORD J. SHAW)

AL-BAKRĪ, MUḤAMMAD B. ʿABD AL-RAḤMĀN AL-ṢIDDĪḲĪ AL-SHĀFIʿĪ AL-ASHʿARĪ ABU 'L-MAKĀRIM SHAMS AL-DĪN, Arab poet and mystic, born 898/1492, lived a year alternately in Cairo and a year in Mecca, and died in 952/1545. Besides his *Dīwān* (Bibl. Nat, Paris, *Catalogue des mss. ar.* by de Slane, no. 3229-3233; *Descriptive Catalogue of the Arabic, Pers. and Turk. Mss. in the Library of Trinity College*, Cambridge, 1870, no. 55-7), a collection of mystical poems entitled *Tardjumān al-Asrār* (Vollers, *Katalog der islam. usw. Hass. der Universitätsbiblioth. zu Leipzig*, no. 573; Derenbourg, *Les mss. ar. de l'Escurial*, no. 439), and several small Ṣūfī treatises (of which the MS. Gotha no. 865 contains a collection) he composed a romantic history of the conquest of Mecca in verse, called *al-Durra al-Mukallala fī Fatḥ Makka al-Mubadjdjala*, (Cairo 1278/1861, 1282/1865, 1293/1876, 1297/1879, 1300/1882, 1301, 1303, 1304); as well as a work of sukstantially historical content entitled *Dhakhīrat al-ʿUlūm wa Natīdjat al-Fuhūm* (Pertsch, *Die ar. Hdss. zu Gotha*, no. 1578).

Bibliography: ʿAlī Pāshā Mubārak, *al-Khiṭaṭ al-Tawfīḳiyya al-Djadīda*, Būlāḳ 1306, iii, 127; Wüstenfeld, *Die Geschichtsschreiber der Araber*, no. 520; Brockelmann, II, 334, 382, S II, 481-2. (C. BROCKELMANN)

AL-BAKRĪ, MUṢṬAFĀ B. KAMĀL AL-DĪN B. ʿALĪ AL-ṢIDDĪḲĪ AL-ḤANAFĪ AL-KHALWATĪ MUḤYI 'L-DĪN, Arab author and mystic, born in Dhu 'l-Ḳaʿda 1099/Sept. 1688 at Damascus, being left an orphan at an early age, was brought up by his uncle and entered the Dervish order of the Khalwatiyya. In the year 1122/1710 he made his first pilgrimage to Jerusalem; there he wrote his prayer-book *al-Fatḥ al-Ḳudsī* and procured a certificate from ʿAlī Ḳarabāsh of Adrianople, that it was not a *bidʿa*, as one of his opponents had said, to read this book aloud at the end of the night. He returned in Shaʿbān of the same year (October 1710) to Damascus, but repeated this pilgrimage more frequently in succeeding years and made the acquaintance in Jerusalem of the vizier Rāghib Pasha, whom he accompanied on a journey to Cairo. Under the protection of this patron he set out from Jerusalem early in 1135

(Oct. 1722) to Istanbul and reached it on 17 Sha'bān/24 May 1723. Four years later he returned to Jerusalem. After making the pilgrimage to Mecca in 1148/1735 which he had planned as early as 1129/1717 but had given up on account of a quarrel with his uncle, he went to Istanbul for the second time in 1148/1735. From there he returned by ship, via Alexandria and Cairo. In the following year, in connexion with a second pilgrimage, he went to Diyār Bakr where he stayed eight months. After spending other eleven months in Nābulus, he again returned to Jerusalem in Shawwāl 1152/Jan. 1740. He died on 18 Rabī' II 1162/8 April 1749 in Cairo when on his third pilgrimage. His numerous mystic treatises, prayers and poems which are given by Brockelmann (see *infra*, cf. also *al-Ḥikam al-Ilāhiyya wa'l-Mawārid al-Bahiyya*, see Vollers, *Katalog der islam. usw. Hdds. der Universitätsbibliothek zu Leipzig* no. 850 ii, and *al-Waṣiyya al-Djalīla lil-Sālikīn Ṭarīḳat al-Khalwatiyya*, ibid. iv; E. Littmann, *A List of Arabic Mss. in Princeton University Library*, no. 351 b.) are all still unprinted except a *Madjmū' Ṣalawāt wa' Awrād* (Cairo 1308). He also wrote an account of his first journey from Damascus to Jerusalem in 1122/1710 entitled *al-Khumra al-Ḥasiyya fi 'l-Riḥla al-Ḳudsiyya* (Ahlwardt, *Verzeichnis der Hdss. zu Berlin*, no. 6149). A journey to Damascus and his stay there were described in his *al-Mudāma al-Sha'miyya fi 'l-Maḳāma al-Sha'miyya* (ibid. 6148).

Bibliography: al-Murādī, *Silk al-Durar fi A'yān al-Ḳarn al-Thānī 'Ashar*, Cairo 1291-1301, iv, 190-200; al-Djabartī, *'Adjā'ib al-Athār fi 'l-Tarādjim wa'l-Akhbār*, Būlāḳ 1297, i, 125-126; 'Alī Pasha Mubārak, *al-Khiṭaṭ al-Tawfīḳiyya al-Djadīda*, Būlāḳ 1306, iii, 129; Brockelmann, II 348, s II, 477.

(C. Brockelmann)

BAKRIYYA, a Dervish order which, according to d'Ohsson, took its name from Pīr Abū Bakr Wafā'ī, who died in Aleppo in 902/1496 or 909/1503-4. According to Rinn, *Marabouts et Khouan*, 271, they are a branch of the Shādhiliyya [*q.v.*].

BAKRIYYA, a collective noun denoting all those who claim descent from Abū Bakr. In Egypt, the head of this family, the Shaykh al-Bakrī, has, since 1811, been the *naḳīb* of the descendants of the Prophet (*ashrāf*), and, since 1906, the *shaykh al-mashāyikh*, that is to say, the *shaykh* of all the religious orders. See *RMM*, iv, 241 ff.; L. Massignon, *Annuaire du Monde musulman*[4], 1954, 274.

BAḲṬ, lat. *pactum*, hell. πάκτον. In the Hellenistic world used both for a compact of mutual obligations and its connected payments. The Arabs designated with this expression what they regarded a tribute yielded by Christian Nubia. This country, because of its geographical situation and the bellicosity of its inhabitants, withstood the first impetus of the Muslim conquest, and after hard fighting under 'Amr b. al-'Āṣ (20 or 21/642-3), who ultimately had to recall his troops, his successor, 'Abd Allah b. Sa'd b. Abī Sarḥ, 'Uthmān's governor over Egypt, made a treaty with Nubia (31/652) on a bilateral basis, falling outside the normal *ṣulḥ* treaties known by the jurists. The two contracting parties agreed on bestowing free passage through the respective countries, while the right to take up fixed abode was to be prohibited. The Nubians bound themselves to repatriate fugitive *coloni*, slaves, and poll-tax paying *dhimmis*. Besides they agreed to defray the costs of the maintenance of a mosque to be built in Dunḳula (Dongola). Moreover they were to deliver annually 360 slaves, originally at least their own prisoners of war, and the custom developed that they paid a further 40 head for the Arab officials taking care of the transaction. The Muslims, on the other hand, were obliged to yield a corresponding amount of wheat and other cereals, and textiles. The Muslim jurists of a later time could not fit this into the frame of the system, and a tradition—or at least an interpretation of an existing one—sprang up that the Muslim quota originated from the restitution of the 40 slaves, after having been exchanged for wine and other supplies, as appears from the exposition of Ibn 'Abd al-Ḥakam (*Futūḥ Miṣr*, ed. C. C. Torrey, 189). The political state is otherwise called a *hudna*, truce. Mālik b. Anas thought it a juridical *ṣulḥ*, but a majority of his colleagues knew that it was only a treaty of non-aggression, and that the Muslims were not bound to defend Nubia against any third party. The treaty was confirmed by subsequent rulers; al-Ṭabarī makes special mention of 'Umar II (*Annales*, Ser. 1, v, 2593). Later the Nubians seem not to have paid their part very punctually, probably because of lack of prisoners of war, with the consequence that they had to replace the wanting number with their own countrymen. The animals for zoological gardens and for medical experiments which are included in the quota in later times may have made up for such deficiencies. Under al-Mahdī and al-Mu'taṣim we hear of readjustments; under the latter, when Nubia was on the verge of breaking the contract, it was found out that the tribute of the Nubians fell below what was paid by the Arabs. That the latter could not muster the force for altering this radically is seen from the fact that a lenient course was followed, allowing the Nubians to pay the stipulated quota every third year only. On the other hand, the request to have the garrison in al-Ḳaṣr on Nubian territory withdrawn was not granted. That was the place where the quotas were handed over. It was only under Baybars al-Bunduḳdārī (674/1276) that Nubia was subjugated for good, and part of it came fully under Muslim rule, while native petty princes maintained a more or less free position. After that time Islamisation went on rapidly, and no doubt the term *baḳṭ* fell into desuetude, having lost its meaning under the altered circumstances.

(F. Løkkegaard)

BĀKŪ, a town and district on the W. shore of the Caspian Sea, on the peninsula of Apsheron (Ābshārān). The name is currently said to be from Persian *bādkūba*, 'wind-beaten', which is appropriate to the local conditions, but this derivation is not certain. The form Bākū appears already in the 4th/10th century (*Ḥudūd al-'Ālam*). Another early, authentic pronunciation is Bākūyah (Abū Dulaf, al-Bākuwī). Other forms (Bākūh, Bākuh) are found in the Arabic geographers.

The early history of Bākū is obscure, though the locality seems to be mentioned in antiquity (cf. J. Marquart, *Ērānšahr*, 97). It is perhaps to be identified with the Gangara or Gaetara of Ptolemy (*Geographia*, ed. C. Müller, I, ii, 929). Bākū is not apparently mentioned in accounts of the early Muslim conquests, nor by Ibn Khurradādhbih (3rd/9th century), but thereafter it comes fairly into view

and is known by name to the 10th century Muslim geographers, being mentioned by Abū Dulaf in his *Risāla al-Thāniyya* (cf. V. Minorsky in *Oriens*, v, 1952, 25). Abū Dulaf claims to have reached Bākūyah, as he calls it, from the S. and found there a spring of petroleum, the lease (*ḳabāla*) of which was 1000 *dirhams* a day, with another well adjacent producing white petroleum, which flowed unceasingly day and night and whose lease (*ḍamān*) was also 1000 *dirhams*. These details are repeated in several much later accounts, notably those of Yāḳūt, i, 477, and al-Ḳazwīnī, *Āthār al-Bilād*, 389. About the same time as Abū Dulaf, al-Masʿūdī several times mentions Bākū. He gives an account of a Russian raid on the Caspian littoral *circa* 301/913-914, in the course of which the invaders reached 'the naphtha (or petroleum) coast in the country of Shirwān, which is known as Bākuh' (*Murūdj*, ii, 21). Al-Masʿūdī also speaks of Bākū as a place to which ships went back and forward from Djīl (Djīlān), Daylam, etc. on the Caspian, if not also from Atil [*q.v.*], the Khazar capital on the Volga (*ibid.*, 25). In the *Tanbīh*, a later work (written in 345/956) he again speaks of Bākū, its 'white naphtha' and its volcanoes (*āṭām*) (*BGA.*, viii, 60).

The *Ḥudūd al-ʿĀlam* (written in 372/982 but making use of earlier sources) knows of Bākū as a borough or small town, lying on the sea-coast near the mountains. All the petroleum in the Daylamān country came from there (*Ḥudūd al-Ālam*, 145, cf. 411: the Daylamites used it for a kind of flame-thrower). In another passage (*ibid.*, 77) the waters of the Kur and Aras rivers are said to 'flow between Mūḳān and Bākū to join the Khazar sea (Caspian)', where regions rather than cities are perhaps intended. Since it lay N. of the Aras, Bākū was usually reckoned as in Shirwān, but according to al-Muḳaddasī, 376, in 375/989, who appears to be the first to mention its excellent harbour, Bākū was distinct from Shirwān and both were included in Arrān, to which al-Muḳaddasī gives a much greater extension than most Muslim writers (*ibid.*, 51, 374). Al-Iṣṭakhrī (*circa* 340/951) mentions Bākū and already knows of its troleum (190).

The best description of mediaeval Bākū is by a native of the place, ʿAbd al-Rashīd b. Ṣāliḥ al-Bākuwī, who wrote in 806/1402, shortly after the campaigns of Tīmūr in this quarter. The town was built of stone, actually on rocks, close to the sea, which at the time of writing had carried away part of the walls and reached the vicinity of the principal mosque. The air was good, but there was shortage of water. Since in consequence the district was infertile, provisions had to be brought from Shirwān and Mūḳān, though there were gardens situated at a distance from the town, producing figs, grapes and pomegranates, to which the inhabitants went in summer. There were two well-built fortresses in the town, of which the larger, on the seaward side, had resisted the attacks of the Tatars, although the other, which was very high, had been partially destroyed during the sieges. Day and night, in winter, high winds blew, sometimes so strongly as to sweep men and animals into the sea. At Bākū there were petroleum wells from which daily more than 200 mule-loads were drawn. A by-product in the form of a hard yellow substance was used as fuel in private houses and baths. At a *farsakh* from the town was a perennial source of fire, said to be a sulphur-mine, near which was a village inhabited by Christians, who made and sold lime. There were also salt-mines, the produce of which was exported to other countries. Nearby was an island to which people went to hunt sharks. The skins when suitably prepared were filled with petroleum, after which they were loaded on ships to be taken to the different countries. There was also a considerable trade in silk. In some years a great fire was seen emerging from the sea, visible for a day's journey. The inhabitants were Sunnī Muslims.

Politically, Bākū at most times appears to have been subject to the Shirwān Shāhs. The last dynasty of Shirwān Shāhs came to an end only in 957/1550, when the Ṣafawid Shāh Ṭahmāsp occupied Shirwān. After vicissitudes in the course of which it belonged for a short time (1583-1606) to the Ottoman Turks, Bākū finally became a Russian possession in 1806.

Bibliography: V. Minorsky, *Abū Dulaf Misʿar b. al-Muhalhil's Travels in Iran* (containing the Arabic text and translation of his *Second Risāla*), Cairo 1955, 35, cf. 72; al-Bākuwī, *Talkhīṣ al-Āthār wa-ʿAdjāʾib al-Malik al-Ḳahhār*, transl. De Guignes, *Notices et extraits*, ii, 509-510; Le Strange, 180-1.

(D. M. Dunlop)

Bākū under Russian domination, was at first very slow to develop. In 1807 the town had only 5,000 inhabitants, grouped in the old citadel.

The naphtha deposits, the exploitation of which was a monopoly of the former masters of Bākū, became Crown property and the first drilling took place in 1842 on the Apsheron peninsula. In 1872 exploitation became free and the deposits were sold by auction.

This periods marks the beginning of the town's rapid growth. This development was favoured by the building in 1877-78 of the pipe-line connecting Bākū with the oil fields of the Apsheron peninsula. In 1883 the town was connected by railway with Transcaucasia and the interior of Russia. Finally in 1907 the pipe-line was completed linking Bākū with Batum on the Black Sea. In 1859 Bākū had still only 13.000 inhabitants, but in 1879 the "oil rush" brought the number up to 112.000. On the eve of the Revolution, Bākū, which provided 95% of all Russia's oil, had already a population of 300,000.

During the Revolution, Bākū achieved the status of capital of independent Ādharbaydjān (31 July 1918 to 28 April 1920). Taken by the Red Army on 28 April 1920, it was henceforth the capital of the Ādharbaydjān Soviet Socialist Republic. Under the Soviet régime, the town continued to grow. In 1939 it was the fifth town of the Soviet Union with 809,300 inhabitants (about a third of whom were Russian and a third Armenians). It is now a great modern industrial city, centre of the oil industry. Bākū is also an important University centre, the seat of the State University and of the Ādharbaydjān Academy of Sciences. (A. Bennigsen)

BAʿḲŪBA, more correctly (but not now currently) Baʿḳūbā, from the Aramaic Bāyaʿḳūbā, or Jacob's House, a town situated 40 miles N.E. of Baghdād (40° 37′ E, 33° 45′ N), on the site of a very ancient pre-Islamic settlement, was in Caliphate times described as on the west bank of the Nahrawān-Diyālā (*q.v.*) main canal. It formed an important station on the Baghdād-Khurāsān trunk road, and served as chief town of the Upper Nahrawān district. Under ʿAbbāsid rule the place was highly prosperous, its date and fruit gardens famous, and the surrounding country fertile and populous, with scores of villages.

Modern Baʿḳūba is an ʿIrāḳī provincial town with an Arab mixed Sunnī and Shīʿī population of some

8,000. It is the headquarters of the *liwā* of Diyālā with dependent *ḳaḍā*s of Mandali, Khāliṣ, Khāniḳīn, and Baʿḳūba itself; the last-named *ḳaḍā* contains the important *nāḥiya*s of Kinʿān and Maḳdādiyya (formerly Shahrubān). The town is prosperous, partly transformed by modern buildings, streets and services, and good communications; the Baghdād-Irbīl line of ʿIrāḳ Railways here crosses the Diyālā by a high-level bridge.

Bibliography: Yāḳūt, i, 472, 672; Abu 'l-Fidā', *Taḳwīm*, 294; the same, *Annal. moslem.*, ed. Reiske, iv, 690; Rashīd al-Dīn, *Hist. des Mongols*, ed. Quatremère, 278 ff.; V. Cuinet, *La Turquie d'Asie*, iii, 119; (Rousseau), *Descr. du Pachalik de Bagdad*, 80; Binder, *Au Kurdistan, en Mésopotamie et en Perse*, Paris 1887, 319 ff.; G. BĀKUSĀYĀ, a town and lesser administrative district under the ʿAbbāsids. With four others it formed part of the rich and populous circle (*astān*) east of Tigris, that of Bāzīyān Khusraw, in which the town of Bandanīdjīn (now vanished without trace) was a principal headquarters. Bākusāyā is usually grouped with the adjacent district of Bādarāyā [*q.v.*] (the modern Badra) by the Arab geographers, and like it enjoyed good water from the hills which mark the present Persian frontier. A modern village, within Persia, known as Baksaiyyeh, a few miles S.E. of Badra, almost certainly marks the site of Bākusāyā. The latter name strongly suggests the Syriac Bā-Kussāyē, and would indicate the home or district of the Kussāyē, the Greek κοσσαῖοι and the Kaššu (modernised into Cassites) of the Babylonian inscriptions. The domicile of these people was entirely in the Zagros range, and this identification is tempting. Nothing remarkable is recorded regarding the town or its inhabitants, in which (as in modern Badra) Lurish or other Iranian strains doubtless prevailed. The district is malarial, but in modern times produces a race of famous weight-lifting porters.

(M. STRECK-[S. H. LONGRIGG])

BAʿL is an old Semitic or even Proto-Semitic word with the central meaning of "master, owner" and has been widely used in the sense of "local god" (fertiliser of the soil) and "husband" (in a society predominantly masculine). In the last century attention was vigorously drawn to the importance of this last meaning by W. R. Smith, *Kinship and Marriage in early Arabia*, Cambridge 1885 (2nd. ed. London 1903); but his thesis that the term itself had been borrowed by the Arabs from the Northern Semites could not be substantiated. The various meanings of the word have continued to exist in Classical Arabic with, however, a very variable vitality according to sense, period and area.

1.—In the sense of "master (of)", *baʿl* was ousted in Arabic by various synonyms, so that, unlike the Hebrew *baʿal*, it does not make an appearance in numerous compounds. It has survived better in the sense of "husband, spouse (of)", thanks most probably to the use made of it in three Ḳur'ānic passages (ii, 228; xi, 72; xxiv, 31 twice) in the singular and in the plural (*buʿūla*; subsequently Classical Arabic usually uses *buʿūl* or *biʿāl*). The meaning "master" was still strongly felt: *baʿlī* "my spouse", in xi, 72, renders the Biblical *adōnī* (in the mouth of Sarah, Genesis, xvii, 12; Targum Onkelos: *ribbōnī*). For the feminine, Classical Arabic has the forms *baʿl* or *baʿlat*. Several verbal forms developed from this connubial meaning.

2.—The Ḳur'ān, xxxvii, 125 (story of Elijah; cf. I Kings xviii, and the art. *Ilyās*) has contributed still more definitely to perpetuating the memory in Islam of *Baʿl* as a pagan deity, in spite of all the confusion and reticence of the commentators. This meaning of the word, it is true, could not hope to enjoy much success in Muslim thought as such; it is to be encountered incidentally in the medieval authors in connexion with the etymology of Baʿalbakk [*q.v.*] with fictitious details concerning an ancient idol at this place. What is more remarkable is the unconscious survival of the idea of the god *Baal* in the two following cases:

a) The verb *baʿil*^a and the adjective *baʿil*, "(to be) lost in astonishment", that is to say originally, as Nöldeke has shown (*ZDMG*, 1886, XL, 174), "(to be) possessed by Baal".

b) The terms *baʿl* and *baʿlī* to convey the idea of unwatered tillage: in a verse attributed to ʿAbd Allāh b. Rawāḥa, a Companion of the Prophet, (*LA*, xiii, 60), we read: *hunālika lā ubālī nakhla baʿlin, wa lā saḳyin* ..... In an expression of this kind, *baʿl* may retain something of the original meaning, not understood by the author of the *Lisān*: that of the god (male) fertilising the land (female) by rain or sub-soil water. The contrast between watered land (with terms from the same root as *sḳy*) and "dwelling or field of Baal" is well attested in the Targum and the Talmud (Jastrow, *Dict. of the Talmud*, *b ʿl* and *sh ḳ y*; W. R. Smith, *Lectures on the Religion of the Semites*[3], London 1927, see *Index*; G. Dalman, *Arbeit und Sitte in Palästina*, Gütersloh 1932, ii, 32-33).

In Classical Arabic of the early centuries of the Hidjra, however, the term *baʿl* is to be encountered on several occasions meaning on its own —and not in a compound expression open to several interpretations—"unwatered cultivated land". In the works on jurisprudence, it is to be found with this meaning, mainly in relation to the prescribed tithe (*zakāt*, *ṣadaḳa*) on agricultural produce. Muslim Law, both Shīʿī and Sunnī, does in fact reduce this impost to a half tithe or a twentieth where the crop is dependent on artificial irrigation requiring some exertion; in contrast, the *zakāt* is actually a tenth when the produce of a *baʿl* is involved. In this connexion, the term appears in various recorded *ḥadīth*s from the *Muwaṭṭa'* of Mālik (2nd/8th century) onwards (see Bādjī, *Muntaḳā*, ii, 157-158), repeated in the 3rd/9th century in works on *fiḳh*, such as the Shāfiʿī *K. al-Umm* (ii, 32) and the Mālikī *Mudawwana* of Saḥnūn (ii, 99, 108). In an almost identical form, these *ḥadīth*s are to be found in Abū Dāwūd (*Sunan*, no. 1596-1598) and in the early specialists on fiscal and land law (3rd-4th/9th-10th centuries): Yaḥyā b. Ādam (*K. al-Kharādj*, Cairo ed. 1347 AH., no. 364-395, where an illuminating variant, no. 381, has "that which Baʿl has watered", thus reproduced in Balādhurī, *Futūḥ*, 70), Abū ʿUbayd b. Sallām (*K. al-Amwāl*, Cairo ed. 1353 AH., no. 1410-1421),

Ḳudāma b. Dja'far (*K. al-Kharādj*, part 7, ch. VII, *apud* De Goeje, *Glossaire* to Balādhurī, *Futūḥ*, 14; the *Mafātīḥ al-ʿUlūm* of al-Khwārizmī on that point is merely a résumé of this work). Likewise in the Fāṭimid *fiḳh* already established in Ifrīḳiya (4th/10th century): ḳāḍī al-Nuʿmān, *Daʿāʾim al-Islām*, Cairo ed. 1951, i, 316; and naturally also in many later books.

These texts evoke, as regards the use of *baʿl*, the two ensuing comments: a) the word seems to be linked with Madinese and perhaps also Yemenite traditions, but appears to be unknown to the oldest ʿIrāḳī traditions (probably because ʿIrāḳ is primarily a land of irrigation); Ḥanafism, of ʿIrāḳī origin, does not normally employ the word, though on this point it states the same rule as the other *madhāhib*.

b) The *ḥadīth*s containing this term insert it in an enumeration in which the *baʿl* appears to be distinct from lands watered by spring water, rain or surface drainage. Among the commentators and lexicographers, some nevertheless maintain that *baʿl* applies to all unwatered cultivated lands; others, influenced by the letter of the *ḥadīth*s and perhaps by dialectal usages, offer a series of rather more restrictive interpretations revolving round the idea of unwatered land under dry cultivation: for some, it only applies to cases where plants obtain water through their roots beneath the surface alone (detailed argument in *LA*, *loc. cit.*; see also W. R. Smith, *Lectures...*, 98-99 and Løkkegaard, *Islamic Taxation*, Copenhagen 1950, 121).

Among words possessing the same or an adjacent meaning which frequently replace or accompany *baʿl* in the enumeration mentioned above, particular attention should be paid to the term *ʿaththarī* (for example in the *Ṣaḥīḥ* of al-Bukhārī, *K. al-Zakāt*, chap. 55), which it would be difficult to refrain from explaining by the name of the deity ʿAthtar (= Astarte, Ishtar): a male stellar god in the Arabian and South Arabian pantheon, ʿAthtar exercised an influence on the fertility of the land and was at times qualified by the name *baʿal* (Lagrange, *Études sur les religions sémitiques*, Paris 1903, 133-136; Nielsen, *Handbuch der altarab. Altertumskunde*, Copenhagen 1927, i, index; Jamme, in *Le Muséon* 1947, 85-100; G. Ryckmans, in *Atti Accad. Lincei* 1948, 367; idem, *Les religions arabes préislamiques*, 2nd. ed. Louvain 1951, 41 and passim; Jamme, in Brillant and Aigrain, *Hist. des Religions* [1956], iv, 264-5). The assimilation tht > thth is attested in Classical Arabic and the semantic parallelism with *baʿl* here is striking.

The occurrence of *baʿl*, still with the same meaning, must also be noted in some versions of the stipulations which the Prophet is stated to have imposed as a land code in the year 9 AH., either on the oasis of Dūmat al-Djandal (through its leader Ukaydir b. ʿAbd al-Malik), or on the neighbouring Kalbite tribes (through their leader Ḥāritha b. Ḳaṭan); see Caetani, *Annali*, ii, 1, 259-269 (event discussed by Musil, *Arabia Deserta*, New York 1927, appendix VII, and by W. M. Watt, *Muhammad at Medina*, Oxford 1956, 362-5).

It is again to be met with, in connexion with the land tax (*kharādj*), in the great treatises on public law of the 5th/11th century: *al-Aḥkām al-Sulṭāniyya* by the Ḥanbalī Abū Yaʿlā (Cairo ed. 1938, 151) and by the Shāfiʿī Māwardī (trans. Fagnan, Algiers 1915, 314). In calculating this tax, they recommend that account be taken of the source of the water: this envisages four categories of cultivated land, among which the *baʿl* is very closely defined, approximately as above, in contrast to land irrigated or adequately watered by rainfall.

The geographer al-Muḳaddasī, in the 4th/10th century, uses the term on three occasions (*BGA*, iii, 197, 474), dealing with agricultural production near Ramla, Alexandria and in Sind, always in the phrase (*ʿalaʾl-baʿl*; this, however, does not suffice as a proof of the use of the term outside Syria-Palestine, the author's country of birth. In this geographical area where, "in spite of the the illusion of an abundance of water, dry cultivation constitutes the basis of traditional agricultural exploitation" (J. Weulersse, *Paysans de Syrie*, Paris 1946, 144), at the present day we find: *arḍ baʿl* contrasted as in former times with *arḍ saḳy* (G. Dalman, *op. cit.*, 30; already mentioned by E. Meier in *ZDMG*, 1863, xvii, 607).

Here is a special case of the use of this term in medieval Egypt: in Cairo under the Mamlūks, perhaps already under the Fāṭimids, a park near the Khalīdj, which subsequently became a public promenade, was called *bustān al-baʿl*, then *arḍ al-baʿl*; see Maḳrīzī, *Khiṭaṭ*, Būlāḳ ed. 1270 AH., ii, 129, who takes *baʿl* here expressly in the geographical sense.

The Muslims of Spain, "exactly like the Spanish peasants of today ... made a distinction between *secano* (Ar. *baʿl*) land and *regadio* (Ar. *saḳy*) land, the former being especially reserved for cereal cultivation" (Lévi-Provençal, *Hist. Esp. mus.*, Paris 1953, iii, 270). The famous agronomist of Seville Ibn al-ʿAwwām (6th/12th) confirms this distinction (*K. al-Filāḥa*, ed. Banqueri, Madrid 1802, i, 5). It appeared in contracts, especially those of plantation leases or *mughārasa*: the notarial formula of Ibn Salmūn for example, *K. al-ʿIḳd al-Munaẓẓam*, Cairo ed. 1302 AH., ii, 21-22, in the 8th/14th century, has the two adjectival forms *baʿlī* and *saḳ(a)wī*.

These two forms do in fact appear to have had a tendency in modern times to become nouns, perhaps in certain regions because of the model provided by *ʿaththarī*. *Baʿlī* has been noted alongside *ʿaththarī* in the dialects spoken in Southern Arabia: Landberg, *Glossaire Datînois*, Leiden 1920, i, 186, where *ʾatharī* must almost certainly be emended to *ʿath(th)arī*. At a first glance it is not always easy to determine whether *baʿlī* is at present used as an adjective or a noun in the East and in North Africa. It is frequently attached—more so than its opposite *saḳwī*— to the name of a vegetable or a fruit: in such a case it stresses the good quality. At Fez, the feminine *baʿliyya* is applied to a succulent fig, whereas *baʿlī* describes a man, avaricious, dry and hard as the land bearing the same name (information by L. Brunot).

As in the case of so many other elements of the vocabulary of spoken Arabic, it is to be regretted that we are far from knowing with sufficient exactitude the areas in which the words *baʿl* and *baʿlī*, unknown to extensive Arabic speaking districts, are in fact used. The precise distribution of these words would be informative from various points of view. (R. Brunschvig)

BĀLĀ (Persian "height, high") I. — Since 1262/1846 the term for a grade in the former Ottoman Civil Service, to which the Secretary of State (*mustashār*) and other senior officials belonged; he was addressed in correspondence as *ʿuṭūfetlü efendim ḥaḍretleri* (Further details in the article by M. Cavid Baysun in *IA*, ii, 262 ff.).

Bibliography: in M. C. Baysun (see above).

(Fr. Taeschner)

II. — Originally the name of a *ḳaḍā* in the *wilāyet* and *sandjaḳ* of Ankara (Central Anatolia) with the village of Karalî (Ḳara ʿAlî, now written Karaali) as its centre. It is now the name of the new chief town of the *ḳaḍā*, 39° 35′ N. Latitude, 33° 4′ E. Longitude and is situated 48 kms. south east of Ankara on a ridge of hills called Kartal Dağî, between two valleys, through which flow tributaries of the Kîzîl Irmak (Halys), at the point where the road from Ankara branches off in one direction to Kirşehir and Kayseri, and in the other to Aksaray and Konya. Population 1142 (1945); that of the *ḳaḍā*, 27,096. The inhabitants of the *ḳaḍā* are principally Yürüks and refugees (*muhādjir*) from the Caucasus and the Balkans.

(Fr. Taeschner)

BĀLĀ-GHĀT ("above the *ghāts* or passes"), a name given to several elevated tracts in central and southern India. It was usually applied to the highlands above the passes through the Western Ghāts. On the east side of the Indian peninsula it was the term used to distinguish the Carnatic plateau from the Carnatic Pāʿīnghāt or lowlands. In Berār it was the name of the upland country above the Adjanta pass, the most northerly part of the table-land of the Deccan. It was also applied to the hilly country of western Ḥaydarābād. In 1867, the name was given to a newly formed district of the Central Provinces. To-day it forms a district of Madhya-Pradesh (area: 3,614 square miles; population (1951) 693,379).

Bibliography: *Imperial Gazetteer of India*; C. E. Low, *Balaghat District* (1907).

(C. Collin Davies)

BĀLĀ ḤIṢĀR ("High Castle"), in the popular tongue Ballî Ḥiṣār ("Honey Castle"), village in Central Anatolia, in the Sivriḥiṣār *ḳaḍā*, *wilāyet* of Eskişehir, 14 kms. south of Sivriḥiṣār, having only 363 inhabitants in 1935. Ruins of Perssinûs in the neighbourhood with a Roman temple to Cybele.

Bibliography: Ch. Texier, *Asie Mineure*, 473-479; G. Perrot, *Souvenirs d'un voyage en Asie Mineure*, 198 ff.; *I.A*. ii, 268 f. (by Besim Darkot).

(Fr. Taeschner)

BĀLĀ ḤIṢĀR, a general term applied, in Pākistān and Afghānistān, to citadels built on archaeological mounds and often commanding a panoramic view of the settlement, whether town, city or village, around. Among the most famous are the fort at Pēshāwar (Pākistān) and that in Kābul, the capital of Afghānistān.

The fort at Pēshāwar, lying on the northern outskirts of the present city and covering an area of 44,000 sq. yds., with double thick walls and strong bastions, is of considerable antiquity. It was first built on the present site in 925/1519 by Bābur during his incursions into India through the Khyber Pass. It served as a halting-place for the Mughal Emperors on their way to and from Kābul, where another fort of the same name already existed. Soon after its construction by Bābur the fort was destroyed by the neighbouring wild Afghan tribes, who considered it a threat to their age-long freedom. It was, however, rebuilt by Humāyūn in 960/1553 under the supervision of Pahlawān Dōst, the Superintendent of Lands, and Sikandar Khān Uzbeg was appointed as its commander. It was, the same year, attacked by the Dalazak Afghāns but they were repulsed by Sikandar Khān. In 994/1586, during the reign of Akbar, it was the scene of a great fire which consumed a huge quantity of merchandise. It remained in the possession of the Mughals till 1079/1668 when it was captured by the Afghāns under Aymal Khān, but they were soon expelled by the Imperial forces and the fort was regarrisoned.

It was captured by Nādir Shāh Afshār [*q.v.*] in 1151/1738 but on his death in 1160/1747 the Sadōzaīs, under Aḥmad Shāh Durrānī [*q.v.*], became its master. His son Tīmūr Shāh made the fort his place of residence. When the Sikhs captured Pēshāwar in 1240/1824 the fort was dismantled and the rubble was sold. Harī Singh Nalwa, the Sikh general, realising its strategic importance rebuilt, it in 1834 with cob and mud and named it Sumērgarh. In 1848 the British occupied Pēshāwar and constructed a stronghold in its place. It is now garrisoned by Pākistān troops.

(A. S. Bazmee Ansari)

BAʿLABAKK, a small town in inland Lebanon, situated at about 3,700 ft. on the edge of the high plain of the Biḳāʿ [*q.v.*], surrounded by an oasis of gardens watered by the large spring of Raʾs al-ʿAyn, which emerges at the foot of the Anti-Lebanon range. The freshness of its climate and the beauty of its vegetation have won the admiration of Arab authors, who have always extolled its *ghūṭa* as reminiscent of that at Damascus. Various hypotheses have been made as to the etymology of its name, in which the Semitic *Baal* [see Baʿl] can be seen, but none seems entirely satisfactory.

Baʿlabakk is chiefly famous for the ancient ruins still visible on its site, which was doubtless occupied from a very early date. It was particularly flourishing at the time the locality was given the Greek name of Heliopolis, when the vogue of the cult there celebrated of the Heliopolitan trinity (Zeus, Aphrodit and Hermes, avatars of Syrian gods) led to the construction of imposing sanctuaries, to be attributed in the Middle Ages to the strength of Solomon. Even today the main group of monuments impresses us with its two temples of colossal dimensions, its two courtyards preceded by large gateways and its perimeter with its massive foundations. During the Arab period these buildings were made into a strong fortress, the lay-out of which was established by the German archeological expedition of 1900-1904, but certain parts of this have since been sacrificed in restoring the earlier condition of the site or in carrying out new excavations.

Commanding both the surrounding districts and the main road from Damascus to Ḥimṣ, the town of Baʿlabakk had an eventful history. Its importance was chiefly military from the time when Christianity dealt the prosperity of its sanctuaries a mortal blow, and the Arabs, after their conquest, began to use its "acropolis" as a citadel or seat of the master of the region. In 16/637 the Muslims commanded by Abū ʿUbayda annexed it after the conquest of Damascus and just before conquering Ḥimṣ, under the terms of

a treaty we know of from al-Balādhurī, and it later became part of the Umayyad *djund* of Damascus, then passed into ʿAbbāsid control until the Fāṭimid caliph al-Muʿizz installed a governor in 361/972. Temporarily occupied by the Byzantine emperor John Tzimiskès in 363/974, and by the prince of Aleppo, Ṣāliḥ b. Mirdās, in 416/1025, it fell into the hands of the Saldjūḳid Tutush and his sons in 468/1075, and during the domestic struggles of the Būrid period belonged in turn to the governor Gumushtakīn, Būrī and his son Muḥammad, then finally to the celebrated Onor, from whom Zenkī seized it for a time and entrusted it to Ayyūb, the future father of Ṣalāḥ al-Dīn. Nūr al-Dīn succeeded in reconquering it in 549/1154, and had to rebuild its walls after the devastation caused by the terrible earthquake of 565/1170. Ṣalāḥ al-Dīn in his turn seized the fortress from his old master's successors, in 570/1174, and gave it in fee successively to various members of his court or family, notably to his grand-nephew al-Malik al-Amdjad Bahrām-shāh, who held it from 578/1182 until 627/1230, in which year it was seized from him by al-Malik al-Ashraf Mūsā, the master of Damascus. After various Ayyūbids had again contended for its possession, it was conquered by the Mongols before passing into Egyptian control in 658/1260. Then, under the Mamlūks, it became the chief town of an area in the third northern border district of the province of Damascus, and its governor, whose authority did not extend over the entire Biḳāʿ, was in a position of direct dependance on the *naʾib* of Syria, who himself confirmed his appointment. The town seems to have become less important from that time onward, and the main Mamlūk mail routes, Damascus-Ḥimṣ and Damascus-Tripoli, thenceforward passed it by in favour of the Ḳalamūn route, as the commercial roads of the modern era were also later to do. In 922/1516 it passed under Ottoman control, together with the whole of Syria, and remained in the hands of petty rulers, notably of the Harfush family, until the Porte set up a regular administration in 1850.

The struggles for its possession in the Būrid, Zengid and Ayyūbid periods, when to hold the town seems to have been the pre-requisite for control of southern Syria, explain why Arab building there consisted chiefly in continually improving a system of defences set up mainly to fill the original gap at the south-west corner, between the *podia* of the two ancient temples. Of the four periods of work which have been distinguished, the second is characterised by a shifting of the fortified entrance from the west side to the south, and can be dated either in the reign of Muḥammad b. Būrī, who effectively defended Baʿlabakk, or in that of Zenkī, who according to inscriptions and written documents took measures to improve the state of the citadel. In the reign of Bahrām-shāh new towers reinforced the new facade. Lastly the time of Ḳalāʾūn was marked by work in a more advanced style, in particular the massive tower at the south-east corner of the small temple and the barbican round the old south gate.

Inscriptions, studied in conjunction with the archeological remains, allow us to date with certainty various features of an ensemble which must be considered among the most interesting relics of Arab military architecture of mediaeval Syria. From the same period date also the small mosque at Raʾs al-ʿAyn and notably the large mosque in the town, built not far from the citadel with materials from an older building, and characterised by its prayer hall with its four naves and its imposing minaret. Both mosques are inscribed with texts from Mamlūk decrees. Other monuments which have now disappeared, *madrasas*, *ribāṭs*, hospices, convents and ḥadīth schools, are mentioned in earlier descriptions of the town.

(J. Sourdel-Thomine)

AL-BALĀDHURĪ, Aḥmad b. Yaḥyā b. Djābir b. Dāwūd, one of the greatest Arabic historians of the 3rd/9th century. Little is known of his life. Neither the year of his birth nor that of his death is directly attested. From the dates of his teachers, it is evident that he cannot have been born later than the beginning of the second decade of the 9th century A.D.; for the date of his death, Muslim authors suggest, as the latest and most likely date, ca. 892 A.D. As he is said to have been a translator from the Persian, Persian origin has been arbitrarily assumed for him, but already his grandfather was a secretary in the service of al-Khaṣīb in Egypt Djahshiyārī, fol. 162a). He probably was born, and certainly spent most of his life, in Baghdād and its environs. His studies led him to Damascus, Emesa, and Antioch, and in ʿIrāḳ he studied, among others, with such famous historians as al-Madāʾinī, Ibn Saʿd, and Muṣʿab al-Zubayrī. He was a boon companion of al-Mutawakkil; his influence at the court appears to have continued under al-Mustaʿīn, but his fortunes declined sharply under al-Muʿtamid. The statement that he was a tutor of the poet, Ibn al-Muʿtazz, appears to be the result of a confusion of our historian with the grammarian, Thaʿlab, and the story that he died mentally deranged through inadvertent use of *balādhur* (*Semecarpus Anacardium L.*, marking-nut), a drug believed beneficial for one's mind and memory, is meant to refer not to him but to his grandfather, but even so, it constitutes a puzzle for which no satisfactory explanation is offered by the sources.

The two great historical works that have survived have won general acclaim for al-Balādhurī's reliability and critical spirit.

1. His *History of the Muslim Conquests* (*Futūḥ al-Buldān*) is the short version of a more comprehensive work on the same subject. The work begins with the wars of Muḥammad, followed by accounts of the *ridda*, the conquests of Syria, the Djazīra, Armenia,

Egypt, and the Maghrib, and lastly, the occupation of ʿIrāḳ and Persia. Remarks of importance for the history of culture and social conditions are interwoven with the historical narrative; for instance, al-Balādhurī discusses the change from Greek and Persian to Arabic as the official language in government offices, the quarrel with Byzantium concerning the use of Muslim religious formulas at the head of letters originating in Egypt, questions of taxation, the use of signet-rings, coinage and currency, and the history of the Arabic script. The work, one of the most valuable sources for the history of the Arab conquests, was edited by M. J. de Goeje, *Liber expugnationis regionum*, Leiden 1863-66, and reprinted repeatedly later on. English translation by P. K. Hitti and F. C. Murgotten, *The Origins of the Islamic State*, New York 1916 and 1924; German translation (continued to p. 239 of de Goeje's edition) by O. Rescher, Leipzig 1917-23.

2. His *Ansāb al-Ashrāf*, a very large work which was never completed, is genealogically arranged and begins with the life of the Prophet and the biographies of his kinsmen. The ʿAbbāsids follow the ʿAlids. The ʿAbd Shams, among whom the Umayyads claim a disproportionate amount of space, follow the Banū Hāshim. Next, the rest of the Ḳuraysh and other divisions of the Muḍar are dealt with. The Ḳays, in particular the Thaḳīf, occupy the closing portion of the work; the last biography of any size is that devoted to al-Ḥadjdjādj. Though a genealogical work in outward form, the *Ansāb* are really *ṭabaḳāt* in the style of Ibn Saʿd, arranged genealogically. This method of arrangement is not rigidly adhered to; for the most important events of the reigns of individual rulers are always added to the corresponding chapters. The *Ansāb* thus are one of the most valuable sources for the history of the Khawāridj, A portion of the work was discovered in an anonymous MS. and identified and edited by W. Ahlwardt. *Anonyme arabische Chronik, Bd. XI*, Leipzig 1883. A complete MS. of the work was discovered by C. H. Becker in Istanbul, MS. ʿAshīr Efendi 597-98 (table of contents by M. Hamidullah, in *Bull. d'Ét. Or.* xiv, Damascus 1954, 197-211). Of the edition of the work sponsored by the Hebrew University in Jerusalem, Vol. ivB (ed. M. Schlössinger, 1938-40) and Vol. v (ed. S.D. Goitein, 1936, with an important introduction) have been published. O. Pinto and G. Levi Della Vida have translated *Il Califfo Muʿâwiya I secondo il "Kitâb Ansâb al-Ašrâf"*, Rome 1938. Cf. also F. Gabrieli, *La Rivolta dei Muhallabiti nel ʿIrâq e il nuovo Balâdurî*, in *Rendiconti, R. Accad. dei Lincei, Cl. sc. mor., stor. e ilol.*, vi, 14, 1938, 199-236.

In spite of all al-Balādhurī's merits, his value as a historical source has been occasionally overestimated in certain respects. It is not correct to say that he always gives the original texts, which later writers embellished and expanded; it may be with much more truth presumed, from the agreement of essential portions of his works with later more detailed works, that al-Balādhurī abridged the material at his disposal in a number of cases, though he often remained faithful to his sources. Al-Balādhurī's style aims at conciseness at the expense, at times, of the artistic effect. We seldom meet with fairly long stories, though they do occur. In the *Futūḥ*, al-Balādhurī continued the old method of dividing up the historical narrative and presenting it in separate articles, and in the *Ansāb*, he attempted to combine the material of the books of classes (Ibn Saʿd) and of the older chronicles (Ibn Isḥāḳ, Abū Mikhnaf, al-Madāʾinī), with a third sort of style, namely, the genealogical literature (Ibn al-Kalbī).

Bibliography: The oldest biographical source is the historian of Baghdād, ʿUbayd Allāh b. ʿAbd Allāh b. Abī Ṭāhir Ṭayfūr (not preserved). ʿUbayd Allāh and all the other old Arabic sources were utilised by Yāḳūt, *Irshād*, ii, 127-32; some additional references can be found in the late compilation published in the introduction of de Goeje's edition of the *Futūḥ*. Cf. Brockelmann, I, 147 f.; S I, 216.

(C. H. BECKER-[F. ROSENTHAL])

BALADIYYA, municipality, the term used in Turkish (*belediye*), Arabic, and other Islamic languages, to denote modern municipal institutions of European type, as against earlier Islamic forms of urban organisation [see MADĪNA]. The term, like so many modern Islamic neologisms and the innovations they express, first appeared in Turkey, where Western-style municipal institutions and services were introduced as part of the general reform programme of the *Tanẓīmāt* [*q.v.*].

(1) TURKEY.

The first approaches towards modern municipal administration seems to have been made by Sultan Maḥmūd II, among the reforms following the destruction of the Janissaries. In 1242/1827 an inspectorate of *iḥtisāb* (*Iḥtisāb Neẓāreti*) was set up, which centralised certain duties, connected with the inspection of markets, weights and measures, etc., hitherto performed by members of the ʿUlamāʾ class (see MUḤTASIB); in 1245/1829, with the same general aims of centralising control and ending the laxness of the Imāms (in Luṭfī's words: *"we-imāmlarïñ musāmaḥa edememesi ičün"*), the system of headmen (*Mukhtār* [*q.v.*]) was introduced in the town districts of Istanbul. Until then, there had been headmen in villages (*Kōy Ketkhudāsï* in Muslim villages, *Kodja bashï* among the Christians), but not in towns, where the duties of keeping the registers of the male population and recording movements, transfers and the like were the responsibility of the ḳāḍīs and their deputies, or the Imāms. Under the edict of 1245/1829, these duties were transferred to the *mukhtārs*, of whom two, first and second, were to be appointed to every town quarter (*maḥalle*). Luṭfī tells us that this innovation aroused some comment among the populace of Istanbul, who said: "Village headmen have been set up in the quarters of the town. Next thing we shall have *sālyāne* registers!" (Luṭfī, ii, 173). A little later, the mukhtār was reinforced by committee of elders (*Ikhtiyār Heyʾeti*) of 3-5 persons; in time, this system was extended to other cities of the Empire.

In 1247/1831 the office of Commissioner of the City (*Shehremīni* [*q.v.*]) which had existed since the Ottoman conquest of Constantinople, was abolished; some of its functions, relating to the care of public buildings, were transferred to the newly established Directorate of Buildings of the Domain (*Ebniye-i Khāṣṣa*), (Luṭfī, iii, 165; *Medjelle-i Umūr-i Belediyye* i, 980 and 1365, quoting the decree in the official gazette, *Taḳwīm-i Waḳāʾiʿ* vii, 1247, no. 2).

The next phase began in the year 1271/1854, when two changes were initiated. The first of these was the creation of a new *Shehremānet* for Istanbul. Despite the name, this bore little resemblance to the earlier institution; it was rather an adaptation of the French *préfecture de la ville* and was chiefly concerned with the supervision of the markets, the control of prices, etc. The prefect was to be assisted by a City

Council (*Shehir Medjlisi*) drawn from the guilds and merchants. The *Iḥtisāb Neẓāreti* was abolished and its duties handed over to the prefecture. This change in nomenclature seems to have had little immediate effect, and complaints were made about official neglect of municipal problems. A few months later, therefore, another decision was taken by the High Council of Reform (*Medjlis-i ʿĀlī-i-Tanẓīmāt*), to establish a municipal commission (*Intiẓām-i Shehir Komisyonu*). A leading spirit in the commission was Antoine Allion, a member of a rich French banking family that had settled in Turkey at the time of the French Revolution. The other members were drawn chiefly from the local Greek, Armenian and Jewish communities, together with some Muslim Turks, including the *Ḥekimbashī* Meḥmed Ṣāliḥ Efendi, one of the first graduates of Sultan Maḥmūd's medical school. The Commission was instructed to report on European municipal organisation, rules and procedures, and to make recommendations to the Sublime Porte.

A number of factors had combined to induce the Ottoman government to take these steps. European financial and commercial interests in Istanbul had been growing steadily, and a new quarter was developing in Galata and Beyoghlu (Pera), with buildings, apartment houses, shops, and hotels, in European style, and with increasing numbers of horse-drawn carriages of various kinds (see ARABA). All this created a demand, which was put forward by the European residents, with the support of the Europeanised elements among the local population, for proper roads and pavements, street-cleaning and street-lighting, sewers and water-pipes. The presence in Istanbul of large allied contingents from the West during the Crimean War gave a new impetus and a new urgency to these demands, and in the new phase of reform that began in 1854 some attention was given to the problems of municipal organisation and services in the capital. A good example of the attitude of the Turkish reformers to these questions will be found in an article, published in the newspaper *Taṣwīr-i Efkār*, by the poet and publicist Ibrāhīm Shināsī [*q.v.*] on the lighting and cleaning of the streets of Istanbul (reprinted in Abū 'l-Ḍiyā [Ebuzziya] Tewfīḳ, *Numūne-i Edebiyyāt-i ʿOthmāniyye*, [1st ed. Istanbul 1296/1878], 3rd ed. Istanbul 1306, 227-235.

The record of the proceedings of the High Council of Reform on these matters reflect clearly the various preoccupations of the Ottoman government. The creation of a city prefecture, under the recently created Ministry of Commerce, was in part an attempt to meet a real need by installing the relevant European apparatus. There was also the usual desire to impress Western obsevers.

The Commission sat for four years, and reported to the High Council of Reform. Its chief recommendations were for the construction of pavements, sewers, and water-pipes, regular street-cleaning, street-lighting, the widening of the streets where possible, the organisation of separate municipal finances, the imposition of a tax for municipal purposes, and the appointment of the commission to apply municipal laws and regulations (*maḍbaṭa* of 27 Safar 1274/17 Oct. 1857, in *Medj. Um. Bel.* i, 1402-3).

In 1274/1857 the High Council decided to accept these recommendations, but to limit their application for the time being to an experimental municipality, to be established in Beyoghlu and Galata. This district, though the first to be organised, was officially named the sixth district (*altïndjï dāʾire*), possibly, as ʿOthmān Nūrī suggests (*Medj. Um. Bel.* i, 1415, n. 93), because the sixth *arrondissement* of Paris was believed to be the most advanced of that city. The reasons for this step are set forth in a *maḍbaṭa* of 21 Rabīʿ I 1274/9 Oct. 1857 (*Medj. Um. Bel.* i, 1416-8). Municipal services and improvements were badly needed, and should be provided; the cost should not fall upon the state treasury, but should be met by a special levy from the townspeople who would benefit. It would be excessive and impracticable to apply the new system to the whole of Istanbul at once, and it was therefore decided to make a start with the sixth district, consisting of Beyoghlu and Galata, where there were numerous properties and fine buildings, and where the inhabitants were acquainted with the practice of other countries and were willing to accept the expense of municipal institutions. When the merits of these institutions had been demonstrated by this example and had been generally understood and recognised, a suitable occasion would be found to apply them generally. The *maḍbaṭa* refers explicitly to the large number of foreign establishments and the preponderance of foreign residents in the district.

The constitution and functions of the municipality of the sixth distict, also known as the model district (*numūne dāʾiresi*) were laid down in an *irāde* of 24 Shawwāl 1274/7 July 1858. The Municipal Council was to consist of a Chairman and twelve members, all appointed by Imperial *irāde*, the Chairman indefinitely, the others for three years. The Council would elect two of its members as vice-Chairmen and one as treasurer. All were to be unpaid. The permanent officials were to be an assistant to the Chairman, a Secretary-General, two interpreter-secretaries, a civil engineer, and an architect. All these were to be appointed by the Council and receive salaries. The terms of reference of the Council were defined generally as "all that concerns cleanliness and public amenities (*neḍāfet we nüzhet-i ʿumūmiyye*)", and more specifically as roads and streets, sewers, pavements, street-lamps, sweeping and watering the streets, widening and straightening the streets, water-supply, gas, inspection and condemnation of ruinous and dangerous buildings, inspection and control of food supplies, control of prices, inspection of weights and measures, supervision of public places such as theatres, markets, hotels and restaurants, schools, dance-halls, coffee houses, taverns, etc. The Commission was further given the right to assess, impose, and collect rates and taxes, and raise loans, within limits laid down, and also to expropriate property in certain circumstances. The Chairman was to submit his budget to the Commission for discussion and inspection, and then to the Sublime Porte for ratification, without which it would not be valid.

From this it will be seen that the measures of 1271-4/1854-8, while accepting and providing for the discharge of certain new responsibilities in relation to the town, hardly represent an approach to the European conception of municipal institutions. There is still no recognition of the city as a corporate person. for such an idea remained alien to Islamic conceptions of law and government; nor was there any suggestion of election or representation. What was created was a new kind of administrative agency, appointed by and responsible to the sovereign power, but with specified and limited tasks and with a measure of budgetary autonomy. Such special commissions were by no means new in Ottoman administration (see EMIN). The novelty lay in the kind of function entrusted to it.

The municipal commission of the model sixth district seems to have done good work. Among other achievements, it made a land survey of the district, laid out two municipal parks, opened two hospitals, and introduced many improvements for the health, security and convenience of the residents. All of which did not prevent the official historiographer Luṭfī Efendi from condemning it in the most scathing terms (cited by ʿOth̲mān Nūrī in *Şehircilik*, 127). The movement towards the introduction and extension of Western-style municipal services continued, however. In 1285/1868 a municipal code of regulations (*belediyye niẓāmnāmesi*) was issued, the intention of which was to extend the commission system to the rest of the 14 districts of Istanbul. Each was to have a municipal committee of 8-12 members, who would choose one of themselves as Chairman. A general assembly for all Istanbul (*D̲j̲emʿiyyet-i ʿUmūmiyye*) of 56 members was to be formed, consisting of 3 delegates from each district, as well as a Council of the Prefecture (*Med̲j̲lis-i Emānet*) of six persons, appointed and paid by the Imperial government. These two bodies were to function under the Prefect (*S̲h̲ehremīni*), who was to remain a government official. The elaborate provisions of this code seem to have remained a dead letter until 1293-4/1876-7 when, under the impetus of the constitutional movement, new codes were issued for the capital and for provincial towns. The Istanbul code of 1293/1876 was in effect a rearrangement of the earlier one, with a few changes, the most important of which were the increase in the number of districts from 14 to 20, and the change in the property qualification of members from an annual income of 5,000 piastres to an annual tax payment of 250 piastres. Perhaps the most significant innovation in the new code was less in its provisions than in the fact that it was promulgated, not by the Sublime Porte, but by the short-lived Ottoman parliament. However, the wars and crises that followed caused it to be as ineffectual as its predecessors. (An exception was the Princes Islands, where a seventh district was constituted: Saʿīd Pasha, *K̲h̲āṭirāt*, Istanbul 1328, i, 5; *Med̲j̲. Um. Bel.* i, 1457). Finally, in 1296/1878, a new and more realistic version was published, which in time was put into operation. This divided the city into ten municipal districts. The elaborate apparatus of councils and committees provided by the earlier codes was abolished. What was left was an appointed Council of Prefecture to assist the Prefect, and a government-appointed director (*müdür*) for each of the 10 districts. This system remained in force until the revolution of 1324/1908.

In the provinces the policies of the reformers were much the same. The earlier authority of the *aʿyān* and the *S̲h̲ehir ketk̲h̲udasī* [*qq.v.*] had been abolished. The *muk̲h̲tār* system, inaugurated by Maḥmūd II, was introduced into the urban districts of most of the larger towns, and the *wilāyet* law of 1281/1864 laid down regulations for their election (chapters iv and v). In the *wilāyet* law of 1287/1870, provision was made for the establishment of municipal councils in provincial cities, along the same general lines as in the code for Istanbul. There is no evidence that anything much was done about this. Some attempt, however, seems to have been made to implement parts of the provincial municipal code (*wilāyāt belediyye ḳānūnu*) of 1294/1877. According to the law, every town was to have a municipal council, consisting of 6 to 12 members, according to the population. They were to sit for four years, with elections every two years to choose half the members. The doctor, engineer, and veterinary surgeon of the region were *ex officio* advisory members. Membership was restricted to those paying 100 piastres a year in tax. One of the members of the Council became mayor (*belediyye reisi*), not by election but by government appointment. The budget and estimates were to be approved by a municipal assembly (*D̲j̲emʿiyyet-i Belediyye*) meeting twice yearly for this purpose. This assembly was responsible to the General Council of the province (*Med̲j̲lis-i ʿUmūmī-i Wilāyet*) (*Med̲j̲. Um. Bel.* i, 1664 ff.).

After the Young Turk Revolution a new attempt was made to introduce democratic municipal institutions. The law of 1293/1876, with some amendments, was restored, and a serious attempt made to put it into effect. The experiment was not very successful. The personnel of the district committees, though enthusiastic, were inexperienced, and there was little co-operation between districts for common purposes. In 1328/1912 a new law finally abolished this system. In its place a single Istanbul municipality, called *S̲h̲ehremānet*, was established, with nine district branch offices (*S̲h̲uʿbe*), each directed by a government official. The Prefect was assisted by a 54 man general assembly, to which 6 delegates were elected from each of the nine districts. In this as in so many other respects, the new régime was returning to a more centralised system of government. Despite many difficulties, some important progress was made by the Young Turks in improving the amenities of Istanbul. A new drainage system was planned and constructed, improvements were in policing and fire-prevention, and the famous packs of dogs that had for long infested the Turkish capital were finally removed.

The first municipal measure of the republican government was a law of 16 Febr. 1924, setting up a prefecture (*S̲h̲ehremānet*) in Ankara (*Ḳawānīn Med̲j̲mūʿasī* ii, 218). The first prefect was Ali Haydar, and he was assisted by a general assembly of 24 members. The constitution followed broadly that of Istanbul, but with some changes, the general purport of which was to restrict the autonomy of the municipality in financial and security matters and place it more strictly under the control of the Ministry of the Interior.

On 3 April 1930, a new law of municipalities was passed (*Resmi Gazete* 1471, 1580; *OM*, 1930, 551). The old names of *S̲h̲ehremānet* and *S̲h̲ehremīnī* were abolished, and replaced by *Belediye* and *Belediye reisi*, usually translated mayor. Under Sultan ʿAbd al-Ḥamīd, the offices of Prefect and Governor of Istanbul had in fact been exercised by the same person. The Young Turks, by a law of 1325/1909, had formally separated the prefecture from the governorship. The new law laid down that in Istanbul, though not elsewhere, the office of mayor should be combined with that of Vali, the *vilayet* and *belediye* administrations, however, remaining separate. Under the law, municipalities, like villages, have corporate legal identity and legally defined boundaries. The 165 articles of the law provided a systematic code of rules for the election and functioning of municipal bodies, and with some modifications remained in force to the present day. Under these rules, municipalities are administered by a Mayor, a Permanent Commission, and a Municipal Council. The Mayor is elected by the Council, which itself is elected directly by universal suffrage for a term of four years. Towns with from 2,000 to 20,000 inhabitants are called *kasaba*, those with more than 20,000 are called *şehir*. The size of the

Council depends on the number of inhabitants, the minimum being 12 members, for fewer than 3,000 inhabitants. The Council meets three times a year, at the beginning of February, April and November. At other times it is replaced by a permanent commission (*daimi encümen*) consisting of three of its own members reinforced by the permanent officials of the municipality. The functions of the municipality include public health (hospitals, dispensaries, preventive medecine, sanitary and food inspections, etc.), public services (trams, buses, gas, electricity), town planning and engineering (roads and bridges within the town, public parks and gardens, street-lighting and cleaning, sewage, water-supply, etc.); in times of shortage, it is also entrusted with the distribution of commodities in short supply. It has its own enforcement agency (*zabita*). The municipality imposes taxes and has its own budget; its permanent staff, however, are civil servants.

Bibliography: the richest collection of material for the history of municipal institutions in Turkey will be found in ʿOth̲mān Nūrī (= Osman Ergin), *Medjelle-i Umūr-i Belediyye*, 5 vols., Istanbul 1330-1338; the first volume contains an elaborately documented history of municipal institutions in Islam and in Turkey, the second reproduces the texts of Ottoman laws and edicts on municipal matters, the remaining three deal with specific topics such as municipal contracts and privileges, health, public works, etc. For a brief general introduction to the subject by the same author, see Osman Ergin, *Türkiyede Şehirciliğin Tarihî Inkişafi*, Istanbul 1936. The texts of laws relating to municipal matters will be found in the *Destūr*, Istanbul 1872-1928, in the *Ḳawānin Medjmūʿasi* and *Kanunlar Dergisi* (1920 ff.), and in the *Resmi Gazete*. (French translations in G. Young, *Corps de droit ottoman*, Oxford 1905-6; Aristarchi, *Législation ottomane*, Constantinople 1874-8; *La Législation turque*, Istanbul 1923 ff.). Descriptions of the organisation of the *S̲h̲ehremānet* and the provincial municipalities will be found in the general and provincial yearbooks (*sālnāme*) of the Ottoman Empire, the last of which appeared in 1328/1912. On the municipal laws of the republic see *La Vie Juridique des Peuples*, vii, *Turquie*, Paris 1939, 57 ff; Albert Gorvine, *An Outline of Turkish Provincial and local Government*, Ankara 1956. (B. Lewis)

(2) Arab East.

Town councils of the earlier period of reform, such as the *madjlis Dimas̲h̲ḳ* which Ibrāhīm Pasha established during the Egyptian occupation of Syria, 1832-40 (A. J. Rustum, *al-Maḥfūẓāt al-Malakiyya al-Miṣriyya: Bayān bi-Wat̲h̲āʾiḳ al-S̲h̲ām* Beirut 1940-43), and a council appointed by Nūr al-Dīn Pas̲h̲a, a reforming *muḥāfiẓ*, at Sawākin in 1854 (J. Hamilton, *Sinai*, 1857), were unrelated to any legislative policy and were short-lived.

The Ottoman municipal legislation of 1281-94/1864-77 was applied throughout the Arabic-speaking provinces of the Empire except in certain frontier regions and in Egypt where municipal development was following a different course. The new municipalities flourished where the *wālī* of the province was sympathetic to the *tanẓīmāt*, and languished where he was not. Thus, under the guidance of Aḥmad Midḥat Pas̲h̲a, Bag̲h̲dād in 1869-72 and Damascus in 1878-80 experienced an intensive if brief period of urban development involving the demolition of city walls, re-alignment of streets and construction of covered markets and other public buildings. Participation of public-spirited local notables furthered urban reform. Mosul under its seigniorial families has had a continuous municipal history since 1869. Sectarianism hindered the smooth working of several municipalities in the communes (*nāḥiya*) of the autonomous *sandjaḳ* of Mt. Lebanon, and in Jerusalem where the complicated religious situation demanded that the chairman of the municipal council should be a Muslim. A weakness in all Ottoman provincial municipalities was the ineffectiveness of the municipal police (*belediyye čaʾus̲h̲lari*, Ar. *s̲h̲urṭat al-baladiyya*).

In spite of its shortcomings, which the consuls of the Powers were quick to report in their despatches, the Ottoman municipal organisation showed a remarkable ability to survive the disintegration of the Empire after the world war of 1914-18 when the withdrawal of Ottoman rule left a vacuum in local government in the Arab lands. To preserve continuity during the transitional period, the British in ʿIrāḳ, Palestine and Transjordan, and the French in Syria and Lebanon, continued to administer the Ottoman municipal code for several years until they introduced changes which reflected the influence of the Mandatory Powers. In 1922 a *muḥāfiẓ* was appointed for Baghdad who was at once executive head of the *liwāʾ* of Baghdad and chairman of the city municipal council; the two offices were separated in 1923. The Ottoman Law (*wilāyāt Belediyye Ḳānūnu*) of 27 Ramaḍān 1294/1877 was not however repealed until the promulgation of Law no. 84 of 1931 (*Idārat al-baladiyyāt*). The Palestine Government did not finally break with the Ottoman system until the issue of the Municipal Corporations Ordinance of 1934. Conditions in Transjordan limited the councils to consultative functions, and the Municipalities Law of 1925 permitted the head of the municipality of the capital to be appointed from outside the municipal council, a situation existing also, and more recently, at Damascus.

In Lebanon the Ottoman Law of 1877 was replaced by a Municipal Decree of 1922 under which the minister of the interior took over the supervisory duties of the former Ottoman *wālī*. In 1924 Beirut was given special status as a capital city and an organisation based on that of Paris though, from that year until the end of the French mandate, chairman and council continued to be appointed by the minister. By Legislative Decree no. 5 of 1954 the special status of Beirut was abolished and a municipal council of twelve members, of whom half were elected, was set up. The chairman, appointed from its members, is head of the municipal legislature. the *muḥāfiẓ*, representing the state, is head of the city executive. The Syrian municipalities, including that of Damascus, are governed by a *Ḳānūn al-baladiyyāt* promulgated by Decree no. 172 of 1956.

The chairmen of the municipalities of Damascus, Beirut, Bag̲h̲dād and Ammān are styled *amin al-ʿāṣima* to emphasise their particular importance in relation to the seat of the government; elsewhere the original designation, *raʾīs al-baladiyya*, is retained. In the capitals the chairman is appointed by the council of ministers. In other municipalities he is chosen either by the municipal council or by the minister of the interior who usually has a department (*maṣlaḥa, mudīriyya*) in his ministry which supervises municipal affairs. In Egypt and the Sudan special ministries of town and rural affairs have been created.

Egypt developed its own local government tradition. Owing to the presence of the European consuls and a European merchant community, Alexandria possessed the beginnings of municipal government as early as about 1835 when a consultative *madjlis al-tanẓīm* (*conseil de l'ornato* in Levantine parlance) was formed. This was followed in 1869 by a municipality having an appointed president and a partly elected council. The Khedive Ismāʿīl and his successors witheld municipal privileges from Cairo until 1949, though municipal commissions with restricted powers had long existed in the Egyptian provinces.

An ordinance of 1901 empowered the governor-general of the Sudan to establish municipal councils, but this measure was not implemented. In 1921 a consultative council was founded in the neighbouring towns of Khartoum, Omdurman and Khartoum North, with regional committees in each town. The formation in 1942 of the first municipal council at Port Sudan was followed in other towns. In 1945 the three regional committees at the capital were replaced by municipal councils, and a bill containing provision for further decentralisation became law in 1951.

In Arabia municipalities were established by the Ottoman Government in Madīna, Jedda, Ṭāʾif and Yanbūʿ about 1870. In Mecca the maintenance of the simple public services was divided between the ʿAyn al-Zubayda water board (*taʿmīrāt ḳomisyonu*) and a general-purposes council. These institutions had no roots in the Ḥidjāz and disappeared in the war of 1915-19. In 1926 the Saudi Goverment issued an administrative instruction providing for elected municipal councils of notables and merchants in Mecca, Madīna and Jedda, with technical management boards in each of these towns composed of the director of the municipality and his heads of department.

A municipal authority was in existence in Aden by 1855, and an Aden local authority was established in 1900, though the elective element was not admitted to the Fortress until 1947. In 1953 the Fortress township authority was reconstituted as the Aden municipality with an appointed president and an official majority on the council, but with a broadened electoral basis and control over its own budget. Baḥrayn municipalities have each a *rāʾīs madjlis al-baladiyya* appointed by the Ruler, a partly-elected council, and a permanent director (*muʿāwin, sikritayr*). Kuwayt municipality is managed by a *mūdīr* responsible to the *raʾīs al-baladiyya*, a member of the ruling family. The Arabic-speaking communities of Muṣawwaʿ and Ḥarar have taken only a small part in town management. By decree of 1893, rescinded in 1901, the Italian Government instituted a municipal board at Muṣawwaʿ with an insignificant representation of appointed natives and a narrowly limited competence. Two measures passed by the Ethiopian Government: Administrative Decree no. 1 of 1942, extended by Municipalities Proclamation no. 74 of 1945, provided for elected town councils.

Municipalities in the Arab East do not usually exercise direct control over electricity and water supply, and rarely over urban transport, undertakings which are operated either by concessionary companies, now mostly in process of nationalisation, or by boards under the authority of the central government, with or without municipal representation. Municipal councillors are chosen by direct suffrage of the electors, not by inferior councils in town wards as in two-tier systems of municipal representation. Municipalities vary in the degree of publicity in which they pursue their activities. Those in the more politically advanced centres, such as Damascus, Beirut, Baghdād, Cairo and Alexandria, disclose their budgets and explain their policies; others are less communicative. The press is excluded from council meetings, and the somewhat negative attitude of the citizens to local, in comparison with national, affairs results in relatively small polls at council elections, though the inhabitants of Palestine under British mandate, denied an active part in national affairs, frequently vented their feelings in municipal politics. Municipalities also differ in the strictness with which they enforce building restrictions and traffic control, and in the importance which they attach to welfare and public amenities. Only in Egypt have women the right to be municipal electors and to be elected on municipal councils; women municipal employees are everywhere few.

In no state is there a nation-wide local government service with its own traditions existing parallel with the national civil service. Local government is considered as a regional branch of the central government, having no juridical or real financial independence. Yet the growing wealth and technical complexity of the larger municipalities, as well as their record of administrative maturity and good government, have in practice increased their civic autonomy.

(3) North Africa — (i) Tunisia

In Tunisia the first *baladiyya* appeared in the reign of Muḥammed Bey, who set up by a decree of 30 August 1858 a municipal Council to administer the affairs of the town of Tunis, composed of a president, a secretary and twelve members chosen from among the foremost people in the land, a third of whom gave up their seats each year. The chief responsibilities of this council were to do with public moneys, roads, the acquisition for the public benefit of land needed for widening roads, and the issuing of building permits. The council received its administrative authority, which was only vaguely defined, from the sovereign. The constitution of the Tunis municipal council was altered after the setting up of the French protectorate, by a decree of the bey dated 31 October 1883. Two years later a decree of 1 April 1885 promulgated a municipal charter for the whole of Tunisia, and was soon followed by another decree (10 June 1885) which determined that all municipal councillors in Tunis were to be appointed by the government, listed the matters the municipal councils were competent to deal with, and organised the administration of the country through these bodies. Two subsequent reforms have been made, one by a decree of 10 August 1938 which relaxed the rule whereby consent had to be granted for all deliberations by the municipal councils, and the other by a decree of 15 September 1945, which provided for an elected municipal council in Tunis, composed of an equal number of Tunisians and Frenchmen.

But the institution as a whole was profoundly modified by the bey's decree of 20 December 1952, which defined the commune: a collective body under public law, with civil status and financially autonomous, responsible for the conduct of municipal affairs. The deliberating body of the commune is the municipal council, elected for six years by direct suffrage by two electoral bodies, who appoint the Tunisian and the French councillors respectively. Half the members vacate their seats every three years. Of 64 communes in all, 39 appoint an equal number of Frenchmen and Tunisians to their municipal councils, the others appointing a majority of Tunisians, or Tunisians alone. The elections are held on a general basis of universal suffrage, with the proviso that Tunisian women, unlike Frenchwomen, do not have the right to vote. The municipal council holds four ordinary sessions annually. Its competence is restricted and does not extend to all the business of the commune. There is still administrative supervision centrally by the Minister of State and locally by the *Ḳāʾid*, who has now taken the place of the French civil inspector. The executive body of the commune is made up of a president appointed by decree from among the *Ḳāʾid*s other than the *Ḳāʾid* responsible for the commune concerned, and a vice-president and deputies elected by the municipal council from among its members. This arrangement preserves the earlier relationship vis-a-vis the Tunis municipal council, elected for six years. The executive body of the commune is the *Shaykh al-Madīna*, president appointed by the municipal council of the town of Tunis, and assisted by two vice-presidents, one French and one Tunisian.

Tunisia's communal organisation was changed after it became independent, under the municipal law of 14 March 1957. This new statute raised the number of communes to 94. The municipal councils are now elected directly in one ballot from a list of candidates, for three years, the electors being Tunisians of both sexes aged twenty and over. The minimum age for candidates is 25. Frenchmen can no longer be members of the municipal councils, but the law provides that Frenchmen and foreigners who have the right to vote may be appointed by the Tunisian government, which will fix the number of such persons for each commune.

Administrative supervision is exercised by the Minister of the Interior, and by the governors centrally and locally.

Two other important innovations must be mentioned: the president and deputies are now elected by the council. But the president of the commune of Tunis is still appointed by decree of the Prime Minister, the president of the council, on the nomination of the Minister of the Interior. On the other hand the municipal councils now deal with all the business of the commune. (Ch. Samaran)

(3) North Africa — (ii) Morocco

Before 1912 there were no municipalities nor municipal life in Morocco in the sense these words have had in some European countries since the Middle Ages, a sense inherited from Roman tradition. The towns had no finances of their own; the expense of public services was met in large measure by the revenue of religious foundations or *ḥubūs*, and building or improvements were dependent on the good will of the prince, who would levy the required sums on the public treasury. Nor were there any representative assemblies of citizens; the governor or *ʿāmil* held his power directly from the sultan, and the *muḥtasib* was not "the merchants' provost", as is often stated, as they did not elect him. A wise governor would take the advice of prominent people in his area, but was not bound to do so.

The first modern municipal body set up by the French Protectorate was that of Fez (*al-madjlis al-baladī*), instituted by the *dahir* of 2 September 1912. It comprised a council of fifteen members with right of vote, seven officials appointed on special grounds and eight other prominent men elected for two years. This organisation survived until the municipal charter of 1917.

A *dahir* of 1 April 1913 set up "municipal commissions in the ports of the Sharīfian empire". It was recapitulated and clarified by the *dahir* of 8 April 1917. Nineteen towns were given the status of municipalities (1,822,746 inhabitants according to the census of 1951-52). The *dahir* determines the municipal authorities: the pasha or governor, still appointed by the central authority, and under the direction of a senior municipal services official, then from 1947 of an urban affairs delegate; and a municipal commission with right of discussion only, appointed and not elected, and made up of one French and two Moroccan sections (one Muslim, one Jewish). The municipalities provide services under the direction of the Head of municipal services: administrative, public works, sanitary and fiscal. They have budgets drawn from their own resources (direct and indirect taxes, revenues from land and excise, a share in the profits from services given).

Casablanca, like Fez, was given a special organisation, but only in 1922. The municipal commission, though still appointed, now had power to vote, and the French section now elected a French vice-president with special powers.

The system of municipalities was reformed in 1953 by the *dahir* of 18 September, which abolished the special organisations at Fez and Casablanca. The

main change it introduces is to set up elected, not appointed, municipal commissions, still of Moroccans and Frenchmen equally. The commission manages the affairs of the city, though approval of its decisions by the central supervising authority is required.

The administrative provisions of this statute have been given effect, but not those relating to elections. This was prevented by the political crisis of 1953. The old appointed commissions remained, and were dissolved when Morocco became independent.

The government of independent Morocco has made no change in the legislation on municipalities. Only French control and the commissions have gone, naturally enough. A new representative system is being prepared. It will relate not only to the towns, but envisages the setting up throughout the country of rural communes which would replace the old tribes or divisions of tribes, and would be run by elected councils. At the time of writing this law has not yet been promulgated. It seems to be inspired in large measure by the *dahir* of 6 July 1951, which set up elected "*dj̲amāʿas*" with power of vote, usually within the framework of the tribe or tribal division.

In Algeria, the municipal organisation reproduces, in the towns and villages, the system in force in France. The old "mixed communes" administered by officials appointed by the government and subordinate to the sub-prefects have everywhere been replaced by "communes with full powers".

(4) Persia

In the 19th and early 20th century the chief city official after the governor was the *beglerbegī*; under him were the *dārūg̲h̲a* and *kalāntar*; and over each of the quarters in the larger cities was a *kadk̲h̲udā*. In the bazaar the craft guilds enjoyed a considerable degree of autonomy in internal affairs. The streets of the city were narrow, mostly unpaved, muddy in winter, dusty in summer, and unlit at night. There was, however, little demand for municipal reform and even after the grant of the constitution in 1906 scant attention was paid to the establishment of municipalities on modern lines. A Municipal Law was passed on 20 Rabīʿ II 1325/2 June 1907 but remained largely in abeyance owing to the fact that inadequate financial provisions had been made for municipal development. In 1919 during the premiership of Sayyid Ḍiyāʾ al-Dīn Ṭabāṭabāʾī a commission was set up to evolve a scheme for a municipality for Tehran on modern lines but proved abortive (J. M. Balfour, *Recent Happenings in Persia*, London 1922, 240). In 1922 Dr. Ryan, an American, was engaged as municipal adviser to Tehran; he died in 1923 and was not replaced (A. C. Millspaugh, *The American Task in Persia*, New York and London 1925, 21, 212). During the reign of Riḍā S̲h̲āh (1925-41) considerable development took place in municipal affairs, and by 1927-8 there were some 134 municipalities in existence. By the Municipal Law of 1309 P./1930 the head of the municipality (*raʾīs-i idāra-i baladiyya*) was designated by the Ministry of the Interior. He was responsible for the execution of projects for municipal development and municipal administration; his duties included the supervision of weights and measures, control of the guilds, and the regulation of food supplies, prices and rents. The law also provided for an elected municipal council of 6-12 members. Its term of office was two years; its duties were to supervise the activities of the municipality, approve the municipal budget, and propose through the head of the municipality to the Ministry of the Interior the levy of municipal dues. Much progress was made in the field of town planning under Riḍā S̲h̲āh but the high degree of centralisation and the close control of the Ministry of the Interior over municipal affairs meant that the local communities had little real responsibility for or control over municipal affairs. In 1328 P./1949 new legislation increased the size of the municipal council so that it was composed of 6-30 members and extended its term of office to four years. Its main functions were unchanged but its powers were somewhat increased. The head of the municipality was appointed by the Ministry of the Interior from among three candidates submitted by the council; he was dismissed in the event of the municipal council passing a vote of no confidence in him. The increase in the power of the municipal council was, however, offset by the fact that in the event of a disagreement between the governor-general and the municipal council the former could have recourse to the Ministry of the Interior whose decision in such a case was final. Subsequently modifications were made in the position of the municipality and the municipal council by Administrative Orders (*lāyiḥa-i ḳānūnī*) dated 11 Ābān 1331 P./1952 and 25 K̲h̲urdād 1332 P./1953 issued during the premiership of Dr. Muṣaddiḳ, and the Law of 11 Tīr 1334 P./1955. In some respects the position of the municipal council was strengthened, but its freedom of action was limited by the fact that its dissolution could in certain circumstances be demanded by the Ministry of the Interior; in the event of there being no municipal council the Ministry of the Interior was deemed the council's successor. Under the Second Seven-Year Plan Law, approved in March 1956, Persia was divided into three areas for municipal development, for each of which a firm of consultants was allotted responsibility (F. C. Mason, *Iran, Economic and Commercial Conditions in Iran, August* 1957, HMSO 1957, 74-5). The *baladiyya* became known during the reign of Riḍā S̲h̲āh as the *s̲h̲ahrdārī* and the *raʾīs-i baladiyya* as the *s̲h̲ahrdār*.

(A. K. S. Lambton)

(5) India

The indigenous village communities of India controlled by village councils or *pančāyats* represented a form of local self-government but they had practically ceased to function during the anarchy accompanying the decline of the Mughal empire. Albuquerque, the Governor of the Portuguese possessions in India between 1509 and 1515, had retained the existing village communities in his administration of Goa. In 1674 Gerald Aungier had also made use of the ancient *pančāyats* in Bombay. To a certain extent the *pančāyat* system had survived in the territories of the Maratha Peshwa and traces were discernible elsewhere. This led Mountstuart Elphinstone in Bombay and Thomas Munro in Madras to advocate the preservation of these village councils where possible. Their representations however were little attended to and the institutions of local self-government introduced by the British in the middle of the nineteenth century were of a foreign type. Until the introduction of the Montagu-Chelmsford reforms in 1919 they resembled the French rather than the British system, for the district officer of British India like, the French prefect of a department, rigorously controlled the provincial authorities.

There was far too much official interference and British administrators aimed more at efficient local government under official control than any genuine system of local self-government under popular control.

The development of municipal institutions under British rule began in the three Presidency towns of Madras, Bombay and Calcutta. As early as 1687, by order of the Court of Directors of the East India Company, a municipal corporation and mayor's court were established in Madras. Similar bodies were set up in Calcutta and Bombay in 1726. These courts however were intended to exercise judicial rather than administrative functions. By the Charter Act of 1793 the governor-general was authorised to appoint justices of the peace for the municipal administration of the Presidency towns. In addition to their judicial duties they were to appoint watchmen and scavengers and levy a sanitary rate for this purpose. This worked with a certain amount of success in Bombay but not in Calcutta or Madras. The justices of the peace were government nominees and it was not until 1872 that the ratepayers of the Presidency towns were allowed to elect their own representatives.

Between 1842 and 1863 a series of regulations extended municipal institutions to other towns. After the 1861 Councils' Act municipal government was remodelled by the local legislatures. The need for associating Indians in local self-government was laid down by a resolution of Lord Mayo's government. The governor-generalship of Lord Ripon (1880-84) witnessed a great extension of local self-government which it was hoped would be a means of political education for Indians. At the same time rural boards, similar to the municipal boards, extended the system to the rural areas. It was not until the introduction of dyarchy under the Montagu-Chelmsford reforms that local bodies were handed over to popular control and elected ministers became responsible for the administration of local self-government.

(6) Malaya and Singapore

The municipalities in Malaya, as in other parts of the British Commonwealth, are adapted from the local government system of England. The first appearance of such institutions in the area took place in the Straits Settlements of Malacca, Penang and Singapore. In 1827 the genesis of municipal institutions in the Straits Settlements was introduced in the form of a Local Committee concerned with the management of roads and drainage in Penang. This was soon followed by similar Committees in Singapore and Malacca. In 1856 the Government of India (East India Co.) enacted a law for the establishment of Municipal Commissions of the three 'stations' of Singapore, Malacca and the Prince of Wales Island (Penang). In 1858 the meetings were held twice monthly and were open to the public. The Municipal Commissions of the station of the Prince oi Wales Island (Penang) became the Municipal Commission of George Town in 1888. By the turn of the century there were three Municipal Commissions for the town of Singapore, George Town in Penang and the town and fort of Malacca. Each Commission had a full time president appointed by the governor and a number of official members and non-official members who were chosen in the early stages by electoral procedure. This procedure was later restricted to only half the commissioners leaving the other half to be nominated by the governor. By 1913 when the Municipal Ordinance of the Straits Settlements was enacted electoral procedure was completely abandoned and all the commissioners were nominated to represent local opinion, business associations and religious or racial groups. The system of nomination continued until after the Second World War when the electoral procedure was re-introduced first in Singapore (1949) and later in Penang and Malacca. At this stage only two thirds of the commissioners were elected by general adult suffrage. By 1957 the Municipal Commissions became City Councils (*Madjlis Bandar Raʿaya*) in Singapore and George Town which had become cities with fully elected councillors who in their turn elected their president who is styled 'mayor' (*dato' bandar*).

The Municipal Ordinance of the Straits Settlements stipulated that a member of a Municipal Commission must be able to speak and read English since it was the language officially recognised. This stipulation together with the system of nominating commissioners tended to reduce public interest in the affairs of the Council. After 1957 the Chinese, Tamil and Malay languages were recognised as official languages together with English for the purposes of the Sintapore Council meetings. In Malacca and Penang Malay, the national language of the Federation of Malaya, was also recognised with English. This helped to break the barriers between the public and the Council and it opened the door to the non-English educated members of the community to stand for election with accompanying tendencies towards radicalism.

The Municipalities of Singapore, George Town and the town and fort of Malacca have always exercised all functions expected of a local authority. In addition to this they were allowed to own undertakings for the supply of water, gas and electricity.

With the spread of British administration into the Malay States and the peninsula another type of local government emerged. This was called the Town Board. It was first established in the Federated Malay States of Perak, Negri Sembilan and Pahang. The non-federated Malay States adopted similar institutions with local modifications in nomenclature and powers. It must be noted that the Town Boards were less of a local government and more of a central government functioning locally. They were totally dependent upon the authority of the State and all their employees were officers of the State. Unlike the Municipal Commission they were not legally independent of the central government but agents of it. The president and the members were appointed by the central authority for an indefinite period and not for four years as was the case with the Municipal Commission. Again at variance with the Municipal Commissions Town Boards extended their authorities beyond the boundaries of the towns to the neighbouring villages.

The first attempt at the creation of municipalities

in the true sense within the Malay States came after the establishment of the Federation of Malaya in 1948. The Municipal Ordinance of the Straits Settlements was enacted for the whole Federation which by now comprised the nine Malay States together with the Settlements of Penang and Malacca. Singapore was left out of the Federation. In the same year the Town Board of Kuala Lumpur, the Federal capital, was transformed into a municipality. It retained its former responsibilities including those of the administration of the outlying villages around it. A distinction however was made between an inner municipal area and an outer municipal area. The former referring to the town proper and the latter to the villages around it. From then onwards changes began to take place. Town Boards became Town Councils (*Madjlis Bandaran*). Electoral Procedure was introduced. Greater authority was vested in these Councils and great interest in local affairs became apparent. In fact local elections in Malaya have become equal in importance to their counterparts in other highly developed countries in the sense that they have become a testing ground for the opposing national political parties.

At present Municipalities (Berbandaran) in the Federation of Malaya are still in a state of transition. The Municipal Ordinance is not fully implemented all over the Federation. (Apart from George Town City Council and the Municipalities of Kuala Lumpur and Malacca 27 of the larger towns in the Federation have elected Town Councils, 12 of which are financially autonomous and the others are moving in the same direction.) It is expected that the Ordinance will be emended to give greater scope for local variations retaining however the basic essentials of a modern municipality.

(7) Indonesia

We do not know much about political life or the kind of government in the ancient pre-Islamic cities and towns of Indonesia, either in such royal centres as the capitals of *old* Mataram or *later* Modjopahit, or in commercial urban centres like Tuban, Gresik or Palembang.

There is no evidence, up to now, that there ever was any form of really local government or autonomy vested in locally-rooted public institutions. When, from the 7th/13th century onwards, Islam gradually penetrated almost the whole of Sumatra and Java and in many other regions of the archipelago, this lack of local public institutions in the towns and cities (neither big nor numerous) continued. Both European and non-European sources of the 16th and 17th centuries tell us that the inhabitants of cities or urban emporia were ruled by servants of the sultans or princes and that their towns never were considered to be a juridical entity. Neither in remote past nor in more recent times did the indigenous towns of Indonesia have any creative influence on the development of law as did the towns and cities of Western Europe, through *their* law-giving authorities or special *municipal* courts.

In towns that came to be ruled by the Dutch East Indian Company or were founded by this chartered body (as Batavia) some urban institutions of 17th century Western type were created, of which the *weeskamer* (council for the affairs of orphans) perhaps may be mentioned because it has survived the Company itself. It reappears in the general legislation of the 19th and 20th century on the civil law of Europeans and non-Indonesian inhabitants of the archipelago.

When after the downfall of the Company and after the end of the British interregnum these islands became a part of the new kingdom of the Netherlands (1816) a highly centralised and exclusively official system of government was introduced. This system remained unaltered until the end of the 19th century, when under the influence of prominent colonial specialists some ideas of "decentralisation" began to carry the day. Though in 1894 and in following years several bills were conceived—which did not pass the parliament—it was not before 1903 that the so-called *Indische decentralisatiewet* (Act for decentralisation) was promulgated.

This act had a double aim: first, to pave the way for the creation of local and regional public councils; secondly to procure the financial means to be used by these councils. (The regional councils will not be dealt with here). So this act did not aim at reforms in the great diversity of Indonesian rural and truly indigenous institutions: in that field everything continued to be founded on customary law (*ʿādat*) and special legal regulations made for it. This new chapter of the legislation prescribed (*inter alia*) how to set up *urban* municipalities.

Large cities, like Batavia (now Jakarta, Djakarta), Surabaya, Semarang, Bandung and many other places of urban character as well, were westernised in many respects. The great majority of Europeans and Chinese, and several other non-Indonesian groups lived there; even the Indonesian inhabitants often were of different origin, *ʿādat* and language. Western business and industrial activity had its headquarters there. In these great half-western, half-eastern agglomerations the usual problems that are to be found in big cities everywhere were encountered. They

could be better served and solved by municipal authorities and services than by the general civil service officials of the central government. Further legislative measures, issued by the governor-general in 1905, carried out what the fundamental act aimed at, and Batavia became a municipality. In its initial phase the members of its municipal council were appointed by the governor-general and not elected.

The resident of Batavia was officially the council's chairman. Meester-Cornelis and Buitenzorg (now Djatinegara and Bogor) also obtained municipal councils in 1905. This new system gradually developed so that all the cities and big towns in Java as well as many towns elsewhere (Medan, Pamatangsiantar, Padang, Makassar, Menado, etc.) became municipalities, while since 1918 the members of these councils could be elected by qualified inhabitants.

Since 1925 every *male* citizen of an urban municipality in Java who had attained his majority, had a yearly income of at least 300 guilders, and could read and write in Dutch, Malay or any vernacular, was given the vote. In the outer provinces other rules might be in force. These new urban municipalities were made corporate bodies. The rather limited activities of urban municipalities comprised such items as roads, streets, parks, sewage-systems, fire-service, public utility works, public health service and so on. Municipal regulations could be made. In 1916 a new ordinance enabled the government to appoint burgomasters (*burgemeesters*) for those cities or towns that were deemed to need such an official (as in the Netherlands, the burgomaster was to be appointed by the central government). Their salaries were paid by the central government; a percentage of it was to be reimburred by the municipal treasury. As these urban municipalities were considered western-type enclaves in the territory of *ʿādat* law it seemed convenient, at least during the first two decades of their existence, to appoint only European burgomasters. The *wethouders* (aldermen) were chosen by the council from among its own members. They formed under the chairmanship of the burgomaster the executive committee of the council. Only in the last decade before the second world war did the government start appointing Indonesians as burgomaster.

In the present Republic of Indonesia the principle of decentralisation as well as that of autonomy and local government is maintained in article 131 of its provisional constitution. New legislative measures however to give practical effect to this principle are not yet in force. For Java at least, an act of 1948 (nr. 22) promulgated by the *former* republic of Indonesia (*vulgo*: the Jogja-republic) has systematised the autonomous parts of the territory in three ranks: 1) provinces, 2) *kabupatèn* or regencies and big cities 3) small urban municipalities and rural unities. As a consequence of article 142 of the abovementioned provisional constitution (*undang-undang dasar Republik Indonesia*, promulgated 17 August 1950) all earlier regulations not explicitly abolished or altered are to be considered as decrees or regulations of the republic. So the essentials of the prewar legislation as to urban municipalities are still in force, although the burgomasters are now officially called *walikota*, and the municipal council has influence on the appointment of these magistrates while the members of the councils are to be elected by all inhabitants of both sexes who have passed their 18th birthday or married at an earlier date. (The special and temporary situation in Jakarta where the 24 members of the council are appointed by the government, need not be discussed here).

BALĀGHA (A.), Abstract noun, from *balīgh* effective, eloquent (from *balagha* "to attain something"), meaning therefore eloquence. It presupposes *faṣāḥa*, purity and euphony of language, but goes beyond it in requiring, according to some of the early definitions, the knowledge of the proper connexion and separation of the phrase, clarity, and appropriateness to the occasion. Even though those definitions are not infrequently attributed to foreign nations such as the Persians, Greeks or Indians, the demand for skill in improvisation and the recurring references to the *khaṭīb* (or orator) in connexion with the discussion of the concept make it abundantly clear that it originated in the Arabian milieu. The transfer of the concept to the written word and hence to literary criticism and, beyond this, its widening to denote a three-pronged science are the essential facts in the rather complicated history of the term.

Grammar and lexicology, the primary concerns of the early critic, became in the course of the ninth century, when stylistic perfection had been accepted as a desideratum in official pronouncements, integral parts of the education of the *kātib*. The period appreciated systemisation not excluding the analysis of aesthetic experience. Acquaintance with the conceptual apparatus of Greek thought assisted in the articulation of critical insights even though the impulse toward a theory of *balāgha*, or aesthetic effectiveness on the verbal level, seems to have been germane to the Arab tradition which was then stimulated by an increased interest in structure and development of poetry and by the need to rationalise the aesthetic implications of the theological postulate of the uniqueness (*iʿdjāz*) of the Ḳurʾān. The motivation for the first work exclusively devoted to certain formal characteristics of artistic expression, the *Kitāb al-Badīʿ* of Ibn al-Muʿtazz (written in 887/88; ed. I. Kratchkovsky, London 1935), was the justification of the 'new' or 'modern' style, *al-badīʿ* [*q.v.*], of which the second half of the ninth century had witnessed the victorious surge. This justification Ibn al-Muʿtazz sought to accomplish by means of the proof that the figures of speech whose generous employment appears to have been the most prominent (and hence the most frequently criticised) feature of the modernistic style in the eyes of the public, were without exception traceable in the Holy Book as well as in classical literature. The reason why Ibn al-Muʿtazz divided the eighteen figures of which he furnishes examples into the two categories of *badīʿ* (five kinds) and *maḥāsin* (thirteen) still eludes us. We know, however, that the second part of his work (which deals with the *maḥāsin*) was added by the author after the first had encountered a certain amount of criticism. (W. Caskel, in *OLZ*, 1938, 146-47, sees the rationale for the distinction in the fact that it was only in the employment of the *badīʿ* figures that 'modern' poetry differed from the classical tradition.)

The use of the notion of the 'rhetorical figure' in the interpretation of the Ḳurʾān antedates the work

of Ibn al-Muʿtazz; the method is fully developed in Ibn Ḳutayba's (d. 889) *Taʾwīl mus̲h̲kil al-Ḳurʾān* (ed. A. Ṣaqr, Cairo 1373); this fact may help us to understand why the doctrine of tropes and figures was the earliest aspect of *balāg̲h̲a* to attract systematic investigation.

Ḳudāma b. D̲j̲aʿfar's (d. 922?) *Naḳd al-S̲h̲iʿr* is inspired by another tendency; Ḳudāma searches for an objective standard in the evaluation of poetry. Rhetorical figures are only one of the elements with which the poet and his critic have to deal. Like many of his Arab and Greek predecessors Ḳudāma was led, especially in his discussion of the defects of poetry, into problems that to our mind come within the purview of grammar and logic. The orderly fashion in which he coordinates the several viewpoints may have contributed to the three-fold structuring of the *ʿilm al-balāg̲h̲a* at which the scholastic age of Muslim critical thought was to arrive. Not much later than Ḳudāma one Ishāḳ b. Ibrāhīm b. Wahb, a *kātib*, wrote (in or after 335/946-7) the *Kitāb al-Burhān fī wud̲j̲ūh al-bayān* (identical with the *Kitāb Naḳd al-nat̲h̲r* that had been attributed variously to Ḳudāma and to Abū ʿAbdallāh Muḥammad b. Ayyūb al-G̲h̲āfiḳī, d. 1262; it awaits publication; it is known only through an article of ʿAlī Ḥasan ʿAbd al-Ḳādir, *RAAD*, 1949, 73-81; cf. the discussion of the problem by S. A. Bonebakker in the introduction to his edition of *Naḳd al-S̲h̲iʿr*, Leiden 1956, 15-20). Isḥāḳ continues the discussion of 'the various ways of expressing things which D̲j̲āḥiẓ, *Kitāb al-bayān wa'l-tabyīn*, had initiated; he criticises the limitations of his predecessors and, from our point of view, indicates one of the directions in which the final systemisation of *balāg̲h̲a* was to occur. This system slowly takes shape in works like the *Kitāb al-ṣināʿatayn* of Abū Hilāl al-ʿAskarī (d. 1005).

The struggle between the Ancients and the Moderns which dominates literary life from the middle of the ninth to the close of the eleventh century kept the interest in stylistic analysis alive. Toward the end of this period, ʿAbd al-Ḳāhir al-D̲j̲urd̲j̲ānī (d. 1078) refined to a degree never reached by any Arab (or Persian) critic before or after him the comprehension of the psychological roots of the aesthetic effect. In his *Asrār al-Balāg̲h̲a* (ed. H. Ritter, Istanbul 1954) his principal concern is with simile, metaphor and analogy—later to become the domain of the *ʿilm al-bayān*. D̲j̲urd̲j̲ānī succeeded in explaining the (logical and) psychological foundations of the aesthetics implicit in the aspirations especially of the later phases of Arabic (and Persian and Turkish) poetry. His is the merit of having been the first to investigate the 'fantastic aetiology', the very life of Persian poetry in particular (although its technical designation, *ḥusn al-taʿlīl*, is found only more than a century later in Sakkākī). D̲j̲urd̲j̲ānī's other important work, *Dalāʾil al-iʿd̲j̲āz*, unquestionably spurred the rise of the *ʿilm al-maʿānī* as an integral part of rhetoric.

After D̲j̲urd̲j̲ānī the scholastics hold the field. In the third part of his encyclopaedia of the sciences, *Miftāḥ al-ʿulūm*, Sakkākī (d. 1226 or 1229), gives the *ʿilm al-balāg̲h̲a* the organisation which it was to retain to the present. In his treatment it comprises three branches: the *ʿilm al-maʿānī*, 'notions', dealing with the different kinds of sentence and their use; the *ʿilm al-bayān*, 'modes of presentation', with the art of expressing oneself eloquently and without ambiguity—both are concerned with the relation of thought to expression and with the different ways to express the 'same' idea which the poet or writer has at his disposal; one must never forget that the *ʿilm al-balāg̲h̲a* as all Arab literary theory is primarily a *Kunstlehre*, an *ars dicendi*, and not an aesthetics in Plato's or our own sense, i.e., a *Schönheitslehre*. (At this point a distinct analogy may be drawn to Muslim treatment of political theory which, conspicuous exceptions such as Māwardī's (d. 1058) *al-Aḥkām al-sulṭāniyya* notwithstanding, is concerned with the conduct of the ruler and his administrators rather than with the nature of kingship and administration). The third branch is the *ʿilm al-badīʿ* which deals with the embellishment of speech and defines a large number of tropes classifying them in general on the ancient model in σχήματα διανοίας, *maʿnawī*, and λέξεως, *lafẓī*.

A tendency to proliferation of the figures identified is unmistakable. Where Sakkākī (and his commentators al-Ḳazwīnī, better known as *k̲h̲aṭīb Dimas̲h̲ḳ* (d. 1338), and al-Taftazānī (d. 1389), whose, works *Talk̲h̲īṣ al-Miftāḥ*, and *Muk̲h̲taṣar al-Talk̲h̲īṣ*, have come to supersede Sakkākī's as the standard textbooks of rhetoric) list thirty *maʿnawī* figures (some subdivided further) and seven *lafẓī*, Ibn Ḳayyim al-D̲j̲awziyya (d. 1350), *Kitāb al-Fawāʾid* has eighty-four *maʿnawī* alone.

The *Muʿd̲j̲am fī maʿāyīr as̲h̲ʿār al-ʿAd̲j̲am* of the Persian S̲h̲ams-i Ḳays (*fl.* 1204-30) is the first and a fairly successful attempt to apply Sakkākī's system to a literature other than Arabic.

A contemporary of Sakkākī's commentators, Ṣafī al-Dīn al-Ḥillī (d. 1349), inaugurated the fashion of the so-called *badīʿiyya*, a poem composed to illustrate the various figures of speech. The genre whose most celebrated representative is perhaps the *Badīʿiyya* of Ibn Ḥid̲j̲d̲j̲a al-Ḥamawī (d. 1434) has been cultivated down to quite modern times.

It is difficult to find the Hellenising strain in the theory of *balāg̲h̲a* its proper place in this presentation; for with the significant exception of Ḳudāma (cf. Bonebakker, *op. cit.*, 36-44) it has always remained on the edge of the developmental sequence. Both the *Poetics* and the *Rhetoric* of Aristotle found translators; the translation of the *Poetics* by the Nestorian, Abū Bis̲h̲r Mattà b. Yūnus (d. 940), has found three editors (Margoliouth, Oxford 1887; Tkatsch, Vienna 1928-32; ʿAbd al-Raḥmān Badawī, Cairo 1953), that of the *Rhetoric* has remained unpublished. Concern for these works has been confined to the *falāsifa*. Avicenna included an abridgement of the *Rhetoric* in the section on logic of his *S̲h̲ifāʾ* (ed. S. Sālim, Cairo 1954) and Averroes summarised the *Poetics* (edd. F. Lasinio, Pisa 1872; ʿAbd al-Raḥmān Badawī, Cairo 1953). But the literary background that served as the vantage-point for Aristotle's ideas remained alien to the mediaeval Muslim. Respect for the protophilosopher rather than a desire to influence Arab literature or the reduction to theory of its techniques and aspirations motivated such occasional studies as were accorded those much-misunderstood works. What Averroes observed with regard to Greek epic narrative in metrical form (in connexion with *Poetics* xxiii), that "all this is peculiar to them (i.e., the Greeks) and nothing like it is to be found among ourselves", could fairly be extended to the tradition of Greek literature and its theory as a whole—even though a good many motifs, conventions and definitions of tropes did find their way (in contrast to other Greek bequests apparently *not* through the mediation of the Syriac tradition) into Arabic literature and theory.

BALAK, Nūr al-Dawla Balak b. Bahrām b. Artuḳ, one of the first Artuḳids, known chiefly as a tough warrior. He appears in history in 489/1096 as commander of Sarudj on the Middle Euphrates. This locality being taken from him by the Crusaders in the following year, and his uncle Ilghāzī having been appointed governor of ʿIrāḳ by Sulṭān Muḥammad, he accompanied him, and is found in the following years struggling vainly for the little towns of ʿĀna and Ḥadītha, against Arabs, or protecting the Baghdād-Iran road from the attacks of Kurds and Turkomāns. After Ilghāzī's disgrace in 498/1105 he returned to Diyār Bakr, the headquarters of the family, as did his uncle, and in 1110 accompanied him on an expedition in Syria in which Sukmān al-Ḳuṭbī of Akhlāṭ also took part. On Ilghāzī and Sukmān's quarrelling he was carried off a prisoner by the latter. He was soon set free on the death of Sukmān, and in 1113 took advantage of the death of the Turkomān chief Djabuk to occupy Pālū on the eastern Euphrates (Murād Ṣū). The princess mother of Tughril-Arslan, the young Saldjūḳid of Malaṭya, who had need of a protector against the Saldjūḳid of Ḳonya Masʿūd, married Balak, making him the young prince's *atabeg*. Strengthened by this alliance, Balak was now able to take the Khanzit with its chief settlement the stronghold of Khartpert, which remained his chief residence (about 1115). The encroachments which he made on the territory of Mengüdjek in the north led him into a war against the latter and his ally Gavras, the Byzantine duke of Trebizond; with the help of the Dānishmandid Gümüshtakin he crushed them (1118), and incorporated in his principality the little tributary valleys on the right of the Murād Ṣū as far as Tshimishkezek and Mizgard, while in the meantime his protegé Tughril-Arslan had taken the province of Djahān, towards Marʿash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin II of Jerusalem who had hastened to its relief. After the death of Ilghāzī, who had become master of Aleppo, one faction in this town considered Balak a better man to oppose the Franks than the sluggish Badr al-Dawla Sulaymān, the dead man's son; Balak laid claim to the succession, by a combination of plunder and cunning occupied the town, and at once attacked the Frankish territories east of the Orontes. He then learnt that with the help of local Armenians his Frankish prisoners at Khartpert had risen and seized the fortress; hastening back he recaptured it and executed them without mercy, with the exception of Joscelin, who escaped, and Baldwin, whom he held for ransom. It seems that the Shīʿīs of Aleppo then tried to shake off his overlordship in his absence; he took measures against them, and exiled their chief Ibn al-Khashshāb. To strengthen his hold on the district of Aleppo he attacked the too independent Turkish governor of Manbidj, who called on Joscelin for assistance. He defeated Joscelin, but was killed by an arrow during the siege (518/1124). After his death Khartpert soon passed into the control of his cousin Dāʾūd of Ḥisn-Kayfā, whose son married Balak's daughter and only heiress.

Balak is hardly known except for his martial exploits. The most one can add is that he lessened the effect of his depredations on enemy lands by making forced transplantations of peasants, who brought the conquered lands back to productivity again. He was still basically a Turkomān chief, but endowed with a striking personality which made him in his last days one of the first champions of the Muslim revival against the Crusaders.

Bibliography: The sources are the same as those for the general history of Syria and Mesopotamia in the period in question, and more particularly for Irāḳ Ibn al-Athīr, for Upper Mesopotamia the same writer and Ibn al-Azraḳ (unpublished), for Syria Ibn al-Ḳalānisī and Ibn Abī Ṭayyī (in Ibn al-Furāt, unpublished); apart from these, the Frankish historians of the Crusade, Orderic Vitalis (ed. le Prévost), the Armenian Matthew of Edessa and the Michael the Syrian (ed. trans. Chabot). Among modern works see the histories of the Crusades, esp. Grousset, i; C. Cahen, *Syrie du Nord à l'époque des Croisades*, 1940 (with study of sources), and by the same scholar, *Diyār Bakr au temps des premiers Urtuḳides*, in *JA*, 1935. See also J. Sauvaget, *La tombe de l'Artuḳide Balak* in *Ars Islamica* v-2, 1938, and the article Artuḳids. (Cl. Cahen)

BĀLAḲ b. **ṢĀFŪN**. [see ʿŪdj b. ʿAnāḳ].

BALAKLAVA, in the Tatar language Balïklava (with the folk-etymological meaning of "fishery", "fishing-place"), a small port in the Crimea, on a deep inlet of the Black Sea. Balaklava, which is not visible from the open sea, lies 16 km. south of Sevastópol'.

The town was known to the Greek geographers (Strabo, etc.) under the name of *Palakion* on the sea-inlet Συμβόλων λιμήν and was inhabited by Taurians, who used it also as a place of refuge. It came later under Roman and Byzantine rule and during the 9th-13th centuries acted as the centre of a modest exchange-trade with the Russians. The Genoese settled here in about 1360 and founded a Roman Catholic bishopric; the entire southern shore of the Crimea as far as Kaffa (Feodosiya) was made over to them by Byzantium in 1380. The town, at that time, bore the name of *Cembalo* (probably from Symbolon) and was strongly fortified; remnants of the walls were still to be seen in the 19th century. An attempt of the Greek inhabitants, in 1433-1434, to rid themselves of Genoese rule miscarried. Balaklava fell in 1475 under the control of the Crimean Tatars and remained so until 1783, forming the southern limit of their lands over against the territories under direct Ottoman rule (cf. Muḥammad Riḍā, ed. Kazem-Beg, 92: with reference to a date c. 1540). The town, during this period, was only of commercial importance. The Tatars, who had gradually settled in the town, left it after its subjection to Russia (1783) and were replaced by Greeks from the Aegean Islands who, in the war of 1768-1774, had joined the Russians. These people

formed a battalion of their own from 1795 to 1859. An engagement was fought near Balaklava on 25 October 1854, during the Crimean War. Today Balaklava is a small market-town occupied with fishing and vine-growing.

BALʿAM B. BAʿŪR(Ā), Bilʿam b. Beʿor of the Hebrew Bible. The Ḳurʾān does not mention him, unless perhaps in an allusion in vii, 175 [174], 176 [175]. The commentators and historians keep the main elements of the Biblical story in their accounts of him (Numbers xxii-xxiv, xxxi, 8) and following the Jewish Aggada which likewise has given other features of his portrait, make him responsible for the fornication of the Israelites with the daughters of Moab and Midian (Numbers xxv); note that he tends to absorb the figure of Balaḳ, who appears rarely in the Muslim sources. Some traditions deviate from the Hebrew sources in making Balʿam an Israelite or in dating him in the time of Joshua, an anachronism which despite Sidersky does not go back to a Samaritan tradition. — The statements of the *tafsīr* on Kurʾān vii, 175 [174] are used by the mystics, at least since Muḥāsibī, to make of Balʿam the prototype of the spiritual man led astray by lust and pride.—The Ps.-Balkhī attributes to Balʿam somewhat confused philosophical views on the eternity of the world.— On the identification of Balʿam with Luḳmān (a tradition taken up by Petrus Alphonsi) see *EI*¹, s.v. *Luḳmān*.

Th. W. J. Juynboll, Leiden 1848, 3/133-8/138). (G. VAJDA)

BALʿAMĪ, the *nisba*, *i.e.*, generic name, of two Sāmānid *wazirs*, father and son, of whom the latter, as translator of the famous History of Ṭabarī, is at present better known. The reference of the name is uncertain. Samʿānī (*Kitāb al-Ansāb*, fol. 90 r.) mentions the explanation of Ibn Mākūlā (Brockelmann, I, 354) that it is from Balʿam, 'a town in the land of the Greeks' (*balad min diyār al-Rūm*), not otherwise known, but which is perhaps the same as 'Balaam', mentioned by Priscus (*Excerpta de Legationibus*, ed. Bonn, 165) in A.D. 472, or that it is from Balʿamān, a locality at Balāshgird near Marw, the opinion of al-Maʿdānī (cf. Samʿānī, fol. 536 r.). Both authorities indicate that the ancestor of the Balʿamīs was an Arab tribesman of Tamīm in the early days of Islam, but by the former he is said to have accompanied Maslama b. ʿAbd al-Malik and by the latter, Ḳutayba b. Muslim.

(1) The father, ABU 'L-FAḌL MUḤAMMAD B. ʿUBAYD ALLĀH (sometimes ʿABD ALLĀH AL-BALʿAMĪ AL-TAMĪMĪ, is said by Samʿānī more than once (fols. 90 r. and 262 v.) to have been *wazir* to the Sāmānid Ismāʿīl b. Aḥmad (279-295/892-907), but there appear to be no notices of his activity until the reign of Naṣr II b. Aḥmad (301-331/913-942). He became *wazīr* to Naṣr probably about 310/922 (cf. Barthold, *Turkestan*, 241), his immediate predecessor having been, according to Muḳaddasī (337), Abu 'l-Faḍl b. Yaʿḳūb al-Naysābūrī. In this year he was at Astarābād (Ibn al-Athīr, viii, 96), and is thereafter mentioned repeatedly (Ibn al-Athīr, viii, 196, 207, cf. Muḳaddasī, 317), till he was replaced by the younger Djayhānī in 326/937-938 (Ibn al-Athīr, viii, 283, but cf. Muḳaddasī, 337). Iṣṭakhrī (260) mentions his houses at Marw, and a gate in Bukhārā was named after him, Bāb al-Shaykh al-Djalīl (*ibid.*, 307), the same apparently as that which in later times was called 'Shaykh Djalāl'. The sources agree as to his capacity, and he was a patron of men of learning. He is said by Samʿānī (fol. 262 verso) to have considered the poet Rūdagī without a peer among the Arabs and Persians. He died, according to Samʿānī (fol. 90 r.), in the night of 10 Ṣafar 329/14 November 940.

(2) ABŪ ʿALĪ MUḤAMMAD B. MUḤAMMAD AL-BALʿAMĪ, son of the foregoing, was appointed *wazir* to ʿAbd al-Malik I b. Nūḥ (343-350/954-961) towards the end of his reign through the influence of the *ḥādjib* Alptagīn (Gardīzī, *Zayn al-Akhbār*, ed. M. Nāẓim, E. G. Browne Memorial Series, 1928, 42). He did not inherit his father's practical ability. Muḳaddasī (338) calls him Amīrak Balʿamī, with the diminutive, and mentions that he was twice *wazīr* to ʿAbd al-Malik's successor al-Manṣūr I b. Nūḥ (350-366/961-976), from whom he received instructions in 352/963 (cf. Rieu, *Catalogue of the Persian MSS. in the British Museum*, i, 69) to compose the translation of Ṭabarī which has made him famous. This is one of the earliest prose works in modern Persian and inaugurates the long and brilliant series of Persian historical writings.

Balʿamī did not attempt to bring the history down to his own time. He omits the *isnād*s (chains of authorities) and alternative versions of the same event characteristic of Ṭabarī, presenting a continuous account derived from these. The same method was followed by later Arabic historians such as Ibn al-Athīr (cf. G. Weil, *Geschichte der Caliphen*, iii, X ff.). The result is a work substantially shorter than the original (4 volumes in Zotenberg's French translation and one volume in the Lucknow edition, as against the 15 volumes of the Leiden Ṭabarī). Yet Balʿamī's History is not simply an abbreviation of Ṭabarī. Occasionally he gives substantial additional information, as in the case of a series of episodes in the fighting between the Arabs and Khazars from 104/722 onwards (text in B. Dorn, *Nachrichten über die Chasaren*, see *Bibliography*), the source of which appears to be the *Kitāb al-Futūḥ* of Ibn Aʿtham al-Kūfī (cf. Akdes Nimet Kurat, *Abū Muḥammad Aḥmad bin Aʿṣam al-Kūfī'nin kitab al-futūḥu*, *Ankara Üniv. Dil ve Tarih-cog. Fak. Dergisi*, 1949, 255-282; D. M. Dunlop, *History of the Jewish Khazars*, 58). Most surviving MSS. of Balʿamī represent a later redaction, the approximate date of which is indicated by a short appendix, giving a cursory account of the ʿAbbāsid Caliphs down to the death of al-Mustaẓhir and accession of al-

Mustarshid (512/1118). According to B. Spuler (*The Evolution of Persian Historiography*), the translation of Ṭabarī into Persian under the Sāmānids served no mere cultural purpose, but was intended to show the Persians that the destiny of their nation was linked with orthodox Islam.

Balʿamī died, according to Gardīzī (ed. M. Nāẓim, 46), in Djumādā II, 363 (February 27th-March 27th, 974). The much later date for his death indicated by ʿUtbī (*Taʾrīkh-i Yamīnī*, ed. Cairo, A.H. 1286, i, 170), who says that he was appointed *wazīr* by Nūḥ II b. Manṣūr for a short time after the fall of Bukhārā in Rabīʿ I/382 May 992, seems less likely.

BĀL-ʿANBAR. [see TAMĪM].

BALANDJAR, an important Khazar town, lying on a river of the same name, N. of the pass of Darband, *i.e.*, Bāb al-Abwāb [*q.v.*], at the E. extremity of the Caucasus. Its site is probably to be identified with the ruins of Endere near Andreyeva. Balandjar appears to have been originally the group-name of its inhabitants (cf. Ṭabarī, i, 894-896, and 'Barandjār' below). According to Masʿūdī (*al-Tanbīh*, 62), Balandjar was the Khazar capital before Atil [*q.v.*] on the Volga, but in the accounts which we have there is no evidence that this was so. Balandjar was the subject of repeated attacks by the Arabs in the first Arab-Khazar war, and in 32/652 underwent a full-scale siege, which ended disastrously for the assailants. It was again besieged by the Arabs under Djarrāḥ b. ʿAbd Allāh al-Ḥakamī in 104/722-723, and this time was captured. Most of the inhabitants are said to have emigrated. It is readily understandable that many of them moved N. Two hundred years after this the traveller Ibn Faḍlān (310/922) came across thousands of 'Barandjār' among the Volga Bulgars. According to the figures given by Ibn al-Athīr (*sub anno* 104) for the amount of the booty distributed after the siege—300 *dīnārs* per horseman in an army of 30,000—Balandjar at the time of its fall must have been a place of great wealth. From this point its importance appears to have declined, and after the close of the second Arab-Khazar war in 119/737 it is scarcely mentioned.

Bibliography: *Ḥudūd al-ʿĀlam*, 452-454; A. Zeki Validi Togan, *Ibn Faḍlān's Reisebericht*, AKM, XXIV, Leipzig 1939, 191-193, 298-299 nn.; D. M. Dunlop, *The History of the Jewish Khazars*, Princeton 1954, index, s.v. *Balanjar*; M. Artamonov, *Ocherki drevneishei istorii Khazar*, 93.

(D. M. Dunlop)

BALANSIYA (VALENCIA), a town in Spain, the third in size as regards population, which exceeds 500,000, lying on the east of the Peninsula, 3 miles from the Mediterranean and from its port, el Grao. It is connected with Madrid by two railway lines, one via Albaceta, 306 m. (490 km.) in length, the other via Cuenca, 251 m. (402 km.) in length, and by road (218 m. = 350 km.); the distance as the crow flies is however only 188 miles. Valencia is the capital of the province of the same name and the diocese of an archbishop. Its situation is a striking one, in the centre of the fertile Huerta de Valencia, which is watered by the Turia or Guadalaviar (Ar. *Wādī 'l-abyaḍ*, the "White River") and is the site of part of the lake of Albufera [see BUḤAYRA]. Unlike Cordova or Toledo, the old capital of Valencia has seen its importance grow with the years and it remains the capital of the Spanish Levante, the *Shark al-Andalus* of the Muslim period. It is still known officially as Valencia del Cid in memory of the part played in its history by the celebrated Castilian hero.

Valencia was founded by the Romans in 138 B.C. After the death of the rebel Viriathus, the consul D. Junius Brutus established a colony there of veterans who had remained faithful to Rome. The inhabitants later took the side of Sertorius and in 75 B.C. Pompey partially destroyed the town which began to return to prosperity under Augustus. It was taken by the Visigoths in 413 and became Muslim in 714, when Ṭārik [*q.v.*] established himself there and at Saguntum, Jativa and Denia.

In the political history of Umayyad Spain, Valencia seems only to have been a place of minor importance. The country of which it was the capital soon became arabicised by the settlement of Kaysī colonies: the capital of Spanish Levante thus was one of the most active centres of Arab culture throughout the whole period of the Muslim occupation; on the other hand in the mountains along the Valencian littoral there were little islands of people of Berber origin. Valencia at this time was the capital of a province or *kūra*, as we know from the eastern writer al-Mukaddasī and the Spaniard al-Rāzī (see Yākūt, s.v.) and the residence of a governor (*wālī*) appointed by the caliph of Cordova. It is only from the 5th/11th century, with the break up of the caliphate, that, becoming the capital of an independent Muslim state and very soon one of the principal objectives of the Christian *reconquista*, Valencia began to occupy a more and more important place in the Spanish and Arabic chronicles of the mediaeval history of Spain that have come down to us.

The Muslim kingdom of Valencia was founded in 401/1010-11 by two enfranchised ʿĀmirids, Mubārak and Muẓaffar, previously in charge of the irrigation system of the district who declared themselves independent and shared the power. After a very short reign Mubārak died and Muẓaffar was driven from Valencia; the inhabitants of this town then chose another "Slav" [cf. ṢAKĀLIBA] to rule them, called Labīb, who placed himself under the suzerainty of the Christian count of Barcelona. The principality of Valencia soon passed into the hands of a grandson of al-Manṣūr Ibn Abī ʿĀmir [*q.v.*], ʿAbd al-ʿAzīz b. ʿAbd al-Raḥmān who, like his grandfather, assumed the *lakab* of al-Manṣūr; he had previously been a refugee at the court of the Tudjībid Mundhir b. Yaḥyā at Saragossa. The reign of ʿAbd al-ʿAzīz, which lasted till his death in 452/1061 brought an era of peace and prosperity to Valencia. He recognised the authority of the caliph of Cordova, al-Kāsim b. Ḥammūd, who gave him the right to bear the titles al-Muʾtamin and Dhu 'l-Sābikatayn, and kept on good terms with the Christian kingdoms of Spain. His son ʿAbd al-Malik succeeded him and took the title al-Muẓaffar. He was still a youth at his accession and the vizier Ibn ʿAbd al-ʿAzīz acted as regent. Very soon afterwards, Ferdinand I of Castile and Leon attacked Valencia and almost captured the town, after

inflicting a severe defeat on the Valencians who made a sortie to attempt to drive off the besiegers. ʿAbd al-Malik sought the assistance of the king of Toledo al-Maʾmūn b. Dhu ʾl-Nūn [*q.v.*] but the latter came to Valencia and soon dethroned the young king (457/1065). The principality of Valencia was then incorporated in the kingdom of Toledo and al-Maʾmūn left the vizier Abū Bakr b. ʿAbd al-ʿAzīz there to govern it. When al-Maʾmūn died in 467/1075 he was succeeded by his son Yaḥyā al-Ḳādir, whose great incapacity soon became apparent. Valencia then gradually recovered its independence; al-Ḳādir sought the help of Alfonso VI, king of Castile, to bring the town under his authority again but he ended by having to surrender his own capital to him in 478/1085. For the course of events and part played in them by the great Castilian hero Rodrigo Diaz de Vivar, the Cid of history and legend, cf. the article AL-SĪD.

On their arrival in Spain, the Almoravids tried to regain the kingdom of Valencia for Islām but their efforts against the Cid were fruitless. When he died in 492/1099 his widow Ximena was still able to offer some resistance to the attacks of the Almoravids, led by Mazdalī. But in the end she abandoned Valencia after first of all setting it on fire and the Muslims entered it on 15 Radjab 495/5 May 1102.

Governors appointed by the Almoravids succeeded one another at Valencia until the middle of the 6th/12th century when the town gradually began to resume its independence in the troubled period which preceded the coming of the Almohads into Spain, and it linked its fortunes with those of Murcia whose series of ephemeral rulers it recognised. In 542/1147, Ibn Mardanish was proclaimed king of Valencia but four years later his subjects rebelled against him. Under the nominal suzerainty of the Almohads, Valencia continued in the hands of local princes until it finally fell into Christian hands, two years after Cordova, when James I of Aragon took it on 28 Sept. 1238.

Bibliography: All the Arab geographers who have dealt with Muslim Spain devote more or less attention to Valencia: cf. al-Idrīsī, *Ṣifat al-Andalus*, ed. (E. LÉVI-PROVENÇAL)

BALARM, Palermo, surrendered to the Arabs after a short siege in Radjab 216/August-Sept. 831, four years after their arrival in Sicily, and straightaway it appears as the strong point of Muslim domination in the island. It was there that the governors made their seat in the name first of the Aghlabids, and then of the Fāṭimids of Africa, who, however, had to send expeditions more than once to re-establish their authority over the rebel colony; such were the expedition of ʿAbd Allāh b. Ibrāhīm b. al-Aghlab in 287/900, sent by his father, and that of Abu Saʿīd in 304/916-17, which was sent by the Fāṭimid Mahdī, who built the citadel of Khāliṣa (Calsa) opposite the old town. In 336/948 the Fāṭimid governor al-Ḥasan b. ʿAlī al-Kalbī seized power at Palermo, and established a genuine local dynasty under Fāṭimid suzerainty, which lasted till about 442/1050. The period of Kalbite supremacy is for Palermo as for the whole of Sicily the most brilliant of the Arab era. In 445/1053 the last Kalbite, Ṣamṣām, who had climbed to power after a period of turbulence and unrest and a direct intervention by the African Zīrids, was driven from the town, which thenceforward managed its affairs through its *djamāʿa* or municipal council. During this time the ties between the capital and the rest of the country loosened, and finally disappeared. It was thus that Palermo played no special part in the defence of Muslim Sicily against the Normans, and awaited more or less in apathy the arrival of her conquerors beneath her walls, where, however, she defended herself vigorously. She surrendered at last to Robert and Roger d'Hauteville after a five months' siege, at the beginning of Rabīʿ II 464/January 1072, thus becoming Christian again after one hundred and forty years of Muslim domination. But the Arab character of Palermo was only very gradually obscured; although the great mosque was straightway given over to Christian worship and the Muslims lived from then on as subjects of the Normans, it was more than a century before every trace of an Arab population and Arab monuments and customs disappeared. As late as 580/1184 the traveller Ibn Djubayr saw at Palermo districts reserved for Muslims, and mosques, schools and markets frequented by them, and heard much Arabic spoken. The condition of these Muslims in the capital of the Norman kingdom, which had been reasonable enough under the tolerant rule of the two Rogers, grew worse under their successors (there was an anti-Muslim riot or pogrom in 556/1161) and became intolerable in the disturbances which followed the death of William II (1190). By the end of the 6th/12th century the Arab colony in Palermo had almost ceased to exist, although some Muslims of rank managed to remain there in the court of Frederick II.

For the description of Arab Palermo we have the precious account of Ibn Ḥawḳal, who visited the town in 361/972, and those of Ibn Djubayr and al-Idrīsī, two centuries later during the period of Norman supremacy. The Kalbid capital as Ibn Ḥawḳal knew it was divided into five parts: the Ḳaṣr (Cassaro), that is the old town surrounded by walls, the Khāliṣa (Calsa), founded by the Fāṭimids and also walled, and the open districts of the Ḥārat al-Masdjid and the Ḥārat al-Djadīda in the south, and the Ḥārat al-Ṣaḳāliba in the north. The population of Palermo in the days of the Kalbites is estimated by Amari at three hundred or three hundred and fifty thousand. The remains that we have from the period of Arab domination (not counting the famous monuments of Norman-Saracenic art) are very scanty: the site of a mosque beside the church of S. Giovanni degli Eremiti, and some old work inside the royal palace (Torre pisana) which has recently been brought to light.

(F. GABRIELI)

BALĀSĀGHŪN or BALĀSAĶŪN, a town in the valley of the Ču, in what is now Kirghizia. The medieval geographers give only vague indications as to its position. Barthold, *Otčet o poyezdke v Sredniya Aziyu*, St. Petersburg 1897, 39, suggests its identity with Aķ-Peshin in the region of Frunze. A. N. Bernshtam, *Čuyskaya dolina* in *Materialī i issledovaniya arkheologii S.S.S.R.*, No 14 (1950), 47-55, agrees with Barthold and gives a description of the site. The town was a Soghdian foundation and in Kāshgharī's time, *i.e.*, in the second half of the 11th century, the Soghdian language still survived alongside Turkish. According to Kāshgharī Balāsāghūn was also known as Ķuz-Ordu or Ķuz-Ulush. The former name is also found in the Chinese account of the Ķara-Khitay, and a variant of Ķuz-Ulush — Ķuz-Balīgh or Ghuz-Balīgh, *balīgh* like *ulush* meaning "town" — was according to Djuwaynī still current in the 7th/13th century.

According to a story in the *Siyāsat-nāma* (ed. Schefer, 189) a religious war was planned about 330-1/942-3 against the "infidel Turks" who had conquered Balāsāghūn. These must have been the Ķara-Khānids immediately prior to their conversion to Islam. Balāsāghūn afterwards became the headquarters of the first Ķara-Khānid invasion of Mā warāʾ al-Nahr under Bughra Khān b. Mūsā (d. 382/992-3). Shortly after 416/1025-6 the ruler of Balāsāghūn, Ṭoghan Khān, brother of the Ķara-Khānid ruler of Mā warāʾ al-Nahr, ʿAlī Tegin, was driven out of his territory by other members of the dynasty ruling in Kāshghar (Bayhaķī, ed. Morley, 98 and 655, ed. Ghanī and Fayyaḍ, 91 and 526). Balāsāghūn seems afterwards to have belonged to the same ruler as Kāshghar. The poet Yūsuf Khāṣṣ-Ḥādjib, author of the *Ķutadghu Bilig*, the oldest poem in the Turkī language, was born in Balāsāghūn (462/1069-70); the Bughra Khān to whom it is dedicated must be Bughra Khān Hārūn, who ruled over Kāshghar, Khotan and Balāsāghūn, first with his brother Toghrïl Khān and then, for 29 years till 496/1102-3, alone.

About 1130 Balāsāghūn was conquered by the Ķara-Khitay [*q.v.*] and the ruler of the town, who had appealed to their leader (the Gür-Khān) for help against the Ķanghlï and Ķarlïgh nomads, was deposed. The real seat of the Ķarā-Khitay still remained the territory on the Ču while native princes ruled as vassals of the Gür-Khān in Mā warāʾ al-Nahr and Kāshghar as well as in the districts of Semirechye north of the Ili.

When the army of the Gür-Khān was defeated by Muḥammad Khwārazm-Shāh in Rabīʿ I 607/August-September 1210, on the Talas, the inhabitants of Balāsāghūn, expecting the speedy arrival of the victor, refused the defeated army admittance to the town. After a 16 days' siege it was taken by the Ķara-Khitay and plundered for three days, during which time, according to Djuwaynī, "47,000 of the chief notables were counted among the slain."

Balāsāghūn is seldom mentioned during the Mongol period. Barthold's assumption that it was taken without resistance by Čingiz-Khan's general Djebe in 1218, in the course of his operations against Küčlüg, the Nayman ruler of Ķara-Khitay, is based on a misreading of the name Ghuz-Balīgh as *gho balīgh* "good town". In the account of Timur's campaigns Balāsāghūn is never mentioned; like all the towns on the Ču, Ili and Talas it must have been destroyed during the endless wars and struggles for the throne in the 8th/14th century. Muḥammad Ḥaydar, writing about the middle of the 10th/16th century, knew about Balāsāghūn only from books; of the town itself no trace was then to be found.

Bibliography: In addition to the works quoted above: W. Barthold, *Turkestan*; idem, *Histoire des Turcs d'Asie Centrale*, Paris 1945; Kāshgharī, *Divanü Luġat-it-Türk Tercümesi*, transl. B. Atalay, 3 vols., Ankara 1939-41; Djuwaynī, *The History of the World-Conqueror*, transl. J. A. Boyle, 2 vols., Manchester 1958; Muḥammad Ḥaydar, *The Taʾrikh-i Rashidi*, ed. N. Elias, transl. E. Denison Ross, London 1895.

(W. BARTHOLD-[J. A. BOYLE])

BALĀṬ (Ar.), a word with a number of varied meanings due to its dual etymology, Latin or Greek as the case may be. Deriving from *palatium* it means "palace" (Masʿūdī, *al-Tanbīh*, 167; Ibn al-ʿAdīm, *Zubda*, ed. Dahan, i, 142 and 145; Muķaddasī, 147, and Ibn Ḥawķal[2], 195, mentioning the *Dār al-Balāṭ* at Constantinople; cf. M. Canard, *Extraits des sources arabes*, ap. A. A. Vasiliev, *Byzance et les Arabes*, ii/2, Brussels 1950, 412, 423 and n. 2). Deriving from πλατεῖα (through the intermediary of Aramaic), it has two principal meanings corresponding to those of the Greek term, denoting "a paved way", an old Roman road for example (see Ibn al-ʿAdīm, *Zubda*, i, 164), "flagging" or, in the form of the noun of unity *balāṭa*, a "flag-stone" of any kind of material serving to pave the ground or to bear a monumental or memorial inscription (see for example, Mudjīr al-Dīn al-ʿUlaymī, *al-Ins al-Djalīl*, Cairo ed. 1253 AH., 372), whence the meaning of "stele", or "portico" or "colonnaded gallery", more especially the "nave" of a mosque (see for example Ibn Djubayr, *Riḥla*, ed. de Goeje, 190).

The word *balāṭ* occurs in various rural and urban toponyms, both in the Muslim West (see infra) and East, where it is especially frequent in Syria-Palestine. The following are the main occurrences: the town of al-Balāṭ in Northern Syria, which was adjacent to a Roman highway (M. Canard, *Histoire des Hamdanides*, i, Algiers 1951, 218),—the al-Balāṭ quarter of Aleppo, the name of which recalled the old monumental thoroughfare (J. Sauvaget),—the former village of Bayt al-Balāṭ in the *ghūṭa* of Damascus,—the village of Balāṭa or Bulāṭa in Palestine (the name of which could also derive from the Latin *platanus*),—the Bāb al-Balāṭ in Jerusalem (cf. J. Sauvaget, *Les perles choisies*, Beirut 1933, 99 n. 1),—the paved square of al-Balāṭ in Medina,—the quarter of Balat in Istanbul [*q.v.*],—the village of Balat, adjacent to the ruins of ancient Milet in Asia Minor and corresponding to the Saldjūķid town of Palatia (see Pauly-Wissowa, under *Miletos*).

Bibliography: E. Quatremère, *Histoire des sultans mamelouks*, ii/1, Paris 1845, 277 n. 3, to be supplemented by J. Sauvaget, *Alep*, Paris 1941, n. 112 and *La mosquée omeyyade de Médine*, Paris 1947, 69, n. 2. For the toponyms, see Yāķūt, i, 709.

(D. SOURDEL)

BALĀṬ, now a small village on the site of the ancient Miletos in Caria. The word Balāṭ derives from "Παλάτια", the name used for this locality at least from the first years of the 13th century. Balāṭ

came under the control of the Begs of Menteshe [*q.v.*] towards the close of this century and, because of its favourable situation near the mouth of the river Maiandros (Büyük Menderes), served them as a point of departure for their raids into the Aegean Sea and, later, as a commercial centre of some importance. The Venetians had a church and a consulate there by 1355. Balāṭ flourished at this time on the traffic in such commodities as saffron, sesame, wax, alum from Kutahya, slaves from the islands of the Archipelago, etc. The Ottoman sulṭan Bāyazīd I confirmed to the Venetians their privileges at Balāṭ, when, in the winter of 791-2/1389-90, he took over the coast-lands of Menteshe. Tīmūr Beg, after his defeat of the Ottomans at Ankara in 804/1402, set on the throne Ilyās, a member of the local dynasty. This prince was forced, however, to become a vassal of Sulṭān Meḥemmed I in 818/1415 and by 829/1425-6 Menteshe had been absorbed once more, and this time definitively, into the Ottoman state. Balāṭ, during the course of the 15th century, began to sink into a long and slow decline, due in no small measure to its fever-ridden climate and to the gradual silting of the river estuary. None the less, an active, although no doubt diminishing commerce was still associated with Balāt, when Ewliyā Čelebi passed through this region in 1671-1672. Balāṭ, now assigned to the *kaza* of Söke in the province of Aydîn, lies today approximately 9 km. from the sea and had in 1945 a population of about 700 people.

BALĀṬ. In Spain, of the various meanings of the word *balāṭ*, the most general seems to be "pave ment"; it was thus used to denote the Roman roads of the Peninsula, as witness the vocabulary attributed to Raimundo Martín. The now ruined town of Albalat, on the border of Romangordo, adjoining a ford across the Tagus, near the Almaraz bridge, must take its name from one of these roads. The battlefield of Tours and Poitiers, called Balāṭ al-Shuhadāʾ [*q.v.*] after the Roman road, would seem to confirm this meaning. But it is extremely doubtful whether such a concrete meaning applied to the whole *iḳlīm* which, according to al-Idrīsī, comprised a large part of present-day Spanish Estramadura, with Alange, Medellín, Trujillo and Cáceres, in addition to the Albalat already mentioned. On the other hand, the numerous Spanish place-names, Albalat, Albalate and their derivatives and diminutives, Albadalejo, Albalatillo, could better be explained by *al-balad*, or *al-balād* "place, terrain or locality"; thus, Albalat de la Ribera, near the river Júcar, Albalat dels Sorells, near Valencia, and Albalat dels Tarongers, in the Sagunto region, do not seem to have any connexion with Roman roads, and seem only to be names of hamlets or villages; the numerous Albalates which exist in the provinces of Teruel, Huesca, Guadalajara, Ciudad-Real, Toledo and the Ajarafe of Seville, must be interpreted in the same way. The derivation from *platea* or *palatium*, applicable to place-names in Jerusalem, Syria and Medina, is not found in al-Andalus.

In addition to the *iḳlīm* of al-Balāṭ in Muslim Spain, there was another *iḳlīm* in the Portuguese zone, al-Balāṭa, situated in the Faḥṣ Balāṭa, a huge plain between Lisbon and Santarem; this *iḳlīm* contained, apart from these two towns, the town of Cintra, and its territory corresponded to present-day Ribatejo. The name given to it by al-Idrīsī coincides with that of Vallada, a small town in the commune of Azambuja; el-Campo de Vallada, a translation of Faḥṣ Balāṭa, is also quoted, although its extent is less than that attributed to it by al-Idrīsī; its etymological derivation from *plata* or *vallata* appears to be neither well-founded nor acceptable.

(A. Huici Miranda)

BALĀṬ AL-SHUHADĀʾ: an expression used by the Arab historians for the Battle of Poitiers, which was fought between Charles Martel, at the head of the Christian Frankish armies, and the governor of Muslim Spain ʿAbd al-Raḥmān b. ʿAbd Allāh al-Ghāfiḳī in Ramaḍān 114/October 732.

Neither the name of Poitiers nor that of Tours are mentioned by the Arab authors of the Middle Ages. As for the expression *Balāṭ al-shuhudāʾ*, its occurrence is only recorded from the 5th/11th century onwards and only in Andalusian historians: Ibn Ḥayyān (died 469/1075), quoted by al-Maḳḳarī, *Nafḥ al-Ṭīb*, Leiden, ii, 9, l. 15-16; Cairo 1949, iv, 15, 1.4 (the same author also called it *Waḳʿat al-Balāṭ*: Leiden, ii, 9, 1.4; Cairo 1949, iv, 14, 1.9); the Anonymous Chronicle entitled *Akhbār Madjmūʿa*, which dates from the 5th/11th century (ed. Lafuente y Alcantara, Madrid, 1868, text, 25; Spanish trans. 36 and no. 2); and subsequently in Ibn Bashkuwāl (died 578/1183), quoted by al-Maḳḳarī, *op. cit.*, Leiden, ii, 9, l. 16-17; Cairo, iv, 15, l. 5, but with the variant: *Ghazwat al-Balāṭ*; Ibn ʿIdhārī (died end of the VI/XII century), *al-Bayān al-Mughrib*, ed. Dozy, i, 37; ed. Colin and Lévi-Provençal, i, 51; trans. Fagnan, i, 49, but the historian dates the event from 115, instead of from 114; Ibn Khaldūn (died 808/1406), *al-ʿIbar*, Būlāk, iv, 119, l. 6, with lacunae which can be supplemented from the MSS. of the Bibliothèque Nationale de Paris and from the integral quotation by al-Maḳḳarī, *op. cit.*, Leiden, i, 146, l. 3; Cairo, 1949, i, 220, l. 15; al-Maḳḳarī (died 1041/1632, supra under Ibn Bashkuwāl and Ibn Khaldūn: the first passage has been translated by Lafuente y Alcantara, *Apendices* to *Ajbar Machmûa*, 198, and the second by Pascual de Gayangos, *The History of the Mohammedan Dynasties in Spain*, vol. ii (London 1843), 37 and note 27.

In the other Arab historians of the Middle Ages, a simple allusion is made to the effect that the Muslims and their leader ʿAbd al-Raḥmān "died a martyr's death there [for Islām]" (*yustashhadu* or *ustushhida*): Ibn ʿAbd al-Ḥakam (died 257/871), *Futūḥ Ifriḳiya waʾ l-Andalus*, ed. A. Gateau[2], Algiers 1948, text 120, l. 11; French trans. 121, l. 22; al-Ḍabbī (died 599/1202), *Bughyat al-Multamis*, ed. Codera and Ribera, Madrid 1885, no. 1021, 353, l. 2 (with 115 as the date); Ibn al-Athīr (died 630/1233), v, 130 and 374; transl. Fagnan, *Annales*, Algiers 1901, 60, l. 6 and 94, l. 1-2.

The task confronting the modern historians, both

Arab and especially European, has mainly been to explain the term *Balāṭ* [*al-Shuhadāʾ*] and to determine the exact site of the battle. *Balāṭ* [*q.v.*] is borrowed from the Graeco-Latin and appears to render both *platea*: "wide paved road, paved public square", and *palatium*: "palace". It has been rendered, as regards the Battle of Poitiers, by "pavement" and by "highway". *Pavé* [of the martyrs]: Reinaud, *Invasions des Sarrazins en France, et de France, en Savoie, en Piémont et dans la Suisse, pendant les 8ᵉ, 9ᵉ et 10ᵉ siècles de notre ère.*, Paris 1836, 49; Pascal de Gayangos, *op. cit.*, ii, 33 and 37: "pavement of the martyrs"; Cl. Huart, *Histoire des Arabes*, 1913, ii, 138; H. Fournel, *Les Berbers* . . ., i (1875), 280, n. 3; M. Mercier and A. Seguin, *Charles Martel et la Bataille de Poitiers*, 1944, 17, 19, 26, 27, 39; C. F. Seybold, in *EI*, i, 55 (S.V. *ʿAbd al-Raḥmān . . . al-Ghāfiḳī*). Chaussée [of the martyrs]: Dozy, *Histoire des Musulmans d'Espagne*, 1861, i, 252; 2nd. ed. by E. Lévi-Provençal, 1932, i, 158 and n. 1; Lafuente y Alcantara, *op. cit.*, 36: *Calzada*; Fr. Codera, *Narbona, Gerona y Barcelona* . . ., 1909-1920, 191: *Calzada*; Ballesteros y Beretta, *Historia de España*. ., ii (1920), 9-10: *Calzada*; G. Marçais (and Ch. Diehl), *Le monde oriental de* 395 *à* 1081, 1936, 340 and n. 1; E. Lévi-Provençal, *Hist. Esp. Mus.*, 1950, 62: "Highway" (or Roman road) of the Martyrs for the Faith".

Study of the texts and examination of the terrain in the region lying between Poitiers and Tours have led the investigators to the largely concurrent conclusions, admirably summed up by Professor Lévi-Provençal in the following words: [the battle took place] "near to a Roman road which linked Chatellerault with Poitiers, about twenty km. north-east of the latter town, probably at a place which is today still called Moussais-la-Bataille . . . in October 732 or Ramaḍān 114 . . . more exactly . . . between the 25th and the 31st of October 732" (*Hist. Esp. Mus.*, i, 61-62).

Bibliography: In addition to the works and studies mentioned in the body of the article, the references should be consulted which are given by E. Lévi-Provençal in the 2nd. ed. of the *Histoire des Musulmans d'Espagne* by Dozy, Leiden, 1932, i, 158, note 1, and in his own *Hist. Esp. Mus.*, Paris-Leiden 1950, i, 59-62. To this may be added: H. Zotenberg, *Note sur les invasions arabes dans le Languedoc d'après les sources chrétiennes et les historiens musulmans*, in Dom Cl. Devic and Dom J. Vaissette, *Histoire générale du Languedoc*, Toulouse 1875, ii, 549-558 (Christian sources: 549-554; Arabic sources: 555-558). The bibliography given by M. Mercier and A. Seguin, at the end of *Charles Martel et la Bataille de Poitiers*, Paris 1944, 93-99, containing 135 references, should also be consulted. See also the following modern Arab authors who base their studies almost exclusively on Reinaud, *Invasions des Sarrazins* . . . (Paris, 1836; English tr. by H. K. Sherwani in *IC* iv/1930 and v/1931), which is well over a century old: Shakīb Arslān, *Taʾrīkh Ghazawāt al-ʿArab fī Faransā wa Suwisarā wa Iṭāliyā wa Djazāʾir al-Baḥr al-Mutawassiṭ*, Cairo 1352/1933, 48, 56, 57, 84, 85, 92-103: *Wāḳiʿat Balāṭ al-Shuhadāʾ*; M. ʿAbd Allāh ʿInān, *Taʾrīkh al-ʿArab fī Isbāniyā* . . ., Cairo 1924, 55-59; idem, *Mawāḳif ḥāsima fī taʾrīkh al-Islām*, Cairo 1347/1929, 16 and 114; idem, *al-ʿArab fī Ghālis wa Suwisarā*, in the Cairo review *al-Risāla*, no. 72 (19 November 1934), no. 73 (26 November 1934), and no. 74 (3 December 1934); Ḥasan Murād, *Taʾrīkh al-ʿArab fiʾl-Andalus*, Cairo 1348/1930, 27 (does not use the Arabic term); Buṭrus al-Bustānī, *Maʿāriḳ al-ʿArab fiʾl-Sharḳ waʾl-Gharb*, Beirut 1944, 55-56; Ḥusayn Muʾnis, *Āthār Zuhūr al-Islām fiʾl-Awḍāʿ al-Siyāsiyya waʾl-Iḳtiṣādiyya waʾl-Idjtimāʿiyya fiʾl-Baḥr al-Abyaḍ al-Mutawassiṭ*, in *al-Madjalla al-Taʾrīkhiyya al-Miṣriyya*, published by the Société Egyptienne d'Études Historiques, Cairo, lv, fasc. I (May 1951), 67-68, with Bibliography, 68, n.l.

Lastly, the following two works should be noted: the Arabic translation by ʿAlī al-Djārim, under the title of: *al-ʿArab fī Isbāniyā*, Cairo 1366/1947, 27-28, of S. Lane-Poole's *The Moors in Spain*, London 1887, 2nd. ed. 1920; and the historical romance of Djurdjī Zaydān (d. 1332/1914), *Sharl wa ʿAbd al-Raḥmān*: *Riwāya Taʾrīkhiyya Gharāmiyya*, Cairo 1904, 4th. ed. 1926, 181, 185, 218, 218, 223, 230.

In conclusion, it is perhaps of interest to note that al-Ṭabarī (d. 310/923), is absolutely silent on the Battle of Poitiers (there is nothing in his *Taʾrīkh al-Umam waʾl-Mulūk* (*Annales*), *sub anno* 114, or in the two or three preceeding or following years); likewise Ibn al-Ḳūṭiyya (died 367/977), in his *Iftitāḥ al-Andalus*. (H. Pérès)

BALĀṬUNUS, mediaeval name of a Syrian fortress now in ruins and called Ḳalʿat al-Muhaylba, which was built on one of the first spurs of the Djabal Anṣāriya, and, with the castle of Ṣahyūn, commanded the plain of al-Lādhiḳiya and guarded the road from the Orontes to Djabala, "its port" according to al-Dimashḳī.

According to the Arabic sources, it is supposed to have been begun by the clan of the Banu 'l-Aḥmar, then continued by the Byzantines who obtained possession of it and, in the time of Basil II, based the protection of the coastal region, in which they had taken up their quarters, partly upon it. It again passed under Arab control, but after the First Crusade, was to fall into the hands of Roger of Antioch, who bestowed it on the lord of Saône as a fief, and it remained in the hands of the Franks from 512/1118 to 584/1188. At this latter date, Ṣalāḥ al-Dīn made himself master of it and in the ayyūbid period it became temporarily part of the Kingdom of Aleppo of al-Malik al-Ẓāhir. After the Mongol invasion which had encouraged the efforts of a local family to establish their independence, it was obliged to surrender to Baybars in 667/1269 and became in the Mamlūk period the centre of one of the six districts of the *niyāba* of Tripoli.

It is not known when it fell into ruins and relinquished its ancient name (derived from the Latin *Platanus*) for the present term, which for a long time prevented its identification.

(J. Sourdel-Thomine)

BALĀWĀT. This is a small village lying some 16 miles south-east of Mawṣil on the Dayr Mār Bihnām-Kara Kosh road. It is mentioned by Yāḳūt under "Balābādh", which he describes as follows: "It is a village situated east of Mawṣil in the province of Nineveh and can be reached by a short journey

from Mawṣil. It is frequented by caravans and there exists in it a *Khan* for travellers. It lies between Tigris and the Zāb rivers". Balāwāt is one of the villages in the Ḥamdāniyya *nāḥiya* in the Mawṣil *Liwā'* of ʿIrāḳ. The majority of its inhabitants are of the Shabak faith (cf. Aḥmad Ḥāmid al-Ṣarrāf, *al-Shabak*, 10). Balāwāt's only claim to fame is the existence of a historical mound some few steps from it. This mound is known as "Tell Balāwāt", and is one of the Assyrian historical sites excavated in the 19th century; Hormuzd Rassām, of Mawṣil, discovered there in 1878 the bronze gates of the palace of the Assyrian king Shalmanessar III (859-824 B.C.). These gates were taken to the British Museum, London. The inscriptions and scenery contained thereon illustrate the first third of the reign of this king, and also clarify some of the conditions prevailing in the 9th century B.C. From some of the Assyrian texts, it appears that the ancient name of Tell Balāwāt was Imgur-Enlil.

BALAWHAR [see BILAWHAR WA YŪDĀSAF].

AL-**BALAWĪ**, ABŪ MUḤ. ʿABD ALLĀH B. MUḤ. AL-MADĪNĪ, Egyptian historian; the dates of his birth and death are not known, but we can reasonably assume that he lived in the 4th/10th century. He belonged to the Arab tribe Baliyy, a branch of the Ḳuḍāʿa, who were scattered in different parts of the Ḥidjāz, Syria and Egypt.

The earliest biographical notice is that given in the *Fihrist*, which names several books. All of them are lost, but Al-Balawī's *Sīrat Aḥmad b. Ṭūlūn* was discovered in about 1935 by the late Muḥ. Kurd ʿAlī. He edited it with a long introduction and useful commentary (Damascus 1939). Kurd-ʿAlī took al-Balawī for an Ismaʿīlī writer, a point of view which has been proved wrong by Ivanow, by Abū ʿAbd-Allāh al-Zindjānī, and by the late ʿAbd al-Ḥamīd al-ʿAbbādī.

There are other short biographies of al-Balawī in the later books of biography such as al-Ṭūsī's *al-Fihrist*, al-Nadjāshī's *Kitāb al-Ridjāl*, al-Dhahabī's *Mīzān al-Iʿtidāl* and Ibn Ḥadjar's *Lisān al-Mīzān*. These all agree in saying that he was a 'liar' (in relating *ḥadīth*) and that he cannot be relied upon because he forges *ḥadīth*. Ibn Ḥadjar adds that he is "the author of al-Shāfiʿī's journey which was elaborated and beautified by him, but most of its contents were invented".

His book *Sīrat Ibn Ṭūlūn* is now considered the most important source for the study not only of the history of this great ruler but also of the history of Egypt, the ʿAbbāsid Caliphate and the Near East in general in the second half of the 3rd/9th century. It is more detailed than other sources on the same subject, such as *Sīrat Ibn Ṭūlūn* by Ibn al-Dāya (abridged by Ibn Saʿīd in *al-Mughrib*), *Kitāb al-Mukāfa'a* by the same author, *Akhbār Sībawayh al-Miṣrī* by Ibn Zūlāḳ and *Kitāb al-Wulāt wa 'l-Ḳuḍāt* by al-Kindī.

Al-Balawī says in the introduction that he was asked to write a history of the Ṭūlūnids in greater detail than the earlier work by Aḥmad b. Yūsuf Ibn al-Dāya, but he does not name the person who asked him to write this book. There are indications, however, that he was a statesman or a man of letters of the Ikhshīdid period. For instance, al-Balawī mentions in his book the ʿAbbāsid Caliph al-Muḳtadir, who was killed in the year 320/932, and this means that the book must have been written after this year (al-Ikhshīd began his rule in Egypt in in the year 323/934-5). It is obvious too that al-Balawī wrote his book after the death of Ibn al-Dāya, and we know that the latter died after the year 330/941-2. The manuscript which was discovered by Kurd ʿAlī bears the title *Kitāb Sīrat Āl Ṭulun*, but only contains the biography of Aḥmad b. Ṭūlūn.

There is great resemblance between al-Balawī's work and that written by Ibn al-Dāya, although the former is more detailed. Kurd ʿAlī says that al-Balawī copied from his predecessor but it seems more likely that both of them depended mostly upon the same main source, which was the official documents preserved in the first chancery office (*Dīwān al-Inshā'*) founded in Egypt by Aḥmad Ibn Ṭūlūn (see the *Sīrat* of al-Balawī, 100-1, 111, 122, 224, 228-9).

The *Sīrat* ot al-Balawī is an invaluable source for many reasons. One of the oldest Muslim historical works written in Egypt, it sheds new light on the history of institutions, such as the *kharādj*, the police, justice, espionage, the post, etc. It also contains a number of official documents relating to that period.

Bibliography: Ibn Saʿīd al-Andalusī, *al-Mughrib fī Ḥula al-Maghrib*, vol. i of the part concerning Egypt, ed. Zakī Muḥ. Ḥasan, Shawḳī Ḍayf and Sayyida Ismāʿīl Kāshif, Cairo 1935; Ibn al-Nadīm, *al-Fihrist*, Cairo (no date); al-Ṭūsī, *Fihrist Kutub al-Shīʿa*, Calcutta 1853; al-Nādjāshī, *Kitāb al-Ridjāl*, Bombay 1317/1899-1900; al-Dhahabī, *Mīzān al-Iʿtidāl fī Naḳd al-Ridjāl*, Lucknow 1884; Ibn Ḥadjar, *Lisān al-Mīzān*, Ḥaydarābād 1329-31 A.H.; ʿAbd al-Ḥamīd al-ʿAbbādī, *Sīrat Aḥmad b. Ṭūlūn li-Abī Muḥ. ʿAbd Allāh .... al-Balawī* (review in *Bulletin of the Faculty of Arts*, Alexandria University, vol. i, 1943, 1-9). (G. E. SHAYYAL)

BALBAN [see DELHI SULTANATE].

BALDJ B. **BISHR** B. ʿIYĀḌ AL-ḲUSHAYRĪ, an Arab military leader, of a brave but haughty disposition, commanded the Syrian cavalry in the army sent against the Berbers in 123/741 by the Caliph Hishām b. ʿAbd al-Malik, under the leadership of Kulthūm b. ʿIyāḍ, Baldj's uncle. After their arrival in Ifrīḳiya (in Ramaḍān 123/20 July-18 August 741), the violence and arrogance Baldj and his Syrians earned them the bitter hostility of the African Arabs, especially the Anṣār, who had fled westwards in a body after the battle fought in the Ḥarra in 63/683. So it was that when near Tilimsān the Syrian army was united with the African army (together amounting to some 60,000 men), they all but came to blows through the arrogance of the Syrians and a quarrel which arose between Baldj and the commander of the African troops Ḥabīb b. Abī ʿUbayda. The Berbers, however, so as to exhaust the enemy, withdrew right up to the river Sebū, at the extreme limit of the Maghrib. Just before the encounter with the Berber army, Kulthūm withdrew the command of the African contingent from Ḥabīb, who was well-versed in Berber fighting methods, but whose counsel was arrogantly rejected

by Baldj, and entrusted it to two Syrian officers, a measure which still further increased the resentment of the Africans. As a result, the Arabs suffered a complete defeat at Baḳdūra (or Nabdūra on the Sebū to the North of Fās, comp. Fournel, *Les Berbers*, i, 294, rem. 1). Baldj himself, by his over-confidence and the impetuosity of his attack, which resulted in his becoming separated in the action from his foot-soldiers, was the real cause of the disaster (in Dhu 'l-Ḥidjdja 123/17 October-14 November 741). At the head of some 7,000 horsemen, he fought his way through to Ceuta, where he withstood a protracted siege by the Berbers, until the day when the governor of Cordova, ʿAbd al-Malik b. Ḳaṭan [*q.v.*], an Anṣārī, brought him over to Spain with his Syrians to use him against the Berbers who were in revolt there. Precautions, moreover, were taken on both sides: Baldj undertook to leave Spain as soon as the Berber revolt had been repressed; he was to give hostages as a guarantee. On his part, the governor ʿAbd al-Malik promised the Syrians that when the time came for them to depart, they would be taken back to North Africa all together and not in separate groups, which would make them extremely vulnerable; and that, furthermore, they would be landed at a point on the coast of the Maghrib, where the hinterland was effectively under Arab control. The intervention of Baldj and his horsemen was decisive; the Berber rebels had formed themselves into three columns. Baldj countered swiftly and scattered the first group in the direction of Medina-Sidonia. The second band was dispersed in the Cordova region. The third and most numerous column, engaged in laying siege to Toledo, was severely defeated at the battle of Wādī Salīṭ, (the *arroyo* of Guazalete, a small tributary of the left bank of the Tagus). Thenceforth, the governor ʿAbd al-Malik's only desire was to send his too burdensome auxiliaries back to Africa. But he did not adhere to his word, and tried to interpret the stipulations of the agreement contracted with him in the manner least favourable to the Syrians. When he sought to re-embark them for Ceuta the enraged *djundīs* swiftly surprised the weak garrison of Cordova, expelled the governor ʿAbd al-Malik from his palace and installed Baldj in his place. In spite of his predecessor's advanced age, he made the mistake of having him put to torture. An encounter between the two parties took place a little later, in Shawwāl 124/August 742, at Aqua Portora, a few leagues to the north of Cordova, where the Syrians were the victors, in spite of the bravery of the governor of Narbonne, who mortally wounded Baldj with his own hand.

BALEARIC ISLANDS [see mayurḳa].

BĀLFURŪSH [see bārfurūsh].

BALHARĀ (al-Balharay or Ballaharā < Ballaharāya, Prakrit form of 'Vallabha-rāja', meaning 'the beloved king') represents the title of the kings belonging to the Rāshṭrakūṭa dynasty of the Deccan (c. A.D. 753-975), whose capital was at Mānyakheṭa, now Malkhed (Ar. *Mānkīr*), south of Gulbarga (Mysore). Ibn Khurradādhbih and Ibn Rusta's information that Balharā meant 'the king of kings' or 'the king of the kings of India' is incorrect. Ibn Khurradādhbih's Balharā almost certainly pertains to Govinda III (A.D. 793-814); Sulaymān's to the same prince or to his son Śarva or Amoghavarsha (A.D. 814-878); al-Masʿūdī's to Indra III (A.D. 914-922); and that of Ibn Ḥawḳal also to Amoghavarsha. The later references are mostly repetitions of the information supplied by the earlier authorities. Arab writers generally acclaim these rulers as 'the greatest king of India' or 'the most illustrious', and epithets like 'the king of kings' or 'the supreme king of India' seem to reflect the glory and political supremacy of princes like Govinda III or Indra III. However, some authors present an exaggerated account of the extent of the Rāshṭrakūṭa kingdom (*e.g.*, *Akhbār al-Ṣīn* 'beginning from the sea-coast called *Kumkam* (Konkan) and continuing overland up to China'; some authors 'have somewhat misunderstood Sulaymān [i.e. the *Akhbār al-Ṣīn*] in saying that *Kumkam* was the name of Ballah-rā's country', see *Ḥudūd al-ʿĀlam*, 238 n. 2). But generally the descriptions of the kingdom are confined to the coastal towns of Bombay, with which Muslim merchants and travellers were familiar, and in which large numbers of Muslims had settled. Arab writers are unanimous in stating that the Balharās loved the Arabs more than any other prince of India did, and that Islam was protected and openly practised in their kingdom. They even appointed Muslims as governors or heads of Muslim communities living in their kingdom. From their accounts it appears that the Arabs were aware, though not fully, of the sanguinary wars that took place between these princes, the Gūrjara-Pratīhāras (*al-Djurz*) of the North and the Pālas (*D.hmy*) of Bengal. The love of the Rāshṭrakūṭas for the Arabs and their liberal attitude towards Islam, as well as the immense praise and glorification of the Rāshṭrakūṭas by the Arabs, must have arisen from the Rāshṭrakūṭas' considering the Muslims as allies against the Gūrjara-Pratīhāras, who were inimical to the Arabs of Sind, and from the presence of large numbers of Muslims living in their kingdom.

BAL-ḤĀRITH [see ḥārith b. kaʿab].

BĀLI, one of the Muslim trading states in southern Ethiopia. It lay to the east of Lake Awasa and the Ganale Doria, and extended to the Webi Shabelle near longitude 40 E., with a narrow piece stretching north of the Webi Shabelle to the edge of the Danākil lowlands, the railway marking approximately the northern boundary. The first mention of Bāli seems to be in the epinikia in honour of ʿĀmda Ṣyon king of Ethiopia, 1312-42 (I. Guidi, *Rend Lin*, 1889, nos. viii and ix) where Bāli is described as part of the king's dominions. In the middle of the 14th century al-ʿUmarī described Bāli as being 20 days' journey in length and six days in breadth, under a king who was tributary to the king of Ethiopia and possessed an army of 40,000 horsemen. A century later al-Maḳrīzī repeats al-

ʿUmarī's account, including the statement that the people of Bāli were Ḥanafīs. Till about 1542 the state remained tributary to Ethiopia, when ʿAbbās the ruler made himself independent of Gālāwdēwos king of Ethiopia.

BALI [see DJĀWA].

BALIABADRA, Turkish name for Pátrai, Patras (fourth largest town on the Greek mainland and the largest on the Morean peninsula), situated on the gulf of the same west of the entrance to the Gulf of Corinth (Turkish *Kordos*, [*q.v.*]), capital of the Nomos Achaia, seat of a bishop. It had about 85,000 inhabitants in 1951. The name Baliabadra comes from Παλαιαὶ Πάτραι, or rather Παλαιά Πάτρα (*Pâtra* is even today the colloquial name for the town), *i.e.*, Old Pátra(i), apparently because from the 14th century onwards New Pátra(i) denoted the fortress under whose protection the old settlement was. Nikiphoros Gregorás (IV.9.4) describes it explicitly as φρούριον τὸ τῶν Νέων Πατρῶν ἐπικεκλημένον. The adjective would not, therefore seem to have been added to distinguish Old Patra(i) from Νέαι Πάτραι, a place near Lamía (Turkish Zitun , conquered by the Ottomans in 1393, which was itself more usually known as Patratzik (Πατρατζίκ, from the Turkish Badradjik) although today, as in antiquity, it is once again known as Hypati. In the west, Old Pátra(i) is known as Patras (from 'ς τάς Πάτρας, compare the Italian Patrasso).

Additional data concerning its pre-Ottoman history can be found in the works of A. Bon, E. Gerland, Wm. Miller, D. A. Zakythinos, cf. bibliography at the end of the article. Only the following facts need be mentioned here: at the division of the Byzantine Empire in 1204, the town became the seat of the Latin duchy of Achaia, and also the seat of an archbishop. In 1408, it became Venetian. On 1 July 1428, the town was threatened—but not captured—by Palaeologue princes who were quarrelling amongst themselves. On 20 March 1429, the despot Constantine repeated the attack on the town. During the course of this attack, the population turned away from the Latin archbishop Pandolfo Malatesta, and their notables swore an oath of allegiance to the Greek despot on June 5th in the Church of St. Andrew. The fortress continued to hold out, and did not surrender to the Greeks until May 1430 (Zakythinos, i, 206 ff.). At the time, Sulṭān Murād II objected to the taking of Pátrai, asking the Greeks to refrain from occupying it, as the inhabitants desired to pay their tribute to him. Sphrantzis, the first governor of Pátrai (later a historian), negotiated with the Porte, and eventually succeeded in obtaining the Sultan's consent (Sphrantzis, 152-3). It was, apparently, not until 17 years later that Murād II made an attempt to gain Pátrai for himself. According to Dukas (ed. Vas. Grecu [Bucharest 1958], 278,[19]), he advanced in the winter of 1446/7 "as far as Pátrai and Klarentza" (the Kyllíni of today), on which occasion he may have succeeded in taking the open town by a surprise attack, but it is hardly likely that he also overcame the almost impregnable fortress above. Cf., however, Hammer-Purgstall, i, 473. The country all around was laid waste at the time, and some 60,000 people were led off into slavery. When the despot Constantine became Emperor of Byzantium in 1448, his brother Thomas took possession of north-western Morea, that is to say, of the whole of Achaia, including Pátrai and Klarentza, where he may well have held court (cf. Zakythinos, i, 242). Meḥemmed II, the Conqueror, went in person to Pátrai, in summer 1458, arriving from Mouchli (cf. E. Darkó in the Πρακτικά of the Academy of Athens, vi, Athens 1931, 22-29). He found it deserted and derelict. The inhabitants had fled to Venetian possessions on the Morean peninsula. This time, the fortress surrendered after a short resistance (cf. Kritoboulos, in the edition of C. Müller, FHGraec, V, Paris 1870, 123, also F. Babinger, *Mehmed der Eroberer und seine Zeit*, Munich 1953, 176 ff. (French edition 1954, Italian edition 1957). The sultan considered Pátrai a suitable place for his commerce with the West, and he therefore invited the population to return, granting special privileges and tax reductions (cf. Kritoboulos, in the above mentioned book, 123; and Zakythinos (see above), i, 258). Later, early in 1459, there were Greek attempts to regain the town, but these failed (cf. Chalkokondyles, ed. I. Bekker, 457 f.). Pátrai remained, now as Baliabadra, an Ottoman possession for more than 350 years, without, however, regaining the great position it had once held in the times of the Roman Emperors, when there was a flourishing trade with Italy. Baliabadra became a Turkish provincial town and administrative centre, but was without any commercial significance. Attempts made by Venice to regain the town repeatedly failed. In summer 1464, Iacopo Barbarigo, Provveditore of Morea, made an ill-fated attempt on the town, which was successfully repulsed by Turakhan-oghlu ʿUmar-Beg (cf. s.v. and also Hammer-Purgstall, ii, 84 f.). In September 1532, however, the imperial admiral Andrea Doria captured the practically unprotected Pátrai without fighting, but the re-occupation was only temporary (cf. J. W. Zinkeisen, *Geschichte des Osmanischen Reiches*, ii, 734 f.). In 1685, the Venetian general landed in Pátrai (with an army which largely consisted of German mercenaries) in order to drive the Turks from Morea. On 24 July 1687, Baliabadra (abandoned by the Ottomans and partly blown up by them) fell into the hands of F. Morosini's troops, after a heated battle (cf. Zinkeisen, v, 132); but this reoccupation, again, did not lead to any permanent re-establishment of Venetian rule in Morea. In the middle of April 1770, the town was taken by surprise by a horde of Greeks, who were shortly afterwards either killed or taken as slaves by the Albanians and Turks. At that time, Baliabadra once again went up in flames, and only a few families saved themselves and their possessions, fleeing to the Ionian islands (cf. Zinkeisen, v, 931). The first big Greek rebellion against Turkish rule in Pátrai started on 6 April 1821. On this occasion, the archbishop of Pátrai (since 1806) Germanós (1771-1826) led the battle for liberation. On 15 April 1822, the Ottomans stormed the town for the last time under the leadership of Yusuf Mukhliṣ Pasha (from Serres), who razed the town to the ground. French troops came to the assistance of the Greeks and took possession of Pátrai in 1828, being relieved by the Bavarians in 1833. Since then, the town has been rebuilt in a regular checkerboard plan and has once again developed into a flourishing port, linked more recently with Athens (cf. ATINA) overland by the Peloponnesian Railway (230 km.).

Until the middle of the 18th century, whilst Baliabadra was under Ottoman rule, it had only once been described by a western traveller, viz.

Master Thomas Dallam (1599-1600), see *Early Voyages and Travels in the Levant*, ed. by I. Theod. Bent (London 1893; Hakluyt Society, vol. LXXXVII), 86. The first such description dates from 1740, when Richard Pococke (*A Description of the East*, ii/2, London 1745, 176 f.) mentions it as an unhealthy town in a swampy plain, seat of a Greek archbishop, with 12 parish churches, each with 80 Christian families, some 10 Jewish families and roughly 250 Turkish ones "who are not the best sort of people". At that time there were an English Consul General, a French Vice-Consul (the Consulate was in Modon), and a Venetian and a Dutch Consul in Pátrai. The description of the town by Dr. Richard Chandler (*Travels in Greece*, Oxford 1776) in 1764, is much the same. The description by the Ottoman globe-trotter Ewliyā Čelebi (*Seyāḥetnāme*, viii, Istanbul 1928, 288-292), who was there in 1080/1669, is much more extensive. He noted a mosque near the market (*čarshu*), donated by Meḥemmed II, and one of Bāyazīd II in the citadel (*ič ḳalʿa*), also the mosque of the Kyaya (Ketkhudā Dj.), and not far from this, the mosque of Sheykh-Efendi, that of Ibrāhīm Čavuš, and finally the mosque at the Dabbāgh-khāne (*i.e.*, tannery). Furthermore there were at that time three smaller houses of prayer (*masdjid*), four Dervish monasteries (that of Sheykh-Efendi amongst them), and three baths (*ḥammām*). Ewliyā Čelebi mentions places of pilgrimage near Baliabadra, amongst these the one of Ṣarī Ṣaltīḳ Baba [*q.v.*], *i.e.*, 'Sveti Nikola', and the one of 'Jovani-Baba'—doubtless old Christian places of pilgrimage. In his description, Ewliyā Čelebi calls Baliabadra "ballu (ballī) Baliabadra", *i.e.*, "Baliabadra rich in honey"; compare "ballu Badra" (*'Anonymus Giese'*, 141_{18}). Ḥādjdjī Khalīfa (*Rumeli und Bosna*, translated by J. v. Hammer, Vienna 1812, 124 f.) gives only a few details concerning the port and administration in Baliabadra.

The fever-ridden, swampy plains to the north, east and south-east of the town (cf. R. Pococke, in the above mentioned book, ii/2, 176), have long since been dried up. Commerce is largely concerned with currants, oil, and wine, as well as silk (which was already cultivated in Ottoman times, as is also described by Pococke), and this has made Pátrai into a flourishing trading centre. According to Ludwig Steub, *Bilder aus Griechenland*, Leipzig 1885, 230, in 1822, Pátrai consisted solely of the ruins of five mosques, fallen down churches, derelict houses, and only a few repaired and inhabited dwellings.

Weber, *Voyages and Travels in the Near East made during the XIX century*, Princeton 1952, 245, Patras. L. Steub, see above, gives a vivid picture of Pátrai and its inhabitants in the year 1846 on 209-249.

(FR. BABINGER)

BĀLIGH (A), major, of full age; *bulūgh*, puberty, majority; opp. *ṣaghīr*, minor, *ṣabī*, boy, *ṣughr*, minority. Majority in Islamic law is, generally speaking, determined by physical maturity in either sex (the Shāfiʿīs explicitly lay down a minimum limit of nine years); should physical maturity not manifest itself, majority is presumed at a certain age: fifteen years according to the Ḥanafīs, Shāfiʿīs and Ḥanbalīs, eighteen years according to the Mālikīs (various other opinions are ascribed to the old authorities). Within these limits, the declaration of the person concerned that he or she has reached puberty, is accepted. Majority is one of the conditions of full legal capacity; the minor is subject to a legal disability (*ḥadjr*) and to the guardianship of his father or other legal guardian [cf. WILĀYA]. The major who is of sound mind (*ʿāḳil*), is *mukallaf*, i.e. obliged to fulfil the religious duties, and therefore also responsible in criminal law. But majority (together with soundness of mind) does not by itself produce contractual capacity, the capacity to dispose of one's own property; in order to have this effect, it must be accompanied by *rushd*, discretion or responsibility in acting. The father or other legal guardian must not only encourage the minor to fulfil his religious duties regularly, but test his *rushd* when he approaches puberty, and hand over his property to him only when he shows that he possesses it (cf. Ḳurʾān iv, 6). The other schools of religious law do not lay down a time limit for this, but the Ḥanafīs fix the age at which his property must be handed over to him in any case, at 25 years, an obvious adoption of the *legitima actas* of Roman law. The Mālikīs, in the case of a woman, make this kind of capacity dependent, in addition to majority and *rushd*, either on the consummation of marriage, or on a formal act of emancipation by the father or other legal guardian, or on becoming an "old spinster" (*ʿānis*); a somewhat similar opinion is also held by some Ḥanbalīs. Islamic law envisages a gradual transition from the status of minor to that of major, as exemplified by the *mumayyiz*, the "discerning minor", and the *murāhiḳ*, the "minor on the point of reaching puberty".

(ED.)

BĀLIK, Turko-Mongol word for "town" = or "castle" (also written BĀLIḲ and BĀLIGH); appears frequently in compound names of towns, such as Bīshbāliḳ ("Five Towns", at the present day in ruins at Gučen in Chinese Turkestan), Khānbāliḳ (the "Khān's Town"), Turko-Mongol name for Pekin (also frequently used by European travellers in the middle ages in forms like (Cambalu), Ilibāliḳ (on the River Ili, the modern Iliysk) etc. As the town of Bāshbāliḳ is mentioned as early as the Orkhon inscriptions (2nd/8th century), Bāliḳ, in the meaning of town, is one of the oldest of Turkī words, as is the word Bāliḳ "fish", which is similarly pronounced and is common to all Turkī dialects.

(W. BARTHOLD.)

BĀLIKESRĪ, Balīkesir, a town of north-western Asia Minor, in the region known in ancient times as Mysia. The name Bālikesrī derives from the Greek "Παλαιοκάστρον". Al-ʿUmarī, in his *Masālik al-*

Abṣār, refers to this locality as "Akīrā" (= "Ὀχυρά", a name current in the period of the Comneni). The Roman Hadrianuthera is believed to have been situated in this same district. Bālikesrī was one of the chief towns in the emirate of Ḳarasī [*q.v.*], which came into being when the Turks wrested this area from the Byzantines in the years around 699-700/1300. Ibn Baṭṭūṭa, who travelled through Asia Minor c. 730-1/1330, judged Bālikesrī to be a beautiful and well-populated place. The amīrate of Ḳarasī was soon absorbed into the Ottoman state, a process which began in about 735-6/1335 and appears to have been gradually completed during the reign of Orkhān Ghāzī. Ḳarasī, under Ottoman rule, long remained a *sandjaḳ* in the *eyālet* of Anadolu, until in the reign of Maḥmūd II it was attached to the *wilāyet* of Khudāvendigār. It is now a separate province with Bālikesrī as its administrative centre. Bālikesrī, situated at the foot of the Yïlan-dagh ("mount of the serpent"), confronts a fertile plain noted for its production of cereals, vegetables and fruit. Its population was estimated in 1945 to be a little less than 34,000.

(V. J. Parry)

BALĪNŪS. Silvestre de Sacy was the first to state that this name means Apollonius. The above form and Balīnās are the most frequently used ones. Other forms are Abullūniyūs (*Fihrist*, 266, Ibn al-Ḳifṭī, 61), Abūlūniyūs (Cheikho's personal MS. of Ibn Ṣāʿid, *Ṭabaḳāt al-Umam*, 1912, 28, 16), Afullūniyūs (*ibid.*, 29,1), Afūlūniyūs (Barhebraeus, ed. Salhani, 118), Ablīnas (*Fihrist*, *l.c.*), ʿlūsūs (*ibid.*, 263, 21, cf. Plessner, *Der* οἰκονομικός *des Neupythagoreers 'Bryson'*, 1928, 4 f.; P. Kraus, *Jābir ibn Ḥayyān, Contribution*, ii, 273 n. 3), Abūlūs (Yaʿḳūbī, i, 165) Ablūs (Ps. Madjrīṭī, *Ghāyat al-Ḥakīm*, ed. H. Ritter, 1933, 107 ff.; the meaning Apollonius is proved by the fragment of a Hebrew translation in Cod. Adler 1920). For other forms see Kraus, *op. cit.*, 270, n. 6.

In Islam, two persons named Apollonius are known, the famous mathematician Apollonius of Perge in Pamphylia (ca. 200 B.C.) and a sage whose personality is based on the Greek tradition about Apollonius of Tyana in Cappadocia (1st cent. A.D.).

Apollonius of Perge appears in the biographical sources (not in the MSS. of his works) almost invariably with the epithet al-Nadjdjār (the carpenter), the origin of which has not yet been explained satisfactorily. Since G. Flügel, *al-Kindi*, 1857, 53 it has been customary to render this by "the geometer", and as a matter of fact, Apollonius was already in antiquity called "the great geometer". Also Euclid was called the geometer, and Ibn al Ḳifṭī, 62 (E. Kapp's quotation *al-muhandis*, in *Isis*, xxii, 1934, 161 n. 20 is wrong) calls him al-Nadjdjār in the heading of his article, but states afterwards that Euclid was a carpenter by vocation. However, no other place is known where *al-nadjdjār* appears as the translation of geometer, and no dictionary gives this translation.

A detailed discussion of the Arabic translations of, and commentaries on, Apollonius' famous *Conica* and his other works has been given by M. Steinschneider, in *ZDMG*, l, 1896, 180-187; cf. also G. Sarton, in *IHS*, i, 173-175 and indexes of all three volumes; Brockelmann, S, index s.v. *Apollonios v. Perga* (instead of 852 read 856); M. Krause, *Stambuler Handschriften islamischer Mathematiker*, 1936.

With regard to Apollonius of Tyana, there are considerable contradictions in the various sources, and the tradition about the *ṣāḥib al-ṭilasmāt*, as he is usually called (beside *al-ḥakīm*) has even, to a certain degree, influenced the reports concerning Apollonius of Perge. Our oldest source, Yaʿḳūbī, i, 165 rightly relates that Apollonius lived under the reign of Domitian (81-96), and the same is related by Ibn Abī Uṣaybiʿa, i, 73, and Barhebraeus, *l.c.* But the same Yaʿḳūbī speaks on p. 134 of "Balīnūs al-nadjdjār who is called the orphan, and he is the *ṣāḥib al-ṭilasmāt*, etc.". The confusion lies not only in the use of the epithets of both Apollonius for one and the same person, but also in the addition "the orphan": in the preface of the *Sirr al-Khalīḳa* (see below) Balīnūs calls himself "an orphan inhabitating Tyana" (cf. Kraus, *op. cit.*, 273 n. 3). In the *Dhakhīrat al-Iskandar* (see below) Aristotle tells Alexander that he had received the book from Apollonius (the text in J. Ruska, *Tabula Smaragdina*, 1926, 72). Here Apollonius appears as a contemporary of Philip and his son Alexander, and so he does in al-Balʿamī's Persian version of Ṭabarī (cf. Zotenberg's French translation, i, 510 f.; the whole passage is missing in the Arabic Ṭabarī) and in Niẓāmī's *Iskandar-nāma* (cf. W. Bacher, *Nizâmî's Leben und Werke*, 1871, 67 ff. and Persian text, 28; W. Hertz, *Gesammelte Abhandlungen*, 1905, 45). This anachronism with regard to Apollonius the talisman-maker has, in its turn, influenced Ibn al-Ḳifṭī's dating of Apollonius of Perge; his article about the latter begins (p. 61): "Apollonius the carpenter, mathematician of ancient time, much earlier than Euclid; he wrote the book *Conica*". And in his article on Euclid, 63, Euclid, a carpenter of Tyre, explains and accomplishes for an unnamed Greek king two books of Apollonius on irregular polyeders (this is in fact the subject of Euclid's *Elementa*). On 65 he speaks, on the contrary, of a commentary on Euclid's 10th book by an ancient (*ḳadīm*) Greek man named Balīs (the variant readings show with almost absolute certainty that he speaks of Apollonius). Now, Apollonius of Perge lived about 80-100 years after Euclides. (Kapp, *op. cit.*, 163-168 does not even point out this confusion!).

In Ḥunayn b. Isḥāḳ's *Ādāb al-Falāsifa*, an Apollonius appears in two places: in part i ch. 5 the saying engraved on his seal is reported, and of part ii the whole ch. 17 is dedicated to his apophthegms. None of these dicta is characteristic of either of the two Apollonius; but Abū Sulaymān al-Manṭiḳī points to Apollonius of Tyana, when he, in the first paragraph of ii, 17 ("The pen is the most powerful sorcerer") substitutes "talisman" for "sorcerer".

Also the six *sermones* in the *Turba Philosophorum*

attributed by Steinschneider (*Europ. Uebers. aus dem Arab.*, II, SBAk. Wien, 1905, 67 ff.) and Ruska (*Ṭ. Ph.*, 1931, 23 ff.) to Apollonius of Tyana are no more characteristic of him than do the other alchemistic *sermones* of their respective orators.

Of the Arabic books connected with the name of Apollonius of Tyana the following are preserved in this language either in full or partly or in quotations of some length:

1. *K. al-ʿIlal* or *Sirr al-Khalīḳa*, parts of which were edited and translated by Sivestre de Sacy (*Notices et Extraits*, iv, *an.* 7/1798-99, 108 ff.) and J. Ruska (*Tab. Sm.*, 124-163). The latter also proved that the famous alchemist text known as *Tabula Smaragdina* has its original place at the end of this book; and P. Kraus, *op. cit.*, 303 has shown that the whole book is to be a commentary of that text. About the Latin translation by Hugo Sanctalliensis, cf. Ruska, 177 ff. The analysis of the book by Kraus, 270-303 led to its dating in the time of the Caliph al-Maʾmūn and shew its close relation to the Syriac *Book of Treasures* by Job of Edessa (ca. 817 A.D.), ed. Mingana, 1935, as well as to the Greek περὶ φύσεως ἀνθρώπου by Nemesius of Emesa (5th cent. A.D.). Cf. now also L. Massignon, in A.-J. Festugière, *La Révélation d'Hermès Trismégiste*, i, 1944, 395 f., and the additions in the 2nd ed., 1950: A. E. Affifi, in *BSOAS*, xiii, 1949-51, 847 ff. Kraus also showed the great influence of this book on Djābir Ibn Ḥayyān; the latter wrote a considerable number of books on different subjects *ʿalā raʾy Balīnās*, cf. Kraus, i, index, s.v. *Balīnās*; J. W. Fück, *Ambix*, iv, 1951, § 12 and Commentary), parts of them were edited by Kraus, *Jābir Ibn Ḥayyān, Textes choisis*, 1935.

2. *Risāla fī Taʾthīr al-Rūḥāniyāt fi 'l-Murakkabāt*, MS. Istanbul, Asʿad 1987 (Plessner, in *Islamica*, iv, 1931, 551 f.), Wehbi 892 (courtesy of H. Ritter), Chester Beatty (cf. J. Bowman, *Glasgow Univ. Or. Soc., Transactions*, xiv, 1950-52); for other MSS., see Kraus, ii, 293 n. 5.

3. *al-Mudkhal al-Kabīr ilā ʿIlm Afʿāl al-Rūḥāniyāt*, in all MSS. following no. 2, Hebrew translation in Paris, MS. Hebr. 1016 and Steinschneider MS. 29 (cf. Steinschneider, *Hebr. Übersetzungen des Mittelalters*, 846 f. and Plessner, *l.c.*).

4. *K. Talāsim Balīnās al-Akbar li-Waladih ʿAbd al-Raḥmān* (!), Paris MS. 2250, fol. 84-134, identical with *K. Balīnās li-Ibnih fi 'l-Ṭilasmāt*, Berol. Pet. I 66, fol. 41v-72v (Ahlwardt 5908).

5. A *Kitāb Ablūs* (vocalisation uncertain) *al-Ḥakīm* is one of the sources of the lists of images to be engraved on the stones of the planets, *Ghāyat al-Ḥakīm*, 107-124. Whether this book is the *Liber de imaginibus* quoted by Albertus Magnus, *De libris licitis* (cf. F. J. Carmody, *Arabic astronomical and astrological sciences in Latin translation*, 1956, 58 ff.), is still an open question.

6. The Hermetic book *Dhakhīrat al-Iskandar* given to Alexander by Aristotle who received it from Apollonius has been elaborately discussed and partly edited and translated by Ruska, *Tab. Sm.*, 68-107; it contains also some of the talismans located by Apollonius in several towns. The connexion between the prologue and the Babylonian report on the Flood has been stated by Plessner, in *Studia Islamica*, ii, 1954, 52 ff.

(For the Arabic texts belonging to the above nos. 1 and 6 as published by Ruska, cf. Plessner, in *Islamica*, xvi, 1927, 83 ff.).

7. In no. 3, the author alludes several times to his *Risālat Sal-siḥr*, which is as yet unknown in Arabic; but perhaps the Hebrew *Mlekhet muškelet* (Steinschneider, *Hebr. Übers.*, 848, cf. also *ZDMG*, xlv, 1891, 444) has something to do with it.

8. Al-Ḳazwīnī quotes in many places of his *ʿAdjāʾib al-Makhlūḳāt* (see the list in Bacher, *op. cit.*, 70 n. 26) a *Kitāb al-Khawāṣṣ* by Balīnās, which has not yet been traced, Steinschneider judges the title to be a fiction (*Hebr. Übers.*, 845 n. 7).

The vast number of medieval Latin and vernacular texts ascribed to Balīnūs (Belenus and the like) cannot be dealt with here, cf. Steinschneider, *Europ. Übers.*, Index, and Carmody, *op. cit.*, index. But there is no doubt that some of the authors whose books are published or analysed in the *Lapidario del rey D. Alfonso X*, reproduced and partly edited by J. F. Montaña, 1881, are translations of Arabic books attributed to Apollonius; cf. the full list in Sarton, ii, 837. Here belong: 1. Abolais (never deciphered, cf. G. O. S. Darby, in *Osiris*, i, 1936, 251 ff.), 4. Yluz, 5. Belyenus and Ylus, 6. Plinius and Hermuz (Hermes). A comparison of these names with the forms of the name of Apollonius in Arabic at the beginning of this article will furnish sufficient evidence.

The Greek *Apotelesmata Apollonii Tyanensis*, simultaneously edited by F. Nau, *Patrologia, Syriaca*, I 2, 1907, 1363 ff., and F. Boll, *Cat. Codicum astrologorum Graecorum*, vii, 1908, 175 ff. contains passages of which the Latin translation from the Arabic can be traced in Brit. Mus. MS. Royal 12 C XVIII (Carmody, 73), and even an English translation in Sloane 3826. For another Latin (Vatican) MS. cf. Carmody, *l.c.* Similar texts, also translated from Arabic, in Sloane 3848. The name of the disciple of Apollonius to whom the Greek text is dedicated has been identified with that of the author of a text edited in Syriac and Arabic by G. Levi Della Vida, *La Dottrina e i Dodici Legati di Stomathalassa, Atti Acc. Naz. Lin., Cl. Sci. mor. stor. fil.*, viii/iii, fasc. 8, Rome 1951.

Another pupil of Apollonius is the famous Artefius (not Arletius, as in Brockelmann, S I, 429, nor Atrefius, as in the additions in vol. iii, 1208), the author of *Clavis sapientiae*, the Arabic original of which, *Miftāḥ al-Ḥikma*, has been discovered by Levi Della Vida, and described in *Speculum*, xiii, 1938, 80-85; cf. Kraus, 298 f.

Bibliography: On Apollonius of Perge, see also H. Suter, *Die Mathematiker und Astronomen der Araber und ihre Werke*; M. Krause, *Stambnler Handschriften islamischer Mathematiker*; M. Steinschneider, *Euklid bei den Arabern* (*Zeitschrift für Mathematik und Physik, Historisch-Literarische Abteilung*, vol. xxxi, 1886). (M. Plessner)

BĀLIS, former town in northern Syria, which was both a port on the Western bank of the Euphrates and an important stage, 100 km. from Aleppo and at the entrance to the Djazīra, of the road from Antioch and the Mediterranean leading, via al-Raḳḳa, to Baghdād and ʿIrāḳ. The commercial and agricultural prosperity of the town was doubtless due to its situation at a point of intersection of river and land highways, and in a warm valley where the irrigation possibilities favoured the development of husbandry.

Known in antiquity under the Aramaic and Greek names of BYT BLS and Barbalissos, indicated both in the *Table de Peutinger* and the *Notitia Dignitatum* and, after the administrative division of the province of Syria which took place towards the middle of the 11th century A.D., belonging to the *Augusta Euphratensis*, it played the rôle of a

frontier town which was to continue in the Byzantine period, when it was several times pillaged by the Persians. It suffered particular damage during the campaign of Khusraw II Anushirwān and was rebuilt by the efforts of Justinian. Previously, the hagiographers had made it the site of the martyrdom of Bacchus, a famous saint of the area, whose relics are said to be preserved there.

Occupied by the Arabs as the result of a treaty concluded with Abū ʿUbayda after the capture of Aleppo and abandoned at that time by certain elements of the population, in the Umayyad period Bālis formed part of the *djund* of Ḳinnasrīn and was subsequently, under al-Rashīd, attached to the territory of the ʿAwāṣim [*q.v.*]. It continued to retain its strategical importance for a long time in the vicinity of the Byzantine territories. The famous general Maslama b. ʿAbd al-Malik took an interest in it to the extent of having a canal excavated and improving the production of the land. He established himself there and it was to remain the property of his descendants. In 245/859 the town suffered from an earthquake which affected the whole of Northern Syria; subsequently it shared the fate of the cities of the area, escaping from Caliphal control and entering the orbit of the Ṭūlūnids, then that of the Ḥamdānids, until the Saldjūḳids, in their turn, extended their authority to the region. Its economic decline, according to Ibn Ḥawḳal, who, however, still mentions rich grain harvests, dates apparently from the end of the reign of the Ḥamdānid Sayf al-Dawla; but the brief information given by the geographers should not make us forget the signs of prosperity, borne out by archaeological remains, right into the Ayyūbid period. At the time of the Crusades, it was subject especially to indecisive incursions by the Franks, after which it continued to pass from hand to hand of various Muslim masters, among whom can be cited at the end the Ayyūbids al-Malik al-Ẓāhir Ghāzī and al-Malik al-ʿĀdil Abū Bakr (who seems to have held it at least from 607/1210-11, the date inscribed on the minaret which he had erected). At this time various indications seem to show that the population of Bālis, where several *mashhads* were venerated in connexion with the memory of ʿAlī and al-Ḥusayn, was mainly Shīʿite. Subsequently the destruction wrought by the Mongol invasion destroyed the locality, which did not even appear in the administrative organisation of Mamlūk Syria.

At the present day the ruins of Bālis lie five km. from the small modern village of Meskéné on a plateau overlooking the valley of the Euphrates which flows at quite a distance from the site. The fortified enclosure can still be identified, with its monumental doors, the remains of a brick praetorium doubtless dating back to the times of Justinian and the site of the great mosque, indicated by the beautiful octogonal brick minaret, erected on a rectangular base and bearing four series of ornamental inscriptions. The numerous mounds where abundant potsherds are to be found, have never been systematically excavated, but trial soundings carried out about 1925 revealed interesting sculptured plaster decorations with inscriptions dated 464/1072 and 469/1076-77.

BĀLISH (Persian: "cushion"), Turkish: *yastuḳ*, a 13th century Mongolian monetary unit, which was in use particularly in the eastern part of the Empire. It is, however, also mentioned frequently by the Īlkhāns [*q.v.*] in Īrān. In China it appears as late as the 14th century. The *bālish* was coined in gold and in silver, and (according to Djuwaynī, *GMS* i, 16, and Waṣṣāf, lith. Bombay, 22), corresponded to 500 *mithḳāl* (according to W. Hinz, *Islamische Masse und Gewichte*, Leiden 1955, 1-8, on the basis of numismatic observations: 4. 3 g. each; Djuwaynī, trans. J. A. Boyle, i, 22, writes *loc. cit.* of 50, instead of 500 *mithḳāl*). According to this assessment, *a bālish* would weigh 2.15 kg., and this would agree with a Western report by William of Rubruquis, ed. Rockhill, 156, which states that one silver *bālish* corresponds to 10 (Cologne) marks, *i.e.*, 2.338 kg.

W. Hinz assesses the gold value (taking 1 g. of gold at a price of 2.88 gold marks) at 6,192 gold marks. If we assume the relative value of gold to silver (according to Ahmet-Zeki Validi (now Togan), *Moğollar devrinde Anadolun'un iktisadî vaziyeti*, in *Türk hukuk ve iktisat tarihi mecmuasî*, i, 1931, 1-42), to be 12 : 1 (cf. also B. Spuler, *Die Mongolen in Iran*[2], 1955, 556 corresponding to 303[7]), then one silver *bālish* corresponds to 516 gold marks.

According to Djuwaynī (*loc. cit.*) a silver *bālish* has the value of 75 Ruknī dīnārs of 2/3 standard (so-called after the Būyid Rukn al-Dawla, 934-976); thus the value of such a dīnār would be 6.88 DM.).

Other statements of the same period do not indeed agree with Djuwaynī, but this may be due partly to fluctuations in value. According to Djūzdjānī (Djawzadjānī), *Ṭabaḳāt-i Nāṣirī*, trans. Raverty, 1110, the *bālish* corresponded to 60 1/3 dirhams; Waṣṣāf, lith. Bombay, 22, quotes the gold *bālish* at 2,000, the silver *bālish* at 200 dīnārs (which corresponds to a proportion of 10 : 1 for gold : silver at that time). One *bālish* in paper money (*čao*) was worth 10, or (according to Waṣṣāf, 506) only 6 dīnārs (this is an indication of the rapid fall in value of the *čao*). W. Barthold assumed that here the silver dīnār worth 3 *mithḳāl* is meant (cf. also d'Ohsson, *Histoire des Mongols*, iv, 464).

Bibliography: Rashid al-Din ed. Quatremère, i, 320 f., note 120 (compilation of relevant parts of sources, although seen from the erroneous point of view that the *bālish* does not denote a definite sum of money but a "great quantity" of money); B. Spuler, *Die Mongolen in Iran*[2], Berlin 1955, 304 f. with notes; W. Barthold/W. Hinz, *Die pers. Inschrift .... zu Ani*, in *ZDMG*, 101 (1951), 241-269; W. Hinz, in *Islam*, xxxii (1959) (note on Boyle's translation of Djuwaynī); concerning *yastuḳ*, cf. P. Pelliot in Tʿoung-Pao, no. 27 (1930), 190-2, *ibid*, 32 (1936), 80; idem, *Notes sur ... la Horde d'Or*, Paris 1950, 8. (B. Spuler)

BĀLISH, Belesh, Span. Vélez, a toponymic of Berber origin encountered on the coast of the Rif and at various places in the Iberian peninsula with the spellings بالش، بَالِش and بلش. Al-Bakrī mentions the port of Bālish after those of Bādis and Būḳuya, opposite Peñon de Vélez de la Gomera, on the Rif coast. Another Bālish, unidentified, is to be found beside the Guadalquivir after leaving Cordova in the direction of Tudmīr and Murcia. Al-Idrīsī gives the name Bālish to the Mar Menor of Murcia, a large lake formed by the waters brought down by various swift streams, situated 57 miles from Alicante and which is navigable by shipping. The Vélez, which the same author includes in the *iḳlīm* of Badjdjāna (Pechina), with Almería, Berja and Purchena, is Velez-Rubio, 105 km. from Almería and 42 from Lorca, in the valley of the Guadalentín, a tributary of the Sangronera. A prehistoric cemetery, rock paintings and numerous coins, art objects and Roman inscriptions have been found amongst the ruins of its fortifications. It formed part of the *kūra* of Tudmīr and revolted with Ibn Ḥafsūn [*q.v.*] against the *amīr* ʿAbd Allāh, being subsequently subdued by ʿAbd al-Raḥmān III in 313/925. When the Infante, the future Alfonso X the Wise, took Lorca, it marked the frontier of the Kingdom of Granada. It was taken by Alonso Yáñez Fajardo in 1437, but again passed into the hands of the rulers of Granada in 851/1447, and the Naṣrid ruler al-Zaghall Abū ʿAbd Allāh Muḥammad XII resided there; it was finally taken by Ferdinand III in 893/1488, who, at the beginning of the 10th/16th century, ceded his overlordship to Pedro Fajardo, the first Marquis of both the towns of Vélez, el-Rubio and el-Blanco. Situated 5½ km. from Vélez-Rubio is Vélez-Blanco, a town of some 10,000 inhabitants, belonging to the same marquisate of the Vélez; on the ruins of the Roman citadel and the Moorish alcazaba rising on the hill above the two towns of Vélez, Pedro Fajardo erected a magnificent castle of imposing proportions and elaborateness, the shell of which is still preserved.

Another Vélez is that of Benaudalla (Ibn ʿAbd Allāh), in the province of Granada (ward of Motril), on the left bank of the Guadalfeo river, on the side of a small hill called el-Castillo, and possessing some 5,000 inhabitants.

Finally in the province of Málaga, 34 km. from the capital and three km. from the sea, on the left bank of the river Vélez or Benamargosa, is the town of Vélez-Málaga, with some 30,000 inhabitants. Very little is known to us, however, of its history in the Muslim period. Alfonso el Batallador, in his expedition through Andalusia in 519/1126, after reaching Granada and crossing the Sierra Nevada, advanced up to Vélez-Málaga, without being able to take it.

When in 283/896, the *amīr* ʿAbd Allāh was besieging one of these Vélez—it is not known which one—a number of infantrymen and cavalrymen of the regular Umayyad army, attracted by the inducement of better pay held out to them by Ibn Ḥafsūn, went over to the rebel's service. Dozy, who refers to this event without citing his source, confuses Bildj (now Vilches) with Belesh (Vélez), and situates it at Vélez-Rubio. The toponymic has passed to Latin America and is to be found at various places in Colombia, Uruguay and the Argentine; it is also a fairly common surname in Spain.

(A. Huici Miranda)

BALIYYA (Ar. pl. *balāyā*), a name given, in the pre-Islamic era, to the camel (more rarely the mare) which it was the custom to tether at the grave of its master, its head turned to the rear and covered with a saddle-cloth (see al-Djāḥiẓ, *Tarbīʿ*, ed. Pellat, index), and to allow to die of starvation; in some cases, the victim was burnt and, in other cases, stuffed with *thumām* (Ibn Abiʾ l-Ḥadīd, *Sharḥ Nahdj al-Balāgha*, iv, 436). Muslim tradition sees in this practice proof that the Arabs of the *djāhiliyya* believed in the resurrection, because the animal thus sacrificed was thought to serve as a mount for its master at the resurrection, while those who rose from the dead without a *baliyya*, and were therefore of inferior status, went on foot. According to another tradition, however, the same term also denoted a cow, a camel or a ewe which was hamstrung at the grave of the deceased and allowed to die of hunger; in this way, it appears, the primitive symbol of belief in the resurrection seems to have become a funeral sacrifice, which paved the way for the funeral feast (*waḍīma*).

(J. Hell-[Ch. Pellat])

AL-BALḲĀʾ, name given by the Arab authors either to the whole of the Transjordanian territory corresponding approximately to the ancient countries of Ammon, Moab and even Gilead, or to the middle part of it, having, depending on the period, ʿAmmān, [*q.v.*], Ḥusbān or al-Ṣalt as its chief town. Although a certain lack of precision still persists to-day in the use of the term, its geographical meaning is usually restricted to the limestone plateau (average altitude from 700 to 800 m.), comprised between the Wādī 'l-Zarḳāʾ (or Jabbok) in the North and the Wādi 'l-Mūdjib (or Arnon) in the South. This is a region of tabular relief on the desert side, but the ground is considerably broken along the subsidence zone of the Dead Sea and the Jordan (peak of Nabī Ushaʿ (1,096 m.) near al-Ṣalt in the North, Mount Nebo (835 m.) in the vicinity of Mādabā), where the erosive action of rain has promoted the escarping of especially deep ravines; as a whole it is an arid land, but at the bottom of depressions and on the plains it affords possibilities of cultivation, which explain the praise bestowed on its fertility and the abundance of its villages in bygone times.

In the Hellenistic period the principal divisions were Peraea, on the Western fringe, with Gadara (near al-Ṣalt) as its metropolis, the territory of Philadelphia (ʿAmmān), a town attached to the Decapolis, and the northern end of the Nabatean kingdom. Under Trajan, in 106 AD., the new province of Arabia extended over it, taking in Nabataea, which had also extended northwards to Bostra. On the other hand in the Byzantine period, the Arnon acted as the boundary between the province of Arabia, which then included the bishoprics of Philadelphia, Esbus (Ḥusbān) and Mādabā, and the new Palestina Tertia, created in the Southern part of the country.

This region, conquered by Yazīd b. Abī Sufyān

shortly after the fall of Damascus and the peaceful surrender of ʿAmmān, retained its former prosperity under the Umayyads, and numerous caliphal and princely residences were situated there (al-Mshattā, al-Zīza, al-Ḳasṭal, Umm al-Walīd, for example, without counting the castles scattered further towards the East such as Ḳusayr ʿAmrā, al-Kharāne, Ḳaṣr al-Ḥallabāt or Ḳaṣr al-Ṭūba). At this period the term al-Balḳā' had a wide connotation, still attested later by Yāḳūt, and the reports of the chroniclers also included in it towns of the ʿAdjlūn like Arbad (Irbid), where Yazīd II died (al-Ṭabarī, ii, 1464), or of the Ma'āb like al-Mu'ta [*q.v.*]; the corresponding administrative district was provided with its own *ʿāmil* and was in direct dependence on the *djund* of Damascus before experiencing a variety of fortunes throughout the Middle Ages. The testimony of al-Yaʿḳūbī, who distinguishes two sections, the Ghawr (main town: Jericho) and the Ẓāhir (main town: ʿAmmān), in this "canton of the colony of Damascus", may in fact be contrasted with that of al-Muḳaddasī, a century later, for whom al-Balḳā' is dependent on the territory of Filasṭīn; likewise, in the Ayyūbid period, Abu 'l-Fidā' connects it with the Sharāt, whilst al-Harawī deals separately with this country and the Balad Ma'āb. Finally, during the period of Mamlūk domination, the district of al-Balḳā' (main town: Ḥusbān) belonged in principle to the southern march of the province of Damascus, though sometimes it was recognised as possessing a second *wilāya*, that of al-Ṣalt, and it appears to have depended temporarily, in entirety or in part, on the *niyāba* of al-Karak.

The favourite etymology of the Arab geographers, who link the name of al-Balḳā', in which, however, the feminine of the adjective *ablaḳ* "variegated" can be perceived, with that of an eponymous hero, a descendant of the Banī ʿAmmān b. Lūṭ, evokes the Ammonites of Biblical tradition and the memories of Lot, localised in a region where the "town of the Giants" of the Ḳur'ān, v, 25/22, (identified with ʿAmmān) and the Cave of the *Aṣḥāb al-Kahf* [*q.v.*], were also placed.

BALKAN, the Balkan peninsula. The word *Balkan* means mountain or mountain range and, in the form of *Balkanlık*, rugged zone in Turkish. The etymology of the word is now linked with *balk*, mud, and the diminutive suffix, *-an* in Turkish (according to H. Eren). There is a mountain called *Balkhan* in Türkmenistan. The word *Balkan* was used first by the Ottomans in Rumeli in its general meaning of mountain, as in Kodja-Balkan, Čatal-Balkan, and Ungurus-Balkanı (the Carpathians). But specifically it was applied to the Haemus range of the ancient and mediaeval geographers, who thought that it separated the barbaric north from the civilised south. When considered as a historical and cultural entity the Balkans can be given different boundaries in the north. The Romans built their main defence line on the Danube with the extension of Trajan's walls between Černa-Voda and Constanza in the Dobruja. The boundary of the Byzantine empire in the north reached as far as the Danube and the Drava rivers (under Justinian I and Basil II). Finally by the treaty of 848/1444 the Ottomans and the Hungarians agreed reciprocally not to cross over the Danube, and up to the 17th century this river remained as the northern boundary of the Ottoman province of Rumeli, which included the whole peninsula south to this river. Both the Roman and Ottoman empires tried also to establish their control over the flat country on both sides of the Danube. Its lower part always became a passage for the Turco-Mongol peoples who invaded the Balkans one after another from the 5th up to the 13th century A.D., namely the Huns., Avars, Bulgars, Pečeneks, Kumans and Tatar-Kıpčaks. The Avar invasions are thought responsible for the penetration and settlement of the Slavs in the Balkans in the 6th century. Then the native Vlachs and Albanians had to retire to the mountains and lived there a pastoral life for many centuries to follow. Toward 680 A. D. the Bulgars, a Turkish people from north of the Black Sea, settled on the lower Danube and, as a military aristocracy ruling over the Slavs, they created the first powerful state to rival the Byzantine empire in the Balkans. Their conversion to Christianity (864) had far-reaching consequences for the history of the peninsula because the Byzantine church and the Byzantine concept of the state gave definitive shape not only to Bulgarian Czardom but also through it to the states that emerged subsequently in the Balkans (see F. Dölger, *Byzanz und europäische Staatenwelt*, 261-282).

The first Muslim geographers who spoke of the Balkans are contemporary with these important developments. Ibn Khurradādhbih, whose information, like that of others, was derived from the reports of the three observers of the the end of the 3rd/9th and the middle of the 4th/10th centuries (see Z. V. Togan, *Balkan*, in *IA*) said that the country west of the Byzantine themes of *Tafla*, *Trākiyya* and *Maḳadoniyya* was the *bilād al-Saḳāliba* and that in the north the *arḍ Burdjan* (Bulgars). In the *Ḥudūd al-ʿĀlam* the Danube is called *Rūd-i Bulgharī* and the Balkan range *Kūh-i Bulgharī*).

It seems that Islam first appeared in the Balkans with the Anatolian saint Sarı-Saltuḳ [*q.v.*], in 662/1264. After the incursions of the Anatolian Turks of the Ghāzī principalities in Western Anatolia in the first half of the 8th/14th century, the Ottomans finally settled firmly on the European shores of the Dardanelles in 755/1354. Even in the first period of the Ottoman expansion distinction must be made between the activities of the Ghāzī leaders who made continuous warfare in the *Udj*, the frontiers, and the Ottoman central government which was also concerned with the welfare of its subjects.

Perhaps the most important factor of the Ottoman conquest was the strong immigration movement into the Balkans from Anatolia in the 14th century which turkicised Thrace and Eastern Bulgaria (see *Studia Islamica*, ii, 103-129). At that time the small Ottoman state was regarded rather as a useful adjunct in the complicated struggle among the small Balkan states, but, growing in power, the Ottoman sultan soon became the suzerain of his former allies. When later these attempted to form a common front or called on Western Christendom for help, they were disappointed (Čermanon 773/1371,

Kossova 791/1389). Bayezīd I inaugurated a new policy by establishing direct control over the vassal countries. He had the ambition of establishing a unified empire in the Balkans. He conquered the whole of Bulgaria, Macedonia and Thessaly between 1393 and 1396, and attempted to seize Constantinople, the traditional capital. The victory of Tīmūr over Bayezīd (804/1402) had important consequences for the Balkans. Abandoning most of their Anatolian possessions, the Ottomans then considered the Balkans as their real home, and, Adrianople (Edirne) became the real capital city of the sultans from then on. A fresh exodus of the Anatolian Turks into the Balkans followed Tīmūr's invasion. The successors of Bayezīd I abandoned his imperial policy and Serbia and Byzantium enjoyed some freedom of action until Sulṭān Meḥemmed II conquered Constantinople (857/1453), and resumed the policy of unification with energy and success. In 864/1459 Serbia, in 864/1460 Morea and in 867/1463 Bosnia came under direct Ottoman rule. But these Ottoman successes were due to more important factors than the military ones.

In the struggle against the Ottoman conquest and centralisation policy, the feudalised princes and local lords in the Balkans had turned their eyes to the West, with a readiness to make concessions not only from their territories but also on religious matters. Thus in the first half of the 15th century, while Hungary was establishing its suzerainty over Bosnia, Serbia and Wallachia, Venice had seized the most important points on the Albanian coasts, in the Aegean Sea and the Morea, and, after taking Salonica, she coveted Constantinople. Representing Catholicism and seeking political and economic domination, the Western powers and their feudal sympathisers in Byzantium and the Balkans were regarded with hostility by the masses at large and by the Orthodox clergy. The Ottomans profited from the alienation of the common people from their Western or native lords. They assumed the role of protector of the Orthodox church and tried to drive Catholicism out of the Balkans. Even before the installation of Gennadius as oecumenical Patriarch in Constantinople in 1454, the Orthodox priests were recognised and granted pensions and even *tīmārs* by the Ottoman state everywhere. On the other hand when the Latins were driven out of the Balkans in the second half of the 9th/15th century the native merchants, Muslims, Greeks and Ragusans, as well as Jews, replaced them in trade and finance. Ragusa under Ottoman protection surpassed its mediaeval importance in the Balkan trade. Perhaps most important of all was the fact that the Ottoman land and tax system (see DAFTAR-I KHĀḲĀNĪ) brought about a real change in the life of the Balkan peasantry. The Byzantine emperors in the 10th century had made great efforts to uphold the central power by protecting the peasantry against the magnates in the provinces who were constantly trying to enlarge their lands and power. With the Comneni, this struggle had ended in favour of the landed aristocracy, and under the Palaeologi, the central government had lost all its authority. But with the Ottoman state a strong centralised government was established again in the Balkans and this government tried to abolish feudal practices and to prevent any local control over the peasantry. For example the old feudal services such as three days of forced labour, and the obligation to provide wood, hay and straw for the seigneur, were all converted by the Ottomans to one simple tax called *čift-resmi* [*q.v.*]. As the direct agents of the sultan, the *ḳāḍīs* [*q.v.*] and the *ḳapi-ḳulus* [*q.v.*] in the provinces secured the strict application of the laws. Thus it was no wonder that the Christian peasantry remained indifferent to the fate of their lords in their struggle against the Ottomans and until the 11th/17th century no serious rebellion is recorded among the Balkan peasants. It must also be noted that the Ottomans followed a conservative policy towards the previous social classes in the Balkans by adapting their status to the Ottoman system. The pre-Ottoman upper aristocracy, who mostly possessed *pronoia*, were included by the Ottomans in the *tīmār* system or, later, taken into the sultan's court to become high officials. The members of the lower aristocracy, especially *voiniks* (in Turkish *voynuḳ*), who previously were the backbone of the empire of Stephan Dushan, were reorganised in *bölüks* [*q.v.*] in the greater part of the Balkans by the Ottomans and formed a section of the Ottoman army up to the 16th century, when they lost their usefulness and were made simple *reʿāyā*. Other military groups, nomad *Eflaḳs*, and *Martolos* were incorporated into the Ottoman forces in the provinces (see my *Fatih Devri*, i, Ankara 1954, 145-184). Even the *reʿāyā* had access to the ruling class through the *Devshirme* institution. In the classification of the *reʿāyā* [*q.v.*]—that is, the peasants, Muslim or Christian, a system similar to the pre-Ottoman system seems to have been followed and the Byzantine *paroikoi*, who were divided into *zeugarate* and *boïdion* as well as the *eleutheroi*, appear to have survived under the Ottomans with different names, and several Byzantine taxes actually continued in the Ottoman taxation system as *rusūm-i ʿurfiyya* or *ʿādet-i ḳadīma*. These taxes were assigned to the *tīmār*-holders, and the Ottoman *tīmār* system which was the foundation-stone of the empire in the first period acquired its final form in the Balkans. In conclusion we can speak of a continuity of Balkan history in its basic forms under the Ottomans. It was true that national cultures lost their former centres of development, but the peasantry and the church remained in existence and became the foundations of the national states in the 19th century.

During the 10th/16th century the Balkan peninsula enjoyed one of the rare periods of peace and prosperity in its history; everywhere new lands were brought under cultivation, the population increased (5 million about 1535), cities developed, as we can observe in the regular Ottoman land and population surveys, *defters*, preserved in the Turkish archives (see *Iktisat Fakültesi Mecmuasi*, Istanbul, no. 4, 11, 15). After Greek, Turkish became a common language of civilisation in the Balkans.

As Sir T. W. Arnold has already emphasised (*The Preaching of Islam*, London [1st ed. 1896] 3rd ed. 1935, 145 ff.) conversions to Islam in the Balkans were not in general the result of a state policy or the use of force. However, three periods in this respect should be distinguished. Up to Bayezīd II's time the Ottoman state followed a very liberal policy in the matter of religion. In this period voluntary conversions took place among the nobility incorporated in the Ottoman *ʿaskarī* [*q.v.*] class especially among the Bogomils in Bosnia. After Bayezīd II, the Ottoman state became more conscious of being a Muslim state and more careful in the application of the *sharīʿa*. From the 11th/17th century onwards, to begin with as a result of the activities of the Franciscan missions in the Balkans, which were supported by the Hapsburgs and the Venetians

for political purposes, the Ottomans had recourse to certain coercive measures against the Christians in Serbia, Albania and Danubian Bulgaria. This brought about some mass conversions in these countries. In 1690 the Patriarch of Peč took refuge in southern Hungary with 37,000 Serbian families. Large-scale conversions took place among the Albanians during the subsequent centuries [see ARNAWUTLUḲ]. The third important islamised area is found on the Rhodope region where Bulgarian-speaking Muslims are called *Pomaḳs* [*q.v.*].

For further developments in the Balkans under the Ottomans in the subsequent periods see RUMELİ.

(HALIL INALCİK)

BALKAR, a Muslim people of the Central Caucasus, whose origins are the subject of contradictory hypotheses. For some the Balkar are descendants of Bulghar driven back towards the mountains in the 12th-13th century; according to others, their ancestors were the Khazar pushed back towards the upper Terek in the 11th century; finally, others see in the Balkar Ibero-Caucasians or indeed Turkicised Finns. The Balkar traditions say that their ancestors, once living on the steppes of the Kuban, were driven back towards the mountains by the Čerkes tribes (Adīghes), whence in turn they drove away and partially absorbed the Ossets.

Prior to 1946, the habitat of the Balkar, on the northern slopes of the main range of the Caucasus, included the high valleys of the tributaries of the Terek lying between the Elbruz to the West and the Ossete country to the East. The Balkar people (numbering 33,307 in 1926, of whom only 2% were urban dwellers, 42,666 in 1939), are divided into 5 tribes.

In the 16th century the Balkar were subdued by the Kabard and thenceforth adopted the forms of material civilisation of their sovereigns, copying their feudal structure, which persisted practically intact until the Russian conquest. It had five classes: 1. the princes, *tawbii* (analogous to the *pshə* of the Adīghes); 2. the nobles, *uzden* (*uorkh* among the Adīghes); 3. the free peasants, *karakash* (*tl'fakashaw* among the Abaza); 4. the serfs liable to corvée duties, *čagar* (*og* among the Kabard); and 5. the slaves, *kazakh* (*unawt* among the Kabard).

Sunnī Islam of the Ḥanafī rite was introduced among the Balkar at the end of the 18th century by the Crimean Tatars and the Nogai of the Kuban, but pre-Islamic survivals (Christian and animist) still persisted at the beginning of the 20th century.

Russian penetration of the high valleys of the tributaries of the Terek, begun at the end of the 18th century, was completed in 1827 by the conquest of the Balkar country, but was not followed, as in the case of the Adīghes, by rural colonisation; the Russian authorities preferred to favour the setting up of villages of Kumīk, Ossets and mountain Jews in the midst of the Balkar country.

Soviet Balkaria. — The Soviet régime, temporarily proclaimed in December 1918, was finally established in March 1920. By a decree of the All-Union Central Executive Committee dated 21 January 1921, the Balkar *okrug* was attached to the Soviet Socialist Republic of Mountain-dwellers (Gorskaya ASSR). On 1 September 1921, the Balkar country, joined to the Kabarda, became the Autonomous Kabardino-Balkar Region of the RSFSR, and on 5 December 1936 became the Kabardino-Balkar Autonomous SSR. Balkaria was briefly occupied by the German armies during the second world war, was suppressed as an administrative formation by decree of the Praesidium of the Supreme Soviet of the USSR of 25 June 1946, and the Balkar people was deported to Central Asia. A part of it (the valley of the Baksan) was attached to the Georgian SSR and the remainder to the Kabardinian Autonomous SSR. A new decree of the Supreme Soviet of the USSR of 9 January 1957 re-established the Kabardino-Balkar Autonomous SSR and authorized the deported Balkars to return to their country.

The Balkar language, which is simply a dialect of Ḳaračay [*q.v.*], belongs to the Ḳipčaḳ group of Turkish languages. It has been strongly influenced by Ossetic and the neighbouring Ibero-Caucasian languages: Kabard, Čečen and Abaza.

Balkar-Ḳaračai, previously not a written language, was endowed in 1920 with a slightly modified Arabic alphabet (ى = ı, ۆ = ö), replaced in 1925 by the Latin alphabet; the first works were published in Balkar-Ḳaračay in the following year: a collection of poetry by ʿUmar ʿAliev and a Chrestomathy (*Bilim*) by Askhat Bidjiev. Also in 1926 the first newspaper, *Karakhalḳ*, of the Kabardino-Balkar Autonomous Region made its appearence at Nalčik, with alternate pages in Adīghe and Balkar-Karačay. In 1931 the first daily, *Tawlu-Djashaw*, in Balkar-Karačay was published at Mikoyan-Shakhar, the administrative centre of the Karačay Autonomous Region (now Klukhori). Finally in 1938 the Latin alphabet was replaced by the Cyrillic alphabet.

BALḲAYN [see ḲAYN].

BALKH, an important city in ancient and mediaeval times, now a village, located in what is today northern Afghānistān, ca. 67° E. Long. (Greenw.) and 36° 45′ N. lat. It was located on the Balkh river, now dry.

Ancient Bactria was the name of a province of the Achaemenid Empire as well as its chief city. In the Old Persian inscriptions of Darius we find the form Bāxtriš, in the Avesta Bāχδī, and in Greek Βάκτρα. Perhaps the original form was *Bāχdrī, from the name of the river (cf. Markwart, *Catalogue*, 34). Balkh after the conquests of Alexander the Great was a centre of the Greco-Bactrians, then of the Kushans and Hephthalites. In pre-Islamic times the city was a Buddhist centre with a famous cloister, the Nawbahār, the head of which, Barmak [*q.v.*], seems to have exercised political control over the city. Balkh was also famous in Zoroastrian tradition and there must have been five temples there before Islam. The city, at least from the time of Alexander the Great, was protected by great walls. The various traditions on the founding of Balkh, as found in Arabic and Persian sources, are discussed by Schefer and Schwarz (refs. below), where it is apparent that the Arabs knew of the antiquity of the city.

In 32/653 the Arab commander al-Aḥnaf b. Ḳays [*q.v.*] raided Balkh and obtained tribute (Balādhurī, 408). The area was not conquered until the war between ʿAlī and Muʿāwiya was decided in favour of the latter. In 43/663-4 Balkh was reconquered by Ḳays b. al-Haytham or ʿAbd al-Raḥmān b. Samura (cf. J. Marquart, *Ērānšahr*, Berlin 1901, 69). On this expedition, or the first one of al-Aḥnaf, the Nawbahār shrine is said to have been destroyed by the Arabs (Le Strange, 422). During part of this period a local prince, called Nēzak Ṭarkhān, occupied Balkh and caused much trouble to the Arabs (cf. Markwart, *Wehrot und Arang*, 41-2). Unfortunately, the events and chronology of this area under the early Umayyads are confused in the Arabic sources. There were frequent revolts against Arab rule and it is not until the time of Ḳutayba b. Muslim (d. 96/715) that Balkh could be considered subdued. The city seems to have suffered considerably from warfare, and there are indications in Ṭabarī that the city was in ruins about 705 A.D. (Schwarz, 436). The Arabs did not reside in Balkh but maintained a garrison at Barūḳān, two farsakhs from Balkh until the governor of Khurāsān Asad b. ʿAbd Allāh al-Ḳasrī moved the garrison to Balkh rebuilding the city in 107/725. In 118/736 Asad transferred the capital of Khurāsān from Marw to Balkh with the result that Balkh prospered. Abū Muslim had to capture and recapture Balkh from the Syrian troops of the garrison loyal to the Umayyads who were helped by local troops, but his lieutenant Abū Dāʾūd al-Bakrī finally secured Balkh and Ṭukhāristān for the ʿAbbāsids.

Under the ʿAbbāsids the governors of Khurāsān became practically independent, and in Balkh the descendants of the princes of Khuttal held sway (cf. *Ērānšahr*, 301). One of them, Dāʾūd b. ʿAbbās al-Bānīdjūrī, succeeded his father as governor of Balkh, and was driven from his capital by Yaʿḳūb b. Layth in 256/870. In 287/900 ʿAmr b. Layth was defeated and captured near Balkh by Ismāʿīl b. Aḥmad, and Balkh passed under Sāmānid rule. It is Balkh in the 4th/10th century which is described by the geographers in Arabic as *umm al-bilād* "the mother of cities". The later Sāmānid governors of Balkh such as Fāʾiḳ, Alptakīn and Subuktakīn were virtually independent. During the rule of Maḥmūd of Ghazna 387-421/997-1030, Balkh was captured once by Īlak Khan in 397/1006, but Maḥmūd shortly recaptured it. Although Balkh was in the centre of the arena of warfare between the Saldjūḳs and the Ghaznawids, and was threatened with capture by the former after their victory at Dandānḳān in 431/1040, it was not until 451/1059 that they definitely occupied the city. The city changed rulers several times during Saldjūḳ rule and at the end of Sandjar's reign it fell into the hands of the Ghuzz Turks, and was destroyed by them in 550/1155. The Ḳarā Khitāy rulers then included Balkh in their domains from about 560-1/1165 A.D. In 594/1198 Bahāʾ al-Dīn Sām of Bāmiyān occupied Balkh for the Ghūrids and in 603/1206 Muḥammad Khwārazmshāh captured it. Shortly thereafter, in 617/1220, although Balkh surrendered to Čingiz Khān, the city was destroyed and its inhabitants massacred. It took long to recover from this blow, for Ibn Baṭṭūṭa in the early 8th/14th century describes the ruins of the city.

Balkh regained some of its past splendour under the Tīmūrids, and some of the masterpieces of Tīmūrid architecture were erected in Balkh. The citadel of Balkh which had been razed by Tīmūr was rebuilt by this son Shāh Rukh in 810/1407. The end of Balkh as a great centre, however, was forecast by the discovery (ca. 1480 A.D.) of the "so-called" grave of ʿAlī in the vicinity of Balkh. In 886/1481 a shrine was erected at the site ca. 20 km. to the east. By the 19th century around this shrine had developed the present city of Mazār-i Sharīf at the expense of Balkh. In 912/1506 Shībānī Khān of the Özbeks conquered Balkh. Bābūr held the city for a short time as did the Ṣafawids under Shāh Ismaʿīl, but most of the time Balkh remained in Özbek hands. The Özbeks controlled the area until the rise of Nādir Shāh, except for a short period when Shāh ʿAbbās and the Ṣafawids obtained the allegiance of the local khān, and from about 1641 to 1647 when the Mughals occupied it. In 1737 Nādir Shāh suppressed a revolt against his rule by the Özbeks of Balkh, but after Nādir's death the district passed again under local Özbek rule. This was soon followed by submission to Aḥmad Shāh Durranī and the Afghāns about 1752. In the early 19th century the area of Balkh was raided several times by the Özbek Khān of Bukhārā, but from 1841 it remained in Afghān hands.

The importance of Balkh came in great measure from its geographical position on a fertile plain, the meeting place of trade routes from India, China, Turkistān, and Iran. It was natural that a great centre should exist between the Oxus River and the Hindu Kush Mountains. At the present time the ruins of Balkh occupy a large area, and the site of so much promise actually has been very disappointing to archeologists. At the present day the village of Balkh has only a few thousand inhabitants. The visible monuments of Balkh include the ruins of extensive walls (ca. 10 km. perimeter) enclosing the modern village, and two shrines on the square of the present village. One is the Green Mosque in Tīmūrid style but probably built at the end of the 16th century A.D. by an Özbek Khan, ʿAbd al-Muʾmin. Facing it is the tomb-shrine of Khwāja Abū Naṣr Parsā, a Ṣūfī of the 16th century. A nearby *madrasa*, erected by Saʿīd Subḥān Ḳulī Khān (d. 1702), has only one arch left. In the northeast section inside the walls, are the ruins of the shrine of Khwāja ʿAkkashāh Walī from the late Tīmūrid period. In summer the area of Balkh is very hot and dusty, in the winter the area is almost a swamp.

London 1933, 434-43. The text of a Persian history *Faḍā'il-i Balkh* with historical notes is given by Ch. Schrefer, *Chrestomathie Persane*, i, Paris 1883, 56-94, 65-103; Le Strange, 420-3; *Ḥudūd al-ʿĀlam*, 337; Barthold, *Turkestan*, 76-9. For the history of Balkh under the Özbeks see A. A. Semenov, *Mukim-Khanskaya Istoriya*, Tashkent 1956, passim. For photographs and a plan of the present site see A. Foucher, *La vieille Route de l'Inde de Bactres à Taxila*, i, Paris 1942, 59, and O. von Niedermeyer, *Afganistan*, Leipzig 1924, 48, 64. For a summary of the monuments see E. Caspani, *Afghanistan Crocevia dell'Asia*, Milan 1951, 240-2, and further D. Wilber, *Annotated Bibliography of Afghanistan*, New Haven, Conn., 1956, 177-8.

(R. N. FRYE)

BALKHĀN, two mountain ranges east of the Caspian Sea, which enclose the dried-out river-bed of the Özboi (cf. Āmū Daryā). To the north of this river lies the Great Balkhān, a high plateau of limestone, difficult of access, with steep slopes; the highest elevation is at the Düinesh Kalʿe, about 1880 metres. The Little Balkhān, south of the Özboi and cut with numerous ravines, attains (in the west) a height of no more than 800 metres. These mountains, where according to Muḳaddasī, 285, l. 14 ff., wild horses and cattle lived, were searched for iron by the surrounding peoples. The area became, in about 420-2/1029-31, a place of retreat for Türkmen tribes coming from Khurāsān (cf. Ibn al-Athīr, ed. Tornberg, ix, 267). During the following centuries the region was thickly settled with Türkmens and lost more and more its economic importance. The establishment of Russian harbours on the Balkhān inlet of the Caspian Sea (after 1869) and the construction of the Trans-Caspian railway (after 1881) restored to this area a certain importance, which declined, however, after the building of the Orenburg-Tashkent line (1905).

Bibliography: Brockhaus-Yefron, *Enciklopedičeskiy Slovar*, vol. 4, St. Petersburg 1891, 834; *Bol'shaya Sovetskaya Enciklopediya*[2], iv (1950), 167 ff. (W. BARTHOLD-[B. SPULER])

BALKHASH, after the Aral [*q.v.*], the largest inland lake of Central Asia (18,432 sq. km.), into which the Ili and several other less important rivers flow. The lake's existence was unknown to the Arab geographers of the Middle Ages. The anonymous author of the *Ḥudūd al-ʿĀlam* (372/982-983; comp. J. Marquart, *Osteuropäische und ostasiatische Streifzüge*, xxx, makes the Ili (Īlā) flow into the Issīḳ-Ḳul. Of all the Muslim authors, Muḥammad Ḥaydar is the only one, to our knowledge, who, towards the middle of the 10th/16th century (*Ta'rīkh-i Rashīdī*, trans. by E. D. Ross, 366) describes lake Balkhash. The author gives the lake, which then marked the boundary between the country of the Özbegs (Özbegistān) and that of the Mongols (Mughalistān), the name of Kökčä-Teñiz or blue lake, and describes it as a body of fresh water. But he greatly exaggerates its length and breadth and considers the Volga (Itil) as a derivative of Balkhash. Nevertheless, Muḥammad Ḥaydar's statement on the taste of the waters of the lake is important. In point of fact, all the modern geographers have looked upon Balkhash as a salt lake. It was only in 1903 that the investigations undertaken by the Turkistan section of the Imperial Russian Geographical Society, completed in 1931 by the works of the State Institute of Hydrology and in 1941 by those of the Institute of geological Sciences of the Academy of Sciences of the USSR, established that a part of the waters of the lake is fresh water.

The Kalmuks were the first to give the lake its Mongol name of Balkhash. They did in fact dominate in these regions in the 17th and the first half of the 18th century. The name "Balchas" occurs with a reproduction of the lake, very exact for the period, on a map by the Swedish non-commissioned officer J. G. Renat, who spent seventeen years in the country of the Kalmuks, from 1716 to 1733. Comp. *Carte de la Dzoungarie dressée par le suédois Renat pendant sa captivité chez les Kalmüks de 1717 à 1733*, ed. Russ. Imp. Geog. Society, St. Petersburg 1881.

The appearance of the neighbourhood of Balkhash is extremely desolate and arid and until the October Revolution the lake had never played a rôle of any economic importance. Its development began in 1936 with the building of a large industrial city, Balkhash, on the bay of Bertis on the Northern shore of the lake. (W. BARTHOLD-[A. BENNIGSEN])

AL-BALKHĪ, ABU'L-ḲĀSIM (ʿABD ALLĀH B. AḤMAD B. MAḤMŪD), also known as Abu'l-Ḳāsim al-Kaʿbī al-Balkhī, the Muʿtazilite. Born at Balkh, he lived for a long time at Baghdād, where he was the disciple of the Muʿtazilite Abu'l-Ḥusayn al-Khayyāṭ. He founded a school at Nasaf, converted to Islām a number of the inhabitants of Khurāsān, and died at Balkh at the beginning of Shaʿbān 319/August 931. Among his disciples were Ibn Shihāb (Abu'l-Ṭayyib Ibrāhīm b. Muḥammad), who died after 350/962, and al-Aḥdab (Abu'l-Ḥasan). Among his works are mentioned the *Kitāb al-Maḳālāt* and the *K. Maḥāsin Khurāsān*, in which he speaks of Ibn al-Rawandī.

He defended the optimistic Muʿtazilite thesis which states that God cannot abandon the better for that which is less good. Man, he says, can and must do that which is better, whereas God cannot, because there is nothing superior to Him to oblige Him to do better than that which He has done. In agreement with the Muʿtazila, he did not recognise in God attributes distinct from His essence. He held that non-existence capable of existing is a well-determined thing outside existence, namely a simple essence. He considered the atom as inextensive and devoid of qualities of its own; the qualities of the body derive from the aggregate of the atoms, which are therefore not essential but accidental. He distinguished between sensation and impression: man, he says, perceives by his reason the sensible objects which affect his different senses; but the senses by themselves can perceive nothing; they are the routes by which organic impressions reach the reason. The voluntary act, he says, presupposes hesitation and decision, which are characteristic of Man, an imperfect being, whereas in God such an act is totally absent. —The imāmate, he says, must return to the Ḳuraysh, but if a conspiracy is suspected, a non-Ḳurayshite can be elected imām.

AL-**BALKHĪ**, ABŪ ZAYD AḤMAD B. SAHL, a famous scholar known today principally for his geographical work, was born at Shāmistiyān, a village near Balkh in Khurāsān, about 236/850. He died upwards of 80 yeards old in Dhu 'l-Ḳaʿda 322/October 934. His father was a schoolmaster from Sidjistān. As a young man, wishing to study the doctrine of the Imāmiyya sect to which he belonged, al-Balkhī travelled on foot to ʿIrāk with the pilgrim caravan. He remained there for eight years, becoming a pupil of the celebrated al-Kindī and visiting the neighbouring lands. In later life he refused to cross the Djayhūn (Oxus) to go from Balkh to Bukhārā, when invited by the *amir* of the latter place.

During the years which al-Balkhī spent in ʿIrāḳ his studies included philosophy, astrology and astronomy, medicine and natural science (Yāḳūt, *Irshād*, i, 145-6). For a time he was torn between his earlier sectarian religious allegiance and the tenets of judicial astrology, then much in vogue, but he finally became strictly orthodox in his opinions, and pursued the study of the religious sciences side by side with 'philosophy'. He is cited as an almost unique example of one who was equally expert in both, and he is named by Shahrastānī (*Milal*, ed. Cureton, 348) among the philosophers of Islam. He himself relates that he lost his patron, the general Ḥusayn b. ʿAlī al-Marw-al-Rūdī, through the publication of one of his books and Abū ʿAlī al-Djayhānī, also his patron, the *wazir* of the Sāmānid Naṣr b. Aḥmad, through the publication of another, though the general was a Ḳarmaṭian and the *wazir* a Dualist. (This Abū ʿAlī was the son of Abū ʿAbd Allāh al-Djayhānī, [*q.v.*], the geographer, who is perhaps here meant, cf. Barthold, *Turkestan*, 12). Yet the works of al-Balkhī on religious subjects were much praised by competent judges, especially his *Naẓm al-Ḳur'ān*, evidently a work of *tafsir* (*Irshād*, i, 148). Yāḳūt (*Irshād*, i, 142-3, cf. 150) gives the titles of 56 out of 'about 60' works of al-Balkhī, *i.e.*, he adds 13 titles to the 43 listed in the *Fihrist* (ed. Flügel, 138). Of these Ḥādjdjī Khalīfa mentions less than half-a-dozen, and in our own time, apart from a *Kitāb Maṣāliḥ al-Abdān wa 'l-Anfus* (for which see Brockelmann, S I, 408), al-Balkhī is known by a single work, apparently no longer extant as such.

This is the so-called *Ṣuwar al-Aḳālīm*, otherwise *Taḳwīm al-Buldān* (neither title in the list of his works in Yāḳūt), which is generally admitted, since De Goeje's monograph appeared (see *Bibliography*), to be the basis of the geographical works of al-Iṣṭakhrī and Ibn Ḥawḳal, and thus to mark the beginning of what has been called the classical school of Arabic geography. It seems to have been a world-map divided into 20 parts, with short explanatory texts (Muḳaddasī, 4). It has been suggested by Barthold (*Ḥudūd al-ʿĀlam*, preface, 18, n. 5, cf. V. Minorsky, *ibid.*, xv) that al-Balkhī in his book may simply have added an explanation to maps by Abū Djaʿfar al-Khāzin (Brockelmann, SI, 387). Al-Balkhī's fame as a geographer depends solely on this work, which in any case can scarcely be said to have been completely original, in view of the *ṣūra Ma'mūniyya*, also apparently a series of maps, mentioned by Masʿūdī *tempore* al-Ma'mūn (Caliph 198-218/813-833) (*Tanbīh*, 33). Al-Balkhī's interest in geography may have been due to his teacher al-Kindī, for whom a translation of Ptolemy's treatise on the subject was specially made (*Fihrist*, 268), and another of whose pupils, Aḥmad b. al-Ṭayyib al-Sarakhsī, wrote a *Kitāb al-Masālik wa 'l-Mamālik* (*Tanbīh*, 67), apparently the first of several geographical works in Islam with that title. Though Muḳaddasī (68, 260) observes that al-Balkhī did not travel widely, he admits that he was an expert, especially for his own province, mentioning in particular his familiarity with the *dīwāns* (*i.e.*, registers of taxes) of Khurāsān (*ibid.*, 307). This is consistent with what we read elsewhere of al-Balkhī having acted as a secretary (*kātib*) to one of the Sāmānids (*Irshād*, i, 147). His work is cited also by Maḳrīzī (*Khiṭaṭ*, ed. Būlāḳ, i, 115).

BALKUWĀRĀ [see SĀMARRĀ].

BĀLṬA LĪMĀNĪ, situated on the European shore of the Bosphorus between Boyacl-Köyü and Rumeli Hisarī, takes its name from Bālṭa-oghlū Sulaymān Beg, the commander of the Ottoman fleet at the time of the conquest of Constantinople in 1453. It is in fact the ancient Phaidalia and was also known as Gynaikōn Limēn (Portus Mulierum). Gyllius (mid-16th cent.) refers to it as the ". . . . sinum Phidaliae, et portum mulierum . . . .", which the Greeks called Sarantacopa from the wooden bridge there across the marshlands (". . . . quem Graeci nostrae aetatis appellant Sarantacopam . . . . ita nuncupatus a ponte ligneo . . . . quo paludes transeuntur cannis plenae . . . ."). Bālṭa Līmānī, in the 18th and 19th centuries, was a resort popular with the wealthier classes of Istanbul. Several international treaties were signed at Bālṭa Līmānī in the first half of the 19th century: the Anglo-Turkish agreement of 16 August 1838, which accorded to England large commercial privileges with a most-favoured nation clause and also decreed the abolition of trade monopolies in all the territories under Ottoman suzerainty, the pact of friendship, commerce and navigation (3 August 1839) between Belgium and the Porte, and the Russo-Turkish convention of 1 May 1849, which modified the organic regulations of 1831 relating to the Danubian principalities of Wallachia and Moldavia.

(V. J. PARRY)

BALṬADJĪ: a name given to men composing various companies of palace guards under the Otto-

man régime down to the beginning of the nineteenth century. The term was used alternatively with the equivalent Persian *tabardār*, both words meaning, literally 'axe-man', and hence 'woodcutter', 'pioneer', 'halberdier'.

It would appear that originally the *balṭadjïs*, whose corps was recruited from the *ʿAdjemī Oghlans* [*q.v.*], were employed in connexion with the army in the felling of trees, the levelling of roads, and the filling of swamps, but that even before the conquest of Constantinople some of them were posted as guards to the imperial palace at Adrianople. Thereafter, with the foundation at Istanbul in turn of the 'Old' and 'New' *Sarays*, Galaṭa Sarayï, and the *saray* of Ibrāhīm Pasha, other companies of *balṭadjïs* were formed for each. The men of all these companies except that of the New, later called the Ṭopḳapï, Saray, were admitted, after a certain length of service, to the *odjaḳ* of the Janissaries, whereas those of the Ṭopḳapï Sarayï enjoyed the privilege of entry into the *Sipāh* and *Silāḥdār bölüks* [*q.v.*] of the standing cavalry. The men of this privileged company were known as *zülüflü balṭadjïlar*—that is to say "blinkered" *balṭadjïs*—for the curious reason that, since one of their duties was to carry the wood required for heating the imperial *ḥarem* into that forbidden precinct, on the occasions of their performing this duty, in order to prevent their inadvertently catching sight of the ladies of the establishment, they wore "blinkers" made of cloth or gold lace hanging down on either side of their faces from their tall pointed caps (the Persian *zulf* signifying 'a lock of hair'), as well as special jackets furnished with exceptionally wide upright collars.

Upon the closure in 1675 of the sarays of Galaṭa and Ibrāhīm Pasha, their *balṭadjï* companies were abolished. By this time also recruitment by *dewshirme* had all but ceased. The remaining companies were mostly recruited therefore from free-born Anatolian Muslims, though the relatives of palace servants were also sometimes admitted into them. The *Zülüflü Balṭadjïs* were suppressed by Muṣṭafa III but revived by ʿAbd al-Ḥamīd I, and remained in being until the palace service as a whole was reorganised by Maḥmūd II. They were commanded by a *kāhya* (*kedkhüdā*) responsible to the sultan's principal page, the *Silāḥdār Agha*.

Twelve *ḳalfas* of the *Zülüflü Balṭadjïs*, distinguished by their literacy, had various special duties. Thus they would bring out, and stand behind, the sultan's throne at his accession and upon *bayrams* [*q.v.*]; guard the Prophet's Standard (*sandjagh-ï sherīf*) and read the Ḳurʾān beneath it on campaign; take charge of the belongings of the *ḥarem* ladies every year when they and the sultan removed to one of the summer *köshks*; and—from the seventeenth century—present officiants of the Sulṭān Aḥmed mosque with sherbet, rose-water and incense at the yearly celebration of the Prophet's Birthday (*Mewlūd*).

Each of the chief officers of the palace, moreover, had one or more *Zülüflü Balṭadjïs* in attendance on him; and two important offices in the palace service were filled by *ḳalfas* of the corps: that of the head cook of the *Kush-khāne* (the imperial kitchen) and his second in command.

The *Balṭadjïs* of the Old Saray, which from the late fifteenth century was the residence of the sultans' mothers, were responsible down to the seventeenth century to the *Ḳapï Aghasï* [*q.v.*] and thereafter to the *Ḳïzlar Aghasï* [*q.v.*], to whom those who could acquire enough learning in the Bayāzīd *medreses* might act as confidential secretaries or as clerks for the *awḳāf* of the Holy Cities, whereas other senior members of this corps might serve the Wālide Sulṭān and other princesses as chief coffee-makers (*ḳahwedji-bashï*).

A number of Grand Viziers were former *balṭadjïs*, of whom perhaps the best known are Balṭadjï Meḥmed Pasha, who defeated Peter the Great on the Pruth in 1711, and Newshehirli Ibrāhīm Pasha, the last minister of Aḥmed III.

BALTISTĀN, known to Muslim writers as Tihbat-i khurd or Little Tibet, lying between 34° and 36° N and 75° and 77° E between Gilgit and Ladākh, extends some 150 miles on either bank of the Indus, covering an area of 8,522 sq. miles. A mountainous country, it has some of the highest peaks in the world: Godwin Austen (K 2), 28,250 ft., conquered in 1953; Gasherbrum, 26,470 ft., conquered in 1958, and Haramosh, 24,000 ft. Skārdū the chief town, was electrified in 1951. It has an airstrip, a modern hospital and a number of schools. A new *bāzār* has been recently built.

The Baltīs were converted to Islam in the 8th/14th century partly by Sayyid ʿAlī Hamadānī of Srinagar (Kashmīr) and partly by his *khalīfa*, Sayyid Muḥammad Nūr Bakhsh. They are polygamous and of the Shīʿite persuasion. Their neighbours, the Hunzas, are followers of the Āghā Khān. The language used by the Baltīs is a mixture of Ladākhī and Tibetan but has a sprinkling of Arabic and Persian words, indicative of the influence of Islam.

The old rulers of Baltistān are known as Rādjās or Giālpōs, the most famous being ʿAlī Shīr Khān who flourished in the 10th/16th century and also built a fort at Skārdū. His expeditions to neighbouring regions still form the theme of many a native folk-song. In the early 11th/17th century another Giālpō, ʿAlī Mīr, chief of Skārdū, invaded and conquered the home-land of the Baltīs. The last of the Giālpōs, Aḥmad Shāh, lost his independence to the Dogra general, Zōrāwar Singh in 1840, when Baltistān was annexed to the Kashmīr State, then ruled by Gulāb Singh. It came under the British sway in 1846 by the Treaty of Amritsar when it was placed under the Wazīr Wizārat of Ladākh.

In February 1948, the people of Baltistān rejected the suzerainty of the Mahārādja of Kashmīr and requested the Pākistān Government to take over control of the area. Since then it is being administered by the Chief Adviser, Kashmīr and Baltistān. It has made general progress; almost the entire area now has a net of pony tracks. Skārdū is linked with Rawalpindi by air. An airmail service has also been introduced between Baltistān and Pākistān. Improved educational, medical and other facilities have been provided raising the standard of living of the people. Large amounts have also been sanctioned for the economic development (specially the construction of roads) of the area.

BALŪČ (Balōč) of the USSR, elements who emigrated from Khurāsān at the end of the 19th and the beginning of the 20th century, whose emigration in fact continued after 1918. They are sometimes erroneously confused with the Gipsies of Central Asia (see Lūlī]. At the 1926 census, 936 Balūč were counted; this figure underestimates their true number, as some of them were reckoned with the Turkmen and others with the Čingānes; on the other hand, the estimate made by Grandé (*Spisok narodnostey SSSR,* in *Revolyutsiya i Natsional'nosti,* no. 4 of 1936, 74-85), who assessed them at 10,000 in 1933, is excessive. The Balūč inhabit the SSR of Türkmenistān, in the region of Marī. They are Sunnī Muslims of the Ḥanafī rite and speak the Makrānī dialect of Balūčī; this, however, is disappearing, gradually ceding ground to Türkmen, which is used as the literary language, and to Tādjīk. Until 1928, the Balūč were nomads, but between 1928 and 1935 they were settled and grouped in stock-rearing Kolkhozes. Their carpets, the manufacture of which is a craft, are justly famous. (A. Bennigsen)

BALŪČISTĀN (Balōčistān), land of the Balōč.

A. Geography and History. The exact boundaries of Balōčistān are undetermined. In general it occupies the S.E. part of the Iranian plateau from the Kirmān desert east of Bam and the Bashagird Mts. to the western borders of Sind and the Pandjāb. This arid and mountainous country with a predominantly nomadic population is divided between Iran and Pakistān. At present Balōč are also found in Sind and the Pandjāb, in Sīstān and a few nomads in the USSR near Marw, [see above].

The rivers of Balōčistān are small and unimportant. One may consider the country a plateau with the rugged Sulaymān range in the East and several mountain ranges in the West, the most spectacular peak of which is the volcano Kūh-i Tāftān (13,500 ft.). The town of Īrānshahr (formerly Fahradj) is the capital of Persian Balōčistān with Kalāt the most important centre in the East. The seaports, such as Tīz, Pāsnī and Gwādar, formerly active, now have lost their importance.

The population of the area, including Brahōīs, is uncertain, hardly more than two million today. Although the Balōč are the majority of the population, with the Brahōīs the largest minority, there are also Djaṭs and other Indian elements on the eastern coast, and negroid people in the port towns especially in Persian Balōčistān. The Balōč are divided into two groups separated from each other by the Brahōīs in the Kalāt area which accounts for the two major dialects.

The earliest mention of the area, called Maka, is in the Old Persian cuneiform inscription of Darius at Behistun and Persepolis. Other names occur in classical sources, but very little is known of the country in pre-Islamic times. It is probable that Iranian speakers were late in coming to Balōčistān and the southern and eastern parts of Balōčistān were predominantly non-Iranian until well after the Islamic conquests. The Balōč probably entered Makrān (*i.e.*, western Balōčistān) from Kirmān about the time of the Saldjūḳ invasion of Kirmān.

Kirmān was conquered by the Muslims in 23/644 in the caliphate of ʿUmar. In the mountains of Kirmān they met Ḳufṣ or Kōč and Balūṣ or Balōč who were marauding nomads. At this time the Zuṭṭ or Djaṭs were in Makrān, which was not conquered by the Arabs. In the time of Muʿāwīya, ca. 44/664, the towns of Makrān were occupied and war was waged with the Mēds of the coast, while raids extended as far as Sind.

In the time of al-Ḥadjdjādj b. Yūsuf (86/705) in the inter-Arab struggles the ʿAlāfī Arab faction was driven into Sind to be followed in 89/707 by Muḥ. b. Ḳāsim with an Arab army. It is difficult to identify the places he captured but Muslim rule was extended by him through Balōčistān to Sind. It is probable that the Arabs maintained their influence only on the coast, but we have very little information about the entire area throughout the ʿAbbāsid caliphate. Maḥmūd of Ghaznī maintained authority over Ḳusdār (the Kalāt plateau) acc. to the *Ṭabaḳāt-i Nāṣirī.*

The Balōč and the Koč tribes during the Umayyad and ʿAbbāsid caliphates raided from Kirmān, spreading into Sīstān and Khurāsān. According to Yāḳūt the Balōč were decimated by ʿAḍud al-Dawla the Būyid (338-372/949-982). They continued their depredations until Maḥmūd of Ghaznī sent his son Masʿūd against them, who defeated them near Khabīs. Shortly after this time the eastward movement of the Balōč began, for they left Kirmān and went into Makrān. It is possible that the strong centralised government of the Saldjūḳs made raiding unprofitable for the Balōč who consequently moved eastward. Two centuries later the Balōč are found in Sind. In the Kalāt highlands the Brahōī confederacy, including some Balōč and Afghān tribes, kept the main body of Balōč from inundating the area, and the Balōč then moved into Sind and the Pandjāb. No permanent kingdom was established but each tribe was under its own chief and inter-tribal fighting was common.

The first tribes of which any records have survived are the Rinds under Mīr Čākur and the Dōdāīs under Mīr Sohrāb who appeared at the court of Shāh Ḥusayn Langāh at Multān, who ruled from 874-908/1467-1502. The tradition is that Mīr Čākur and his Rinds came from Sibī and took service with Shāh Ḥusayn. Other Balōč followed and, according to ballads, there was war between the Rinds and Dōdāīs. In these legends the memory of the migration of the Balōč to India is preserved.

The Dōdāīs and Hōts, another Balōč tribe, spread up the Indus valley and Bābar met them as far north as Bhērā and Khushāb in 1519. The towns of Dēra Ismaʿīl Khān and Dēra Ghāzī Khān were founded by the sons of Sohrāb Dōdāī in the time of Shēr Shāh, who confirmed their possession of the lands of the lower Indus valley. According to tradition these Balōč aided Humāyūn in his reconquest of Dihlī and were in the good graces of the Mughal rulers.

The only history we have of Balōčistān in the later period concerns the Brahōī confederation. The Brahōī confederation began to expand in the 17th century under the Kambarānī chiefs. At the end of the century one of these rulers, Mīr ʿAbd Allāh extended his power west throughout Makrān and south to the sea. Nādir Shāh of Persia regarded the Brahōī Khāns with favour, for after his Indian conquests he awarded them lands in Sind taken from the Indian Kalhōras.

Aḥmad Shāh Durranī established his authority over Makrān, and the Brahōī Khān recognised him as his suzerain. This Brahōī, Naṣīr Khān, extended his rule over Las-Bēla including Karāčī. He organised

the Brahōīs into the two main groups of Sarāwān and Djahlāwān. Each tribe had to supply the Khān with troops at the Khān's request but were otherwise free from taxes.

Naṣīr Khān became so powerful that he defied his suzerain Aḥmad Shāh who defeated him in 1172/1758 and besieged him in Kalāt. Peace was made on condition that Naṣīr Khān retain his independence but agree to render military service to Aḥmad Shāh, which he did. Naṣīr died in 1210/1795 and was succeeded by his son Maḥmūd Khān who was unable to retain the extensive dominions of his father. Western Makrān was lost and some Balōč tribesmen took Karāčī. Maḥmūd died in 1821 and was succeeded by his son Miḥrāb Khān. The latter mixed in Afghan affairs which brought him in conflict with the British. In 1838 a force under Gen. Wiltshire was sent against Kalāt which was stormed and Miḥrāb Khān was killed. After much confusion and a second occupation of Kalāt by the British, the son of Miḥrāb was recognised as Khān at the end of 1841 with the name Naṣīr Khān II. In 1854 the Khān signed a treaty, accepting a position of subordination to the British Government, but his authority over the tribes declined. He died in 1857, and the disorders and revolts which followed his death filled the years until 1876 when Capt. Sandeman brought about a treaty which recognised Kalāt as a protected state in the India Empire. The establishment of Quetta as a military centre and the building of a railroad in Balōčistān in the 1880's kept the country pacified.

The boundary between Kalāt and Persia was laid down in 1872 and revised in 1895-6, but for the most part the Balōč tribes disregarded the frontier.

Much less is known of Persian Balōčistān. Although the Balōč tribes owed allegiance to the Ṣafāwids and Ḳādjārs in fact they were independent. Raiding parties of Balōč terrorised the settlements of Kirmān and Khurāsān until the 1930's. The Nahrōī tribe today is perhaps the most important in Persian Balōčistān and Sīstān, but it is difficult to obtain information about the various tribes, who perhaps know very little themselves about their history and present status.

There are many ballads and stories on Balōč history, many apocryphal, though some, telling of eponymous ancestors, may contain actual history.

Bibliography: For travellers' accounts, see the literature in A. Gabriel, *Die Erforschung Persiens*, Vienna 1952, 137-140, 175, and *passim*. On ethnography, cf. M. Longworth Dames, *The Baloch Race*, London 1904, and Mockler, *The Origin of the Baloch*, in *JRASB*, 1895. History is poor; for the early periods the sources are only scattered notices in the standard Arabic histories and geographies; for later history see Elliot and Dowson, *The History of India*, London, 1867-77, esp. vols. 1, 2 and 5; H. Raverty, *Ṭabaḳāt-i Nāṣirī*, transl. and notes, London 1881; Thornton, *Life of Sir R. Sandeman*, London 1895. (R. N. FRYE)

B. Language. — § 1. *Linguistic history*.

Within the main division of Iranian languages, based on the treatment of the simple I(ndo)-E(uropean) palatals **k̂* and **ĝ* into a Western, Persic, and an Eastern group, Bal(ūčī) belongs to the latter, cf. *āsk* 'gazelle': N(ew) P(ersian) *āhū*; *zān-* 'to know': NP *dān-*; *burz* 'high': NP *buland*. The Balūčīs are thought to have migrated to their present habitat from the shores of the Caspian Sea. One therefore looks for orientation on the ancestor of Bal. to the two of the known Middle Iranian languages which are nearest to that area, *viz*. M(iddle) P(ersian) (belonging to the Western group) and P(arthian) (belonging to the Eastern group), whose meeting point lay to the South of the Central Caspian region.

Bal. ranges with P not only in the treatment of the simple IE palatals (cf. also the special development of IE **k̂u̯* in *āsin* 'iron': P *ʾʾswn*: MP *ʾʾhwn*), but also, *e.g.*, of O(ld) Ir(anian) *ǰ* (*ǰan-* 'to strike': P *jn-*: MP *zn-*), *-d-* (*pād* 'foot', *gidān* 'tent': P *pʾd*, *wdʾn*: MP *pʾy*, *wyʾn*), *-rd-* (*zirdē* 'heart': P *zyrd*: MP *dyl*), *-sč-* (*paš-tara* 'later': P *pš*: MP *ps*), *du̯-* (*iptī* 'other': P *bdyg*: MP *dwdyg*), and *xwā-* (*w(h)aš* 'sweet, happy': P *wxš*: MP *xwš*); ¶ it agrees with MP *e.g.*, in the development of OIr. *y-* (*ǰitā* 'separate': MP *jwd*: P *ywd*; *ǰuz-* 'to move': P *ywz-*), *-zg-* (*maǰg* 'brain': MP *mgj*, cf. NP *maγz*), and *θr* (*sai* 'three', *pusaγ* 'son': MP *sh*, *pws*: P *hry*, *pwhr*); ¶ and differs from both MP and P, *e.g.*, in the treatment of OIr. *x-* (*kand-* 'to laugh': MP *xn-*: P *xnd-*; *sōtka* 'burnt': MP, P *swxt*; *bakš-* 'to give': MP, P *bxš-*), *f* (*hapt* 'seven': MP, P *haft*; *kōpag* 'shoulder', cf. MP, P *kōf* 'mountain'), *-θ-* (*mētag* 'house', cf. P *myh*: 'vacillating'), *-k-* (*gōkurt* 'sulphur': MP *gwgyrd*; *makask* 'fly': P *mgs*), *-č-* (*ač* 'from': MP *ʾz*: P *ʾž*), *-p-* (*āp* 'water': MP, P *ʾb*), *-t-* (*gwāt*, v. below), *wă-* (*gwāt* 'wind', *gwarak* 'lamb': MP, P *wʾd*, *wrg*), *wĭ-* (*gīst* 'twenty': MP, P *wyst*; *gidān*, v. above), *xwai-* (*hēd* 'sweat', cf. MP *xwybš*, P *wxybyh* 'own'), *-šm-* (*čamm* 'eye': MP, P *čšm*), *-šn-* (*tunnag* 'thirsty': MP *tyšng*, cf. P *tšynd* 'thirst'), and the preverb *fra-* (*ša-*: MP, P *fra-*).

Apart from phonological matters, Bal. agrees with P against MP in avoiding the Iḍāfat construction, and using, *e.g.*, *kap-* for 'to fall' (P *kf-*: MP *ʾwptʾd-*), *gwaš-* for 'to say' (P *wʾc-*: MP *gw-*), *ātka* for 'gone' (P *ʾgd*: MP *ʾmd*), and *girōk* for 'lightning' (cf. P *wrwc*: Pahlavī *rwcʾk*); however, the Bal. present of 'to do' is *kan-* (MP *kwn-*, against P *kr-*), and while MP has *rw-/rp(?)-*, P *šw-* for 'to go', Bal. uses the former stem in the present, the latter in the past; for the present of 'to sit' (MP *nšyy-*, P *nšyd-*) and 'to see' (MP, P *wyn-*) Bal. goes its own way with *nind-* and *gind-*; on the other hand the passive construction of transitive verbs in the past tenses is characteristic of all three languages.

The ancestor of Bal. was thus neither P nor MP, but a lost language which, while sharing a number of characteristic features with either, and some with both, had a pronounced individuality of its own. This language may have been a variety of Median speech since the Kurdish dialects, which have a noteworthy affinity with Bal. (v. P. Tedesco, in *Monde Oriental*, xv, 252), are to be traced, in V. Minorsky's opinion (*Travaux du XXe Congrès des Orientalistes*, 143 ff.) to ancient Median. However, such distinctive straits of Bal. as are also met with in Ormurī (*e.g. ša-* < *fra-*, and *gwa-* < *u̯a-*, the latter development to be found also in Khūrī, see V. Minorsky in *BSOAS* xix, 61, n.l. and, according to I. Gershevitch, in the dialects of Rūdbār, Rūdān, and parts of Baškard), may have been borrowed from an Iranian substratum in territories to which the Balūčīs had moved, see G. Morgenstierne, *Indo-Iranian Frontier Languages*, i, 316 f. Moreover, since Middle Iranian times Bal. has borrowed on a considerable scale from Persian. At a more recent stage loanwords from Sindhī, Brahūī, and Pašto have penetrated into Bal.

For a different classification of Iranian dialects, using different criteria, see now W. B. Henning, *Mitteliranisch* (*Handbuch des Orientalistik*), 89 ff.; note Khwārizmian *ša-* < *fra-*, *ibid.*, 114.

§ 2. *Dialects.*

Bal. dialects are divisible geographically and linguistically into two great groups: Western and Eastern, separated from each other by a strip of territory inhabited by Brahūī-speakers, extending from Quetta in the North to Las Bela in the South.

A) Western. The Western dialects (also called 'Southern' or 'Makrānī') are spoken principally in the Makrān, their territory extending from Biyābān north of Cape Jāsk in Persian Balūčistān (abt. long. 57°) eastwards to Ras Malan in the Sind (abt. long. 66°), thence northwards to the Afghan frontier, and thence along this frontier westwards into Kirmān. The map in the *LSI*, x, 327 (v. bibl.) shows a territory where there live mixed Balūčīs and other language speakers, extending from the north-west corner of the Makrān along the Persian-Afghan frontier northwards into Russian Turkestan, in the province of Marw. Details of these Marw Balūčīs remained obscure until 1927-28, when I.I. Zarubin first investigated their language. They number about 10,000 (mainly in the *rayons* of Yolotan, Bāiram ʿAlī, and Kuibyshev.)

B) Eastern. The Eastern dialects (also called 'Northern') are spoken by tribes in an area extending from Karāčī northwards through the Sulaymān mountains approx. to Dera Ismāʿīl Khān.

C) The principal dialect differences are given by Geiger, in *Gr. I. Ph.*, I², 232. It may be noted further that:

1. The W(estern) stops *k p t g b d* and the affricates *č, ǰ* are changed in the E to the corresponding spirants *x f* θ γ β δ and *š, ž* when following a vowel, except in pre-consonantel position (for examples, v. *LSI*, x, 338).

2. W *ū* (*būta* 'was', *nūn* 'now', *mālūm* 'known') becomes E *ī* (*bīθa*, *nīn*, *mālīm*).

3. The W pronouns *hamā* 'same', *šumā* 'ye', are in E *hawā*, *šawā*. Further dialect subdivision:

A) Western. Information regarding the distribution and character of these dialects is too scanty to permit of more than broad outlines.

I. Kēčī dialects, spoken in the district of Kēč, in South-Central Makrān and west of a line from Kēč to Gwādar on the coast. A variety of this dialect is also spoken by about 10,000 Balūčīs in Karāčī, who are probably recent emigrants.

II. Panǰgūrī dialects, spoken in the district of Panǰgūr in NE Makrān, and east of a line from Kēč to Gwādar.

III. The dialect of the Marw province.

There are many similarities, both lexical and grammatical, between the Panǰgūrī and Marw dialects. Comparison of P(anǰgūrī), M(arw) and K(ēčī) shows:

1. P, M *ū* (P *hūk*, M *ūk* 'swine') becomes K *ī* (*hīk*);
2. OIr *-xt-* becomes K *-tk-* (< **kt-*) but P *-xt-*, *-ht-*, and M *-t-* (< **-ht-*: M drops *h* in all positions);
3. Gen. sing. of nouns: in K *-a*, *-ēg*, *-īg* or no ending: P, M *-ē*, *-ai*;
4. Voc. sing.: in K *-a* or no ending; P, M *-ē*, *-ī*.
5. 1st sing. pres-fut. in K *-ān*: P, M *-in*;
6. K *pit*, *māt*, *brāt* ('father, mother, brother') correspond to P, M *pis*, *mās*, *brās*;
7. The 1st sing. of the suffixed verb 'to be' is K *-ān*, but P, M *-un*.

Lexically, we have K *lōg* 'house', but P, M *gis*; K *ās* 'fire', P *āč*, M *ātiš*; K *haik* 'egg', but M *ā(murg)*; especially characteristic of M and P are the verb *di-* 'to strike' and the adverbs in *-ingō*, *-angō*. K and P have many more Sindhī loanwords, but rather less Persian than has M.

B) Eastern.

I. The purest E. dialects are spoken in an area stretching from Quetta through Loralai to include Dera Ghāzī Khān and south to include Marrī and Bugtī territory, into the Upper Sind Frontier.

II. The Kasrānī dialect, north of Dera Ghāzī Khān up to Dera Ismāʿīl Khān. This dialect has been strongly influenced by neighbouring Indian languages: cerebralisation is common, normal E θ becomes δ, *-ptʿ-* becomes *-tt-* (*kʿatta* 'fallen'), *gw-* becomes *gu-*; and it has a large number of Indian loanwords (principally Sindhī and Lahndā).

III. The dialects of Sind, south of Jacobābād. These are much more mixed with and influenced by Sindhī than the others; typical of them is the Käččʿēǰī-Bōlī, spoken by about 100,000 in a district north of Karāčī. In it all E θ, δ become *s*, *z*; cerebralisation is a general rule, voiced stops are usually aspirated, and final vowels are affixed to words ending in a consonant.

The E dialects have been much better studied than the W, and reference to the bibliography must suffice here for them.

BALYEMEZ, the name given to a large calibre gun. The term is encountered in Ottoman chronicles and other works and is still to be found occasionally in relatively late sources (down to the 19th century). Balyemez cannon were first introduced into the Ottoman army in the time of Sulṭān Murād II. Meḥemmed II the Conqueror, who undertook regular large-scale military operations, made great use of such guns. He caused the Transylvanian Urban, a noted cannon-founder, to construct a special siege gun of the Balyemez type, for the purpose of breaching the walls of Constantinople. The technique of gun-casting became available to the Ottomans through Western and, above all, German specialists. The production of a Balyemez gun was described in some detail by Kritobulos, the Greek panegyrist of Meḥemmed II. Since guns were at that time employed only in siege warfare, the Turks, as a rule, used to cast them on the spot; there is but seldom any reference to the transport of guns already cast. The name Balyemez ("that eats no honey") is in all probability a jesting and popular transformation of the German "Faule Metze" (the famous cannon of the year 1411 which, together with the "Faule Grete", altered the entire conduct of war, as it stood at that time). The word came to the Ottomans, as a technical term, through the numerous German gun-

founders in the Turkish service. It passed also, from the Turkish, into various languages of south-east Europe. The nickname Balyemez, occasionally given to Ottoman army commanders, is a secondary derivation from the name of the gun.

Bibliography: H. J. Kissling, *Baljemez*, in *ZDMG*, 101 (1951), 333-340, where further bibliographical references will be found [see also MĀRŪD and TOP]. (H. J. KISSLING)

BĀLYŌS, Bālyoz (originally Baylōs), the Turkish name for the Venetian ambassador to the Sublime Porte—in Italian, *bailo* (Venetian ambassadors at Byzantium had borne this title since 1082; other *baili* were at Tyre and Lajazzo/Payas near Alexandretta). The Venetians, immediately after the conquest of Constantinople, sent off as *bailo* Bartolommeo Marcello, who on 18 April 1454 made with the Porte a commercial treaty which renewed the agreement already existing with the Ottomans since 1408. Under this new treaty Venice had the right to maintain at the Sublime Porte a bailo with his seat in Pera and with the power to issue passes for Venetian merchants and to exercise in relation to those merchants certain legal functions. The representatives of Venice sat in Constantinople, except in time of war, until the fall of the Republic in 1797; their tenure of office lasted, during the 17th and 18th centuries, in principle for three years. There were moreover special ambassadors to the Porte who also bore the name of *bailo*. The *baili* played, in the 16th and 17th centuries, an important rôle politically; several amongst them, in times of tension or of war, were thrown into prison (as a rule in Yedikule). The reports (*relazioni*) which they submitted to the *Signoria* bear witness to their perspicacity. These reports have been published in two series: (i) E. Albèri, *Relazioni degli Ambasciatori Veneti al Senato*, ser. iii: Turchia, 3 vols., Florence 1840-1855; and (ii) N. Barozzi and G. Berchet, *Le Relazioni degli Stati Europei lette al Senato dagli Ambasciatori Veneti ne' secolo decimosettimo*, ser. V: Turchia, Venice 1866, 1872.

List of the Baili: Cf. (i) Barozzi and Berchet, *op. cit.*, i, 9 ff.; and (ii) B. Spuler, *Die europäische Diplomatie in Konstantinopel*, Pt. iv, in *Jahrbücher für Geschichte Osteuropas*, i, (1936), 229-247 (with additional references).

With the generalised meaning of European diplomatic or consular agent, the word is also encountered in some Arabic dialects and in Swahili.

BAM (Arab. Bamm). District and town in the VIIIth *ustān* of Persia. In the middle ages the district was one of the five into which the province of Fārs was divided. The town is situated in an oasis on the south-western fringe of the great desert of the Dasht-i Lūṭ. Bam is 1257 km. from Tehran and 193 from Kirmān; Zāhidān, on the further side of the Dasht-i Lūṭ, is 324 km. distant. Standing at an altitude of 1,100 metres, Bam is hot in summer, but the winter climate is temperate. Situated as it is on the most practicable of the routes linking south-west Persia with Sīstān, Afghānistān and Balōčistān, the town has, ever since its foundation in Sāsānid times, been a place of some strategic and commercial importance. Since the 4th/10th century Bam has been noted for its citadel, which was for long regarded as impregnable; this citadel has often served as a bastion against invaders and marauders from the east. During the war between the Ṣaffārid Yaʿḳūb b. Layth [*q.v.*] and the Ṭāhirids in 260/873, the fortress was used as a prison. The *Ḥudūd al-ʿĀlam*, 125, describes Bam as it was in the latter part of the 4th/10th century: "Bam, a town with a healthy climate . . . in its *shahristān* stands a strong fortress. It is larger than Jiruft and possesses three cathedral mosques . . . . one belongs to the Khāridjites, another to the Muslims, and the third is in the fortress. From it come cotton stuffs (*karbās*), turbans (*ʿamāma*), Bam-turbans (or kerchiefs, *dastār-i bamī*) and dates". Similar details are given by Iṣṭakhrī, Ibn Ḥawḳal and al-Muḳaddasī. In those days the citadel, which was in the centre of the town, contained part of the bazaars. The houses were of sun-dried brick. There were a number of baths, the best known being in the street or lane of the willows (*zuḳāḳ al-bidh*).

In 1131/1719 Maḥmūd, the Ghalzay leader, captured Bam, but abandoned it some months later owing to a revolt in Ḳandahār. In 1134/1721 he captured the town again and it remained in Afghān hands until their power was shattered by Nādir [*q.v.*] in 1142-3/1729-30. It was doubtless in order to guard against possible future attack from the east that Nādir greatly strengthened the defences of the town.

It was at Bam that Āghā Muḥammad Khān captured the gallant Luṭf ʿAlī Khān, the last of the short-lived Zand dynasty, in 1210/1795: in order to celebrate his success the Ḳādjār erected a pyramid there consisting of the skulls of 600 of his adversary's followers (R. G. Watson, *A History of Persia from the beginning of the XIXthCentury to the Year* 1858, 75). In 1256-7/1840-1 Bam came into prominence again, when Āghā Khān Maḥallātī occupied it during his revolt. In the old town, which is now almost entirely in ruins, the only building of interest, apart from the striking citadel, is the shrine of the Imām Zayd b. ʿAlī Zayn al-ʿĀbidīn. The modern town, which is some 500 metres to the south-west of the old one, has a population of 13,500; it is divided into four quarters by two broad avenues (*khiyābān*) which intersect in the centre. As in former times, the principal products of Bam and the surrounding district are dates and cotton-stuffs.

Bibliography: In addition to works mentioned in the article: Iṣṭakhrī, 166; Ibn Ḥawḳal, 223; Muḳaddasī, 465; Ibn al-Faḳīh, 206 and 208; Ibn Khurradādhih, 49, 54, 196, 242; Ibn Rustā, 106, 286, 308; al-Bakrī, 162 ff.; Yāḳūt, *sub verbo*; Abuʾ l-Fidā, 336; Ḥamd Allāh Mustawfī, *Nuzha*, 76; E. Lockhart, *Persia*, London 1957, 38-9 and plates 75-78. (L. LOCKHART)

BAMAKO, chief town of the territory of the Sudan (French West Africa), on the Niger, at the

junction of the two navigable stretches of the river, at the end of the Dakar-Niger railway, served by an important aerodrome. Formerly a trading post on the routes between the Sahel and the Southern region, and between the Sudan and Senegal, Bamako occupies a central position in French West Africa which is the reason for its flourishing state: the population of the town, numbering 800 in 1883, had risen to 37,000 in 1945, and today (1958) has reached 100,000 (of whom 4,000 are Europeans). It owes its importance to its administrative and political rôle.

Bamako was founded by a Bama hunter and named by his Niaré successor, who came from Kaarta, Bama-ko = "after Bama" (the etymology "river of the crocodiles" is incorrect). The size of the original village increased as there came to it first fishermen, and then men from Draa (the Dravé) and Touat (the Touré) who brought with them Islam; the town thus comprised four quarters: Niaréla, Touréla, Bozola, and Dravéla, the basis of the present city.

In a short time Bamako, a bridgehead on the Niger, became a French political objective; after the war of 1870, a move was made in its direction, and it was occupied in 1883 by Col. Borgnis-Desbordes. From then on, as a base for French operations in the Sudan, its population was constantly swelled by groups of Senegalese and Sudanese. In 1904, the railway reached the town, which became in 1907 the chief-town of Upper Senegal and Niger: a large administrative, military and medical (Institutes of Leprosy and Tropical Ophthalmology) centre grew up, and the town also tended to become a university (Federal School of Public Works) and cultural (French Institute of Black Africa) centre.

Bamako is an Islamic city, but its Islam is africanised, lax, and often tainted with animist survivals. Far from being a centre of religious expansion, the city has always been under the influence of the ancient Muslim towns in the region and of families of Moorish marabouts. The Ḳādiriyya and the Tidjāniyya have long been established there; at first in the majority, the Ḳādiriyya were supplanted by the ʿUmariyya; between the two wars, Hamallism, in a more sober form, developed there; at the present time there has come into being a reformist group which proposes to purify the local form of Islam. It is possible to foresee Bamako, following its present bent, seeking to assume a leading rôle in an Islamic revival. In conclusion, it should be noted that Bamako has a small Christian community and is the seat of an archbishop.

The town, originally built of mud, does not possess any ancient historical monuments.

Bibliography: Scanty. Information should be sought in official publications and in historical works on the Sudan. (M. Chailley)

BAMBĀRA [see mande and sūdān].

BĀMIYĀN, in the Arabic sources frequently al-Bāmiyān, a town in the Hindu-Kush north of the main range in a mountain valley lying 8,480 feet above sea level, through which one of the most important roads between the lands of the Oxus watershed and the Indus leads; the town is therefore naturally important as a commercial centre and was important in the middle ages as a fortress also. Although the valley, that of the Kunduz river, really belongs to the Oxus watershed and is separated from Kābul by high mountain passes, *e.g.*, the Shibar and Unnai, its political association has often shifted from north to south. In recent centuries Bāmiyān has tended to belong to Kābul and Ghazna rather than to the Oxus territories, and the pass of Aḳribāṭ to the north-west of Bāmiyān has marked the boundary between Kābulistān and Afghān Turkistān.

The early history of Bāmiyān is obscure. Rare coins of the Kushāns have been reported there but no monuments or other remains of that period have been discovered (J. Hackin, in *JA* 1935, 287 ff.). The Chinese sources, of which the earliest are scarcely earlier than the 6th century A.D., century, usually transcribe the name Fan-yen-na or Far-yanh (see J. Marquart, *Ērānshahr*, 215 ff.; and P. Pelliot's note in J. Hackin, *Les Antiquités Bouddhiques de Bāmiyān*, Paris 1928, 75). According to Marquart the "Older Middle Iranian" form was Bāmīkān. The valley and town at this date are described by the Chinese pilgrim Hüan-Čuang who found there a great centre of Buddhism with more than ten monasteries and over a thousand monks. He noticed that the language, coinage, script and religious beliefs current differed but little from those of Turkistān. The royal town was on the cliff above the valley, south-west of the great Buddha figures. These two colossal figures, which have for centuries excited the wonder of travellers, both Arab (cf. especially Yāḳūt, i, 481) and European, have recently been described in detail, together with many of the associated caves and fresco paintings. Their age is still uncertain but the weight of evidence indicates that the early work, including the two great figures, dates from the latter half of the 6th or early 7th century A.D., and that the excavation and painting of caves continued well into the 8th. During this period Bāmiyān appears to have been ruled by a dynasty, perhaps of Hepthalite origin, but certainly subject to the prince (Yabghu) of the Western Turks. This dynasty was still ruling in the first quarter of the 2nd/8th century and still professed Buddhism (cf. E. Chavannes, *Documents sur les Tou-kiue (Turcs) occidentaux*, St. Petersburg, 1903, 291-2, and Hackin, *loc. cit.* 1928, 83).

The prince of Bāmiyān bore the title *Shēr* (written *Shīr* or *Shār*) which Yaʿḳūbī (*Buldān* 289) erroneously translates "lion"; the word means "king" and is to be derived from the old Persian *khshathriya* (Marquart, *loc.cit.*,). Islam was first adopted by these princes in the time of the ʿAbbāsids, according to Yaʿḳūbī's geography (*loc.cit.*) in the reign of al-Manṣūr, according to the same author's history (ed. Houtsma, ii. 479) in that of al-Mahdī. The relations of this dynasty to the lands south and north of the Hindū-Kush are not quite clear. According to Yaʿḳūbī Bāmiyān belonged to Ṭukhāristān, *i.e.*, the lands of the Oxus territory, which is probably confirmed by Ṭabarī's statement (ii. 1630.1) that about 119/737 a foreigner from Bāmiyān ruled in Khuttal (north of the Oxus); on the other hand Iṣṭakhrī (277) says that the district (*ʿamal*) of Bāmiyān only included the lands south of the Hindū-Kush with the towns of Parwān, Kābul, and Ghazna. Under the later ʿAbbāsids the members of the dynasty of Bāmiyān, like many Central Asian princes, held influential positions at the court of Baghdād; Ṭabarī (iii, 1335) tells us that a Shēr of Bāmiyān was appointed governor of Yaman in 229/844. There was still a large Buddha temple in Bāmiyān in which there were also idols in the 3rd/9th century. This temple was destroyed by the Ṣaffārid Yaʿḳūb and the idols brought to Baghdād in 257/871 (cf. the comparison of Ṭabarī, iii, 1851 and *Fihrist*, 346, by Barthold in *Oriental. Stud.* (*Nöldeke-Festschrift*), i, 187).

The native dynasties seem to have been finally

overcome by the Ghaznawids. A branch of the house of the Ghūrids ruled in Bāmiyān for half a century (550-609/1144-1212). Bāmiyān was then the capital of a kingdom which comprised all Ṭukhāristān and some districts north of the Oxus, and stretched to the north-east as far as the borders of Kāshghar. Like the other lands of the Ghūrids, this kingdom also was incorporated in the kingdom of Muḥammad Shāh of Khwārizm in the beginning of the 7th/13th century; Bāmiyān was granted with Ghazna and other lands to Djalāl al-Dīn the eldest son of the Khwārizmshāh (Nasawī, ed. Houdas, text 25, transl. 44). Soon afterwards followed the destruction of the town by the Mongols (618/1221). Mütügen, a grandson of Čingiz Khān, fell at the siege of the town; in revenge for his death the conqueror razed the town to the ground and exterminated its inhabitants; the place received the name of Mo-baliḳ (evil town) or, according to Rashīd al-Dīn, Mo-ḳurghān (evil fortress) and was still uninhabited 40 years later in the time of the historian Djuwaynī. For the past few centuries Bāmiyān has always been combined with Ghazna and Kābul; like these towns it belonged, down to the 12th/18th century, to the empire of the Mughals, and afterwards to the newly formed Afghān kingdom of which it is still a part.

At present Bāmiyān is a district town connected by motorable roads with both Kābul and Kunduz. The population of the valley belongs mainly to the Hazāra stock, but there are also villages of Tādjīks. The inhabitants speak two languages, Persian and Pashtu (Afghān), but the former is the more widely spoken. The modern settlement lies immediately beneath the cliff with the great images. About two miles south-east lies the ruined fortress of Gulgula, situated on a prominence on the south of the valley. This has been generally recognised as the town built on a hill which Čingiz Khān destroyed, and is probably also the strong fortress referred to by Yāḳūt and Yaʿḳūbī. Whether it is also the site of Hüan-Čuang's royal town is not clear, as the pilgrim states that it lay on the cliffs south-west of the images. No remains have been reported in this direction.

Bibliography: The geographical position is discussed by A. Foucher, *La Vieille Route de l'Inde*, Paris 1942. The Buddhist monuments are described by J. Hackin and A. & Y. Godard in *Les Antiquités Bouddhiques de Bāmiyān*, Paris 1928; and J. Hackin and J. Carl, *Nouvelles Recherches à Bāmiyān*, Paris 1933. Hackin's views on the dating should be compared with those of B. Rowland, *Wall Paintings in India, Central Asia and Ceylon*, Boston, 1938, particularly when corrected by Bachhofer, *Art Bulletin*, 1938, 230 ff. Hackin (*loc.cit.* 1928) includes most of the Chinese and European travellers' reports, but Marquart (*loc. cit.*) and Chavannes (*loc.cit.*) are still indispensable. The Hepthalite connections are discussed by R. Ghirshman, *Les Chionites-Hephthalites*, Paris 1948. For the later history see Barthold, *Turkestān*, 2nd ed., London, 1928. On the Ghūrids of Bāmiyān see *Ṭabaḳāt-i Nāṣirī* (ed. Nassau Lees), 101 ff.; *ibid.* transl. Raverty, 142 ff. On the Mongol conquest, see the text of Djuwaynī (*Taʾrīkh-i Djahān-Kushāy*) in Schefer, *Chrestomathie Persane*, ii. 142 ff.; and d'Ohsson, *Histoire des Mongols*, i, 294 ff.

(W. Barthold-[F. R. Allchin])

BAMPŪR, a district and small town in the VIIIth *ustān* of Persia (corresponding approximately to the province of Kirmān and Persian Balōčistān). For administrative purposes, Bampūr and its district come under Īrānshāhr (formerly Fahradj), situated 23 kilometres to the east. Bampūr, which has a population of 5,000, is chiefly remarkable for its citadel which crowns an eminence 100 feet in height. The inhabitants, who are Sunnīs and are Balōčī-speaking, are mostly engaged in agricultural and pastoral pursuits. The surrounding district, which is well supplied with water, is very fertile and produces corn and dates.

After the assassination of Nādir Shāh in 1160/1747, Naṣīr Khān, the Governor of Balōčistān, transferred his allegiance to Aḥmad Shāh Durrānī [*q.v.*], of Afghānistān, but later became independent. Persian authority over Bampūr was not restored until 1849.

(L. Lockhart)

BĀN (A. and P.), the ben-nut tree (*Moringa aptera Gaertn.*). Dioscorides knew of its existence in Arabia and other neighbouring countries. Galen, speaking of a remedy obtained from the tree, says that it was imported from the Arabs. Abū Ḥanīfa reports that the fruit, called *shūʿ*, was a commodity greatly in demand which was bought and paid for in advance even before being ripe. The wood, because of its lightness, was used for tent-poles. On account of the high and slender growth of the *bān* and the softness of its wood, Arab poets used the word as a simile for a tender woman of tall stature.

The fruit, known to the Greeks as βάλανος μυρεψική and to the Romans as *glans unguentaria*, was put to various medicinal uses. Especially the fine oil, extracted from the seeds, was applied against several skin diseases. The juice of the fruit, mixed with vinegar and water, was given to horses as a remedy for cardialgia. In addition to its application in medicine, the oil of the *bān* was much used in the manufacture of perfumes.

Techn.*, iv, 419 ff.); *Tuḥfat al-Aḥbāb* (Renaud-Collin), no. 382.

(L. Kopf)

BANĀKAT, more correctly B/Pinākath (thus in Muḳaddasī, 277, l. 1; in Sogdian: Bi/unēkath, "chief town", "capital"), but in Djuwaynī, i, 47 Fanāka(n)t—a small town at the confluence of the Ilak (today the Āhangarān/Angren), flowing from the right, with the Jaxartes (Iranian: Khashant—cf. *Ḥudūd al-ʿĀlam*, 118, 210 ff., and also *ibid.*, 72, where it is named Ūzgand). It lies almost south-east of Tashkent (Čāč/Shāsh) and was once a flourishing place (*Ḥudūd al-ʿĀlam*, 118), possessed however no walls and had its mosque in the bazaar (Muḳaddasī, 277; cf. also al-Khʷārizmī, in C. A. Nallino, *al-Ḫuwārizmī e il suo rifacimento della geografia di Tolomeo*, Rome 1895, 36, and Yāḳūt, i, 740). The town was conquered in 616/1219 by a Mongol force, 5000 strong according to the sources, under the command of Ulagh Noyon and Süktür, its inhabitants

being either slain or else carried off to serve as assault troops in further sieges; there is no mention that its buildings were destroyed (Djuwaynī, i, 70-74; Mīrkhwānd, ed. Jaubert, 140).

It is clear that, during the following centuries, Banākat fell into decline, for in 794/1392 it was "rebuilt" by Tīmūr and named, after his own son, "Shāhrukhiyya" (Sharaf al-Dīn ʿAlī Yazdī, *Ẓafar-nāma*, ed. Ilāhdād, Calcutta 1885-1888, ii, 636). The place is mentioned in the period from the 15th to the 17th century as a strong fortress, but later it sank once more into decay. Ruins (now bearing the name "Sharkiyya") are still to be seen and were examined for the first time in 1876 by a Russian expedition.

Bibliography: Barthold, *Turkestan*, 169; Le Strange, 482 (with a wrong date for the rebuilding of the town); B. Spuler, *Die Mongolen in Iran*², Berlin 1955, 28, 417 ff. On the name itself, cf. J. Markwart, *Wehrōt und Arang*, Leiden 1938, 162-163, note; and V. Minorsky, in *BSOAS*, xvii/2 (1955), 262. (B. SPULER)

BANĀKITĪ, (for the vocalisation, see the preceding article), FAKHR AL-DĪN ABŪ SULAYMĀN DĀWŪD B. ABI'L-FAḌL MUḤAMMAD, Persian poet and historian (d. 730/1329-30). According to his own account, he was made *malik al-shuʿarāʾ*, or "king of poets", in 701/1301-2 by the Mongol ruler of Persia, Ghāzān Khān. Dawlatshāh (*Tadhkira*, ed. Browne, 227) records one of his poems. His historical work, entitled *Rawḍat ūli 'l-Albāb fī Tawārīkh al-Akābir wa 'l-Ansāb*, was written in 717/1317-8, under the Īlkhān Abū Saʿīd; the preface is dated 25 Shawwāl 717/31 Dec. 1317. Apart from a few very brief remarks on the events of recent years, it is a résumé of the *Djāmiʿ al-Tawārīkh* of Rashīd al-Dīn, the arrangement of the subject matter being different. According to E. G. Browne (iii, 101), the range of the second half of the work affords evidence not only of a wider conception of history (probably under the influence of Rashīd al-Dīn), but also of a spirit of real tolerance towards non-Muslim peoples and of a real knowledge of these peoples, doubtless promoted by the position which the author held at the court of the Īlkhān. Blochet (*Introduction à l'Histoire des Mongols* ..., Gibb. Mem. Series, xii, 98) seems to assert that the Chinese sources of the *Djāmiʿ al-Tawārīkh* are indicated only by Banākitī and not by Rashīd al-Dīn; Rashīd's text which contains these indications was, however, published as early as 1886 by V. Rosen (*Collections Scientifiques de l'Institut des langues orient. du Ministère des Aff. Étrang.*, iii, *MSS. persans*, St. Petersbourg 1886, 106-107). The *Rawḍat* is divided into nine parts: prophets and patriarchs; ancient kings of Persia; Muḥammad and the Caliphs; Persian dynasties contemporary with the ʿAbbāsid caliphs; the Jews; the Christians and the Franks; the Indians; the Chinese; the Mongols. The eighth part (China) was published in 1677 (Berlin; then, in 1679, at Jena) by A. Muller, in Persian and Latin, under the erroneous title of *Abdallae Beidawaei Historia Sinensis* (later translated into English by S. Weston: *A Chinese Chronicle, by Abdallah of Beyza* ..., London 1820); Quatremère, however, proved that it belonged to the *Rawḍat* of Banākitī.

Bibliography: Quatremère, *Histoire des Mongols de la Perse ... par Rashīd al-Dīn*, Paris 1836, lxxxv, lxxxvi and 425; H. M. Elliot, *The History of India as told by its own Historians*, iii, 55 ff.; Rieu, *Cat. Pers. MSS.*, i, 79 ff. Other references in Storey, section ii, fasc. 1, 80-81.

BANAT [see TEMESVAR].

BANĀT NAʿSH [see NUDJŪM].

BĀNAT SUʿĀD (Suʿād has departed) are the opening words of a *ḳaṣīda* or ode, composed by Kaʿb b. Zuhayr [*q.v.*] in praise of the Prophet Muḥammad. The events which led to its composition may be briefly stated as follows. After the fall of Mecca in 8 A.H., Kaʿb's brother Budjayr, who had embraced Islam, warned him of the fate which had overtaken some of the poets there, and urged him to come in to Medina or seek asylum elsewhere. Kaʿb replied in verses disapproving of his brother's conversion. Threatened by the Prophet, Kaʿb in despair came to Medina at last and presented himself before the Prophet, who was then seated in the mosque after the morning prayers surrounded by his companions. Kaʿb succeeded in obtaining the Prophet's pardon; and in token of his gratitude recited in public his famous poem, in which he lauded the generosity of his benefactor. The Prophet was so pleased with it that he bestowed his own mantle (*burda*) on the poet. The poem is, therefore, often called *ḳaṣīdat al-burda*.

The poem consists of 58 verses, and in its general features conforms to the usual pattern of the pre-Islamic Arabian ode. Numerous commentaries have been written on it. It was first published by Lette at Leiden in 1740, and subsequently by Freytag with a Latin translation (Halle 1823) and also by Th. Nöldeke in his *Delectus Veterum Carminum Arabicorum*, Berlin 1890, 110 ff. R. Basset edited it with a French translation and two commentaries, Algiers 1910. An English translation will be found in R. A. Nicholson's *Translations of Eastern Poetry and Prose*, Cambridge 1922. There is also an Italian translation by G. Gabrieli (Florence 1901) and a German translation by O. Rescher (Istanbul 1950).

The poem of Kaʿb inspired another famous hymn in praise of the Prophet, *viz.*, the *ḳaṣīdat al-burda* ("Mantle Ode") of al-Būṣīrī [*q.v.*].

BANBALŪNA, Pampeluna, Span. Pamplona, a town in the north of Spain, chief-town of the province of Navarre, with a present population of about 80,000. No Arab geographer has left us an accurate description of Pampeluna in the late Middle Ages. The *Rawḍ al-Miʿṭār*, which devotes most space to it, depicts the town as the capital of the land of the Basques (*Vascones*, Ar. *Bashkunish* [*q.v.*]), a group of mountain tribes established on the southern slopes and at the western end of the Pyrenees, not far from the Atlantic Ocean. Their territory bounded, in the West, the land called *al-Alaba wa 'l-Ḳilāʿ* [*q.v.*], *i.e.*, of Alava and the Castles (the original Castille); in the East, it reached the mountainous regions inhabited by the Gascons (Ar. *Glashkiyūn*) and the people of Cerretania or Cerdagne. Pampeluna was taken by the governor ʿUḳba b. al-Ḥadjdjādj in 121/739; it rebelled against Cordova and, in 161/778, was taken by the Franks in the course of Charlemagne's expedition. It passed under the sway of the Franco-Gascons for a number of

years and, from about 825 A.D. onwards, became the capital of an independent principality with Iñigo II in close connexion with the powerful Mūsā b. Mūsā, who was his maternal uncle and at the same time his brother-in-law and father-in-law. In 227/842, ʿAbd al-Raḥmān II led the Umayyad forces as far as Pampeluna, which was sacked. In 245/859, bands of Scandinavian pirates, the Norsemen, penetrated as far as Pampeluna and took prisoner the king García Iñiguez. ʿAbd al-Raḥmān III succeeded in taking possession of the town for a time in 312/924, in the course of his campaign against Navarre, and demolished it. Other attempts by Muslim armies against Pampeluna were made in 322/934 and during the dictatorship of the two ʿĀmirid *ḥād̲j̲ibs* al-Manṣūr [*q.v.*] and al-Muẓaffar [*q.v.*].

(E. Lévi-Provençal-[A. Huici Miranda])

BAND ("bond"), a Persian word denoting anything which is used to bind, attach, close or limit, both literally and figuratively (*e.g.* sadness, preoccupation),; it has also passed into Arabic and Turkish. In Persian, it has various meanings when used in compounds (*e.g.*, *band-i angus̲h̲t*, the phalanx; *band-i pā*, ankle-bone; *dar-band*, defile, inlet; *dast-band*, bracelet; *rū-band*, head-veil; *band-i s̲h̲ahryār*, the name of a musical air). It denotes in particular dams (*band-i āb*) built for irrigation purposes: for instance, the Band-i Ḳayṣar, built across the river Kārūn at S̲h̲ustar by order of the Sāsānid king S̲h̲āpūr I (3rd century A.D.), several arches of which were carried away by floods about 1880; on the other side of S̲h̲ustar, on the way from Ahwāz, the Band-i Gargar (the Mas̲h̲ruḳān of the Arab geographers), on a lateral drain of the Kārūn, which was excavated during the Sāsānid period; the Band-i Miyān ("middle dam"), constructed during the same period and several times restored, notably at the beginning of the 19th century by a son of Fatḥ ʿAlī S̲h̲āh (hence its other name: Band-i Muḥammad ʿAlī Mīrzā); some 40 kms. downstream from S̲h̲ustar, near Band-i Ḳīr ("bitumen dam"), are the ruins of a great dam of the same period (on these dams, see *EI*¹, s.v. *Kārūn*, 825²-826, and *Guide Bleu*, *Moyen-Orient*, 1956, 718-721). In addition to these, the Band-i Amīr (or Band-i ʿAḍudī) on the Kurr (formerly the Cyrus; Barbier de Meynard, *Dictionnaire de la Perse*, 477, n. 2), about 80 km. north of S̲h̲īrāz, was constructed in the 4th/10th century at the order of the amīr ʿAḍud al-Dawla of the Būyid dynasty; on the same river were built the Band-i Rāmd̲j̲ird and the Band-i Ḳaṣṣār ("the fuller's dam"), which were restored by Fak̲h̲r al-Dawla Čawlī, atābak of Fārs under the Sald̲j̲ūḳs (on these three dams, cf. the interesting passage in Ibn al-Balk̲h̲ī, *Fārs-nāma*, Gibb. Mem. Series, 151-152). Near Kās̲h̲ān, in a mountain gorge, is situated the Band-i Ḳuhrūd, built under the Ṣafawids (Ḥamd Allāh Mustawfī, *Nuzha*, 72; de Sercey, *La Perse en 1839*, 230). In Turkey, nine dams contribute to Istanbul's water supply: on the heights overlooking Büyükdere (on the European side of the Bosphorus), north of Bahçeköy, the *bend* of Maḥmūd I (Mahmut bendi), built in 1732, and the *bend* of the mother of Selim III (Valide bendi), 1796; some five km. further away, in the neighbourhood of the forest of Belgrat, four other *bends* from which water flows, as required, into the Bas̲h̲ Ḥawz (Baş Havuz) or cistern of Pyrgos, and thence towards the city via two aqueducts—the most notable being the Büyük bend ("great dam") built in the 6th/12th century by Andronicus I and restored by several sultans, and the Paşaderesi bendi, the work of the same Byzantine Emperor (details of these dams: *Guide bleu*: *Turquie*, 1958, 171-2).

BĀNDĀ, town in Uttar Pradesh (India), situated in Lat. 25° 28′ N and Long. 80° 20′ E; headquarters of the district of the same name. Pop. (1951) 30,327. The town, otherwise unimportant, attracted notice during the Sepoy Revolt of 1857 when its last ruler, Nawāb ʿAlī Bahādur II, put up a hard fight against the British. The town, however, finally surrendered in April 1858. A mere village till the end of the 12th/18th century, it began rapidly to expand when S̲h̲ams̲h̲īr Bahādur, said to be a natural son of the Pēs̲h̲wā Bād̲j̲ī Rāo I (1139-53/1726 40), by one of his concubines who had adopted Islam, made it the chief town of his estate conferred on him by the Pēs̲h̲wā. S̲h̲ams̲h̲īr Bahādur, who fought on the side of the Marathas in the Third Battle of Panipat (1175/1761), was seriously wounded and subsequently died at Bharatpūr. His son, ʿAlī Bahādur I, subjugated many places in Bundhelkhand, with the help of the Sindhia of Gwalior. He was succeeded by his son, D̲h̲u 'l-Faḳār Bahādur, who entered into an agreement with the British in 1227/1812 and was awarded the title of Nawāb and confirmed into his *d̲j̲āgīr* of Bāndā. An ill-built town, it has a very large number of places of worship, both Muslim and Hindu. The congregational mosque, the largest in the town, was built by the last Nawāb, ʿAlī Bahādur II. A patron of learning, he has been praised by the Indian poet in Urdū and Persian, Mīrzā G̲h̲ālib.

(A. S. Bazmee Ansari)

BANDA ISLANDS, a group of small islands in Indonesia, Long. 130° E., Lat. 4° 32′ S., inhabited by less than 10,000 people of mixed origin who are partly Muslims. From the view point of institutions these Muslims are not different from those in other parts of Indonesia [*q.v.*]. The islands, however, played an important part in the history of the struggle between Islam and Christendom, as the nutmeg trees which are grown there attracted the Portuguese. They arrived in 1511 in Malacca whence they sailed to the Banda Islands a year later, thus transplanting the Iberian war, which had ended a few years earlier, to South and South-East Asia. The Dutch appeared on the scene in 1599. From 1619 to 1942 the islands were under Dutch control, from 1942 to 1945 occupied by the Japanese. (C. C. Berg)

BANDA NAWĀZ, SAYYID MUḤAMMAD [see sayyid muḥammad].

BANDAR (Bender), a Persian word which has passed into Turkish, denoting a seaport or port on a large river; it has passed into the Arabic of Syria (Barthélemy) and Egypt in the sense of market-place, place of commerce, banking exchange (Bocthor, Vollers) and even workshop (Cuche). *Shāh-bandar*, in Persian, means customs officer, collector of taxes; in Turkish, it means consul and, formerly, a merchants' syndic. In compounds, it occurs in Persian geographical nomenclature: on the Caspian Sea (southern shore), Bandar-Pahlawī (formerly Enzeli); Bandar-Gaz, the safest harbour in the region; some 50 kms. to the north, Bandar-Shāh, the terminus of the Trans-Iranian railway—the other terminus being Bandar-Shāhpūr, on the Persian Gulf; other ports on the shores of the Gulf are: Bandar-Daylam, Bandar-Rīg, Bandar-Būshīr [see BŪSHAHR], Bandar-Maḳām, Bandar-Linga, Bandar-ʿAbbās (see following article).

Bibliography: P. Schwarz, *Iran in Mittelalter* (index: *bandar*). On the places mentioned: *Guide bleu: Moyen-Orient* (index: Bandar); R. Vadala, *Le golfe Persique*, Paris 1920, *passim*.

(Cl. Huart-[H. Massé])

BANDAR ʿABBĀS, a Persian port situated in the VIIIth. *ustān* (which comprises part of Fārs and Kirmān). The town, which is on the coast of the mainland 16 km. north-west of the island of Hormuz [*q.v.*], stands on bare, sandy ground rising gradually to the north; it has a frontage of 2 km. along the shore. The position of Bandar ʿAbbās at the entrance to the Persian Gulf and the fact that it is the terminal point of trade-routes from Yazd and Kirmān to the north and Lār, Shīrāz and Iṣfahān to the north west have made it a place of some strategic and commercial importance. Owing to the shallowness of the sea, large vessels cannot berth alongside the quay or jetty and have to anchor some distance offshore and load or discharge their cargo by means of lighters.

There are grounds for believing that the town is situated on or near the site of the small fishing village of Shahrū (see Iṣṭakhrī, 67) or Shahruvā (see the *Ḥudūd al-ʿĀlam*, 124 and 375). When the neighbouring island of Djarūn (or Djarrūn) ceased to be so called and was given instead the name of Hormuz at the beginning of the 8th/14th century, the former name was transferred to Shahrū. When Hormuz developed into a great commercial centre, the importance of Djarūn as the point of transhipment for goods in transit between the island and the mainland gradually increased. Early in the 10th/16th century the Portuguese established themselves on Hormuz and subsequently also on the adjacent stretch of mainland, and Djarūn, or Gamru, as it then came to be called, thus passed into Portuguese hands. In 1615 the Persians recovered Gamru from the Portuguese and seven years later, with the naval aid of the English East India Company, they also drove the Portuguese out of Hormuz. In gratitude for its services, Shāh ʿAbbās I allowed the Company to set up a factory in Gamru (or Gombroon, as the English usually called it) and not only exempted it from customs dues there, but also gave it the right to receive half the customs dues. An additional reason for the granting of these privileges was the Shāh's desire that the town should become the chief port in his realm: it was in token of this desire that he named the port Bandar ʿAbbās after himself. The Shāh's hopes were soon realised; with the advent not only of the English East India Company, but also of the Dutch East India Company and the French, the port became the most important in Persia. When Chardin was there in 1674, he stated that the town contained between 1,400 and 1,500 houses; he also remarked upon the bad climate and its deadly effect upon the European residents (*Voyages*, Paris 1811, viii, 508, 511-512).

The overthrow of the Ṣafawīd monarchy by the Ghalzay Afghāns in 1722, followed by the Russian and Turkish invasions and numerous internal revolts, paralysed the trade of the country and brought stagnation to Bandar ʿAbbās. The expulsion of the Afghāns led to a temporary revival of prosperity, but this was soon nullified by Nādir's exorbitant tax-collectors. Furthermore, his creation of a naval base at Būshahr [*q.v.*] dealt another blow at the supremacy of Bandar ʿAbbās, and it was not long before the former port became the leading one of the country. When Plaisted was at Bandar ʿAbbās in 1750, he found that nine out of every ten houses were deserted (*Journal from Calcutta .... to Aleppo in the Year MDCCL*, London 1758, 11). A few years later the Dutch and English East India Companies abandoned Bandar ʿAbbās, thus causing it to decline still further.

In 1793 the town, together with a coastal strip 150 km. in length, was leased to the Sulṭān of ʿUmān, in whose hands and those of his descendants it remained until its reversion to Persian control in 1868.

In recent times Bandar ʿAbbās has recovered something of its former prosperity, thanks to the construction of motor roads from Kirmān and Yazd and also from Shīrāz. The modern town has a population of some 11,500 (this total undergoes quite considerable seasonal fluctuations). Living conditions have improved with the provision of a piped water supply from ʿIsīn, 16 km. to the north-west. The main thoroughfare, the Khiyābān Riḍā Shāh-i Kabīr, runs through the town approximately parallel with the shore, at a distance of some 200 m.; the governmental and most of the municipal buildings are in the central part of this avenue. The chief mosques are the Masdjid-i Djāmiʿ (for the Shīʿa) and the Masdjid-i Galla-Dārī (for the Sunnīs). Modern industry is represented by a fish-canning plant.

BANDAR PAHLAWĪ, principal port (*bandar*) of Iran on the Caspian Sea, situated at 37° 28′ N and 49° 27′ E. Formerly called Enzeli, the town was

renamed in honour of the Pahlawī dynasty by its founder Riḍā Shāh who came to the throne in 1926. Bandar Pahlawī itself lies on a tongue of land to the west of an inlet between the Caspian Sea and a freshwater lake called Murdāb. To the east of the inlet is the older settlement of Ghāziyān. From Bandar Pahlawī a bridge carries the motor road across the inlet and into Ghāziyān, from there the road proceeds to Rasht, the principal commercial town of the Caspian littoral region, and then on to Tehran, a total distance of 364 km.

In the early 19th century there were only a few hundred houses at the site, in the first decade of this century about 9,000 people, and the present population is given at 48,500. Persian, Gīlakī (a local dialect) and some Turkish are spoken. The inhabitants are Shīʿīs. There are no monuments of any interest or real antiquity in either Bandar Pahlawī or neighbouring Ghāziyān.

During the second quarter of this century the inlet mentioned above has been developed into a shallow, but sheltered, harbour. In the period March 1951-March 1952 some 298 ships entered or left the port. Between 1930 and 1940 there was considerable transit traffic of goods and passengers from Bandar Pahlawī through the USSR and to Europe, but in recent years nearly all the trade has been directly with Russia.

Owing to its proximity to Russia the port town has been the scene of international incidents. In 1722 Russian troops landed on the south side of the Murdāb and again in 1804 another force landed at Enzeli. In March 1920 Soviet troops, following a British force retreating from Baku, landed at Enzeli and later gave support to the establishment of a short lived Soviet Republic of Gīlān. During the Anglo-Soviet occupation of Iran Bandar Pahlawī sheltered a Soviet garrison from 1941 until May 1946.

BANDIRMA, a port on the Sea of Marmara, near the site of the ancient Cyzicus. The mediaeval Greek name for the town was Panormos. Villehardouin mentions a castle called "Palorme", which the Latin Crusaders fortified in 1204. It was used thereafter as a base for their operations against the Greeks in north-west Asia Minor. Under Ottoman rule Bandirma was included in the *sandjaḳ* of Ḳarasī [*q.v.*]. According to the evidence of travellers who visited the town in the 16th-17th centuries, most of its inhabitants seem to have been not of Turkish, but of Greek or Armenian descent. Much of Bandirma was burnt down in 1874. It now forms part of the province of Balīkesir and is an active commercial centre, exporting the varied products of the hinterland—cereals, sheep and cattle, boracite, sesame, etc. The population of Bandirma in 1950 stood at a little less than 19,000.

BANDJ, an arabicised Persian word, originally from the Sanskrit, denoting a narcotic drug, more exactly the henbane (*hyoscyamus*). The meaning of the Sanskrit *bhaṅgā* is really "hemp" (*cannabis sativa L.*), *i.e.*, the variety which grows in southern climes which contains in the tip of its leaves an intoxicating resinous substance (Arabic *ḥashīsh*), whence the Zend *banha* "drunkenness". In Persian the loanword *bang* was applied to the henbane and for this reason Ḥunayn b. Isḥāḳ, in his Arabic translation of the *Materia medica* of Dioscorides, (c. 235/850) equated it with the Greek ὑοσκύαμος. With this meaning, the word *bandj* is found in the early Persian medical writers who, as a rule, write in Arabic (al-Rāzī, Ibn Sīnā) and in more modern Persian medicine in Abū Manṣūr Muwaffaḳ b. ʿAlī (4th/10th century), while it appears to be unknown in the old Arabic poetry, as al-Bīrūnī in the chapter on *bandj* in his pharmacology (MS. in the Bursa library) gives no quotations from the poets, which he would not otherwise have omitted to do. The early physicians of western Islām (Isḥāḳ b. ʿImrān, Isḥāḳ b. Sulaymān, Ibn al-Djazzār and others) also identified *bandj* with henbane and called it in Arabic *saykarān*, which however Aḥmad al-Ghāfiḳī (an Arab physician of Spain of the 6th/12th century) in his pharmacology considers wrong. *Shakhrōnā* is however the Syriac term for henbane and the Arabic *saykarān*, *sīkrān*, *shūkrān* etc. is derived from it; but the later Arab botanists used the name for another henbane (*hyoscyamus muticus*) which drives the taker mad, and also for the hemlock (*cicuta*). In modern times the word *bandj* (in the popular dialect of Egypt *bing*) is used for every kind of narcotic and the verb *bannadja*, "to narcotise" and also to "send to sleep, to anaesthetise", infinitive *tabnīdj*, "narcosis" etc. is derived from it.

BANDJARMASIN, town on the southern coast of Kalimantan (Borneo, Indonesia), at Lat. 3° 18′ S. and Long. 114° 35′ E. It has been known from the 14th century onwards as a centre of inter-island trade and capital of a small principality. It was the capital of a residency in the Dutch period (1859-1942) and during the Japanese occupation. The population of approximately 300,000 is Muslim, though the influence of the Javanese civilisation is considerable, especially among the members of the nobility.

(C. C. Berg)

BANGĀLA, a geographical term, derived from the word Bang, originally denoting a non-Aryan people of this name and later applied to their homeland in the southern and eastern parts of Bengal, now in East Pakistan. Abu 'l-Faḍl, in his *Āʾīn-i Akbarī*, remarks "The original name of Bengal was *Bang*. Its former rulers raised mounds measuring ten yards in height and twenty in breadth throughout the province called *Āl* (Sanskṛit—*Āli*). From this suffix the name Bengal took its rise and currency". But both the words, Bang and Bangāla (or sometimes Bhangālah) were used in Sanskṛit records. It is generally supposed that Bangāla was a smaller division, limited to the southern districts of East Bengal, while Bang was a wider unit. This distinction is purely hypothetical. Among the early Muslim historians, Minhādj al-Sirādj, in his *Ṭabaḳāt-i Nāṣirī*, uses Bang, and Ḍiyā al-Dīn Baranī, in his *Tārīkh-i Fīrūzshāhī*, employs *Diyār-i Bangāla*, or *ʿArṣa-i Bangāla*, for the same region of East Bengal—a geographical division which maintained its integrity till about the middle of 14th century A.D.

Shamsī Sirādj ʿAfīf, in his *Tārīkh-i Fīrūzshāhī*, gives to Shams al-Dīn Ilyās Shāh the titles of Shāh-i *Bangāla* (the king of Bangāla), and *Shāh-i Bangāliyān* (plural of Bangālī) meaning the king over the people of Bengal. As Ilyās Shāh united for the first time both the kingdoms of eastern and western Bengal under him, he well deserved the titles, given by ʿAfīf, and it is after him that Bangāla came to denote a wider geographical region, comprising the whole Gangetic Delta; and this is the sense in all subsequent writings, Persian chronicles, Chinese travel accounts, and European works. But the Hindus began to use the older term Gawḍa for this whole region.

From the middle of 16th century A.D., the city of Bangāla is mentioned in some of the European accounts, and also marked in their maps. But no local tradition or record speaks of such a city. Its position in the old maps is never identical, nor do the descriptions of different authorities tally with one another. Probably the important ports, or the capitals, visited by the Europeans, were variously called the city of Bangāla by different authorities. The mint "*Gawr-Bangāla*", occurring in the coins of the Mughal emperor Akbar, may refer to the city, or the country, of Gawḍa in Bangāla (or *ʿurf* Bangāla), more probably the latter.

The kingdom of Bangāla grew out of the original Muslim conquest of Lakhnawtī (north-west Bengal) to which were added Satgāon (part of south-west Bengal) and Sonārgāon (east Bengal). Ilyās Shāh integrated these three regions into an independant Muslim Sultanate in A.D. 1352. His descendents ruled, with occasional revolutions, till A.D. 1484, when they were supplanted by their Abyssinian guards and officers. Within about ten years the oppressive Abyssinian rulers were overthrown by their own popular minister ʿAlā al-Dīn Ḥusayn Shāh, an Arab of noble lineage, who ushered in an age of peace and prosperity for the kingdom. The independence of Bangāla was finally crushed in 1538 when Shīr Shāh annexed it into his Indian Empire, but its unity continued as a *ṣūba* (province) even under the Mughals, from 1576 onward.

The political unity of Bangāla led to the cultural cohesion of the people who were called Bangālī, a term also applied to the local language which developed its literature in this period.

BANGANAPALLE, a small state in south India prior to its merger in the Madras State in 1948. It had the distinction of being the solitary State south of the Tungabhadra ruled by a Muslim chief, in this case belonging to the Shīʿī persuasion. In 1948 it had an area of 275 sq. m. and a population of 44,631. The State lay between latitudes 15° 3′ and 15° 29′ N. and longitudes 77° 59′ E. and 78° 22′ E.

Banganapalle has had a chequered history. The ruling family claims descent from a minister of Shāh ʿAbbās II of Persia on the paternal, and from a minister of the Emperor ʿĀlamgīr on the maternal, side. The ancestor of the family, Mīr Ṭāhir ʿAlī, migrated from Persia to Bīdjāpūr. A number of family quarrels arose there resulting in his murder. His widow and four sons sought refuge with the Mughal *fawdjdār* of Arcot. One of these sons married the grand-daughter of the *djāgīrdār* of Banganapalle, and thus came in contact with what was to be the home of the family.

Banganapalle itself changed hands a number of times. In 1643 it became subject to Bīdjāpūr along with a large part of the Vijayanagar territory; but soon the Bīdjāpūr hegemony gave place to Mughal rule and the rule of the Āṣaf Djāhs. The *djāgīrdār*, Ḥusayn ʿAlī, paid allegiance to Ḥaydar ʿAlī of Mysore and fought many a battle under his banner. But when Tīpū Sulṭān succeeded his father he resumed the *djāgīr* on a mere pretext. On Ḥusayn's death his widow took refuge with the Niẓām of Ḥaydarābād, and one of the representatives of the family is said to have defeated Tīpū's *fawdjdār* in 1790 and taken possession of the town. The *djāgīr* came under British supremacy by the Treaty of Seringapatam in 1800. It remained under the Madras Presidency till 1839 when it was taken over directly by the Government of India.

By the *sanad* of 1862 the British Government guaranteed succession according to Muslim Law in case a ruler died childless. In 1867 the hereditary title of *Nawāb* was conferred on the *djāgīrdār*. In 1897, on the occasion of the Silver Jubilee of Queen Victoria's reign, the Nawāb was addressed as 'Your Highness'. The last ruling Nawāb, Mīr Faḍl-i ʿAlī Khān, died soon after the merger, and the title now devolves on his eldest son Mīr Ghulām ʿAlī Khān.

BANGKA, island in Indonesia near the East coast of southern Sumatra, between Lat. 1° and 4° S. and at Long. 106° E. It owes its fame to its tin mines and tin trade which attracted foreign merchants from early times. The economically weaker part of the population is Indonesian and Muslim of the normal Indonesian type. The most important part of the population consists of Chinese immigrants.

(C. C. Berg)

BANHĀ, a town in the Nile Delta, situated on the Damietta branch, one of the main stations on the railway between Cairo and Alexandria and

45 kilometres north of Cairo. In mediaeval times, it formed part of al-Sharḳiyya province and is today the chief town of al-Ḳalyūbiyya province, with some thirty thousand inhabitants. The Arabic name is a transcription of Coptic *Panaho.*

The locality occupies a place in the traditional history of the diplomatic relations between the Prophet and the enigmatic Muḳawḳis, the so-called sovereign of Egypt. Among the presents which the latter sent to Muḥammad, honey from Banhā is mentioned, and it is the recollection of just this detail which its nickname *Banhā al-ʿasal,* "Banhā of the honey", is supposed to evoke. The story may also well be an embellished explanation of an actual fact, for one of the earliest geographers, al-Yaʿḳūbī, states plainly that the village of Banhā produces famous honey. Yāḳūt, in turn, extols the quality of this honey, which was one of the glories of Egypt.

The description given by al-Idrīsī seems to allow of the following translation: "Banhā al-ʿasal forms an extensive domain, its lands planted with trees and producing much fruit; the cultivated fields succeed one another without a break; opposite, on the Western bank of the Nile, stands the main centre, which has given it its name".

Banhā does not appear to have played a rôle in history. At the end of the last century, "it was exporting considerable quantities of the commodity to which it owed its name, as well as oranges and mandarins, which were highly esteemed".

Dozy and De Goeje, 152; Ibn Mammātī, 110; Yāḳūt, i, 748; Chauvet and Isembert, *Guide de l'Orient, Malte, Égypte,* 293; J. Maspero and G. Wiet, *Matériaux pour servir à la géographie de l'Égypte,* 50. (G. Wiet)

BANĪ SUWAYF (Beni Suef, Beni Souef) a town in Egypt, on the west bank of the Nile, 75 m. (120 km.) south of Cairo. According to al-Sakhāwī (902/1497) the old name of the town was Binumsuwayh, from which popular etymology derived the form Banī Suwayf (the منفسويه of Ibn Djīʿān, *al-Tuḥfa al-Saniyya,* 172, and the منقوسنه of Ibn Duḳmāḳ, *Intiṣār,* v, 10, ought probably to be read بنمسويه). In still more ancient times the capital of this district was Heracleopolis Magna, 10 m. (16 km.) west of Banī Suēf, which only attained importance under Muḥammad ʿAlī.

From the time of the division of Egypt into provinces (*mudīriyya*), Benī Suēf became the chief-town of the second province of Upper Egypt, comprising three districts (*markaz*), and gave its name to this province. The town, numbering to-day 70,000 inhabitants, is an agricultural centre of considerable importance, with a certain amount of commercial and industrial activity. Situated on the railway and the main road which follow the Nile, it is linked by a track to the Coptic monasteries on the Red Sea. The *maḳām* of the Shaykha Ḥūriyya, situated in the oldest mosque, Djāmiʿ al-Baḥr, is venerated locally.

Bibliography: ʿAlī Pasha Mubārak, *al-Khiṭaṭ al-Djadīda,* ix, 92 ff.; A. Boinet Bey, *Dict. géog. de l'Egypte,* Cairo 1899, 120; *Guides Bleus, Egypte,* 1956, 251. (C. H. Becker*)

BANĪḲA, (plur. *banāʾiḳ*), an Arabic word which has been subject to considerable semantic evolution.

In early Arabic, its meaning is disputed by the lexicographers (cf. Ibn Sīda, *Mukhaṣṣaṣ,* iv, 84-85; *TA,* s.v.). The primitive meaning seems to have been "any piece inserted (*ruḳʿa*) to widen a tunic (*ḳamīṣ*) or a leather bucket (*dalw*)". In the case of the *ḳamīṣ,* according to some authorities, *banāʾiḳ* were "snippets" of material, in the form of very elongated triangles, inserted vertically below the armholes, along the lateral seams of the garment, to give greater fullness. According to others, they were pieces inserted on both sides of the fore-part of the collar (*ṭawḳ*) to take the buttons and button-holes. As equivalents, the dictionaries give *libna, dikhrīṣ* and *dj.r.bān*; *banīḳa* (and its variant *binaḳa*), like the two latter words, may be of Persian origin.

In the Arab West, *banīḳa* is at times employed for a kind of man's tunic, though more frequently it is applied to an element of women's hair-covering. Spanish has retained *albanega* "a hair-net for gathering and covering the hair" and the Arabic of Tetuan still uses the word with a very similar meaning. At Algiers, it is a kind of square head-dress, provided with a back flap, which women use to cover their heads to protect themselves against the cold when leaving the *ḥammām* (= *bnīḳa*).

In its final development, the word, in the towns of Morocco, has come to mean "a small cell, a closet serving as an office for a "minister", in the old *makhzen* [*q.v.*]; a dark padded cell (in a prison for the insane); a small room or lumber-room (in a flat)". According to oral tradition, the *banīḳa* was originally a silk scarf in which all ministers coming to the Council carried their documents.

For the semantic evolution, compare with that of the French "*pointe*" and also (ministerial) portfolio and cabinet.

Bibliography: For the Moroccan ministerial *bniḳas,* cf. Aubin, *Le Maroc d'aujourd'hui* (= 1903), chap. XI. (G. S. Colin)

BĀNIYĀS (or *Buluniyās*), the ancient Balanea, which also bore the name of Leucas; attempts have several times been made to identify it with an "Apollonia which never existed on this site" (R. Dussaud). It is today a small township on the Syrian coast situated some fifty kms. to the south of Latakiya. This ancient Phoenician settlement, which became a Greek city minting its own coinage and, later, the seat of a bishopric, was incorporated in the *djund* of Ḥims at the time of the Arab conquest. It was, however, especially at the time of the Crusades, that its small harbour, protected by a fortress and dominated by the mighty castle of Marḳab [*q.v.*] on its rocky spur, was for a long period a scene of activity. Occupied by the Franks in 503/1109, Valenia, the position of which was strengthened by the taking of Marḳab in 512/1118, was one of the important fiefs of the principality of Antioch, at the extremity of the county of Tripoli and, after it was entrusted together with Marḳab to the Hospitallers in 572/1186, remained one of the last centres of resistance to the Muslim conquest. The attacks to which it was subjected, especially by Ṣalāḥ al-Dīn, until its conquest by Ḳalāʾūn in 684/1285, so completely ruined it that during the Mamlūk period it entirely lost its administrative role to the advantage of Marḳab, and its site and gardens alone retained the attention of the Arab geographers. The present town does not even possess archaeological remains evocative of its ancient prosperity.

(J. Sourdel-Thomine)

BANIYĀS, the ancient Paneas, owed its name to the presence in the vicinity of a sanctuary of Pan, established in a grotto and sanctifying one of the main sources of the Jordan. The present place, situated 24 km. north-west of al-Ḳunayṭra, on the road running along the southern frontier of the Syrian Republic, occupies a pleasant site, with plentiful water and rich vegetation, in a smiling valley of Mt. Hermon. Its neighbourhood, moreover, has always been praised by Arab writers for its fertility, and especially for its lemons, cotton and rice cultivation.

The town, though doubtless possessing an older history, is only mentioned since the Hellenistic period. It was embellished by Herod the Great and especially by his son Philip, who bestowed on it the name of Caesarea in honour of Augustus. It was then called Caesarea Philippi (to distinguish it from Caesarea in Palestine), then Caesarea Paneas. Later on the second part of the name survived alone. In the 4th century A.D. it became the seat of a bishopric, dependent on the province of Phoenicia, and the Arab conquest, when it is known to have served the army of Heraclius as a base before the battle of the Yarmūk, made it the chief town of the district of al-Djawlān. Somewhat later al-Muḳaddasī emphasises the prosperity of the township and the surrounding villages, into which inhabitants of the *thughūr* had emigrated. At the time of the Crusades, however, when the position of Bāniyās, lying at no great distance from Tyre, between Damascus and the Kingdom of Jerusalem, acquired strategic importance, its history became more eventful and its successive masters applied themselves to fortifying the castle of al-Ṣubayba, whose ruins still dominate the town today.

Ceded in 520/1126 by Tughtakīn, Atabek of Damascus, to Bahrām, leader of the Ismāʿīlīs, who were then active in Syria, it was handed over to the Franks in 524/1130, following the death of Bahrām and the violent action undertaken at Damascus against the followers of the sect. Recovered by force of arms by Būrī in 527/1132 and delivered up to Zankī, it was then besieged by the Franks who, with the help of the Damascenes, reincorporated it in their possessions in 534/1140. Nūr al-Dīn, after being repulsed twice in succession, Baldwin III and his army coming to the assistance of the threatened garrison on each occasion, finally made himself master of Bāniyās and its citadel in 559/1164 and his adversaries, in spite of their efforts, never succeeded in setting foot there again.

Bāniyās then played the role of a frontier stronghold between the countries of Islam and the territory of the Franks who, in Ibn Djubayr's time (580/1184), peacefully shared the exploitation of the surrounding plain with the Muslims. It was presented by Ṣalāḥ al-Dīn to his son al-Afḍal and then passed into the hands of various Ayyūbid princes, who improved its defences, as is still born out by several extant inscriptions. Baybars, in his turn, was to carry out the restoration of a fortress, the continued importance of which is emphasised by the Mamlūk authors, who even make it the residence of an amīr, independent of the governor of the place. At this period, Bāniyās was the chief town of a *wilāya* forming part of the *niyāba* of ʿAdjlūn, in the south of the province of Damascus. It was, however, soon to decline to its present state of a small township.

(J. Sourdel-Thomine)

BANJALUKA (alternative spelling Banja Luka), a town in Yugoslavia, in the north-western part of Bosnia, situated on both sides of the river Vrbas. It is a centre of culture and commerce of considerable importance in the district, has been on a railway line since 1873, and had 42,233 inhabitants in 1956, of whom about one third were Muslims (in 1948 the number of inhabitants was 31,223, of whom 9,951 were of "unspecified nationality" (*i.e.*, Serbo-Croat speaking Muslims who did not declare themselves as either Serbs or Croats). Apart from the quarter called "Novoselija" which developed in the 12th/18th century, and more modern parts ("Varoš" and "Predgradje"), the town consist of two other parts —an upper city, ("Gornji Šeher")—where a fortress, or settlement, existed before the Turkish conquest (1527 or 1528)—and a Lower City ("Donji Šeher") which was built in the second half of the 10th/16th century. Both these parts contain survivals of the Ottoman rule. Of the 27 mosques of the town, two should be especially mentioned: the oldest of them, built immediately after the Turkish Conquest, stands in the Upper City and is called the Emperor's Mosque ("Hunkarija" or "Careva džamija"), which was subsequently repaired and rebuilt three times (the building to be seen at the present day is said to date from the year 1824/25). The most beautiful one in the Lower City is the Mosque "Ferhadija džamija" built in 1579 by Ferhād Sokolović, governor of Bosnia at the time. The *maḥallas* (*i.e.*, quarters) of "Gornji Tabaci" and "Donji Tabaci", in the Upper City, recall the tanner's trade—the principal trade in nearly all Balkan towns in the 10th/16th and 11th/17th centuries. In the Lower City, on the banks of the Vrbas, there is a citadel ("Kaštel") which was built during the reign of Murād III (1595-1603) as the town's second fortress.

The statement which is found first in Ewliya Čelebi, that the first part of the name "Banjaluka" is the Serbo-Croat word "Banja" (bath), is merely an example of folk-etymology, based on the fact that there are hot sulphur springs in the town. The name is actually formed from the archaic possessive adjective of the noun "Ban" (a governor, in this case of the Hungarian King), and the word "Luka" (meadow by the river). It thus means the meadow of the Ban.

After the fall of the kingdom of Bosnia (in 1463) the Hungarians acquired the area of Jajce. It is probable that Banjaluka was built at that time (it is mentioned for the first time in 1494) to serve as a fortress for the newly built Jajce-Banates. Immediately after the fall of Jajce, Banjaluka was conquered by the Turks (in 1527 or 1528). Under Turkish rule Banjaluka gained in importance, especially after the residence of the governor of the *sandjaḳ* of Bosnia was moved from Sarajevo to Banjaluka in the middle of the 10th/16th century. The quick rise of the town was largely due to the merits of the first governors who resided in Banjaluka, in particular Ferhād Sokolović, a cousin of the Grand Vizier Meḥmed Pas͟ha Sokolović (Sokolli). Ferhād Sokolović was governor of Bosnia from 1574, and became Beglerbeg of the newly formed Pas͟halik of Bosnia in 1580. Banjaluka remained the seat of the Beglerbeg of Bosnia until it was moved to Sarajevo in 1638.

In 1661, when Ewliya Čelebi visited Banjaluka, it was a flourishing town with two fortresses, 45 *maḥalla*s, 45 mosques, and several *madrasa*s and baths, with 300 shops and a Bezistān. The town itself (which numbered 3,700 houses) was then the seat of the representative (*Ḳāʾim-maḳām*) of the Vizier of Bosnia.

Banjaluka was conquered for a short time in 1688 by the Austrians under the Margrave of Baden, and they burnt down some parts of the town in their retreat. During the 1737 war, Banjaluka was besieged by the Prince of Hildburghausen, but was relieved by the Bosnian Vizier ʿAlī Pas͟ha Ḥekīmog͟hlu as the result of the victory of August 4th. This war was described by ʿOmar Efendi of Novi (Babinger, 276-277). Since then, Banjaluka has developed more or less unhindered, although it could not regain its former greatness until the end of Turkish rule. There were 37 *maḥalla*s and 1,126 houses liable to taxes in Banjaluka in 1851. From then on it was the capital of one of the six Bosnian *sandjaḳ*s (districts).

At the time of the Austrian occupation of Bosnia (1878), Banjaluka capitulated (without offering resistance) as early as 31st July. Nevertheless, there was a battle with the Bosnian Muslims on 14th August. The town remained under Austrian rule until 1918, when it became part of Yugoslavia.

BANKING [see djahbadh and ṣayrafī].

BĀNKĪPŪR, the Western suburb of the city of Patna, the ʿAẓīmābād of the Muslim historians, situated in 25° 37′ N. and 85° 8′ E. on the right bank of the Ganges. The great landmark of Bānkīpūr is the brick-built beehive-shaped silo or grain storehouse constructed by Warren Hastings after the terrible famine of 1769-70. In Oriental circles the town is famous for its fine collection of Arabic and Persian manuscripts, some of which are extremely rare. The Bānkīpūr library, called in the Trust Deeds "The Patna Oriental Public Library", and also known as the "K͟hudā Bak͟hs͟h Library", contains many valuable books on Islamic literature. The founder, Mawlawī K͟hudā Bak͟hs͟h, (d. 1908) an advocate by profession, was a native of Čhaprā (Bihar) who dedicated his entire life to the collection of rare manuscripts from such ancient centres of culture as Cairo, Damascus, Beirut and places in Arabia, Egypt and Persia. It was Lord Curzon, Governor-General of India (1899-1905) who commissioned Sir Edward Denison Ross to reorganise the Library and to prepare a systematic catalogue. So far 31 volumes, describing some 4,000 MSS. out of a total number of over 6,000, have been published, as a result of sustained and patient collaboration between Sir Edward Denison Ross, ʿAbd al-Muḳtadir, ʿAẓīm al-Dīn Aḥmad, ʿAbd al-Ḥāmid and Masʿūd ʿĀlam Nadwī.

BANNĀʾ [see bināʾ].

AL-BANNĀʾ, aḥmad b. muḥammad [see al-dimyāṭī.

AL-BANNĀʾ, Ḥasan, founder and Director-General of al-Ik͟hwān al-Muslimūn, was born in the year 1906, the son of Aḥmad b. ʿAbd al-Raḥmān b. Muḥammad al-Bannāʾ al-Sāʿātī. In addition to carrying on his trade of watch-maker, his father was a keen student of the traditional Islamic sciences and the editor of the *Musnad* of Ibn Ḥanbal.

Paternal influence was of the greatest significance in shaping the formative years of Ḥasan al-Bannāʾ and his early education followed the ancient pattern of that of the sons of the *ʿulamāʾ*—the memorising of the Ḳurʾān and the study of *ḥadīt͟h*, *fiḳh* and *lug͟ha*. In addition to his conservative religious upbringing he appears to have possessed an innate spiritual bent, for at an early age he became drawn towards Ṣūfism and was initiated into the Ḥaṣāfiyya order when he was fourteen years of age.

After a period at the Junior Teachers' School at Damanhūr he entered the Dār al-ʿUlūm in Cairo, at that time an independent teachers' training College. Even at Damanhūr his precocious capacity for organisation and impulse towards active proselytising had shown themselves in his founding of al-Djamʿiyya al-Ḥaṣāfiyya al-K͟hayriyya. At the Dār al-ʿUlūm he developed further his thesis that the sicknesses of Islamic society could only be cured by a return to the regenerative springs of the Ḳurʾān, *ḥadīt͟h* and *sīra*. Together with a group of fellow-students he began to spread the Islamic mission by preaching in the mosques and meeting-places of Cairo.

On completing his course of training in 1927 he was posted to Ismāʿīliyya as a government schoolteacher and in the following year founded the Muslim Brotherhood. He remained at Ismāʿīliyya until 1933, preaching, lecturing, pamphleteering and perfecting the organisational structure of his movement on the cell principle. During this period he travelled indefatigably up and down the Canal Zone and offshoots of the Ismāʿīliyya headquarters sprang up between Port Saʿīd and Suez.

Following upon his transfer to a teaching post in Cairo, Ḥasan al-Bannāʾ entered upon a period of intense activity and the movement rapidly gained ground throughout Egypt. Subsequent to 1936, when he espoused the cause of the Palestine Arabs, he became increasingly involved in the political arena, lobbying successive prime ministers with pleas for action and reform. The years of the Second World War saw a hardening of the attitude of the government towards Ḥasan al-Bannāʾ. Under both Sirrī Pas͟ha and al-Nuḳrās͟hī he was arrested for

brief periods and the activities of the Brotherhood severely curtailed. In the immediately post-war period tension between them and the government increased, culminating in their suppression following the murder of al-Nuḳrāshī in December 1948. A few months later, in February 1949, Ḥasan al-Bannāʾ was himself assassinated.

BANNĀʾĪ, KAMĀL AL-DĪN SHĪR ʿALĪ BANNĀʾĪ HARAWĪ, Persian poet, the son of a mason (*bannāʾ*) of Harāt, hence his choice of the pseudonym "Bannāʾī". He spent his youth in the entourage of the famous poet and Maecenas of the period ʿAlī-Shīr Nawāʾī [*q.v.*], but fell into disgrace on account of his bitter jests, and had to take refuge at the court of the Aḳ Ḳoyunlu [*q.v.*] prince Sulṭān Yaʿḳūb (884-896/1429-1491), at Tabrīz. After a reconciliation with ʿAlī-Shīr, he returned to Harāt, but he had to leave his company once more in order to go to Samarḳand, to the court of the Tīmūrid prince Sulṭān ʿAlī (902-953/1497-1546), son of Sulṭān Aḥmad (823-899/1468-1494), son of Sulṭān Abū Saʿīd (855-873/1451-1468), who ruled over Transoxania. He composed in his favour a *ḳaṣīda* in the dialect of Marw, with the title of *Madjmaʿ al-Ḳarāyib*. He was also the court poet of Sulṭān Maḥmūd, who ruled over this region between 899 and 900 (1494-5). In 906/1500-1, when Abu ʾl-Fatḥ Muḥammad Shaybānī Khān [*q.v.*] (Shaybak Khān: Shāhī Beg Özbek) occupied Samarḳand, he remained for a time in prison and later became the official poet of his court and chief military judge (*ḳāḍī ʿaskar*), and at the same time one of the favourites of his son Muḥammad Tīmūr. After the death of Shaybānī Khān on 30 Shaʿbān 916/2 December 1510, he returned to Harāt, his native town, but he was slain during the massacre at Ḳarshī, perpetrated in 918/1513 by Nadjm al-Dīn Yār Aḥmad Iṣfahānī, known as Nadjm-i Thānī, on the orders of Shāh Ismaʿīl the Ṣafawid. Bannāʾī tried his hand at all types of poetry. He wrote at first under the pseudonym Ḥālī, and in addition to his *dīwān*, still unpublished (in which he constantly tried to imitate Ḥāfiẓ), he has left two epics: 1) *Shaybānī-nāma*, on his patron's campaigns; 2) *Bāgh-i Iram* or *Bahrām-u-Bihrūz*, a poem several times incorrectly attributed to the great Ṣūfī poet Sanāʾī (as a result of the word Bannāʾī being corrupted to Sanāʾī) and published in a collection with the works *Afḍal al-Tidhkār Dhikr al-Shuʿarā wa ʾl-Ashʿār* and the *Tadhkira* of Nawāʾī, at Tashkent in 1336/1918. He was also a musician, a composer, the author of two small works on music and a fine calligraphist.

Bibliography: Mīr ʿAlī-Shīr Nawāʾī, *Madjālis al-Nafāʾis*, two 16th century. Persian translations, edited with an introduction and annotations etc. by ʿAlī Asghar Ḥikmat, Tehran 1945, 60, 232-3; Sām Mīrzā Ṣafawī, *Tuḥfa-i Sāmī* (section v), ed. in the original Persian, with index, Persian and English prefaces, variants and notes by Mawlawī Iḳbāl Ḥusayn, Patna 1934, 27-30; *ibid.*, complete Tehran edition 1314/1936, 98-100; Said Naficy, *Taʾrīkhča-yi Mukhtaṣar-i Adabiyyāt-i Īrān*, in *Sāl-nāma-yi Pārs*, 1326, 12-13. (SAID NAFICY)

BANNĀNĪ (also AL-BANNĀNĪ), name of a family of Jewish converts to Islam of Fès (Fās), which from the 12th/18th century has produced a number of eminent religious scholars and still belongs, together with a few other families of Jewish extraction, to the aristocracy of Islamic learning in Fès. Its most important members are:

(1) ABŪ ʿABD ALLĀH MUḤAMMAD B. ʿABD AL-SALĀM B. ḤAMDŪN (d. 1163/1750). He is considered the last great representative of the older school of Fès in which he occupies a key position, uniting in his person the main traditions of Māliki scholarship in the Maghrib (cf. J. Berque, in *Revue historique de droit français et étranger*, 1949, 88), combining with them the Māliki traditions of the East where he also studied, and forming a great number of disciples. His *Fahrasa* [*q.v.*] is an important source on the legal studies in Fès in his time. His commentary on the *al-ḥizb al-kabīr* of al-Shādhilī [*q.v.*] testifies to the lasting connection of his family with the Shādhilī *ṭariḳa*. His main work is a commentary on the *K. al-Iktifāʾ* of al-Kalāʿī, on the military expeditions of the Prophet and of the first three Caliphs. His son ʿAbd al-Karīm composed a biography of him.

Bibliography: Muḥammad b. al-Ṭayyib al-Ḳādirī, *Nashr al-Mathānī*, ii, 257; Muḥammad b. Djaʿfar al-Kattānī, *Salwat al-Anfās*, i, 146-148; Muḥammad ʿAbd al-Ḥayy al-Kattānī, *Fihris al-Fahāris*, i, 160-162; Muḥammad b. Muḥammad Makhlūf, *Shadjarat al-Nūr al-Zakiyya*, i, 353; Lévi-Provençal, *Hist. Chorfa*, 312 f.; Brockelmann, S II, 686.

(2) ABŪ ʿABD ALLĀH MUḤAMMAD B. ḤASAN B. MASʿŪD (d. 1194/1780). He wrote a gloss (completed in 1173/1759-60) on al-Zurḳānī's [*q.v.*] commentary on the *Mukhtaṣar* of *Khalīl b. Isḥāḳ*, a commentary on the *Mukhtaṣar al-Manṭiḳ* of al-Sanūsī [*q.v.*], a commentary on the *Sullam* of al-Akhḍarī [*q.v.*], often printed, and a reputed *Fahrasa*.

Bibliography: al-Ḳādirī, *Nashr al-Mathānī*, ii, 257; Muḥammad b. Djaʿfar al-Kattānī, *Salwat al-Anfās*, i, 161-163; Muḥammad ʿAbd al-Ḥayy al-Kattānī, *Fihris al-Fahāris*, i, 162 f.; al-Naṣirī al-Salāwī, *al-Istiḳṣāʾ*, iv, 129; Muḥammad b. Muḥammad Makhlūf, *Shadjarat al-Nūr*, i, 357; Sarkīs, i, 590; Lévi-Provençal, *Historiens*, 146, n. 7; Brockelmann, II, 325, 615, S II, 98, 355, 706.

(3) MUSTAFĀ B. MUḤAMMAD B. ʿABD AL-KHĀLIḲ, wrote in 1211/1796 a gloss on the *Mukhtaṣar* of al-Taftāzānī [*q.v.*] on rhetoric, printed several times, also with notes of Muḥammad b. Muḥammad al-Anbābī (d. 1313/1895).

Bibliography: Sarkīs, i, 590; *Catalogue Cairo*², ii, 181; Brockelmann, i, 355, S i, 518.

(4) MUḤAMMAD B. MUḤAMMAD B. MUḤAMMAD AL-ʿARABĪ B. ʿABD AL-SALĀM B. ḤAMDŪN (d. 1245/1829-30), a grand-nephew of no. 1, became Mālikī muftī of Mecca.

Bibliography: Muḥammad ʿAbd al-Ḥayy al-Kattānī, *Fihris al-Fahāris*, i, 163 f.

(5) MUḤAMMAD, called FIRʿAWN (d. 1281-82/1865), author of a *K. al-Wathāʾiḳ* which was printed several times, also with the commentary of ʿAbd al-Salām b. Muḥammad al-Hawārī (d. 1328/1910).

Bibliography: Berque, in *Revue historique de droit français et étranger*, 1949, 102; Sarkīs, i, 590.

(6) For other members of the family Bannānī, see Ben Cheneb and Lévi-Provençal, *Essai de répertoire chronologique des éditions de Fès*, in *R. Afr.*, 1921 and 1922 (index by H. Pérès and A Sempéré, in *Bull. Études Arabes*, no. 32, 1947, *s.v.* Bannānī); Sarkīs, *Muʿdjam al-Maṭbūʿāt*, i, 589-591; Muḥammad b.

Muḥammad Makhlūb, *Shadjarat al-Nūr*, i, 431; ʿAbd al-Ḥafīẓ al-Fāsī, *Riyāḍ al-Djanna*, ii, 20 ff., 100 f.

(7) Not to the family Bannānī belong ʿAbd al-Raḥmān b. Djād Allāh al-Bannānī (d. 1198/1784), who derives his *nisba* from a village in the neighbourhood of Monastir (Muḥammad b. Muḥammad Makhlūf, *Shadjarat al-Nūr*, i, 342; Sarkīs, i, 591; Brockelmann, II, 109, S II, 105), and Abu 'l-Ḳāsim Ibrāhīm al-Warrāḳ (earlier than 900/1495), whose *nisba* is uncertain (Brockelmann, S I, 585).

(J. Schacht)

BANNŪ, town and headquarters of the district of the same name in West Pakistan, situated in 33° 0′ N. and 70° 36′ E. Population in 1951 was 27,516 for the town and 307,393 (district).

The present town was founded by Lt. Edwardes Herberts in 1848 on a strategic site and named Edwardesābād. The name, however, did not become popular and soon fell into disuse, giving place to Bannū, the old name of the valley derived from the Bannʿučīs, an Afghān tribe of mixed descent. The valley, strewn with ruins of great antiquity, was, according to local tradition, overrun by the armies of Maḥmūd of Ghazna, who razed all Hindu strongholds to the ground. A century later the valley was peopled by the surrounding hill-tribes, the Bannūčīs, the Marwats and the Niāzāīs. For two centuries thereafter it remained under the loose sway of the Mughals. It was conquered in 1738 by Nādir Shāh Afshār and subsequently over-run by Aḥmad Shāh Durrānī. In 1823, the Sikh ruler of Lahore, Randjīt Singh, occupied the valley to be constantly harried by the Afghāns. It was, however, formally ceded to the Sikhs in 1838. After the first Sikh War (1845-46), the valley came under the British influence. In 1847/48, Lieut. Edwardes, as a representative of the Sikh Durbar of Lahore, marched on the valley along with a large army under Gen. van Cortlandt. In 1849 with the annexation of the Pandjāb, Bannū passed on to the British. Contrary to expectations, it remained absolutely peaceful during the military uprising of 1857.

The valley has yielded finds of great archaeological value, among them being coins with Greek or pseudo-Greek legends. The Akra mound near the town is reputed to be of great antiquity.

After its construction in 1848 the Bannū fort was named Dalīpgarh, after Mahārādjā Dalīpsingh, a grandson of Randjīt Singh. As usual a town soon grew up around the fort. It is now the centre of considerable trade. The town is expanding fast and large sums have been recently sanctioned by the Government for the economic development of the area.

BANTAM or **BANTEN** [see djāwa].

BANŪ, followed by the name of the eponymous ancestor of a tribe, see under the name of that ancestor.

BANŪ ISRĀʾĪL, "the Children of Israel".

1. This designation of the Jewish people occurs in the Ḳurʾān about forty times. The terms *Yahūd*, Jews, and its derivatives as well as *Naṣāra*, Christians, appear only in the Medinese period, although they had been widely used in pre-Islamic poetry and certainly were familiar to every Arab townsman (Joseph Horovitz, *Koranische Untersuchungen*, 144 ff. and 153 ff.). On the other hand, *Banū Isrāʾīl* never occurs in authentic pre-Islamic poetry (*ibid.*, 91). It would therefore seem to follow that the exclusive use of this term during the Meccan period has something to do with the Prophet's original knowledge of, and attitude towards, the monotheistic religions preceding him.

In most of the Meccan verses, the *Banū Isrāʾīl* appear in connexion with Moses and the stories which are paralleled in the Biblical book of Exodus or its aggadic amplifications; they are, in chronological order according to Noeldeke-Schwally: xx, 47, 80, 94 (dissensions among the *Banū Isrāʾīl*, see below); xliv, 30; xxvi, 17, 22, 59; xvii, 2, 103; xl, 53; xxxii, 23-24; x, 90; vii, 105, 134, 137, 183. This explains also the form of the name: "the *Children of Israel*", as in the book of Exodus, and not "Israel", as was common usage in Jewish literature in the period preceding Muḥammad (with few exceptions; see *Tarbiz* 3(1932), 413, n. 15a.)

However the *Banū Isrāʾīl* were more than the "people of Moses" (vii, 147, 158.; xxviii, 76). In Sura xvii, which bears the name of *Banū Isrāʾīl* (but also *al-Isrāʾ*), 4-8, the destruction of the First and the Second Temple is described as the fulfilment of a heavenly decree included in the "Book" (perhaps an allusion to Leviticus 26 and Deuteronomy 28), while liii, 59 makes Jesus appear among the *Banū Isrāʾīl*.

Finally, there are a number of Meccan passages which clearly indicate that the *Banū Isrāʾīl* were also understood to denote persons living in Muḥammad's own time. Doubtful is xlvi, 10: "If a witness from the *Banū Isrāʾīl* testified about (a message) similar to this [Revelation (Muḥammad's or another part of the Ḳurʾān?)] and believed"—a verse generally regarded by Muslim tradition as alluding to the Jewish convert ʿAbd Allāh b. Salām (see the sources collected in Ṭabarī's commentary, vol. 26, 6-9). For as the word "(a message) similar" shows, the reference is probably to "the book of Moses" (xlvi, 12), as indeed Ṭabarī himself thought possible, although he rejected that interpretation.

However xxvi, 197 "Is it not a proof for them (the Meccans) that the scholars (or: knowledgeable men) of the *Banū Isrāʾīl* know it (the content of Muḥammad's message)?" hardly makes sense without the assumption that the persons referred to were known to his hearers; the more so as the following verses, xxvi, 198-9, allude to missionary activities of non-Arabs. Likewise xvii, 101 "Ask the *Banū Isrāʾīl*" is to be compared with such passages as x, 94 "If you (M.) are in doubt concerning what We sent down to you, ask those who read the Book before you," cf. xxi, 7; xvi, 43; xxv, 59; ii, 211 (xliii, 45 is no proof to the contrary, as in xxi, 7 and xvi, 34 the Meccans are addressed).

In any case, the *Banū Isrāʾīl* must be regarded as contemporary with Muḥammad in those Meccan verses in which reference is made to their dissensions, which will be settled either by the Ḳurʾān xxvii, 76, or on the day of resurrection, xxxii, 23-5; xlv, 16-17; x, 93. This use of the term is even more evident in al-Madīna, where the *Banū Isrāʾīl* are admonished to believe in Muḥammad's message and warned of the consequences of their disbelief (ii. 40 f.), or where they are censured for their behaviour, obviously actually observed (ii, 83-85: they fight one another, but ransom those that were taken captives).

In order to establish which group of contemporary monotheists were meant by *Banū Isrāʾīl*, one has to bear in mind that already in the Meccan Sura xliii, 59 (see above) Jesus appears among the *Banū Isrāʾīl*. and does so rather frequently in Medinese passages iii, 49; v, 72-74, 78; lxi, 6. In lxi, 14 it is said explicitly that one group of the *Banū Isrāʾīl* believed in him and another did not. Cf. also v, 110, where God protects him against the *Banū Isrāʾīl*.

However, when in v, 12-13 the *Banū Isrāʾīl* are opposed to "those that say we are Christians", v, 14; or are censured in v, 70 together with "Those that say the Messiah, son of Maryam, is God", v, 72, it seems indeed that the Ḳurʾān, where addressing Muḥammad's contemporaries as *Banū Isrāʾīl*, meant Jews. To this interpretation point also the references to the dietary laws in iii, 93 and the quotation from the *Mishna* (*Sanhedrin* 4, 5), which is introduced as an injunction imposed by God on the *Banū Isrāʾīl*. The Muslim commentators indeed explained the Ḳurʾānic diatribes against the *Banū Isrāʾīl* as directed against the Jews of al-Madīna, with whom Muḥammad had so many dealings.

From this use of the name *Banū Isrāʾīl* it does not follow that the word or the ideas connected with it had come to Muḥammad from Jews. On the other hand, the form of the word (*Isrāʾīl*, not *Yisrāʾīl*) does not prove that it is derived from Syriac, for the Hebrew spelling with *Y* and *Śīn* was merely traditional, while the pronunciation of initial *yi* as *i* was as common among Jews as among some other Aramaic-speaking peoples.

In any case, it is most likely that the term *Banū Isrāʾīl* became known to Muḥammad together with the general ideas on revelation and prophecy centering around it: there was only one true religion laid down in a heavenly book; that book had been "sent down" through Moses "before Muḥammad" xlvi, 12, 29; xi, 17. However, instead of uniting the *Banū Isrāʾīl*, its very revelation caused dissension among them xxxii, 23-25; xlv, 16-17; x, 93. The same happened to the followers of Christ xlii, 13-14. Finally, Muḥammad's own mission, which was destined to settle "most" of the dissensions of the *Banū Isrāʾīl* xxvii, 76, was not recognised by Jews and Christians ii, 120 (see *ib.* 111, 113), so that it, too, had the effect of dividing humanity xcviii, 3. This tragic discord was explained as brought about by God's own inscrutable decree xli, 45; xi, 110 (Moses' book); x, 19 (humanity originally was one *umma* or religious community); xvi, 93 (God could unite humanity in one *umma*, but He "chooses" whom He likes xlii, 13). This conception was in a way reminiscent of the *Midrash* applied to the history of the ancient *Banū Isrāʾīl*. Aaron, when rebuked by Moses for making the Golden Calf, excuses himself by explaining that he did so in order to avoid the *Banū Isrāʾīl* becoming divided xx, 94.

Muḥammad, as the son of a caravan city, knew of course about Jews and Christians. However, the idea that these two had their common origin in the *Banū Isrāʾīl*, the numerous stories about them and the belief that the various religions should rightly be one, are too specific to have come from this source. As only the term *Banū Isrāʾīl* or other general designations for the earlier book religions occur during the whole of his Meccan period, it seems most probable that this use of the term is to be traced to a monotheistic tradition which emphasised the common rather than the dividing aspects of the monotheistic religions.

2. In the *ḥadīth*, *Banū Isrāʾīl* denotes both the old Israelites, *e.g.*, when ʿUmar is compared to a king of the *Banū Isrāʾīl* (Hezekiah), Ibn Saʿd iii, I, 257, l. 2 ff., or when David's Araonah (Samuel II 24, 21) is referred to, Ibn Sa'd iv, I, 13, l. 23, and also the Jews and Christians in general, *e.g.*, in the chapter "What was said about the *Banū Isrāʾīl*" in Bukhārī (60) *Anbiyāʾ*, 50. Although, by chance, only Jews are mentioned there separately, Christians are referred to by implication in a story about a *rāhib*, which normally denotes a monk. A story about Djuraydj, "who was a monk among the *Banū Isrāʾīl*" is reported by Abu'l-Layth al-Samarḳandī in his *Tanbīh al-Ghāfilīn* 260.

The question why the ancient *Banū Isrāʾīl*, the chosen people, Sūra ii, 2, 47, 122; xliv, 32; xlv, 16, should have disappeared, considerably occupied the mind of the Muslims. Their answers to this question echoed of course their own tribulations, such as deviations in the fields of theology and religious law ("the *Banū Isrāʾīl*" perished, because they practised *Raʾy* [see AṢḤĀB-AL-RAʾY]), or public morals "because their women indulged in wigs" (Bukhārī (60) *Anbiyāʾ* 54) or "in high heels" (Fāʾiḳ, ii, 366, quoted by Dozy, *Suppl.* ii, 391 a).

For the Muslims regarded those *Banū Isrāʾīl* as their brothers, as in the famous *ḥadīth* Farḳad-Hudhayfa: "What excellent brothers are the *Banū* to you: They (experienced) the bitterness and you the sweetness," quoted *e.g.*, by Abū Nuʿaym, *Ḥilyat al-Awliyāʾ iii*, 50, l. 5. The saying obviously refers to "the burden and the chains", *i.e.*, the many religious obligations which were incumbent on the *Banū Isrāʾīl* (both Jews and Christians according to Sūra vii, 157), cf. Ibn Ḳutayba, *Mukhtalaf al-Ḥadīth* 142, ult.

In a *ḥadīth* quoted by Sahl al-Tustarī in his *Tafsīr al-Ḳurʾān*, 57, the Muslims even identify themselves with the *Banū Isrāʾīl*: "We are the *Banū Isrāʾīl*, we, the sons of Naḍr b. Kināna. We do not follow our mother (who was the wife of both Kināna and his father Khuzayma, see Ibn Hishām 1-2) nor our fathers (*i.e.*, Naḍr, Kināna, Khuzayma); with "we" the Arabs are meant."

However, as in the Ḳurʾān, *Banū Isrāʾīl* denotes in the *ḥadīth* also contemporary Jews and Christians and is thus synonymous with *Ahl al-Kitāb* and similar expressions. Cf. the very often quoted saying of Muḥammad: "*ḥaddithū ʿan Banī Isrāʾīl walā ḥaradj*" "Relate traditions which come from the *Banū Isrāʾīl* without scruples", cf. *Concordance et Indices de la Tradition Musulmane*, i, 445 b, s.v. *ḥrdj*, and Wensinck, *Handbook*, 231a; al-Shāfiʿī, *Risāla*, Cairo 1310, 101 (1312, 105).

Again, as in the Ḳurʾān, when used of contemporaries, *Banū Isrāʾīl* mostly means Jews. Cf. the characteristic story about the wigs of the women of the *Banū Isrāʾīl* which is given in Bukhārī (60) *Anbiyāʾ* 54, the first time (ed. Krehl ii 376) with a general reference to the *Banū Isrāʾīl* but a second time (Krehl ii 380, l. 10) in a detailed story about the Caliph Muʿāwiya, who, while visiting al-Madīna, was disgusted to find the women there wearing wigs (a habit which they might have adopted from their Jewish neighbours). "I have nobody seen doing this", the old Caliph said, "except the Jews". Thus the familiar picture of the *Ḥabr min aḥbār Banī Isrāʾīl* (*e.g.*, Abū Nuʿaym, *Ḥilya* ii, 372, l. 22 = Ibn Ḳutayba, *ʿUyūn al-Akhbār* ii, 359, l. 13) is to be understood as describing a rabbi; and when Madjd al-Dīn Ibn al-Athīr, *Nihāya*, s.v. *thny* I 136 refers to "the rabbis, *aḥbār*, of the *Banū Isrāʾīl*, after Moses "who compiled the *Mishna* (*al-mathnāt*)" he means of course Jews.

It is from this usage of *Banū Isrāʾīl* that the word *Isrāʾīlī*, Israelite, was derived as a more polite designation for a Jew than Yahūdī. We find this term already in full use in the third/ninth century, *e.g.* Masʿūdī, *Tanbīh* 79, 7 (the Israelites in ʿIrāḳ); 113, 3 (Israelite translators of the Bible); 219, 9 (Israelites divided into three sects), cf. also *ibid.*, 105, 7; 112, 18; alongside with Yahūd 113, 9; 184, 14. Similarly, Muslim scholars and men of letters refer in this way to their Jewish colleagues, *e.g.*, Isḥāḳ al-Israʾīlī, the famous doctor and author (M. Steinschneider, *Arab. Lit. d. Juden*, Frankfurt 1902, 38-45); Jewish converts to Islām also, such as the poet Ibn Sahl al-Israʾīlī of Seville (Brockelmann S. I, 483) were styled thus.

A later, scientifically minded, age tried to distinguish with more precision between *Banū Isrāʾīl* and *Yahūd*. Al-Ḳalḳashandī xviii, 253, quoting ʿImād al-Dīn (*i.e.* Abuʾl-Fidā), states that *Banū Isrāʾīl* are the ancient Jews by race, while the term *Yahūd* includes also the many converts to Judaism from Arab, Rūm and other stocks. This statement is not without foundation in the usage of ancient sources. Thus Ibn Saʿd, viii, 85, l. 27 says with regard to Ṣafiyya, the Jewish wife of Muḥammad, that she was from the *Banū Isrāʾīl i.e.*, from pure Jewish stock, a descendant of the high priest Aaron.

As is natural, to an ancient people such as the *Banū Isrāʾīl* things were ascribed which originally had nothing to do with them. Thus a Maghribī handbook on agriculture advises against doing farmwork on certain days, because they were the days of punishment (*ridjz*, cf. Sūra 7, 162) inflicted on the *Banū Isrāʾīl*, see J. M. Millás-Vallicrosa, in *Andalus* 19 (1954), 132.

The most important aspect of the image of the *Banū Isrāʾīl* in Muslim literature is the piety attributed to them. "The pietists (*ʿibād, mutaʿabbidūn*) of the *Banū Isrāʾīl*" is a common expression, cf. *e.g.*, ʿAbd al-Ḳādir Djīlānī, *Ghunya* ii 62, Abū Nuʿaym, *Ḥilyat al-Awliyāʾ* ii 373, l. 4 ff. Of a man who devoted himself to worship and ascetism it was said that he was like the *Banū Isrāʾīl*, Sakhāwī (d. 902/1497), *al-Ḍawʾ al-Lāmiʿ* vi, 146, 20-22. Many of the stories about the pious men of the *Banū Isrāʾīl*— quite a number of which have found their way into *Alf Layla wa-Layla*— can be traced in the Talmud and the Midrashim, such as the beautiful parable about the pious Ḥayy of the *Banū Isrāʾīl* in Ibn ʿAsākir's *Taʾrīkh Dimashḳ*, v, 23, which is an almost literal rendering of Babylonian. Talmud, Taʿanīth 23. Cf. ISRĀʾĪLIYYĀT, where also an attempt is made to explain, why pietism was connected with *Banū Isrāʾīl*.

BANŪR, an ancient town (East Pandjāb, India) situated in 30° 34′ N. and 76° 47′ E., 9 miles from Ambālā and 20 miles from Sirhind. The old Sanskrit name was Vahnīyūr which became, during the course of centuries, Banīyūr and finally Banūr. The ruins extend right up to Čhat [*q.v.*] (another ancient town, now in ruins) 4 miles away. It was first mentioned by Bābur when it was, and still continues to be, famous for its white jasmine flowers and the otto distilled from them.

Another ancient name of Banūr, according to tradition, was Pushpā Nagarī or Pushpāwatī (lit. city of flowers) but it bears no resemblance to its present name. During the rule of the Sayyid dynasty (817-55/1414-51) the town seems to have gained in importance and even just before the establishment of Pākistān (1947) was peopled mainly by *sayyids* who, like the *sayyids* of Bilgrām, trace their descent to Abū 'l-Faraḥ of Wāsiṭ, said to have migrated to India after Hūlāgū's sack of Baghdād (656/1258). The tomb of Malik Sulaymān Khān, father of the Sayyid ruler Khaḍir Khān (817-24/1414-21) existed till 1947 when the local Muslims migrated *en masse* to Pākistān. Sayyid Ādam al-Banūrī, [*q.v.*] (d. Madina, 1053/1643) one of the leading *khulafāʾ* of Aḥmad Sirhindī [*q.v.*] was a native of this town. It was overrun early in the 12th/18th century by the Sikh adventurer Banda Bayrāgī, and passed into the possession of the Singhpūriyā Sikhs. It was occupied in 1177/1763 by Ālā Singh, the chief of Patiala and remained in the possession of his descendants till 1956 when the State was eventually merged into the new province of East Pandjāb. It was defended by two forts, Mughal and Sikh, which are still extant as ruins.

(A. S. BAZMEE ANSARI)

AL-BANŪRĪ, MUʿIZZ AL-DĪN ABŪ ʿABD ALLĀH ĀDAM B. S. ISMĀʿĪL, one of the premier *khulafāʾ* of Aḥmad Sirhindī [*q.v.*], was a native of Banūr [*q.v.*]. He claimed descent from Imām Mūsā al-Kāẓim [*q.v.*], but it was disputed on the ground that his grandmother belonged to the Mashwānī tribe of the Afghāns and he too lived and dressed after the fashion of the Afghāns. His *nasab* was again questioned when in 1052/1642 he was in Lahore accompanied by 10,000 of his disciples, mostly Afghāns, by ʿAllāmī Saʿd Allāh Khān Chinyōtī, the chief Minister of Shāhdjahān, and by ʿAbd al-Ḥakīm al-Siyālkōtī [*q.v.*], who had been deputed by the Emperor to ascertain from the saint the reason of his visit to Lahore in the company of such a large force. Not satisfied with the explanation of the *Shaykh*, the emperor ordered him to quit Lahore, go back to Banūr and proceed on pilgrimage to Mecca and al-Madīna.

During the early years of his life he served in the Intelligence branch of the Imperial army but gave up service after some years having felt a strong urge to take up a life of piety and spirituality. He first became a disciple of Ḥādjdjī Khiḍr Rūghānī Buhlūlpūrī and on his advice later contracted his *bayʿa* with Aḥmad Sirhindī. During the transition period he visited a number of places including Multān, Ambāla, Pānīpat, Shahābād, Sirhind, Lahore and Sāmāna in search of derwishes and mystics.

There are conflicting statements in the *Nikāt al-Asrār*, a collection of his *malfūẓāt*, and the *Manāḳib al-Ḥaḍarāt*, his authentic biography, regarding his educational attainments. While the *Nikāt* describes him as an "*ummī ʿāmmī*" the *Manāḳib* records that he read primary books like the *Mīzān al-Ṣarf* and *Munshaʿib* with Mullā Ṭāhir Lāhawrī, a well-known scholar of his days. His military assignment, however, suggests that he was fairly well educated.

He died at al-Madīna on Friday, Shawwal 13, 1053/December 25, 1643 and was buried in al-Baḳīʿ near the tomb of ʿUthmān b. ʿAffān. During his life-time he wielded great influence and at the time of his death more than 400,000 persons owed spiritual

allegiance to him. His meagre religious education, rigid attitude and contempt for State dignitaries was constantly criticised, but he remained steadfast in his mission and won over to his side both scholars and laymen like Muḥammad Amīn Badakhshī, ʿAbd Khāliḳ Ḳaṣūrī, Shaykh Abū Naṣr Ambālawī, his brother Masʿūd and Shaykh Muḥammad also of Ambāla. Among his *khulafāʾ* are counted more than a hundred persons, including Ḥāfiẓ ʿAbd Allāh of Akbarābād, spiritual guide of Shah ʿAbd al-Raḥīm, father of Walī Allāh al-Dihlawī [*q.v.*[and Sayyid ʿAlam Allāh, one of the ancestors of Aḥmad Barēlwī [*q.v.*].

An incidental reference in the *Nikāt al-Asrār* reveals that he was 46 when the book, as internal evidence shows, was compiled during his sojourn in the Ḥidjāz in 1052-3/1642-3. This means that he was born c. 1005-6/1506-7. His youngest son, Muḥammad Muḥsin, was born at Gwalior in 1052/1642, while he was on his way to Mecca, a fact which further supports the view that he died at no very advanced age.

He is the author of: i) *Nikāt al-Asrār*, dealing with abstruse mystical problems and their *Ṣūfic* exposition, interspersed with personal experiences of the author in the spiritual field and casual biographical references; ii) *Khulāṣat al-Maʿārif* (in 2 vols.) is more or less a continuation of the former. The entire work is in Persian and is still in MS. He is also the author of a commentary on *al-Fātiḥa* which forms the first part of the *Natāʾidj al-Ḥaramayn*, compiled by Muḥammad Amīn Badakhshī, who claims to have lived for fifty years in the Hedjaz and also accompanied Ādam al-Banūrī on his pilgrimage to the holy cities.

BANYAR, a confederation of South Arabian tribes, mainly Banū ʿĀmir, Banū Yūb (Ayyūb), Āl ʿAzzān and Āl ʿUmar, living north of Kawr ʿAwdhilla (cf. art. ʿAwdhalī) in al-Ḍāhir, Markha and Wādī Maʿfarī (also called W. Banyar). The Banyar once belonged to the Sultanate of al-Raṣṣāṣ in Miswara; their chief town is al-Bayḍāʾ [cf. art. BAYḤĀN]. Here is the residence of the common head (*ʿāḳil*) of all Banyar, while the Banū Yūb in the north are said to have an *ʿāḳil* of their own in al-Farsha. The Banyar territory corresponds, roughly speaking, to that of the MḌHY in inscriptions (cf. art. Maḍhḥidj).

BANZART, (Bizerta), a town on the Northern coast of Tunisia. It stands on the site of the ancient town of Hippo Diarrytus, the memory of which is perpetuated in the modern name. Phoenician, Carthaginian, Roman and Byzantine in succession, it was taken by Muʿāwiya b. Hudaydj in 41/661 and again occupied, simultaneously with Carthage, by Ḥasan b. Nuʿmān. In the 4th/10th century, it is mentioned by Ibn Ḥawḳal as the capital of the province of Saṭfūra (north of Tunis), although at the time it was practically deserted and in ruins. It recovered from this decline. In the 5th/11th century, al-Bakrī speaks of the stone wall surrounding the town, as well as of its great mosque, bazaars, baths and gardens. Fish is cheaper there than elsewhere. The lake (*buḥayra*) offers wonderful fishing, different kinds of fish stocking it in turn. Not far from the roadstead, called the *Marsā al-kubba*, and from the town, there are some forts (*Ḳilāʿ Banzart*), which served as a *ribāṭ*, a place of retirement for men of piety and a refuge for the local people, when they feared a Christian landing.

Following the invasion of the nomadic Hilāl and the abandonment of al-Ḳayrawān by the Zīrid sultan al-Muʿizz, Banzart became virtually independent; soon, however, it was forced to pay tribute exacted by the Arabs holding the countryside, as a guarantee against being pillaged by them. Taking advantage of the rivalries which reft the population, the Arab chieftain al-Ward al-Lakhmī entered Banzart and there set himself up as the ruler. He endowed his capital with the requisite institutions and made the town relatively prosperous. His son succeeded him and the Banu 'l-Ward dynasty continued in Banzart until the Almohad invasion (554/1159). The seventh of this line, the amīr ʿĪsā, made his submission to ʿAbd al-Muʾmin.

At the beginning of the 7th/13th century, Banzart was occupied by the Banū Ghāniya Almoravids and from that time entered on a decline, confirmed at the beginning of the 16th century by Leo Africanus. However, it received some Muslim emigrants from Spain, who founded the "suburb of the Andalusians" and, like all ports of the Barbary coast, it turned its attention to privateering. Having repudiated the authority of the Hafṣids of Tunis, in 240/1534 it submitted to Khayr al-Dīn, the master of Algiers. Charles V took it in the following year and it remained in the hands of the Spaniards until 280/1572. Banzart having once again become a Turkish town, its corsairs became an ever increasing danger. Their depredations provoked reprisals on the part of the Christian powers, namely naval expeditions by the Knights of Malta and bombardments, that of 1122/1785 by the Venetians almost completely destroying the town. The suppression of privateering and the

silting up of the harbour brought about Banzart's ruin. Bizerta, now no more than a wretched village, was taken by the French in 1881. Considerable works were undertaken, which made it a great port, accessible to the largest ships, equipped with a military arsenal and defended by modern forts.

(G. Marçais)

BĀʾOLĪ, Urdū and Hindī word for step-well, of which there are two main types in India, the northern and the western. The northern variety is the simpler, consisting essentially of one broad flight of stone steps running from ground level to below the waterline, the whole width of the site; subsidiary flights may run opposite and at right angles to these below water-level, thus constricting the cistern itself into successively smaller squares, and these may be supplemented by cross-flights reducing the final cross-sectional area of the cistern to an octagon. The sides other than that composed of the main flight are vertical, of stone or, less commonly, of brick. The whole site is usually rectangular—the *bāʾolī* outside the Buland darwāzā at Fatehpur [*sic*] Sīkrī, associated with Shaykh Səlim Čishtī is a notable exception, the nature of the terrain having made an irregular polygon the only shape possible—with apparently no consistency in orientation: *e.g.*, the *bāʾolī* at the *dargāh* of Niẓām al-Dīn Awliyya, near Humāyūn's tomb, Delhi, runs north and south in alignment with the shrine, while that at the *dargāh* of Khwādja Ḳuṭb al-Dīn Bakhtiyār Kākī at Mahrawlī, near Lālkot, Old Delhi, runs east-west and is not aligned with any major structure. Such *bāʾolīs* are functional structures, from which water may be drawn and in which ablutions may be carried out, and into which men dive, often from a height of 20 metres, to recover alms cast in by pilgrims. They are usually unadorned, but often of a monumental beauty on account of their size: *e.g.*, that of Niẓām al-Dīn is 37.4 m. long by 16.2 m. broad, and some 20 m. deep from ground level to average water-level.

Bāʾolīs are found at the principal shrines associated with Čishtī *pīrs*; besides the examples already noted, a fine rock-cut *baʾolī* is at the *dargāh* of Shaykh Muʿīn al-Dīn Čishtī at Ajmer. The reason for this particular association is not clear. Other *bāʾolīs*, smaller but of similar type, are not uncommon at other Islamic sites in N. India, concerning which there is no reason to suppose any Čishtī connexion. Pre-Islamic examples are not recorded.

The western variety, generally known by the Gudjarātī word *vāv*, is of high artistic and architectural merit as well as functional; it is more elaborate than its northern counterpart, consisting of two parts: a vertical circular or octagonal shaft, from which water may be drawn up as from an ordinary well, and a series of galleries connected by flights of steps, with pillared landings on the lower galleries supporting the galleries above; passages from each landing run to the shaft, where there are frequently chambers which form a cool retreat in the hot season. Such structures are known in Gudjarāt from pre-Muslim times: Mātā Bhavānī's *vāv* near Aḥmadābād, the best preserved Hindū prototype, is probably 11th century A.D. (Burgess, *ASWI*, viii, 1-3); Bāī Ḥarīr's *vāv* in Aḥmadābād, which bears a Sanskṛit inscription of A.D. 1499 and an Arabic one of 8 Djumādā I 906/30 Nov. 1500, has ornament very similar to that of the tracery in the niches of the minarets of local mosques. The *vāv* at Adāladj (*ibid.*, 10-13) is cruciform, with three main flights down to the first landing. Other *vāvs* occur scattered throughout Gudjarāt from Barawdā (Baroda) northwards; one of these, at Māndvā on the left bank of the Vātruk, is of peculiar construction, having a brick circular shaft with chambers in three storeys on one side reached by spiral stairs within the wall of the shaft itself.

The northern *bāʾolīs* are not dated; that at the *dargāh* of Niẓām al-Dīn is said (Sayyid Aḥmad Khān, *Athār al-Ṣanādīd*, Lucknow edition 1900, 42) to have been built by the Shaykh (636-725/1238-1325) himself, and it is probable that other examples date from the same approximate period.

BĀONĪ, formerly a petty Muslim state in the Bundelkhand Agency of Central India, is now administered as part of Madhya Pradesh (area: 122 square miles; population: 25, 256, of which only 12% are Muslims). Its rulers were descended from ʿImād al-Mulk Ghāzī al-Dīn, the grandson of Āṣaf Djāh, the Niẓām of Ḥaydarābād. About 1784 Ghāzī al-Dīn came to terms with the Marāthās who granted him a *djāgīr* of 52 villages, the name Bāonī being derived from *bāwan* (fifty-two). This grant was later recognised by the British. Because of his loyalty during the 1857 revolt, the nawāb was granted a *sanad* 1862 guaranteeing the succession. In 1884 the nawāb ceded lands for the Betwā canal and received the usual compensation. There is little else of historical importance to record.

AL-BĀRA, place in northern Syria, belonging to what is called the region of the "dead towns", in the centre of the limestone plateau, some fifteen kms. west of the important township of Maʿarrat al-Nuʿmān. In the Middle Ages, as attested by the Arabic and Western texts, it served as a fortified cathedral town and its site is still marked today by extensive ruins, among which the modern villages of al-Kafr and al-Bāra (names corresponding to the ancient Greek and Syriac terms, *Kapropēra* and KPRʾD BRTʾ) rise on both sides of a *wādī*. In bygone days, local trade as well as the olive oil and wine industries ensured the growth of this "town of Apamea, situated between the two dominant massifs of the Djabal Zāwiya, at a point which had to be passed through" (G. Tchalenko) and, in the Byzantine period, contained a complex assembly of churches, monasteries and living quarters. It continued to flourish

after the Arab conquest. But at the time of the Crusades, it was coveted from many sides, being taken in succession by Tancred and Raymond of Saint-Gilles in 492/1098, reconquered by Riḍwān in 496/1102, then left to the Franks by the treaty of 514/1120, to be reoccupied in 516/1123 by Balak and again by Nūr al-Dīn in 543/1148. Sorely tried by these struggles and by the ravages of the Turkomāns, it declined in the 6th/12th century, and thenceforth no longer appeared in the lists given by the Arab geographers. The importance of its medieval fortress, known under the name of Ḳalʿat Abī Safyān (see ABŪ SAFYĀN), has already been noted but other remains, inscriptions and small mosques likewise bear witness to its persistent vitality at the beginning of the 5th/11th century when, from various indications, it has been concluded that its Muslim population were for the most part S̲h̲īʿīs.

AL-**BARĀʾ** B. ʿĀZIB B. AL-ḤĀRIT̲H̲ AL-AWSĪ AL-ANṢĀRĪ, a Companion of the Prophet. He was too young to take part in the Battle of Badr, but he accompanied Muḥammad on numerous other expeditions and later took part in the wars of conquest; he brought Rayy and Ḳazwīn under Muslim dominion. He later espoused the cause of ʿAlī b. Abī Ṭālib and fought under his banner at the Battle of the Camel [see AL-D̲J̲AMAL], at Ṣiffīn [*q.v.*], and at al-Nahrawān [*q.v.*]; the famous *ḥadīt̲h̲* of G̲h̲adīr K̲h̲umm [*q.v.*] was related on his authority. After his retirement to Kūfa, he lost his sight towards the end of his life, and died about 72/691-2.

AL-**BARĀʾ** B. MAʿRŪR, a Companion of the Prophet. Among the seventy-five proselytes who appeared at the ʿAḳaba in the summer of 622 at the pilgrims' festival to enter into alliance with the Prophet, the aged S̲h̲ayk̲h̲ al-Barāʾ b. Maʿrūr of K̲h̲azrad̲j̲ was one of the most important, and when Muḥammad declared he wished to make a compact with them that they should protect him as they would their wives and children, al-Barāʾ seized his hand, promised him protection in the name of all present, and sealed the compact. In the same assembly, the so-called second ʿAḳaba, twelve men were chosen as preliminary representatives (*naḳīb*) of the new community in Yat̲h̲rib, and on this occasion al-Barāʾ was appointed chief of the Banū Salima. He is also famous in the history of Islām, for having changed the direction of praying, even before Muḥammad, by turning towards the sanctuary of Mecca. When Muḥammad reproved him, saying that Jerusalem was the true *ḳibla*, he obeyed him, but on his deathbed ordained that his corpse should be turned towards Mecca. He died in Medīna in Ṣafar, a month before Muḥammad's arrival there, after bequeathing to the Prophet one third of his estate.

BĀRA SAYYIDS, the descendants of Sayyid Abu 'l-Faraḥ of Wāsiṭ near Bag̲h̲dād, who with his twelve sons emigrated to India in the 7th/13th century and settled in four villages near Patiāla in the *sarkār* of Sirhand in the *sūba* of Dihlī. The four main branches of the family were named after these four villages. Sayyid Dāʾūd settled in Tihanpūr; Sayyid Abu 'l-Faḍl in Čhatbanūr or Čhatraurī; Sayyid Abu 'l-Faḍāʾil in Kūndlī; and Sayyid Naẓm al-Dīn Ḥusayn in Jagner or Jhajari. From this area they later migrated into the Muẓaffarnagar district of the Ganges-Jumna *doāb*. The Kundlīwāl branch settled in Majhera; the Čhatbanūrī branch near Sambalhera; the Jagnerī branch in Bidaulī and Patri; and the Tihanpūrī branch in Dhāsrī and Kumhera.

The derivation of the term *bārha* is uncertain. Some derive it from *bāhir* (outside), because the Sayyids, disgusted with the debaucheries of the Mīna *bāzār* at Dihlī, preferred to live outside the city. Others derive it from the fact that the Sayyids, being S̲h̲īʿīs, were followers of the twelve (*bāra*) Imāms. The authors of the *Tabaḳāt-i Akbarī* and the *Tuzūk-i D̲j̲ahāngīrī* derive the name from the twelve villages in which they settled in the district of Muẓaffarnagar. This is the most probable explanation. The contention of H. M. Elliott and M. Elphinstone that one of the Sayyid settlements was named Bāra has been shown to be incorrect (see W. Irvine, in *JASB* 1896, 175).

Sayyid settlements in the district of Muẓaffarnagar can be traced back to the middle of the 8th/14th century. From the reign of Akbar onwards the Bāra Sayyids took part in every important campaign and became renowned for their courage. The Tihanpūrī branch was the most important. To this branch belong the famous Sayyid brothers, Ḥasan ʿAlī and Ḥusayn ʿAlī, the king-makers of the first two decades of the 18th century. They rose to prominence in the service of ʿAẓīm al-S̲h̲ān, the son of Muʿaẓẓam al-Dīn who became the emperor Bahādur S̲h̲āh. For their gallantry at the battle of Jājau (1707), which gave the throne to the father of their patron, the elder brother, Ḥasan ʿAlī, afterwards known as ʿAbd Allāh K̲h̲ān, was entrusted with the government of Allāhābād and the younger brother with that of Patna. On the death of Bahādur S̲h̲āh in 1712, distrustful of the power of their enemies at Dihlī, they overthrew D̲j̲ahāndār S̲h̲āh and replaced him by Farruk̲h̲-siyar. As his ministers they enjoyed the highest dignities that the emperor could confer. ʿAbd Allāh K̲h̲ān was appointed *wazīr* of the empire with the title of Ḳuṭb al-Mulk. Ḥusayn ʿAlī became first *bak̲h̲s̲h̲ī* with the title of *amīr al-umarā*. They are generally given the credit for being the first to abolish the *d̲j̲izya* after the death of Awrangzīb, but the latest researches disclose that they were merely continuing the policy already introduced by the *wazīr* D̲h̲u 'l-Fiḳār K̲h̲ān (see *Jizyah in the Post-Aurangzeb Period* by S. Chandra, in *Proceedings of*

the Indian History Congress, Ninth Session, 320-326). Farru<u>kh</u>-siyar was an ingrate who plotted against his benefactors. His efforts came to naught and eventually, in the seventh year of his reign, he was deposed, blinded, and finally executed by the infuriated Sayyids. The Sayyids next raised two miserable puppets to the throne, Rafīʿ al-Dara<u>dj</u>āt and Rafīʿ al-Dawla, both of whom were consumptive youths who died in the year 1719. In the same year the Sayyids crowned Muḥammad <u>Sh</u>āh as Emperor. The administration of the six Deccan provinces was entrusted to Ḥusayn ʿAlī, the younger Sayyid brother, but he was soon recalled to Dihlī by ʿAbd Allāh, whose position was being undermined by court conspiracies in which the Emperor was involved. It was at this juncture that Niẓām al-Mulk, leader of the Turānī nobles and for that reason opposed to Sayyid predominance at Dihlī, deemed it advisable to abandon Mālwā, of which he was governor, and establish himself in the Deccan. This naturally alarmed the Sayyids who took immediate steps to coerce him, but before their forces had marched many miles beyond Āgra, Ḥusayn ʿAlī was assassinated and in a very short time ʿAbd Allāh was overthrown by a powerful combination of Turānī and Īrānī nobles at Dihlī. This took place in 1720. In 1737 the descendants of the two brothers were slaughtered or dispersed when the Rohillas sacked Jansath. From this date their power rapidly declined. After the establishment of British paramountcy many Sayyids returned to their former villages only to fall victims to the wily money-lenders.

(C. Collin Davies).

BĀRĀ WAFĀT is a term used in India and Pakistan for the 12th day of Rabīʿ I, observed as a holy day in commemoration of the death of the prophet Muḥammad. It is compounded of *bārā* (in Urdū = twelve) and *wafāt*, death. On this day, portions of the Ḳur'ān (*Sūra Fātiḥa*) and other works in praise of the Prophet's excellences are read in private houses and mosques, and sweet dishes are prepared, partaken of and also given away along with fruit as alms. Most of the ceremonies described in Herklots' *Islam in India* in connexion with Bārā Wafāt are now things of the past. It is now a day of rejoicing rather than mourning for the Muslims, who consider 12th Rabīʿ I at the same time as the birthday of the Prophet. As such it is known as ʿĪd Milād al-Nabī and is observed as a public holiday in Pakistan.

Bibliography: *Islam in India*, composed under the direction of G. A. Herklots; revised edition by W. Crooke, OUP 1921, 188.

(Sh. Inayatullah)

BARĀ'A. I. — This substantive is derived from the Arabic root *b r'*, which is frequently used to denote the general idea of "release, exemption" (from a duty, from an accusation—therefore "innocence"—, from risk, from responsibility), a meaning to be found repeatedly in the Ḳur'ān. With this is connected the notion of "freedom from disease, cure", which is equally expressed by this root in classical Arabic. There is undoubtedly good reason to distinguish, as a borrowing from North-Semitic, the meaning, also Ḳur'ānic, of "create", when speaking of God (Jeffery, *Foreign Vocabulary of the Qur'ān*, Baroda 1938, 76).

The word *barā'a* itself occurs twice in the sacred book. In Sūra liv, 43, it means without doubt "immunity, absolution". On the other hand its interpretation, when it occurs as the first word of Sūra ix (and one of the titles given to this Sūra) is a matter of some difficulty: "*Barā'at*ᵘⁿ of Allāh and his prophet towards those polytheists with whom you have concluded a treaty". The following verse, which accepts a sacred truce of four months, might give rise to the supposition that the reference here is to an immunity. But the traditional interpretation explains this *barā'a* on the basis of verses 3-5, according to which Allah and his prophet will be "unbound" (*barī'*) in regard to the unbelievers, whom the Muslims will then be able to kill with impunity (see the translation and notes of Blachère). The *barā'a*, refers then to the "breaking of the ties"—the religious and social ties—, a kind of dissociation or excommunication, the dire consequences of which are exactly the opposite of an immunity. *Barī'*, indeed, is the term used for a person or persons who have broken off all relations with an individual or a group, mainly with fellow-tribesmen; the term *barā'a* enters into those phrases which mean "to exile or to remove from the protection of the law" (for the *tabri'a*, an Ibāḍī penal sanction, see below), and the *yamīn al-barā'a* is the oath, condemned by the *ḥadī<u>th</u>* (notably Abū Dāwūd, *Sunan*, no. 3258), but still in evidence today, by which a person renounces on his own behalf, if he should swear falsely, adherence to Islam or the protection of God. The <u>Sh</u>īʿīs advocate the "repudiation" (*barā'a*) of the enemies of ʿAlī and his descendants. as opposed to the "attachment" due to this line; *contra* the whole practice of *barā'a-walāya*, see the condemnation of the Ḥanbalī school *apud* H. Laoust, *La profession de foi d'Ibn Baṭṭa*, Damascus 1958, 162. The evil implications of the *barā'a*, thus understood, justify, in the view of certain Muslim scholars, the exceptional absence of *basmala* at the begining of Sūra ix.

In legal terminology, *barā'at al-<u>dh</u>imma*, or simply *barā'at* is the "absence of obligation". *Bayʿ al-barā'a*, for example, is the sale without guarantee wherein the seller is freed from any obligation in the event of the existence, in the sale-object, of such a defect as would normally allow the sale to be rescinded (see Santillana, *Instituzioni*, ii, 149, for a striking resemblance of formulae in this regard between Muslim Egypt and Christian Tuscany). Hence the term *tabri'a* is variously used for all sorts of declaratory or constitutive acts which absolve from responsibility. One may cite the *tebriya* of the present-day Moroccan Bedouin. This is an "indemnity paid by the parents of the murderer to those of the victim for continuing to live within the tribe" (Loubignac, *Textes arabes des Zaër*, Paris 1952, 359); see the similar use of *barā'a* < *barāh* noted in the Bethlehem region (Haddād, in *ZDPV*, 1917, 233).

The following derived technical terms may be noted here.

1. *Mubāra'a*: a form of divorce by mutual agreement where husband and wife free themselves by a reciprocal renunciation of all rights (Bergsträsser-Schacht, *Grundzüge*, 85; Santillana, *Istituzioni*, i, 272; cf. Averroes, *Bidāya*, ed. Cairo 1935, ii, 66, who gives an accurate definition by way of comparison with some similar forms of *ṭalāḳ*).

2. *Istibrā'* or "confirmation of emptiness", with two quite distinct connotations: a) temporary abstention from sex-relations with a slave-girl, in order to verify that she is not pregnant, on the occasion of her transfer to a new master or a change in her circumstances [see ʿABD], and b) an action of the left hand designed to empty completely the urethra, before the cleaning of the orifices or *istind̲j̲ā'* which must follow satisfaction of the natural needs (*LA*, i, 25; Abu 'l-Ḥasan on the *Risāla* of Ibn Abī Zayd, ed. Cairo 1930, i, 144).

Proceeding now to the general theory of law as found in the classical works, the notion of *barā'a* is there to be found in the maxim, generally accepted by orthodoxy and vindicated by As̲h̲ʿarī doctrine: *al-aṣl barā'at al-d̲h̲imma*, "the basic principle is freedom from obligation". This means, according to the standpoint one adopts: "The only obligations to which man is subject are those defined by God", or: "In the absence of proof to the contrary the natural presumption is freedom from obligation or liability".

In its first sense this *barā'a aṣliyya* embodies a theological notion: it contradicts the Muʿtazilite thesis which is founded upon the rationality of the legal values (*aḥkām*) of a certain number of human acts, and which holds that, before the promulgation of the revealed law, all those other acts which do not admit of a rationalist assessment are all illicit (according to some) or all permissible (according to others) or unqualified (according to a third group). See G̲h̲azālī, *Mustaṣfā*, ed. Cairo 1937, i, 40-42, 127-132; or better: Āmidī, *Iḥkām*, ed. Cairo 1914, i, 130-135. Both these works refute the Muʿtazilite thesis. But for almost the totality of the orthodox scholars (two exceptions are indicated, for the Mālikīs, by Bād̲j̲ī, *Is̲h̲ārāt*, ed. Tunis 1351 A.H., 123, 130-131;—the work of Lapanne-Joinville in *Travaux Semaine Intern. Droit musulman*, Paris 1952, 85, calls for certain corrections), the legal values are based, absolutely and exclusively, upon the revealed law; before this law and outside it, human acts have no *ḥukm*; and this kind of fundamental indifference, which must not be confused with permissibility, denies the notion of any obligation.

In its second sense, which, however, the authors do not attempt to distinguish from the first (the confusion is obvious in the S̲h̲āfiʿī and Ḥanafī works entitled *al-As̲h̲bāh wa 'l-Naẓā'ir*: Suyūṭī, ed. Cairo 1936, 39, Ibn Nud̲j̲aym, ed. Cairo 1298 A.H., 29), the *barā'a aṣliyya*, whether combined or not with the principle of the "continuance of facts" (*istiṣḥāb ḥāl*), comes to support in theory innumerable solutions—whether strict legal rules or legal presumptions—throughout the whole field of *fiḳh* (Lapanne-Joinville, *op. cit.*, 82-88; Brunschvig, in *Studi ... Levi Della Vida*, i, 75).

However, the word *barā'a* has been increasingly employed in a concrete sense to denote written documents of various kinds (pl. *barā'āt* or *barawāt*) by virtue of a semantic development which starts from the idea of "discharge", or doubtless, to be more precise, "financial, administrative discharge" (K̲h̲wārizmī, *Mafātīḥ al-ʿUlūm*, ed. Cairo 1930, 37; Løkkegaard, *Islamic Taxation*, Copenhagen 1950, 159; Spuler, *Iran in frühislam. Zeit*, Wiesbaden 1952, 338, -458). This first sense is to be found, in the context of transactions concerning customs duties, in the treaties concluded with the Christian powers since the Middle Ages, notably by the Ḥafṣids (14th-15th centuries); the Latin or Roman versions have: *albara*, or *arbara* (Mas-Latrie, *Traités de paix et de commerce*, Paris 1866-72: refer to the glossary). Equally, one can see there the sense of "official licence" which the word had come to acquire. It was by now quite readily applied to what we would term a "licence, certificate, diploma", to various written documents originating from administrative bodies or addressed to them: for example "a demand for payment or a billeting order", "a passport" (Dozy, *Suppl.*, i, 63), "a label to be attached by the *amīn*" to a piece of merchandise (Saḳaṭī, *Manuel de Ḥisba*, ed. Colin and Lévi-Provençal, Paris 1931, 61), "a request or petition to the sovereign" (Brunschvig, *Berbérie Orientale*, ii, 144, n. 3). The languages of the Iberian peninsula have collected and preserved meanings of the same kind: the Catalian *albarà*, the Castillian *albalá*, the Portuguese *alvará*.

Neo-classical Arabic knows the term *barā'at al-tanfīd̲h̲* for the consular *exequatur*, and *barā'at al-t̲h̲iḳa* for the diplomatic "credentials" (the dictionaries of Bercher and Wehr).

In the colloquial Arabic of N. Africa, *barā'a* > *brâ* is widely used, often in the diminutive form *bréyya*, with the meaning of a simple "letter, missive, note", (whence the Berber *brát*, with the same meaning). At Fez, semantic development has led to the name of *bréyya* being given, in Arabic, to a pastry consisting of a pâté enclosed in a pastry-case which is folded in the same way as a letter (Brunot, *Textes arabes de Rabat*, ii, *Glossary*, Paris 1952, 40).

Finally we must note the expression, very common in the East, "night of the *barā'a*" (Arabic: *laylat al-barā'a*, Turkish: *berat gecesi*, Persian: *s̲h̲ab-i barāt*) to describe the night of mid-S̲h̲aʿbān, a religious festival (see the paper by H. H. Erdem, *Berat Gecesi hakkında bir tedkik*, Ankara 1953). Here the precise meaning of *barā'a* escapes the author, since none of the explanations offered by traditional interpretation or by Western scholarship are convincing: "immunity" (for those beings whose lot is favourably cast on that night), "revelation" (to Muḥammad of his prophetic mission by the archangel Gabriel), "creation" (of the world: referring to the Hebrew *berī'a*, Plessner, art. RAMAḌĀN in *EI*[1]). It would first be expedient, in order to orientate etymological research, to determine, with such precision as is possible, the antiquity of the expression and the circumstances of its origin, for it is not commonly encountered in the mediaeval texts which deal with the mid-S̲h̲aʿbān celebration.

Under the Ottoman Turks the administrative use of the term was particularly developed in the form *berat* [*q.v.*] (*berāt*), which they distinguished from *berāet*, (*berā'et*).

Bibliography: in the text of the article.

(R. BRUNSCHVIG)

II. — The theme of the *barā'a* was particularly developed by the K̲h̲ārid̲j̲ites with their religious zeal and their emphasis on separatism. In opposition to the *wilāya*, which is the dogmatic duty of solidarity and assistance to the Muslim, the *barā'a* was for them the duty to repudiate all those who did not deserve this title. Throughout the heresiologists can be found the particular applications given by

the numerous sects to the principle of *barāʾa*. It is only by means of the Ibāḍī catechists that we can arrive at a direct and full exposition. The oldest text which has come down to us, that of Abū Zakariyyāʾ al-Dj̲annāwunī (6th/12th century), imposes on a man who has reached puberty, and is in his right mind, repudiation of a) all the *kāfirūn* of both worlds, living and dead, known or unknown; b) the unjust *imām*; c) those who are censured (*madhmūmūn*) in the Ḳurʾān and acknowledged rebels (*mawṣūfūn bi 'l-maʿṣiya*); d) the man who, personally known, has committed a grave sin.

A decision concerning the children of persons subject to the *barāʾa* was postponed until they attained their majority. The *barāʾa* was cancelled in respect of the sinner who had carried out the *tawba*.

(R. Rubinacci)

BARABA, steppe of Western Siberia, situated in the *oblast'* of Novosibirsk of the Russian Soviet Federal Socialist Republic, between lat. 54° and 57° North, and bounded on the East and West by the ranges of hills which skirt the banks of the Irtîsh and the Ob'. This steppe, which extends for 117,000 sq. km., has numerous lakes, most of which are salt; the biggest is Lake Čanî. The ground, which is partly marshland, also has some fertile zones, but it is essentially a cattle-rearing region. It has a cold continental climate.

The population (over 500,000 inhabitants in 1949) is unequally distributed; its density, which reaches 6 to 9 inhabitants per sq. km. in the central and southern part, does not exceed 1 to 1.8 in the North. It is made up of a majority of Russian and Ukrainian colonists, with a Tatar minority, some of whom have emigrated from the Volga at a recent period, whilst others are autochthonous.

The latter, whom the Russians call "Baraba Tatars" or *Barabintsî*, form a small community near to the other Tatar groups of Western Siberia (Tobol Tatars, Tümen Tatars [*q.v.*]), which, however, shows signs of disappearing. Their very complex ethnogenesis gives rise to contradictory hypotheses. It appears that they issued from autochthonous Ugrian peoples who became partly turkicised when they made contact with the Turkish tribes who emigrated at the time of the foundation of the Siberian Empire. This turkicisation, which continued during the 16th/17th centuries, was completed in the 19th century with the large-scale influx of Tatar immigrants from the Middle Volga.

From the conquest of the Siberian Empire by the Russians under Ivan IV until the time of Peter the Great, the Baraba steppe separated Russia from the Empire of the Kalmuks. The frontier region contained between the towns of Tara (on the Irtîsh) and Tomsk (to the East of the Ob') was then called "Baraba district" (*Barabinskaya volost'*); the indigenous population, in addition to speaking their own language, spoke Ḳazan Tatar and Kalmuk, and initially paid tribute to the Russians and the Kalmuks, though later to the Russians only. In the 18th century a large number of exiles from European Russia were settled in the Baraba as colonists. At the end of the 19th century, when the Trans-Siberian railway had been built, the steppe was systematically developed with the help of a new wave of Russian and Ukrainian colonists.

The autochthonous Tatar population, which in the 17th century was established in villages, was pushed back at the end of the 18th century towards the sterile zones of the steppe. Since then, its numerical importance has steadily declined. According to the data collected by Radlov in 1865, there were then 4,635 "Baraba Tatars" in existence. At the census taken in 1897, 4,433 were counted and, in 1926, only 39, the remainder having had themselves re-classified as "Kazan Tatars".

The Baraba Tatars at present occupy a small number of villages (wholly Tatar or Tatar-Russian) near the lakes Sabrali, Yurtush and Mangîsh and in the basin of the river Om', especially in the Kuybishev district (formerly Kainsk), along the Trans-Siberian railway.

The islamisation of the Baraba, which commenced in the 10th/16th century with Central Asia (Khwārizm and Bukhārā) continued as the result of the activities of the Tatar merchants and missionaries of Ḳazan, who made their way up the Irtîsh. However, it seems most probable that it was only in the 19th century, after the Ḳazan Tatar colonists had established themselves in Western Siberia, that the majority of the autochthonous Tatars adopted Sunnī Islam of the Ḥanafī rite.

Radlov saw several old men who remembered their fathers making pagan sacrifices in the manner of the inhabitants of the Altai and being dressed differently from the Muslims.

The Baraba Tatar dialect, which has not been studied much as yet, possesses certain phonetic peculiarities: (*ts* in the place of *č* for example). It has almost entirely given way to Ḳazan Tatar and Russian.

Like the Russians, the Baraba Tatars live by agriculture, stock breeding and fishing; trapping animals for fur has greatly diminished.

(W. Barthold-[A. Bennigsen])

BARĀBRA (for Barābira; sing. Barbarī): Nubian-speaking Muslims inhabiting the Nile Banks between the First and Third Cataracts. The term includes the Kunūz, Sukkūt and Maḥas. The name Barābra is not commonly used by these peoples of themselves, and is stated by Lane (i, 177, col. 3) to be a late and modern application of the term used by earlier writers for the Berbers of the Maghrib. The Danāḳla [*q.v.*], who live above the Third Cataract, are linguistically and physically allied to the Kunūz but do not regard themselves as Barābra. The territory now inhabited by the Barābra formed the northern part of

the Christian Nubian kingdom of Maḳurra, which entered into treaty-relations with ʿAbd Allāh b. Saʿd in 31/652. Arab settlement began with a migration of Rabīʿa into the Aswān region in 869. After the defeat of Abū Raḳwa (396/1006), the Fāṭimid al-Ḥākim is said to have conferred the title of Kanz al-Dawla on the *Shaykh* of Rabīʿa at Aswān (al-Maḳrīzī, *al-Bayān wa'l-Iʿrāb ʿammā bi-arḍ Miṣr min al-Aʿrāb*, ed. and tr. F. Wüstenfeld, "*El-Macrizi's Abhandlung über die in Aegypten eingewanderten arabischen Stämme*", *Göttinger Studien*, ii, vii, 434-5, 475, Göttingen 1847), whence the Barābra of the vicinity, resulting from Arab-Nubian intermarriage, are known as Banī Kanz or Kunūz. In the 8th/14th century the kingdom of Maḳurra disintegrated under Arab pressure; intermarriage took place and Islam superseded Christianity. After Selīm I's conquest of Egypt, garrisons of Bosniak troops (locally called Ghuzz) were established at Aswān, Ibrīm and Sāy, while the Barābra territory was placed under a *kāshif*. In spite of intermarriage and the adoption of Nubian speech, the Ghuzz remained a distinct group until the 19th century. In the 18th century the northern Barābra were under the suzerainty of Ḥumām Abū Yūsuf, the powerful *shaykh* of the Hawwāra. On the eve of Muḥammad ʿAlī Pasha's invasion of the Sudan, the Barābra *Kāshiflik* was held jointly by three brothers whose headquarters were at Darr. The Ghuzz enclaves of Aswān, Ibrīm and Sāy were under their own *āghās*. Muḥammad ʿUthmān al-Mīrghanī, the founder of the Khatmiyya order, travelled from Aswān to Dunḳulā a few years before Muḥammad ʿAlī's conquest and won many adherents. The poverty of the Barābra territory has been a stimulus to emigration. In the 16th century Maḥasī colonies were formed on the Blue Nile by immigrants who had a reputation as holy men and established Ḳur'ānic schools. From the 18th century travellers have noted the "Berberine" servants in Cairo.

Bibliography: H. A. MacMichael, *A History of the Arabs in the Sudan*, Cambridge 1922, i, 12-34, 155-190 and Index; J. S. Trimingham, *Islam in the Sudan*, London 1949. Both these works contain extensive bibliographical references. The condition of the Barābra in the early 19th century is fully described in J. L. Burckhardt, *Travels in Nubia*, London 1819. (P. M. Holt)

BARADĀ, referred to by Naʿamān the leper (Kings, ii, 5, 12) by the name of Abana, and by Greek and Latin authors called Chrysorrhoas, is the most important perennial river of the eastern slopes of the Anti-Lebanon. It has determined the site of Damascus and permitted the development of the Ghūṭa.

It owes its existence to the high peaks which dominate the gap between Zabadānī and Sarghāya. At the foot of a limestone cliff over 1,000 m. high, a copious Vauclusian spring forms a vast lake on the Western side of the Zabadānī hollow at the foot of the Djabal Shaykh Manṣūr. It is the overflow from this lake which gives birth to the Baradā, which meanders over the gentle slope of the Zabadānī plain, receiving the waters from many springs in the area. After setting out peacefully on its course, the Baradā turns eastwards, following the axial change of direction of the eastern branch of the Anti-Lebanon. At Takiyya (hydro-electric station), it starts upon its fall. It then assumes the aspect of a racing torrent bounding through an enclosed gorge, the walls of which are formed of pliocene and eocene conglomerates. At Sūḳ Wādī Baradā (ancient Abīla) the gorge widens a little and then, 30 km. from its source, ʿAyn Fīdja empties into it. This spring, situated only a few metres above the level of the Baradā, almost doubles the volume of the river. It is an overflow spring with a large and very regular flow of water, welling up in the cretaceous limestone; above the grotto is a Roman temple. At low-water, it brings down 5 cub. m. of water per second and without this influx the Baradā might well dry up during the summer. Part of this spring is harnessed and piped down to provide Damascus with drinking water. Though the Baradā races impetuously towards Damascus, man's intervention checks its impetus and brings it under control. Without the skill of man, the Baradā would have hollowed out a sluggish bed through the centre of the Damascus depression; its valley would have been no more than a narrow ribbon of greenery in the midst of parched steppes, finally loosing itself in swamps. Through the ages, man has diverted the river into successive channels, flowing at different levels parallel to the main bed of the river, before reaching the outskirts of Rabwa. There, at the foot of the Ḳāsyūn, the six main canals, called *nahr*, fan out. By means of manifold ramifications, their waters carry life-giving moisture to the arid land, transforming an area of over 25 km. in length by 15 km. in breadth in the basalt depression of Damascus, filled with marl brought down in the form of deposits by the river, into a fertile oasis. The Baradā, which irrigates nearly 10,000 hectares of orchards and gardens, has pushed back the desert to a distance of 20 km. from the mountains; beyond the Ghūṭa, the Mardj is covered by extensive cultivation and from December to June displays a carpet of green meadows.

Water not absorbed by irrigation passes on towards the steppe where, in a trough devoid of outlet, it becomes stagnant in the marshes of ʿUtayba.

Going downstream the following canals lead out of the Baradā: at Ḥamā, on the left bank, the Nahr Yazīd, of Nabatean origin, restored by the Caliph Yazīd I, goes to swell the Nahr Thawra. At Dummar, on the right bank, N. Mizzāwī carries water to the market-town of Mazza; then, still on the same bank, the Dārānī which supplies Kafar Sūs and Dārayā; after that, on the left bank, the N. Thawra, of Aramaean origin, which by itself irrigates nearly half the oasis. On the threshold of Rabwa, two canals, in the main urban, diverge: the Ḳanawāt, of Roman origin and restored by the Umayyads, swells the older watercourse: the N. Bānās (literary form) or Bāniyās, an Aramaean creation. About 670, Arnulf mentions *magna IV flumina*, which are those existing in 724 under Hishām b. ʿAbd al-Malik: Yazīd, Thawra, Bānās and Ḳanawāt, and in the 6th/12th century, in Ibn ʿAsākir's time. According to a plan of Damascus prepared by German travellers in 1572, the Baradā is shown as a navigable waterway.

In the town, the Ḳanawāt, the Bānās and the Baradā itself provide water for *ḥammāms*, mosques, fountains and houses (drinking water has only recently been piped from ʿAyn Fīdja) to pass on again into the countrydise. A most ingenious system of irrigation has made possible the creation of an artificial oasis of exceptional fertility. The manifold canals diverted from the Baradā weave a close network watering the villages and the vegetation of the Ghūṭa. The Baradā plays a major rôle, making up for the lack of adequate regular rainfall (Damascus receives only about 200 mm.). It imparts humidity

to the atmosphere, gives rise to the autumnal and and spring mists and renders plant and animal life possible and thus, the human habitat.

Yāḳūt (i, 389) indicates a village with the name of Baradā to the East of Ḥalab. Lammens recognised it as Barad in the Djabal Simʿān. He also indicates (iii, 69) a canal called Baradā, excavated at al-Ramla by the Umayyad Sulaymān b. ʿAbd al-Malik.

BARADĀ or baradān, the ancient Cydnus, now Djayhūn, a river rising in Cappadocia, which flows towards the West, irrigates the gardens near Marʿash and those of Ṭarsūs, brings down alluvial deposits to the low-lying plain of Cilicia and empties into the sea on the Western side of the Gulf of Alexandretta. In ancient times, small ships sailed up it as far as Ṭarsūs.

BARADĀN, a town in ʿIrāḳ in ʿAbbāsid times. According to the Arab geographers it was situated some 15 miles north of Baghdād on the main road to Sāmarrā and at some distance from the east bank of the Tigris, a little above the confluence of the Nahr al-Khāliṣ and the latter. The Khāliṣ canal, a branch of the Nahrawān (or Diyāla) flowed immediately past Baradān. The caliph al-Manṣūr held his court here for a brief period, before he definitely resolved on building a new capital on the site of the modern Baghdād (cf. Yaʿḳūbī, *Buldān*, 256). There was a bridge in Baghdād, a street and a gate (after this a cemetery also) in the eastern half of the town called after Baradān which was two post stations distant; cf. Le Strange, *Baghdad during the Abbasid Caliphate* (1900), 360 (index). When the author of the *Marāṣid* made his extract from Yāḳūt (about 700/1300), Baradān was quite desolate and unknown. It is doubtless to be sought for in the present mound of ruins at Badrān, the position of which agrees admirably with the statement of Arab authors. Arab sources suggest that the name Baradān is arabicised from the Persian *barda-dān* ("the place of the prisoners"), which suggests the possibility of a Jewish colony settled here presumably by Nebuchadnezar.

Streck-[S. H. Longrigg])

BARĀDŪST (Brādust), name of two Kurdish districts. The first in the south, between Ushnū, Rāyat and Rawāndūz, with Kāni Resh as its chief town, perched on a crag, at an altitude of 4,372 feet. In the north it borders on Girdī (Shamdīnān), in the West on Shirwān and in the East on Bilbās. The massif of Ḳandīl (C. J. Edmonds, 244, n.) constitutes the framework of the district. The sources of the Little Zab (Lāven, then Kalu in the Persian section) are situated in this region. The famous Urartu stele of Kel-i Shīn is likewise situated there, on the pass of the same name. There is another Barādūst, called Ṣūmāy Barādūst, lying to the North, between Targavar and Ḳotūr, with Čehrīk Ḳalʿa as the principal residence (B. Nikitine, 79, 263). It was there that Bāb was held before his execution at Tabrīz. The early history of Barādūst is not well known to us. According to M. E. Zakī (*Taʾrīkh*, 388, 389), the founders of this principality were the Ḥasanwayhids (348-406/959-1015) in the person of Nāṣir al-Dawla Badr and his three sons. Ghāzī Ḳirān b. Sulṭān Aḥmad was the most famous *amīr* of this line. At the outset he opposed Shāh Ismāʿīl, but subsequently his relations with him improved. The Shāh bestowed the *laḳab* of Ghāzī Ḳirān on him and gave him the districts of Targavar, Ṣūmāy and Dūl as an *iḳṭāʿ*. Thus it was that this valiant *amīr* remained independent as regards internal affairs until the famous battle of Čāldirān (920/1514), after which, like others of the Kurdish *amīrs*, he rallied to the Ottoman sultan. The latter recognised his worth and gave him numerous districts, *nawāḥi*, in the *wilāyets* of Arbil, Baghdād and Diyārbakr. The amirate of Ṣūmāy was founded by Shāh Muḥammad Bek b. Ghāzī Ḳirān, whose descendants ruled it down to the extinction of this branch. In 395/1005, the *amīr* of Ṣūmāy was called Awliyā Bek. As for Targavar, the *amīrs* of this branch likewise derived from the Barādūst tribe. Sharaf Khān says that Nāṣir Bek b. Khārīn Bek b. Shaykh Ḥasan was *amīr* of this region in his time (10th/16th century). The *amīr* Khān Yakdas was the most famous representative of this branch. He had defended himself in the fortress of Dimdim, which became one of the main themes of Kurdish folklore. He was *amīr* at the beginning of the reign of Shāh ʿAbbās I, against whom he revolted, shutting himself up inside the fortress. These events took place in 1017. Among the other Kurdish chieftains of Barādūst, may be mentioned in the south Fayḍ Allāh Bey, referred to by Layard (373, 374), and Yūsif Bek, who made himself famous by his fight against Mīr Muḥammad of Shamdīnān. In spite of their being bound by an agreement, he killed him treacherously, whence is derived the saying "*Barādūst bir ay dūst*". (Barādūst friend of a month ...). In the north, there was Ṣādiḳ Khān, who played a rôle in the accession of the Ḳādjār dynasty. Later, he rose against Fatḥ ʿAlī Shāh (1211/1796). Closer to us in time, Ismāʿīl Aghā Ṣimḳo ʿAbdoy must be mentioned, well known during and on the morrow of the first world war on the Russo-Turkish front and in ʿIrāḳ. In February 1918, Ṣimḳo lured the Nestorian Patriarch Benyamīn Mār Shimʿūn into a trap and had him assassinated. For a while, Ṣimḳo remained master of the whole region West of Lake Urmiya, but in 1922 a Persian punitive expedition expelled him from the region. He sought refuge near Rawāndūz and a few years later tried to return to Persia and re-establish his position, but was killed near Ushnū (C. J. Edmonds, 252, 305, 313, 315, 365). Among the main tribes of Barādūst, that which bore this

name has lost its importance. At present, the Bālakī tribe is the most powerful in the South, numbering some ten thousand families. Their territory in the massif of Ḳandīl is difficult of access. Its centre is the township of Rāyat. Formerly, the amīr Sohrān was dominant there; it was his custom to take a man from each family to incorporate in his army. When Sohrān's line died out, the tribe regained its independence, which it still retains down to the present time (1956). Its present chief is ʿAzīz Bek (M. E. Zakī, *Khulāṣa*, 392). In the north, the Shiḳāḳ constitute the main tribe, who number some 2,000 families (M. E. Zakī, *Khulāṣa*, 413). According to the *Taʾrīkh-i Djewdet*, quoted by M. E. Zakī (*ibid.*, 238), both they and the Ḥaydarānlū shared a common origin. Their original habitat was in the neighbourhood of Mayyāfāriḳīn.

BARĀHIMA (Brahmans). The Arabs' knowledge of the Brahmans and Brahmanism was, with the exception of al-Bīrūnī, very scanty (probably their acquaintance with Buddhists, called Sumaniyya —cf. the term *Ṣamanaioi* applied to them by later Greeks like Alexander Polyhistor—was more direct since these were spread in Persia and eastern ʿIrāḳ). In Muslim theological works, the doctrine most persistently attributed—from Ibn Ḥazm to Tahānawī (in his *Dictionary of Technical Terms*)—to the Brahmans is a denial of Prophecy. The accounts given in Ibn Ḥazm and al-Shahrastānī are probably versions of the same argument. According to the former, the Brahmans say that if God wanted to lead people aright through the prophets, why does He not compel the reason of each individual to the truth?. According to the latter, they base their denial of prophecy on the self-sufficiency of the human reason. Al-Bīrūnī (ed. Sachau, 51-2) says that the Hindus deny the need of prophets in connexion with the Law and Ritual which they regard as having been established once and for all by the Rishīs, their wise and holy men,—but affirm their need for the spiritual weal of mankind at special times when evil becomes rampant.

As for the derivation of the word Brahman, Ibn Ḥazm says that they claim descent from an ancient king called Barahmī (or Barhamī); al-Masʿūdī thinks they have descended from Brahman, a king who, with the help of sages, founded the Hindu religion, astronomy and other sciences. Al-Bīrūnī refers to the Hindu myth that the Brahmans have originated from the head of Brāham (or Brāhim) which signifies Nature and that they are thus regarded as the choicest part of mankind. Tahānawī, *op. cit.*, asserts that they claim descent from Ibrāhīm, the Prophet, a doctrine which possibly reflects a much later Hindu opinion which wanted to claim this Judaic-Christian-Islamic figure as its own.

The only authentic source is undoubtedly al-Bīrūnī, who, although he wrote his work in Ghazna (about 1030 A.D.), had stayed in the north-western part of the Indian sub-continent, learnt Sanskrit, translated many works from that language and had acquired an intimate knowledge of Hindu philosophy, religion, law, literature, society and sciences, such as astronomy. In the preface he complains that no reliable work on Hindu India existed, that even Abuʾ l-ʿAbbās al-Īrānshahrī who had written accurately about Judaism and Christianity had failed to do so with regard to Hinduism and that he himself undertook to write this work at the instigation of his master Abū Sahl ʿAbd al-Munʿim b. ʿAlī b. Nūḥ. (Al-Masʿūdī mentions the works of Abū ʾl-Ḳāsim al-Balkhī and al-Ḥasan b. Mūsā al-Nawbakhtī). Al-Bīrūnī first narrates the difficulties which beset a foreign student: the difficulty and artificiality of the written Sanskrit, the utter difference between Hinduism and Islam and the almost total social Hindu taboos against foreigners, etc. Then follow six sections on Hindu Religion and Metaphysics and so on. The author gives a detailed description of the manners of the Brahmans their way of life, etc.

In the works of Muslim travellers in India it is usually the *Yogis*, their practices and way of life that gains prominence; there is little about Hindu philosophy or the Brahmans. The practices of *Yoga*, as a way of attaining spiritual bliss or knowledge, have sometimes aroused curiosity, but have generally been regarded as suspect if not altogether damnable. (F. Rahman)

BARAHŪT [see barhūt].

BARAK [see Supplement].

BARAḲ BABA, a Turkish dervish who acquired some celebrity in the time of the Il-Khāns. He is said to have been a disciple of the famous Sarī Saltuk [*q.v.*], and is mentioned in connexion with the Bābāʾī, Bektāshī, and Mewlewī movements. His followers were called Baraḳīs; his *Khalīfa* was Ḥayrān Emirdji. A story preserved by Yazīdjīoghlu ʿAlī makes him a Saldjūḳ prince, converted to Christianity by the Greek patriarch and then reconverted to Islam by Sarī Saltuk, who transmitted his supernatural powers to him and gave him the name Baraḳ. The Arabic sources describe him as a native of Tokat (the *Būḳāt* in the printed text of Ibn Ḥadjar should be amended accordingly), and say that his father was a high officer and his uncle a well-known scribe. From Turkey he travelled to Iran, where he is said to have exercised some influence on Ghāzān and Öldjaytu. In Djum. I 706/Nov. 1306 he arrived with a party of disciples in Damascus, where his dress and behaviour were sufficiently remarkable to win him a place in the Arabic chronicles of the Mamlūk Empire. He visited Jerusalem, but was prevented from visiting Egypt, and then returned to Iran. In 707/1307-8 he prevailed on Öldjaytu to send him on a mission to Gaylān, where he was killed.

The Turkish name Baraḳ is sometimes, by confusion with the Arabic *Burāḳ* [*q.v.*], misspelt thus. The form *berrāḳ*, given by Huart, is also mistaken. The name is in fact a Turkish word for a special kind of dog, identified by Köprülü as a 'hairless dog' (*Chamanisme* 14-15, n. 26) and by Pelliot as a 'long-haired, more or less fabulous dog' (*Notes sur l'histoire de la Horde d'or*, Paris 1950, 57-8). The name is not infrequent among Mongols and Turks in the 13th-15th centuries (for some examples see G. Moravczik, *Byzantinoturcica*, Budapest 1942-3, s.v.

βαράκος and παράκ; see also BURĀḲ ḤĀDJIB and BURĀḲ KHĀN).

(B. LEWIS)

BARAKA, blessing. In the Ḳurʾān, the word is used only in the plural: *barakāt*, like *raḥma* and *salām*, are sent to man by God. It can be translated by "beneficent force, of divine origin, which causes superabundance in the physical sphere and prosperity and happiness in the psychic order". Naturally, the text of the Ḳurʾān (*kalāmu-llāh*) is charged with *baraka*. God can implant an emanation of *baraka* in the person of his prophets and saints: Muḥammad and his descendants are especially endowed therewith. These sacred personages, in their turn, may communicate the effluvia of their supernatural potential to ordinary men, either during their lifetime or after their death, the manner of transmission being greatly varied, sometimes strange. God, however, can withhold his *baraka*.

Among agricultural peoples, a *baraka* is recognised in cereals, causing them to multiply miraculously. *Baraka* is to be met with, here and there, attributed to the most diverse objects. Already in the Ḳurʾān, the olive tree and the 27th Ramaḍān are *mubārak*.

In practice, the word ended up by taking the secular meaning of "very adequate quantity": *mā fīhi baraka*. It is used in the vocabulary of the Almohads in the sense of "gratuity which is added to a soldier's pay". The Maghribī dialects have various uses of the word in the adverbial sense of "enough".

Derivatives of the word *BRK* occur in numerous formulas of politeness: expressions of thanks, compliments, euphemisms; they are often associated in the context with derivatives of the root *SʿD*. The rather obscure *tabārakallāh* (Ḳurʾān, lxvii, 1) is commonly used as a prophylactic against the "evil eye".

BARAKA KHĀN [see BERKE KHAN].

BARAKĀT, the name of four Sharīfs of Mecca.

(1) Barakāt I b. Ḥasan b. ʿAdjlān belonged to the seventh generation after Ḳatāda b. Idrīs [see AL-ʿARAB, DJAZĪRAT; MAKKA], the founder of the last line of Sharīfs. As a youth Barakāt was associated with his father in the rule (809-21/1407-18), which was challenged by several cousins. The father abdicated because of his age in 821/1418, though he lived on until 829/1426. After being confirmed in office by Barsbāy, the Mamlūk sultan of Egypt, who had made himself the supreme authority over Mecca, Barakāt reigned until 845/1442 in the face of opposition by his brothers. Unseated then by other members of the line, he returned to power in the last years of his life (851-9/1447-55). During Barakāt's time the Mamlūk sultan Čaḳmaḳ appointed an Inspector (*nāẓir*) for the Holy Cities and established a garrison of 50 horse in Mecca. A noteworthy increase in Indian trade and the number of Indian pilgrims went hand in hand with greater Egyptian control in the Red Sea. Barakāt visited Cairo in 851/1447. He was succeeded by his son Muḥammad (regn. 859-903/1455-97).

(2) Barakāt II b. Muḥammad, a grandson of Barakāt I, shared the rule with his father from 878 to 903/1473-97. From 903 on he struggled against his brothers Hazzāʿ and Aḥmad Djāzān. In 908/1503 Barakāt was sent to Cairo in chains, leaving the way open for another brother, Ḥumayḍa, to become Sharīf. Restored in 910/1504, Barakāt remained the lord of Mecca until his death in 931/1525. From 910 to 918/1504-12 his brother Ḳāytbāy was associated with him, and thereafter his young son Muḥammad Abū Numayy II. The new threat of the Portuguese prompted the Mamlūk sultan Ḳānṣūh al-Ghūrī to delegate Ḥusayn al-Kurdī with a military force to protect Djidda, which he enclosed with a wall and towers. Upon the entry of Selīm Yavuz into Cairo, Barakāt sent Abū Numayy (*aet. c.* 12) in 923/1517 to wait upon him, and the Ottoman conqueror recognised the status quo in Mecca. For some reason Selīm did not take advantage of this opportunity to make the pilgrimage, though the first Ottoman *maḥmal* was sent out in 923 and the first shipment of wheat for the population of Mecca went by sea from Suez to Djidda. Barakāt was succeeded by Abū Numayy (regn. 931-74/1525-66), from whom all the subsequent Sharīfs of Mecca were descended.

From the first half of the 11th/17th century to the 14th/20th century, three clans among the progeny of Abū Numayy II contended with each other over the Sharīfate: Dhawū Zayd, Dhawū ʿAbd Allāh, and Dhawū Barakāt. The eponym of Dhawū Barakāt was Abū Numayy's son Barakāt, who never held the office of Sharīf himself.

(3) Barakāt III b. Muḥammad b. Ibrāhīm, a great-grandson of the eponym of Dhawū Barakāt, was the first of this clan to wear the dignity, acceding in 1082/1672. His installation was the work of a North African, Muḥammad b. Sulaymān al-Rūdānī, an enemy of Dhawū Zayd and an intimate of the Ottoman Grand Vizier, Aḥmad Köprülü. During the first part of Barakāt's tenure Muḥammad b. Sulaymān instituted a number of radical reforms designed to improve the lot of the foreign elements and the poorer classes in Mecca at the expense of the old aristocracy. With the death of Köprülü in 1087/1676 the reformer's star declined. Barakāt stayed on as Sharīf until his death in 1093/1682, being succeeded by his son Saʿīd (regn. 1093-5/1682-4).

(4) Barakāt IV b. Yaḥyā, a grandson of Barakāt III, ruled less than two months (1135-6/1723). After the abdication of his father, he was defeated by Dhawū Zayd, whereupon he and his father fled to Syria.

The last Sharīf of Dhawū Barakāt was ʿAbd Allāh b. Ḥusayn, a nephew of Barakāt IV, whose

reign was almost as brief as his uncle's. Placed in power in 1184/1770 by Muḥammad Abū Dhahab, the general sent to the Ḥidjāz by ʿAlī Bey [*q.v.*] of Egypt, he lacked the strength to maintain himself after Abū Dhahab's withdrawal. From then on the Sharīfate remained the exclusive property first of Dhawū Zayd and then of Dhawū ʿAbd Allāh.

BARAKZAY [see AFGHĀNISTĀN].

AL-**BARĀMIKA** or Āl Barmak (Barmakids), an Iranian family of secretaries and *wazīrs* of the early ʿAbbāsid Caliphs.

1. Origins. — The name *Barmak*, traditionally borne by the ancestor of the family, was not a propei name, according to certain Arab authors, but a word designating the office of hereditary high priest of the temple of Nawbahār, near Balkh. This interpretation is confirmed by the etymology which is now accepted, deriving the term from the Sanskrit word *parmak* — "superior, chief". The term Nawbahār, moreover, likewise derives from Sanskrit (*nōva vihāra*—"new monastery") and evokes the name of the famous Buddhist monastery, visited in the 1st/7th century by the Chinese pilgrim Hiouan Ts'ang, at Po-Ho, another name for Balkh (Hiouen Thsang, *Mémoires*, trad. St. Julien, i, Paris 1857, 30-32). Furthermore, some of the Arab geographers likewise affirm that the Nawbahār was dedicated to the worship of idols (*ʿibādat al-awthān*); the description of it left by Ibn al-Faḳīh (322-25) also corresponds in the main with that of a *vihāra* and describes a monument, which can be recognised as the characteristic Buddhist *stupa*, in spite of the distortion of its name. The later authors (Yaḳūt, iv, 819; Ibn Khallikān, Cairo 1948, iii, 198), who make this sanctuary a Zoroastrian Fire-Temple, were doubtless influenced by the tradition which envisaged the Barmakids as the descendants of the ministers of the Sāsānid Empire (see especially Niẓām al-Mulk, *Siyāsat-nāma*, trans. Schefer, 224). It is difficult to ascertain when these imaginary interpretations, universally disseminated in subsequent literature (especially local literature, see *Faḍāʾil Balkh*, ap. Ch. Schefer, *Chrestomathie persane*, i, Paris 1883, 71), which have been accepted for too long by modern scholarship, arose. The view has sometimes been held that they may have seen the light of day in al-Manṣūr's reign. It would, however, be more accurate to consider them as being much later than that period.

We possess little precise information on the Nawbahār and its high priests during the first century of Islām. The lands attached to the temple, amounting to some 1,500 sq. km., are known to have been the property of the family, who appears subsequently to have retained them, at least in part, whilst the rich village of Rawān, near Balkh, belonged to Yaḥyā b. Khālid personally (Yāḳūt, ii, 742).

According to al-Balādhurī (*Futūḥ*, 409), the Nawbahār, centre of national resistance, was attacked and damaged under Muʿāwiya, probably shortly after 42/663-64; al-Ṭabarī (ii, 1205) says the native prince Nīzak still prayed there in 90/708-09. In 107/725-26, under Hishām, according to al-Ṭabarī, Balkh was raised from its ruins by the efforts of Barmak on the order of the governor Asad b. ʿAbd Allāh; what had happened to the temple is not known, but there are no grounds for supposing that it was rebuilt as a Fire-Temple, as is sometimes assumed. As for the last Barmak, the father of Khālid, he is a figure known to us by information which is to a large extent legendary.

Thus it is that he is held to have possessed medical knowledge and to have treated, among other patients, the Umayyad prince Maslama b. ʿAbd al-Malik (Ṭabarī, ii, 1181). One tradition, moreover, intended perhaps to benefit the sons of ʿAbd Allāh b. Muslim, makes the latter, who with his brother Ḳutayba had participated in the repression of the revolt of Balkh in 86/705, and not Barmak, the real father of Khālid (Ṭabarī, *lob. cit.*). Furthermore we do not know whether Barmak, who was again in Balkh in 107/725-26, had previously gone to the Court of the Caliphs, as has been maintained, and had there embraced Islam. However that may be, his sons left Khurāsān for ʿIrāḳ, where they settled at al-Baṣra and there became clients of the Azd tribe (L. Massignon, in *Westöstliche Abh. Tschudi*, Wiesbaden 1954, 159 and 168). There Khālid seems to have been the first to be converted, followed by his brothers Sulaymān and al-Ḥasan.

Bibliography: L. Bouvat, *Les Barmécides*, Paris 1912, 25-36; S. Nadvi, in *Isl. Culture*, vi, 1932, 19-28; H. W. Bailey, in *BSOS*, xi, 1943, 3 (on the word *barmak*) and the references given above. (W. Barthold-[D. Sourdel])

2. Khālid b. Barmak.—Practically nothing is known of Khālid's activities until the moment he appeared, towards the end of the Umayyad period, in the ranks of the Hāshimite movement; he was then entrusted with the distribution of the plunder in Ḳaḥṭaba's army. Shortly after that, the new Caliph al-Saffāḥ entrusted the management of the *dīwāns* of the army and land-tax (*al-djund waʾl-kharādj*) to him, and then the control of all the bureaux, so that, as one chronicler says, he played the role of a *wazīr*; attached to the personal service of the Caliph, he had the honour of seeing his own daughter suckled by al-Saffāḥ's wife whilst his own wife acted as foster-mother to his sovereign's daughter. Under al-Manṣūr, Khālid continued to play an important role, without however being, as is too frequently averred, the right hand of the Caliph. He seems to have remained for at least a year director of the office of land taxation, though he was soon ousted from the central administration by the intriguer Abū Ayyūb. Appointed governor of Fārs, he appears to have stayed there for about two years. Later we see him at Baghdād persuading the Caliph, according to a well known tradition, to refrain from destroying the Īwān Kisrā, participating in 147/764-65 in the manœuvres which led to ʿĪsā b. Mūsā agieeing to renounce his rights to the succession, proffering advice to Abū ʿUbayd Allāh Muʿāwiya, who was returning from al-Rayy. Subsequently appointed governor of Ṭabaristān, he remained there for about seven years (coins struck in his name between 150/767 and 154/771 are known), took possession of the fortress of Ustūnāwand near Damāwand and made himself popular with the inhabitants of these regions, where he founded the new town of al-Manṣūra. It was probably about this time that his grandson al-Faḍl b. Yaḥyā became the "foster-brother" of Hārūn, the son of al-Mahdī. Finally in 158/775, shortly before al-Manṣūr's death, a heavy fine seems to have been imposed on Khālid, but he was pardoned and appointed governor of the province of al-Mawṣil, where a Kurdish revolt had broken out. At the beginning of the Caliphate of al-

Mahdī, we find him in Fārs and, in 163/779-80, he appears to have further distinguished himself, at the same time as his son Yaḥyā, during the siege of Samālū in Byzantine territory, though he died shortly afterwards in 165/781-82, approximately in his 75th. year.

Bibliography: L. Bouvat, *Les Barmécides*, 37-43; Ṭabarī, index; Djahshiyārī, *K. al-Wuzarā'*, index; Mas'ūdī, *Murūdj*, v, 444; Ibn al-Faḳīh, 314; Yāḳūt, i, 224; Ibn Khallikān, Cairo ed. 1948, i, 295-96; J. Walker, *Arab-Sassanian Coins*, London 1946, lxxvi.

3. The *Wizāra* and the fall of the Barmakids.—When Yaḥyā b. Khālid was chosen as *wazīr* by Hārūn al-Rashīd, he already had a fairly long career behind him. After assisting his father in his various governorships, Yaḥyā had been appointed in 158/775 governor of Ādharbaydjān. He was still at Khālid's side in Fārs at the beginning of al-Mahdī's Caliphate, and in 161/778 he had became secretary tutor to Prince Hārūn, in the place of Abān b. Ṣadaḳa, and had accompanied the Prince on the Samālū expedition, on which he had been especially entrusted with the commissariat of the army. A little later, when his pupil had been acknowledged as the second heir and appointed governor of the western provinces as well as of Ādharbaydjān and Armenia, Yaḥyā had administered this part of the empire. After the death of al-Mahdī, though he was confirmed in his office, he found himself the object of the hostility of the new Caliph al-Hādī, who accused him of supporting Hārūn against him and of encouraging him to maintain his rights to the succession, which very nearly brought about his downfall. The very night, however, when Yaḥyā, who had been thrown into prison, was, we are told, to have been executed, al-Hādī was found dead and certain reports suggest that the Queen-mother al-Khayzurān, who supported Hārūn, was not unconnected with the occurrence.

In any case, as soon as Hārūn had been hailed as Caliph, he hastened to summon Yaḥyā and entrusted him with the direction of affairs, investing him, according to tradition, with a general delegation of authority. The able secretary received the title of *wazīr* and from the outset associated his two sons al-Faḍl and Dja'far with his administrative and governmental duties. They frequently presided with him and also appear to have been styled *wazīr*. Yaḥyā remained in office for seventeen years, from 170/786 to 187/803, this period being referred to by some authors as "the reign of the Barmakids" (*sulṭān Āl Barmak*). Engaged in "righting wrongs" in the name of the Caliph, he was likewise empowered to chose his own secretaries, who acted as his delegates, and was in practice head of the administration; even the office of the Seal, initially withheld from him, was soon placed under his control. Tradition likewise has it that al-Rashīd handed his personal seal over to him, a symbol of the new authority enjoyed by the *wazīr*. This seal, entrusted to Dja'far, subsequently returned to Yaḥyā, who relinquished it when he set out to stay in Mecca in 181/797; it was then entrusted to al-Faḍl and afterwards to Dja'far, being taken back by Yaḥyā after his return.

Yaḥyā's two sons, al-Faḍl and Dja'far, were not satisfied with merely seconding their father. They likewise enjoyed important responsibilities. Al-Faḍl who was the eldest and, moreover, Hārūn's "foster-brother", played a major rôle in the early years. In 176/792 or perhaps even earlier, he was placed at the head of the Western provinces of Iran and was sent by the Caliph against the 'Alid Yaḥyā b. 'Abd Allāh, who had revolted. He obtained the latter's submission by negotiation. In the following year he was appointed governor of Khurāsān, where he played the role of a conciliator and a builder. He pacified the country of Kābul and recruited a local army, part of which, we are told, was sent to Baghdād. Upon his return to Court, he left a deputy in his province, which he retained until 180/796. In 181/797, he appears to have been in charge of the government during his father's absence. Nevertheless, he was the first to lose the Caliph's favour. He gravely displeased Hārūn and was deprived of all his offices, except his appointment as tutor to Prince Muḥammad al-Amīn, for whom he had obtained recognition as heir-apparent in 178/794.

As for Dja'far, whose eloquence and legal erudition the authors are fond of stressing, in 176/792 he received the governorship of the western provinces, though he remained at Court, which he only left in 180/796 in order to suppress the risings in Syria. He was next appointed temporarily governor of Khurāsān and was placed in charge of the caliphal bodygard as well as being entrusted with the direction of the Post Office and of the offices of the Mint and textile manufactures (in fact his name appears on the coins struck in the East from 176/792 and, subsequently, also on those of the West). He was likewise tutor to Prince 'Abd Allāh al-Ma'mūn, who was proclaimed second heir in 182/798. But above all he was the Caliph's favourite, if not his Ganymede as has often been supposed, and willingly took part in his pleasure parties, of which his brother, on the other hand, disapproved.

Thus with Yaḥyā's two sons entrusted with the tutelage of the two princely heirs-apparent, between whom an actual division of the empire was contemplated, power might have remained in the hands of the Āl Barmak for a long time, had al-Rashīd so permitted. The Caliph, however, on returning from the Pilgrimage which he accomplished with his suite in 186/802, suddenly decided to put an end to their domination; during the night of Saturday the 1 Ṣafar 187/28-9 January 803, he had Dja'far executed, al-Faḍl and his brothers arrested, Yaḥyā placed under observation and the property of all the Barmakids (with the exception of Muḥammad b. Khālid) confiscated. Dja'far's remains were left exposed in Baghdād for a year. Al-Faḍl and Yaḥyā himself, whose wish had been to share his sons' fate, were conducted to al-Raḳḳa as prisoners; there Yaḥyā died in Muḥarram 190/November 805, 70 years of age, and al-Faḍl in Muḥarram 193/November 808, aged 45 years.

The brutal fall of the Barmakids came as a surprise to their contemporaries, who had no satisfactory explanation to account for it and therefore invented various fictitious reasons, such as the story of 'Abbāsa [*q.v.*], which have too long been given credence. The origin of their fall still remains partly a mystery for modern historians; but it can hardly be seen as the result of a sudden caprice on the part of the Caliph. Even if it was not "prepared well beforehand", as W. Barthold said, it was at least contemplated long in advance by a sovereign who had come to endure the tutelage of his ministers with increasing impatience and who at times accused them of pursuing a policy contrary to his own interests.

The vizierate of the Barmakids was not really the period of perfect harmony which came to be portrayed in later legend. In spite of what has been said on the matter, causes for disagreement did exist

between the Caliph and his former tutor, whose hands were never completely free to govern. Not only was he obliged in the early years, as W. Barthold has already pointed out, to render account to al-Khayzurān, who, nevertheless, constantly gave him her support as long as she lived, but later he was often forced to come to terms with al-Rashīd's wishes and to resort to that cleverness for which he was so highly reputed. In some cases he was not even successful in imposing his views, and the man appointed to replace al-Faḍl in Khurāsān in 180/796 was appointed against his advice. At other times he found himself having to plead highly compromised causes. Thus we see him hastening from Baghdād to al-Raḳḳa in 183/799 to divert the sovereign's ire from al-Faḍl and succeeding only at the cost of condemning his son's behaviour. Very early on also, intrigues had contributed to weaken his position and the Caliph, upon the death of his mother, had been eager to bestow honours on the accomplished courtier al-Faḍl b. al-Rabīʿ, in whom he had for long begun to take an interest and whom, furthermore, he appointed *ḥādjib* in 179/795 in the place of the Barmakid Muḥammad b. Khālid; the new dignitary exercised a growing influence at Court, where he stigmatised the shortcomings of his enemies and provoked the resentment of al-Rashīd against them.

The Caliph's relationships with Yaḥyā's sons were similarly not always harmonious. Al-Rashīd did not think well of the pro-ʿAlid policy of al-Faḍl, who does not seem to have been endowed with the same flexibility as his father. He was removed from power in 183/799, four years before the final disgrace of his family. Even Djaʿfar, who apparently enjoyed the Caliph's complete confidence, retaining his influence with him the longest, was not secure from the suspicions of a restive master and was reproached upon occasion for abusing his powers.

It was, of course, quite normal for the attitude of al-Rashīd towards the Barmakids to become modified during the seventeen years of their supremacy. The Caliph, at his accession, when he was 23 years old, was content to follow his mother's advice and to relieve himself of certain responsibilities, by entrusting them to Yaḥyā. Later, however, this humiliating situation began to weigh upon him, the more so since the desire to impose his own will increased with the years, whilst the Barmakids, filling the most important posts with their relatives and clients and preparing themselves to institute some kind of hereditary vizierate, constituted an actual State within the State. At the same time, they had amassed great wealth, which excited the cupidity of the sovereign and to which their proverbial generosity continually called attention. Yet if the different reasons are adequate to explain their fall, nevertheless the brutality of the treatment inflicted on Djaʿfar was doubtless the ransom for the affection which was bestowed on him by the Caliph and which may perhaps have postponed the inevitable outcome.

On the other hand, imputations of impiety, which are sometimes levelled at the Barmakids during the period of their ascendency, do not seem to have contributed to the disgrace which befell them. Such accusations do not even appear to have had any basis in fact. These secretaries of Iranian origin did, it is true, display a special interest in the literary masterpieces which came from Iran and India, as well as in the various philosophical and religious doctrines, which they liked to hear discussed; but these were tastes widely disseminated in Baghdād society of the period and were not necessarily accompanied by heterodox opinions. The Barmakids, moreover, had completely adapted themselves to the usages of the ʿAbbāsid Court at which they lived; they thought highly of Arabic poets and writers and, like so many other *mawālī*, displayed an ostentatious generosity, inspired by ancient Bedouin traditions. Though they frequently assumed a conciliatory attitude towards the inhabitants of the provinces or of certain tributary states, they appear to have made no attempt to favour al-Maʾmūn, the "son of the Persian woman", at the expense of his brother. They seem primarily to have served the Caliphate effectively and loyally, pacifying Eastern Iran, repressing the risings in Syria and even Ifrīḳiya, obtaining the submission of rebels, including ʿAlids, directing the administration in an orderly fashion, guaranteeing to the State important resources, undertaking works of public interest (canals of Ḳāṭūl and Sīḥān), setting wrongs aright with equity in accordance with the requirements of Islamic law and reinforcing the judicial administration by the institution of the office of the great ḳāḍī. Doubtless by their behaviour they accentuated the process of iranisation which became evident from the beginning of the ʿAbbāsid regime, imparting to the vizierate a style which did not fail to attract subsequent imitators; in spite of their new prerogatives and exceptional prestige, however, their influence was a highly personal thing, as was the tragedy which terminated it. It does not appear that they ever sought to transform the vizierate in accordance with a hypothetical Sāsānid model.

The activity of the Barmakids was not merely political and administrative. An important cultural and artistic achievement is also due to them. Indeed they acted as patrons of poets, distributing rewards for their panegyrics through the intermediary of a special office created specifically for the purpose, the *dīwān al-shiʿr*; they favoured scholars and gathered theologians and philosophers in their home, in assemblies (*madjālis*) which have remained famous. They encouraged the arts, and as great builders, left numerous palaces in Baghdād, the most famous of which, that of Djaʿfar, subsequently became the Caliphal residence.

Neither did the influence of the Barmakids disappear with their fall. It continued to be exerted during the ensuing years through the medium of the *wazīrs* and secretaries who came to power under al-Maʾmūn and who, for the most part, were their former clients and dependants, as in the case of the famous al-Faḍl b. Sahl. It is actually known that, at the time of their ascendency, the ministers of al-Rashīd had gathered around themselves a group of especially competent *kuttāb*, whom they had trained in their methods, and the following Caliphs were unable to dispense with them.

Finally *adab* literature laid hold of the Barmakids, stressing their edifying and remarkable traits of character, often with some exaggeration (Yaḥyā's "wisdom" and his gift for foretelling events, al-Faḍl's haughtiness and ostentatious generosity, the elegant language of Djaʿfar) whilst some stories, such as those later to be incorporated in the collection of the *Thousand and One Nights*, popularised the figure of Djaʿfar, the *wazīr* and intimate companion of al-Rashīd.

Bibliography: L. Bouvat, *Les Barmécides*; D. Sourdel, *Le vizirat ʿabbāside* (appearing shortly); Djahshiyārī, *Kitāb al-Wuzarāʾ*, index; Ibn ʿAbd Rabbih, *al-ʿIḳd*, Cairo ed. 1945-53, iii, 26-34; Ṭabarī, Yaʿḳūbī, Masʿūdī, index; Ibn Khallikān, *s.v.*

4. Other members of the Barmakid family. —Yaḥyā had a brother, Muḥammad b. Khālid, who was *ḥādjib* from 172/788 to 179/795 and was the only one spared by the Caliph when they fell.

In addition to al-Faḍl and Dja'far, he had two other sons, Muḥammad and Mūsā, who though less brillant, nevertheless played a role at Court. The latter, known for his military bravery, was governor of Syria in 176/792. They were thrown into prison in 187/803 with their father and brother, but were released by al-Amīn who showed himself generous towards them. Mūṣā remained in 'Irāḳ and fought in the Caliphal army, subsequently rallying to al-Ma'mūn, who later appointed him governor of Sind. He died in 221/835, leaving a son 'Imrān who succeeded him and distinguished himself in several expeditions. Muḥammad, on the other hand, had joined the Court of al-Ma'mūn at Marw, where he had been preceeded by his son Aḥmad and his nephew al-'Abbās, the son of al-Faḍl.

Of the numerous descendants of the Barmakids, one especially was famous as a musician and man of letters: Aḥmad b. Dja'far, surnamed Djaḥẓa [*q.v.*], grandson of Mūsā b. Yaḥyā and intimate companion of the Caliph al-Muḳtadir.

Bibliography: L. Bouvat, *Les Barmécides*, 101 ff.; Djahshiyārī, *K. al-Wuzarā'*, Cairo ed., 297-98.

5. The nisba *al-Barmakī*.—This *nisba* was also born by persons not belonging to the Barmakid family. A first category comprises their clients and their manumitted slaves with their descendants. Others were natives of the quarter of Baghdād which had received the name of *al-Barāmika*. They included the singer Danānīr, the man of letters Muḥammad b. Djahm, an astrologer who was present at the siege of Samālū, a *wazīr* of the Sāmānids and an envoy of the Ghaznawids.

A number of dynasties, both in Iran and North Africa, were later to claim descent from the Barmakids (Sarbadārān in Khurāsān, Borāmik at Touat). Finally a tribe, from whom the dancing-girls called Ghawāzī were recently still being recruited in Egypt, claimed to be descended from them; doubtless the reputation of these dancing-girls has imparted to the word *barmakī* the pejorative sense which it sometimes assumes in modern Egyptian.

Bibliography: L. Bouvat, *Les Barmécides*, 105 ff. (D. Sourdel)

BARAN, an old name for Buland-Shahr [*q.v.*].

BARANĪ, Ḍiyā' al-Dīn, historian and writer on government under the Delhī sultanate. Born not later than 684/1285, (and probably earlier as he was old enough to remember witnessing convivial parties and to have read the whole of the Ḳur'ān in the reign of Djalāl al-Dīn Khaldjī (689-95/1290-6), Baranī was well connected with Delhī ruling circles. His father, Mu'ayyid al-Mulk, was *nā'ib* to Arkalī Khān, second son of sulṭān Djalāl al-Dīn Khaldjī, becoming *nā'ib* and *khwādja* of Baran in the first year of the reign of 'Alā' al-Dīn Khaldjī. Baranī's paternal uncle, Malik 'Alā' al-Mulk was *kōtwāl* of Delhī under 'Alā' al-Dīn Khaldjī and a prominent royal counsellor. His maternal grandfather, *sipah-sālār* Ḥusām al-Dīn, *wakīl-i dār* to Malik Barbak, was appointed to the *shahnagī* of Lak'hnawtī by Sulṭān Balban.

Baranī himself became, for seventeen years and three months, a *nadīm* of Sulṭān Muḥammad b. Tughluḳ (725/1325-752/1351). The *Siyar al-Awliyā'* describes him as an entertaining conversationalist and as having been a friend of the poets Amīr Khusraw and Amīr Ḥasan.

At the beginning of the reign of Fīrūz Shāh Tughluḳ (752-90/1351-88) Baranī was banished from court and, according to his own statement in the *Na't-i Muḥammadī*, was imprisoned for a time in the fortress of Pahtēz. It is a possible hypothesis that he was associated with the attempt of Khwādja-Djahān Aḥmad Ayāz to place a minor son of Muḥammad b. Tughluḳ on the throne while Fīrūz Shāh Tughluḳ and the army were extricating themselves from Muḥammad b. Tughluḳ's expedition against Thatta in Sind.

Baranī spent his remaining years in penurious exile, writing both in the hope of being restored to favour and of atoning for the sin to which he ascribed his misfortunes. He died not long after 758/1357 and was buried near the grave of Niẓām al-Dīn Awliyā' at Ghiyāthpūr. Four of Baranī's works, the *Ta'rīkh-i Fīrūz Shāhī*, the *Fatāwā-yi Djahāndārī*, the *Na't-i Muḥammadī* and his translation of anecdotes on the Barmakids, the *Akhbār-i Barmakiyyān*, are known at present to be extant.

Baranī is a significant (though in the total context of medieval Islam, not original) figure in Indo-Muslim thought on government. Holding the first four caliphs to have been the only truly godly rulers in the history of the community, Baranī aimed in the *Fatāwā-yi Djahāndārī*, a work of the *Fürstenspiegel* type, and in the *Ta'rīkh-i Fīrūz Shāhī*, to educate the *de facto* rulers of the day, the sultans, in their duty towards Islam in a corrupt age. In the form of *dicta* by Sulṭān Maḥmūd of Ghazna, the *Fatāwā-yi Djahāndārī* advises sultans to enforce the *sharī'a*, to curb unorthodoxy (*scil.* especially *falsafa*), to abase the infidel, to employ only pious servants and to remain inwardly humble towards God though governing with the pomp and circumstance of pre-Muslim Persian kings, that is, in opposition to the ascetic *sunna* of the Prophet and the orthodox caliphs, as Baranī, under Ṣūfī influence, conceived them.

The avowedly didactic *Ta'rīkh-i Fīrūz Shāhī*, dedicated to Fīrūz Shāh Tughluḳ, shows what happens in history when the precepts in the *Fatāwā-yi Djahāndārī* are disregarded. It covers the period from the beginning of the reign of Balban (664-86/1266-87) to the sixth year of Fīrūz Shāh Tughluḳ. The account of each sultan of Delhī is treated as a parable in which success or failure is explicable in terms of the sultan's adherence to or deviation from Baranī's politico-religious theories. For example, Sulṭān 'Alā' al-Dīn Khaldjī is depicted as a successful sultan in so far as he subjugated the Hindus, overcame sedition, forbade strong drink and reduced the cost of living, but as an impious one since, Baranī says, his motives were worldly, he neglected his own religious observances, wished to become a prophet, appointed low men to office and avoided the company of the religious —in particular of Shaykh Niẓām al-Dīn Awliyā' whose *mayāmin* and *barakāt* were the true cause of the glory of the reign. Thus 'Alā' al-Dīn Khaldjī dies of suspected poisoning and within four years his family is exterminated. Baranī's *Ta'rīkh-i Fīrūz Shāhī* is not an annal or chronicle; it is an important example of didactic historiography in Islam. (See further Ta'rīkh).

al-**BARĀNIS,** name of one of the two groups of tribes which together constitute the Berber nation [*q.v.*], that of the other being the Butr. It represents the plural of the name of their common eponymous ancestor: Burnus; for a possible origin of this name see Butr.

According to Ibn Khaldūn, the Barānis comprised five great peoples: Awraba, ʿAdjīsa, Azdādja, Maṣmūda-Ghumāra, Kutāma-Zawāwa, Ṣanhādja, Hawwāra. Whether, however, the last three belong to this group is a matter of controversy; they are considered by some to be descendants of Ḥimyar and therefore non-Berbers. Neither they nor the Maṣmūda will be dealt with here.

The most ancient habitat of the Barānis in the true sense of the term is the massif of the Awrās, the northern province of Constantine and the two Kabylias where they used to live as sedentary mountain dwellers. At the time of the first Arab invasion, in the first quarter of the 1st/7th century, the Awraba of the famous Kusayla [*q.v.*] had to abandon the Awrās, after the defeat and death of their chief. They went to northern Morocco, where they established themselves from the massif of the Zarhūn to the river Wargha; the names of some of their old tribes are to be met with today along the banks of this river: Ludjāya, Mazyāt(a), Raghīwa. The rôle they played in connexion with Idrīs I [*q.v.*] is known.

We possess no information on the conditions in which some of the Barānis arrived and established themselves to the North of Taza. At all events, al-Bakrī indicates some of the Barānis and Awraba in contact with the kingdom of Nukūr [*q.v.*]. In the present tribe (in dialect ʾl-Brāneṣ, ethnic ʾl-Barnōṣi) which contains a sub-group called the Werba, the memory of the prince of the Awraba who received Idrīs I (at Walīla!) has been retained and even the remains of his palace are shown there?

The Barānis-Awraba participated in the expeditions launched from Morocco against the Iberian Peninsula; some of them settled there and bequeathed their name to the Djabal al-Barānis, now the Sierra de Almadén, to the North of Cordova.

Some of the Barānis (from the North of Taza) formed part of the "Rif" contingents who took Tangier (1684). A village of the *faḥṣ* of this latter town bears their name.

As for the Azdadja (and Misiṭṭāsa) Barānis, nothing is known of the reasons for their establishing themselves in the region of Oran; some of the Misiṭṭāsa still live in the region of Bādis [*q.v.*]. There is the same lack of information concerning the Kutāma of Morocco.

BARANTA, a term used in the eastern portion of the Turkish world (Teleut, Kirgiz, Kazak etc.) though today regarded as old-fashioned (for the forms of the word cf. *baramta*, *barïmta*, *barumta*, *parïntï*; the forms *barumtav* and *barumtay*, encountered in some sources, are not yet fully understood, while Šeykh Suleymān's *barant* and H. K. Kadrī's *baratta* must be mistakes), generally with the meanings 'foray, robbery, plunder, pillage, looting'; 'for one who is owed money or has been wronged to get his own back by raiding his adversary's livestock'; hence 'cattle-lifting'. For related terms, cf. *barïmtačï* (-*šï*), 'cattle-lifter, marauder' (*parïntïdjï*, 'robber'); *barïmtala*-, 'to get one's own back by driving off other people's livestock, to capture on foray'; *barïmtalaš*-, 'to quarrel together about property' (*djardï menen djoldas bolgončo, bay menen barïmtalas*, 'rather than be friendly with a poor man, quarrel with a rich').

The term has passed into Russian with the same meaning: *baranta*, 'revenge, retaliation; taking reprisals for a robbery by driving off cattle; foray, incursion' etc., and the derivatives *barantar*ʹ, *barantovščik*, 'participant in a hostile incursion, robber'; *barantovïy*, 'pertaining to a foray'; *barantovat*ʹ, 'to raid' etc.

M. Vasmer (*Russ. etym. Wb.*, Heidelberg 1950), noting that the Russian *baranta* is used in eastern Russia and the Caucasus, indicates that it has been taken from Turkish, into which language it has passed from Mongol. See in the Mongol dictionaries *barïm*, *barïmda*, 'clutching with the hand', *barïmdalagu*, 'to be seized, held fast, to preserve, to keep'; *barïmdalal*, 'the act of holding fast, of tightening' etc. Cf. in particular G. J. Ramstedt, *Kalm. Wb.* (Helsinki 1935): *bärm̥tə* 'to seize, hold fast, assault, attack'; *b. keχə*, 'to go on a foray in order to take from one's adversary a surety for future engagements'; *bärm̥tl̥χъ*, 'to take, hold fast' (cf. *bärā̆*, *bärātē̆*, etc.).

It is clear that among the nomad Turkish peoples this term once represented a specific legal concept; in Turkish as in Mongol it involves the notion of 'pledge, surety', and our sources show that *baranta* was done only with a specific purpose and subject to certain rules. It is *baranta* when a man who has been wronged appropriates a quantity of his adversary's property in order to recover his due; the return of the property depends on the result of ensuing litigation between the parties. It is likely that reciprocal *barantas* sometimes covered a wider group. The rule demanded that the use of *baranta* to redress a wrong should be in daylight and with prior notice. *Baranta* at the same time afforded an opportunity for young men in the nomad society to display their bravery, skill and resourcefulness; to earn the appellation of 'hero', and to be held in honour. With the changing bases of social life, and changing economic conditions, *baranta*, like many another institution rooted in customary law, has lost its importance: the term has suffered a gradual diminution and has come to mean simply 'theft'.

In the limited areas where the old customs are still preserved, however, the *baranta* system survives, and the laws of the land feel the need to take cognisance of it. *E.g.*, on 16 October 1924 the Russian

central administrative organ (VTSIK) studied the system of *baranta* in connexion with offences against the customary law in the Republic of Kazakstan and the Oyrat Autonomous Region, under three heads: simple, armed, and tribal.

BARĀTHĀ, the name of a residential quarter on the western side of ancient Baghdād to the south of the quarter of Bāb Muḥawwal, originally some 3 kms. from ancient Baghdād. There used to be in Barāthā a mosque, designed for the prayer of the Shīʿī sect, which Yāḳūt (d. 626/1228) mentions as being totally demolished. He also remarks that the quarter itself was destroyed without trace. This mosque was built in 329/941; later on it was pulled down by the ʿAbbāsid Caliph Al-Rāḍī Billāh; later still, it was reconstructed and maintained its normal function until after 450/1058, when it was finally abandoned.

Prior to the building of Baghdād, Barāthā was a village where, as the Shīʿīs claim, ʿAlī b. Abī Ṭālib passed by and performed prayers on the site of the mosque. The name Barāthā, derived from the Syriac word Baraytha, has the meaning of "outer".

BARAWA (Brava), a coastal town of Italian Somaliland. The inhabitants, c. 9000, are mostly of the Tunni tribe of the Digil Somali, who displaced the Adjurān and are mingled with Boran Galla. The soil is comparatively fertile; skins, grain and butter are marketed and leather is worked. Barawa is perhaps Yāḳūt's Bāwarī, which exported amber, and Idrīsī's B·rwa (var. M·rwa) on the pagan frontier; other Islamic geographers do not mention it. Barros, following a Kilwa chronicle now lost, says Zaydīs from Al-Aḥsāʾ founded it soon after Maḳdishū; Stigand's informant attributed it to the Khalīfa ʿAbd al-Malik b. Marwān in 77/696-7. In the 8th/14th century it was subject to Pate. The Chinese visited "Pu la wa" about 821/1418. In 908-9/1503 12 shaykhs captured by Rui Lourenço Ravasco made Barawa tributary to Portugal. In 912/1507 Tristão da Cunha and Albuquerque stormed and burnt it; Barawa mustered 4-6000 defenders and afforded rich booty. It recovered temporarily but decayed after the rise of the Galla. Portuguese suzerainty was recognised intermittently. Portuguese writers describe it as a republic, governed by 12 shaykhs; Guillain mentions a council constituted by the heads of 5 Somali and 2 Arab tribes with a monarch elected for 7 years, whom, he was told, it had once been the custom to kill after that time. Barawa was nominally subject to the Āl Bū Saʿīd [*q.v.*] who asserted their authority against the Mazrui c. 1238/1822, but tribute was sometimes paid to Somali chiefs. For about 2 months in 1292/1875-6 it was occupied by the Egyptians. The Anglo-German declaration of 1303/1886 recognised Bū Saʿīdī rule. Three years later Italy announced a protectorate over the coast and Barawa was subsequently leased to her (see somaliland). Harbour works were begun in the hope of making it the port of the Djub (Juba) region but were later abandoned.

BARBĀ, a name given by the Egyptians to all the temples and ancient monuments. This statement by Ibn Djubayr is corroborated by Yāḳūt, according to whom *barbā*, "which is a Coptic word", is applied to solidly constructed ancient buildings of pagan times, which served as laboratories for magic: they were wonderful buildings, full of paintings and sculptures. ʿAbd al-Laṭīf, in turn, noted the excellence of the construction of these temples, the balanced proportions of their forms, the prodigious volume of the materials employed, end was astounded by the great multitude of inscriptions, figures, sunk carving and relief sculpture. In the eyes of some Arab writers, these various representations served a utilitarian purpose, namely to reproduce the techniques and tools of various crafts and to preserve a description of the sciences for future generations.

The Christian historian of the Patriarchs of Alexandria, Severus of Ashmūnayn, employs the word *barbā* in the very precise sense of pagan temple, in contrast to the buildings of the Christian cult. The Arabic word *barbā* is, in fact, a transcription of the Coptic *p'erpé*—"temple", and usage has endowed it with a classical plural *barābī*. The expression *barbā* is also reported by Leo Africanus.

Many authors recount impossible stories concerning these temples, either that they tell of the means of defending the country against external enemies by means of talismans or that these talismans help in discovering treasures, which they take a greater delight in elaborating.

The only relatively serious description, from the pen of Ibn Djubayr, concerns the temple of Akhmīm, which no longer exists.

AL-**BARBAHĀRĪ**, AL-ḤASAN B. ʿALĪ B. KHALAF ABŪ MUḤAMMAD AL-BARBAHĀRĪ, a famous Ḥanbalī theologian, who died at Baghdād at a great age. He was both a traditionist (*ʿālim*), and a jurist (*faḳīh*), being, above all, one of those popular preachers (*wāʿiẓ*), who, in the history of the Caliphate during the 4th/10th and 5th/11th centuries, played so important a rôle in the struggle of Sunnism against the Shīʿī missionaries (*duʿāt*) and who, without exhibiting the least spirit of compromise, successfully managed to oppose the progress of Muʿtazilite and semi-Muʿtazilite-inspired theology (*kalām*).

Al-Barbahārī was schooled in Ḥanbalī doctrine by Abū Bakr al-Marwazī (died 275/888) [*q.v.*] (cf. *Taʾrīkh Baghdād*, iv, 423-425; *Ṭabaḳāt al-Ḥanābila*, i, 56-63; *Ikhtiṣār*, 32-34) who was supposed to have been one of Ibn Ḥanbal's favourite disciples and one of the most assiduous reporters of the great imâm's *responsa*, both in the field of jurisprudence (*fiḳh*) and, more generally, in that of moral theology (*akhlāḳ*), the rules of civility (*ādāb*) and of religious beliefs (*ʿaḳāʾid*). The famous mystic Sahl al-Tustarī (died 283/896), who founded the Sālimiyya school (cf. *EI*[1], iv, 119) and who was to exert an influence on several other major representatives of Ḥanbalism, was likewise his teacher.

Al-Barbahārī is the author of a profession of faith, the *Kitāb al-Sunna*, the text of which has been transmitted to us in great measure by the ḳāḍī Abu 'l-Ḥusayn in his *Ṭabaḳāt* (ii, 18-43), and which recalls that composed by Aḥmad Ghulām Khalīl (died 275/888), an opponent of the extremist Ṣūfism of Abū Ḥamza and al-Nūrī (died 297/910) and himself an author with Ḥanbalī affinities (cf. L. Massignon, *Textes inédits*, 212-213). Abu 'l-Ḥasan al-Ashʿarī (died 329/941) is held to have composed his own *Ibāna* after a discussion with al-Barbahārī, an assertion which a comparative study of the two professions of faith does not show *a priori* to be inadmissible.

Al-Barbahārī's profession of faith is primarily a polemic work denouncing the multiplication of suspect innovations (*bidʿa*) and energetically enjoining a return to the precepts of the "old religion" (*dīn ʿatīḳ*), as it was understood at the time of the first three Caliphs, before the schism which followed the assassination of ʿUthmān b. ʿAffān and the succession of ʿAlī b. Abī Ṭālib. The principle underlying this restoration resides in imitation (*taḳlīd*) of the Prophet, of his companions and their pious successors, among whom al-Barbahārī frequently cites, with Ibn Ḥanbal, Mālik b. Anas (died 179/795), ʿAbd Allāh b. al-Mubārak (died 181/797), Fuḍayl b. ʿIyāḍ (died 187/803) and Bishr b. al-Ḥārith (died 227/842). Al-Barbahārī does not condemn the use of reason (*ʿaḳl*); on the contrary he perceives therein a grace diversely distributed by God among his creatures and necessary to final salvation. Neither does he entirely reject what is *bāṭin* as opposed to what is *ẓāhir*, that is to say, what is inward and profound in contrast to what is outward and in conformity with the letter of the text, provided this *bāṭin* has its basis in the Ḳurʾān and the Sunna. What he condemns above all else are the pernicious deviations, which result from the personal and arbitrary use of reasoning (*taʾwīl*; *raʾy*; *ḳiyās*) in the domain of religious beliefs. His theodicy, on the problem of the divine attributes (*ṣifāt*), is limited to an attempt to reproduce the data of the Ḳurʾān and the Sunna.

Politically, he appears as an energetic defender of the rights of Ḳuraysh to the Caliphate, though he none the less reminds believers of the duty incumbent on them to obey all established authority, except where disobedience to God is involved. He is particularly severe in his condemnation of all attempts at armed revolt (*khurūdj bi 'l-sayf*), considering in fact that the re-establishment of the Law should be effected by appeal to public opinion, by the duty of missionary preaching (*daʿwa*), of enjoining the Good (*amr bi 'l-maʿrūf*) and of proffering good counsel (*naṣīḥa*). This re-establishment of the Law, in a world in which Islam had split up into numerous sects, was incumbent especially on the "people of the *ḥadīth*", on the *ahl al-sunna wa 'l-djamāʿa*, whose triumph God had definitely assured. True to his doctrine, al-Barbahārī conducted so vigorous a personal action against *bidʿa* and against the sects (*firḳa*), especially against Muʿtazilism and Shīʿism, that he was at times accused of entertaining political ambitions.

Indeed, al-Barbahārī's influence is to be discovered behind several popular demonstrations and insurrections which broke out in Baghdād between 309/921 and 329/941. He was not unconnected with the opposition encountered by al-Ṭabarī who, in 309, was invited by the *wazīr* ʿAlī b. ʿĪsā to come to discuss with his Ḥanbalī opponents points of doctrine which separated them and who, in 310, had to be buried at night in his own house because of the hostility of the mob (cf. on these incidents, especially *Bidāya*, xi, 132 and 145-146).

In 317/929 there was a brawl in Baghdād involving considerable bloodshed between al-Barbahārī's followers and their adversaries, arising from the interpretation given to verse xvii, 81/79: "Perchance thy Lord will send thee to a sojourn worthy of praise (*maḳām maḥmūd*)". Al-Barbahārī's disciples maintained that this was to be interpreted as meaning that on the Day of Resurrection, Gold would seat the Prophet on His throne, whilst, for their adversaries, who followed the doctrine of al-Ṭabarī and Ibn Khuzayma, this was merely a question of the great intercession (*shafāʿa*) of the Prophet in favour of believers culpable of grave faults on the Day of Judgement (cf. *Bidāya*, xi, 162-163).

In 321/923, during the Caliphate of al-Ḳāhir, when the question arose of having Muʿāwiya cursed from the pulpit, a measure aimed directly at Ḥanbalī doctrine, the *ḥādjib* ʿAlī b. Yalbaḳ ordered a search to be made for al-Barbahārī, who managed to conceal himself, though a number of the Ḥanbalī theologian's disciples were exiled to Baṣra (*Kāmil*, viii, 204; *Bidāya*, xi, 172). The measures then taken by the Caliph al-Ḳāhir for the re-establishment of morality were designed in some degree to appease the Ḥanbalī critics.

Although the supporters of al-Barbahārī do not seem to have played a direct rôle in 322/934 at the time of the trials of al-Shalmaghānī and of Ibn Muḳsim, nevertheless the Ḳurʾān reader Ibn Shannabūdh, likewise accused of publicly teaching Ḳurʾānic readings divergent from those of the recension of ʿUthmān, was brought to trial by the

wazīr Ibn Muḳla and sentenced (cf. al-Ṣūlī, trans. M. Canard, i, 109 and 145), apparently as the result of a noisy demonstration by the Ḥanbalīs of Baghdād.

The agitation by al-Barbahārī's supporters reached its apogee in 323/935, at the beginning of al-Rāḍī's Caliphate, still under the vizierate of Ibn Muḳla, on the eve of Ibn Rāʾiḳ's appointment as *amīr al-umarāʾ*. Muslim historians (al-Ṣūlī, i, 114; *Kāmil*, viii, 229-231; *Bidāya*, xi, 181-182) depict the Ḥanbalīs looting shops, intervening in commercial transactions to impose the prescriptions of the Law, attacking the wine-sellers and singing-girls, smashing musical instruments, pushing their way into private dwellings and denouncing to the Prefect of Police any man found in the street with a woman, not being her *maḥram* (cf. K. V. Zettersteen, *EI*[1], iii, 1169, s.v. RĀḌĪ). The Caliphal authorities then prohibited al-Barbahārī's supporters from meeting and teaching and the Muslims from praying behind an imām following the Ḥanbalī doctrine. As the ardour of al-Barbahārī's supporters did not diminish, a decree by the Caliph al-Rāḍī (text in *Kāmil*, viii, 230) was issued in 323, condemning Ḥanbalism and excluding it from the Muslim community; it accused it of developing an anthropomorphist theodicy (*tashbīh*) and of forbidding the visiting of the tombs of the great imāms (*ziyārat al-ḳubūr*). This condemnation only prevented Ḥanbalī demonstrations for a while.

Al-Barbahārī's supporters resumed their agitation with violence in 327/939 under the amīrate of Badjkam; they molested people going to the *maḥyā* festival, that is to say the ceremonies organised in some mosques during the night of the 14th/15th Shaʿbān (cf. al-Ṣūlī, i, 204 and 205). The Prefect of Police issued orders for al-Barbahārī to be found, but once again he concealed himself, though one of his lieutenants, a certain Dallāʾ, was executed.

The likelihood of disarming the hostility of al-Barbahārī's supporters was further diminished by the fact in 328/940 the amīr Badjkam had the mosque of Barāthā rebuilt. This mosque had been demolished under the Caliphate of al-Muḳtadir and was considered by Sunnīs as the "nest of Shīʿism" (cf. al-Ṣūlī, i, 142 and 208). When in 329 the amīr Badjkam was assassinated by a band of Kurdish brigands, the Ḥanbalīs noisily gave vent to their satisfaction, attempted to demolish the mosque of Barāthā and also attacked the quarter of the money-changers and bankers, in the Ḍarb ʿAwn, which was at the heart of the financial and commercial life of the ʿAbbāsid metropolis (al-Ṣūlī, ii, 16 and 19). The Caliph al-Muttaḳī was obliged to have a number of Ḥanbalīs arrested and to place the Shīʿī mosque under a heavy guard.

At this juncture, in Radjab 329/April 941, al-Barbahārī died in the house of Tūzūn's sister, where he had hidden himself and where he was buried (*Ṭabaḳāt al-Ḥanābila*, ii, 44-45; *Bidāya*, xi, 201).

Al-Barbahārī's influence also manifested itself in several contemporary Ḥanbalī doctors, especially Ibn Baṭṭa al-ʿUkbarī (died 387/997), who met him at Baghdād on a number of occasions and who drew inspiration in his *Ibāna* from his *ʿaḳīda*. His influence is likewise to be encountered, through the medium of Ibn Baṭṭa, on the ḳāḍī Abū Yaʿlā b. al-Farrāʾ (died 458/1066) and several of his disciples, especially the Sharīf Abū Djaʿfar al-Hāshimī (died 471/1078), who instigated several violent popular demonstrations against *bidʿa*.

BARBAROSSA [see KHAYR AL-DĪN].

BARBASHTURU, an ancient city on the R. Vero, a tributary of the Cinca, N.E. of Saraḳusta (Saragossa), in the approaches to the Central Pyrenees (modern Barbastro). It lay 50 km. almost due E. of Washḳa (Huesca). Barbashturu is stated by Ibn Ḥayyān to have become Muslim at the time of the conquest of Spain, and to have remained in Muslim hands continuously thereafter for upwards of 360 years. It became a bastion of the defences of al-Thaghr al-Aʿlā (the 'Upper Frontier'), in which sytem it formed a link between Saraḳusta and Lārida (Lérida).

In an account of the expedition of ʿAbd al-Malik al-Muẓaffar in 396/1006 against Pampeluna, Barbashturu is mentioned as the last place in the lands of Islam (Ibn ʿIdhārī, iii, 12). At the time of its capture in 456/1064 (see below) it belonged to the Banū Hūd of Saraḳusta, and evidently contained a large population and substantial wealth, though the figures given by the Arabic historians who, following Ibn Ḥayyān, describe this event, appear to be exaggerated. In the summer of 1064, a Christian force estimated at 40,000 men presented itself before Barbashturu. These included Normans under Robert Crespin — the name is given by a Latin chronicler—and others, who with Papal support were engaged in what has been described as *una cruzada antes de las cruzadas*, 'a crusade before the Crusades'. After a siege of more than a month they succeeded in taking the town. Though the part played by the Christians of Spain is obscure, and though Barbashturu was retaken after a year, its fall marked a stage in the reconquest of the country. It was spoken of by contemporaries as an event without parallel, the greatest disaster which had ever happened in Muslim Spain, and Ibn Ḥayyān's painful reflections on the state of al-Andalus were prompted by what had taken place there (cited in Ibn ʿIdhārī, iii, 254-255).

It was characteristic of the disunity among the Spanish Muslims that the ʿAbbādid al-Muʿtaḍid sent only 500 horsemen to al-Muḳtadir b. Hūd of Saraḳusta, his nominal ally, then assembling forces for a counter-stroke, though urged to march in person by al-Hawzanī, a noble of Seville (Ibn Saʿīd, *Al-Mughrib fī ḥulā al-Maghrib*, ed. Sh. Ḍayf, I, 234). Thanks to a corps of crossbowmen, al-Muḳtadir b. Hūd succeeded in retaking the town. Yet Barbashturu was not destined to remain much longer in Muslim hands. It was finally taken for the Christians by Pedro of Aragon in 1101, an event which seems to have been known to Yāḳūt (cf. *Muʿdjam al-Buldān*, s.v.).

BARBAṬ [see ʿŪD].

BARCELONA [see BARSHALŪNA].

BARDASĪR [see KIRMĀN].

BARDESANES [see DAYṢĀNIYYA].

BARDHAʿA, Armenian Partav, modern Barda, a town S. of the Caucasus, formerly capital of Arrān, the ancient Albania. It lies about 14 miles from the

R. Kūr (2 or 3 *farsakh*s according to the Arabic geographers; Masʿūdī says inaccurately 3 miles, *Murūdj*, ii, 75) on a river of its own (Muḳaddasī, 375), the modern Terter (Tharthūr, Yāḳūt, *Buldān*, i, 560). It was built, according to Balādhurī (194), by the Sāsānid Ḳubād (ruled A.D. 488-531). This is varied by Dimishḳī (*Cosmographie*, ed. Mehren, 189), who mentions as founder a mythical Bardhaʿa b. Armīnī (?), earlier than Ḳubād. The Arabs attempted to explain the name as from Persian *barda-dār*, 'place of captives', from the original purpose to which it was put.

Bardhaʿa served the Sāsānids and the Arabs later as a frontier fortress against invasion from the N. and W. At the time of the Arab conquest it was taken after a short resistance by Salmān b. Rabīʿa al-Bāhilī (Balādhurī, 201), probably before 32/652, the date of the Arab debacle at Balandjar [*q.v.*]. Thereafter Arrān, the province of which Bardhaʿa and its territory formed part, was usually joined with Armenia, sometimes with Armenia and Ādharbaydjān, under a single governor. In the Caliphate of ʿAbd al-Malik its fortifications were reorganised by ʿAbd al-ʿAzīz b. Ḥātim (Dhahabī, *Duwal al-Islām*, i, 40, *sub anno* 86/705) and perhaps further improved by Muḥammad b. Marwān a little later (cf. Balādhurī, 203). After this Bardhaʿa was well fitted to be 'the spearhead of Muslim domination and policy in those parts' (V. Minorsky) and is mentioned repeatedly during the second Arab-Khazar war and later under the ʿAbbāsids. As late as the 10th century the population retained their own Arrān dialect (Iṣṭakhrī, 192).

When Iṣṭakhrī wrote (circa 320/932), Bardhaʿa was at the height of its prosperity, though decline was soon to set in. It covered an area of several miles in length and breadth in a fertile and well-watered region, and in mere size challenged comparison with Rayy and Iṣbahān. In the district of Andarāb, beginning a mile or two from the town, gardens and orchards extended continuously in every direction for a day's journey or more. Hazel-nuts and chestnuts of the finest quality and a local fruit resembling that of the service-tree were to be found in abundance. Bardhaʿa also produced superior figs, and especially silk, the latter exported to Khūzistān and Fārs. The mulberry-trees on which the silkworms fed were public property and according to Ibn Ḥawḳal (see below) most of the population had a hand in silk-production. Of several kinds of fish caught in the R. Kūr was one called *sarmāhī* or *shūrmāhī* (Persian = 'salt-fish'), which when salted was also exported. The mules of Bardhaʿa mentioned by Muḳaddasī (380) were appreciated as far away as Central Asia (at Samarḳand in 416/1025, Barthold, *Turkestan*, 283). These and other commodities, such as the furs from the North mentioned by Masʿūdī (*Tanbīh*, 63), madder and caraway-seeds (*Ḥudūd al-ʿĀlam*, 143), were no doubt mostly offered for sale at the Sunday market (*sūḳ al-kurakī*, from Κυριακή, the Lord's day, reflecting the Christian religion of the inhabitants earlier), situated in the suburbs outside the Gate of the Kurds (Bāb al-Akrād), to which visitors came even from ʿIrāḳ. The public treasury at Bardhaʿa dated from Umayyad times (Ibn Ḥawḳal), and according to the older fashion was in the Friday Mosque, beside which stood the palace of the governor.

This description serves also as the basis of Ibn Ḥawḳal's account nearly 50 years later (367/977), the chief difference being that Ibn Ḥawḳal knows of the capture and occupation of Bardhaʿa by the Russians in 332/943. A notice of this remarkable event is given by Ibn al-Athīr (viii, 308-10) and in greater detail, evidently from eye-witnesses, by Ibn Miskawayh (*The Eclipse of the Abbasid Caliphate*, ed. D. S. Margoliouth, ii, 62-67; English translation, v, 67-74, reprinted in N. K. Chadwick, *The Beginnings of Russian History*, Cambridge 1946, 138-144). The Russians, whose number is not given but who must have numbered at least several thousand, appeared in the Caspian, undoubtedly from the Khazar country on the Volga, as on other occasions (cf. D. M. Dunlop, *History of the Jewish Khazars*, 209 ff.; 238 ff.), and having sailed up the R. Kūr, defeated the forces of al-Marzubān b. Muḥammad, the Musāfirid ruler of Ādharbaydjān, and gained possession of Bardhaʿa. The Russian occupation continued for many months (a year according to Yāḳūt, ii, 834), and they were only dislodged with the greatest difficulty, after an epidemic had decimated their numbers.

Ibn Ḥawḳal mentions the ill effects of the Russian invasion but, as is now clear from the second edition of his work (see *Bibliography*), he does not ascribe the catastrophic decline of Bardhaʿa in his time, illustrated by a report that there are now only five bakers in the town where formerly there were 1200, mainly to devastation caused by the Russians. Rather this was due, he tells us, to 'the injustice of its rulers and the management of lunatics' (1st ed., 241), phrases which are amplified and explained in his second edition (336) as fiscal molestations which have 'eaten up it and its people', and to 'the neighbourhood of the Georgians (al-Kurdj)' (2nd ed. 337, 339). The latter appears to have reference to interference from the direction of Gandja (Djanza), later Elizavetpol, only 9 *farsakh*s distant from Bardhaʿa (Yāḳūt, i, 559), where the Shaddādids ruled in the 2nd half of the 4th/10th century. Otherwise the misgovernment and excessive taxation of which Ibn Ḥawḳal speaks must probably be ascribed to the Daylamite Musāfirids, unwilling to see Bardhaʿa recover its former position to the detriment of Ardabīl. Bardhaʿa may have revived somewhat, since an attack upon it by a king of the Abkhāz is said to have provoked reprisals by the Saldjūḳ Alp Arslān in 461/1067. But it is scarcely mentioned in the Mongol period, and in the long interval which has elapsed since then can hardly have been much more than it is today, a village in the midst of ruins.

Bibliography: Iṣṭakhrī, 182-184; Ibn Ḥawḳal, 1st ed. (De Goeje) 240-1, 2nd ed. (Kramers), 336-339; Muḳaddasī, 375; Yāḳūt, i, 558-561; Ḳazwīnī, *Āthār al-Bilād*, 344; *Ḥudūd al-ʿĀlam*, indices; V. (D. M. DUNLOP)

BARDJAWĀN, ABU 'L-FUTŪḤ, a slave who was for a while ruler of Egypt during the reign of al-Ḥākim. He was brought up at the court of al-ʿAzīz, where he held the post of intendant (*Khiṭaṭ* ii, 3; Ibn Taghribirdī, Cairo, iv, 48; Ibn Khallikān, ii, 201). He was a eunuch, and was known by the title *Ustādh* [*q.v.*]. His ethnic origin is uncertain—Ibn Khallikān calls him a negro, Ibn al-Ḳalānisī simply a white (*abyaḍ al-lawn*), al-Maḳrīzī either a Slav or a Sicilian, the readings Saḳlabī and Siḳillī both occurring in the MSS. of the *Khiṭaṭ* (cf. S. de Sacy, *Chrestomothie*, i, 130).

Bardjawān was appointed guardian of the young heir to the Caliphate by al-ʿAzīz, and on the latter's death in Ramaḍān 386/October 996, he proclaimed

his ward as the Caliph al-Ḥākim. His rôle was at first limited to the guardianship of the young sovereign, the effective power in the state resting with the *Wāsiṭa* [*q.v.*] Ibn ʿAmmār al-Kutāmī, the leader of the Berber troops and faction. Ibn ʿAmmār's power was no doubt irksome to the young Caliph and his guardian; the supremacy of the Berbers undoubtedly angered the Turks and other Easterners in the army, and probably also the general Egyptian population. Bardjawān threw in his lot with the Easterners, and in 386/996 wrote to Mangutakin, the Turkish governor of Damascus, inviting him to come with his army and save Egypt and also the person of the Caliph from the tyranny of the Berbers. Mangutakin, with Turkish, Daylamite, Negro, and local Arab support, advanced against Egypt, but was defeated near ʿAskalān by a Berber force sent by Ibn ʿAmmār and commanded by Sulaymān b. Djaʿfar b. Fallāḥ. Bardjawān was compelled for the moment to submit to Ibn ʿAmmār, but a little later the support of Djaysh b. Ṣamṣāma, a disaffected Berber officer, enabled him to challenge Ibn ʿAmmār again, this time successfully. In an open clash Ibn ʿAmmār was defeated and driven into hiding, while Bardjawān took his place as *wāsiṭa* and effective master of the state (28 Ram. 387/4 Oct. 997). Bardjawān dealt leniently with the defeated Berbers in Egypt, but the breaking of their power proved to be permanent. In Damascus the Berber governor was dismissed and his Kutāmī troops massacred. A period of disorder followed in Syria, which was ended by vigorous action on the part of Bardjawān. Arab rebels were suppressed in Palestine and Tyre, and Byzantine attacks by land and sea repelled. Diplomatic negotiations ended with a ten-year truce between the Byzantine and Fāṭimid Empires. In the West, Bardjawān conquered Barḳa and Tripoli, both of which were placed under eunuch governors. The latter conquest was of brief duration.

Emboldened by these successes, Bardjawān adopted a high-handed attitude to the Caliph, even going so far, according to some sources, as to restrict his riding on horseback and his expenditure on gifts (Nuwayrī, Bar-Hebraeus). Nuwayrī tells a revealing story, according to which Bardjawān used to call al-Ḥākim 'the lizard' (*wazgha*); this nickname rankled, and when al-Ḥākim summoned Bardjawān to his death, the message ran: 'Tell Bardjawān that the little lizard has become a large dragon, and wants him now'. Al-Ḥākim's resentments were encouraged by another slave eunuch, Abu 'l-Faḍl Raydān al-Saḳlabī, who warned the Caliph that Bardjawān was trying to emulate the career of Kāfūr, and proposed to deal with him as Kāfūr had dealt with the Ikhshīdids. Bardjawān was stabbed to death by the hand of Raydān, and by order of the Caliph, in the night between 26th and 27th Rabīʿ II 390/5 April 1000 (Ibn al-Ṣayrafī, who does not, however, mention the exact day; Ibn Khallikān; al-Maḳrīzī; Ibn Muyassar—the reading *sabʿin*, instead of *tisʿin*, is an obvious error; Ibn al-Ḳalānisī, followed by Ibn al-Athīr, gives the year as 389).

The killing of Bardjawān aroused the anger of both the populace and the Turks, who no doubt feared a revival of Berber rule. The Caliph, however, appeared to the armed crowd above the door of his palace, and defended his action; accusing Bardjawān of plotting against him, he appealed for help in his youth and inexperience. Letters to the same effect were also sent out. In the Druze epistle *Al-Sīra al-Mustaḳīma*, by Ḥamza, there is an interesting passage in which the execution of Bardjawān by the youthful caliph, without fear of the anger of the troops, is presented as an act of unprecedented daring, presaging the miraculous quality of al-Ḥākim's rule (*al-Muḳtabas*, v. 306).

Bardjawān is said to have been a man of taste and a lover of the pleasures of this world. His house was a meeting place of poets and musicians. On his death, he astonished his contemporaries by the size and variety of the wardrobe, library, stables, and establishment which he left. A street in Cairo was named after him.

BARDO [see Tunisia].

BAREILLY (Barēlī) a district town in the Uttar Pradesh, India, situated in 28° 22′ N. and 79° and 24′ E. stands on a plateau washed by the river Rāmgangā. Population (1951): 194,679. Founded in 944/1537, the town derives its name, according to tradition, from Bās Dēō, a Barhēlā Rādjpūt by caste. It is popularly known as Bāns Bareilly, partly to distinguish it from Rāē Barēlī, the birth-place of Sayyid Aḥmad Brēlwī [*q.v.*], and partly due to the proximity of a bamboo (*bāns*) jungle.

During the reign of Akbar, a fort was built here to check the depredations of the Rādjpūt tribes of Rohīlkhand. As usual a town gradually grew up round the citadel, and, by 1005/1596, it had developed into a *pargana* head-quarters. It remained of little importance till the reign of Shāh Djahān when it was made the capital of Kētehr (the old name of Rohīlkhand). In 1068/1657, a new city was founded by Makrand Rāy, who was appointed governor in place of ʿAlī Ḳulī Khān, who had held the office since 1038/1628. During the Mughal period the city was ruled by a governor. After the death of Awrangzīb in 1119/1707 the Hindus of Bareilly turned out the Mughal governor, refused to pay the tribute, and assumed power. They, however, soon fell out among themselves, and invited ʿAlī Muḥammad Khān, the Rohilla chieftain, to assume the reins of power. He soon extended his sway right up to Almōrā in Kumāon but in 1158/1746 Muḥammad Shāh, King of Delhi, marched against him and took him a prisoner to Delhi. He, however, soon won back his freedom and returned to the governorship of Bareilly in 1160/1748. On his death in 1162/1749 he was succeeded by Ḥāfiẓ Raḥmat Khān, who after some sharp encounters with Awadh forces, strengthened by Mahratta contingents, became the unquestioned ruler of Rohīlkhand. In 1184/1770 Nadjīb al-Dawla defeated Raḥmat Khān with the help of Mahratta troops under Sindhia and Holkar. Shudjāʿ al-Dawla,

however, came to the rescue of the Rohillas but soon afterwards fell upon them, killing their chief, Raḥmat Khān. In 1188/1774 Saʿādat Yār Khān was appointed governor of Bareilly under the Awadh *wazīr*. In 1216/1801 the town was ceded to the British, when entire Rohīlkhand fell into their hands. In 1220/1805 Amīr Khān Pindārī raided Bareilly but was driven off with heavy losses. In 1232/1816 the residents rose against the imposition of a local tax but were dealt with an iron hand. In 1253/1837 and 1257/1842 serious Hindu-Muslim riots took place. The town was badly disturbed during the "Mutiny" of 1273/1857 when Khān Bahādur Khān, grandson of Ḥāfiẓ Raḥmat Khān, was proclaimed governor. After the fall of Delhi in September 1857, Tafaḍḍul Ḥusayn Khān, Nawāb of Farrukhābād, Nānā Ṣāhib from Bitʾhūr and the Mughal prince, Fīrūz Shāh, the rebel leaders, made the city their stronghold. They were, however, defeated, and the city was re-occupied by the British on 5 May 1857. In 1287/1871 a Hindu-Muslim riot again took place and since then several religious riots have occurred. With the establishment of Pakistan in 1366/1947 the bulk of the Muslim population migrated from Bareilly.

'General' Bakht Khān [*q.v.*] of the Bareilly Brigade, who was appointed Commander-in-Chief of the rebel forces during the "Mutiny", was a native of this town. Aḥmad Riḍā Khān (d. 1340/1921), a theologian and scholar whose followers formed themselves into the *Ḥizb al-Aḥnāf*, popularly known as the *Barēlwīs*, also belonged to this town. The *Ḥizb al-Aḥnāf* is a sub-sect of the Ḥanafīs, who, contrary to other Sunnīs, believe that the Prophet possessed prescience or knowledge of the future. It is an article of faith with the *Barēlwīs* and has occasioned much strife among the *ʿulama*ʾ in the Indo-Pakistan sub-continent.

The only building of note is the tomb of Ḥāfiẓ Raḥmat Khān, constructed by his son, Dhuʾl-Faḳār Khān, in 1189/1775. This tomb has been repaired several times, the last in 1891-2 by the British Government.

BĀRFURŪSH, formerly Bārfurūshdih ("the village where loads are sold") and renamed Bābul in 1927, is the chief commercial town in the second *Ustān* (Māzandarān). It is situated four miles to the east of the Bābul river, midway between the foot of the Elburz range and the coast; it is 12 miles from Bābul-i Sar (formerly Mashhad-i Sar), the port at the mouth of the Bābul river.

The town was founded at the beginning of the 16th century on the site of the ancient city of Māmṭīr or Māmaṭīr (see Melgunov, *Das südliche Ufer des Kaspischen Meeres*, Leipzig 1868, 177). Shāh ʿAbbās I used to visit the town and he laid out a garden to the south-east called Bāgh-i Shāh or Bāgh al-Iram. Bārfurūsh remained a place of little importance until the reign of Fatḥ ʿAlī Shāh [*q.v.*].

In recent years many new buildings, including administrative offices, a hospital and a number of schools, have been erected. The population in 1950 was 39,096.

Much silk, cotton and rice are produced in the neighbourhood.

BARGHASH b. Saʿīd b. Sulṭān, sultan of Zanzibar, succeeded his brother Madjīd, 7 Oct. 1870, and reigned till his death, 27 March 1888. He tried to seize power on his father's death in 1856, and again in 1859 when he was defeated by British intervention and sent to Bombay for two years. The British supported his accession but he at once resisted their efforts to suppress the Slave Trade, for he relied partly on the Ibāḍī Mlawa faction which was hostile to all European intervention in such affairs. In 1873 Barghash was obliged to suppress all slave markets and prohibit all export of slaves, even to other parts of his realm; he was then invited to London. In 1876 the movement of slave caravans on land was forbidden. To enforce this policy Lloyd Mathews began training African troops in 1877. The British agent Kirk won Barghash's confidence and became the dominant personality in Zanzibar till he left in 1886. In the African hinterland Barghash had inherited wide claims and some prestige but very little power. In 1877 the failure of negotiations with Sir Wm. Mackinnon for a concession for the development of the country between the coast and Victoria Nyanza ruined Barghash's best chance of enforcing his authority in the interior. In 1881 his proposal that Britain should guarantee the throne to his family and should exercise a regency if he died leaving a minor as heir was rejected. In 1884 the German agent Peters concluded twelve treaties with chiefs whose suzerain Barghash claimed to be; their territories lay along the trade route to Tabora and Ujiji. In 1885 Germany took them and the Sulṭān of Witu under her protection. Barghash's protest was met by the visit of five German warships and an ultimatum which lack of British support forced him to accept. A commission of British, German and French representatives then met to determine the extent of territory over which his authority would be recognised. Under British pressure Barghash accepted their decision (for details see bū saʿīd). His health was now broken and he died immediately on his return from a visit to ʿUmān. Barghash was an able and energetic ruler who did much for Zanzibar, supplied it with pure water, organised the import of cheap grain and worked hard to restore the clove industry after a cyclone in 1872. Contemporary Europeans often called him xenophobe but his position was extremely difficult. Britain, whom he was powerless to resist, especially after the collapse of France in 1870, forced him to adopt an anti-slavery policy highly unpopular with his subjects and at the same time gave him no support against the Germans.

Coupland, ***The Exploitation of East Africa***, 1939, giving references to British official sources and the private papers of British officials.

(C. H. Becker-[C. F. Beckingham])

BARGHAWĀṬA, a Berber confederation belonging to the Maṣmūda group, established in the Tāmasnā [*q.v.*] province, extending along the Atlantic coast of Morocco, between Salé and Safi, from the 2nd/8th to the 6th/12th century.

They were an important confederation, able, according to the Andalusian geographer al-Bakrī, to put more than 12,000 cavalry into the field simultaneously. They appear to have played a certain political rôle up to the arrival of the Almoravids (second half of the 5th/11th century). Prior to this time, our information on the Barghawāṭa is almost exclusively due to the Eastern traveller Ibn Ḥawḳal (second half of the 11th/10th century) and the geographer al-Bakrī (second half of the 5th/11th century); several subsequent chroniclers merely reproduce the latter's narrative with slight variations of detail (see Bibliography). Al-Bakrī says that he derived his information from statements, evidently preserved in Spain, made by a Barghawāṭa emissary to the Umayyad Caliph al-Ḥakam II, who came to Cordova on a mission in Shawwāl 352/October-November 963. Indications of the rôle played by the Barghawāṭa at the time of the conquest of Morocco by the Almohad ʿAbd al-Muʾmin are to be found in the memoirs of al-Baydhaḳ (*Doc. inéd. d'Hist. almohade*) and in the *History of the Berbers* of Ibn Khaldūn (see bibliography). In addition to the political importance of the Barghawāṭa confederation, they practised a special religion, which was nevertheless clearly derived from Islam; al-Bakrī alone gives us some meagre information on this subject, and the other chroniclers confine themselves to reproducing this.

Undeniably the Barghawāṭa's appearance in history is connected with the Khāridjite revolt of Maysara; the populations known under the name Barghawāṭa (several chroniclers affirm without adequate proof that this was not their contemporary name) embraced the Khāridjite cause and in 127/744-745, if we are to believe a number of them, grouped themselves round an individual called Ṭarīf, whose origin is much disputed: some introduce him as a chief of the Zanāta and Zuwāgha Berbers, some as deriving from a Berber group in Southern Spain (Barbāṭ, the distorted pronounciation of which was supposed to give Barghawāṭ), whilst others even accord him a Jewish origin. The Sunnī authors, it should be noted, sometimes display a tendency to attribute such an origin to the strongest personalities of the dissident sects: e.g. the Shīʿī Mahdī ʿUbayd Allāh (cf. Goldziher, *Muh. Stud.*, i, 204). Nobody, however, says that Ṭarīf was descended from a family established in the Tāmasnā in early times. Whether or not he was the promoter of a doctrine derived from Sunnī or Khāridjite Islam, he certainly does not seem to have professed it. His son Ṣāliḥ may perhaps have been the progenitor of the new belief after living and studying in the East. If we accept the chronology of al-Bakrī, completed by Ibn Khaldūn, Ṣāliḥ came to power about 131/748-749 and transmitted it to his son al-Yasaʿ about 178/794/795. It was only the latter's son Yūnus who, openly professed and spread the new doctrine during his 43 years reign, from 228/842-843 to 271/884-885. We possess no information on the relationships which must have existed at this period between the Idrīsids and the Barghawāṭa; nobody mentions any conflict between them. Nevertheless, there is an indication of a bloody battle supposed to have been won near the Wādī Baht by Abū Ghufayl, Yūnus's nephew and successor (271-300/912-913). The Barghawāṭa would thus appear to have attempted to take advantage of the decline of the Idrīsids to extend their domination and propagate their doctrine.

In the middle of the 4th/10th century, they appeared to Ibn Hawḳal as infidels against whom the Sunnīs tended to conduct a holy war from the *ribāṭs* of the region of Salé. Their economy seems to have been prosperous, as they maintained commercial relations with Fās, Aghmāt, Sūs, and Sidjilmāssa. They attempted to open diplomatic relations with the Caliphate of Cordova. Soon, however, they were subjected to a series of attacks by Djaʿfar al-Andalusī, a client of the Umayyads, in 367/977-978, by Buluggīn b. Zīrī, viceroy of the Fāṭimids in Ifrīḳiya, from 368 to 372/982-983, and by Wāḍiḥ, the manumitted slave of al-Manṣūr b. Abī ʿĀmir, in 389/998-999. The decline of the Caliphate of Cordova enabled them to recover their breath, but about 420/1029, they were subjected to attacks by Abu 'l-Kamāl Tamīm, chief of the Banū Īfran, who conquered them. His death in 424, gave them a new respite until the arrival of the Almoravids in 451/1059. After putting up a fierce resistance, which cost ʿAbd Allāh b. Yāsīn, the spiritual leader of the new conquerors, his life, the Barghawāṭa were completely defeated and destroyed. Some, however, still remained in the Tāmasnā when the Almohad ʿAbd al-Muʾmin undertook the subjugation of Morocco after the conquest of Marrakesh (541/1147). Since they had embraced the cause of rebels against the new authority, the Almohad chief sent several expeditions against them and finally got the better of them in 543/1148-1149. From that date their group ceased to exist and gradually their name disappeared: Leo Africanus (beginning of the 10th/16th century) no longer quotes their name, though he knows that the Tāmasnā was formerly inhabited by "heretics".

Their doctrine, according to the glimpse which al-Bakrī affords of it, appears as a Berber distortion of Sunnī Islam with a number of Shīʿī infiltrations and an entirely Khāridjite austerity as regards morals. Ibn Ḥawḳal stresses the ascetic life and good morality of the Barghawāṭa. Moreover, the institution of numerous prayers (five during the day and the same number at night) frequent fasts, very complete ablutions, the harshness of punishments inflicted on thieves (death), fornicators (stoning) and liars (banishment) can be ascribed to Khāridjite strictness. On the other hand, the fact that Ṣāliḥ promised that he would return when the seventh chief of the Barghawāṭa had assumed power and declared that he was the Mahdī who would fight against the Antichrist (*al-dadjdjāl*) at the coming of the end of the world with the help of Jesus, can be considered a sign of Shīʿī influence. The month's fast in Radjab or Shawwāl, the communal prayer instituted in Thursday, the food taboos (no heads of animals, no fish, eggs or cocks), and the rules of marriage are merely distortions of Muslim Law, as was the existence of a Ḳurʾān in the Berber language of 80 sūras, bearing names of prophets, animals etc. The continual use of the Berber language, the frequent resort to astrology and magic (healing by means of applications of the saliva of members of the family of Ṣāliḥ) bear witness to the influence of the Berber milieu on the faith of the Barghawāṭa. It is to be regretted that apart from a few ritual expressions and the beginnings of a sūra cited by al-Bakrī, we possess no original documents on this religion. In such circumstances it is impossible to arrive at an accurate idea of it.

BARHEBRAEUS [see Ibn al-ʿIbrī].

BARHŪT (also Barahūt or Balahūt), a *wādī* in Ḥaḍramawt, in one wall of which is the famous Biʾr Barhūt, now known to be a cave rather than a well. The *wādī*, which lies east of the town of Tarīm, empties into al-Masīla, the lower stretch of Wādī Ḥaḍramawt, from the south. At the mouth of Barhūt is Ḳabr Hūd [see hūd], the most sacred shrine in southern Arabia, which is the object of a *ziyāra* every Shaʿbān.

Early Islamic traditions describe Biʾr Barhūt as the worst well on earth, haunted by the souls of infidels. Barhūt probably came to be known throughout Arabia because of its association with the tomb of Hūd, rather than vice versa (cf. Wensinck, citing von Kremer, in *EI*[1], ii, 328); it is unlikely that a mere cave would have acquired such notoriety. The true nature of Biʾr Barhūt was first revealed by D. van der Meulen and H. von Wissmann, who explored it in 1931. About 300 feet above the floor of the valley they found "a typical limestone cave, with nothing whatever volcanic about it. The curious but innocuous smell inside does not come from sulphurous vapour; it is probably due to the dust from the weathering of the rock or, perhaps, to bats". An examination of the main corridor and various side corridors failed to disclose any noteworthy remains.

Bibliography: For the old erroneous beliefs regarding Biʾr Barhūt, see the references cited by J. Schleifer in *EI*[1], i, 654, to which should be added C. von Landberg, *Études sur les dialectes de l'Arabie méridionale*, i, Leiden 1901, 432-47, 481-4. For the cave, see D. van der Meulen and H. von Wissmann, *Ḥaḍramaut*, Leiden 1932.

(G. Rentz)

BARĪD, word derived from the Latin *veredus*/ Greek *beredos* (of uncertain origin, perhaps Assyrian) "post horse", usually applied to the official service of the Post and Intelligence in the Islamic states, and likewise to the mount, courier and post "stage". The institution of the state postal service was known to the Byzantine and Sāsānid Empires, from which it would appear the first Caliphs only required to borrow it, its foreign origin being confirmed by a partly Persian terminology. The *barīd* operated from the Umayyad period and ʿAbd al-Malik is considered as having strengthened its organisation, once he had re-established internal order. From the beginning of the ʿAbbāsid regime, the Post was one of the most important governmental services and its direction was entrusted to intimates of the Caliph, such as Djaʿfar the Barmakid, or to Palace eunuchs. The various Caliphs developed the system of stages which, in the middle of the 3rd/9th century, covered the whole Empire.

The actual organisation of the post in the ʿAbbāsid period is sufficiently well known thanks to the works of Ibn Khurradādhbih and Ḳudāma, composed for the use of the secretaries of state in the 3rd/9th and 4th/10th centuries, which provide lists of stages. The Empire contained no less than nine hundred and thirty stages (*sikka*, also called *ribāṭ* in Iran and *markaz al-barīd* in Egypt), theoretically, situated two *farsakhs* (12 km.) apart in Iran and four (24 km.) in the western provinces; officials (*murattabūn*) were responsible for ensuring the transport of the post (*al-kharāʾiṭ*) within the times allotted. The messengers (*fuyūdj*, *furānik*) used mainly mules in Iran and camels in the West, but sometimes horses as well. The organisation, however, remained flexible and several times a Caliph, a *wazīr* and even an ordinary governor were to be found temporarily strengthening the postal service on a particular route for political or military reasons. Pigeons were also employed for sending urgent news. The Post being an official service, it only transmitted private letters as an exception to the rule. The mounts also served to carry men, when these were agents of the State, and we even find the new Caliph al-Hādī availing himself of the services of the *barīd* to return to Baghdād from Djurdjān after the death of his father (al-Ṭabarī, iii, 547 and al-Djahshiyārī, *K. al-Wuzarāʾ*, Cairo ed., 167).

The Postmasters (*aṣḥāb al-barīd*), who came under the authority of the director of the department of the Post (*ṣāḥib dīwān al-barīd*) were not restricted in their duties to the transmission of official letters emanating either from local officials or from the central services. Thanks to a text of al-Ṭabarī relating to the Caliphate of al-Manṣūr and to a diploma of investiture preserved by Ḳudāma, we are acquainted with the duties of these officials. They had to provide the central government with all necessary information on the state of their province and agents' activities, on the attitude of the commissioners for land taxation and Crown lands and that of the ḳāḍīs, and on the monetary and economic situation. Their supervision extended also to the governor of the district, as is shown by the episode of Ṭāhir's [*q.v.*] autonomy in Khurasān and, in some cases, they were also entrusted with the duty of redressing grievances (Miskawayh, *Eclipse*, i, 25). In Baghdād the reports assembled by the director of the *dīwān* were communicated directly to the Caliph, at least in the early period. In addition, there was a director of intelligence (*khabar*), entrusted with the supervision of the officials and officers of the capital, including the *wazīr* himself when necessary (Miskawayh, *Eclipse*, i, 24); this office, which seems to have been independent of the Postal Service properly so-called, was entrusted to eunuchs or amirs enjoying the sovereign's confidence.

If we are to credit the account in the *Taʿrīf* of al-ʿUmarī, the Buwayhids "cut off" the *barīd* so as to deprive the Caliph of his means of gaining information, thus bringing him more surely under their tutelage. It was in fact in their time that "runners" (*suʿāt*) first appear in the East. Gradually the postal service seems to have become increasingly disorganised until its suppression by the Saldjūḳids (455/1063), after which extraordinary "emissaries" alone were used. At the time of the Crusades, the Zangids and Ayyūbids had no real postal service at their disposal, but made use of runners, swift cameleers and pigeons.

In the Mamlūk State, the postal service for a time recovered its former importance, and its workings are known to us through texts and archaeological remains. Its reorganisation was the work of Baybars, who not only drew upon the example of the ʿAbbāsid Caliphs, but also on that of the Mongol Empire, with which he had to contend. The Mamlūk *barīd*, an organ of the State closely linked with the Holy War, therefore, assumed primarily a political and military rôle, although later it was adjusted to favour commercial traffic. Directed initially by the sultan himself, it later passed into the hands of the secretaries of state, recruited from the famous family of the Banū Faḍl Allāh, who imparted to it a bureaucratic character, before passing back to the amīr *dawādār*. In addition to couriers (*barīdī*) commanded by a *muḳaddam al-barīdiyya* and recruited among the mamlūks of the sultan's household, the personnel included stage grooms (*sāʾis*) and "outriders" (*sawwāḳ*). The postal service first operated in Egypt and on the Cairo-Damascus route (a distance normally covered in a week) and was subsequently extended to the towns of the Syrian coast and the fortresses on the Taurus borders. The stages for changing horses, theoretically four *farsakhs* apart, were first established in public caravanserais. Then special buildings were erected for the purpose, of which the almost universal type, apart from architectural improvements, corresponded to the requirements of "stabling the sultan's horses and housing the small number of men in charge of them" (J. Sauvaget). The routes were then adjusted to ensure a quicker and more regular service. At the same period, the reception of the couriers by the sultan was surrounded by a special ceremonial and their badge of office, known from its employment in Mamlūk heraldry, was given a more sumptuous appearance. Pigeon post and a system of visual signalling were also developed. The invasion of Tīmūr (803/1400), however, destroyed ihts organisation and swift cameleers and runners were again used for carrying official mail.

The institution of the Post existed in the various Muslim states, where it met practical requirements and harmonised with the ethical principles of the Ḳurʾān, the inviolability of letters and state secrets; its form, however, was not always very developed. In Muslim Spain in the 4th/10th century, the State postal service had not the same importance as it possessed in the East; it employed messengers mounted on mules and Sudanese runners (*raḳḳāṣ*), which reveals the sketchy character of the organisation, and was directed by a *ṣāḥib al-burud*, a high official, who seems also to have had a network of agents at his disposal to provide intelligence. In the Ḥafṣid state in eastern Barbary, the Post assumed a more rudimentary aspect; the couriers had to provide their own mounts, and there were no fixed stages where they could change them. The Post also existed in Ṣafawid Iran as well as in the Ottoman Empire (see further POSTA, RAḲḲĀṢ, TATAR, ULAḲ).

(D. SOURDEL)

AL-BARĪDĪ, *nisba* made especially famous by three brothers, sons of a postmaster of al-Baṣra, and called Banu 'l-Barīdī for that reason. They played an important rôle at Baghdād and in ʿIrāḳ during the Caliphate of al-Manṣūr and his successors. Shīʿī tax-farmers and military leaders, they distinguished themselves by their ambition and acts of prevarication and had eventful careers, very characteristic of the period preceding the advent of the Buwayhids.

The eldest of the three brothers, Abū ʿAbd Allāh Aḥmad, appeared on the political scene during the second vizierate of ʿAlī b. ʿĪsā (315-316/927-928). Dissatisfied with the subordinate offices to which he and his brothers were then appointed, he obtained from the next vizier, Ibn Muḳla, against a gratuity of 20,000 dirhams, the tax-farm of the province of al-Ahwāz for himself and lucrative appointments for his brothers. When arrested two years later, upon the fall of Ibn Muḳla, these tax-farmers, who had rapidly grown rich, were capable of meeting a heavy fine as the price of their liberty. Somewhat later, under the following Caliph al-Ḳāhir, Abū ʿAbd Allāh again became influential. He financed the expedition against the former supporters of al-Muḳtadir and recovered the tax-farm of al-Ahwāz, still retaining it, in spite of numerous vicissitudes, at the beginning of the reign of al-Rāḍī (322/934), after having benefited from Ibn Muḳla's return to power. Appointed secretary to the chamberlain Yāḳūt, he succeeded in getting rid of him (324/936), and becoming the sole master of al-Ahwāz, where he unscrupulously amassed considerable wealth, constantly deferring payment of the moneys due to the central government, whilst at Baghdād he was represented by his brother Abū Yūsuf Yaʿḳūb.

The *amīr al-umarāʾ* Ibn Rāʾiḳ soon undertook to subdue this undisciplined governor and occupy al-Ahwāz, but al-Barīdī was astute enough to take refuge with the governor of Fārs, the *amīr* ʿAlī b. Buwayh, whose support he obtained. In 325/937, he succeeded in becoming reconciled with Ibn Rāʾiḳ, who again granted him the tax-farm of al-Ahwāz and the governorship of the province. When, subsequently, Ibn Rāʾiḳ was faced with a rival in the person of the Turk Badjkam, al-Barīdī alternativly allied himself with them both and in 326/938, when Badjkam had prevailed, Abū ʿAbd Allāh obtained the vizierate, at the same time retaining his province and paying tribute to the Caliph. He was soon deposed, but after Badjkam's death, at the beginning of the reign of al-Muttaḳī (329/941), the Barīdīs entered Baghdād in force and Abū ʿAbd Allāh recovered the vizierate, which he retained until a military mutiny obliged him to return to Wāsiṭ. The following year (330/942), Abū ʿAbd Allāh entrusted his brother Abu 'l-Ḥusayn with the command of an army which succeeded in occupying Baghdād, forcing the Caliph and Ibn Rāʾiḳ to take refuge with the Ḥamdānids at al-Mawṣil. Abu 'l-Ḥusayn, however, incurred such bitter hatred that he was soon hounded from Baghdād and Wāsiṭ by the Ḥamdānid troops. The three brothers held out at al-Baṣra in spite of the costly war which they had to conduct against the ruler of ʿUmān, who landed and occupied al-Ubulla. These adventures had exhausted Abū ʿAbd Allāh's

resources and he did not hesitate to have his brother Abū Yūsuf assassinated in Ṣafar 332/November 943 for the simple purpose of possessing himself of his wealth. However, he himself died shortly afterwards in Shawwāl 333/June 944 and was replaced by his son Abu 'l-Ḳāsim. The latter had to protect himself against the intrigues of his uncle Abu 'l-Ḥusayn who, seeking to obtain the governorship of al-Baṣra for himself, was in the end condemned to death and executed in Baghdād at the end of 333/944. He was then obliged to fight the Buwayhid Muʿizz al-Dawla who, in 336/947, expelled him from al-Baṣra. Forced to flee to the Carmathians of al-Baḥrayn, his political rôle came to an end. He died in 349/960. Abū ʿAbd Allāh had four other sons, to whom incidental references are made in the chronicles.

(D. SOURDEL)

BARĪD SHĀHĪS. A dynasty founded by Ḳāsim Barīd, who was originally a Turkish slave sold to Muḥammad Shāh III, the 13th of the line of the Bahmanids [*q.v.*]. A man of outstanding personality, a good calligrapher and musician, he also proved his mettle on the battlefield and rose to be the *kotwal* in the reign of Maḥmūd Shāh, and after the death of Malik Ḥasan Niẓām al-Mulk, arrogated to himself the office of chief Minister of the tottering Bahmanī State. He had often to contend with the more powerful fiefholders of the Kingdom who had become virtually independent at Bīdjāpūr, Aḥmadnagar and Golkonḍa, but his chief strength lay in his being always at the capital, Bīdar [*q.v.*]. Ḳāsim died in 910/1504 and was succeeded by his son Amīr Barīd. The authority of the Bahmanī Sulṭāns had been shattered by Ḳāsim, and what was left of it was now put an end to by his successor, till, after the flight of the last titular monarch, Kalīm Allāh he became supreme at Bīdar. But he had to cope with the power of ʿAlī ʿĀdil Shāh of Bīdjapūr who actually occupied Bīdar after routing the Barīdī ruler. The citadel was restored after a while, but only after the forts of Ḳandhār and Kalyānī had been annexed to Bīdjāpūr. Amīr Barīd tried to bring at least the small fiefholders under the direct control of the centre, much as Maḥmūd Gāwān had done [*q.v.*] but he was not successful. He died in 950/1543 and was succeeded by his son ʿAlī.

ʿAlī Barīd was a lover of literature, art and architecture and the Rangīn Maḥal within the fort at Bīdar and his own well-proportioned mausoleum are two outstanding monuments to his taste. He was blessed with a long reign. He was the first of the Barīdīs who adopted the royal title, although he was content with the epithet *al-Malik al-Mālik*, which appears in beautiful mother of pearl inlay in the Rangīn Maḥal. He was of the four allied monarchs who finally put an end to the power of Rāma Rāya, the regent of Vijayanagar, in 1565 and was put in command of the left wing of the allies along with Ibrāhīm Ḳuṭb Shāh. He died in 987/1579.

The fortunes of the dynasty came quickly to a close after ʿAlī Barīd. He was followed by Ibrāhīm and then by Ḳāsim II who was succeeded by his infant son known as Mīrzā ʿAlī Barīd Shāh. A relative, known as Amīr Barīd Shāh II put him aside and occupied the throne. He was succeeded by a ruler who is called in a bilingual inscription Mīrzā Walī Amīr Barīd Shāh. It was in his reign that the Barīdī dynasty came to an end and Bīdar annexed Bīdjāpūr in 1028/1619.

Very few Barīdī coins have been found. Although Ferishta says that even Ḳāsim Barīd struck his own coins the only coins known so far are either the Bahmanī coppers with the punch-marked legend *Amīr Shāh*, which are attributed to Amīr Barīd II or else copper *fils* and half *fils* with "Amīr Barīd al-Sulṭān" but without any date. These are all in the Ḥaydarābād Museum.

II. — Monuments. All the monuments of this dynasty are in the town of Bīdar [*q.v.*]; as successors to the well established Bahmanī dynasty they inherited many fine structures, and their building activity was more a matter of adaptation and rebuilding than of the erection of any major structures. The progress of the Barīdī style is well illustrated in their tombs, which form a royal necropolis some 6 km. west of the city walls, and occupy a large area on account of the vast garden-enclosures of each tomb. Page references in the following account are to G. Yazdani, *Bīdar: its history and monuments*, Oxford 1947.

The tomb of Ḳāsim I, d. 910/1504, is a small insignificant building with a plain conical dome, p. 149. That of his successor, Amīr Barīd I, was left incomplete on his sudden death in 949/1542, without a dome; there are two storeys of arches on each façade, pierced by a central arch running through both storeys, all stilted at the apex as in the earlier Bahmanī buildings (pp. 150-1). The reign of ʿAlī Barīd (949-87/1542-79) saw much building activity: large scale improvements to fort and city fortifications, including the mounting of many more large guns; rebuilding of the Rangīn Maḥal, with fine mother-of-pearl inlay work and intricate wood-carving in which Hindū patterns are mixed with Muslim designs (44-9); much alteration of the Tarkash Maḥal, especially the upper storey, in which the chain-and-pendant motif, characteristic of Barīdī work from now on, is apparent (pp. 57-9); and ʿAlī's tomb, very well sited, with an imposing gateway having wide arches with low imposts and upper rooms decorated with a profusion of small cusped niches. Each wall of the tomb consists of one open arch, through which the fine sarcophagus of polished black basalt is visible; the interior is thus very bright and airy, and is embellished with good encaustic tile work (verses from ʿAṭṭār, Ḳurʾānic texts, in *Thulth*), though not over-elaborated. Since the tomb is open on all sides there is no *ḳibla* enclosure, and attached to the tomb there is a separate mosque with slender minarets a vaulted ceiling, and fine cut-plaster decoration on the façade. Tomb, gateway and mosque have the trefoil parapet which originates in the late Bahmanī period (pp. 151-60). The tomb of Ibrāhīm (d. 994/1586) imitates that of his father on a smaller scale

but is incomplete and presents surfaces of lime-laid masonry. Carved corner jambs show the Hindū *čakra* as part of their decoration (pp. 160-1). Both these tombs have a large dome, not stilted but recurved at the base to form a three-quarter orb, which appears somewhat top-heavy for the structure. This constriction of the dome is characteristic of the contemporary buildings of the Ḳuṭb Shāhī and ʿĀdil Shāhī [*qq.v.*] dynasties at Golcondā and Bīdjāpur also. The single opening is reverted to in the tomb of Ḳāsim II, which is better proportioned, but the open design is apparent in the dome over the *miḥrāb* of the Kālī ('black') *masdjid*, pp. 196-7. The Djāmiʿ Masdjid of the town (see Bīdar), a late Bahmanī building, was restored during the Barīdī period (chain-and-pendant motif in spandrels of the façade), pp. 103-4.

From the time of ʿAlī Barīd the buildings become more ornate in their minor detail, and the influence of the Hindū mason becomes more apparent; in some Barīdī buildings—*e.g.*, the Kālī *masdjid*—the forms used in stone often seem more appropriate to wood-work. Much of the later work shows that meretricious character often apparent in the buildings of a dynasty in decline.

Bibliography: Fuller details of many of the above buildings are given in the article on Bīdar, [*q.v.*]. See particularly Yazdani, *op. cit.*, for full references, extensive plates, drawings, plans, etc, and bibliography given in article Bīdar.

(J. Burton-Page)

BĀRIḤ (Ar.), a term applied to a wild animal or bird which passes from right to left before a traveller or hunter; although opinions differ on this point, this is generally interpreted as a bad omen, because, it is said, it presents its left side to the hunter who does not have time to take aim at it; an animal which passes from left to right (*sāniḥ*) is on the contrary of good omen. The *nāṭiḥ* approaches from the front, and the *ḳaʿīd* from the rear.

(Ed.)

BĀRIMMĀ [see ḥamrīn, djabal].

BARĪRA, a slavewoman who had arranged to buy her freedom in nine (or five) annual instalments, appealed to ʿĀʾisha who agreed to pay the whole sum. The owners were willing to sell her, but insisted on retaining the right of inheritance from her. When the Prophet heard this he told her to buy her, for the right of inheritance belonged to the one who set a person free. ʿĀʾisha therefore paid the money and set Barīra free. She remained as ʿĀʾisha's servant and is said to have died during the Caliphate of Yazīd I (60-64/680-683). In the tradition of the lie she was consulted regarding ʿĀʾisha (cf. Bukhārī, *Shahādāt*, 15). Three *sunnas* are connected with her: (1) The Prophet said the right of inheritance belongs to the one who sets a person free. (2) She was given her choice about staying with her husband Mughīth who was a negro slave, and when she refused in spite of the Prophet's plea for Mughīth she was told to observe the *ʿidda* period appropriate for a divorced woman. Mughīth is said to have followed her in the streets of Medina weeping. (3) Once when the Prophet came in when meat was being cooked and was given something else to eat he asked the reason. On being told that the meat was *ṣadaḳa* given to Barīra, he said it was *ṣadaḳa* to Barīra but a gift to him, meaning that one who had received *ṣadaḳa* could give some of it as a present to another. Barīra is said to have warned ʿAbd al-Malik b. Marwān that if he became ruler he must avoid shedding innocent Muslim blood.

BARḲA, a word applied by the Arab writers both to a town—now al-Mardj—and to the region which belonged to it, that is to say Cyrenaïca, a broad African peninsula jutting out into the eastern Mediterranean between the gulf of Bomba and that of the Great Syrtis, situated, therefore, between long. 20° and 30° east of Greenwich and the parallels 30° and 33° of latitude. To the east begins the Marmarica, whilst the vast eastern Libyan Sahara stretches away to the south.

The relief is made up of plateaux, resulting from the folding, in the Miocene age, of thick layers of Cenomanian limestone and lower Tertiary; they slope gently towards the south, where the Saharan table has not been raised up, giving way to low alluvial plains and falling away to the sea in graded levels. The high plateau, the Djabal Akhḍar (Green Mountain) rises from 500 to over 600 metres, reaching its highest point at 868 to the south of the ruins of Cyrene. An intermediate plateau, from 250 to 400 metres, narrow in the north, then widens out to the west and south-west; it contains al-Mardj and dominates the coastal plain of Benghāzī, which is also of limestone. That Cyrenaïca is not a desert like its vast hinterland is due to the influence of sea and altitude: its temperatures are moderate in summer and it enjoys relatively high rainfall. January and July-August temperatures are 13.5° C. and 25.8° at Benghāzī, at sea-level, 10.4° and 23.9° at al-Mardj at an altitude of 285 metres, and 8.4° and 22.3° at Cyrene, situated at 621 metres, where snow is not unknown. Rainfall, slight on the western littoral (266 mm. at Benghāzī) and inadequate for almost all cultivation without irrigation as the local soils are often heavy, increases in the northern parts of the first plateau with 471 mm. at al-Mardj, and especially on the second, where more than 500 and even 600 mm. fall in the region of Cyrene. In contrast, rainfall declines towards the east (300 mm. at Derna) and, very rapidly, towards the south-east and the south. Likewise, the *wādīs* running down towards the Sahara only have water after the heaviest rains and end in vast enclosed depressions; of the very short and deeply embanked Mediterranean tributaries, only the *wādī* Derna has a perennial flow of water. The waters filter away into the limestone of the plateaux and only reappear in a few "Vauclusian" springs at the base of certain escarpments. The plateaux have a "carstic" relief, with swallow-holes, sink-holes, extensive areas without surface drainage and grottos. The high plateau, the Djabal Akhḍar, still supports, to the south of al-Mardj and Cyrene, several fine forests of horizontal cypress *Cupressus sempervivens*, var. *horizontalis*), green oaks, Aleppo pines and Phoenician junipers; in the main, however, it is covered by low forest and a scrub of mastics and wild olives. Cyrenaïca comprises 110,000 hectares of forest and scrub. The clearings, extended by man, afford good pasturage and fertile brown and grey land for cultivation. This very limited good region quickly passes on the coast and to the south into scanty heath dominated by a few junipers and broken

by increasingly extensive stretches of steppe. The large rocky outcrops enclose somewhat narrow areas of red clay soils, relatively fertile, but for the most part requiring too much water for so slight a rainfall. 55 kilometres to the south-east of Benghāzī and 60 to the south of Derna, begins the Sahara, with its very scanty pasturages and light soils.

"Serviceable" Cyrenaïca, a narrow fertile region and one favourable to sedentary life, isolated by the steppes of the Marmarica and Syrtica and by the vast Libyan desert, has always been a dependency of the East. A land of nomadic Libyans, it became the sole African dependency of the Greek world with the five colonies of the Pentapolis founded between the 7th and 5th centuries B.C.: Cyrene, the first to be created, and admirably situated in the heart of the Djabal Akhdar, its port Apollonia (Marsā Sūsa), Barkè (al-Mardj), Euhesperidis (Benghāzī) and Teuchira (Tocra). It was subsequently attached to Ptolemaïc Egypt, at which time Ptolemaïs (Tolmeta) and Darnis (Derna) originated. As a Roman province, it was beset by frequent disturbances and was far from prosperous. In the 4th century A.D., it was attached to the Eastern Empire and formed part of the Byzantine Empire down to the 7th century, without ever recovering its activity of the Greek period. On the eve of the Arab conquest, its agriculture was receding before the advance of pastoral life. Cyrenacïa was occupied by the Arabs after two campaigns conducted by ʿAmr b. al-ʿĀṣ in 22/642 and 643. Subsequent expeditions crossed it, gradually reaching and conquering the Maghrib. Thus it became a major thoroughfare, both military and commercial, from Egypt westwards, either via the southern depression and oases such as Awdjīla or by the detour of the northern plateaux. The Berber tribes, the Lawāta, the Hawāra and the Awrigha, intermingled with Arab elements, took increasingly to stock-breeding, which spread at the expense of agriculture: exports to Egypt then consisted of live-stock, wool, honey and tar Bakrī, trans. de Slane, 15); Barka remained the only considerable centre. The region, linked to Egypt, was, like the latter, dependent in turn on Damascus, Baghdād and then the Fāṭimids. The Banū Hilāl and Banū Sulaym invaders, who, in the 5th/11th century left Egypt and spread over the Maghrib, crossed the Barka region, which gradually became completely bedouinised. In Ibn Khaldūn's time, in the 8th/14th century (*Histoire*, trans. de Slane, i, 164-165), its towns and villages were ruined and the population, the ʿAzza, were shepherds leading a nomadic existence from the region of the oases in the south to the northern plateaux and cultivating barley; Barka and Bernīk (Benghāzī), however, still continue to be mentioned as well as the oases of Awdjīla and Adjdābiya. The region, in theory at least, continued to depend on Egypt and, like the latter, was occupied by the Turks in the 10th/16th century. It was, however, placed under the authority, more nominal than real, of the governors of Tripoli, whom the Karamanlī dynasty supplanted from 1711 to 1835. Barka disappeared and, at the beginning of the 19th century, Cyrenaïca, a European term, apart from the southern oases, only possessed two centres, which owed their existence to foreign immigration: Benghāzī, ancient Euhesperidis, originated at the end of the 15th century, from an immigration of Tripolitanians, and Derna, on the site of ancient Darnis, founded somewhat earlier by Andalusians, owed its modest rise to the Bey Muḥammad, who, in the 17th century, reorganised the irrigation: it has become a small palm oasis beside the sea with pretty gardens. In the interior, al-Mardj arose from the construction of a Turkish fort in 1840 on the site of Barka. In the second half of the 19th century, however, Cyrenaïca came under the *de facto* authority of the great Sanūsiyya confraternity, an effective politico-religious power based on a sound commercial organisation. Finally, in 1897, Muslims from Crete, fleeing before the Greek conquest, founded the modest Marsā Sūsa on the ruins of Apollonia.

When the Italians landed at Benghāzī and Tripoli in 1911, they found it, except for these modest urban centres, to be entirely a country of Bedouin, without a single village outside the oases. The population was made up entirely of semi-nomadic and nomadic herdsmen, living only in tents. The tribes formed two main groups, the Mrābṭīn (Murābiṭūn) and the Saʿādī. The Mrābṭīn are thought to have a Berber origin and comprise two groups: the Barāghīth to the west, whose main tribes are the Maghārba (Syrtic), the ʿUrfa and the ʿAbīd (al-Mardj), and, on the other hand, the Harābī, who include the Dorsa, on the littoral, the Hasa, the ʿAylet Fāʾiḍ and the Brāʿsa north and south of the central Djabal Akhdar and especially the ʿAbeidat on the plateaux south of Derna and the Gulf of Bomba. As regards the Saʿādī, they lay claim to purely Arab origins: they are the Fwāsher and the Awāghir on the steppes of the south-west, the minor tribes of the Marmarica and the nomads of the Awdjīla-Djalo region. Outside the urban centres, the entire population were Sunnī Muslims of the Mālikī rite; all spoke Maghribī type Arabic dialects, except the inhabitants of Awdjīla in the south, the first Berber-speaking locality to be encountered going westwards.

It was not until the end of 1931, after determined resistance by the Bedouin and Sanūsiyya, that the Italians became masters of the whole of Cyrenaïca with its hinterland. They did their utmost to colonise it. The first colonists settled, in rather hazardous conditions, on the unpropitious Benghāzī plain and in the vicinity of al-Mardj. Systematic effort, however, was directed towards the exploitation and settlement by Italians of the Djabal Akhdar, where, between 1934 and 1939, a dozen villages were founded. "Demographic" and then "mass" colonisation was extended over a total of 80,000 hectares, producing wine and olive oil. On the 9th January 1939, Cyrenaïca, like Tripolitania, was integrated with its hinterland in Italian territory. By this time, the Italians had begun to provide Cyrenaïca on a large scale with the equipment and services of a colonial country in the course of modernisation: a railway line from Benghāzī to al-Mardj and Solūk (164 km.), a network of roads in the west and the north, ports (especially at Benghāzī), aerodromes, educational establishments and hospitals, postal services, works to supply water, notably a pipe-line over 200 km. with pumping stations, reservoirs and branch conduits to serve the villages of the Djabal Akhdar, etc. Cyrenaïca entered the war period in full development. But all Italians left the country in the face of the final victorious offensive of the British Eighth Army in November-December 1942 and it then came under British Military Administration. The British then placed Idrīs, the leader of the Sanūsiyya, at the head of the amīrate of Cyrenaïca and, in 1951, assisted him to accede to the throne of the Libyan Federal Union, which, with Cyrenaïca, comprises Tripolitania and

Fazzān. Nothing remains of the agricultural work of the Italians; the country has reverted to pastoral life, with a little barley being grown, and the villages have fallen into ruin. Likewise nothing survives of the few industrial undertakings (fish canning-factories, breweries and distilleries, boot and shoe factories), which they had set up at Benghāzī. Exports now only include a few products derived from stock breeding, salt and sponges harvested by the Greeks in the Gulfs of Bomba and the Great Syrtis. Cyrenaïca, prolonged by its immense Saharan hinterland, stretching to lat. 20° and embracing the oases of Kufra, covers 855,400 km² (out of a total of 1,759,500 for the whole of the Federal Union of Libya), though it contains only 291,350 inhabitants, almost all in the North (out of a total of 1,091, 800). Its average yearly production is 360,000 quintals of cereals (barley and wheat), and it has a stock of between 450 and 500,000 sheep, 350 and 400,000 goats, 30 and 35,000 head of cattle and 20,000 camels. Sparsely populated, very poor in spite of the fertility of some of the regions in the north, deficient in financial resources and administrative personnel, Cyrenaïca is dependent on the financial and technical help provided by Great Britain, by the United Nations and the United States.

BARKAʿĪD, in ʿAbbāsid times one of the sequence of small towns on the main route between Niṣībīn and Mawṣil, in the Djazīra province, the others being Adhrama to the west, and Bāʾaynāthā and Balad (where the Mawṣil-Sindjar road bifurcated south-westward) to the east. Barkaʿīd, of which the modern Tall Rumaylān, north of the railway line (and near to Tall Kochek station thereon) may possibly mark the site, was probably just inside the Bec de Canard (eastward extremity of the modern Syrian province of Djazīra), and lay some 50-55 miles from Niṣībīn, and 80 from Mawṣil. It is described by a number of Arab geographers as a place of considerable scale, especially in the 3rd/9th century, with its walls and three gates, excellent springs, 200 shops (largely wine-shops) and busy traffic. It was, in its best days, the country-town of the district of Bakāʿ, which covered most of the country between Mawṣil and Niṣībīn. It continued as a recognised staging-post until the 7th/13th century, but much diminished in scale by reason of the natural anxiety of travellers and caravans to avoid a place always notorious—indeed proverbial—for its population of thieves and robbers; Barkaʿīd declined, therefore, to mere village status while its better reputed neighbours (notably, it is said, Bāshazzā, on an alternative route) increased.

(M. STRECK-[S. H. LONGRIGG])

BARKŪK, AL-MALIK AL-ẒĀHIR SAYF AL-DĪN, Mamlūk Sultan of Egypt. He was the first of a new series of rulers, to whom history refers as Circassians in memory of the country where they were originally purchased as slaves, and as Burdjī [see BURDJIYYA], because Barkūk was the first to have belonged to a regiment with their barracks in the dungeons (*burdj*) of the Cairo Citadel.

Barkūk provided the link between the two dynasties of Mamlūk sultans: before ascending the throne, he ruled Egypt as Marshal of the Armies, *atâbak al-ʿasākir* [*q.v.*], during the turbulent reigns of two sultans, both minors, of the line of Kalāwūn.

Purchased in the Crimea, Barkūk, unlike the rest of the Mamlūks, was no son of an unknown father but could state in his monumental inscriptions that he was the son of Anas; the latter was invited to come to Egypt, where he occupied a position of some standing.

Sold to the all-powerful Ylbughā ʿUmarī, the Marshal who had succeeded in breaking the ill-fated Malik Nāṣir Ḥasan, Barkūk was for a short while imprisoned after the execution of his master. He passed into the service of the Court, but was soon involved in the conspiracy which ended in the assassination of Malik Ashraf Shaʿbān in 778/1377.

He was then promoted to be Marshal of the Armies by Malik Manṣūr ʿAlī, a seven year old child. He had to contend with the ambitions of his fellows, and there was continual warfare, from which he finally emerged the victor. He was then able to gather a group of clients round himself and, when the Sultan died of plague in 784/1382, Barkūk began by placing a brother of the late ruler on the throne, the eleven year old Ḥādjdjī. In the end he threw off the mask and, on the pretext that an energetic ruler was needed for the protection of the country, at the end of the same year had the crown offered to himself by a council of the magistrates presided over by the Caliph.

Barkūk was soon up against serious difficulties, which were momentarily to make him lose power. They started with the revolt of the governor of the province of Aleppo, Ylbughā Nāṣirī, who was joined by a dismissed Mamlūk named Mintāsh. The rest of the Syrian governors joined the movement, including the governor of Sīs, on the remotest part of the frontier. When the Sultan, after causing his principal officers to renew their oath to him, made up his mind to take action, Ylbughā already held the whole of Syria and it was beneath the walls of Damascus that he defeated the legitimate army, which came to bring him to his senses, in Rabīʿ I 791/March 1389.

The sultan raised a second army corps, making his preparations in some haste, for Ylbughā's troops had penetrated into Egyptian territory at Kaṭyā and were encamped at Ṣāliḥiyya. The Sultan set out to take up his position at Maṭariyya, but returned to Cairo in despair, for the majority of his officers, guessing who would win, went over to the enemy camp. Nevertheless, he wished the matter to be decided by the arbitrament of war and the battle was fought to the north of Cairo and beneath the city's walls on the 9th Djumādā/1st May, without any decisive result. Day by day, Barkūk saw the devotion of his men vanishing and, in the end, he left the Citadel in disguise and went into hiding.

He was discovered, and sent off to prison at Karak in the land of Moab, whilst Ḥādjdjī was replaced on the throne. As his masters, the latter had the factious generals, who proceeded to indulge themselves in the trivial occupation of street fighting. Barkūk took advantage of this confused situation

and, escaping from imprisonment, gathered together an army composed in the main of Bedouin Arabs. After numerous vicissitudes, some of which read like an adventure story, he made his triumphal entry into Cairo in Ṣafar 792/February 1390.

Clearly Ḥādjdjī could do nothing but withdraw, but apart from this he was not troubled. Sulṭān Barḳūḳ, moreover, had not disposed of his old opponent Minṭās͟h and a campaign of two years was needed to get rid of him.

As can be seen, these two reigns of the Sulṭān Barḳūḳ were eventful but contributed nothing to the glory of Egypt: the last fifty years of the 8th/14th century were indeed lamentable.

Other events must be noted, though at the time the seriousness of their implication was not evident. Already in 788/1386, during Barḳūḳ's first reign, rumours had been current in Cairo that a certain "Mongol rebel named Tīmūr" had marched on Tabrīz and this was soon confirmed officially by a dispatch from the Djalā'irid sultan of ʿIrāḳ, Aḥmad b. Uways, who urged Barḳūḳ to be on his guard. The Mamlūk government then sent one of their intelligence agents to conduct an inquiry on the spot: in Radjab 789/July 1387, the latter brought back somewhat alarming news. Detachments of the Mongol army had entered Upper Mesopotamia and Asia Minor, at Edessa and Malaṭya, after having scattered the troops of the Turcoman ruler Ḳarā Muḥammad.

In the middle of the year 795/1393, Tīmūr again made his presence felt; an embassy from the Ottoman sultan Bāyazīd urged the Egyptian government to take military precautions, whilst the Sultan of Bag͟hdād, Aḥmad b. Uways, expelled from his domains by the Mongol hordes, took refuge in the Mamlūk kingdom. Tīmūr had nevertheless approached Barḳūḳ amicably, though the latter, casting aside all prudence, had the Mongol ambassador put to death.

The Egyptian sultan had left for Syria at the head of an army; at that time only a few skirmishes occurred. Barḳūḳ made a certain number of appointments relating to the Syrian frontier, so that the fortresses of Malaṭya, Ṭarsūs, Edessa and Ḳalʿat al-Rūm received new commanders. Epigraphy, moreover, reveals that works were carried out at this time at the citadel of Baʿlbak, the command post at the entrance to Coele-Syria. Thus, thanks to these meagre indications, we may assume that in the course of his passage through Syria, Barḳūḳ saw to the defence of the territory; he was back in Cairo on the 13 Ṣafar 797/8 December 1394.

The end of the reign is devoid of historical significance; the sultan died on the 15th S͟hawwāl 801/20th June 1399, as the result of an attack of epilepsy.

Barḳūḳ was 63 years of age, and for over twenty years had governed Egypt firstly as Marshal of the Armies and then as sultan. The disturbances caused by the Syrian governors gave him much trouble. They can probably be explained by normal feelings of jealousy and instinct for intrigue, which at all times actuated the Mamluks. Certain synchronisms, however, are suggestive and one may well ask whether the great Syrian officers were not induced to rebel by skilful propaganda conducted by the emissaries of Tīmūr, who was to benefit from the disorders.

BARKYĀRŪḲ (Berkyaruk), fourth Saldjūḳid Sulṭān, in whose time the visible decline of the regime began. Although the eldest of the sons of Maliks͟hāh, he was only thirteen years old on the latter's death (S͟hawwāl 485/November 1092) and, unlike his father, who at a similar age had been guided by his vizier and *atabeg* Niẓām al-Mulk, he lacked a man of undisputed authority in his entourage. Moreover, Maliks͟hāh's last wife, Turkān K͟hātūn, a woman also of the noblest birth, had dominated her husband in the latter years of his life and now, with the treasury at her disposal, she was able to have her four year old son Maḥmūd proclaimed Sulṭān at Bag͟hdād. Already caliphal arbitration seems to have become a significant factor in the succession to the sultanate, which had previously been decided within the Saldjūḳid family. Furthermore, Tādj al-Mulk, the enemy and successor of Turkān K͟hātūn's counsellor, Niẓām al-Mulk, had been unable to destroy the considerable armed following surrounding the sons of the late vizier, and was seeking vengeance. The Niẓāmiyya abducted Barkyārūḳ from Iṣfahān and at Rayy, their centre, proclaimed him Sulṭān. Finally, in the absence of any law of succession, a vague tribal tradition favourable to family sharing and to the pre-eminence of the eldest member of the extended family encouraged the pretensions of Ismāʿīl b. Yāḳūtī, Barkyārūḳ's maternal uncle and Maliks͟hāh's cousin, of Tutus͟h, the latter's brother, who held Syria as his appanage, and of Arslan Arg͟hūn, another brother, who was active in K͟hurāsān. There then began a complex civil war, which was to prove much more serious than the skirmishes engendered by the accession of Alp Arslan and Maliks͟hāh. Ultimately Barkyārūḳ prevailed because, following the killing of Tādj al-Mulk by the Niẓāmiyya, death claimed Turkān K͟hātūn and Maḥmūd; Ismāʿīl, who alternatively sought to join with Turkān K͟hātūn and Barkyārūḳ, was likewise killed by the Niẓāmiyya; Tutus͟h, the most dangerous of all of them, had succeeded in gaining recognition by the whole of Mesopotamia (including Bag͟hdād) and had invaded the Iranian plateau, but first his great Syrian amīrs Aḳsunḳur of Aleppo and Būzān of Edessa deserted him and then the amīrs of Iran, fearing the advent of a new suzerainty, offered resistance and Tutus͟h perished in the final battle; finally Arslan Arg͟hūn, whose limited aim was to make K͟hurāsān an autonomous appanage, after overcoming Būrībars, the last of Maliks͟hāh's brothers, despatched against him by Barkyārūḳ, likewise died in due course. Thus from 488/1095, Barkyārūḳ was acknowledge by the Caliph in the Arab provinces of the Empire and on the Iranian plateau and in the following year he was able to proceed to K͟hurāsān to receive the submission of the province and even to renew the claim to Saldjūḳid sovereignty over Samarḳand and G͟haznā. But the Empire over which he ruled was far from resembling that over which his predecessors had held sway.

Alp Arslan and, more clearly, Maliks͟hāh had indeed already formed appanages and great commands for the benefit of princes of their family and in exceptional cases, for high amīrs; in the main, however, frontier or remote districts were affected and, in spite of ominous incidents, they had not seriously compromised the unity of the Empire.

Under Barkyārūķ, things developed differently and the Empire assumed the guise of a federation of autonomous princes. In Syria, the sons of Tutu<u>sh</u>, Duķāķ of Damascus and Ruḍwān of Aleppo, acknowledged his sovereignty in principle, without, however, Barkyārūķ ever being able to intervene in their affairs. In <u>Kh</u>urāsān, in the inaccessible mountain regions of the East, rebels persisted—a cousin of Malik<u>sh</u>āh, a descendant of Yab<u>gh</u>u, Tu<u>gh</u>ril Beg's brother, etc., so that Barkyārūķ deemed it prudent to constitute the whole of Khurāsān an appanage for his brother San<u>dj</u>ar, assisted by a governor whom he appointed. He did the same thing for Ā<u>dh</u>arbay<u>dj</u>ān (with its frontier districts), another of the frontier marches, dangerous —as recalled by Ismāʿīl b. Yāķūtī's attempt—by reason of the numbers of Turkomāns always ready to support any enterprise showing a likely prospect of booty. Here Barkyārūķ installed his youngest brother, Muḥammad, accompanied by an *atabeg*, whom he likewise appointed.

Barkyārūķ's difficulties, however, did not end there. Muḥammad and San<u>dj</u>ar, co-uterine brothers (but by a different mother from Barkyārūķ's) were incited, especially by Niẓām al-Mulk's son, Muʾayyad al-Mulk, (who had been dismissed from the vizierate by Barkyārūķ, in favour of a brother with whom he had quarrelled) to throw off all control by their elder brother and revolt against him. Subsequent to operations which were complicated by several amīrs constantly changing sides, and in the course of which both protagonists were in turn forced to flee, an agreement was negotiated by the moderate elements of both sides. In accordance therewith, Muḥammad was given the title of *malik* and received Ā<u>dh</u>arbay<u>dj</u>ān with Armenia, under the suzerainty of Barkyārūķ, the sole sultan. Muḥammad, dissatisfied, reopened hostilities, but was forced to flee into Armenia. Finally, however, in 497/1104, Barkyārūķ, ill and weary of the war, agreed to an actual division of the sultanate. Though in addition to the <u>Dj</u>ibāl with Rayy, he retained Ṭabaristān, Fārs and <u>Kh</u>ūzistān, Ba<u>gh</u>dād and the Holy cities, in other words the towns of greatest consequence and the core of the central territories, he was obliged to acknowledge his brother in Iṣfahān, half of ʿIrāķ, and all the western frontier territories from Ā<u>dh</u>arbay<u>dj</u>ān to Syria, and to accord him the direction of the Holy War. As for San<u>dj</u>ar, he was to pronounce the *<u>kh</u>uṭba* for Muḥammad and himself simultaneously, disregarding Barkyārūķ. It is difficult to say what the outcome of this agreement might have been, if Barkyārūķ's death and the provisional reunification of the Empire which ensued under Muḥammad had allowed time for it to come to fruition. In any event, even within the territories as attributed to each brother, the reality of their authority was far from being everywhere assured.

It had been impossible to keep watch over the attempts at regional independence, and the support of the amīrs, vacillating between the pretenders, had had to be purchased. The result was that even in Upper Mesopotamia, Kerbu<u>gh</u>ā and especially his successor <u>Dj</u>ekermi<u>sh</u> were to be found almost independent at Mawṣil, whilst the Artuķids were taking the initial steps towards the unification of Diyār Bakr to their own advantage. In Armenia, to the Turkomān principalities established in former Byzantine territory and that of the Rawwādids of Ani, which continued to exist, there was added that of Sukmān al-Ķuṭbī, one of Ismāʿīl's former officers, who made himself the <u>Sh</u>āh-i Armīn at A<u>kh</u>lāṭ. On the borders of ʿIrāķ, the masters of the Baṭīḥa and the Mazyadid Arabs became powers to be reckoned with. Leaving aside <u>Kh</u>urāsān and the Caspian provinces, where autonomous principalities had always been accepted, and the old principalities, belonging to ancient Būyid and Kurdish families, had similarly been tolerated, the genesis can be observed in Iran and even <u>Kh</u>ūzistān of hereditary feudal families, issuing from great Sal<u>dj</u>ūķid officers, the best known of them being that of the sons of Bursuķ at Tustar. The successive viziers of Barkyārūķ, the three sons of Niẓām al-Mulk, ʿIzz al-Mulk (died 487/1094), Muʾayyad al-Mulk, disgraced after a year, and Fa<u>kh</u>r al-Mulk (493/1096), then ʿAbd al-<u>Dj</u>alīl al-Dibistānī, who fell in battle, and al-Mayba<u>dh</u>ī (495-498), were doubtless primarily occupied in finding money by all possible means (confiscation, pressure exerted on the Caliph, harassing the Christians, etc.) and in countering the intrigues of hostile clans; the difficulty confronting them lay in making themselves accepted by the amīrs, as is illustrated by the assassination of the *mustawfī* (Director of Finances) Ma<u>dj</u>d al-Mulk al-Balāsānī, on the pretext of <u>Sh</u>īʿism.

It is true that, in comparison with Muḥammad or the early Sal<u>dj</u>ūķs, Barkyārūķ did not enjoy the reputation of being a militant defender of orthodoxy. The dissensions of his reign benefited the Nizārī Ismāʿīlīs of Ḥasan al-Ṣabbāḥ, who acquired impregnable fortresses in the mountains of northern Iran and around Iṣfahān, not to mention the former Ismāʿīlī seigniory of Ṭabas in the desert, which went over to them. When the Niẓāmiyya took Muḥammad and San<u>dj</u>ar's side, Barkyārūķ's lieutenant in <u>Kh</u>urāsān was even to be found enlisting considerable contingents from Ṭabas. However at the end of the reign, the influence acquired by the Ismāʿīlīs and the disaffection of Barkyārūķ's supporters, due to the toleration he had shown them, appeared dangerous to him and he encouraged massacres of Ismāʿīlīs at Ba<u>gh</u>dād and in Iran, without, however, anything being done to deal with the bases of their power.

Barkyārūķ died in Rabīʿ II 498/beginning of 1105, when 25 years of age. He was certainly not a great man and the clumsiness with which he alienated the Niẓāmiyya, for example, was a grave error indeed. Yet it must be remembered that he was very young and it would be unjust not to recognise that the factors of disintegration which manifested themselves in his time were latent even in the regime of the Great Sal<u>dj</u>ūķs.

Bibliography: The sources will be examined in the article SAL<u>DJ</u>ŪĶ. The main ones are the History of the Sal<u>dj</u>ūķids of ʿImād al-Dīn al-Iṣfahānī (ed. in the version of Bundarī by Houtsma, *Recueil*, ii, 1888), the relevant part of which is based on the Persian memoirs of the vizier Anu<u>sh</u>irwān; the *Kāmil* of Ibn al-A<u>th</u>īr, x, which combines copious information from ʿIrāķī and <u>Kh</u>urāsānī sources etc., with that provided by the above work; and the *Sal<u>dj</u>ūķ-nāma* of Ẓahīr al-Dīn Ni<u>sh</u>āpūrī, ed. of an approximative text by Gelaleh <u>Kh</u>āwar, Tehran 1953, with its derivative, the *Raḥāt al-Ṣudūr* of Rāwandī, ed. Muḥ. Iķbāl, *GMS* 1921. To these may be added, for the revolt of Tutu<u>sh</u>, the Muslim and Christian sources of Syrian history, in particular Ibn al-Ķalānisī, ed. Amedroz. See also the *Mu<u>dj</u>mal al-Tawārī<u>kh</u>* in Persian, anonymous, ed. Bahar 1938, short but contemporary, and the Nestorian chronicle of Mari etc. ed. Gismondi. Modern works: Defrémery, *Recherches sur le règne du*

sultan Barkyarok, in *JA*, 1853; Sanaullah, *The decline of the Seldjukid Empire*, Calcutta 1938; M. G. Hodgson, *The order of the Assassins*, 1955.

BARLAAM and **JOSAPHAT** [see Bilawhar wa Yūdāsaf].

BARMAKIDS [see Barāmika].

BARNIḲ [see Benghāzī].

BARŌDA, formerly capital of the Indian State of the same name, now merged with Madhya Bharat, situated in 22° 18′ N. and 73° 15′ E. on the Vishwāmitrī river. Population in 1951 was 211,407. It is known to the inhabitants as Wadōdara, said to be a corruption of the Sanskrit word *vatōdar* which means 'in the heart of the banyan-trees', and the vicinity of the town still abounds in these trees. The word *baṛ* in Urdu also means a banyan-tree. An old name of the town is Vīrakshetra or Vīrāwatī which means 'a land of warriors' and was used by the 11th/17th century Gudjarātī poet, Parmānand. Early English travellers call the town Barōdera. The city proper was enclosed by the walls of the old fort, which have now been demolished.

The history of Barōda is closely linked with the history of Gudjarāt. In 1140/1727 Pilādjī Gāēkwār, the founder of the dynasty which ruled over Barōda till 1949, when the State was merged with the Indian Union, wrested Barōda from Sarbuland Khān, the Mughal governor of Gudjarāt. In 1144/1731 Pēshwā Bādjī Rāō invested the town with the intention of turning out Pilādjī but had to lift the siege on hearing that he was about to be attacked by Niẓām al-Mulk Āṣaf Djāh. But the very next year (1145/1732) Pilādjī was murdered and Abhay Singh, the ruler of Djōdhpūr, taking advantage of the confusion, captured both the fort and the town. Dāmādjī, who had succeeded Pilādjī as the ruler of Barōda, recaptured the town in 1147/1734. Thereafter he entered into an alliance with Muʾmin Khān, the Mughal governor of Gudjarāt. Dāmādjī was one of those Maharatta chiefs who fought against Aḥmad Shāh Durrānī in 1175/1761 in the third battle of Pānīpat. On the death of Dāmādjī, the town was occupied by his youngest son Fatḥ Singh, on behalf of his insane eldest brother Sāyādjī Rāō. The House of Gāēkwār continued to rule the city independently till 1273/1856, when along with the State it was included in the dominions of the East India Company.

There are many beautiful buildings in Barōda including Lakshmī Vilās, the chief palace, built in the Indo-Saracenic style at a cost of £ 400,000. Among the State jewels is a finely embroidered cloth studded with precious stones and seed-pearls which was designed as a covering for the Prophet's tomb at al-Madīna. Barōda has a fine library and its Gāēkwār Institute of Oriental Research has published a number of Persian works on Indo-Muslim history.

al-**BARRĀDĪ**, Abu 'l-Faḍl Abu 'l-Ḳāsim b. Brāhīm, a North African Ibāḍī scholar, who lived in the second half of the 8th/14th century. He was a native of Dammar in Southern Tunisia, where he studied under Abu 'l-Baḳāʾ Yaʿīsh al-Djarbī. Thence he moved on to Yefren, in the Djebel Nefūsa, to attend the classes given by Shaykh Abū Sākin ʿĀmir al-Shammākhī (died in 792/1390). On completing his studies, he settled in Djerba, where for several years he devoted his energies to teaching, holding his classes in the Wādī al-Zabīb mosque. He died at Djerba, leaving several sons. According to al-Shammākhī, the most famous of them was ʿAbd Allāh Abū Muḥammad, who made a reputation especially in the science of *uṣūl*.

His main work is the *Kitāb Djawāhir al-Muntaḳāt* (lithographed at Cairo in 1302/1885), which forms a complement to the *Kitāb Ṭabaḳāt al-Mashāʾikh* by the 7th/13th century Maghribī author, Abu 'l-ʿAbbās Aḥmad al-Dardjīnī [*q.v.*]. The book is divided into two categories (*ṭabaḳa*), the first of which reviews from the Ibāḍī point of view the history of the early period of Islam, omitted by al-Dardjīnī, and contains the biographies of those famous men, whom the latter failed to mention; the second subjects al-Dardjīnī's work to a critical examination, adding a number of new facts and brief excursuses. It ends with a catalogue of the books of the sect, which has been published and translated by A. de Motylinski.

According to al-Shammākhī, al-Barrādī was also the author of a *Risāla*, addressed to Shaykh Abū ʿAbd Allāh Muḥammad b. Aḥmad al-Ṣadghayānī, in which he explicitly states his theories on faith and the unity of God; likewise of a *Sharḥ* on the *Kitāb al-Daʿāʾim* by Aḥmad b. al-Nazātī and of a *Sharḥ* on the *Kitāb al-ʿAdl fī Uṣūl al-Fiḳh* by Abū Yaʿḳūb b. Ibrāhīm al-Sadrātī. There is no reference in al-Shammākhī to the *Siyar al-ʿUmāniyya*, quoted by Lewicki (*Handwörterbuch*, s.v. *Ibāḍiyya*), a MS. of which exists at Lwów.

Bibliography: Shammākhī, *Kitāb al-Siyar*, Cairo 1301, 574-75; E. Masqueray, *Chronique d'Abou Zakariya*, Algiers 1878, 141; A. de Motylinski, *Bibl. du Mzab. (R. Rubinacci)

BARSBĀY, al-Malik al-Ashraf Abu 'l-Naṣr, Mamlūk sultan of Egypt from 825/1422 to 841/1438. He joined the Mamlūks of Sulṭān Barḳūḳ, received his first promotion during the reign of Shaykh and then became governor of the province of Tripoli. Like many officers, he did not avoid imprisonment, spending some time in the jails of Marḳab and Damascus. Fortune favoured him at the accession of Tatar and, in spite of the brevity of the latter's reign, he was able to gain the ascendancy in Cairo.

From the moment Barsbāy acceeded to the sultanate, he displayed the salient features of his nature: greed, bad temper, and cruelty. One of his first acts was to renew the ban on Christians and Jews which prevented them from entering government service. This may have been a tax in disguise, since when non-Muslims were the object of such a decree, they usually circumvented it by payment of a sum of money. But it may also be interpreted as a measure of defiance, for European privateers were then very

active in the Mediterranean. Hence the Draconian decree: European property was impounded both in Egypt and Syria and no European was permitted to return to his own country. There then followed the temporary prohibition of the circulation of European currencies, a measure which had uncertain effects.

The government of Egypt also took serious military precautions, building a number of small forts on the coast and fitting out a flotilla of corvettes. The sultan, however, continued without respite, his preparations for the realisation of his great idea, an expedition against the island of Cyprus. After several preliminary reconnaissances, a large-scale attempt was launched; the only engagement, which was particularly bloody, ended unfavourably for the Cypriots, whose king, Janus, was taken prisoner and brought back to Cairo. He was led through the town in fetters; he only recovered his freedom and his kingdom on payment of a yearly tribute. A part of the booty was devoted to the restoration of various monuments in Mecca (830/1427).

Nevertheless, this relatively easy victory revealed a dangerous state of indiscipline among the troops and on the occasion of a frontier conflict with the army of the White Sheep Turkomān prince, Ḳarā-Yūluḳ, the Mamlūks, after taking the town of Edessa by storm, perpetrated the most revolting atrocities there. This disagreement between neighbours severely impaired the prosperity of Upper Mesopotamia, which was alternately devastated by one side or the other. After considerable hesitation, Barsbāy mobilised a large army, which finally proceeded to invest Āmid (Diyārbakr). They were, however, unable to take the Turkomān capital, to Barsbāy's great annoyance. Faced with the growing discontent of the army, the Sulṭān was obliged to resign himself to negotiate. Ḳarā-Yūluḳ accepted his proposals for peace and, in several vague formulas, recognised the sovereignty of the sultan of Egypt. The Mamlūk army made its way back to Cairo; their progress was the stampede of a discontented soldiery. The troops proceeded in the greatest disorder, giving the impression rather of the hasty retreat of a defeated army (837/1433). The Sulṭān had left half the total strength of his army behind in Mesopotamia.

There then ensued a strange diplomatic struggle with the Tīmūrid sultan Shāh-Rukh. The Mongol ruler claimed the right to cover the Kaʿba with a veil. This was, in fact, a privilege of the Egyptians consecrated by immemorial custom and Sulṭān Barsbāy, supported by his council of chief judges, was unwilling to relinquish it. The dispute, fanned by lawyers' quibbles and cruelly derisive treatment of the ambassadors, gave rise to the exchange of pithy diplomatic documents. However, it entailed no immediate consequences during the reign of Sulṭān Barsbāy.

No doubt the policy of the ruler of Egypt was based on considerations of prestige, but primarily he wished to prevent the Mongol sultan from gaining a foothold in Arabia through official agents, which might possibly endanger Egypt's commercial interests.

Indeed, Barsbāy had recently requested those merchants coming from India to land their wares at Djedda, instead of putting in at the port of Aden, as previously. It was a good beginning, but in his insatiable greed, Barsbāy determined to force the merchants to proceed obligatorily to Cairo for the purpose of paying taxes. This vexatious regulation was soon formally modified, but though the merchants were excused from proceeding to the Egyptian capital, they still had to pay exorbitant dues at Djedda. This port, however, henceforth became a commercial mart of the first importance. Half the dues collected there went to the Sharīf of Mecca and half to Egypt. The tax-collectors belonged to the Egyptian administration.

Barsbāy's end is a pitiful and tragic tale. An epidemic of plague broke out and, fearing lest he might catch the disease, he resolved to suppress the vexatious economic measures to which we have referred; he proceeded to distribute alms in plenty, though at the same time he also had his two physicians put to death. On the 13th Dhu 'l-Ḥidjdja 841/7th June 1438, he fell a victim to the plague.

To summarise our impressions of Sulṭān Barsbāy, we must bear two aspects of his character in mind. He was constantly haunted by the morbid fear inspired in him by his rival, Djānībak Ṣūfī, whom he had imprisoned at his accession and who made good his escape. This in itself induced him to make haphazard gestures, which, however, were milder than those suggested to him by his need of money. There flourished a series of practices which led the Mamlūk regime to disaster: the sale of offices, confiscation of fortunes which were too noticeable, the unprecedented extension of state monopolies and the institution of the compulsory purchase of primary commodities, bought up in advance by the Government. The Arab historians aver that Barsbāy was an intelligent administrator, an able and poised politician, but the facts speak against this assessment. All his actions are dominated by the spectre of Djānībak and, precisely because of his erratic changes of mood, we can scarcely consider him as a wise and sagacious statesman. His preparations for the Cyprus and Diyārbakr campaigns appear to have swallowed up large sums of money and the latter was a resounding failure.

BARSHALŪNA, Spanish Barcelona, the old Iberian town of Barcino (compare Ruscino, from which Roussillon is derived), which incidentally has no connexion with Hamilcar Barca. Barcelona, once the home of the Laeetians, gradually supplanted Tarraco-Tarragona, situated to the south-west of it, as the capital of north-eastern Roman Spain (Hispania-Tarraconensis). From the fragments of the works of al-Idrīsī and al-Bakrī compiled by Ibn ʿAbd al-Munʿim al-Himyarī, it is clear that Barcelona in their day was already a large town. It was encircled by a strong rampart and its port was rockbound, so that only captains familiar with the channels could steer their ships into it. It was in Barcelona, the capital of his country, that the 'King of Ifrandja' resided. This monarch owned armed ships for travel and corsair raids. The Ifrandj (Catalans) were of an aggressive temperament which spurred them on to great daring.

The territory of Barcelona produced a great deal of wheat and other cereals, as well as honey in large quantity. There were as many Jews living there as Christians. In 96-98/714-16 it fell to the Arabs under ʿAbd al-ʿAziz b. Mūsā b. Nuṣayr after a single attack. In Arabic the town is called Barshinūna, a name derived from the low Latin Barcinona (Orosius already has Barcilona, the Geographer of Ravenna Barcelona, cf. Hübner in *Pauly-Wissowa*,

s.v.), but it is still more commonly called Barshalūna, from which the present Barcelona derives.

The form Bardjalūna is rarer. This is in the origin of the name al-Bardjalūnī, the short title which later Arab writers often gave to the king of Aragon and Catalonia (cf. *JA*, 1907, ii, 279 ff.).

In 185/801 Louis, the son of Charlemagne, as king of Aquitaine, conquered Barcelona, which from that time became the capital of the Spanish borderlands of the Frankish Empire, and from 888, of the independent counts or marquesses of Barcelona or Catalonia. In 242/856, Barcelona was temporarily occupied by the Arabs (*Al-Bayān al-Mughrib*[2], ii, 95-6). In 375/985, it was taken by assault in the last time by the great Almanzor (Dozy, *Histoire des Musulmans*[2], ii, 238-9), but in 987, Count Borell I reconquered it. In the twelfth century (1137) it was reunited with the kingdom of Aragon. Worthy of note is the order given in 450/1058 by the Muslim king of Denia, ʿAlī b. Mudjāhid al-ʿĀmirī by virtue of which the Mozarabic bishoprics of Baleares [*q.v.*] like those of Denia and Orihuela were placed under the jurisdiction of the Archbishopric of Barcelona (Simonet, *Historia de los Mozarabes de Espana— Memoria de la Real Academia de la Historia*, vol. xiii, Madrid 1905, 651-4; Campaner, *Bosquejo histórico de la dominacion islamita en las islas Baleares*, Palma 1888, 82-84).

BARSHAWĪSH [see Nudjūm[.

BARṢĪṢĀ, the name of a pseudo-historical figure, a recluse, who is to be connected, according to a later interpretation, with the Antonian tradition. In its folk-lore aspect, the tradition concerning Barṣīṣā must have assumed several forms, because at a late period Ibn Baṭṭūṭa came across, between Tripoli and Alexandria, a *kaṣr Barṣīṣā al-ʿābid*, a name which recalls the career of St. Antony and his long period of seclusion in an old castle (*ṣīṣat*). The Aramaic etymology of the name Barṣīṣā calls to mind the highest sacerdotal office, whether one considers the *ṣīṣā* as denoting the pectoral of the high priest, or the topknots of the sacerdotal coiffure. In Muslim Tradition, Barṣīṣā is the hermit who, after a long career of asceticism, succumbs to the successive temptations of the Devil who finally induces him to deny God, and then abandons him to eternal despair.

These remarks refers to the commentary on Kurʾān lix, 16, which deals with hypocrites who tempt the faithful ... "in the likeness of the Devil, when he says to Man, 'Disbelieve', but when he disbelieves, says, 'I am quit of thee; I fear Allāh, the Lord of the Worlds'". There are two rival interpretations of "Man", and al-Ṭabarī (xxviii, 31 f.) sets them before us: is it a question of a particular man, or of mankind as a whole?

The first four traditions which al-Ṭabarī produces in the case of "Man" denoting a particular person, relate to a recluse, either a monk (*rāhib*) (Ṭabarī, xxviii, 332), or an ascetic (*radjul min Banī Isrāʾīl*, *ʿābid*), or a Christian priest (*kās*). The story about this pious man is relatively constant; three brothers entrust to him their sister, who is ill, while they are absent on a journey. The monk, yielding to the suggestions of Satan, seduces her, gets her with child, and then, in order to get rid of her and thus of the evidence of his fall, kills her and buries her in a secret place (under a tree, in his house). The brothers, on their return, believe at first that she died a natural death, but Satan reveals to them in a dream the ascetic's crime. The ascetic, panic-stricken at the realisation that his crime has been discovered, is approached in his turn by Satan, who offers to save him if he will prostrate himself before him and deny God. When the wretched man has stooped to this ultimate degree of sin, Satan mocks him, in the terms of the verse in the Kurʾān, lix, 16. After al-Ṭabarī, Tradition rediscovered the name of Barṣīṣā and applied it to the hero of this legend. In *EI*[1], Duncan B. Macdonald (s.v. *Barṣīṣā*) enumerated these sources. The first author who seems to have mentioned the name of Barṣīṣā is Abū Layth al-Samarkandī (d. 985 or 993), in his *Tanbīh al-Ghāfilīn*, who was followed by al-Baghawī (d. 1122). Goldziher-Landberg, *Legende vom Mönch Barṣīṣā*, fills in the history of the later development of the legend, as narrated in al-Kazwīnī (ed. Wüstenfeld, i, 368), in the *Mustaṭraf* of Ibn Ibshayhī, chap. 64, in al-Suyūṭī, and thence, in the *Forty Vezirs*, the Istanbul edition of which, 1303 A.H., 120-126, contains a long account, of greater length than the one translated by Pétis de la Croix and Gibb.

This account, either via Spain, or through the medium of a translation of the *Forty Vezirs*, must have become the source of the 'Gothic' romance of Monk Lewis, *Ambrosio or the Monk*, in which every detail was dealt with at length and adapted to the taste of the day.

BARTANG [see badakhshān].

BĀRŪD.

i. — General

In Arabic, the word *nafṭ* (Persian *naft*) is applied to the purest form (*ṣafwa*) of Mesopotamian bitumen (*kīr*—or *kār*—*bābilī*). Its natural colour is white. It occasionally occurs in a black form, but this can be rendered white by sublimation. *Nafṭ* is efficacious against cataract and leucoma; it has the property of attracting fire from a distance, without direct contact.

Mixed with other products (fats, oil, sulphur etc.) which make it more combustible and more adhesive, it constituted the basic ingredient of "Greek fire", a liquid incendiary compound which was hurled at people, the various siege weapons which were made of wood, and ships. The Muslims of the East, as is well known, made spectacular use of it against the Crusaders and the Mongols. This new product retained the name of *nafṭ*. A specialist, *naffāṭ* or *zarrāk*, discharged the "Greek fire" in the form of a jet, by means of a special copper tube: *naffāṭa, zarrāka, mukḥula*; this instrument, the prototype of our flame-throwers, seems to have been a sort of huge syringe, similar to the "pumps" of the earlier firemen of Constantinople. "Greek fire" could also be discharged in "pots" (*kārūra*) hurled by various types of ballistic apparatus, or in cartridges fixed to arrows, in the "Chinese" fashion (*sihām khiṭāʾiyya*).

With the introduction of the use of salpetre, about 1230, the word *nafṭ* assumed new meanings. Since a remote period, the Chinese had known of the

igniting properties of nitre, but they only used it to propel rockets used in firework displays or in war. Knowledge of the properties of saltpetre (and of the procedure for refining it by washing) probably passed from China to Persia; in Persian, in fact, in addition to the Iranian term *shūra* (archaic: *shūrag*) "nitrous earth, nitre", there existed the synonym *namak-i čīnī* "Chinese salt". In Arabic, in addition to *shawradj*, a loan-word from Iranian, and the vernacular forms *milḥ al-ḥā'iṭ* "sea salt" (cf. *infra*) and *milḥ al-dabbāghīn* "tanners' salt", one finds *thaldj ṣīnī* "Chinese snow", *thaldj al-Ṣīn* "snow of China". One also meets the terms *zahrat ḥadjar assiyūs*, lit. "flower of the stone of Assos" (an ancient town of Troas or Mysia), a sort of marine saltpetre, a powdery salty efflorescence deposited by sea spray on friable rock resembling pumice-stone, something like aphronitre. Ibn al-Bayṭār gives *bārūd*, the history of which will be traced below, as the Maghribī equivalent of the last three terms, which apply to pharmaceutical saltpetres.

Saltpetre was at first incorporated in the igniting powder of fireworks, which retained the name of *nafṭ*. Shortly afterwards, the same name was used for gunpowder.

As far as our present knowledge goes, the first word used by the Arabic-speaking peoples to denote the new saltpetre-containing powder, a word of universal application, was *dawā'* "remedy, medicament, drug". It was in fact the term used by Ḥasan al-Rammāḥ (died 694/1294) to denote the mixture used to fill the *midfaʿ*: 10 parts of *bārūd*, 2 of charcoal and 1.5 of sulphur. This term is still used in Arabic (cf. Landberg, *Glossaire datinois*, i, 895). Semantically, it is parallel to the Persian *dārū* (see *infra*), although it is impossible to determine whether it is pure coincidence, or whether it is a case of a loan-word transmitted through translation, and in what sense the latter could have been effected.

Far more widespread, at least in the Mamlūk East, was the term *nafṭ*, the name of the earlier "Greek fire" transferred to the new compound. In Muslim Spain, the earliest recorded name (from 724/1324) is *nafṭ*. In the *Vocabulista* (a Latin-Spanish Arabic vocabulary compiled in the region of Valencia, in the 13th century), one finds opposite *Ignis* and *Ignem excutere*, the word *nafṭ*, but its meaning is not given with any precision; at all events, this term recurs at Beirut in the sense of "matches". At Tunis, *neffāṭa* is a fire-cracker. In many Arabic dialects, words derived from the root *n-f-ṭ* (*neftā, neffāṭa*) have the meaning of "ampulla" (under the epidermis). This may perhaps be an echo of *ḳawārīr al-nafṭ*.

The form of the word *bārūd*, with *ā*, is not classical. It seems to appear for the first time in the *Djāmiʿ* of Ibn al-Bayṭār (d. 646/1248). It is stated there that it is the name given in the Maghrib by the common people and physicians to the "snow of China" or "saltpetre", a substance with medicinal properties (cf. trans. Leclerc, i, 71). Al-Rammāḥ uses the word in this sense in his formula for gunpowder. Again, for Ibn al-Kutubī (710/1310, cf. *infra*), *bārūd* only meant saltpetre.

In his *Taʿrīf* (1312 ed., 208), al-ʿUmarī (d. 748/1348) twice uses the word *bārūd*. In one instance, he is talking about a substance incorporated in the "naphtha pots" (*ḳawārīr al-nafṭ*), projectiles used in naval warfare. In the other, he is talking about *makāḥil al-bārūd*, where the word could be taken to refer to a propulsive saltpetre compound (see *infra*: ii).

It is thus difficult to state with any accuracy at what date and in what country "gunpowder" assumed the name of its principal ingredient.

In Muslim Spain, the change in meaning took place in the course of the second half of the 15th century. "Gunpowder" then became *bārūd*, and "saltpetre" *malḥ al-bārūd*; *nafṭ* (pl. *anfāṭ*) then denoted "cannon", and *naffāṭ* "gunner" (see Dozy, *Suppl.*, s.vv.).

In this new sense of "gunpowder", the word *bārūd* is widespread throughout the Arabic-speaking world; it is in general pronounced with an emphatic *r*. As subsidiary terms, Arabia recognises representatives of *dawā'* (cf. *supra*). Tunisia has *kusksi* "couscous", and Kabylia *kusksu āberkān* "black couscous", names (perhaps euphemistic) deriving from the resemblance of the two products, both rolled up (*maftūl*) and granulated. In Libya, in addition to *bārūd*, one finds *bārūg*, which can be connected either with the Arabic root *b.r.ḳ* "to flash (lightning)", or with *būrāḳ*, the Greek *nitron*.

The word is used in Turkish, mainly in the form *bārūt*, a pronunciation which recurs in various southern Arabian dialects: ʿUmān, Ḥaḍramawt (and even *bārūṭ*, cf. Landberg, *Glossaire datinois*, i, 130). The Turkish term has been borrowed by Persian and by the Balkan languages: modern Greek, Albanian, Serbian, Bulgarian. From Persian, the word has passed into Kurdish and Hindūstānī; but in the latter, as in Afghānī, it has a rival in the Persian *dārū*, lit. "remedy" (= *dawā'*). Representatives of *bārūd* recur in several African languages in the sense of "gunpowder": Amharic, Swahili, Hausa, etc. In addition to the current and popular term μπαρούτι, borrowed from Turkish, modern Greek recognises, as a scholarly word, πυρῖτις, which has been seen as the origin of *bārūd*. But this etymology is not absolutely certain.

Al-Kafādjī [*q.v.*], an Egyptian author who died in 1069/1659 after a long residence in Turkey, devoted to the word *bārūd*, in his *Shifā' al-Ghalīl* (ed. Cairo, 1282, 55), a long notice in which he said: "this word is written with a *dāl* without a dot, and *bārūt* is an erroneous form. In the *Mā lā yasaʿ al-Ṭabīb Djahluh* (the work of Baghdād physician Ibn al-Kutubī, written about 1310), one reads as follows: "this is, in the Maghrib, the name of the "flower of Assiyūs" (cf. *supra*, the quotation from Ibn al-Bayṭār). In their vernacular dialect, the people of ʿIrāḳ apply this term to saltpetre (*milḥ al-ḥā'iṭ*) which appears as an efflorescence on old walls, where it is collected. It is used in fireworks (*aʿmāl al-nār*) which rise into the air and move about; thanks to it, the fireworks rise more rapidly and ignite more quickly". The Egyptian author resumes: "this is a post-classical word (*muwallad*), derived from *burāda* "iron filings", because of the similarity of the two products. At the present time, *bārūd* is applied to a compound of this salt, charcoal and sulphur: it has assumed the name of one of its components". For the ʿIrāḳīs of the beginning of the 8th/14th century, *bārūd* still denoted only saltpetre, but was already used in pyrotechnics.

Equally interesting is the notice devoted to this word by Ibn Khalaf al-Tibrīzī (in his Persian dictionary *Burhān-i Ḳāṭiʿ* (Tehran ed. 1330/1951)): "it is the *dārū-yi tufang* "remedy of collyrium for the musket". In the Syriac language (*suryānī*) it is the name given to *shūra* "nitre, saltpetre", which constitutes the principal element of *bārūd*". I do not know where the Persian lexicographer got his information from. But it is a fact that the *Lexikon Syriacum* of Brockelmann, (2nd. ed. 1928, 95),

records an instance of *bārūd* "nitrum", culled from an alchemical text.

From these two indications, the word *bārūd* could therefore have had an Aramaic origin, which would correlate well with its morphological pattern *faʿūl*.

In Armenian, the name of gunpowder is *vaṛōd* (for *vaṛawd*, with a dotted *r*) which, for phonetic reasons governing word-transference, could not be directly connected with *bārūd*. However, the Armenian word appears to have an etymology (popular?) founded in Armenian itself: *vaṛ* "to burn" and *awd* "air". Could the Aramaic word be of Armenian origin? (Information supplied by Professor Feydit, Paris).

De Goeje proposed for *bārūd* another etymology which seems to have been overlooked (cf. *Quelques observations sur le feu grégeois*, in *Homenaje a D. F. Codera*, 1904, 96): it could stem from *barūd*, in the first place "a soothing collyrium (*kuḥl*) used for inflammation of the eye", which in the end was applied to all powdery collyriums (cf. Ibn al-Ḥas̲h̲s̲h̲āʾ, *Glossaire sur le Manṣūrī de Razès*, ed. Colin and Renaud, 1941, 18). The Bag̲h̲dādī physician Ibn D̲j̲azla (d. 493/1100) in his *Minhād̲j̲* heralded the use of "flower of the stone of Assiyūs, or marine saltpetre, in collyrium to strengthen the sight and make it clearer and also to get rid of leucoma. As regards the change of quantity in the first vowel, other examples of the change *a* > *ā* are known in Mag̲h̲ribī Arabic nouns belonging to the same morphological pattern and also denoting medicaments: *g̲h̲āsūl* (already in Ibn al-Bayṭār), *fāsūk̲h̲* "gum ammoniac", etc. One is encouraged not to pass over this hypothesis in silence by the fact that, in numerous Arabic-speaking countries, the term *mukḥula* "collyrium tube" has been used for "musket". Let us not forget that the first Arabic word for gunpowder was *dawāʾ* "medicament". In the field of Iranian linguistics, gunpowder is sometimes termed "medicament or collyrium of the musket". Finally, in an altogether different field, Malay too has *obat bedil* "medicament of the musket". In the case of "gunpowder", as in that of "fire-tube", it could have been a case, to begin with, of a euphemistic name. The Arabic *dawāʾ* has further other senses of the same origin: "poison", "depilatory compound" (cf. Dozy, *Suppl.*). To sum up, the origin of *bārūd* is still obscure.

On feast days, the rural population of North Africa devotes itself to the *liʿb al-bārūd* "gunpowder game", with guns charged with blanks, either on horseback (*liʿb al-k̲h̲ayl*, the "tilting" of Europeans) in which the participants imitate the oldt actic of *al-farr wa 'l-karr*, or on foot ("the musket dance"). For an accurate picture (in dialectal Arabic), cf. G. Delphin, *Recueil de textes* . . ., 233, 255; V. Loubignac, *Textes arabes des Zaer*, 79; in French, L. Mercier, *La chasse et les sports chez les Arabes*, 234.

From *bārūd* has been formed the derivative *bārūda* "musket" (cf. *infra*); the Moroccan word *bārōdiyya* "ferrous sulphate", which is used as a black dye, is explained by the colour of the powder.

(G. S. Colin)

ii. — THE MAG̲H̲RIB

The first firearms which appeared were siege engines. According to Ibn K̲h̲aldūn (8th/14th century), the Marīnid sultan Yaʿḳūb, when besieging the town of Sid̲j̲ilmāsa in 672-3/1274, brought into action against this town mangonels (*mad̲j̲ānīḳ*) and ballistas (*ʿarrādāt*), as well as a naphtha engine (*hindām al-naft*) which discharged iron grape-shot (*ḥaṣā al-ḥadīd*) expelled from a "chamber" (*k̲h̲azna*) by the fire kindled in the *bārūd* (cf. *ʿIbar*, Būlāḳ 1284, iv, 188, at the bottom). This precise information is unfortunately doubtful for such an early period. In fact, in his account of the same siege in his history of the kings of Tlemcen (*ibid.*, 85), Ibn K̲h̲aldūn speaks only of siege engines (*ālāt al-ḥiṣār*), without any reference to this marvellous invention. On the other hand, the source used by the author for his account of this siege appears to be the *Rawḍ al-Ḳirṭās* and its parallel history *al-D̲h̲ak̲h̲īra al-Saniyya*[2], Fās, 225; ed. Bencheneb, 158; and these two texts mention only mangonels and ballistas.

It is not until the year 724/1324 that one comes across an indication of something which appears to have been a true firearm. At the siege of Huescar (68 m. (110 km.) N-E of Granada), which was held by the Christians, the king of Granada Ismāʿīl used "the great engine which functions by means of *naft*" (*al-āla al-ʿuẓma al-muttak̲h̲ad̲h̲a bi 'l-naft*). The latter hurled a red-hot iron ball (*kurat ḥadīd muḥmāt*) against the keep of the fortress. The ball, when discharged, threw out showers of sparks, and landed in the midst of the besieged, causing damage as great as that caused by a thunderbolt. Several poets celebrated this event (cf. Ibn al-Khaṭīb, *al-Iḥāta*, Cairo 1319, i, 231; idem, *al-Lamḥa al-Badriyya*, Cairo 1347, 72).

Nineteen years later, at the siege of Algeciras (743/1343), the Muslim defenders fired against the Christians, by means of *truenos* (lit. "thunderclaps") large thick arrows as well as heavy iron balls (cf. *Cronica del rey Don Alfonso el onceno*, ed. Ribadeneira, Ch. 270, 344, and Ch. 279, 352). But what exactly is meant by "thunderclaps"? Actual firearms, or machines analogous to the "thunderers" or *raʿʿādāt*? It is only during the last years of the Naṣrid period (1482-1492) that there begin to appear in the sources the terms *bārūd* "gunpowder" and *naft* (pl. *anfāṭ*) "cannon", siege cannon for the Castilians, fort artillery for the Granadans. At the siege of Moclin (1486), the Castilians employed cannon which hurled "rocks of fire" (*ṣuk̲h̲ūr min nār*); the latter soared into the sky and fell back as a mass of flame (*tas̲h̲taʿil nār^an^*) on the town, killing and burning all on whom they fell. It should be noted that, during this period, the plural *anfāṭ* is in general accompanied by the word *ʿudda*, which is properly applied to classical engines of the catapult type. In fact, at the famous siege of the suburb of al-Bayyāzīn, at Granada (1486), *anfāṭ* and *mand̲j̲ānīḳ* were seen in action together (cf. Müller, *Die letzten Zeiten von Granada*, especially 18 and 20).

In his *Vocabulista* of the Arabic spoken at Granada (compiled in 1501), P. de Alcala translated *artilleria* by *ʿudda*; but *artillero* is *naffāṭ*, derived from *naft* "lombarda"; and *trabuco* "trebuchet" has as its corresponding term *mand̲j̲anīḳ*. He knew in addition a sort of culverin: *ubruḳīn*, *ubriḳīn* "robadoquin, passabolante". But he only mentions the arbalest, and does not speak of portable firearms.

The latter appeared, in the Mag̲h̲rib, at the beginning of the 16th century. It was a Mag̲h̲ribī who presented the first arquebus (*bunduḳiyya*) to the Mamlūk sultan Ḳānṣūh al-G̲h̲awrī (906-22/1500-16), saying that this weapon, which had appeared in the territory of the Ifrand̲j̲, was in use in all the lands of the Ottomans and of the G̲h̲arb (cf. Ibn Zunbul, *Fatḥ*, Paris MS. 1832, f. 2 ro.).

Leo Africanus, who left Morocco in 1516, gives us a picture of the army of the Banū Waṭṭās [*q.v.*] as furnished with cannon, and arquebuses carried

by horsemen. In regard to Tunis, at the same period, he mentions that the king had a band of footguards composed of Turks armed with blunderbusses (cf. *Description de l'Afrique*, trad. Épaulard, 239, 387). It was mainly under the Saʿdids [*q.v.*], however, that the use and manufacture of firearms was intensified. The sultans of this dynasty organised their army on the Turkish model; they formed corps of Turkish and Andalusian musketeers, and surrounded themselves with more or less renegade Europeans (*ʿulūdj*) who initiated them in new techniques, notably that of casting cannon.

In 1575, the army of the sultan Mawlāy Muḥammad possessed more than 150 cannon, among which was one with nine barrels (now in the Musée de l'Armée in Paris). In 1578, at the famous battle of Wādi 'l-Makhāzin, the Moroccan army had 34 cannon; it also had 3000 Andalusian arquebusiers on foot and a thousand arquebusiers on horseback.

In 1591, the expeditionary force sent against the Sūdān included 2,000 Andalusian arquebusiers and renegades on foot, and 500 renegade horsemen armed with blunderbusses; it carried off six mortars and numerous small cannon (cf. *Hespéris*, 1923, 467). These firearms facilitated the defeat of the Sudanese, who were armed only with assegais, bows and swords. At Timbuktu, the—extremely hybrid—descendants of the Moroccan musketeers still constitute a sort of class: the *arma*, from the Arabic *rumāt*.

In Morocco, during this period, "cannon" was *nafḍ* (sic), while "musket" was *midfaʿ*. It is only later, in the 17th century, that this latter word took on the meaning of "cannon", while the new "flintlock" took the name *mukḥula*, which came perhaps from the East. The following fact is characteristic of the date of this change of meaning: in the part of his *Nafḥ al-Ṭīb* in which he reproduces a Granadan Arabic text of 1540, al-Makkārī from Tlemcen (d. 1041/1632), who wrote it is true in the East, on several occasions substitutes the word *madāfiʿ* for *anfāṭ* (cf. *Nafḥ*, Būlāḳ ed., 1279, ii, 1265; Müller, *Die letzten Zeiten von Granada*).

In 1630, a Morisco who had fled to Tunisia wrote in Spanish an important manual of artillery, based on German techniques. It was translated into Arabic (in a popular form) in 1638 by another Morisco who had taken refuge at Tunis after having lived for a long time at Marrakesh, for the purpose of distribution to the Ottoman sultan Murād and other Muslim rulers (cf. Brockelmann, II, 465; S II, 714. A slightly abridged version exists in the Bibliothèque générale at Rabat: D. 1342). It is stated in this work that *midfaʿ* denoted "cannon" at Tunis, but "musket" in Morocco; and that conversely, *anfāṭ* "cannon" in Morocco, denoted "fireworks" at Tunis, which the Moroccans called *samāwiyyāt*.

The bronze cannon cast by the Saʿdids in Morocco, in their workshops at Fez, Marrakesh and Taroudant (or on their orders, in Holland), are particularly graceful. Many of them still exist in the ports of Morocco, usually decorated with the *ʿalāma* (or *ṭughra*) of the reigning sultan. Portable firearms were imported from Europe, usually as contraband.

The artillery of the ʿAlawid dynasty comprised mainly pieces seized from the enemy, on land or sea, and pieces brought as gifts by foreign ambassadors. Otherwise, cannon and mortars were bought abroad and then an engraved inscription in Arabic was superimposed. On the other hand, it was under this dynasty that the manufacture of muskets spread in Morocco, especially in the south, but also in the north, at Tetuan and Targīst.

However extraordinary it may appear, *madjānīḳ* (accompanied by cannon and mortars) were used in Morocco up to 1729, not only in siege warfare but also in expeditions in mountainous areas (cf. *Archives marocaines*, ix, 107, 162, 169, 180).

Throughout present-day North Africa, the general word for "cannon" is *medfaʿ*; *kūra* (class. *kura*), coll. *kūr*, is "cannon-ball, shell"; everywhere the artilleryman is called *ṭobdjī*. The "mortar" is *mèhrāz*; it throws a bomb, *bunba*, a Latin word received through Turkish. In Morocco, Algeria and Tunisia, the old locally made musket bears names derived from *mukḥula*; the two principal types are called: *bū-shfer* "fired by a flint", and *bū-ḥabba* "fired by percussion-cap". Secondary appellations are derived from the name of the armourer or from the place of manufacture, or even from the length of the cannon measured in spans (*shibr*). The vocabulary of the Maghribī dialect preserves the memory of earlier portable weapons of European origin: *kābūs* "pistolet" (*arcabuz*), *meshket*, (*moschetto*), *shkubbiṭa* (*escopeta*), *ḳarrbīla* (*carabina*), etc. In Morocco, the European breach-loaded military musket is called *klāṭa* (Spanish *culata*); the different types are named after the number of cartridges held by the magazine. In eastern Tunisia, in Libya, the local musket is called *bindga* and the rifled carbine: *sheshkhān* (from Persian, "with a sexangular barrel", received through Turkish).

We have seen that, in the western Maghrib and up to the beginning of the 17th century, *nafṭ* denoted "cannon" and *midfaʿ* "portable firearm". This semantic pair has been preserved to the present day (with the variant *nafḍ*) in the Berber dialects of the same region; it is also found in the Arabic dialect of Mauritania. However, among the Twāreg Berbers, a musket is *l-būrūd*. In Amharic, the meanings are reversed: *nafṭ* "musket", *madf* "cannon".

For the nomenclature of the Moroccan musket, cf. Joly, *L'industrie à Tétouan*, in *Archives marocaines*, xi, 361; Delhomme, *Les armes dans le Sous occidental*, in *Archives Berbères*, ii, 123).

The introduction of portable firearms, their employment for the *djihād*, and the necessity for a period of training in the technique of shooting (*rimāya*), led to the creation of societies of marksmen (pl. *rumāt*) of a religious character (cf. *Archives Marocaines*, iv, 97; xvii, 73; xx, 242; L. Mercier, *La chasse et les sports chez les Arabes*, 134).

On the other hand, the use of such weapons for hunting forced the jurists from the beginning to study the question whether prey killed by this method was licit (*ḥalāl*) or not (the *aḥkām al-bunduḳ* literature). (G. S. Colin)

iii. THE MAMLŪKS

In the present state of our knowledge, the earliest reliable information on the employment of firearms in the Mamlūk sultanate is from the mid-sixties of the fourteenth century, *i.e.*, some forty years later than the corresponding information on the use of firearms in Europe. There exist in the sources earlier references to these weapons, but their authenticity needs further proof. If Ibn Faḍl Allāh al-ʿUmarī speaks of firearms in his *al-Taʿrīf fi 'l-Muṣṭalaḥ al-Sharīf*, Cairo 1312 A.H., 208, ll. 17-22), which he compiled in the year 241/1341, this would mean that the Mamlūks started to use firearms several decades before the mid-sixties.

Some words may be said about the terms by which these weapons were designated. These were *makāḥil* (sing. *mukḥula*) *al-nafṭ* and *madāfiʿ*

(sing. *midfa'*) *al-naft*, or simply *naft* (pl. *nufūṭ*). Subsequently the first two terms were shortened into *madāfi'* and *makāḥil*. From the Mamlūk sources it cannot be learnt whether *mukḥula* and *midfa'* designate different types of firearms or not. During the first years following the introduction of the weapon one comes across the terms *ṣawā'iḳ al-naft*, *ṣawārikh al-naft*, *ālāt al-naft*, *hindām al-naft*, which also mean firearms. But all these last-named terms soon died out. (For detailed proofs that the above mentioned terms mean firearms and not naphtha or "Greek Fire", which is also called in Arabic *naft*, see D. Ayalon, *Gunpowder and Firearms in the Mamluk Kingdom*, 9-44).

In Mamlūk historical sources the term *bārūd* as designating the whole mixture of gunpowder is extremely rare during the major part of the Circassian period (784/1382-922/1517); only during the last decades of Mamlūk rule do references to it become quite frequent. The term *naft* remains, however, dominant until the very end of the Mamlūk sultanate. It would appear that the final victory of *bārūd* over *naft* took place after the Ottoman conquest.

Though the use of artillery in the Mamlūk sultanate increased steadily since the closing years of the 8th/14th century, a long time had to elapse before they could entirely supplant the veteran siege-engine, the mangonel (*mandjanīḳ*, pl. *madjānīḳ*). For many years the *midfa'* and the *mukḥula* served only as auxiliaries to the *mandjanīḳ*, fulfilling but minor tasks. The Mamlūk sources provide abundant information on the negligible damage they caused to targets against which they were aimed. At the end, however, artillery had the upper hand. The mention of *mandjanīḳs* in action becomes rarer and rarer during the second half of the fifteenth century, though they manage to survive up to the very end of Mamlūk rule.

The Mamlūks used their artillery in siege warfare only (both as a defensive and offensive weapon), consistently refusing until the very end of their rule to use it in the battlefield.

The ever increasing participation of artillery in sieges in the Mamlūk sultanate on the one hand, and its total absence on the battle-field on the other, can by no means be ascribed to accident. The reason for its easy adoption in siege warfare is to be found in the fact that it did not, especially during its early history, bring about any sweeping changes in the traditional methods of siege. Cannon was preceded by the *mandjanīḳ* which performed precisely the same function, and which for a long period was superior to firearms. In the open, however, conditions were entirely different. Here artillery constituted a complete innovation, no similar weapon having preceded it; here it was bound to effect changes in tactics and methods of warfare, thus causing the Mamlūk military hierarchy to adopt a course in sharp contrast to its very spirit.

Sulṭān al-Ghawrī did make some concessions to the use of firearms which, though on the face of it considerable, were in reality not very significant. For in all these concessions one condition was implied: the existing structure of Mamlūk military society should not be subjected to any important change. Such an attitude amounted, in fact, to a death sentence on the scheme of reorganising the Mamlūk army and on preparing it for the final test; for without transforming Mamlūk society, along with all the conceptions for which it stood, there was no hope of making effective use of firearms. Nor was this all: al-Ghawrī made up his mind, side by side with his decision to extend the employment of firearms, to revive traditional methods of warfare.

His plan had three main points: first, to increase considerably the number of cannon cast; second, to renew *furūsiyya* exercises and the traditional military training; and third, to raise a unit of arquebusiers. Of them, only the first and third concern us here.

The Casting of Cannon. A few years after his accession to the throne al-Ghawrī started casting cannon at a rate and on a scale never known before in the history of the sultanate. Near his newly built hippodrome (*maydān*) he established a foundry for cannon (*masbak*) which turned out great quantities of artillery at short intervals. Unfortunately our source (Ibn Iyās) does not as a rule indicate the number of guns involved on each occasion; in four cases, however, he does. In one there were 15 guns; in another 70; in a third 74; in a fourth 75.

This huge output of artillery was not intended at all to be used against the Ottomans in the open field. The bulk of it was directed to the ports of Egypt both in the Mediterranean and in the Red Sea in order to strengthen the coastal fortifications or to be used on board warships.

From the dispatch of so much artillery to the coast and to coastal fortifications it should not be concluded that strategic centres inland were not supplied with considerable quantities of cannon. As to the interior of Egypt, there is no doubt that both in al-Ghawrī's time and in the preceding generations a very great portion of the total output of cannon was allotted to the capital, including the citadel. This is first of all borne out by the fact that most of our information about the weapon comes from Cairo; it is further confirmed by the concentration of great quantities of Mamlūk artillery in the battle of al-Raydāniyya (January, 1517). As for Syria, our knowledge of the fortunes of artillery in that part of the Mamlūk realm is scanty, both in regard to the coast and to the interior. From Ibn Ṭūlūn's chronicle we learn that there were great quantities of firearms in Damascus. This leads us to suppose that more detailed histories of Syria than those we possess might reveal that artillery played there a far bigger part than may be concluded from the available sources.

The Creation of a Unit of Arquebusiers. Arquebuses (or hand-guns or portable firearms) are referred to in the Mamlūk sources by the term *al-bunduḳ al-raṣāṣ* ("the pellets of lead"). The later designation for the hand-gun, *bunduḳiyya*, stems undoubtedly from *bunduḳ*, while *raṣāṣa*, the bullet or cartridge, is derived from *raṣāṣ*. The fact that a considerable traffic of arms was conducted in the period under review by Venice (in Arabic: al-Bunduḳiyya) might also have contributed to the choice of the term *bunduḳiyya*. It would appear that the process of transformation from *bunduḳ raṣāṣ* to *bunduḳiyya* did not take long. Ibn Iyās himself mentions *bunduḳiyya* three times, while in the works of his contemporaries Ibn Zunbul and Ibn Ṭūlūn, who died only a few decades after him, *bunduḳiyya*, *bunduḳiyyāt* and *banādiḳ* are already of most common occurrence. They also mention *bunduḳ*, but the combination *bunduḳ raṣāṣ* is already extinct in their works.

The aversion of the Mamlūks to the use of portable firearms was far more pronounced than their reluctance to employ of artillery in the open field. For artillery is the province of specialised

technicians, whose numbers form only a small part of the fighting force, requiring little change in the structure of the army. The arquebus, on the other hand, is a personal and mass weapon, and its introduction affects a large number of troops. Hence its large scale adoption was bound to involve far-reaching changes in the organisation and methods of warfare. To equip a soldier with an arquebus meant taking away his bow and, what was to the Mamlūk more distasteful, depriving him of his horse, thereby reducing him to the humiliating status of a foot soldier, compelled either to march or to allow himself to be carried in an ox-cart.

Any attempt, therefore, to extend the use of the arquebus had to be based on non-Mamlūk and thus socially inferior elements of the army. This is what the Mamlūk sultans were forced to do from the very outset. As a result, a clash between the interests of the sultanate and those of the military hierarchy ensued. The growing danger from without did, to be sure, enable the sultan to widen somewhat the very narrow limits imposed on the use of the arquebus by Mamlūk resistance to it and to incorporate into the arquebus regiment men from other units whose social position had been somewhat higher than that of the earlier arquebusiers. But his success did not go further than this, and hence the doom of the arquebus was inevitable.

The very date of the introduction of the arquebus by the Mamlūks is significant. It is mentioned for the first time in the sources as late as 895/1490 (the rule of Sulṭān Ḳāytbāy), *i.e.*, only twenty-seven years before the destruction of the Mamlūk sultanate and one hundred and twenty five years later than in Europe (the hand-gun began to be used in Europe in about 1365). Artillery, on the other hand, was introduced into the Mamlūk sultanate only about forty years later than in Europe. The much greater time-lag in the adoption of the hand-gun in comparison with the adoption of artillery is by no means accidental.

The units operating firearms were mainly composed of black slaves (*ʿabīd*) and sons of Mamlūks (*awlād nās*) [*q.v.*]. Members of these two categories seem never to have served in the same unit. Sometimes the black slaves constituted the predominant element in the firearms personnel and sometimes the *awlād nās*.

Sulṭān al-Nāṣir Abu 'l-Saʿādāt Muḥammad (901/1495-904/1498), Ḳāytbāy's son, who ascended the throne at the age of fourteen, made a very serious attempt to create a strong unit of arquebusiers composed of black slaves, on whom he wanted to bestow a higher social status. The Mamlūk *amīrs* intervened, however, forced him to disband the unit and made him promise never to raise it again.

About twelve years after the murder of al-Nāṣir Abu 'l-Saʿādāt, in 916/1510, Sulṭān Ḳānṣūh al-Gh̲awrī, who enjoyed an incomparably higher prestige than the above-mentioned boy-king, and in whose time the need for the arquebus was far more pressing, made, with much greater caution, a second attempt to create a unit of arquebusiers. Though it fared better than his predecessor's unit, its existence was very precarious, its status very low and its achievements quite insignificant.

It was called *al-ṭabaḳa al-kh̲āmisa* because it did not receive its pay together with the rest of the army in one of the four official pay days round the middle of the month, but separately on a fifth pay-day at the end of the month. It was also called *al-ʿaskar al-mulaffaḳ*, *i.e.*, "the motley army" or "the patched up army", because it was composed of heterogenous elements which, according to Mamlūk criteria, were of low origin. It included in its ranks—besides *awlād nās*—Turkomans, Persians and various kinds of artisans, such as shoe-makers, tailors and meat vendors. Only when Sulṭān al-Gh̲awrī, in D̲j̲umādā I 921/June 1515, launched his big expedition against the Portuguese, were Royal Mamlūks joined to it. It is significant that in spite of its heterogenous character *al-ṭabaḳa al-kh̲āmisa* is never said to have included black slaves.

Though the members of this unit occupied a very low rung in the socio-military ladder and received a much lower pay than the Royal Mamlūks, a very heavy pressure was brought to bear on the sultan to abolish it, on the ground that it was favoured over other units and that its creation was the main cause for the emptiness of the treasury. The sultan gave way, at last, and dissolved it on Muḥarram 920/March 1514. This dissolution was, however, on paper only. *Al-ṭabaḳa al-kh̲āmisa* continued to exist because it was urgently needed on a very vital front.

The fact that the Ottomans adopted firearms in the proper way and on a gigantic scale, whereas the Mamlūks and all the other important rulers of Islam neglected them, had a decisive influence on the destiny of Western Asia and Egypt. Within a matter of two and a half years (August 1514-January 1517) the Ottomans routed the Ṣafawids, destroyed the Mamlūk sultanate and added to their realm territories of the old Muslim world which they kept up to the very dismemberment of their empire in the twentieth century and which were far bigger than their combined conquest in Europe throughout their history. Without their overwhelming superiority in firearms such a swift and extensive expansion could never have taken place.

(D. AYALON)

iv. THE OTTOMAN EMPIRE.

There is no evidence to show precisely when the Ottomans first began to use gunpowder and fire-arms. A passage in a Turkish register for Albania of the year 835/1431 permits, however, the inference that cannon had been introduced at least in the reign of Meḥemmed I (1413-1421) and perhaps even somewhat earlier (Inalcık, in *Belleten*, xxi (1957), 509). Other sources mention the Ottoman use of guns for siege warfare in 1422, 1424 and 1430, and again in 1440, 1446, 1448 and 1450 (cf. the references listed in Wittek, 142 and in Inalcık, *op. cit.*, 509). It is well known, moreover, that Meḥemmed II (1451-1481) had a large number of cannon, when he besieged Constantinople in 1453 (Ducas, 247-249, 258, 273; Sphrantzes, 236 ff., *passim*; Chalcocondylas, 385-386, 414-415; Critobulus, bk. I, chapts. 20 and 29 (with additional references given in the notes); Wille, 10 f.; Jähns, 791-792, 1141-1144). Field guns seem to have made their appearance amongst the Ottomans not long before the battle of Varna (1444), *i.e.*, during the course of the Hungarian wars waged in the reign of Murād II (1421-1451). The first clear indication that the Ottomans employed cannon of this type in a major field engagement relates to the second battle of Kossovo (1448) (Wittek, 142-143; Inalcık, *op. cit.*, 509-510), but it was not until considerably later that advances in technique rendered possible the emergence of an effective Ottoman field artillery. The arquebus, too, was taken over in about 1440-1443 during the Hungarian wars under Murād II and its use much extended in the reign of Meḥemmed II. None the less, the change to a more general adoption of the new weapon, *e.g.*, within the corps of Janissaries, was a slow and gradual one, destined to remain long incomplete (Wittek, 143; Inalcık, *op. cit.*, 506, 510-512; Ayalon, 38 (note 89); Jorga, ii, 228. Cf. also Promontorio, 36 (*zerbottaneri*), Chalcocondylas, 356 (*zarabotanas*), Dolfin, 13 (*zarabattane*), terms uncertain in meaning, but perhaps referring to the arquebus? See, in addition, Lokotsch, 172 (Ar. *zarbaṭāna*) and Ayalon, 61: *zabṭāna*). After the reverses which the Ottomans endured in the Cilician war of 1485-1491 against the Mamlūks of Egypt and Syria, Bāyazīd II (1481-1512) increased the number of Janissaries and provided them, and other categories of his troops, with arms more efficient and of greater offensive power than the weapons previously available; the Sulṭān also spared no expense to create a more mobile and more competently manned artillery force (Alberi, ser. 3, iii, 21 (a report dated 1503); cf. also Inalcık, *op. cit.*, 506). The arquebus, slow to load and cumbersome to handle, was ill-suited to the needs and capacities of horsemen. It found little favour therefore, in the 15th and 16th centuries, with the Ottoman timariots and the Sipāhīs of the Porte, *i.e.*, the "feudal" and the "household" cavalry of the Sulṭān. The use of fire-arms in this field had, in general, to await the appearance of new and more manageable types of hand-gun, *i.e.*, the earlier forms of the musket and the pistol. A corps of mounted "arquebusiers" was, however, to be found in Egypt soon after the Ottoman conquest of 1517 (Ayalon, 96-97 and 129 (note 247a); Fevzi Kurtoğlu, in *Belleten*, iv (1940), 67 and 68: *atlu tüfekci zümresi*).

The troops concerned primarily with gunpowder and fire-arms, and with their practical application in time of war, can be listed thus: (a) the *Dj̲ebedj̲iler*, *i.e.*, the Armourers, who had charge of the weapons and munitions of the Janissaries—bows, arrows, swords, etc., but also hand-guns (*tufenk*), powder (*bārūt*), quick-matches (*fitīl*), lead for bullets (*ḳūrs̲h̲ūn*) and the like. Members of this corps served both at Istanbul and in the provincial fortresses of the empire (Uzunçarşılı, *Kapukulu Ocakları*, ii, 1-31). Venetian reports written between 1571 and 1590 state that almost all the Janissaries had adopted the arquebus, the Ottoman model of this gun being made with a longer barrel than was normal amongst the Christians and loaded with large bullets, "*come li (archibugi) barbareschi*" (Alberi, ser. 3, i, 421-422, ii, 99, iii, 220, 343; cf. also Bombaci, in *RSO*, xx (1941-1943), 296, 299 (hand-guns firing shot which weighed 40-50 dirhems) and Uzunçarşılı, *op. cit.*, i, 366 and ii, 8 (note 2: hand-guns that took shot 4 and 5 dirhems in weight), 13-14, 28-29). (b) the *Ṭopdj̲ular*, *i.e.*, the Artillerists, who were responsible for the actual production of guns and for their maintenance and operation in war. These specialised troops had as their chief centre the arsenal (Ṭop-k̲h̲āne) at Istanbul, but served also in the various fortresses of the empire and in provincial cannon foundries and munition depots (Uzunçarşılı, *op. cit.*, ii, 33-93). The Ottomans at first carried into the field supplies of metal, rather than complete, but ponderous guns, and cast their cannon as need arose during the course of a given campaign (Ibn Kemāl, *Tevārīh-i Āl-i Osman*, 462-463; 462-463 (= 420-421, in the transcription); Dolfin, 10-11; Promontorio, 61, 85; Jorga, ii, 227; Wittek, 142; Inalcık, *op. cit.*, 509). This procedure, still current during the reign of Meḥemmed II, fell gradually into disuse as further advances in technique and in methods of transportation rendered it, in general, superfluous. Chemical analysis has shown an Ottoman gun cast in 868/1464 to be composed of excellent bronze, allowance being made for the imperfections of the smelting process in use at that time (Abel, in *The Chemical News*, 1868). A Spanish artillerist, Collado, in his treatise of 1592, describes Ottoman cannon as ill-proportioned, but of good metal (*Manual de Artilleria*, 8 v: "*la fundicion Turquesca por la mayor parte es fea, y deffectuosa, aunque es de buena liga*"). An account of the methods employed in the Ṭop-k̲h̲āne at Istanbul for the casting of guns is given in the work of Ewliyā Čelebi (*Seyāḥat-nāme*, i, 436 ff. = Uzunçarşılı, *op. cit.*, ii, 41 ff.). (c) the *Ṭop ʿArabadj̲ïlarï*, *i.e.*, the corps responsible for the transport of guns and munitions (Uzunçarşılı, *op. cit.*, ii, 95-113). Wagons (*ʿaraba*), drawn by horses, oxen or mules, carried the cannon, both large and

small, but much use was also made of camels to bear the lighter types of gun, especially in difficult terrain (Promontorio, 33; Menavino, bk. v, chapt. xxxi: 176; Ibn Ṭūlūn and Ibn Zunbul, cited in Ayalon, 125 (note 206) and 127 (note 220); Alberi, ser. 3, ii, 432, 438, 452, 456). There is mention, here and there in the sources, of guns on wheels, *i.e.*, passages which refer perhaps to the "ʿaraba" itself or possibly to some form of wheeled gun-carriage (Tauer, *Campagne ... contre Belgrade*, 48 (Persian text: 64); *Viaggio et Impresa ... di Diu*, 173 v; Giovio, ii, bk. XXX, 104 r). Moreover, the Ottomans maintained on the Danube a flotilla which had a major rôle in the transportation of the siege artillery, field guns and supplies needed for the great campaigns in Hungary (cf. Uzunçarşılı, *Baḥriye Teşkilâtı*, 403-404 (also *ibid.*, 404-405: the arsenal at Bīredjik on the Euphrates); and Alberi, ser. 3, iii, 153: mention of flat-bottomed boats (*palandarie*) which carried horses, cannon, stores, etc.). (d) the *Khumbaradjilar*, *i.e.*, the bombardiers concerned with the production and use of grenades, bombs, portable mines, artificial fire, etc. (Uzunçarşılı, *Kapukulu Ocakları*, ii, 115-127). (e) the *Laghimdjilar*, *i.e.*, the sappers who, with the aid of the large labour forces set at their disposal, prepared the trenches, earthworks, gun-emplacements and subterranean mines indispensable in siege warfare (Uzunçarşılı, *op. cit.*, ii, 129-133).

The Ottomans, even before the death of Meḥemmed II in 1481, had acquired the main types of weapon and technique involving the use of gunpowder, *i.e.*, siege and field artillery, mortars, bombs, the arquebus, mines and artificial fire (Jorga, ii, 227-228). A large share in the transmission of these new arms fell to the peoples of Serbia and Bosnia. Artillerists and arquebusiers, recruited in these countries and still retaining their Christian faith, are known to have been in the service of Meḥemmed II (Inalcık, *Fatih Devri*, i, 152, 154-156 and also in *Belleten*, xxi (1957), 511). Masters came, too, from still farther afield, *e.g.*, Jörg of Nuremberg (Kissling, 336). Reliance on specialists of European origin—at first mainly German and Italian, but with French, English and Dutch elements becoming more numerous in later times—was to be henceforth a permanent and indeed essential characteristic of the various Ottoman corps concerned with gunpowder and fire-arms.

Information of a technical nature about the types of cannon in use amongst the Ottomans can be found here and there in the Western sources of the 15th and 16th centuries. The guns are of course described in accordance with the system of classification then current in Europe (and indeed in the Ottoman empire too), *i.e.*, in terms of the weight or size of the projectile thrown (Promontorio, 61 and 85; de Bourbon, 13r-v, with mention of iron and bronze cannon, *e.g.*, culverins, basilisks, sakers and also mortars firing marble shot and copper or bronze "boulletz" filled with artificial fire; Ufano, 40 and 41). An Italian account of the campaign against Diu in 1538 lists some of the guns which the Ottomans had with them on that occasion (*Viaggio et Impresa ... di Diu*, 169r, 172r; cf. also Sousa Coutinho, 58v, on the Ottoman basilisks used in the siege. The princes of India held the Ottoman artillerists in high esteem and welcomed them into their armies: *e.g.*, a Muṣṭafā Rūmī fought under Bābur, and a Rūmī Khān under the Sulṭān of Gudjarat)

The tactical use which the Ottomans made of their cannon in time of war has not been studied in detail. Their normal formation, however, was the *ṭābūr*, when a field battle had to be fought, *i.e.*, the *wagenburg* with the gun-carts chained together and the cannon set between them—a device which seems to have been taken over from the Hungarians (Inalcık, in *Belleten*, xxi (1957), 510; cf. also von Frauenholz, 234 and Uzunçarşılı, *Kapukulu Ocakları*, ii, 255-264. A similar type of battle order ("in accordance with the custom of Rūm", *i.e.*, of the Ottoman empire: *Rūm destūri bile*) was known in Muslim India and in Persia: *Babur-Nāma*, ed. Ilminski, 341 and 458). The method used by the Ottomans to breach the walls of a fortress is described in the work of the Spaniard Collado: medium guns, *e.g.*, culverins, capable of deep penetration and firing along transverse and vertical lines, undermined and split the stonework, large basilisks which threw heavier and more destructive shot, violent in the force of their surface impact, being then discharged in salvo to bring down the enfeebled structure (*Manual de Artilleria*, 13r, 20r, 32r; cf. also Pečevī, ii, 193).

The Ottomans had of course their own nomenclature for guns and related instruments of war (cf. Uzunçarşılı, *Kapukulu Ocakları*, ii, 48-51). In addition to phrases of a mere poetical character (*e.g.*, *ezhder-dihan* and *mār-ten*: "dragon-mouthed" and "serpent-bodied"—cf. Naʿīmā, i, 148) and names given to individual cannon (*e.g.*, the "Kočyān", *i.e.*, the gun captured from Katzianer, the Imperialist general whom the Ottomans defeated in 1537 near Eszék on the Danube—cf. Selānīkī, 31), terms which have a precise technical sense can also be found here and there in the Turkish chronicles and documents. Among the types of cannon most often mentioned in these sources are (i) the *badjalushka* or *badālūshka*, a large siege gun (perhaps the basilisk?): cf. Selānīkī, 35, 37, 38, 41; Ḥādjdjī Khalīfa, *Fedhleke*, i, 29 (guns of this kind firing shot which weighed sixteen *okkas* each), 31, 33; Collado, 13r, 32r; Uzunçarşılı, *op. cit.*, ii, 49, 80, 81. (ii) the *balyemez* [*q.y.*], the name of which derives perhaps from the German "Faule Metze" (Kissling): cf. Pečevī, i, 202; Ewliyā Čelebi, viii, 418, 491 (where it is described as a *menzil ṭopu*, *i.e.*, a long-range gun); Siliḥdār, ii, 46 and 47 (cannon using shot of 10-40 *okkas* in weight are here defined as *balyemez*). (iii) the *ḳolonborna* (cf. the Italian *colubrina*), *i.e.*, the culverin: cf. Selānīkī, 8; Pečevī, ii, 198; Ḥādjdjī Khalīfa, *Fedhleke*, i, 29 (culverins which fired shot weighing eleven *okkas* each) and i, 33 (*lombornu*); Siliḥdār, i, 300 and ii, 46 and 47 (cannon throwing shot of 3-9 *okkas* in weight are here classed as *ḳolonborna*); Uzunçarşılı, *op. cit.*, ii, 49, 81; *Viaggio et Impresa ... di Diu*, 169r; Collado, 13r; Alberi, ser. 3, ii, 432. (iv) the *shaḳaloz* (cf. the Hungarian *szakállas*), apparently a kind of light cannon which threw small projectiles of stone or metal: cf. Selānīkī, 37, 41, 145; Pečevī, ii, 242; Süheyl Ünver, in *Belleten*, xvi (1952), 560; L. Fekete, *Die Siyāqat-Schrift*, I, 61 and 694, and also in *Magyar Nyelv*, xxvi (1930), 264; Redhouse, s.v. *čaḳaloz*. References to guns that fired small shot can be found in Ducas, 211 (cf. also Jähns, 811) and in Giovio, ii, bk. xxx, 104r. (v) the *shāyḳa* (cf. the Hungarian *sajka*), a name given to a certain type of boat, but also used for the guns mounted on such craft: cf. Ḥādjdjī Khalīfa, *Fedhleke*, ii, 320; Ewliyā Čelebi, viii, 378 (a mention of cannon (*shāyḳa ṭoplarī*) that fired stone shot weighing eighty *okkas* each), 382 (*shāyḳa nām prānḳa ṭoplarī*); Fevzi Kurtoğlu, in *Belleten*, iv (1940), 68; Uzunçarşılı, *op. cit.*, ii, 49, 50, 81 (large, medium and small *shayka* cannon); L. Fekete, in *Magyar*

Nyelv, xxvi (1930), 265. On the guns used in the boats which the Ottomans maintained on the Danube, see Giovio, ii, bk. xxxvi, 192r. (vi) the *ḍarbzan* or *ḍarbūzan*, a gun cast in various sizes (cf. L. Fekete, *Die Siyāqat-Schrift*, i, 694, 695: small (300 dirhem shot), medium (1 *okka* shot), large (2 *okka* shot) and also a *ṣarbuzan-i šaiḳa-i büzürg* firing shot 36 *okkas* in weight): cf. Ibn Kemāl, *Tevārīh-i Āl-i Osman*, 464, 509 (= 422, 458 in the transcription); Selānīkī, 8, 35 (*shāhī ḍarbzan ṭoplarī*), 37; Pečevī, i, 93 and ii, 140, 147, 196; Du Loir, *Voyages*, 226-227 (*chahi zerbuzanlar* = "fauconeaux royaux"); Siliḥdār, ii, 47 and 57; Uzunçarşılı, *op. cit.*, ii, 49, 50, 76, 79, 81; Ayalon, 89, 90, 119 (note 92), 127 (note 220).

The Ottomans, in their sea warfare, seem to have used in general the same types of gun as in their campaigns on land. Among the cannon employed in the Ottoman fleet can be numbered the *ḳolonborna*, the *ḍarbzan* and the *shāyḳa* (Barozzi and Berchet, i, 274, ii, 20; Uzunçarşılı, *Baḥriye Teşkilātı*, 460, 462, 463, 468, 469, 512-513. Further information about the naval armament of the Ottomans is available in Alberi, ser. 3, i, 68, 140, 292-293, ii, 100, 150, 342, iii, 223, 354-355; Barozzi and Berchet, ii, 165; Marsigli, Pt. I, chapt. lxxiv, 142 and Pt. II, chapt. xxvii, 171-172; de Warnery, 115) and also the *pranghī* or *pranḳī* (Tauer, in *ArO.*, vii (1935), 195; Kemālpāshāzāde, *Mohādjnāme*, 54 (Turkish text); Bombaci, in *RSO*, xx (1941-1943), 292 and xxi (1944-1946), 190; Uzunçarşılı, *Kapukulu Ocakları*, ii, 49, 83 and also *Baḥriye Teşkilātı*, 462, 468, 469, 512-513).

The sources often mention instruments of war other than cannon, but based on the use of gunpowder, *e.g.*, (i) the *havāyī* (Selānīkī, 8 (cf. Hammer-Purgstall, iii, 426, note 1); Uzunçarşılı, *Kapukulu Ocakları*, ii, 49) and the *ḥavān* (Ewliyā Čelebi, viii, 407, 419, 471, 472; Yūsuf Nābī, 43; Siliḥdār, ii, 47), *i.e.*, mortars which fired bombs and also shot of stone or metal (Promontorio, 61; de Bourbon, 13v; *Viaggio et Impresa ... di Diu*, 169r; Maurand, 202; Scheither, 81; Marsigli, Pt. II, chapt. ix, 30-31); (ii) the *khumbara* or *ḳumbara*, *i.e.*, bombs (Tauer, *Campagne ... contre Belgrade*, 53, 58 (Persian text: 79, 89); Selānīkī, 40-41; British Museum MS. Or. 1137, 74v (bombs made of glass, and of bronze: *shīshe khumbara*, *tundj khumbara*); Ewliyā Čelebi, viii, 401, 414, 432, 483 (*ḳazān* (*ḳazghān*) *ḳumbara*); Naʿīmā, i, 304; Siliḥdār, ii, 47 (*khumbara hāvānlarī*); Scheither, 75, Marsigli, Pt. II, chapt. ix, 33; Bigge, 154); (iii) the *el khumbarasi*, *i.e.* hand-grenades (Ewliyā Čelebi, viii, 414, 432 471 (grenades of glass, and of bronze: *sirça ve tudj el ḳumbaralarī*); Siliḥdār, i, 467, 484, 502; Scheither, 77; Marsigli, Pt. II, chapt. ix, 33); (iv) the *laghīm* *i.e.*, explosive mines of various types and sizes (Ḥādjdjī Khalīfa, *Fedhleke*, ii, 255 and Naʿīmā, iv, 143 (a large mine containing 150 *ḳanṭārs* of gunpowder); Ewliyā Čelebi, viii, 424 (a mine with three galleries and three powder-chambers), 425, 432, 495; Siliḥdār, ii, 55, 56 (a mine of the type known as *puskurma* and holding 30 *ḳanṭārs* of powder), 66; Scheither, 72-73; Montecuccoli, iii, chapt. lxvii; Marsigli, Pt. II, chapt. xi, 37 seq.). Numerous references to mines can be found in the Ottoman accounts of the Cretan War (1645-1669), *e.g.*, in Ḥādjdjī Khalīfa, *Fedhleke*, ii, 239 ff., *passim*, in Siliḥdār, i, 409 ff., in Naʿīmā, iv, 116 ff., *passim*, and in Ewliyā Čelebi, viii, 396 ff. (cf. also *ibid.*, viii, 468 ff., enumerating the guns, munitions, etc. found in the fortress of Candia after its conquest from the Christians in 1669—an account rich in the military terminology used by the Ottomans at that time).

The Ottomans drew from the territories under their control the indispensable raw materials of war—iron, lead, copper and the like. Moreover, the mines producing such metals often served as centres for the manufacture of munitions, *e.g.*, cannon-balls (Alberi, ser. 3, i, 66-67, 146-147, 422, ii, 145, 342, iii, 351; Barozzi and Berchet, ii, 165-166, 225, 337; Aḥmet Refik, *Türk Aşiretleri*, docs. 27, 33, 42, 48, 86, 106, 112 and *Türkiye Madenleri*, docs. 2, 6, 7, 14, 21, 25, 27, 35, 36, 54 and *ibid.*, *Perakende Vesikalar*, docs. 3, 4, 7 and 8; Anhegger, *Beiträge*, i, 138-140, 148-149, 205-206, 210-211 and ii, 299, 303-304, 306-308, also *Nachtrag*, 492-494; Uzunçarşılı, *Kapukulu Ocakları*, ii, 72 ff., *passim*). There were, in addition, mines yielding the saltpetre and sulphur which was needed for the production of gunpowder (*bārūt-i tufenk* and *bārūt-i siyāh*: cf. L. Fekete, *Die Siyāqat-Schrift*, i, 696, note 8) at Istanbul and in the provinces of the empire (Ewliyā Čelebi, i, 483 and 564-565; Uzunçarşılı, *op. cit.*, i, 247 and 335-336; Aḥmet Refik, *Türk Aşiretleri*, doc. 53 and *Türkiye Madenleri*, docs. 11-13, 16-20, 22-24, 26, 28-30; Alberi, ser. 3, i, 146, 422, ii, 342, 349-350, iii, 398; Barozzi and Berchet, i, 177, 275, ii, 17, 165; Montecuccoli, iii, chapt. xxxii; Marsigli, Pt. I, chapt. lxxiv, 142). War material also came to the Ottomans from Europe. Indeed, supplies obtained from the Christians were at times of great importance to the armies of the Sulṭān, *e.g.*, during the long wars against Persia (1578-1590) and Austria (1593-1606), the one involving the establishment and maintenance of numerous fortresses and garrisons in the wide mountainous regions to the south of the Caucasus, the other developing into a bitter conflict of sieges, and both necessitating a vast expenditure of guns and munitions. The English, in these years, sold to the Ottomans cargoes of tin (essential for the making of bronze cannon), lead, broken bells and images (from the churches despoiled in England during the course of the Reformation), iron, steel, copper, arquebuses, muskets, sword-blades, brimstone, saltpetre, gunpowder (*Cal. State Papers, Spanish*: (1568-1579), no. 609 and (1580-1586), no. 265; *Cal. State Papers, Venetian*: (1603-1607), nos. 470, 494 and (1607-1610), no. 860; Braudel, 479 (tin, bell-metal, lead); Charrière, iv, 907, note I (broken images); Sir Thomas Sherley, *Discours*, 7 (the Janissaries have "not one corne of good powder but that whyche they gett from overthrone Christians, or els is broughte them out of Englande"), 9, 10 (the English "keepe 3 open shoppes of armes and munition in Constantinople ... Gunpowder is solde for 23 and 24 chikinoes the hundred ... Muskettes are solde for 5 or 6 chikinos the peyce"; (chikino = chequin, sequin, i. e., the "zecchine", a Venetian gold coin, of which the Ottoman equivalent was the gold sulṭānī: cf. *The Travels of John Sanderson*, Appendix A, 294-295); *Cal. Salisbury MSS.*, Pt. XI, 111 and Pt. XIII, 606-607). It was not long before the Dutch entered into this traffic, and to the marked advantage of the Ottomans, *e.g.*, in the Cretan War of 1645-1669. The Western sources dating from the 17th and 18th centuries emphasise how much the Ottomans owed to this trade in munitions, how great was their reliance on European techniques in regard to the use of fire-arms and gunpowder, and how numerous were the experts of Christian origin enrolled in their service as engineers and artillerists—experts of Italian, French and German, of English and Dutch birth (Scheither, 75, 80; Montecuccoli, iii, chapts. xxviii and xxx (copper from the Dutch, English,

French and also the Swedes); Barozzi and Berchet, ii, 166, 173, 222, 231-232; Marsigli, Pt. II, chapt. ix, 23 (the Ottomans made cannon according to the designs of the Italian author Sardi, one of whose works had been translated into Turkish—probably *L'Artiglieria di Pietro Sardi Romano*, Venice 1621) and 33; de Warnery, 92-93).

The 16th and 17th centuries witnessed in Europe notable changes in the art of warfare (J. R. Hale, in *The New Cambridge Modern History*, ii, 481 ff.; O. Laskowski, in *Teki Historyczne*, iv (1950), 106 ff.; M. Roberts, *The Military Revolution* 1560-1660, also *Gustavus Adolphus and the Art of War*, in *Historical Studies*, i, 69 ff., and *Gustavus Adolphus*, ii, 169 ff.). These changes imposed on the Ottomans a constant need to adopt or otherwise to meet in an effective manner the innovations made in the European practice of war—a process of adjustment which was at times slow and difficult. A Muslim from Bosnia, writing not long after the battle of Keresztes (1596), lamented that the Christians, through their use of new types of hand-gun and cannon, as yet neglected by the Ottomans, had won a definite advantage over the armies of the Sulṭān (L. Thallóczy, *Staatschrift*, 153-154; Garcin de Tassy, in *JA*, iv (1824), 284; Safvetbeg Bašagić, *Nizam ul Alem*, 13; British Museum MS. Harleian 5490, 350r-v). None the less, as the appearance of new, or the more frequent use of hitherto unusual terms in the Turkish chronicles and documents will make clear, the Ottomans did in fact assimilate to a large degree the latest devices and techniques elaborated in Europe at this time (Bombaci, in *RSO*, xx (1941-1943), 303 (*saçma ṭoplar, i.e.*, guns firing a form of grape-shot: cf. also Ḥādjdjī Khalīfa, *Fedhleke*, i, 34 and ii, 245, 317, 319, 321); Siliḥdār, i, 596, 598 (*misket*); Pečevī, ii, 199 (cf. Naʿīmā, i, 164: muskets which fired shot 15-20 dirhems in weight); Ewliyā Čelebi, vii, 179 (*mushkāt tufenkleri* with shot weighing 40-50 dirhems, and *ḳol tufenkleri*) and viii, 398, 410, 415, 416, 467 (*badāloçka nām mūshkāt*); Inalcık, in *Tarih Vesikaları*, ii/II (1943), 377 (*çifte tabancalu tüfenk*); Uzunçarşılı, *Kapukulu Ocakları*, ii, 8, note 2 (*atlu tüfenkleri*); Pečevī, ii, 212-213 (cf. Naʿīmā, i, 190): an account of how an *aghādj ṭop, i.e.*, a petard, was made). Further evidence can be found in the Western sources (cf. Alberi, ser, 3, ii, 452 (*archibugieri a cavallo*), iii, 391 (a report dated 1594, in which it is said that the Ottomans had not yet adopted the pistol) and 404 (the increasing use of the arquebus in the Ottoman fleet); Barozzi and Berchet, i, 265 (the *spahi di paga*, during the Hungarian war of 1593-1606, had begun to arm themselves with the arquebus and the *terzarollo, i.e.*, a short-barrelled arquebus) and ii, 16 and 158; Rycaut, 349 (the Sipāhīs of the Porte made use of pistols and carbines, but had no great esteem for fire-arms); Marsigli, Pt. II, chapt. viii, 15 and 16: the Ottomans learned new methods from the Christians in the Cretan War (1645-1669); the Janissaries and most of the Ottoman horsemen carried pistols). It was in the time of the Köprülü viziers that this gradual transformation attained its full effect. Men well qualified to judge like Scheither, Montecuccoli and Marsigli, describe in much detail, and often with approval, the weapons employed by the Ottomans, noting the excellence, for example, of their mortars (Scheither, 75), their muskets (Montecuccoli, iii, chapt. xiv) and their mines, in the construction of which the Armenian *laghïmdjïlar* had a pre-eminent rôle (Marsigli, Pt. II, chapt. xi, 37 ff.; cf. also Levinus Warnerus, 69, 101 and Ewliyā Čelebi, i, 515 ff.). Montecuccoli (iii, chapts. xxx and xxxi) observes, however, that the Ottoman artillery, although of notable effect when well served, consumed large quantities of munitions and was cumbersome to handle and transport, and that, in respect of the mobility and practical efficiency of their guns, the Christians had achieved an undoubted advantage over their Muslim foes.

The Ottomans failed in the end to keep pace with the developments which occurred in Europe. Their methods, with regard to fire-arms in general, seem to have been, during most of the 18th century, but little in advance of the techniques current in the time of the first Köprülü viziers (cf. de Warnery, 34-35, 40-41, 52, 70, 75, 91-94, 103. This author states (*op. cit.*, 94) that in 1739 the Ottomans, loath to accept good advice, persisted in conducting their siege of Belgrade "à leur ancienne mode"). There were indeed attempts at reform, *e.g.*, by Khumbaradjī Aḥmed Pasha (*i.e.*, the Comte de Bonneval: cf. Uzunçarşılı, *Kapukulu Ocakları*, ii, 118 ff., and 122 ff., also British Museum MS. Or. 1131 (*Taʾrīkh-i Ṣubḥī*), 68v-69v), by the Baron de Tott (Uzunçarşılı, *op. cit.*, 40, 56, 67; de Tott, *Mémoires*, ii, Pt. III, *passim*) and by Khalīl Ḥamīd Pasha (cf. Aḥmed Djewdet, ii, 57 ff. (also *ibid.*, ii, 239-240); Uzunçarşılı, *Kapukulu Ocakları*, ii, 67-68, 91-93, 120, 125-127 and also in *Türkiyat Mecmuası*, v (1935), 225 ff. and 233 ff.), but their efforts had only a limited success. The reign of Selīm III (1789-1807) witnessed, however, the introduction of radical measures designed to modernise on Western lines the armed forces of the Ottoman state (cf. Enver Ziya Karal, 43 ff., and especially 45-49, 59-63 and 63-71). Ottoman fire-arms, considered as a whole, now begin to lose those features which had given them hitherto a distinctive character, their subsequent evolution becoming more and more identified with the general course of technical advance and improvement made in Europe. It will suffice to note here that the reforms carried out in the first half of the 19th century led to the emergence, within the Ottoman army, of an efficient and well equipped corps of artillerists able to sustain a not unfavourable comparison with its European rivals (cf. *Unsere Tage*, Heft XXXVI (1862), 580 and 586 ff.).

V. THE ṢAFAWIDS

A consideration of the use of firearms in Persia under the Ṣafawids falls under two heads: artillery (generic name, *tūp*), and hand-guns; the latter, used by both cavalry and infantry, comprised arquebuses, muskets and carbines, all of which were termed, without differentiation, *tufang*.

According to the traditional account of European writers, artillery was introduced into Persia during the reign of Shāh ʿAbbās I by the English soldiers of fortune Sir Anthony Sherley and his brother Sir Robert Sherley, who arrived in Ḳazwīn in December 1598. Among Sir Anthony's party of 26 persons (Sir E. Denison Ross (ed.), *Sir Anthony Sherley and his Persian Adventure*, London 1933, 13 and n. 3) was "at least one cannon-founder" (Browne, iv, 105). Sir Anthony's steward, Abel Pinçon, states that the Persians at that time had no artillery at all (Denison Ross, 163), but his interpreter, Angelo, asserts that Shāh ʿAbbās "has some cannon, having captured many pieces from the Tartars; moreover there is no lack of masters to manufacture new ones, these masters have turned against the Turk and have come to serve the King of Persia" (Denison Ross, 29). Purchas, writing in 1624, claims that such progress was made under the guidance of the Sherley brothers that "the prevailing Persian hath learned Sherleian arts of war, and he which before knew not the use of ordnance, has now 500 pieces of brass" (Denison Ross, 21).

There is abundant evidence, however, in both the European and the Persian sources, that the Persians were familiar with the use of artillery long before the time of ʿAbbās I. The Venetian ambassador d'Alessandri, who arrived in Persia in 1571, states that the Ottoman prince Bāyazīd, who sought refuge with Shāh Ṭahmāsp in 966/1559, brought with him thirty pieces of artillery (*A Narrative of Italian Travels in Persia in the 15th and 16th centuries*, London 1873, 228). Herbert (*A Relation of Some Yeares Travaile* etc., London 1634, 298) states that the Persians "got the use of cannon from the van quised Portugal", and Figueroa states that the Persian artillery was manipulated by Europeans "and particularly by the Portuguese" (*Tadhkirat al-Mulūk*, 33). We know that in 955/1548 the Portuguese furnished Ṭahmāsp with 10,000 men and 20 cannon at the time of the Ottoman sultan Sulaymān's second invasion of Persia (*A Chronicle of the Carmelites*, i, 29). Direct evidence that artillery was used by the Persian army even earlier than this is found in the contemporary Persian chronicle *Aḥsan al-Tawārikh* (ed. C. N. Seddon, Baroda 1931). In the Ṣafawid army which laid siege to Dāmghān in 935/1528-9 there was a certain Ustād (*i.e.*, "master" [of his craft]) Shaykhī the gunner (*tūpčī*) (*AT*, 212). In a pitched battle with the Özbegs near Mashhad, later the same year, Ṭahmāsp stationed in front of his army the wagons containing the *ḍarbzan* (probably a type of light cannon, cf. the Mamlūk term *ḍarbzāna*; see D. Ayalon, *Gunpowder and Firearms in the Mamlūk Kingdom*, London 1956, 127, n. 220) and (*tūp-i*) *farangī* (*AT*, 214); the gunners and musketeers (*tūpčiyān wa tufangčiyān*) were, however, unable to use their guns because the Özbegs did not approach from the front (*AT*, 217). In 945/1538-9 the besieging Ṣafawid forces destroyed the towers (*burdj*) of the fort of Bīkrid in Shīrwān by artillery fire (*AT*, 287). In 946/1539-40 we hear for the first time of a *tūpčī-bāshī* (commander-in-chief of artillery), in an action against Amīra Ḳubād, the rebel governor of Āstārā (*AT*, 293). From this time onwards artillery was frequently used by the Ṣafawids in siege warfare, for instance at Gulistān and Darband (954/1547-8) (*AT*, 321-2). At the siege of Kīsh near Shakkī in 958/1551-2 the Ṣafawids used "Frankish cannon" (*tūp-i farangī*), and in addition a type of cannon called *bādlidj* (cf. P. Horn, *Das Heer- und Kriegswesen des Grossmoghuls*, Leiden 1894, 29), and mortars (*ḳazḳān*), which are mentioned for the first time; the towers of the fort were destroyed after twenty days' bombardment (*AT*, 350).

It is clear, therefore, that the claim that the Sherleys introduced artillery into Persia is entirely without foundation. In fact, artillery was in regular use at least as early as 935/1528-9, that is, within a few years of the accession of Shāh Ṭahmāsp, and fifteen years after the Ṣafawid defeat at Čāldirān [*q.v.*], a defeat for which the Ottoman artillery was largely responsible. It must be emphasised, however, that even before Čāldirān, the Ṣafawids were familiar with the use of artillery, and that consequently the Ṣafawid lack of artillery at Čāldirān can only be attributed to a deliberate policy not to develop the use of firearms in the Persian army. The Persians had an innate dislike of firearms, the use of which they considered unmanly and cowardly (Naṣr Allāh Falsafī, *Djang-i Čāldirān*, in *Madjalla-yi Dānishkada-yi Adabiyyāt-i Tihrān*, i/2, 1953-4, 93), and in particular they disliked artillery, because it hampered the swift manœuvres of their cavalry (*Tadhkirat al-Mulūk*, 33). It is remarkable that, although we have frequent instances of the use of artillery in siege

warfare, little attempt seems to have been made to emulate the Ottomans in the use of artillery in the field. At the battle of Mas̲h̲had in 935/1528-9 (see above), the one occasion on which the sources specifically record the use of artillery in the field by Ṭahmāsp, its immobility rendered it ineffective, and we hear no more of field artillery until the time of S̲h̲āh ʿAbbās I. Even under the latter, however, the use of artillery was still mainly confined to siege warfare (Naṣr Allāh Falsafī, *Zindigānī-yi S̲h̲āh ʿAbbās-i Awwal*, ii, Tehran 1334 solar/1955, 403).

It seems that in the use of artillery, as in much else, the Ṣafawids were the heirs of the Aḳ Ḳoyunlu. Long before the establishment of the Ṣafawid state, the Aḳ Ḳoyunlu rulers of Diyār Bakr and Ād̲h̲arbāyd̲j̲ān had sought to equip their armies with artillery: the Venetians sent Uzun Ḥasan (d. 882/1478) "100 artillerymen of experience and capacity, who were immediately sent on to Persia, for in the matter of their artillery the Persian armies suffered greatly from a paucity of cannon, while on the other hand the Turkish armies in Asia were very well equipped in this arm, and they could effect much damage in their attack" (*Don Juan of Persia*, ed. trans. G. Le Strange, London 1926, 98). When a Ṣafawid force of 10,000 men under Muḥammad Beg Ustād̲j̲lū laid siege to Ḥiṣn Kayfā in Diyār Bakr about the year 913/1507-8, they made use of "a mortar of bronze, of four spans, which they brought from Mirdin (Mārdīn) .... This mortar was cast in that country at the time of Jacob Sultan (Yaʿḳūb Sulṭān Aḳ Ḳoyunlu, d. 896/1490), and by his orders .... and Custagialu (Muḥammad Beg Ustād̲j̲lū) also had another larger one cast by a young Armenian, who cast it in the Turkish manner —all in one piece. The breech was half the length of the whole piece, and the mortar was five spans in bore at the muzzle" (*A Narrative of Italian Travels in Persia*, 153). About the same time (probably in 912/1506-7) Ismaʿīl sent a force of 10,000 men under Bayrām Beg (Ḳaramānlū?) to lay siege to Wān. Bayrām Beg, "having two moderate-sized cannons in his camp, began to batter the castle; but they were able to do no harm, as the walls were too strong and the gunners too little skilled". After besieging the castle for three months, however, the artillerymen succeeded in destroying the source of the defenders' water supply, and the castle was thus at their mercy (*A Narrative of Italian Travels in Persia*, 161-3). In 916/1510 Ismaʿīl is said to have captured four cannon from the Özbegs after his great victory at Marw (D̲j̲amīl Ḳuzānlū, *Tārīk̲h̲-i Niẓāmī-yi Īrān*, vol. i, Tehran 1315 solar/1936, 372; no authority is quoted for this statement). It seems, therefore, from the evidence available, that although the Ṣafawids used cannon in siege warfare during the first decade of the reign of Ismaʿīl I, the number of guns available was small, and the gunners were as yet inexperienced.

Sir Anthony Sherley has also been given the credit for the formation of a corps of musketeers by S̲h̲āh ʿAbbās I. In a letter dated 22 April 1619, the traveller Pietro della Valle says that the corps was created by S̲h̲āh ʿAbbās "a few years ago" on the advice of Sir Anthony Sherley (*Tad̲h̲kirat al-Mulūk*, 31). Sir Anthony's interpreter Angelo, however, stated in Rome on 28 November 1599 that S̲h̲āh ʿAbbās could provide horses for 100,000 men, who were armed with bows, arrows and scimitars, and that in addition he had 50,000 arquebusiers; "at one time the King did not use arquebusiers, but now he delights in them" (Denison Ross, 29). Sir Anthony's party left Iṣfahān about the beginning of May 1599 (see Denison Ross, 22), and it seems unlikely that a corps of 50,000 men could have been organised during the five months which Sir Anthony spent in the Persian capital. Of the various members of Sir Anthony's party who have left a record of their travels, not one claims that Sir Anthony was responsible for the formation of this corps, and Sir Anthony himself, in his own account of his journey to Persia, states (with reference to S̲h̲āh ʿAbbās's victory over the Özbegs in K̲h̲urāsān on 9 Muḥarram 1007/12 August 1598) that "thirty thousand men the King tooke with him for that warre, twelve thousand Harquebusiers which bare long pieces, halfe a foote longer than our muskets, sleightly made ..... which they use well and certainely" (*Purchas His Pilgrimes*, viii, London 1905, 409-10).

Apart from Sir Anthony's own testimony to the existence of a large and efficient body of musketeers in the Persian army before his arrival in Persia, there is conclusive evidence, again in both the European and the Persian sources, that Persian troops were equipped with hand-guns and skilled in their use long before the time of ʿAbbās I. One of Sir Anthony's companions, Manwaring, explicitly states that the Persians were already "very expert in their pieces or muskets; for although there are some which have written now of late that they had not the use of pieces until our coming into the country, this much must I write to their praise, that I did never see better barrels of muskets than I did see there; and the King hath, hard by his court at Aspahane, above two hundred men at work, only making of pieces, bows and arrows, swords and targets" (Denison Ross, 222). Even earlier (c. 1571) is the valuable account of d'Alessandri: "they use for arms swords, lances, arquebuses, which all the soldiers can use; their arms also are superior and better tempered than those of any other nation. The barrels of the arquebuses are generally six spans long (*A Chronicle of the Carmelites in Persia*, London 1939, i, 53, gives "7 palms" = 1.75 m.; incidentally this version of the text contains an obvious mistranslation), and carry a ball a little less than three ounces in weight. They use them with such facility, that it does not hinder them drawing their bows nor handling their swords, keeping the latter hung at their saddle-bows till occasion requires them. The arquebus then is put away behind the back, so that one weapon does not impede the use of another" (*A Narrative of Italian Travels in Persia*, 227). Herbert (*op. cit.*, 298) states that the Persians had used muskets "since the Portugals assisted King Tahamas with some Christian auxiliaries against the Turk (probably in 955/1548) so as now (*i.e.*, in 1627) they are become very good shots". In the contemporary Persian chronicle *Aḥsan al-Tawārīk̲h̲*, however, there is direct evidence that hand-guns (*tufang*) were in use in the Persian army even before the death of Ismaʿīl I: in 927/1520-1 a detachment of the Ṣafawid garrison at Harāt drove off the troops of ʿUbayd K̲h̲ān Özbeg with arrows and hand-guns (*tīr u tufang*) (*AT*, 171). This is the first reference to hand-guns in this chronicle, and from then on they are mentioned frequently. In 930/1523-4, the year of S̲h̲āh Ismaʿīl's death and S̲h̲āh Ṭahmāsp's accession, infantry armed with hand-guns (*piyādagān-i tufang-andāz*) constituted part of the Ṣafawid garrison at Harāt, and reference is made to two successful actions against the Özbegs in which hand-guns were employed (*AT*, 186). In 934/1527-8, when Harāt was besieged for four months by the Özbegs, the Özbeg *amīr al-*

umarā Yārī Beg was killed by a shot fired from a hand-gun by one of the defenders (*AT*, 206). In 935/1528-9 Ṭahmāsp himself led an army to Khurāsān against the Özbegs, and laid siege to Dāmghān; his forces included a group of Rūmlū *tufangčīs* (*AT*, 212). A few months later, the Özbegs laid siege to Mashhad; musketeers (*tufangčiyān*) formed part of the Ṣafawid garrison (*AT*, 221). While the *Aḥsan al-Tawārīkh* thus affords positive evidence of the use of muskets in the Persian army as early as 927/1520-1, there is a strong indication in *A Narrative of Italian Travels in Persia* that they were in fact in use even before the battle of Čāldirān. In the description of the siege of Ḥiṣn Kayfā by Ṣafawid forces about the year 913/1507-8, there is a reference to "guns" which, in the context, can only mean "hand-guns", and we are also told that the defenders possessed three or four muskets of the shape of "Azemi", *i.e.*, of *ʿAdjamī* or Persian design; these muskets had a small barrel and, with the aid of "a contrivance locked on to the stock about the size of a good arquebuse", had a good range (*op. cit.*, 153).

It is clear, therefore, that the claim that the Sherleys initiated the formation of a corps of musketeers, if it has any historical foundation at all, can only be true in the sense that Shāh ʿAbbās was the first to create a *regular* corps of musketeers, which formed part of a standing army paid from the *khāṣṣa* revenue, as opposed to the units in existence under Ismaʿīl I and Ṭahmāsp, which, like the rest of the Persian army at that time, were probably raised on a tribal basis and paid from the revenue of the *dīwān-i mamālik*. There is no doubt, however, that the practical advice of the Sherleys was of great benefit to Shāh ʿAbbās, who held Sir Robert Sherley in such esteem that, after Sir Anthony's departure, he appointed him "Master General against the Turks" (G. N. Curzon, *Persia and the Persian Question*, London 1892, i, 574). In addition to the corps of musketeers (*tufangčiyān*), 12,000 strong (Chardin, *Voyages du Chevalier Chardin en Perse*, ed. Langlès, Paris 1811, v, 305), who were intended to be infantry but were gradually provided with horses, Shāh ʿAbbās created two other corps to form part of the new standing army, namely, the artillery (*tūpčiyān*), also 12,000 strong (Chardin, v, 312-3), and the "slaves" (*ḳullar, ghulāmān-i khāṣṣa-yi sharīfa*), a cavalry regiment recruited from Georgia and Circassia, armed *inter alia* with muskets, and numbering 10-15,000 (*Tadhkirat al-Mulūk*, 33). The Ṣafawid army was at its strongest under Shāh ʿAbbās I; its numbers declined under his successor Ṣafī (d. 1052/1642) and were reduced still further by ʿAbbās II (d. 1077/1666), who took the extraordinary step of abolishing the corps of artillery; when the *tūpčī-bāshī* Ḥusayn Ḳulī Khān died in 1655, no successor was appointed (Chardin, v, 312-313), and artillery does not seem to have reappeared on the scene until the reign of Shāh Sulṭān Ḥusayn (1105-1135/1694-1722) (*Tadhkirat al-Mulūk*, 33). At the battle of Gulnābād against the Afghāns (8 March 1722), the Persians had 24 cannon, under the command of the *tūpčī-bāshī* Aḥmad Khān and under the supervision of a French master gunner named Philippe Colombe (L. Lockhart, *The Fall of the Ṣafavī dynasty and the Afghan Occupation of Persia*, London 1958, 135, who quotes Krusinski's scathing remarks on the incompetence of the *tūpčī-bāshī*); the artillery was overrun by the Afghān advance, and both the *tūpčī-bāshī* and Philippe Colombe lost their lives (*ibid.*, 142). It is not too much to say that the Ṣafawids never really made any effective use of artillery in the field.

vi. — INDIA

Naphtha (*naft*) was used by the Muslims in India by Muḥammad b. Ḳāsim in 93/711 against Rādja Dāhir. *Tīr-i ātishīn* (fiery-arrows) were the simplest fire missile used by the Muslim Indian rulers in the early part of the 7th/13th century. The department of *ātish-bāzī* (fireworks) was placed under the *Mīr Ātish*. Firishtā's statement that Sulṭān Maḥmūd of Ghazna employed *tūp* "cannon" and *tufang* "muskets" against Anand Pāl near Peshāwar in 399/1008 is an obvious anachronism. It may, however, refer to his use of a missile carrying naphtha (*ḳārūra-i naft*)—a weapon mentioned by Firishta in another place regarding Sulṭān Maḥmūd's campaign in India. Saltpetre, an important ingredient of gunpowder, is commonly found in India. The word *kushk-andjīr* mentioned in the 13th century MSS., *Ādāb al-Mulūk* (f. 118 b) and *Tādj al-Maʾāthir* (f. 3a), needs a minute examination. The *Farhang-i Sharaf-nāma-i Aḥmad Munyārī* (compiled in 875/1470) gives its meaning as: "a perforator, or an instrument for throwing stones or a *gōla* (ball) projected by the expansive force of combustible substances". Steingass explains it as a cannon or cannon ball. According to the *Bāhār-i ʿAdjam*, it is an instrument of war worked with gunpowder. From this it would seem that a machine which discharged balls by some explosive force was used in India by 628/1230. *Sang-i Maghribī* "Western stone", mentioned by both Baranī and Amīr Khusraw as being used under ʿAlāʾ al-Dīn Khaldjī (695-715/1296-1316) can not be taken as denoting "gun". This new implement was borrowed from Spain and North Africa—countries which were called in Arabic "the West". Generally the besiegers employed this machine to bombard a fort. How the stones were thrown is not clearly stated, but this much is certain, that the stone balls were discharged by the force generated by gunpowder.

It is very difficult to discover the real nature of fire-arms used in the 7th/13th or the beginning of the 8th/14th century in India, as the term *ātish-bāzī* (fireworks) is applied to pyrotechnic displays as well to artillery, thus rendering the meaning of the passages ambiguous. However *tūp* and *tufang* are mentioned as being in frequent use from the middle of the 8th/14th century. When Sulṭān Maḥmūd fought against Tīmūr at Delhi in 800/1398, the former's elephants carried howdahs in which were *raʿd-andāz* "throwers of grenades" and *takhsh-andāz* "throwers of rockets". Artillery was improved under the Lodis (855-932/1451-1526). Ibrāhīm Lodī employed *tūp* and *ḍarbzan* "mortars" against Bābur at the battle of Pānīpat in 932/1526.

In the latter half of the 8th/14th and beginning of the 9th/15th century, the use of cannon became very common in the Deccan. The chief reason was that the Deccan States were in contact by sea with Arabia, Iran and Turkey, from which they received artillery and engineers. Firishta records that Sulṭān Maḥmūd Shāh Bahmanī installed a firearms factory in 767/1365; he was the first of the Muslim rulers of the Deccan to do so. Sulṭān Maḥmūd Bāyḳarā with the help of his Turkish gunners sank with his guns a large Portuguese ship at Diu in 915/1509. Bahādur Shāh of Gudjarāt excelled his contemporaries in artillery; his master gunner, Rūmī Khān, cast many cannon. One of the reasons for Bahādur's success against the Portuguese was his superior

artillery. All these facts show that cannon were used in India long before Bābur employed them at Pānipat in 932/1526.

The Mug͟hals paid much attention to the art of artillery. Bābur had a limited number of heavy guns at Pānipat. He uses the words *deg͟h*, *firingī* and *ḍarbzan*, but does not mention their number. He used his artillery "chained together according to the custom of Rūm with twisted bull-hides". Bābur's gun could be discharged eight to sixteen times a day only and after improvement could cover a range of 1600 strikes. Rockets became common in India after 947/1540. The barrels of Akbar's (963-1014/1556-1605) matchlocks were of two lengths, 66 ins. and 41 ins. They were made of rolled strips of steel with the two edges welded together. The longer of the two weapons could only be used by a man on foot. The flintlock was little known to the Mug͟hals. The artillery was much improved, and was more numerous, in Awrangzīb's reign (1068-1118/1658-1707). Besides Indians, Turks, Arabs and Portuguese, the Dutch were also employed by Awrangzib. There was one Dutch artillery engineer who served Awrangzīb for sixteen years and went home in 1077/1667.

Heavy field guns were used both by the Mug͟hals and the Deccanīs. The *haft gazī* in Bīdār was constructed in 977/1570. It measures 31 ft. in length. The *malik-i maydān* "king of the battlefield" was built in 957/1549 by Burhān Niẓām S͟hāh. The metal is an alloy of 80,427 parts of copper to 19,573 parts of tin. It weighs 400 maunds and the bore is so wide that a man can sit and move about in it easily. The weight of its iron shot is ten maunds (Akbar's scale). The *ḳalʿa-kus͟hā*, used by Dārā in 1068/1658 at Sāmugarh, was made of 80% tin and measured 25 ft. in length. During the contest for the throne between the sons of Bahādur S͟hāh in 1123/1712, three large guns were removed from the fort of Lāhore, each being dragged by 250 oxen aided by five or six elephants, and it took ten days to reach the camp although it was not more than three or four miles distance.

Tūpk͟hāna-i Zerah or *tōpk͟hāna-i D̲j̲ambis͟hī* was light or mobile artillery. The *gad̲j̲nāl* or *hatk͟hnāl* was fired from the back of an elephant. *S͟hutarnāl* or *S͟hāhīn* denotes the same weapon, a swivel-gun. According to Baranī, the *zambūrak* was "a small field-gun of the size of a double musket". It threw a ball of two or three pounds. The *dhamākah* and *zahkāla* were light field-guns. The *arg͟hūn* was composed of about thirty-six barrels so joined as to fire simultaneously. Revolvers with four chambers were only in the possession of the nobles.

(YAR MUHAMMAD KHAN)

AL-**BĀRŪDĪ**, MAḤMŪD SĀMĪ, Egyptian and statesman, born 27 Rad̲j̲ab 1255/6 October 1839, died in Cairo in 1332/1904; his genealogy went back to Nawrūz al-Atābakī al-Malakī al-As͟hrafī, brother of Barsbay (d. 841-1438). "Al-Bārūdī" is the *nisba* of a small town in the province of Lower Egypt: al-Baḥīra, called Itāy al-Bārūd. He lost his father, then an official in the Dongola, at the age of seven. After completing his primary studies, he entered, in 1267/1851, the Cairo Military Training School, during the reign of the Viceroy ʿAbbās I (1848-1854), and left it in 1271/1855 with the rank of *bās͟hd̲j̲āwīs͟h* (quartermaster-sergeant), at the beginning of the reign of Saʿīd I (1854-1863).

His taste for poetry developed from this time onwards; his reading and personal researches, his contacts with the men of letters and poets of the period, made him, despite his military duties in his capacity as an officer which took up most of his time, one of the leaders of the literary renaissance in Egypt. A return to the true sources of poetry, that is to say to the great poets of the *d̲j̲āhiliyya* and particularly of the ʿAbbāsid period, seemed to him essential; but he wished also to belong to his own epoch, and for this reason he took advantage of every opportunity to broaden his knowledge in all fields of literature, to begin with, Turkish and Persian, and later, French and English. He lived for some time in Constantinople, with the title of Secretary for Egyptian Foreign Affairs. At the time of the visit of the Viceroy Ismāʿīl to the Ottoman capital, he brought himself to the notice of the new viceroy who had just succeeded Saʿīd (1279/1863): al-Bārūdī thereupon joined the military establishment of the Egyptian sovereign. Promoted *biñbās͟hī* (battalion-commander) in Muḥarram 1280/July 1863, he assumed command of the Viceregal Guard. He was a member of the military mission sent by Egypt to Camp de Chalons, in France, and thence to London. On his return in 1281/1864, he was promoted *ḳāʾim-maḳām* (lieutenant-colonel) of the 3rd regiment of the Guard and, shortly afterwards, *amīr-ālāy* (colonel) of the 4th regiment of the same Guard.

He took part in the war in Crete in 1282/1865, and his services won him the Turkish decoration *Wisām ʿUt͟hmānī*, 4th class. Ismāʿīl, who since 1283/1866 had been Khedive, kept al-Bārūdī at the head of his Guard, and later appointed him private secretary and sent him to Constantinople, during the Serbo-Bulgarian war, to perform various diplomatic missions. At the time of the Russian war in 1294/1877, al-Bārūdī proved himself a brilliant and courageous officer, and as a result was promoted *amīr al-liwāʾ* (brigadier-general). From 1296/1879 to 1882, al-Bārūdī busied himself with the reorganisation of the Egyptian General Staff, under the Khedive Tawfīḳ who had succeeded Ismāʿīl in 1296/1879. Meanwhile, appointed Minister of *Waḳfs*, he tried to clear up the position regarding property in mortmain, and used the sums thus recovered for the construction of public works: mosques and dwellings; he began the construction of the Khedivial Library, and proposed the creation of a Museum of the Fine Arts.

Promoted *fariḳ* (lieutenant-general), and decorated with the *Nis͟hān Mad̲j̲īdī*, he became, in 1298/1881, Minister of War as well as Minister of *Waḳfs*, and thus found himself constrained to participate in the nationalist movement then in its infancy, and to intervene in the serious conflict between the locally recruited Egyptian army and the Turko-Circassian officers. From then on, al-Bārūdī found

himself involved, either as a spectator or as an active participant, in what is known as *Thawrat ʿArābī Pasha* or *al-Thawra al-ʿArabiyya*, "the Revolt of ʿArābī Pasha" (the name is also pronounced ʿUrābī). Summary of events: fall of the minister Sharīf Pasha; formation of al-Bārūdī's Cabinet; proclamation of the Constitution of 1299/1882; bombardment of Alexandria by the British fleet; landing of the British army; defeat of ʿArābī Pasha at Tell-al-Kebir (near Cairo); occupation of Egypt by Britain; exile of the leaders or promoters of the "Revolt", among whom were al-Bārūdī, ʿArābī Pasha and Shaykh ʿAbduh.

For seventeen years, from the end of 1882 until the beginning of 1900, al-Bārūdī was obliged to reside in the island of Ceylon. He profited by his enforced leisure to study English, to devote himself to teaching his compatriots and co-religionists, and above all to take up again his favourite studies in Arabic poetry and to give his inspiration free rein to compose the major poems of his *dīwān*.

When he returned to Egypt after having been pardoned by the Decree of 18 Muḥarram 1318/18 May 1900, he had amassed numerous poems selected with discrimination from the collections and *dīwān*s of the ʿAbbāsid period, and which, arranged in categories, constituted the most representative anthology of *muwallad* or *muḥdath* ("modern") poets. These categories are as follows: 1. *Adab* (moral or ethical); 2. *Madīḥ* (panegyric); 3. *Rithāʾ* (threnody); 4. *Ṣifāt* (descriptive); 5. *Nasīb* (erotic); 6. *Hidjāʾ* (satire); 7. *Zuhd* (renouncement of the world). The poets quoted, arranged in chronological order, are thirty in number, and the total verses quoted under each of the above headings are respectively: 1,697, 24,185, 3,400, 3,393, 4,616, 1,229 and 473, making a grand total of 39,593 verses. The number of verses of the *madīḥ* category is particularly remarkable. More important, it seems to me, is the importance attributed to certain poets. Ibn al-Rūmī and al-Buḥturī lead the field with 3,732 and 3,397 verses. Two poets have between 2,500 and 3,000 verses: Sibṭ Ibn al-Taʿāwīdī and al-Sharīf al-Raḍī; four between 2,000 and 2,500 verses: al-Arradjānī, Abū Tammām, al-Mutanabbī and al-Sarī al-Raffāʾ (al-Mutanabbī is therefore placed seventh); two between 1,500 and 2,000 verses: Ibn Nubāta al-Miṣrī and Mihyār al-Daylamī; five, between 1,000 and 1,500 verses: al-Abīwardī, al-Ghazzī, Ibn Ḥayyūs, Abu 'l-ʿAlāʾ al-Maʿarrī, Ṣurradurr; eight, between 500 and 1,000 verses: al-Ṭughrāʾī, Abū Nuwās, ʿUmara al-Yamanī, al-Tihāmī, Ibn Hāniʾ al-Andalusī, Ibn Sinān al-Khafadjī, Ibn al-Muʿtazz and Ibn al-Khayyāṭ; and, finally, seven, between 90 and 500 verses: Abū Firās al-Ḥamdānī, Muslim b. al-Walīd, Abu 'l-ʿAtāhiya, Ibn ʿUnayn, al-ʿAbbās b. al-Aḥnaf, Bashshār b. Burd and Ibn al-Zayyāt.

The *Mukhtārāt* of al-Bārūdī did not appear in any bookseller's before the death of the author, but were published in Cairo in four volumes, two in 1327/1909 and two in 1329/1911, through the efforts of the scholar Yāḳūt al-Mursī.

Al-Bārūdī's *dīwān*, which similarly did not appear until after his death, was first published, thanks to the scholar and commentator Maḥmūd al-Imām al-Manṣūrī, in three volumes in two (poems with rhymes *hamza* to *lām*), n.d., 536 and 631 pages, and was published a second time in 1940 with a preface by M. Ḥ. Haykal and a commentary by ʿAlī al-Djārim and Muḥammad Shafīḳ Maʿrūf; it reveals the same eclecticism. Occasional pieces are numerous; accurate descriptions of places enable one to follow the poet-statesman through its various étages; some of the poems composed at Colombo (Ceylon) are particularly moving. It is not possible, within the limits of this article, to go into the detail which would be required by a more profound critical appreciation of the subject matter, not to mention the form, of his poems. Let it suffice to say that al-Bārūdī attained an undisputed mastery of poetic language in its purest classical form; vocabulary, figures of speech, stylistic devices, held no secrets for him. He did not seek to make innovations in the pattern of the *ḳaṣīda* or in the poetic metres (there is a rare exception in the *dīwān*, i, 63-4), and remained faithful to his models. His admiration for the passed led him to imitate several famous poems, with resounding success. For example, his imitation of the *Burda* of al-Būṣīrī, using the same metre (*basīṭ*) and the same rhyme (*mi*), under the title of *Kashf al-Ghumma fī Madḥ Sayyid al-Umma* (Cairo 1327/1909, 8vo, 48 pages, 447 verses, whereas the *Burda* only contains 172). The themes used in his *dīwān*, however, are very modern and, in this respect, al-Bārūdī is justly considered to be one of the most effective pioneers of the renaissance of contemporary Arabic poetry.

Bibliography: The reader is referred to the very full references given by J. A. Dagher, in his *Maṣādir al-Dirāsa al-Adabiyya*, ii/1: *al-Rāḥilūn (1800-1955)*, Beirut 1956, 159-162. To these should be added, with regard to the *Thawra ʿArabiyya*, the following two works which give all necessary documentation: M. Sabry, *La genèse de l'esprit national égyptien (1863-1882)*, Paris 1924, and Osman Amin, *Muḥammad ʿAbduh. Essai sur ses idées philosophiques et religieuses*, Cairo 1944.— Cf. also the notice in Brockelmann S III, 7-18.

(H. Pérès)

BARŪDJIRD (or Burūdjird), a town in the VIth *ustān* (Luristān) of Persia, situated on the road connecting Hamadān with Ahwāz *via* Khurramābād; it is the seat of a *farmāndār* (deputy governor). The population is 47,000.

The town stands on an extensive and well-cultivated plain that is bounded on the west by the Zagros mountains. The climate is temperate in summer, but cold in winter. There are some 900 shops most of which are in the two large bazaars. The Masdjid-i Djāmiʿ (cathedral mosque) dates from the Mongol period.

It was at Barūdjird that the Saldjūḳ prince Barkyārūḳ [*q.v.*] in 485/1093 defeated the forces of his mother Turkān Khātūn who, after her husband Malikshāh's death, had espoused the cause of her younger son Maḥmūd.

AL-BĀRŪNĪ, Sulaymān, contemporary Tripolitanian Ibāḍī scholar and politician, who inspired the Arabs of his country in their struggle against Italy. He belonged to an old and influential Berber family of the Djabal Nafūsa (with branches at Djādo, Kābaō and Djerba, where there is a private *bārūniyya* library) and was the son of ʿAbd Allāh al-Bārūnī, the theologian, jurist and poet, who taught at the *zāwiya* of al-Bakhābkha, near Yefren. Sulaymān was suspected by the Ottoman govern-

ment of nurturing separatist ideas and plotting the founding of an Ibāḍite imāmate. Proceedings were instituted against him, but the sentences pronounced were not fully executed because of the disturbances which they provoked, especially in the Djabal. Finally he was granted an amnesty, but upon the Ottoman authorities requesting him to present himself in Constantinople, he fled to Cairo.

A man of unusual culture (having studied at Tunis, al-Azhar and in the Mzab), he founded a printing office, which had the outstanding merit of disseminating several old Ibāḍī works. He also founded a newspaper, which however only enjoyed an ephemeral life, its circulation in the Ottoman provinces, Tunisia, and Algeria, being prohibited.

After the promulgation in Turkey of the constitution following the Young Turks' revolution, Sulaymān al-Bārūnī was elected deputy in the *liwā'* of the Djabal and called to Constantinople; thereupon he learnt Turkish in two months of intense study.

When Italy's designs on Libya became evident, al-Bārūnī endevoured to obtain consignments of arms from his government. After the Italian landing at Tripoli (11th October 1911), he was one of the most active promoters of the Arab resistance, which made Turkey decide to stand firm, and which continued even after the signing of the Turco-Italian Peace Treaty at Ouchy (or Lausanne, 18th October 1912). In the western Djabal sector, where al-Bārūnī was conducting operations and was aiming at the formation of a Berber amīrate, the issue was decided at the battle of al-Aṣābiʿa (el-Aṣābʿa) on the 23rd March 1913. Upon his return to Constantinople, al-Bārūnī was appointed senator, receiving the title of pasha.

When Turkey entered the war on the side of the Central Powers (1914), al-Bārūnī was sent to Sollum (October 1914) with the brother of Enver Pasha, Nūrī Bey, to induce the leader of the Sanūsīs, Aḥmad al-Sharīf, to attack the British from the West. His mission failed; the plot to force the Sanūsī's hand was discovered and al-Bārūnī arrested. Nevertheless he managed to escape (January 1915). He resumed his rôle as an opponent of Italy, when the latter entered the war. However it was not until the end of 1916, when Turkey had appointed him Governor-General and Commander of Tripoli and its dependencies, that he landed at Misurata from a submarine. The Italians were in a precarious situation, having entrenched themselves at Tripoli, Homs (al-Khums) and Zuara, but the Arabs also were in a state of complete confusion. Their leaders had divergent aims and the tribes were fighting amongst themselves; al-Bārūnī restored harmony. Nevertheless, he soon lost his pre-eminence; after proceeding to western Tripolitania, he was there defeated by the Italians (16th and 17th January 1917). At the end of the same month of January, the Turks replaced him by a military man, the Nūrī Pasha referred to above. In November 1918, that is to say after the signing of the Armistice between Turkey and the Allies, the nationalists, under the influence of the Wilsonian principles, established the Tripolitanian Republic (*al-Djumhūriyya al-Ṭarābulusiyya*) in Tripolitania, to which Italy later granted (1st June 1919) the Tripolitanian Statute. Two movements then manifested themselves, one aimed at an agreement with Italy which would have meant complete independence, and the other, represented especially by the Berbers, favourable to collaboration with Italy by the application of the Statute. Al-Bārūnī, who supported the latter course, gave his support to the Italian government, though his ultimate aim still remained the formation of a Berber amīrate in the Western Djabal with access to the sea. The first policy was adopted at a gathering at Garian (November 1920), where the formation of an amīrate, naturally Arab, was demanded in Tripolitania (the idea of uniting Tripolitania and Cyrenaica matured later—end of 1921—and was given substance by the offer of the office of *amīr* to Idrīs al-Sanūsī [spring of 1922]). The Berbers, seeking Italian support and accused by the Arabs of being heretics because of their position as Ibāḍī, were expelled from the Western Djabal by force and compelled to seek refuge on the coast (July 1921). Thus their dreams of independence or autonomy vanished.

Banished from Tripolitania (22nd December 1921) because of his equivocal attitude, al-Bārūnī, after spending some time in Europe and the Ḥidjāz, went to Maskat as the guest of the sultan Saʿīd b. Taymūr. Thence he moved to the interior of ʿUmān to Muḥammad b. ʿAbd Allāh al-Khalīlī, *imām* of the little Ibāḍite state (capital Nazwā) which survived until recent times [see NAZWĀ] in the Djabal al-Akhḍar, and there received the title of minister and was entrusted with the task of reorganising the State. Subsequently he returned to Maskat where, in 1938, he was appointed adviser to the Sulṭān with wide powers. He died in Bombay (not Maskat: see *OM*, 1940, 326) in 1940.

Of his work entitled *Al-Azhār al-Riyāḍiyya fī A'imma wa Mulūk al-Ibāḍiyya*, only the second volume has been published (Cairo, n.d., [1906-7].)

(L. VECCIA VAGLIERI)

BARZAKH a Persian and Arabic word meaning "obstacle" "hindrance" "separation" (perhaps identical with Persian *farsakh* [*q.v.*], a measure of distance). It is found three times in the Ḳur'ān (xxiii, 102; xxv, 55 and lv, 20) and is interpreted sometimes in a moral and sometimes in a concrete sense. In verse 100 of Sūra xxiii the godless beg to be allowed to return to earth to accomplish the good they have left undone during their lives; but there is a *barzakh* in front of them barring the way. Zamakhsharī here explains the word by *ḥā'il*, an obstacle, and interprets it in a moral sense: a prohibition by God. Other commentators take the word more in a physical sence; the *barzakh* is a barrier between hell and paradise or else the grave which lies between this life and the next. In the other two passages of the Ḳur'ān, it is a question of two seas, or great stretches of water, one fresh, the other salt, between which there is a *barzakh* which prevents their being mixed. The same thing is mentioned in verse 61 of Sūra xxvii, and in this passage the word *ḥādjiz* or hindrance takes the place of *barzakh*. The commentators say that there is here an allusion to the fresh waters of the Shaṭṭ al-ʿArab which flow a great distance out into the salt sea without mixing with it; the impedi-

ment here is the effect of a law of nature established by God.

In eschatology, the word *barzakh* is used to describe the boundary of the world of human beings, which consists of the heavens, the earth and the nether regions, and its separation from the world of pure spirits and God. See the pictures representing this conception in the *Maʿrifat-nāma* of Ibrāhīm Ḥaḳḳī (Būlāḳ 1251, 1255); cf. also Carra de Vaux, *Fragments d'eschatologie musulmane*; R. Eklund, *Life between Death and Resurrection recording to Islam*, Uppsala 1941.

The Ṣūfīs, too, use the town in the sense of space between the material world and that of the pure spirits; hence several shades of meaning; cf. C. E. Wilson, *The Masnavī*, book ii, vol. ii, note 20.

The same expression is also found in the philosophy known as "illuminating" (*al-ḥikma al-mas̲h̲riḳiyya*). It there denotes the dark substances, i.e bodies: the *barzakh* or the body is dark by nature and only becomes light on receiving the light of the spirit. The celestial spheres are "animated" or "living" *barzakh*s, inanimate bodies on the other hand are "dead" *barzakh*s (cf. Carra de Vaux, *La Philosophie illuminative d'après Suhrawardi Meqtoul*, in *JA*, Jan.-Febr. 1902).

The term *barzakh* is sometimes rendered by Purgatory, on the analogy of the Christian idea of Purgatory, but this is inaccurate. It is used in the sense of "limbo". See further al-Tahānawī, *Dict. of Technical Terms*, s.v. (B. Carra de Vaux*)

BĀRZĀN, a Kurdish village on the left (eastern) bank of the Great Zāb river, approximately 80 km. due north of Arbīl, in what was formerly the territory of the Zēbārī tribe. S̲h̲araf al-Dīn Bitlīsī, *S̲h̲araf-nāma*, i, 107, in 1005/1596, numbered it among the possessions of the Bahdīnān princes under the name of Bāzīrān. Since the middle of the 13th/19th century Bārzān has been the residence of a Naḳs̲h̲bandī S̲h̲ayk̲h̲. The S̲h̲ayk̲h̲s and their followers, now known as the Bārzānī tribe, maintained a turbulent independence of Ottoman authority until, early in 1333/1915, the Mawṣil authorities captured and hanged S̲h̲ayk̲h̲ ʿAbd al-Salām II. His successor, S̲h̲ayk̲h̲ Aḥmad, temporarily declared himself a Christian in 1350/1931. This occasioned warfare with the neighbouring Brādōst tribe, necessitating the intervention of the government of ʿIrāḳ. The S̲h̲ayk̲h̲ fled to Turkey, where he was arrested.

In midsummer 1362/1943 Mullā Muṣṭafā, brother of S̲h̲ayk̲h̲ Aḥmad, escaped from seclusion at Sulaymāniyya to Bārzān, where he gathered support and rebelled against the government. He had some initial success against government forces, but was finally obliged to retire, early in 1364/1945, to Persia. He assisted at the inauguration of the Kurdish People's Republic at Mahābād on 10 Muḥarram 1365/15 December 1945 and was made a Field-Marshal. On the collapse of the Republic Mullā Muṣṭafā escaped to Soviet territory, while S̲h̲ayk̲h̲ Aḥmad surrendered to the ʿIrāḳ government.

BARZAND, a village and township (*dihistān*), in the district (*s̲h̲ahristān*) of Ardabīl, county (*bak̲h̲s̲h̲*) of Garmī, lying in the mountains overlooking the plain of Mug̲h̲ān to the north. The name may mean "high place". The village lies ca. 47° 40′ E. long. (Greenw.) and 39° 20′ N. lat.

A confusion between Barzand and Barzand̲j̲ (near Tiflis) appears in several of the mediaeval geographers (cf. Yāḳūt, i, 562; *Ḥudūd al-ʿĀlam*, 403). This confusion, together with a remark of Muḳaddasī, 378, that Barzand was a market for Armenians, helps to explain why several geographers (*e.g.*, Yāḳūt) placed Barzand in Armenia.

We find no notice of the place before the time of Afs̲h̲īn [*q.v.*], who in 220/835 made Barzand one of his headquarters in the campaign against Bābak [*q.v.*]. Several sources say that Afs̲h̲īn rebuilt Barzand after he had found it in ruins (Schwarz, 1094). Bābak may have destroyed the town, since it was a strategic point on the main road from Ardabīl north to the Mug̲h̲ān steppe. After the time of Afs̲h̲īn Barzand became a large town with a prosperous bazaar, noted for textiles. It may have suffered during the Mongol conquests, for Ḥamd Allāh Mustawfī, *Nuzha*, trans. G. Le Strange, 91, says the town was in ruins in his time (mid 8th/14th cent.). Later the area was included in the pasture land of the S̲h̲āh Sewan tribe [*q.v.*], and the people spoke Ad̲h̲arī Turkish as they do today.

At the present the township has a population (1950) of ca. 3820, and the central village is called Ḳalaʿ-yi Barzand.

BARZŪ-NĀMA, Persian epic, attributed to Abu 'l-ʿAlāʾ ʿAṭāʾ b. Yaʿḳūb, known as Nakūk (called ʿAṭāʾī b. Yaʿḳūb, known as ʿAṭāʾī Rāzī in Blochét, *Catal. Mss. persans Biblio. Nat. Paris*, iii, 15, no. 1189). According to Riḍā Ḳulī K̲h̲ān Hidāyat, "some people have wrongly considered these two names to represent two poets. This is not so; they are the same person" (*Mad̲j̲maʿ al-Fuṣaḥāʾ*, i, 342). ʿAṭāʾ was a poet in both Arabic and Persian (see his account in Bāk̲h̲arzī, *Dumyat al-Ḳaṣr*) and an official in the reign of the G̲h̲aznawid sultan Ibrāhīm (1059-1099) who, dissatisfied with him, ruined him and held him prisoner for more than eight years at Lahore. ʿAṭāʾ died in 491/1098, according to Awfī (*Lubāb*, i, 72-75). At the end of a remarkable elegy (*mart̲h̲iya*) his contemporary Masʿūd-i Saʿd-i Salmān gave his name clearly: "*az wafāt-i ʿAṭāʾ ibn-i Yaʿḳūb, tāza-tar s̲h̲ud waḳāḥat-i ʿālam*" (by the death of ʿAṭāʾ son of Yaʿḳūb the shamelessness of this nether world received a new stimulus"). His principal work was the *Lay of Barzū* (*Barzū-nāma*), the longest and one of the most important epic poems based on the ancient Persian traditions in imitation of the *Book of the Kings* (*S̲h̲āh-nāma*) of Firdawsī (from which the *Barzū-nāma* in several parts is directly derived). Barzū, son of Suhrāb and grandson of Rustam, was born among the Tūrānians to a woman called S̲h̲āhrū. Persuaded by Afrāsiyāb, leader of the Tūrānians, he went to fight the Persians; at the end of protracted hostilities, Rustam recognised him and reconciled him to the Persians. Finally he died, killed traitorously in the course of a war against the Slavs, represented as demons (*dīw*) ruled over by the *dīw* Ṣiḳlāb. Nöldeke, seeing in these adventures (as J. Mohl did before him) a variant of those of the heroes Suhrāb and D̲j̲ahāngīr, assumed that the work was one of pure invention. The episode of the Tūrānian singing-girl Sūsan, who captured the chief

Persian heroes by a trick, and had decided to send them in chains to Afrāsiyāb, when the Persian hero Farāmurz came suddenly to rescue them, is one of the most brilliant parts of the poem; it may be considered as a work of art on its own merits. Fragments of the *Barzū-nāma* (two MSS. in the Bibl. Nat. Paris, Blochét, *Catal. mss. persans*, iii, 15 and 16) were published by Turner Macan (*Shāh-nāma*, iv, 2160-2296), Kosegarten (*Mines de l'Orient*, V, 309), Vullers (*Chrest. Schahnam.*, 87-99). Also it seems possible to attribute to ʿAṭāʾ the epic poem *Bidjan-nāma*, concerning the exploits of another Persian hero, the last line of which is: "*ču zīn dāstān dil bi-pardākhtam, sūy-i razm-i Barzū hamī tākhtam*", "when I had freed my heart of this poem, I quickly began the Lay of Barzū" (Rieu, *Catal. Persian Mss. British Mus.*, 132-133).

(CL. HUART-[H. MASSÉ])

BARZŪYA, Arabic name, attested by Yāḳūt, of a fortress to which modern writers, following a reference to it by Anna Comnena, prefer to apply the name Bourzey. The local people call it Ḳalʿat Marza. The ruins of this castle, standing on the eastern slope of the Alaouite massif, still dominate the marshy depression of the Ghāb. It had a troubled history from Hellenic times, when the impregnable position of Lysias was known. At the time of the Syrian expedition of the Emperor Tzimisces in 365/975, it passed from Ḥamdānid hands into those of the Byzantines. Subsequently it was occupied by the Crusaders and, forming one of the best defences of the principality of Antioch (at which time it appears to have born the name Rochefort) was retaken by force by Ṣalāḥ al-Dīn in 584/1188. From the Mamlūk period it rapidly lost its importance and the chroniclers merely make passing reference to it.

AL-**BASĀSĪRĪ**, ABU ʾL-ḤĀRITH ARSLĀN AL-MUẒAFFAR, originally a Turkish slave, who became one of the chief military leaders at the end of the Buwayhid dynasty. He owes his *nisba* al-Basāsīrī (al-Fasāsīrī) to his first master who was from Basā (Fasā) in Fars. A *mawlā* of Bahāʾ al-Dawla, he subsequently rose to the highest rank, though we only hear of him from the reign of Djalāl al-Dawla (416-435/1025-1044), in the struggles which the latter was obliged to maintain against his nephew Abū Kālīdjār and the ʿUḳaylids of al-Mawṣil. During the reign of al-Malik al-Raḥīm Khusraw Fīrūz (440-447/1048-1055), a period of continuous troubles due to the indiscipline of the Turkish troops at Baghdād, the struggle between Sunnīs and Shīʿīs in the capital, the ambitions of the ʿUḳaylids and Buwayhid pretenders, the depredations of the Arab and Kurdish tribes, and, finally, the intervention of the Saldjūḳid sultan Toghrul Beg in the affairs of Mesopotamia, al-Basāsīrī came to play a major rôle (Anbār taken from the ʿUḳaylid Karwāsh, 441/1050, Baṣra taken from the brother of Malik Raḥīm, 444/1052, operations against the Arab and Kurdish brigands at Bawāzīdj, 445/1054, assistance given to the Mazyadid Shīʿī Dubays, who had been attacked at al-Djāmiʿān, the future Ḥilla, by the Banū Khafādja, etc.). However in 446/1054, he was unable to stop the rebellion of the Turks in Baghdād, followed by scenes of pillage and famine and an incursion by the troops of the ʿUḳaylid of al-Mawṣil, Ḳuraysh, to Baradān, whence they carried off the camels and horses from his stables. In November of the same year, Ḳuraysh took Anbār, al-Basāsīrī's fief, and, breaking with the Buwayhid, pronounced the *khuṭba* in the name of Toghrul Beg.

At Baghdād al-Basāsīrī had a powerful adversary, the Caliph's vizier the *raʾīs al-ruʾasāʾ* Ibn al-Muslima, who, foreseeing the end of the Buwayhids, had already formed a connexion with Toghrul Beg, because in 446/1054-1055, in which year the Turkish leader's quarrel with the Caliph and his entourage became effective, al-Basāsīrī accused him of having summoned Toghrul's Ghuzz, who had been at Ḥulwān since 444/1052-3. The vizier prevented al-Basāsīrī from taking action against supporters of Ḳuraysh who had come to Baghdād, to which he reacted by impounding one of the vizier's boats, withdrawing the monthly pensions paid to the Caliph and the vizier, and, in March 1055, retaking Anbār by force. Upon his return to Baghdād, he refrained from calling to pay his respects to the Caliph.

Al-Basāsīrī probably already had Shīʿī leanings. In 447/1055, at the time of the Sunnī demonstrations in Baghdād, extremists, doubtless at the vizier's instigation, seized a ship carrying wine destined for al-Basāsīrī, who was then at Wāsiṭ with al-Malik al-Raḥīm, and broke the wine-jars. As the cargo belonged to a Christian, al-Basāsīrī thereupon obtained a *fatwā* declaring the smashing of the jars to be illegal. Thenceforth the vizier sedulously denigrated al-Basāsīrī in the eyes of the Turks of the army, and of the Caliph al-Ḳāʾim. He accused him of being in communication with the Fāṭimid al-Mustanṣir, caused his house in Baghdād to be pillaged and burnt by the Turks, and ordered the Buwayhid to send him away. Meanwhile the troops of Toghrul Beg, who had announced his intention of performing the pilgrimage and of proceeding to Syria and Egypt to dethrone the Fāṭimid, arrived before Baghdād. Al-Malik al-Raḥīm again set out towards Baghdād, whilst al-Basāsīrī went to his brother-in-law, the Mazyadid Dubays; the Turks of Baghdād, deceived by the vizier, regretted his departure. The Caliph, his vizier, and al-Malik al-Raḥīm accepted Toghrul's presence, and his name was pronounced in the *khuṭba* on Friday 15th December 1055; on the 18th, he made his solemn entry into the capital. Discord however was not slow to arise between the inhabitants and the Ghuzz of Toghrul. Toghrul held al-Malik al-Raḥīm responsible for the scenes of pillage which subsequently occurred, and had him arrested on 23rd December.

On Toghrul's orders, Dubays was obliged to break with al-Basāsīrī, who proceeded to Raḥba on the Euphrates. He wrote to the Fāṭimid Caliph Mustanṣir asking him to receive him in Cairo. The vizier al-Yāzūrī did not agree, but the Caliph responded to his request for Fāṭimid aid to conquer Baghdād in his name and prevent the Saldjūḳid from marching on Syria and Egypt; he gave him the governorship of Raḥba and sent him 500,000 dinars, clothes of a like value, 500 horses, 10,000 bows, 1,000 swords, and lances and arrows.

According to the autobiography of the Fāṭimid missionary al-Mu'ayyad fi 'l-Dīn al-Shīrāzī, who was apparently the instigator of the revolt and a real Fāṭimid plenipotentiary in the affair, al-Basāsīrī was not the first to approach Mustanṣir; Mu'ayyad had written to him prior to Toghrul's arrival in Baghdād, though the letters did not reach him until after the Saldjūḳid had entered the city. It was Mu'ayyad who brought the money and supplies sent by Cairo to al-Basāsīrī at Raḥba as well as the Fāṭimid Caliph's patent of investiture.

The year 448/1056-7 was marked by intense Fāṭimid propaganda, attested by the numerous letters addressed by Mu'ayyad to the amīrs of ʿIrāḳ and the Djazīra to win them to the Fāṭimid cause. The excesses of the Ghuzz favoured his success. The *khuṭba* was pronounced in the name of Mustanṣir at Wāsiṭ and other places in ʿIrāḳ, and Dubays, who had been constrained to do likewise for Toghrul, returned to the alliance with al-Basāsīrī. The latter, reinforced by the Arab nomads and the Baghdād Turks who had been despoiled by Toghrul, marched in Dubays's company with a considerable body of troops on the region of Sindjār, where he inflicted a bloody defeat on the Saldjūḳid troops commanded by Toghrul's cousin Ḳutlumush and his ally Ḳuraysh of al-Mawṣil. Ḳutlumush fled to Ādharbaydjān; Ḳuraysh was wounded and captured (29 Shawwāl 448/9 January 1057) and thenceforth made common cause with al-Basāsīrī, who proceeded to al-Mawṣil where the Fāṭimid Caliph was acknowledged.

Toghrul's reaction was not long delayed. He left Baghdād on the 10 Dhu 'l-Ḳaʿda 448/19 January 1057, and, after receiving reinforcements from Persia, marched on al-Mawṣil, took the city and then proceeded towards Nisibīn. Dubays and Ḳuraysh rallied to him, whilst al-Basāsīrī returned to Raḥba with the Baghdād Turks and a group of ʿUḳayl. However, after the arrival of the sultan's brother, Ibrāhīm Īnāl, who heartily disliked the Arabs, Ḳuraysh rejoined al-Basāsīrī, whilst Dubays regained Djāmiʿān via Raḥba. After wreaking his vengeance on Sindjār for the affair of 448 and leaving Īnāl at al-Mawṣil, the sultan returned to Baghdād, where he was solemnly received by the Caliph, who conferred on him the title of King of the West and the East (26 Dhu 'l-Ḳaʿda 449/4 January 1058).

The sultan's brother, Ibrāhīm Īnāl, however, who coveted the sultanate, got into communication with al-Basāsīrī and sent a messenger to the missionary Mu'ayyad, who had come back to Aleppo, with a view to obtaining Fāṭimid support in wresting the sultanate from his brother, promising that the *khuṭba* should be pronounced in the name of the Fāṭimids. He abandoned al-Mawṣil, to which al-Basāsīrī and Ḳuraysh returned. After the taking of the citadel, which held out for four months, al-Basāsīrī returned to Raḥba. However, Toghrul reconquered al-Mawṣil and marched on Nisibīn, whilst, according to Mu'ayyad's autobiography, al-Basāsīrī, undoubtedly alarmed, directed his steps towards Damascus. Then it was that Īnāl rose in rebellion and set out for the Djibāl. Toghrul left Nisibīn on the 15 Ramaḍān 450/5 November 1058 and set off in his pursuit.

Now that ʿIrāḳ was free of the Saldjūḳid for a time, there was nothing to oppose al-Basāsīrī's return and counter-offensive. News was soon received of his arrival at Hīt and then at Anbār. The Caliph Ḳā'im hesitated as to the attitude to adopt and, in spite of the proposal of the Mazyadid Dubays, who offered him a refuge, stayed on in Baghdād, counting on being able to resist. On 8 Dhu 'l-Ḳaʿda/27 December 1058, al-Basāsīrī entered western Baghdād with 400 poorly equipped cavalrymen accompanied by Ḳuraysh at the head of a further two hundred. The following Friday, 1 January 1059, the Shīʿī *adhān* was heard and the *khuṭba* was recited in the name of the Fāṭimids at the Mosque of Manṣūr. Then, re-establishing the bridge of boats, al-Basāsīrī crossed the river and, on the 8th of January, the name of the Caliph Mustanṣir was proclaimed at the Ruṣāfa Mosque. The Caliph had his palace fortified, but al-Basāsīrī not only had the Shīʿīs of the Karkh on his side, but also the large numbers of Sunnīs impelled by hatred of the Ghuzz and the lure of pillage. After defeating a group of Hāshimites and palace eunuchs urged on by the vizier, near the racecourse, al-Basāsīrī attacked the palace on the 1 Dhu 'l-Ḥidjdja/19 January 1059, entering the *ḥarīm* by the Bāb al-Nūbī. The Caliph, seeing that the game was lost, placed himself and the vizier under the protection of Ḳuraysh, who got them away, whilst the palace was sacked. Al-Basāsīrī appropriated the Caliphal insignia, *mindīl* (turban), *ridā'* (cloak) and *shubbāk* (lattice screen), which were sent to Cairo as trophies. He solemnly celebrated the Feast of the Victims on 29 January 1059 at the *muṣallā* with the Egyptian standards. He agreed to leave the Caliph with Ḳuraysh, who placed him in safe-keeping at al-Ḥaditha of ʿĀna with his cousin Muhārish, but insisted that his enemy, the vizier Ibn al-Muslima, should be handed over to him. After parading him with ignominy, he had him put to a terrible death on 16 February 1059. Al-Basāsīrī then took possession of Wāsiṭ and Baṣra, but was unable to gain Khūzistān to the Fāṭimid cause.

But already al-Basāsīrī was virtually abandoned by Cairo. Initially great hopes had been raised there by his action; Mustanṣir relied on his bringing him the Caliph al-Ḳā'im as a captive and had the Little Palace of the West at Cairo made ready for him, and the was greatly displeased when al-Ḳā'im was handed over to Ḳuraysh. In addition, the vizier Yāzūrī, blamed for ruining Egyptian finances to support al-Basāsīrī, had been deposed and then put to death. From June 1058, Ibn al-Maghribī, a former secretary who had fled from al-Basāsīrī at Baghdād, was vizier. When the latter wrote to him, he replied in such terms as to leave him no expectations of support. Toghrul, however, had triumphed over his brother in Djumāda II 451/July 1059 and was preparing to return to Baghdād. He offered to leave al-Basāsīrī in Baghdād, provided he would pronounce the *khuṭba* and coin money in his name and restore the Caliph al-Ḳā'im to the throne. In such an event, he himself would not return to ʿIrāḳ. He asked Ḳuraysh to leave al-Basāsīrī in the event of his refusing to agree to this proposal. For his part, al-Basāsīrī attempted to negotiate with the Caliph to persuade him to break away from the Saldjūḳid, but without success. Ḳuraysh drew his attention to

Fāṭimid ingratitude and let him hope for a pardon by Toghrul, but he would not accept the offer and Toghrul then started to march on Baghdād. At the Saldjūḳid's request, Muhārish freed the Caliph al-Ḳā'im, who met the sultan at Nahrawān on 24 Dhu 'l-Ḳa'da 451/3 January 1060, arriving with him at his palace on the following day. Ḳuraysh had already left al-Basāsīrī, who quitted Baghdād with his family on 6 Dhu 'l-Ḳa'da/14 December, proceeding in the direction of Kūfa and leaving the Shī'is of Karkh exposed to the reprisals of the Sunnīs.

Al-Basāsīrī was swiftly overtaken by Toghrul's cavalry and caught in the company of Dubays. Whilst the latter, whose Arabs refused to engage, took to flight, al-Basāsīrī accepted battle and fell, his horse pierced by an arrow. He was killed by the secretary of the Saldjūḳid vizier al-Kundurī on 8 Dhu 'l-Ḥidjdja/15 January 1060 at Saḳy al-Furāt, near Kūfa. His head was brought to the sultan.

Thus ended the adventure of al-Basāsīrī. For a year he had gained acknowledgement of Fāṭimid sovereignty at Baghdād. The *khuṭba* in the name of the Fāṭimids is said to have been pronounced there forty times. This episode of attempted expansion, Fāṭimid on the one hand and Saldjūḳid on the other, and more generally the struggle between Sunnīs and Shī'is, definitely profited the cause of Sunnism and 'Abbāsid legitimacy, of which Toghrul Beg showed himself the interested champion.

BĀSHĀ [see PASHA].

BASHDEFTERDĀR [see DAFTARDĀR].

BASHDJIRT (BASHKURT) is the name of a Turkish people living in Bashkurdistan in the S. Urals, which is now a Soviet republic. Their place of origin is doubtful; some evidence says that they came from S. W. Turkistan (see Togan, *Türk Tarihi Dersleri*, 1927, 125; Hamilton, *Les Uygures*, 1955, 3), whilst other sources indicate that their present habitat is their original home (the Παγυρῖται, Γηουΐνοι, Ταβινοι, Βορουσκοι and Σουβηνοι, Ptolemy, iii, 5, 22, 24 and iv, 14, 9, 11 may be identified with "Bashγirt" and the tribal names "Geyne", "Tabīn", "Buruč", and "Suvīn"; Ibn Faḍlan, ed. Togan, 187, 327; Rashīd al-Dīn, Paris, Bibl. nat. Suppl. Pers. 1364, fol. 134a). Iṣṭakhrī says that the Bashkurts lived in a mountainous and wooded country into which it was difficult to penetrate, and that the centre of this region was 25 days journey from the Bulgars; and al-Bīrūnī calls the Urals "the Bashkurt mountains". Ibn Faḍlan, who made a personal survey of the country, religion, and customs of the Bashkurts in 310/922 says that he came on their tents after crossing the rivers Kinal and Sokh, *i.e.*, on approaching the borders of the Bulgars. He also states that they were all pagans (*i.e.*, Shamanists). Idrīsī, by combining the stories of his contemporaries about this province with those found in the Arabic translation of Ptolemy, has given rather more complicated details about their cities, iron and copper manufactures, arms, exports of beaver and squirrel furs, etc., but much of this probably refers to the Magyars. Confusion arose because Muslim sources called the Bashkurts "the inner Bashkurts" and the Magyars "the outer Bashkurts", while the Bashkurts of the Urals divided themselves into "inner" and "outer" Bashkurts. To their neighbours the Ḳazaḳs and the Nogays they were after the 15th century known as "Istek", which gave rise to the Ottoman term "Heshdek". The Yurmatī and Yenei tribes of the Bashkurt were among the Turkish tribes that held sway over the Magyars in the 12th century; and theories that the Bashkurts were Magyars who did not become Turkicised till the time of the Mongols (cf. Nemeth, *Magna Hungaria*, 95; *KCA*, iii, 73) lose their force with the statement of Maḥmūd Kāshgharī that the Bashkurt and the Yemek, *i.e.*, N. Kipčak, dialects were closely connected. Shams al-Dīn al-Dimashḳī (died 1327) and Abu 'l-Ghāzī Khān also connect the Bashkurt with the Kipčak. In fact the Bashkurts were Muslims long before the time of the Mongols. Yāḳūt, who met some Bashkurts from Hungary who came to study at Aleppo, relates traditions from them that their ancestors had learnt Islam from the Volga Bulgars and states that they were Ḥanafīs, that they had 30 villages, spoke the "Afrandj" language and served in the army of the "Hungar" monarchs, though not taking part in expeditions against Muslim countries. The 12th century writer Abū Ḥāmid al-Andalusī, who lived for some time among the Bashkurts in Hungary, states that like the Bulgars they were Ḥanafīs and says that there were 78 Bashkurt towns in Hungary, extending the name Bashkurt to the non-Muslim Magyars.

The Bashkurt lands were close to the summer camping-grounds of the Mongol Khāns of the Golden Horde, and when they came under the Mongols they were forced to serve in the Mongol army. They were, however, allowed to have a separate Muslim judge. Prominent in the service of the Ilkhāns were the Amīr Bashkurt, who put down the rebellion of Sülamish in Asia Minor during the time of Ghāzān Khan, and Sarkan Bashkurt, a lieutenant of Öldjaytu. Bashkurts were also found in the service of the Egyptian Mamlūks, among them 'Alam al-Dīn Sandjar al-Bashkurdī, who was Ḳalāwūn's deputy in Syria.

In the first half of the 16th century the Tura (Shībān] Khans held the northern and eastern parts of Bashkurdistan under their sway, while the Ḳazan Khan Ṣāḥib Gerey won influence over the "Ḳazan Yolī" and the Nogay Princes gained S. Bashkurdistan. Two of the Ulu Nogay princes, Ismā'īloghlī Urus Mīrzā and his nephew Ishtirek Mīrzā, governed the "Nogay Yolu", *i.e.*, S. Uralian, Bashkurts on behalf of the Küčümids until 1608. At one time Urus Mīrzā made representations to Sulṭān Sulaymān I urging him to annex the Volga basin. He also sent am-

bassadors to Czar Ivan IV because the Russians occupying Ḳazan and Astrak͟hān had pressed on to the east of the Volga, had made Samara, Yayitika and Ufa into Russian fortresses, and had imposed taxes on the neighbouring Bas͟hkurts, and protested that the "Bas͟hkurt-Isteks" paid taxes only to him, and that by taxing them the Russians were interfering in the internal affairs of the Nogay province (Pekarsky, *Kogda osnovany goroda Ufa i Samara*, 1872, 8). However, despite certain conciliatory moves the Russians gradually extended their control. In 1629 800 Bas͟hkurt families were under the Russians. By 1700 the number had risen to 7,000. Under the Russians the province was organised very much as it had been before. The community was divided into several classes: the *mīrzā*s (Russian *Kniaz*) who came from the Mongol and Tatar aristocracy; the *biy*s (Russ. *stras͟hina*) and *tark͟han*s who were tribal leaders; the *asabe*s (Arabic *ʿaṣaba*; Russ. *votčinnik*) who held hereditary fiefs and served in the army; the *yasaḳlï*s who were peasants liable to military service, and the *tipter*s who were peasants registered in place of fiefholders; the *bobil*s (old Turkish and Mongol *bogul* = captive) who were landless peasants; and the *tasnaḳ*s who were nomads tied to a particular village. The *mīrzā*s, *biy*s, and *tark͟hān*s used to meet to discuss general political questions at congresses (*yayïn*) held at K͟han Töbesi in the neighbourbood of what is now the village of Ḥād͟jd͟jī Yurmatï. There were also departments called *duvan* (= *dīwān*) which dealt with the affairs of the province. The territory of the Yurmatï tribe was the military centre of the province, and the *asabe*s were stationed along four military roads leading from there: the Nogay road to the south, the Ḳazan road to the west, the Osa road to the north, and the Siberia road to the east.

There was fierce resistance to Russian annexation and risings were frequent. The Küčümids, the popularly chosen leaders of the Bas͟hkurts, were generally at the head of these movements, which were sometimes combined with other movements in the Ukraine and N. Caucasus and with enterprises of the Crimeans, the Kalmuks and the Ottomans, with all of whom they had contacts. During the 17th and the first quarter of the 18th centuries the Bashkurts joined in movements in W. Siberia, the lower Jaxartes, Astrak͟hān, Don and Dāg͟histān regions and even in the Debreczen area of Hungary. It was in 1667, during the reign of Küčümid Küčük Sulṭān, that Ewliyā Čelebi visited the Bas͟hkurt between the Terek and Astrak͟hān together with the Kalmuks, and was greatly impressed by their military ability and by their national and religious fervour (*Seyāḥat-nāme*, vii, 761, 811-25, 835-6).

The Bas͟hkurts made their risings at times when Russia had external difficulties. For example, the rising of 1678, during which several Russian towns in the Volga and Ḳama basins basins were burnt, was connected with the Turkish victory over the Russians at Čegerin and their occupation of the S. Ukraine. The Bas͟hkurts were also skilful at making arms, and they were able to supply the Ḳaraḳalpaḳs and the Ḳazaḳs as well as themselves. The Russian government laid great importance on cutting off the Bas͟hkurts' foreign contacts and on closing their iron and steel works. In 1675 they issued an edict forbidding them to manufacture iron, but this had no effect. However, by establishing works at Petro in the Urals and by deporting masses of Russians to them, they succeeded in increasing the Russian element, in spite of external difficulties.

In 1678 was the Kalmuk K͟hān Ayüke who was responsible for the death of Küčük Sulṭān, and the struggle against the Russians was carried on by two of his sons, Murād Sulṭān and K͟huzey (Ibrāhīm) Sulṭān. During the Russo-Swedish wars in the reign of Peter the Great these roused the whole of Bas͟h-kurdistan to rebellion. They were in close contact with the Crimean K͟hāns, the Nogays and the Don Cossacks, and Murād Sulṭān went to the Crimea and to Istanbul in an unsuccessful attempt to seek help. In 1708 he took part in a joint attempt with the Kuban Nogays and the Circassians to occupy the Russian fortress of Terek, but he was wounded, captured by the Russians, tried and executed. According to a Bas͟hkurt envoy who visited Sulṭān Aḥmed III in 1716 the Bas͟hkurts together with their allies the Ḳaraḳalpaḳs and Kirgiz, had raised another rebellion in which they attacked Terek as a reprisal for the execution of Murād Sulṭān and killed up to 40,000 Russians (Rās͟hid, *Taʾrik͟h*, iii, 327). They were supported by the Ḳazaḳs, for at the beginning of the 18th century they had come under the suzerainty of the Ḳazaḳ K͟hān Tobïr-čïḳog͟hlï Ḳayib K͟hān, whose capital was at Tas͟hkent. The correspondence of Ḳayib K͟hān with Sulṭān Aḥmed III in 1715-6 is preserved in the Ottoman archives (Istanbul, *Başvekalet Arşivi, Name-i Hü-māyūn defterleri*, vol. vii, 351-2).

The rebellion lasted 17 years and exhausted the Bas͟hkurts. At length in 1728 a delegation was sent off to St. Petersburg and a peace treaty was concluded. However in 1735 there was another rising led by Kilmek Abïz and Küsümog͟hlï Aḳay against Russian efforts to encircle Bas͟hkurdistan and isolate it from the Ḳaraḳalpaḳs and the Ḳazaḳs. This was the bloodiest of all the Bas͟hkurt risings. Kilmek Abïz and Aḳay were eventually captured, and taken to St. Petersburg and executed, but in 1737 the fighting flared up again under the leadership of two biys from the Ḳuvaḳan tribe, Pepene and Tüngevur Kösep, with the support of the Ḳazaḳ K͟hāns. Pepene proclaimed Hod͟ja Aḥmed Sulṭān the son of the Ḳazaḳ K͟hān Abu ʾl-K͟hayr as K͟hān of the Bas͟hkurts. The movement was put down only with very heavy casualties.

The fighting was renewed in 1740 under a leader known as Ḳarasaḳal. This was, in fact, Baybulat, last of the Küčümids, who together with a nephew had been working with the support of the Crimean K͟hāns among the Bas͟hkurts since 1738 (*Istor. Zapiski*. vol. xxiv, 102). After two years fighting Ḳarasaḳal was defeated by the Russians and fled to the Ortayüz Ḳazaḳ K͟hans and took refuge with Baraḳ K͟hān. After this nothing more is heard of the Küčümids, but further risings occurred in 1755 and in 1774.

In 1798, in accordance with her policy of conciliating the Bas͟hkurts, Catherine the Great divided the province into a traditional tribal cantons. She also set up Bas͟hkurt regiments, which were armed with bows and arrows and wore their national costume. These regiments were used in the Napoleonic wars, and actually advanced as far as Paris. However in 1861 the cantons were abolished, as were the regiments in 1862, though some small units were not disbanded until 1882. In 1872 the Bas͟hkurts, who had previously been dealt with by the Foreign Ministry, were given the same status as other Russian subjects, though they had their own administrative and land laws.

The Bas͟hkurts played no important part in the 1905 revolution. In 1917, in accordance with a resolution of "The General Assembly of the Muslims of Russia" held on May 1-10, which called for autonomy for Muslim Turkish regions, the Bas͟hkurt

representatives set up a 3 man central committee (Zekī Welīdī, Saʿīd Miras, Allāh Berdi Dj̲aʿfer) to deal with the administrative organisation of their provinces. They came to an agreement with the Ḳazaḳ-Kirgiz, and held the first Bas̲h̲kurt Congress which urged that the Bas̲h̲kurts should join with other peoples struggling for autonomy (the Ḳazaḳs and Uzbegs, etc.) (*Bas̲h̲kurt Aymaği*, Ufa 1925, vol. i, 3). In the autumn they began to form an army, and an administrative centre was set up in the Caravanserai at Orenburg under Bikbavoğlu Yūnus. In 1918 this government was suppressed by the Russians and its members were imprisoned at Orenburg but later escaped. In June the Bas̲h̲kurt rose again, formed 2 military divisions, and revived the government at Orenburg. In order to include Ḳazaḳ-Kirgiz detachments the divisions were turned into a separate army corps under the command of General Is̲h̲bulatov. But the Allies, alarmed at the German drive in the Ukraine and Caucasus, wanted no national Kirgiz and Bas̲h̲kurt army in the Urals and in the steppes and sought its disbandment. In accordance with their wishes General Kolčak proclaimed that the army and government would not be recognised (21 Nov. 1918).

On 19 February 1919 the "Bas̲h̲kurdistan" government concluded a peace treaty with the Soviets, which protected its army and its autonomy in internal affairs. Afterwards there were efforts to unite the Bas̲h̲kurts with the Ḳazaḳs, but they were rejected by the Soviets, and İsterlitamaḳ was made the administrative centre for Bas̲h̲kurdistan, and Aḳtübe for Ḳazaḳistān. This was "Little Bas̲h̲kurdistan", with an area of 84,874 sq. km. and a population of 1,259,059, some 65-72% of whom were Turks. The premier was Yumugul-og̲h̲lu, afterwards Z. V. Togan (Validov). On 29 June 1920 the members of the government withdrew from office and went to Turkistan to take part in the movement of the Basmačīs [*q.v.*] against the Soviets. A completely Soviet government was formed and the army was disbanded. In June 1922 the Soviets united Bas̲h̲kurdistan with the province of Ufa, which was predominantly Russian, as "Great Bas̲h̲kurdistan". According to the 1935 census its area was 151,840 sq. km. and its population 2,975,400 only 51% of whom were Turks.

The Bas̲h̲kurt dialect occupies an intermediate place between the Ḳazaḳ and Ḳazan dialects. Under the Soviets it has been reduced to writing and books have been printed in it.

BAS̲H̲Ī-BOZUḲ, a term, meaning 'leaderless', unattached', that was first applied late in the Ottoman period both to homeless vagabonds from the provinces seeking a livelihood in Istanbul and to such male Muslim subjects of the sultan as were not affiliated to any military corps. From this last usage it came to signify 'civilian' (cf. Redhouse, *Turkish-English Lexicon*, s.v.); and for this reason individual volunteers forming bodies attached to the Ottoman army at the time of the Crimean War were called *bas̲h̲ī-bozuḳ ʿasker*i ('civilian' or 'irregular' troops). These irregulars, largely recruited among Albanians, Kurds, and Circassians, furnished their own arms and mounts (some being cavalry) and had their own commanders. In the course of the war an attempt was made to subject them to normal military discipline; but this was not successful; and during the next Russo-Ottoman war (of 1877) the *bas̲h̲ī-bozuḳ ʿaskeri* earned so much opprobrium for their savagery and love of loot that their employment was thereafter abandoned.

(H. Bowen)

BAS̲H̲ĪR B. SAʿD, Medinese companion of the K̲h̲azradj tribe, and an early convert to Islam. He attended the second ʿAḳaba meeting with the Prophet, and, after the Prophet's emigration to Medīna, took part in all the ensuing battles and himself led two expeditions, one in S̲h̲aʿbān 7/December 629 against the Banī Murra at Fadak, and the other later in the same year against a force of G̲h̲aṭafān which ʿUyayna b. Ḥiṣn was assembling between Wādī al-Ḳurā and Fadak in order to attack Medīna. The first expedition ended in complete disaster and Bas̲h̲īr himself fought bravely but was wounded and left for dead. During the night, he managed to reach the house of a Jew in Fadak where he sheltered for a few days before returning to Medīna. The second expedition, carried out with 300 men, was successful, ʿUyayna's force was dispersed and much booty captured. In the same year, when the Prophet visited Mecca for *ʿUmrat al-Ḳaḍā*ʾ in accordance with the agreement of the previous year at al-Ḥudaybiyya, Bas̲h̲īr commanded an armed contingent which escorted him but did not enter Mecca.

On the death of the Prophet, Bas̲h̲īr supported the claim of Ḳuraysh against the Medinese attempt, in the *Saḳīfa* meeting, to elect an Anṣārī successor, and was the first—or one of the first—to make the decisive move of paying homage to Abū Bakr. Later he joined the expedition to ʿIrāḳ and was present when al-Ḥīra was captured by K̲h̲ālid b. al-Walīd. He died at ʿAyn al-Tamr in 12/633, though it is not certain whether he was killed in the fighting

or died from a wound he had received shortly before.

Bas̲h̲īr was one of the few who knew the art of writing. He was the father of al-Nuʿmān b. Bas̲h̲īr [*q.v.*].

BAS̲H̲ĪR ČELEBI, a physician who flourished in the middle of the 9th/15th century. According to the little treatise *Ḥikāyet-i Bes̲h̲īr Čelebi* (of which one MS. has been published in facsimile by İ. H. Ertaylan as *Târih-i Edirne* : *Hikâyet-i Beşir Çelebi*, *Türk Edebiyatı Örnekleri* iii, Istanbul 1946), he was summoned from Konya to Edirne by Meḥemmed II very soon after his accession; he expounded to the Sultan the advantages of the climate of Edirne and recommended to him the site for the building of the New Palace (begun in 855/1451, cf. *IA*, article Edirne [M. Tayyib Gökbilgin], p. 117b).

The Ottoman history attributed to him (*Tevarih-i Al-i Osman*, *Türk Edebiyatı Örnekleri* iv, Istanbul 1946) is nothing but another MS. of the Giese *Anonymous Chronicles* (as demonstrated by Adnan Erzi in *Bell.* XIII, 1949, 181-5 : the MS. is very close to Giese's W(ien)$_2$ = Flügel No. 983). Neither this History nor the *Târih-i Edirne* is the work of Bes̲h̲īr Čelebi.

BAS̲H̲ĪR SHIHĀB II, Amīr of Lebanon, 1788-1840. Born in 1180/1767 in the village of G̲h̲azīr, Bas̲h̲īr lost his father Amīr Ḳāsim in his early years and was soon compelled to try his fortune in the field of politics in Dayr al-Ḳamar, the capital of Lebanon. Robust, intelligent, and circumspect, he soon attracted attention as a possible candidate for the governorship of Lebanon. S̲h̲ayk̲h̲ Ḳāsim Jumblat, a wealthy and powerful feudal lord, was the first to appreciate Bas̲h̲īr's gifts and possibilities. His first approaches were successful, and Ḳāsim and Bas̲h̲īr became friends and allies. Their chance for common action came in 1788. Wearied by the heavy exactions of the Turkish Pas̲h̲as of Sidon, Tripoli, and Damascus, Amīr Yūsuf S̲h̲ihāb, governor of Lebanon, called the Notables of the Land to a meeting in Dayr al-Ḳamar to discuss the general situation. To their surprise, Amīr Yūsuf confessed his inability to come to an understanding with D̲j̲azzār Pas̲h̲a [*q.v.*] of Sidon and called for advice regarding his successor. S̲h̲ayk̲h̲ Ḳāsim and his supporters suggested young Bas̲h̲īr, and Amīr Yūsuf agreed. Bas̲h̲īr made the usual journey to ʿAkkā, D̲j̲azzār's fortress, and came back Governor of Lebanon.

A rapacious intriguer, D̲j̲azzār Pas̲h̲a stimulated in 1209/1794 a number of Lebanese notables to revolt and induced one of the sons of Amīr Yūsuf to make a bid for the governorship of Lebanon. He then promised support to Bas̲h̲īr in return for a large sum of money. Having satisfied the greed of the Pas̲h̲a, Bas̲h̲īr immediately set himself to the task of internal consolidation. In 1794, he permitted the Jumblats and the Amads to murder several Nakad chiefs in his own reception hall. Then, with the help of the Jumblats, he forced the Amad chiefs to leave Lebanon and seek refuge elsewhere (1799, 1808, 1819). In 1822/1237, he burdened the Jumblats with very heavy contributions; and, in 1824, he defeated them in open battle and put them to flight. In the meantime, Bas̲h̲īr strengthened his local levies and made of them the strongest military contingent in all Syria-Palestine. His fifteen thousand men were more than equal to all the soldiers of all the Pas̲h̲as of Syria put together. In addition, Lebanese levies were daring and extremely skilful in the manipulation of arms.

In the meanwhile, Bas̲h̲īr's grants in aid to Christian Patriarchs and Archbishops and his acts of toleration were winning for him clerical support and French consular aid. In 1817, Pope Pius VII wrote in person to thank the Amīr for his policy of religious toleration; and in 1835, Pope Gregory XVI addressed the Amīr as a faithful son and praised his conversion. With his own co-religionists, the Druzes, Bas̲h̲īr behaved differently. Until his time the Druzes had had only one religious head, the S̲h̲ayk̲h̲ al-Aḳl. Bas̲h̲īr introduced a second head and set him up against his colleague.

Bas̲h̲īr's greatest ambition was to ward off local Turkish intrigue and protect the historic autonomy of Lebanon. Circumspect and foxy, he refused to commit himself either for or against Napoleon at the time of his advance into Palestine. And, as soon as the French forces withdrew into Egypt, Bas̲h̲īr went down in person to the Grand Vizier's camp in al-Arīs̲h̲, 1799, and procured an Imperial firman which tied the Lebanon directly with the Sublime Porte. When the Grand Vizier died, this firman became null and void, and Bas̲h̲īr had to use other means. D̲j̲azzār's successor, Sulaymān Pas̲h̲a (1804-1819), was more humane; and Bas̲h̲īr courted his favour to stem the cupidity and inordinate desires of Kand̲j̲ Pas̲h̲a of Damascus. In 1810, Yūsuf Kand̲j̲ Pas̲h̲a claimed direct control of the fertile valley of the Bekaa. When no amount of persuasion could change his desire, Bas̲h̲īr marched on Damascus at the head of a force, 15,000 strong, and Kand̲j̲ fled to Egypt. In 1820, Bas̲h̲īr had to march again on Damascus and for the same reason. A year later, Darwīs̲h̲ succeeded in gaining the good will of the Sublime Porte and marched against Bas̲h̲īr's ally, ʿAbd Allāh Pas̲h̲a, with substantial assistance from his colleague the Pas̲h̲a of Aleppo. ʿAbd Allāh then locked himself up in the fortress of ʿAkkā, and Bas̲h̲īr sought help in Egypt (1821-1822).

Muḥammad ʿAlī Pas̲h̲a [*q.v.*] of Egypt was then laying the foundation of independence. He had already sensed the hostile intentions of the Sublime Porte and was preparing himself for a war of liberation. He realised fully well the military importance of Amīr Bas̲h̲īr and the strategic significance of Mount Lebanon. The two conferred together and soon arrived at a complete understanding of the situation. Muḥammad ʿAlī intervened in favour of ʿAbd Allāh Pas̲h̲a at Constantinople and Bas̲h̲īr came back to Lebanon completely victorious.

In 1247/1831, Muḥammad ʿAlī decided to strike. The Sultan had lost heavily in both the Greek War of Independence and in the Russian War and had, in 1826, dissolved the Janissaries. Emissaries of the Porte promised full respect of the privileges of Mount Lebanon, but Bas̲h̲īr's answer was, "You should not expect help from those whom you have always neglected". Lebanese levies fought ʿUt̲h̲mān Pas̲h̲a in Tripoli, joined in the march on Damascus, protected the Egyptian commissariat and rear as far north as Aleppo. In return, Muḥammad ʿAlī Pas̲h̲a

recognised the ancient privileges of Lebanon, and promised to eschew direct interference in its internal affairs, (1833-40). But as the Sultan could never consider the new situation consistent with his dignity and honour, Muḥammad ʿAlī had to remain prepared for another trial. This meant more men for his army and more money for his growing expenses, and actually led to disarmament, compulsory military service and increased taxation. Unable to understand the Lebanese mentality, he ordered application of his new regulations in Lebanon and in the Druze Mountain of the Ḥawrān, and had to stand the consequences. Troubles flared up in the Ḥawrān in the autumn and winter of 1837-1838; and several thousand Egyptians perished. In the summer of 1253/1838, the Egyptians were routed again in the Anti-Lebanon.

The impending clash between the Egyptian forces and the Ottoman Army took place in the early summer of 1839 at Nezib on the Turkish border. As the Egyptians put the Turks to flight and threatened to march on Constantinople, and as Russia was bound to come to the help of Turkey by the terms of the Treaty of Hunkâr Iskelesi (1833), and as France had consistently favoured Muḥammad ʿAlī Pas͟ha, the Eastern Question was open again for discussion. British and Turkish emissaries visited Lebanon in disguise trying to win over Amīr Bas͟hīr to their side. Bas͟hīr himself procrastinated, but the Lebanese rushed to arms in open revolt. By the summer of 1256/1840, France was isolated and the rest of the Big Powers, including Russia, signed the Treaty of London. Allied naval units arrived in Lebanese waters and a Turkish force was landed off the Bay of Junieh. Lebanese, Turks, and blue-jackets defeated Ibrāhīm Pas͟ha at Bahrsaf, and Bas͟hīr III was proclaimed Governor of Lebanon. Bas͟hīr II surrendered to the British in Sidon and was carried to Malta in exile. Several months later, he was allowed to establish himself in Asia Minor. He passed away in 1851, and was buried in the Armenian Catholic Church in Galata, Constantinople. In 1946, when Lebanon achieved the sort of independence Bas͟hīr had sought, the Government of the Republic brought his remains to Lebanon and deposited them in the family vault in Bayt al-Dīn.

BAS͟HKIR [see bas͟hdjirt].

al-**BAS͟HKUNIS͟H**, the Basques, a people of uncertain origin inhabiting the W. end of the Pyrenees and the adjacent part of the Cantabrian Mountains, with the Atlantic coast to the N. 'Bas͟hkunis͟h' is evidently from Latin 'Vascŏnes', with the phonetic change v < b as elsewhere. The Basque language is called *al-bas͟hḳiyya* (*Al-Rawḍ al-Miʿṭār*, ed. Lévi-Provençal, 56).

The principal centre of the Bas͟hkunis͟h was Pampeluna (Arabic Banbalūna, from an original Pompeiopolis), which became eventually the capital of Navarre. Their territory was invaded by Mūsā b. Nuṣayr at the time of the conquest of Spain (*Kitāb al-Imāma wa 'l-siyāsa*, *Colección de Obras Arábigas*, ii, 132 ff.), and then or later but in any case before 100/718-719, as Codera showed, Pampeluna capitulated to the Muslims. ʿUḳba b. al-Ḥadjdjādj (Umayyad governor of Spain for five years from 116/734) settled a Muslim garrison there (Ibn ʿId͟hārī, ii, 28). A few years later (138/755-756) the Bas͟hkunis͟h were in revolt and destroyed a force sent to Pampeluna by the *amīr* Yūsuf al-Fihrī, *i.e.*, about the time of the arrival in Spain of ʿAbd al-Raḥmān I. At the time of the famous invasion of northern Spain by Charlemagne (161/778) Pampeluna submitted to him, but it was probably bands of Basques, joined by the Muslims, who cut his rear-guard to pieces at Roncesvalles (cf. Lévi-Provençal, *Hist. Esp. Mus.*, i, 1944, 89). In 164/780-781, or in the following year, towards the close of his long reign, ʿAbd al-Raḥmān I was obliged to move in person against the Bas͟hkunis͟h.

By 798/182 the Basques of Pampeluna had renounced their Muslim allegiance, permanently as it turned out, and declared themselves vassals of Alfonso II, king of the Asturias. We soon hear of an independent Basque chief at Pampeluna, G͟harsiya b. Wanḳu (Garcia Iñiguez), who, as it appears, through his granddaughter Iñiga, married to the Umayyad ʿAbd Allāh, became the ancestor of ʿAbd al-Raḥmān III, al-Nāṣir. A fresh grouping of power among the Bas͟hkunis͟h took place in 905, when Sancho Garces I set aside the elder line, and effectively established the kingdom of Navarre. The western Basques continued to be subjects of the king of the Asturias. Henceforward what from the point of view of Muslim Spain has been called the 'Basque menace' (E. Lévi-Provençal) is represented by the history of Navarre especially.

BAS͟HMAḲ [see al-naʿl al-s͟harīf].

BAS͟HMAḲLIḲ, a term applied under the Ottoman régime during the sixteenth and seventeenth centuries to fief revenues assigned to ladies of the sultan's *ḥarem* for the purchase of their personal requirements, particularly clothes and slippers (*bas͟hmaḳ* or *pas͟hmaḳ* meaning 'slipper' in Turkish). The word has not yet been found in any document earlier than the end of the sixteenth century, and ceased to be used from the beginning of the eighteenth. The ladies who qualified for the receipt of *bas͟hmaḳlıḳs* were the sultan's mother (*wālide*), his sisters, his daughters, his *ḳadıns*, and his *k͟hāṣṣekīs*; but information is lacking on the different values of those assigned to each of these ranks,—if indeed there was any fixed scale at all. We know, however, that they were assigned for life and that during the seventeenth century they were often improperly enlarged beyond the usual revenue limit of 20,000

aḳčes a year by the addition to them of military fiefs that had fallen vacant. Though from early in the eighteenth century the term *bashmaḳlik* fell out of use, fief revenues were still assigned to these members of the imperial *ḥarem*, being known thenceforward simply as *khāṣṣ* and consisting, since virtually all revenues were by that date collected by tax-farm (*muḳāṭaʿa*), of the advance payments made by contractors for certain such farms. Towards the end of that century the practice was adopted of granting *muḳāṭaʿas* to the ladies concerned on *mālikāne*, or life, tenures; but in the reform period such grants were finally abolished and annual cash allowances were paid to them in lieu.

BASHMUḤĀSABA [see MĀLIYYA].

BASHSHĀR B. BURD, Abū Muʿādh, a famous ʿIrāḳī Arabic poet of the 2nd/8th century. His family was originally from Ṭukhāristān or eastern Iran. His grandfather had been captured and taken to ʿIrāḳ at the time of the expedition of al-Muhallab [*q.v.*]; his father, who was finally freed by an ʿUḳaylī Arab lady of Baṣra, was a bricklayer of that town. Bashshār was born in Baṣra, the date being uncertain but probably about 95 or 96/714-5. For a long time he attached himself to ʿUkayl as a dependent, without forgetting to glorify the memories of ancient Iran in accordance with his Shuʿūbī leanings; but this was equally, no doubt, a good means of turning his detractors, attention away from his humble origins, which the fiction of his royal ancestry ill concealed (v. the naive genealogy of Bashshār given in *Aghānī*³, iii, 135).

The gift of poetry is said to have been revealed in Bashshār when he was ten years old (see *Aghānī*³, iii, 143, 144: from a Baṣra source). His Baṣra environment was nothing if not favourable to the growth of such a talent; the caravan halt or *mirbad* which was of such importance up to the middle of the 3rd/9th century (cf. Pellat, *Milieu baṣrien*, 158 ff.) was for the young artist a kind of school in which he must have soaked himself in the poetic tradition then in full flower in central and eastern Arabia (see the anecdote in *Aghānī*³, iii, 143-5, which recounts the meeting of Bashshār with the Tamīmī Djarīr, then at the height of his fame; Brockelmann's suggestion, S I, 109, of confusion with a homonym of Djarīr cannot be accepted). Bashshār's career embraces the activities of a writer of panegyric, elegy and satire. It is remarkable that blindness from birth and exceptional ugliness did not cause him to be shunned by women or by the important figures of his day. But he knew how to impress and to make himself feared by the quality of his praises and his epigrams.

From the fragments or pieces which have come down to us Bashshār appears as the court poet of Umayyad governors such as Ibn Hubayra [*q.v.*] (see *Aghānī*³, iii, 197, 236) or Salm b. Ḳutayba (at the latest in 132/750) (see *ibid.*, 190), or prince Sulaymān, the son of the caliph Hishām (see *Dīwān*, i, 291-303); we even have a panegric on the last Umayyad ruler, Marwān (see *Dīwān*, i, 306 ff.). The advent of the ʿAbbāsids does not seem to have checked the rising career of the poet, who was then thirty-seven years old. He was too clever a man not to adapt himself to the new state of affairs. It is difficult to follow the process in detail, but an ode originally in honour of the ʿAlid Ibrāhīm b. ʿAbd Allāh is said to have been finally dedicated to the ʿAbbāsid caliph al-Manṣūr (*Aghānī*³, iii, 213 bottom; cf. al-ʿAskarī, *Dīwān al-Maʿānī*, i, 136); if this fact is correct it is characteristic. Bashshār lived in Baghdād from the time of its foundation in 145/762 (see al-Marzubānī, *Muwashshaḥ*, 247-8). His panegyrics were then dedicated either to prominent figures in Baṣra such as Sulaymān al-ʿAbsī (governor in 142/759-60) or his son (governor about 176/792) (see *Aghānī*³, iii, 165-7, 207; Pellat, 166, 280) or to such figures as ʿUḳba b. Salm (governor in 147/764) (see *Aghānī*³, iii, 174-5; cf. Pellat, index) or his son, Nāfiʿ (governor in 151/768) (see *Aghānī*³, iii, 230; cf. Pellat, 281); several anecdotes give the impression that Bashshār was much in favour under the caliph al-Manṣūr, whom he probably accompanied on pilgrimage to Mecca (see *Aghānī*³, iii, 153, 159, 188, 212, 239 especially *Dīwān*, i, 257, 275 (*ḳaṣīda* of 29 verses) and ii, 24); later relations between the monarch and the poet were to become strained (see *infra*). To these official connexions we owe much precious material on the poet's life. But doubtless they are not as important as Bashshār's connexions with the grammarians of Baṣra, such as Abū ʿAmr b. al-ʿAlāʾ, Abū ʿUbayda or al-Aṣmaʿī [*q.v.*] or with religious folk in that town such as Ḥasan al-Baṣrī [*q.v.*] (d. 110/228; *Aghānī*³, iii, 169 f.) or Malik b. Dīnār [*q.v.*] (d. 131/748; v. *ibid.*, 170). His sarcastic remarks on the subject of these last two persons are in line with, and confirm, his taste for consorting with people ostracised because of their manners or religious beliefs. A "literature" more anecdotal than valuable gives a picture of this aspect of Bashshār's life; his adventures and half-sacrilegious escapades (thus *Aghānī*³, iii, 185-6, on a pretended pilgrimage to Mecca; and 233, on his relationship with some Kūfa libertines. His diatribes against Ḥammād ʿAdjrad show how lively these relations sometimes were (see *ibid.*. iii, 137, 205, 223 bottom; al-Djāḥiẓ, *Bayān*, i, 30). His caustic temperament, his character and above all his sensitivity on the subject of his infirmity and lack of inheritance explain in large measure the poet's pungent invective against his rivals or enemies, though other grounds should not be forgotten which explain the rancour of these quarrels on the ideological plane.

Shuʿūbism is one of these causes (thus *Aghānī*³, iii, 138, 139 and especially 174-5, against the Bedouin poet ʿUḳba b. Ruʾba; v. also *ibid.*, 166 the fragment against a Bedouin, and 203-4 in which a nobleman reproaches the poet with having stirred up the *mawālī* against their Arab patrons). Bashshār's position on the subject of Muʿtazilism reflects his fluctuating opinion of Wāṣil b. ʿAṭā) [*q.v.*] (d. 131/748-9 in Baṣra), whom he satirises, having previously flattered him (see al-Djāḥiẓ, *Bayān*, i, 16 ff., and again in *Aghānī*³, iii, 145 f.; v. also the violent diatribes against each other of Bashshār and the Muʿtazilite poet Ṣafwān al-Anṣarī of Baṣra, on which see Pellat, *Milieu baṣrien*, 175-7 with a translation of Ṣafwān's verses).

Bashshār's religious views remain unclear; they seem to have fluctuated, and Bashshār, as an opportunist, to have concealed his true mind. The reservations he makes on the subject of poets he appreciates such as al-Kumayt or al-Sayyid al-Ḥimyarī who lived in Baṣra from 147/764 to 157/773-4 (cf. *Aghānī*³, iii, 225, VII, 237, but the facts are uncertain) would tend to indicate that he was not a Shīʿī (but see Pellat, 178, who thinks that Bashshār brought together the Shīʿī views of the Kāmiliyya, on which see *id.* 201). The accusation of *zandaḳa* made against Bashshār and the anecdotes

which illustrate it rather than give it substance point to his holding heterogeneous views; among these views there are in fact to be found Manichaean beliefs strongly tinged with Zoroastrianism (see al-Djāḥiẓ, *Bayān*, i, 16: citation of the celebrated verse *the Earth is dark and the Fire is resplendent and the Fire has been worshipped from the time that it existed*; cf. the reference to this affirmation of Bashshār's in the refutation of the Muʿtazilite Ṣafwān, *ibid.*, i, 97, line 7; cf. also *Fihrist*, 338, line 10, which puts the poet among the *Zindīḳ*s-Manichaeans of the 2nd/8th cent.).

But along with these beliefs there would seem always to have been a profound scepticism (see *Aghānī*³, iii, 227, line 1 ff.-*Dīwān*, ii, 246) mingled with a fatalistic outlook leading Bashshār to to pessimism and hedonism (*ibid.*, 232, and the citation from Ibn Ḳutayba, *ʿUyūn*, i, 40 bottom). Like his fellows, Bashshār had to fall back on the *taḳiyya* and profess an orthodoxy and a pious zeal which was totally opposed to his real convictions (thus, his verses against the heretic Ibn al-ʿAwdjāʾ, who was executed at Kūfa, *Aghānī*³, iii, 147, and above all the verse of the *Dīwān*, ii, 36, line 3, showing a strict Islamic orthodoxy).

His prudence in this respect was not allowed to obscure the scandal of his manners, his epigrams and his heterodoxy. A plot engineered in Baṣra effected his ruin in the eyes of the caliph al-Mahdī (see the anecdotal accounts in *Aghānī*³, iii, 243 ff.), impinging as it did on matters of wider import, *viz.* the persecution under that ruler of all those covered by the name of *zindīḳ* [*q.v.*] (see *ibid.*, 246 bottom and ff.; especially, Gabrieli, *Appunti*, 158). Bashshār was seized, beaten, and thrown into a swamp in the Baṭīḥa (al-Ṭabarī, Cairo ed., vi, 401; *Aghānī*³, iii, 247-8). This occurred in 167 or 168/784-5 when the poet was over seventy years of age (not ninety, as has been said through an orthographic confusion; cf. *Aghānī*³, iii, 247, 249, giving the two figures, of which only the second features in al-Khaṭīb al-Baghdādī, *Taʾrīkh Baghdād*, vii, 118 and Ibn Khallikān, i, 88).

Bashshār was famous in his day as an orator and letter-writer or prose-writer (al-Djāḥiẓ, *Bayān*, i, 49), but he owes his renown above all to his poetic gifts. His work in verse was as abundant as it was varied, but unfortunately has not come down to us in its original form. Being blind Bashshār was dependent on *rāwī*s, of whom we know the names of four, notably the notorious Khalaf al-Aḥmar (see *Aghānī*³, iii, 137, 164 (and ix, 112), 170, 189); but none of them troubled to put together the *dīwān* of their master. Occasional pieces, impromptus and epigrams were very quickly lost, while at the same time poems of more or less doubtful authenticity were attributed to Bashshār (see gloss on *Dīwān*, i, 309). From the 3rd/9th century the poet's work was thus known only through the collections of the anthologists, such as Hārūn b. ʿAlī (d. 288/900-1; cf. *Fihrist*, 144) or Aḥmad b. Abī Ṭāhir Ṭayfūr (d. 280/893), who had compiled an *Ikhtiyār Shiʿr Bashshār* (see *Fihrist*, 147). It is known that in the last quarter of the 4th/10th century Ibn al-Nadīm consulted a collection of selected poems of about a thousand pages (v. *Fihrist*, 159 bottom). No account should however be taken of the *Ikhtiyār min Shiʿr Bashshār* of the two brothers al-Khālidī of Mosul, which is not mentioned among their works by Ibn al-Nadīm, *op. cit.*, 169. This last work we know only through the extracts given by al-Tudjībī (5th/11th cent., ed. al-ʿAlawī, Aligarh 1935). A single manuscript of eastern origin (of the 6th/12th century?), containing poems on rhymes from *a* to *z*, has been the basis of the edition of Ibn ʿAshūr (3 vols., Cairo 1950-57), which is far from satisfactory. We see that the work of Bashshār can be studied only with caution.

Bashshār writes in formal, tripartite *ḳaṣīdas*, in a taut style, and though his poems may be conventional in form and theme they show a break with those of the preceding generation. The pithiness of his epigrams places him in the Umayyad satirist tradition (thus, *Dīwān*, ii, 66, against Ḥammād ʿAdjrad; also *Aghānī*³, iii, 188, 202); here also his taste for the baroque or for parody leads him to make innovations (thus, the prosopopeia on his ass, *Aghānī*³, iii, 231 bottom). But it is probably in elegy that he has made his name most remembered. Frequently, already, his bacchic themes tend towards the love-song, which might well be considered the abandonment of a tradition of which the pastiches attributed to al-Aʿshā Maymūn [*q.v.*] are questionable examples. The amorous elegies make up an important part of this work, and are addressed mainly to a Baṣran lady named ʿAbda, but also to other heroines whose names are probably fictitious. Now sensual and even realistic (thus *Aghānī*³, iii, 155, 165, 182, 200 etc.), now suffused with courtly ingenuity, these poems seem to give two different responses to the eternal conflict within the oriental soul. Poems of an intellectual cast are also common, and though Bashshār is not really profound he avoids triviality and can make acute observations.

Adaptability is the key-note of Bashshār's manner, which can be stylised and archaising in the *ḳaṣīda* (thus, *Dīwān*, i, 306 ff.), but loosens and becomes delightfully free in the amorous elegies, in which the poet allows himself daring licences of language (thus *Dīwān*, ii, 5, line 7; 10, lines 3; 15, line 2). The dominant influence on Bashshār was indeed always the tradition he inherited from the desert poets; in many respects he is close to the Ḥidjāz "school" as we see it in ʿUmar b. Abī Rabīʿa [*q.v.*]. But he contrived to enrich this tradition with the wealth of his own interior universe, the hard experience born of his physical disgrace and his contact with a confusing and turbulent world.

The importance of Bashshār's place in the transitional period of poetry in the middle of the 2nd/8th century cannot be overestimated. The influence of the man and the artist is attested by the enthusiasm or hatred he awoke in his contemporaries. All in all he was considered one of the glories of Baṣra. His poems, often set to music, delighted the young and the feminine public, while the connaisseurs' opinion emerges from the "value judgments" attributed to such scholars as Abū ʿUbayda, al-Aṣmaʿī, Khalaf al-Aḥmar and a host of others (see *Aghānī*³, iii, *passim*). We know on the other hand in what esteem al-Djāḥiẓ held him (see *Bayān*, index). Finally, Bashshār profoundly influenced the following generation of poets; statements to this effect in the biographies of Abu 'l-ʿAtahiya [*q.v.*], al-ʿAbbās b. al-Aḥnaf [*q.v.*], Abū Nuwās [*q.v.*], Salm al-Khāsir and many others are confirmed by the study of their works. At the present day eastern critics have readily been able to see in Bashshār one of the greatest names in Arab poetry.

On the text and the *dīwān* of Bashshār see references in the article. (R. BLACHÈRE)

BASHSHĀR AL-SHAʿĪRĪ, Shīʿite heretic, flourished in the second century A.H. He lived in Kūfa and earned his living by selling barley (*shaʿir*), whence his name. According to the *Minhādj* and the *Muntahā*, he was sometimes mistakenly referred to as al-Ashʿarī, instead of the correct al-Shaʿīrī. According to traditions related by al-Kashshī, he was repudiated and disowned by the Imām Djaʿfar al-Ṣādiḳ (*Ridjāl* 252-4; cf. 197, where ʿAbū Bashshār al-Ashʿarī' is denounced as a liar, together with such notorious heretics as al-Mughīra b. Saʿīd, Bazīgh, Abu'l-Khaṭṭāb, Muʿammar, and Ḥamza al-Barbarī. The passage in the edition is very corrupt). The Nuṣayrī al-Khaṣībī describes Bashshār as a *rāwī* of Mufaḍḍal b. ʿUmar al-Djuʿfī (Massignon, *Salmān* 44 n. 4); in a Nuṣayrī text published by Strothmann he is reported as quoting a conversation with Djaʿfar al-Ṣādiḳ, who gives the esoteric explanations of the *basmala*.

A disciple of the Khaṭṭābiyya [*q.v.*] group among the extreme Shīʿa, Bashshār is said to have preached the doctrine that ʿAlī was superior to Muḥammad, since ʿAlī was God and Muḥammad only a messenger. He accepted the teachings of the Khaṭṭābiyya on four of the five deified persons, namely ʿAlī, Fāṭima, al-Ḥasan, and al-Ḥusayn, but demoted Muḥammad, to whom he assigned the rôle which the Khaṭṭābiyya assign to Salmān al-Fārisī. He was also accused of preaching libertinism, the denial of divine attributes, and metempsychosis. His followers were known as ʿUlyā'iyya [*q.v.*], a name that is variously interpreted. One version is that they were so called when Bashshār, after teaching these doctrines, was changed into a sea-bird (*ʿulyā*).

Rajkowski, *Early Shiʿism in Irak*, London University Ph. D. thesis 1955. (B. LEWIS)

AL-BAṢĪR, ABŪ ʿALĪ AL-FAḌL B. DJAʿFAR B. AL-FAḌL B. YŪNUS AL-ANBĀRĪ AL-NAKHAʿĪ AL-KĀTIB, poet and letter-writer of the first half of the 3rd/9th century. He was born in Kūfa in a family of Persian origin which had been living in al-Anbār, but moved to Kūfa and settled in the quarter of the Yemenite tribe al-Nakhaʿ. On account of his blindness he was nicknamed *al-Baṣīr* and *al-Ḍarīr* (*per antiphrasin*, see A. Fischer, *ZDMG* 61, 430). When Sāmarrā was built in 221/836 he went to the new capital and in spite of his strong and even extreme Shīʿite leanings he eulogised al-Muʿtaṣim and his successors. He attached himself to al-Fatḥ b. Khāḳān [*q.v.*] and his nephew ʿUbayd Allāh b. Yaḥyā (see Ibn Khāḳān) and praised them in his poems (see *e.g.* Ibn Shadjarī, *Ḥamāsa* 117; Mubarrad, *Kāmil* 6; Yāḳūt *Irshād* vi, 122; Ibn Rashīḳ, *ʿUmda*, i 78). He was acquainted with Abu 'l-ʿAynāʾ [*q.v.*], Saʿīd b. Ḥumayd, Ibn Abī Ṭāhir [*q.v.*], Abū Hiffān and other men of letters; they addressed to each other witty verses and satirical lampoons. He was a gifted writer; some of his admirers ranked him even higher than Djarīr. He had a poor opinion of the poetry of Abū Nuwās and Muslim b. al-Walīd (see Marzubānī, *Muwashshah* 282 f.). Abu 'l-Ḥasan Ibn al-Munadjdjim in the appendix to his father's *Kitāb al-Bāhir* and Ibn Ḥādjib al-Nuʿmān in his *Ashʿār al-Kuttāb* devoted both a chapter to his poems (*Fihrist* 144, 1; 166, 23). His *Dīwān* and the collection of his letters are lost. Amongst his verses which have come down to us, are some, that can be dated: *e.g.* a poem, composed in 247/861, when al-Mutawakkil went from Sāmarrā to his new residence al-Djaʿfariyya (Yāḳūt, ii, 87; read *al-Baṣīr* instead of *al-Baṣrī*), a few lines of a long poem, urging al-Mustaʿīn in 249/863 to appoint his son al-ʿAbbās heir-apparent (Masʿūdī, *Murūdj* vii, 346; read Abū [ʿAlī] al-Baṣīr) and congratulatory verses on the occasion of the accession of al-Muʿtazz to the throne 4 Muḥarram 252/25 January 866 (Masʿūdī, *Murūdj* vii, 378). This shows incidentally that contrary to the statement of Marzubānī he did not die during the civil war 251/865. Ibn Ḥadjar places his death in the reign of al-Muʿtamid (256-79/870-92).

See also Ḳālī, *Amālī*; Ibn Shadjarī, *Ḥamāsa* (register *s.v.* a. ʿAlī al-Ḍarīr); Thaʿālibī, *Thimār al-Ḳulūb* 44, 164, 268, 483, 496; *Aghānī*[1] x, 108; xx, 41. (J. W. FÜCK)

BAṢĪRĪ, (*c.*1465-1535) Turkish and Persian poet. Although Laṭīfī and ʿĀlī (*Kunh al-Akhbār*) record that he came to Rūm from the realm of Persia, it is clearly stated in the *tadhkira* of Riyāḍī and in the *Kashf al-Ẓunūn* that he was from Baghdād. Because of a diseased condition (*barash*) from which he suffered, he was called Aladja ('Blotchy') Baṣīrī. He grew up in the scholarly and literary milieu of Harāt, and frequented the circles of Sulṭān Ḥusayn Bāyḳarā (1438-1507), Djāmī (1424-92), and Nawā'ī (1441-1501). As he is not mentioned in the last-named's *Madjālis al-Nafāʾis*, he could not yet have won fame in that environment, but he is mentioned among the poets of Selīm I in the supplement written by Ḥakīm Muḥammad Shāh-i Ḳazwīnī to his Persian translation of the *Madjālis al-Nafāʾis*. Baṣīrī left Harāt for Rūm some time before 1492, bringing the books and *ghazals* of Djāmī and Nawāʾī, and various commissions to execute for them. For a while he was in the service of the Aḳ Ḳoyunlu. When Aḥmad Göde, son of Ughurlu, came to the Aḳ Ḳoyunlu throne (1496), Baṣīrī was sent as his ambassador to Sulṭān Bāyazīd II, reaching Istanbul in 1496 or 1497. On Aḥmad Göde's death in battle in the neighbourhood of Iṣfahān in the latter year, Baṣīrī decided not to return to Persia but to settle in Istanbul. He later attached himself to Muʾayyadzāde,

ḳāḍī ʿasker from 1503 to 1507, and became one of his intimates. The testimony of the *tadhkiras* is that it was Baṣīrī who brought the dīwān of Nawāʾī to Rūm.

While he wrote Persian poetry, Baṣīrī, being brought up in the circle of Ḥusayn Bāyḳarā and Nawāʾī, had a detailed knowledge of Turkish language and literature. After his arrival in Rūm, he adapted himself to his new literary environment with such success, thanks to his powerful intellect, as to win the favourable mention of the authors of the *tadhkiras*. Being an elegant and witty versifier he was much in demand in the salons of the great. In the reign of Suleymān he was one of the associates of the *defterdār* Iskender Čelebi, and was given an income from the *awḳāf* of Aya Ṣofya and from the imperial treasury. His poems, both Persian and Turkish, show that he had a sound knowledge of the sciences which in that age were the necessary concomitants of poetry and on which poetry fed. The chief features of his poetry are wit, elegance, and particularly the devices of *djinās* and *īhām*. Although it influenced the local literature, his work does not display the characteristics of 16th-century Anatolian classical literature, but is closer to that of 15th-century Persia. His neat lampoons and witticisms offended no one. Some of these witticisms are quoted in the *tadhkiras* and he himself incorporated them into a *risāla*. Apart from his Turkish *dīwān*, he wrote a *Bengī-nāme*. He died in Istanbul, in his 70th year.

Bibliography: Ḥakīm Muḥammad Shāh-i Ḳazwīnī's translation of *Madjālis al-Nafāʾis*; the *tadhkiras* of Sehī Bey, Laṭīfī, Ḥasan Čelebi, ʿĀshiḳ Čelebi, and Riyāḍī; *Kashf al-Ẓunūn*.

(ALI NIHAD TARLAN)

AL-**BASĪT**, Span. Albacete, Spanish town, chief town of the province of the same name which comprises the north-western portion of the old kingdom of Murcia, situated S.-W. of la Mancha and New Castile, on the S.E. slopes of the Meseta of Central Iberia at an altitude of 700 m. The modern name derives from the Arabic al-Basīṭ ("*lugar ancho y extendido y llano y raso*") and not from al-Basīṭa ("the plain") as is still often stated. The place and the name are found for the first time in al-Dabbī of Cordova and Ibn al-Abbār of Valencia in the 7th/13th century, in connexion with the great battle of 20 Shaʿbān 540/5 February 1146, a date confirmed by a laconic passage in the *Annales Toledanos* (ed. Huici Miranda 347, in *Las Crónicas latinas de la Reconquista*, I): 'Çʿahedola [Sayf al-Dawla al-Mustanṣir Aḥmad b. Hūd] did battle with the Christians, and they killed him in the month of February 1184" (Spanish era = 1146 Christian era). The battle, which was quite an ordinary engagement, was not between Alfonso VII of Castile and his tributary, the short-lived king of south-eastern Spain which was entirely subject to him, but between the latter and the Castilian Counts sent by Alfonso VII to subjugate the rebels of Baeza, Ubeda and Jaén, who withheld their tribute from Sayf al-Dawla. The rebels, seeing their lands pillaged by the Christians, again submitted to their *amīr* in order that he might save them from the Counts, who refused to suspend operations and, when Sayf al-Dawla took up arms against them, routed him and took him prisoner. While he was being led to their camp, certain soldiers, called Pardos, put him to death, much to the regret of the Counts and Alfonso VII himself". With him was killed his ally the governor of Valencia ʿAbd Allāh b. Muḥammad b. Saʿd; the latter is for this reason known by the Arabs as Ṣāḥib al-Basīṭ, "Master (martyr) of Albacete". The battle is also called the battle of al-Ludjdj (Ibn al-Abbār: *bi 'l-mawḍiʿ al-maʿrūf bi 'l-ludjdj wa bi 'l-basīṭ ʿala maḳraba min djindjālla*) in the vicinity of Chinchilla. Al-Ludjdj the place (and the river) may be identified either with Lezura to the west, or with Alatoz to the east of Albacete, on the northern slopes of the Sierra of Chinchilla (in the latter case it should read Latudjdj). It is not possible to settle the problem; Faḥṣ al-Ludjdj is found as early as Ibn al-Kardabūs (cf. Dozy, *Scriptorum arabum loci de Abbadidis*, ii, 19),

Bibliography: Dabbī (ed. Codera and Ribera), 33; Ibn al-Abbār, *al-Ḥulla al-Siyarāʾ* (Dozy. *Notices*, 215, 219, 226); Codera, *Decadencia y desaparicion de los Almoravides en Espana*, Saragossa 1899, 86, 109; Gaspar Remiro, *Murcia Musulmana*, Saragossa 1905, 179 ff.; Seybold, in *ZDMG*, lxii.

BASĪṬ [see ʿARŪḌ].

BASĪṬ WA MURAKKAB. *Basīṭ* and *murakkab* (simple and composite) are translations of the Greek ἁπλοῦς and σύνθετος. In Arabic grammar (but also in philosophy and medicine), the term *mufrad* is used for *basīṭ*. In grammar, *mufrad* and *murakkab* correspond to simple nouns and their construct states, in medicine to constituents and their compounds. In logic, mathematics and music, again, the term *muʾallaf* is more commonly used for *murakkab*, while it is in physics and medicine alone that the term *mumtazidj* is used sometimes as an equivalent of and sometimes as distinguished from *murakkab*, *secundum prius et posterius*.

Something can be simple either absolutely or relatively: an absolutely simple thing is that which cannot be further sub-divided into simpler parts either physically or conceptually; an atom is an example of the first, a highest genus of the second type (for the definition of the simple as indivisible see, *e.g.*, Aristotle, *Metaphysics*, 989b 17). A relatively simple thing is a constituent in a further complex while in itself it may be divisible. Again, from the point of view of the 'composition' of form and matter (and the whole of the material world is so composite), either purely immaterial entities are simple or the primitive matter which is devoid of any form, although Aristotle and the Muslim philosophers restrict the term metaphysically to the former category.

In the actual material world (for the primitive matter does not exist), the four elements, fire, air, water and earth are regarded as the basic simple bodies by the composition of which every other material object comes into existence. According to Aristotle (the chief treatment of the subject is *De Gen. et Corr*, I, ch. 10), a form of composition in which the constituents retain their identity is σύνθεσις, *e.g.*, when sugar is mixed with sand, while in a real composition, called μεῖξις, the parts lose their identity and share a common quality which, in many cases, may be different from that of the individual constituents. The former kind of 'composition' is not mentioned by the Muslim philosophers. They say that in certain combinations, *e.g.*, in the case of compound numbers, figures or tunes, a certain total quality emerges which does not belong to individual parts which also keep their identity, while in others the parts as such share the quality of the whole (*e.g.*, in flesh) which is called *mutashābih al-adjzāʾ* (ὁμοιομερές). Whereas in the animal organism, each part, *e.g.*, flesh, bones etc. is separately constituted in this way, but not the total organism, in the case

of the heavenly bodies, each body is *mutas̲h̲ābih al-ad̲j̲zā'*. The final qualitative pattern resulting from definite proportions of the constituents of a given mixture (*i.e.*, hot, cold, moist and dry) is called *mizād̲j̲*, whereas the particular form which a compound takes on due to this *mizād̲j̲* is called *ṣūra* (or *hay'a*) *tarkībiyya*. Thus the *mizād̲j̲* (temperament) of a piece of living flesh is the final pattern of the mixture of the four primary qualities, while its *ṣūra tarkībiyya* is the form of "fleshiness" (cf. Aristotle, *De Part. An.* 642a 18 f.; *De. An*, 408a 5 f.).

We said above that pure forms unmixed with matter are simple in the real sense. This is patently the case with intellect which not only knows pure universals but in whose act of knowing the duality of subject and object is removed. This kind of simplicity again admits of various degrees and works upwards from the human mind, through the separate intelligences, to God, in whose mind there is no multiplicity of objects. According to philosophers like Avicenna, who believe everything other than God to be composed of essence and existence, God alone is absolutely simple, not only in the operations of His mind but also in the necessary fact of His existence (see MĀHIYYA WA WUD̲J̲ŪD).

There is no special treatise on the subject and the various application of the term can be studied only within the contexts of the special doctrines of the philosophers, chiefly in their physical and metaphysical works. As a further Greek source of the Muslims' physical doctrine see Alexander of Aphrodisias, *Scripta Minora* II, περὶ κράσεως καὶ αὐξήσεως. (F. RAHMAN)

BASMAČIS (in Özbek "brigand"), the name given by the Russians to a revolutionary movement of the Muslim peoples of Turkestān against Soviet authority which broke out in 1918 and lasted until 1930 or even later. See TURKISTĀN, UZBEK, TĀD̲J̲ĪK, K̲H̲OḲAND, K̲H̲IVA, TÜRKMEN, ENWER PAS̲H̲A.

(A. BENNIGSEN)

BASMALA is the formula *bi'sm' llāh' l-raḥmān' l-raḥīm'*, also called *tasmiya* (to pronounce the [divine] Name). Common translation: "In the name of God, the Clement, the Merciful"; R. Blachère's translation: "In the name of God, the Merciful Benefactor", etc. The formula occurs twice in the text of the Ḳur'ān: in its complete form in Sūra xxvii, 30, where it opens Solomon's letter to the queen of Sheba: "It is from Solomon and reads: In the name of God, the Merciful Benefactor"; on a second occasion, in its abridged form in Sūra xi, 43: "(Noah) said: Ascend into the ark! May its voyaging and its anchorage be in the name of God". Finally in its complete form, it begins each of the Ḳur'ānic Sūras, with the exception of Sūra ix.

The invocation of the *basmala*, at the beginning of every important act, calls down the divine blessing upon this act and consecrates it. It gives validity, from the Muslim point of view, to a very widespread custom, invalidating the Arab formulae of the *d̲j̲āhiliyya*: "in the name of *al-Lāt*" or: "in the name of *al-ʿUzzā*"; and even the formulae where the name of a deity did not appear, such as the invitation to a wedding feast *bi 'l-rifā wa 'l-banīn* or again *bi 'l-yumn*. The Meccans, when they were not yet converted to Islam, protested against the reference to *al-Raḥmān* (see below). At the treaty of Hudaybyya (6/628), they succeeded in having *bismika Allāhumma* ("in your name, O my God") adopted.

In writing it is customary to omit the initial *alif* of the word *ism* "name" (*bismi*). Tradition rests this orthography on the authority of ʿUmar, who is supposed to have said to his scribe: "Lengthen the *bā'*, make the teeth of the *sīn* prominent and round off the *mīm*." Tradition also indicates that the *lām* of *Allāh* should be inclined. The formula became a popular motif of decoration in manuscripts and architectural ornamentation.

The benedictory power of the *basmala* is widely put to work in the composition of the talismans admitted by the *siḥr* (lawful magic). It is said that the formula was inscribed upon Adam's thigh, upon the wing of the angel Gabriel, the seal of Solomon and the tongue of Jesus (see Doutté, *Magie et Religion dans l'Afrique du Nord*, 211).

Problems.

1) In the Ḳur'ān. Zamak̲h̲s̲h̲arī informs us that the readers of the Ḳur'ān and the jurists of Medina, Baṣra and Syria did not count the *basmala* at the beginning of the *Fātiḥa* and the other Sūras as a verse. In their view its presence in these places served simply to separate the Sūras and as a benediction. This is also the opinion of Abū Ḥanīfa, and explains why those who follow his doctrine do not pronounce these words aloud during the ritual worship. On the other hand the readers and the jurists of Mecca and Kūfa did reckon the *basmala* as a verse and pronounced it aloud. This is the view of al-S̲h̲āfiʿī. It is founded upon the usage of the ancients, for they wrote the *basmala* on the leaves on which they recorded the Ḳur'ānic texts, whereas they omitted the word *amīn*. This opinion is followed in the current official edition of Cairo.

2) In the acts of daily life. Acts which are classified as obligatory or praiseworthy should always be preceded by the *basmala* unless "the Law-giver has decided otherwise", as, for example, in the *ṣalāt* which begins with *Allāhu akbar*; also, according to tradition, in the recitation of a *d̲h̲ikr* (repeated mention of a divine Name). In all other cases the *basmala* must be written or pronounced. *Ḥadīt̲h̲*: "every important matter which is not begun with the *basmala* will be cut off (or mutilated or amputated, according to the different versions)", that is to say "will be defective and hardly blessed by God; apparently complete, it will be spiritually incomplete". Al-Bād̲j̲ūrī (*Ḥās̲h̲iya*, 3) comments: "The adjective "important" signifies: a thing having a legal value (*ḥukm*), that is to say having a certain relationship with the law. It is not, then, a question of a thing which is bad, nor of one which is forbidden or blameworthy". Particular applications. Solemn writings or acts ought to begin with the full formula. It is required in its abbreviated form before the commencement of the approved acts of daily life, especially before eating (cf. the *Risāla* of al-Ḳayrawānī, 236). An act the quality of which may differ according to the circumstances will receive divine blessing if it is preceded by the *basmala*: marital sex-relations for example (al-Buk̲h̲ārī, *wuḍūʿ*, 8). Finally the *basmala* is authorised where it is a question of an act which by accident becomes forbidden or blameworthy (al-Bād̲j̲ūrī, *ibid.*).

3) The meaning of "Raḥman" [*q.v.*]. In general the Muslim commentators regard *raḥmān* and *raḥīm* as two epithets from the root *RḤM*, whence the translations: clement, or benefactor, or most merciful for *raḥmān*, and merciful for *raḥīm*. However, contrary to the opinion of B. Carra de Vaux (*EI*[1], s.v. *Basmala*), it seems certain that *Raḥmān* was in use prior to Islam in southern and central Arabia (Yaman and Yamāma) as a personal name of God, meaning the single and merciful God. On the day following

the death of the prophet Musaylima still appears in the Yamāma claiming to receive direct revelations from *al-Raḥmān*. In the Ḳur'ān: 1) *raḥīm* alone appears in the list of the most Beautiful Names (adjectives), and it is to be found, in the mass of the text, sometimes as *al-raḥīm* and sometimes as *raḥīm* without the article; *al-raḥmān* on the other hand is always preceded by the article; 2) the Meccans of the *dj̲āhiliyya* refused to recognise *al-Raḥmān* as a Name of God (cf. J. Jomier, *Le nom divin "al-Raḥmān" dans le Coran*, 366-367, with references to al-Ṭabarī). It seems that this divine Name appears in the Ḳur'ānic preaching in order to stress more force fully the absolute Mercy of the Single God; furthermore "whatever is said in the Ḳur'ān about *al-Raḥmān* is said elsewhere about Allāh" (Jomier, 370).

That *al-Raḥmān* should have been the name of the single God in central and southern Arabia is in no way incompatible with the fact that, when adopted by Islam, it assumes a grammatical form of a word derived from the root *RḤM*. The tripartite formula which "opens" each Ḳur'ānic sūra and each consecrated act of Muslim life evokes the mystery of the One God who is Lord of the Mercies. It is to this mystery that the *basmala* owes, in the eyes of the Muslim who pronounces it, its power of benediction.

Bibliography: The references in the text of the article may be supplemented and expanded by: Bād̲j̲ūrī, *Ḥāshiya ... ʿalā D̲j̲awharat al-tawḥīd*, ed. Cairo 1352/1934, 2-4; Ḳayrawānī, *Risāla*, ed. Būlāḳ 1319, and the translation of Fagnan, Paris 1914, 236/251; R. Blachère, *Le Coran*, Paris 1947, i, Introduction, 142-144; J. Jomier, *Le nom divin "al-Raḥmān" dans le Coran*, in *Mélanges Louis Massignon*, ii, Damascus 1957, 361-381 (containing numerous references to the text and the commentaries); Y. Moubarac, *Les études d'épigraphie sud-sémitique et la naissance de l'Islam*, second part, *REI* 1957, 58-61. For extremist S̲h̲īʿte interpretations of the *Basmala*, see Ivanow, *Studies in Early Persian Ismailism*[2] Bombay 1955, 68: and R. Strothmann, *Morgenländische Geheimsekten...*, Berlin 1953, 41-2.

(B. Carra de Vaux [L. Gardet])

AL-BAṢRA (in mediaeval Europe: Balsora; in Tavernier: Balsara; orthodox modern European: Basra, Basrah, Bassora), a town of Lower-Mesopotamia, on the S̲h̲aṭṭ al-ʿArab, 279 m. (420 km.) to the south-east of Bag̲h̲dād. In the course of history the site of the town has changed somewhat, and we may distinguish between Old Baṣra, marked today by the village of Zubayr, and New Baṣra, which was founded in the 11th/18th century in the proximity of the ancient al-Ubulla [*q.v.*] and which is the starting point of the modern town of Baṣra, for the rapid growth of which the discovery of oil to the west of Zubayr is responsible.

I. Baṣra until the Mongol conquest (656/1258)

Although probably built on the site of ancient Diriditis (= Teredon) and more certainly on the site of the Persian settlement which bore the name of Vahis̲h̲tābād̲h̲ Ardas̲h̲ēr, the Muslim town can be considered as a new construction. After having camped, in 14/635, on the ruins of the old Persian post called by the Arabs al-K̲h̲urayba ("the little ruin"), the Companion of the Prophet ʿUtba b. G̲h̲azwān [*q.v.*] chose this location, in 17/638, to establish, on orders from ʿUmar b. al-K̲h̲aṭṭāb, the military camp which was the basis of the town of al-Baṣra (the name of which is probably derived from the nature of the soil). Situated at a distance of approximately fifteen km. from the S̲h̲aṭṭ al-ʿArab, this camp was destined to afford a control over the route from the Persian gulf, from ʿIrāḳ and from Persia, and to constitute a starting base for the subsequent expeditions to the east of the Euphrates and the Tigris, while at the same time it contributed to the settlement of the Bedouin. At the outset the dwelling places were simple huts made out of rushes which were easily gathered from the neighbouring Baṭā'iḥ [see AL-BAṬĪḤA]; they were subsequently strengthened with low walls, and then, after a conflagration, rebuilt with crude bricks. It was only under Ziyād b. Abī Sufyān that the latter were replaced by baked bricks and that the town began to assume a truly town-like appearance, with a new Great Mosque and a residence for the governor; the rampart, bordered by a ditch, was not constructed until 155/771-2. At all times the supplying of al-Baṣra with drinking water posed a grave problem and, in spite of the digging of different canals and the utilisation of the bed of the ancient Pallacopas to provide the town with a river port, the inhabitants were forced to go as far as the Tigris to get their supplies.

This inconvenience, added to the rigours of the climate, would have been enough to prevent the military encampment becoming a great city, but political, economic and psychological factors were sufficiently strong to keep the Basrans in the town which owed its development to them, until the time when other factors intervened—in the first place the foundation of Bag̲h̲dād, and then the degeneration of the central power and political anarchy, which ushered in a decline as total as the growth had been rapid.

At the beginning of its existence, al-Baṣra provided contingents for the Arab armies of conquest, and the men of Baṣra took part in the battle of Nihāwand (21/642), and the conquests of Iṣṭak̲h̲r, Fārs, K̲h̲urāsān and Sid̲j̲istān (29/650). At this stage the military camp was playing its natural rôle, but then the booty began to flow in and the men of Baṣra began to be aware of their importance; then it was that the pace of events accelerated and the town became the stage for the first great armed conflict in which Muslims fought against their brother Muslims, the battle of the Camel (36/656 [see AL-D̲J̲AMAL]). Before the fight the inhabitants had been divided in their loyalties, and the victory of ʿAlī b. Abī Ṭālib served only to increase their disorder, but, on the whole, the population remained, and was to remain, more Sunnī than S̲h̲īʿī, in contrast to ʿAlid Kūfa. In the following year (37/657) men from Baṣra took part in the battle of Ṣiffīn [*q.v.*] in the ranks of ʿAlī, but it was, at the same time, also from Baṣra that a considerable number of the first K̲h̲arid̲j̲īs were recruited. In 41/662 Muʿāwiya re-asserted the authority of the Umayyads over the town, and then sent there, in 45/665, Ziyād, who may, to a certain degree, be considered as the artisan of the town's prosperity. Baṣra was divided into five tribal departments (*k̲h̲ums*, pl. *ak̲h̲mās*): Ahl al-ʿĀliya (the inhabitants of the high district of Ḥid̲j̲āz), Tamīm, Bakr b. Wā'il, ʿAbd al-Ḳays and Azd. These Arab elements constituted the military aristocracy of al-Baṣra and absorbed, in the rank of *mawālī* or slaves, the indigenous population (undoubtedly relatively few in number) and a host of immigrant peoples (Iranians, Indians, people from Sind, Malays, Zand̲j̲, etc.), who espoused

the quarrels of their masters, among whom the old tribal *ʿaṣabiyya* was slow to lose its force. The local situation was aggravated under the rule of the governor ʿUbayd Allāh b. Ziyād, and on his death (64/683) serious disturbances broke out; after a period of anarchy the Zubayrids seized control of al-Baṣra which remained under their authority until 72/691. During the following years the primary concern of the Umayyads was to be the suppression of a number of uprisings, the most important of which was that of Ibn al-Ash̲ʿath̲ [*q.v.*] in 81/701. The period of calm which then prevailed until the death of al-Ḥad̲j̲d̲j̲ād̲j̲ (95/714) was only to be further disrupted by the revolt of the Muhallabids in 101-2/719-20 and certain seditions of a minor character. The town then passed, without too much difficulty, under the control of the ʿAbbāsids, but the proximity of the new capital was not slow in robbing al-Baṣra of its character of a semi-independent metropolis which it had possessed since its foundation; it became henceforth a simple provincial town, periodically threatened by revolts of a character more social than political; first the revolt of the Zoṭṭ [*q.v.*], who spread a reign of terror in the region from 205 to 220/820-35, then the Zand̲j̲ [*q.v.*], who seized power in 257/871, and finally the Ḳarmaṭians who plundered it in 311/923; shortly after this it fell into the hands of the Barīdids [*q.v.*], from whom the Buwayhids [*q.v.*] recaptured it in 336/947; then it passed under the sway of the Mazyadids [*q.v.*] and experienced a resurgence of prosperity, although the new rampart constructed in 517/1123, at a distance of 2 km. within the old one, which had been destroyed towards the end of the 5th/11th century, is sufficient proof of the decline of the town. The neighbouring nomads (in particular the Muntafiḳ) took advantage of the political anarchy to subject the town to their depredations; from 537/1142/3, affirms a copyist of Ibn Ḥawḳal, a number of buildings were destroyed; and in our time there is nothing left of the ancient metropolis save a building known by the name of Masd̲j̲id ʿAlī and the tombs of Ṭalḥa, al-Zubayr, Ibn Sīrīn and al-Ḥasan al-Baṣrī.

The town reached its zenith in the 2nd/8th century and the beginning of the 3rd/9th century. At this period it was fully developed and its population had increased to considerable proportions. Although the figures given are wildly divergent (varying from 200,000 to 600,000), al-Baṣra was, for the Middle Ages, a very great city and, what is more, a "complete metropolis": it was at the same time a commercial centre, with its Mirbad which was halting place for caravans and its river port, al-Kallā', which accomodated ships of fairly large tonnage; a financial centre, thanks to the Jewish and Christian elements and the bourgeois of non-Arab stock; an industrial centre with its arsenals; even an agricultural centre with its numerous varieties of dates; and finally the home of an intense religious and intellectual activity. "Baṣra, in fact, is the veritable crucible in which Islamic culture assumed its form, crystallised in the classical mould, between the first and 4th century of the *hid̲j̲ra* (from 16/637 to 311/923)" (L. Massignon). It is, in fact, worth remembering that it was here that Arabic grammar was born and made illustrious by Sibawayh and al-K̲h̲alīl b. Aḥmad in particular, and that Muʿtazilism was developed with Wāṣil b. ʿAṭāʾ, ʿAmr b. ʿUbayd, Abu 'l-Hud̲h̲ayl, al-Naẓẓām and so many others; here also it was that scholars such as Abū ʿAmr b. al-ʿAlā, Abū ʿUbayda, al-Aṣmāʿī and Abu 'l-Ḥasan al-Madāʾinī collected verses and historical traditions which nurtured the works of later writers. In the religious sphere the sciences shone with an intense brilliance, while al-Ḥasan al-Baṣrī and his disciples founded mysticism. In the field of poetry al-Baṣra can claim the great Umayyad poets and the modernists Bas̲h̲s̲h̲ār b. Burd and Abū Nuwās; finally it was in this town that Arabic prose was born, with Ibn al-Muḳaffaʿ, Sahl b. Hārūn and al-D̲j̲āḥiẓ. After the 3rd/9th century the intellectual degeneration is not so clearly marked as the political and economic decline, and, thanks to Ibn Sawwār, the town was endowed with a library whose fame was to endure; the Ik̲h̲wān al-Ṣafāʾ and al-Ḥarīrī made their contribution to the maintenance of the ancient city's prestige, but Arab culture in general was already decadent, and Bag̲h̲dād, as well as other provincial capitals, tended to supplant al-Baṣra completely.

Bibliography: The history of al-Baṣra was written by at least four authors—ʿUmar b. S̲h̲abba, Madāʾinī, Sād̲j̲ī and Ibn al-Aʿrābī—, but their works have not been discovered and it is necessary to refer to the great historical, biographical and geographical texts of Balād̲h̲uri, Ṭabarī, Ibn Saʿd, Ibn al-At̲h̲īr, Ibn al-Faḳīh, al-Iṣṭak̲h̲rī, Muḳaddaṣī, Idrīsī, Yāḳūt etc. These works have, moreover, been used by L. Caetani, *Annali*, iii, 292-309, 769-84 (see also the same author's *Chronographia*, *passim*) and Le Strange, 44-6, as well as by Ch. Pellat, *Le Milieu baṣrien et la formation de Ǧāḥiẓ*, Paris 1953, where there is to found a history of the town from its foundation up to the middle of the 3rd/9th century and a bibliography, to which might be added particularly J. Saint-Martin, *Recherches sur l'histoire et la géographie de la Mésène et de la Characène*, Paris 1838, 47 ff., Rawlinson, *The five Great Monarchies*, iii, 290 and Nāṣir-i K̲h̲usraw, *Safar-nāma*. The ancient topography of the town is the subject of a detailed monograph by Ṣāliḥ al-ʿAlī, *K̲h̲iṭaṭ al-Baṣra*, in *Sumer*, 1952, 72-83, 281-303 (see also the subsequent numbers of *Sumer*), and of a stimulating paper by L. Massignon, *Explication du plan de Baṣra* in the *Westostliche Abhandlungen R. Tschudi* . . ., Wiesbaden 1954, 154-74, with two sketch maps showing firstly the site of both Baṣras and secondly the location of the *ak̲h̲mās*. The social and economic institutions of the 1st/7th century have been studied in a most profound way by Ṣāliḥ al-ʿAlī, *al-Tanẓīmāt al-id̲j̲timāʿiyya wa-l-iḳtiṣādiyya fī l-Baṣra*, Bag̲h̲dād 1953 (with a full bibliography). (Ch. Pellat)

II. Modern Baṣra

Baṣra, already much reduced in size and vitality in the 5th-7th/11th-13th centuries, was further and faster debilitated by the destruction, near-anarchy and neglect which followed Hülegü's visit to ʿIrāḳ in 656/1258, and the installation there of an Īl K̲h̲ān government, for which Baṣra was the remotest of provinces, with periods of disturbance, insurgence or secession. In the mid-8th/14th century Ibn Baṭṭūṭa found the city largely in ruins, and, while some principal buildings (including the great mosque) still stood, already tending towards transfer from its original site to another (its modern location), a dozen miles distant, on or near the site of Ubulla : a move dictated by reasons partly of security, partly by the deterioration of the canals. The great date-belt of the S̲h̲aṭṭ al-ʿArab remained the wealth and pride of the Baṣrans;

but its cultural and economic life declined throughout the Djalā'ir and Turkomān periods of ʿIrāḳī history—740/1340 to 914/1508—and when at last at the latter date it fell with all ʿIrāḳ to the Persian power of Shāh Ismāʿīl for a brief generation—914/1508 to 941/1534—it was, in its now established new position two miles upstream a main canal (the modern ʿAshār Creek), a provincial town of little interest apart from its sea-port status, its gardens, and its predilection for local independence from distant suzerains.

The Ottoman conquest of ʿIrāḳ in 941/1534, which further strengthened the Sunnī elements in the population already prevalent, had little other effect on its status or fortunes; the Turkish pasha of Baghdād was satisfied with a minimum of respect and tribute from the marsh-surrounded and tribe-threatened city of the far south; and when in 953/1546 the independent airs of Baṣra became too offensive, two expeditions from central ʿIrāḳ succeeded in restoring some semblance of the Sultan's authority as against powerful local (tribal or urban) candidates for power. A longer and more successful attempt at quasi-independence, under merely nominal Imperial suzerainty, was made by a local notable of now unascertainable origins, Afrāsiyāb [*q.v.*], and his son and grandson ʿAlī Pasha (1034/1624) and Ḥusayn Pasha (c. 1060/1650). This interesting dynasty opened the gates of Baṣra and its waterways to the representatives and merchant-fleets of the Europeans —Portuguese, British, Dutch—then active in the commerce of the Persian Gulf; it survived, with vicissitudes and interruptions, for some 45 years against the armed and diplomatic efforts of the Pasha of Baghdād, the threats of the Ṣafawid Shāh, and the intrigues of local rivals and turncoat tribesmen. And its restoration to the Empire was still incomplete until after a further full generation of local uprising and Persian penetration, tribal dominance (of the Ḥuwayza tribes and the Muntafiḳ), and decimation by plague.

Throughout the two centuries (12th-13th/18th-19th) following these events, Baṣra remained the metropolis of southern ʿIrāḳ, the country's sole port —however primitive and ill-equipped—the base for a decayed and microscopic fleet, the centre of the date trade, and the gateway to the tribes and princes of Arabia, Khūzistān, and the Persian Gulf. The city, whose administration evolved only after 1247/1831 slowly towards modernity, was ever at the mercy of tribal marauders and even invaders, notably by the great Muntafiḳ tribe-group, and by plague and inundation.

During the campaigns of Nādir Shāh in ʿIrāḳ in the mid-century Baṣra was threatened and for a time besieged, and his withdrawal was followed by the usual attempts at secession. Sound and vigorous government was witnessed under rare Mutasallims of higher quality, including Sulaymān Abū Layla from 1266 (1749) and Sulaymān the Great from 1282/1765. The establishment of European (British, French, Italian) permament trading-posts, consulates and missions slowly gained ground, but disorder scarcely diminished and tribal threats increased with the rise, after 1256/1740, of the powerful Saʿdūn leadership in the Muntafiḳ. The siege and occupation of the city and district in 1189-1194/1775-79 by the Persian forces of Ṣadīq Khān, brother of Karīm Khān Zand [*q.v.*] was a curiously detached episode of Baṣra's history; it was succeeded by the return of all the familiar conditions. Threats to Baṣra by the fleet of the Imām of Masḳaṭ in 1213/1798 came to nothing, though rivals for tribal or governmental power in southern ʿIrāḳ sought him as an ally, for example in 1241/1825. The great plague of Baghdād in 1247/1831 did not fail to infect the Port also, and increased its weakness and disorders.

The period 1248-1332/1832-1914 was one of slow development, improving security and increasing commercial links with Europe and America. Baṣra became a *wilāyet* in 1267/1850 and, among its eminent families and personalities, a centre of nascent Arab nationalism.

During the British occupation of ʿIrāḳ (from 1333/1914) and subsequent Mandate (1339-1351/1920-32), the transformation of Baṣra into its most modern form was rapid. The port was constructed on spacious modern lines and fully equipped, a deep channel at the mouth of the Shaṭṭ al-ʿArab dredged, and the town itself and its suburbs improved by a variety of new roads, buildings and public services. It became the southern terminus of ʿIrāḳ Railways, and an air centre of increasing importance. Under the ʿIrāḳ Government it became the headquarters of a *liwā* which included the dependent *ḳaḍās* of Abu 'l-Khaṣīb and Ḳurna. The city, with its suburbs of Maʿḳil and ʿAshār, contained in 1955 some 200,000 souls. With improved security and communications Baṣra took its place as by far the leading port and entrepôt of the Persian Gulf, and ʿIrāḳ's indispensable outlet. During the three decades preceeding 1377/1957 further important improvements were carried out to its town-planning, streets (including an imposing Corniche road), public and commercial buildings, and public services and facilities. The vast date gardens (within which, however, life remained poor and primitive) and the magnificent waterway of the Shaṭṭ al-ʿArab offer a remarkable setting to the modernised city of Baṣra and its spreading suburbs with their characteristic mixture of the primitive, the medieval, and the fully modern. The date export trade has been further organised and centralised under a Board located at Baṣra. Exploration for petroleum by a Company of the ʿIraq Petroleum Co. group was rewarded by the discovery of an important oil-field near Zubayr in 1368/1948, followed by others (notably al-Rumayla) in the *liwā*. Export of oil, by pipelines to Fāō, began in 1371/1951. The industry developed rapidly and on a major scale, and became Baṣra's greatest source of employment, technical education and wealth. A small oil refinery was completed at Muftiyya in 1372/1952. Meanwhile the city and district continued to benefit greatly, as from 1353/1934 but increasingly after 1372/1952, from the enrichment of the central government of ʿIrāḳ through its exploited oil-resources. Important developments in flood-protection, land reclamation and perennial irrigation were planned in the vicinity of the city.

Bibliography: The manuscript and printed sources for modern Baṣra history to 1318/1900 are given in S. H. Longrigg, *Four Centuries of Modern ʿIraq*, Oxford 1925, 327-40; for the period 1318/1900 to 1370/1950 see idem, *ʿIraq 1900 to 1950*, London 1953, 401-12.

(S. H. LONGRIGG)

AL-**BAṢRA**, a town in Morocco, not extant to-day, which owed its name to Baṣra in ʿIrāḳ. Situated between two hills of reddish earth (whence its epithet al-Ḥamrā'), on a plateau commanding to the east the road to Wazzān, to the west the valley of the Wēd Mda, and to the north-east that of the Wēd Lekkus,

about $12^1/_2$ m. (20 km.) south of al-Ḳaṣr al-Kabīr, it occupied, according to Tissot, the site of the Roman town of Tremulae. Founded about the same period as Arzila (Aṣila [*q.v.*]), and probably therefore by Idrīs II, at the beginning of the 3rd/9th century, it was doubtless intended to be the summer residence of the Idrīsids of Fās. When Muḥammad b. Idrīs II partitioned his kingdom, al-Baṣra fell to the share of his brother al-Ḳāsim together with Tangier and its dependencies. In the following century, it became the capital of a small state comprising the Rīf and Ghumāraland, the administration of which was entrusted to the Idrīsid prince Ḥasan b. Gennūn; it was soon afterwards captured (5 Muḥarram 363/6 October 973) by the army of the Umayyad caliph of Cordova, al-Ḥakam II; Yaḥyā b. Ḥamdūn set himself up there as an independent ruler before being driven out by Buluggīn b. Zīrī, who razed the fortifications of the town. These are almost the only definite statements we have on the history of al-Baṣra.

Despite the statement of al-Muḳaddasī (ed. trans. Pellat, 27) that it was in ruins, the town seems to have preserved a certain prosperity in the 4th/10th and 5th/11th centuries, as is asserted by Ibn Ḥawḳal and al-Bakrī, who speak of its walls pierced by ten gateways, its baths, its mosque, and the gardens, pastures and fields of corn and cotton which surrounded it; nevertheless, it rapidly declined and eventually fell into complete ruin; at the time of Leo Africanus, it was inhabited by no more than 2,000 households, and its walls stood in the midst of deserted gardens; to-day, only the stone wall remains.

Bibliography: Ibn Ḥawḳal, *Desc. de l'Afr. et de l'Espagne*, trans. de Slane, in *JA*, 1842, 192; Bakrī, *Desc. de l'Afr. Sept.*, trans. de Slane, index; Idrīsī, trans. Esp. Mus.*, index; D. Eustache, *El-Baṣra, capitale idrissite, et son port*, in *Hespéris*, 1955, 217-38 (with a bibliography and a study on Mūlāy Bū Selhām which was probably the port of al-Baṣra). (G. Yver*)

BAST (Pers.), "sanctuary, asylum", a term applied to certain places which were regarded as affording an inviolable sanctuary to any malefactor, however grave his crime; once within the protection of the *bast*, the malefactor could negotiate with his pursuers, and settle the ransom which would purchase his immunity when he left the *bast*. In Persia the idea of *bast* was connected in particular with (1) mosques and other sacred buildings, especially the tombs of saints (for example, in 806/1404 Tīmūr is said to have recognised the tomb (*mazār*) at Ardabīl of Shaykh Ṣafī al-Dīn, the founder of the Ṣafawid order, as constituting a *bast*), (2) the royal stables and horses (the wrong-doer could claim sanctuary by standing either at the horse's head or at its tail), (3) the neighbourhood of artillery, especially in the Maydān-i Tūpkhāna in Tehran. According to Chardin, under the later Ṣafawids the royal kitchens, and the gateway of the ʿĀlī Ḳāpū palace at Iṣfahān, also constituted a *bast*. Malcolm states that the residences of the *mudjtahids* in general were considered as *bast*, and that in the case of one particularly celebrated *mudjtahid*, his residence continued to be regarded as *bast* even after his death. When telegraphic communications were introduced into Persia in the second half of the 19th century, the telegraph offices were at first invested with the status of *bast*. About 1889 Nāṣir al-Dīn Shāh attempted without success to abolish the institution of *bast*. (For details of the violation of the *bast* of Shāh ʿAbd al-ʿAẓīm by Nāṣir al-Dīn Shāh in 1891, see the article DJAMĀL AL-DĪN AL-AFGHĀNĪ).

In the present century, the institution of *bast* (also termed *taḥaṣṣun*), assumed great importance during the events which led to the granting of the Persian Constitution by Muẓaffar al-Dīn Shāh in 1906. In December 1905 a group of merchants, *mullās* and students, in order to compel the Shāh to take note of their grievances, took refuge first in the Masdjid-i Djāmiʿ in Tehran, and then, after having been forcibly expelled from this sanctuary, in the shrine of Shāh ʿAbd al-ʿAẓīm, 6 miles SSE of Tehran. A month later, on the receipt of certain promises and assurances from the Shāh, the *bastīs* left their sanctuary. The "Second *Bast*" occurred in July 1906, when some 12,000 people, led by the *ʿulamā*, merchants, and members of the trade guilds, took refuge in the garden of the British Legation in Tehran, and ultimately (August 1906) succeeded in obtaining from the Shāh the promise of the grant of a Constitution. During the disturbances which attended the election of the members of the National Consultative Assembly, which sat for the first time on 7 October 1906, the constitutionalists again took refuge in the British Legation in Tehran; in the provinces, British Consulates, notably those at Tabrīz and Kirmānshāh, and telegraph offices were used by the constitutionalists as places of refuge. In June 1907 a group of *mullās* and others hostile to the Constitution took *bast* at Shāh ʿAbd al-ʿAẓīm in an unsuccessful attempt to rally opposition to the constitutionalist movement.

(R. M. Savory)

BASṬ (A.), a technical term of the Ṣūfīs, explained as applying to a spiritual state (*ḥāl*) corresponding with the station (*maḳām*) of hope (*radjā*ʾ): it is contrasted with *ḳabḍ* [*q.v.*]. The Ḳurʾānic authority generally quoted for these terms is: "And God contracts (*yaḳbiḍ*) and expands (*yabsuṭ*)" (ii, 245). As *basṭ* is a *ḥāl*, it bears no relation to personal mental or spiritual processes, but is a sense of joy and exaltation vouchsafed to the mystic by God. For this reason many Ṣūfīs accounted it to be inferior to *ḳabḍ*, on the ground that, until God is finally attained and the human individuality is lost in Him, any feeling other than that of desolation is inappropriate. The following saying of al-Djunayd illustrates this point: "The fear of God contracts me, and the hope for Him expands me ... When He contracts me through fear, He causes me to pass away from self, but when He expands me through hope, He restores me to myself" (Ḳushayrī, *Risāla*, 43). These lines of Ibn al-Fāriḍ (*al-Tāʾiyya al-kubrā*,

ii, 646-7) summarise the Ṣūfī theory excellently: "in the mercy of expansion the whole of me is a wish whereby the hopes of all the world are expanded, and in the terror of contraction the whole of me is an awe and over whatsoever I let mine eye range, it reveres me" (tr. Nicholson, in *Studies in Islamic Mysticism*, 256). Hudjwīrī writes (tr. Nicholson, 374); "*Ḳabḍ* denotes the contraction of the heart in the state of being veiled, and *basṭ* denotes the expansion of the heart in the state of revelation". The mood of *basṭ* appears to be similar to that in which Pascal cries: "The world hath not known Thee, but I have known Thee. Joy! Joy! Joy! Tears of joy!"

(A. J. Arberry)

BASTA, Spanish Baza, Basti in ancient geography, now chief town of a *partido* of the province of Granada. It is situated to the north-east of Granada, 123 kilometres distant from it by road. Al-Idrīsī describes it as being of medium size, pleasantly situated, flourishing and well populated. It was a fortified town and had several bazaars. It was a commercial town where local artisans pursued a diversity of trades. Mulberry trees were prolific in the town and, in consequence, there was a large silk industry. Baza was also rich in olive groves and all kinds of fruit trees. It was here that the workshops (*ṭurūz*) for the weaving of prayer carpets (*muṣall*—called *basṭis*) were located. These carpets were made from brocade which had no equal. The galena (*kuḥl* or sulphide of antimony) used in eye washes was taken from deposists in the mountain known as Djabal al-Kuḥl which was situated near the town. During the Umayyad Caliphate, Baza had an important Mozarab community with a bishopric subordinate to Toledo. The *Bayān* in its last section, at present in course of publication, gives the names of a number of the town's Almohad governors. In 635/1237, Baza came under the rule of Muḥammad b. Yūsuf b. Aḥmad, founder of the Naṣrid kingdom (see *Naṣrids*).

Bibliography: Idrīsī, text 202, translation, 247; Yāḳūt, i, 624; Ḳazwīnī, *Cosm.*, ii, 344, according to al-ʿUdhrī; E. Lévi-Provençal, *La Peninsule iberique*, 56-7. (A. Huici Miranda)

al-**BASŪS** bint Munḳidh b. Salmān al-Tamīmiyya, a legendary figure of the pre-Islamic sagas (*ayyām al-ʿArab*), said to be responsible for the murder of Kulayb b. Rabīʿa al-Taghlibī and the ensuing war (*ḥarb al-Basūs*) between the tribes of Bakr b. Wāʾil and Taghlib b. Wāʾil. For the question of the historical background see art. Kulayb b. Rabīʿa. In the legend Kulayb is represented as a tyrant who disregarded the time-honoured customs of the Bedouins and usurped for himself the right of pasture and of hunting in his self-chosen preserves. Once al-Basūs, while staying with her nephew al-Djassās, Kulayb's brother-in-law, let her she-camel (*var.* the she-camel of Saʿd al-Djarmī, her husband, or according to others, her protégé) graze on Kulayb's pasture and he killed the camel (*var.* killed her foal and wounded her in the udder). Outraged by this violation of the host's rights al-Djassās (*var.* together with his cousin) killed Kulayb and this led to the war between the two tribes. Kulayb's killing the she-camel and his death are alluded to by al-Nābigha al-Djaʿdī, d. *ca.* 65/684 but without mentioning al-Basūs (see *Aghānī*[1] iv, 127, 140 and M. Nallino, in *RSO* xiv, 405 f.). Her name is given for the first time in the proverbs *ashʾamu min nāḳat al-Basūs* (see, *e.g.*, al-Mufaḍḍal b. Salama, *Fākhir*, 76). The full story is told on the authority of Abū ʿUbayda in the *Naḳāʾid Djarīr wa l-Farazdaḳ* 905-7 and with slight variations by other collectors of the *ayyām al-ʿArab*. In the *Fākhir*, 76, in Tibrīzī's Commentary on the *Ḥamāsa* 420 (on the authority of Abū Riyāsh 339/950) and elsewhere four verses are put in the mouth of al-Basūs, addressed to Saʿd and indirectly compelling al-Djassās to take revenge on Kulayb; they are a fine specimen of *taḥrīḍ* "incitement", and are cited in the *Rasāʾil Ikhwān al-Ṣafā*, Cairo 1347, i, 133, as an example of the tremendous effect which poetry can have on man's actions.

The proverb *ashʾamu min al-Basūs* was by some scholars thought to refer not the pathetic figure of the heroic age, but to her namesake, a Jewess, who by her stupidity forfeited the three wishes which God had granted to her husband.

Bibliography: In addition to the references given in the text: Ibn ʿAbd Rabbih, *ʿIḳd*, Cairo 1316, iii, 66 f.; Maydānī, *Madjmaʿ al-Anthāl* (ed. Freytag) i, 683-7; Yāḳūt i, 150; Ibn al-Athīr i, 385 f.; *Khizānat al-Adab* i, 300 ff.; W. Caskel, *Aijām al-ʿArab* (= *Islamica* vol. iii suppl.) 76 and 97 (German translation of *Naḳ*. 905, 10-906, 3)—For al-Basūs the Jewess see *LA* and *TA* s.v. *b s s*; Freytag, *Proverbia Arabum I*, 687. Damīrī s.v. *Kalb* (translated by R. Basset, *1001 contes*, ii, 18) tells the story but omits the wife's name. For the motif of "the three wishes" see J. Bolte and G. Polívka, *Anmerkungen zu den Kinder- und Hausmärchen der Brüder Grimm* II (1915) 223.

(J. W. Fück)

BAŞVEKALET ARŞIVI, formerly also Başbakanlik Arşivi, the Archives of the Prime Minister's office, the name now given to the central state archives of Turkey and of the Ottoman Empire. The formation of the Ottoman archives begins with the rise of the Ottoman state, but the present collection, though containing a number of individual documents and registers from earlier times, dates substantially from after the Ottoman conquest of Constantinople in 1453. The archives became really full from about the middle of the 16th century, and continue to the end of the Empire.

The organisation of the Ottoman records in the form of a modern archive collection dates from an initiative of the reforming Grand Vezir Muṣṭafā Reshīd Pasha, who in 1262/1846 erected a new building for the archives in the grounds of the Grand Vezirate, and transferred to it a large number of record collections, previously kept in bales and boxes in various repositories and offices in different parts of the city. The building, designed by the famous architect Fossati, was provided with a staff and a director. This record office, in Ottoman times known as the *Khazīne-i Ewrāḳ*, originally consisted of two main groups of documents; the records of the Imperial Council (*Dīwān-i Humāyūn*) and of the Grand Vezir's office (*Bāb-i ʿĀlī* or *Pasha Kapïsï*). To this core other collections were from time to time added, notably the records of the finance departments and the registers of the cadastral survey office.

From the start, the *Khazīne-i Ewrāḳ* was attached to the establishment of the Grand Vezir. Under the Republic it was, after a brief period of uncertainty, attached to the office of the Prime Minister. The old name was replaced by the modern one by a law of 1937.

A new phase in the organisation and study of the archives had begun in 1911, after the formation of the Ottoman Historical Society (*Taʾrīkh-i ʿOthmānī Endjümeni*). The opening article in the first issue of the society's journal, written by ʿAbd al-Raḥmān Sheref, the last official historiographer and first

president of the society, contained a statement of the society's aims, the first of which was the classification, study, and publication of archive documents (*TOEM*, 1911, 9-19 and 65-9; cf. P. Wittek, *Les Archives de Turquie*, in *Byzantion*, xiii, 1938, 691-9). In the years that followed, Turkish scholars working in the archives began to sort and classify the records, and also published many individual documents. This work was interrupted by the Revolution and war of Independence, followed by the transfer of the capital and a general mood of revulsion from the Ottoman past. In 1932, however, a new start was made, and since then work has continued in housing, organising, and cataloguing the records. In 1936-7 Professor L. Fekete was invited to advise on the methods to be followed in these tasks (see L. Fekete, *Über Archivalien und Archivwesen in der Türkei*, *AO*, Budapest, iii, 1953, 179-206).

The contents of the *Başvekalet Arşivi* may be divided broadly, according to the form in which they are preserved, into two groups—*ewrāḳ*, papers, and *defters*, bound registers. The former, ranging from Imperial decrees drawn up in due form to odd notes and minutes by minor clerks, are estimated to number many millions, of which only a very small proportion has been catalogued. A first classification of papers was made in 1918-1921 by a committee under the direction of Ali Emiri, which sorted 180,316 documents in simple chronological order, by reigns from ʿOthmān I to ʿAbd al-Madjīd. The great majority are of the 18th and the first half of the 19th centuries. In 1921 a second committee, under Ibnülemin Mahmud Kemal, sorted 46,467 documents, from the 15th to the 19th centuries, into 23 subject groups, the largest of which are those of financial (12,201) and military (8,227 documents) affairs. Within each group the documents are in rough chronological order. A third team, under Muʿallim Cevdet (Djewdet), worked from 1932 to 1937 along much the same lines as Ibnülemīn, and sorted 184,256 documents into 16 subject categories. Here the largest groups are military (54,984), *waḳf* (33,351) and internal affairs (17,468 documents). These three classifications are normally cited as the *taṣnīfs* of the three persons who directed them.

Since 1937 this kind of pre-scientific classification has been abandoned, and a new start made on more modern lines. Papers are being completely separated from registers, and classified according to the offices and departments to which they belonged, as far as possible preserving the original order and sequence. In addition to the main classification, the archives staff has undertaken the preparation of a number of special series, such as 'imperial writings' (*Khaṭṭ-i Humāyūn*), decrees (*irāde*), treaties, *waḳf* documents, etc. A special catalogue is being prepared of the papers and records of ʿAbd al-Ḥamīd II, which were transferred to the Başvekalet Arşivi from the Yıldız Palace.

The defters, bound registers, are estimated to number about 60,000 in all Turkish collections, the great majority being in the Başvekalet Arşivi. They are of two basic types: statistical, containing figures and other factual information required and collected for various administrative purposes; and diplomatic, containing register copies of the texts of outgoing orders, letters, and other communications.

The defters may be considered in three main groups: a) the Imperial Council and Grand Vezirate. The latter, which in the 17th century grew into a separate bureaucratic organisation, eventually took over most of the functions of the former, and the archives of the two together thus record the workings of the chief centre of Ottoman Imperial government. Of the many series of registers included in this section by far the most important is the *Mühimme Defteri* (register of important, *i.e.*, public affairs). This consists of 263 volumes, covering the years 961-1323/1553-1905. It is a day by day record of outgoing correspondence of all kinds, in simple chronological sequence. (On the *Mühimme* see G. Elezović, *Iz Carigradskih Turskih Arhiva Muhimme Defteri*, Belgrade 1951, and U. Heyd, *Documents on Ottoman Administration of Palestine* 1552-1615, A *Study in the Mühimme Defteri*, Oxford, in the press). In the course of time a number of separate series were started, dealing with matters formerly included in the *Mühimme*. From 1059 to 1155/1649-1742-3) complaints from the provinces and the decrees answering them are dealt with in separate 'Complaints Registers' (*shikāyet defterleri*). These are still in purely chronological order, but from 1155 to 1306/1742-3—1888-9 are replaced by the 'Decrees Registers' (*aḥkām defterleri*), geographically subdivided into 17 separate provincial series. The Complaints and Decrees registers together number 530 volumes. Other off-shoots of the *Mühimme* include a series on military affairs (68 volumes, 1196-1326/1781-1908); a series of specially secret *Mühimme* (10 volumes, 1203-1294/1788-1877), and a series on Egyptian affairs, the last volume of which is secret (15 volumes, 1119-1333/1707-1914). Among the numerous other series contained in this section, are the Royal Letters (*Nāme-i humāyūn*, 17 vols., 1111-1336/1699-1917), the *Tanẓīmāt* Council registers (30 vols., 1271-1333/1854-1914), as well as other series dealing with foreign consuls and merchants, privileges (*imtiyāz*), legal rulings (*muḳtaḍā*), treaties, sentences of confinement to fortresses (*ḳalʿebend*), *iḥtisāb*, appointments, churches, minority communities, etc. etc.

b) The Cadaster (*tapu*), comprising the great land and population survey of the Empire. It was formerly a separate department of the government [see DAFTAR-I KHĀḲĀNĪ], and was housed in the Defterkhāne, near the Sulṭān Aḥmed mosque. The greater part of the registers was transferred to the *Başvekalet Arşivi*, which now reports the possession of 1155 volumes. The remainder, about 250, are in the General Survey Directorate (*Tapu ve kadastro umum Müdürlüğü*) in Ankara. The earliest, a register of *timars* in a *sandjaḳ* in Albania, dated 835/1431, was edited by Halil Inalcık (*Sûret-i Defter-i Sancak-i Arvanid*, Ankara 1954). These registers, which were renewed at frequent intervals, cover almost all the provinces of the Empire in Europe and Asia, including parts of Transcaucasia and Western Persia. Arabia, Egypt, and North Africa are excluded.

c) Finance (*Māliyye*). The surviving records of the Ottoman financial administration are now in the *Başvekalet Arşivi*, and comprise many series of registers, as well as vast quantities of papers. They include the accounts and records of the Chief Comptroller's Department (*bashmuḥāsebe*) from the 16th to the 19th centuries; of the various special commissioners' departments (*emānet*)—arsenals, cereals, meat, artillery depot, mints, kitchens, powder-magazines; of provinces, departments, paymasters, tax-farms, mines, customs, escheats, etc. A good example is the *djizya* series (418 vols., 958-1255/1551-1840). Part of the series is sub-divided by provinces, and some registers contain copies of *djizya* documents and receipts, with lists of *djizya* payers, sent in from provincial capitals.

Apart from the main collection in the *Başvekalet Arşivi*, there are numerous other smaller collections in Turkey. The most important are the palace archives preserved in the Topkapl Sarayl [*q.v.*], the records of the General Directorate of *waḳf* in Ankara, and the collections of legal documents known as *sidjillāt-i sher'iyye* [see SIDJILL].

Bibliography: For a general survey of the archives, with a description and classification of the papers and registers, see Midhat Sertoğlu, *Muhteva Bakımından Başvekâlet Arşivi*, Ankara 1955. On the history of the collection this may be supplemented by Salahaddin Elker, *Mustafa Reşit Paşa ve Türk Arşivciliği*, in *IV Türk Tarih Kongresi*, Ankara 1952, 182-9. See further B. Lewis, *The Ottoman Archives as a Source for the History of the Arab Lands*, in *JRAS*, 1951, 139-155; idem, *The Ottoman Archives, a Source for European History, Report on Current Research, Spring 1956*, Washington 1956, 17-25 (reprinted with minor modifications in *Archives* 1959); idem, in *BSOAS* xvi, 1954, 469-501 and 599-600. A bibliography of Ottoman archive studies will be found in Ananiasz Zajączkowski and Jan Reychman, *Zarys Dyplomatyki Osmańsko-Tureckiej*, Warsaw 1955 (English translation to be published).

(B. LEWIS)

BAŞVEKIL (BASHWAKĪL), the Turkish for Prime Minister. The term was first introduced in 1254/1838, when, as part of a general adoption of European nomenclature, this title was assumed by the Chief Minister in place of Grand Vezir or *Ṣadr-i A'ẓam* [*q.v.*]. The change of style was of short duration, lasting only for 14½ months, after which the old title was restored. A second attempt to introduce the European title was made during the first constitutional period. Introduced in Ṣafar 1295/Feb. 1878, it was dropped after 114 days, restored in Sha'bān 1296/July 1879, and then dropped again, after about 3½ years, in Muḥarram 1300/Nov. 1882. Thereafter the title Grand Vezir remained in official use until the end of the Sultanate, when it was finally replaced by Başvekil (or, for a while, Başbakan), in the Republic.

Bibliography: 'Abd al-Raḥmān Sheref, *Ta'rikh Muṣāḥabalari*, Istanbul 1340, 264 ff.

(B. LEWIS)

AL-**BAṬĀḤIRA** (Baṭḥarī), a small déclassé tribe (*ghayr aṣil, ḍa'īf*) of (approx.) only a hundred males, on the south Arabian coast between Ra's Naws and Ra's Sawḳira facing the Kuria Muria Islands. They live mainly by fishing and goat herding but have also some camels, frankincense trees, and trading boats. Besides Arabic, they speak Baṭḥarī (*Baṭᵊḥariy-yét*), in which *'ayn* is preserved more than in the related southern Semitic oral tongues: Mahrī of al-Mahra, Ḥarsūsī of al-Ḥarāsīs, Shaḥrī of al-Shaḥra and their overlords al-Ḳarā', and Suḳuṭrī (basically Mahrī but greatly mixed) of the people of Suḳuṭrā. In religion al-Baṭāḥira are Shāfi'ī Muslims, and in political faction they are Ghāfirīs.

The main groups (names in Arabic) are: al-Maḥābisha (Maḥbashī), al-Mashārima (Mashramī), al-Mamāṭira (Mamṭirī), al-Madjā'ira (Madj'arī), and al-Makādisha (Makdashī). The last named live in the mountains of Ẓufār among al-Ḳarā' and like them own cows. Of al-Madjā'ira only six males were left after ten died of "fever" c. 1376/1957. Al-Maḥābisha have two sections, Bayt Ḥubaysh (Ibn Ḥ.) and Bayt Maḥdīra (Ibn M.), to which latter belonged in 1378/1959 the tribal leader, Ḥuthayyith, who succeeded his father, Muḥammad Rā'ī Ḥamrā', c. seven years earlier. (The title *muḳaddam*, pl. *mᵊḳaddamōten*, def. art. *a-*, is now frequently replaced by the Arabic term *shaykh*). Although not subservient to them, the leader may confer on important matters with the chief men of al-Djanaba and al-Mahra. With propinquity overweighing regard for purity of blood, the social status of al-Baṭāḥira does not preclude marriage with any of the neighboring tribes.

The neighbours nearest to them in their rough coastal district—small beside the area of the interior which they claim to have once owned—are al-Ḳarā' and al-Shaḥra to the southwest, al-Ḥarāsīs and eastern groups of al-Mahra in the interior, and al-Djanaba to the northeast. Hence, with regard to geographical names in their territory, great variety if not confusion exists between forms in non-Arabic languages and those in dialectical Arabic—especially that spoken by al-Djanaba. Because political and economic developments are accelerating the aggrandizement of Arabic, such toponyms may eventually be the principal if not the only surviving mementos of historic non-Arabic tongues, both here and elsewhere in southern Arabia.

AL-**BAṬĀ'IḤ** [see AL-BAṬĪḤA].

AL-**BAṬĀ'IḤĪ**, ABŪ 'ABD ALLĀH MUḤAMMAD B. FĀTIK, called AL-MA'MŪN, Fāṭimid *wazir*. Born of obscure parentage, his father having been an Egyptian agent (*djāsūs*) in 'Irāḳ, al-Baṭā'iḥī rose to power through the patronage of the celebrated Fāṭimid *wazir* al-Afḍal, in whose assassination he was implicated (515/1121), and whom he succeeded as first minister of al-Āmir (ruled 495/1101-524/1130).

The creation of an observatory at Cairo had been planned by al-Afḍal. Al-Baṭā'iḥī took up the work, in which the Spaniard Abū Dja'far Yūsuf b. Ḥasdāy, a friend of the philosopher Ibn Bādjdja, played a prominent part, together with other scholars, native Egyptian and foreign, till 519/1125. In that year al-Baṭā'iḥī incurred the suspicion of the Caliph, and fell from power. Among the crimes reckoned against him was the construction of the observatory, and it was alleged that his naming it after himself 'al-Ma'mūnī' was proof that he aspired to the Caliphate. When al-Baṭā'iḥī had been arrested, the Caliph refused to go on with the work, and none dared mention it to him. He gave orders for its demolition, and the materials were removed to the government stores. The workmen and experts fled. The latter included, as well as Abū Dja'far Yūsuf b. Ḥasdāy, the *ḳāḍī* Ibn Abi 'l-'Ish of Ṭarābulus the geometer, Abu 'l-Nadjā' b. Sind of Alexandria the instrument-maker (*sā'ātī*), and the geometer Abū Muḥammad 'Abd al-Karīm of Sicily. Al-Baṭā'iḥī himself was crucified by the Caliph's orders. His large house in Cairo was still used as a residence more than thirty years later, but Ibn Khallikān, who gives this

information (tr. De Slane, ii, 426), adds that in his time it had become a Ḥanafī *madrasa*.

Bibliography: Ibn al-Athīr, x, 417, 443-444; Maḳrīzī, *Khiṭaṭ*, ed. Būlāḳ, i, 125-128; Ibn al-Ḳalānisī, 204, 209, 212. (D. M. DUNLOP)

BAṬALYAWS, Spanish Badajoz, today the fortified capital of the province of the same name, the largest in Spain, embracing the southern half of Spanish Estremadura. The town, situated on the left bank of the Guadiana, before it turns south near the Portuguese frontier, has 100,000 inhabitants. The identification of its name with that of Pax (Julia) Augusta or Colonia Pacensis is without foundation, based on a false local patriotism. In fact, it is not the name of Badajoz which derives from that of the Roman colony, but rather, that of the Portuguese town of Beja (Arab. Bādja = Bĕdja, derived from Pacem). The identification of Badajoz with the doubtful Badia of Valerius Maximus and of Plutarch is equally uncertain. The first time that the name of Badajoz appears indisputably in history is in the Arabic form of Baṭalyaws (present in the root of the modern Spanish name of Badajoz). Baṭalyaws is of modern foundation, having been built by 'Abd al-Raḥmān b. Marwān, called al-Djilīḳī (the Galician), with the authorisation of the amīr 'Abd Allāh who put at his disposition for this purpose a certain number of masons and some capital. 'Abd al-Raḥmān began by constructing the mosque-cathedral; he also built a special mosque inside the citadel. It was also he who built the baths near the gate of the town which had already served him as a point of support and bulwark against the Caliph of Cordova Muḥammad I. It was not until 318/930 that this place could be retaken from the courageous son of Ibn Marwān, under 'Abd al-Raḥmān III (*Bayan*, 105 ff., 140, 195, 213-14, 216). The new town of Arab construction (Abu 'l-Fidā' 173: *wahiya muḥdatha islāmiyya*), Baṭalyaws, gradually replaced in importance Colonia Augusta Emerita, Arab. Mārida = Mĕrida (37 m. = 60 km. east, upstream of Badajoz on the north bank of the Guadiana) which continued to decline. Indeed, at the time of the decadence of the Umayyad Caliphate of Cordova, Baṭalyaws became the brilliant residence of the Afṭasids [*q.v.*] who, from 1022 to 1094, reunited in a single important kingdom the largest part of the north of the former Lusitania. After the disastrous defeat of the Christians at al-Zallāḳā (Sacralias) in 1086, north-east of Badajoz, the principality of the north-west, namely Badajoz, as well as the other Reyes de Taifas, became gradually subject to the Berber Almoravids [*q.v.*], who had rushed out of Morocco to the aid of their co-religionists, these auxiliaries themselves becoming strong enough in 1094 to take all of the territory which formed a part of the Spanish province, or dependency, of the Almoravid Empire of North-West Africa, and, after its fall, of the Almohad Empire which succeeded it. In 1168 Alfonso I Henriques of Portugal took Badajoz by surprise, and was expelled at once by Ferdinand de Léon. Badajoz became once more Almohad. Only in 1230 did Alfonso IX of Castile and Léon conquer it finally. Badajoz is the birthplace of a number of Arab scholars, among whom the most eminent is 'Abd Allāh b. Muḥammad b. al-Sīd al-Baṭalyawsī who died in 521/1127 (cf. Brockelmann, I, 427: where read 444/1052; Ibn Bashkuwāl, 639).

(C. F. SEYBOLD-[A. HUICI-MIRANDA])

AL-**BAṬALYAWSĪ**, ABŪ MUḤAMMAD 'ABD ALLĀH B. MUḤAMMAD IBN AL-SĪD, celebrated Andalusian grammarian and philosopher, born at Badajoz (Baṭalyaws [*q.v.*]) in 444/1052, died in the middle of Radjab 521/end of July 1127, at Valencia, where he had lived after having incurred the disgrace of Ibn Razīn [see RAZĪN, BANU] and after having taken refuge for a time at Saragossa. Ibn al-Sīd who, at Valencia, had had a notable disciple in Ibn Bashkuwāl [*q.v.*], is the author of some twenty works, including his commentary on the *Adab al-Kātib* of Ibn Ḳutayba (under the title of *al-Iḳtiḍāb fi Sharḥ Adab al-Kuttāb*, ed. 'Abd Allāh al-Bustānī, Beirut 1901); *Kitāb al-Ḥadā'iḳ* (ed. trans. Asin, 1940), which had some influence on the philosophy of religion among the Jews (see the Hebrew trans. published by D. Kaufmann, *Die Spuren al-Bataljusis in der jüdischen Religionsphilosophie*, Budapest 1880); a *Fahrasa*; a commentary on the *Muwaṭṭa'* of Mālik; a commentary on the *Saḳṭ al-Zand* of al-Ma'arrī, which is lost, but the criticisms made by Ibn al-'Arabī about this work provoked a counterblast by Ibn al-Sīd, entitled *al-Intiṣār mim-man 'adala 'an al-Istibṣār* (ed. Ḥāmid 'Abd al-Madjīd [Magued], Cairo 1955); *al-Inṣāf fi 'l-Tanbīh 'ala 'l-Asbāb allati awdjabat al-Ikhtilāf*, Cairo 1319 (cf. Goldziher, *Vorlesungen über den Islam*², 1925, 330, n. 116).

García Gómez, *Elogio del Islam español*, Madrid 1934, 54 and n. 50); Pons Boigues, *Ensayo*, no. 151; González Palencia, *Historia de la literatura arábigo-española*², 1945, 229; Sarkīs, 569-70; Brockelmann, I, 122, 427, S I, 185, 758. (E. LÉVI-PROVENÇAL)

BATH [see ḤAMMĀM].

BA'TH (Ar.), literally "to send, set in motion"; as a technical term in theology it means either the sending of prophets or the resurrection.

1. The Mu'tazila [*q.v.*] said that God could not have done otherwise than send prophets to teach men religion as He must do the best He can for men; orthodoxy denied this but held that the sending of prophets was dictated by divine wisdom. One of the reasons for condemning Brahmins and the Sumaniyya was that they denied the existence of prophets.

2. Philosophy taught that resurrection (*ba'th*, *nashr*, *nushūr*) was of the soul only so orthodoxy condemned it as a heresy, insisting on the resurrection of the body. From the first Muḥammad preached the reality of the after life though he assumed that the judgement came with the end of this world suddenly (vi, 31), heralded by the sound of a trumpet (lxix, 13; in xxxix, 68 are two blasts, each introducing a distinct stage in the action) the graves open and all hurry to appear before the judge (xxxix, 75. lxxxix 23/22) and the just will be given their records in their right-hands (xvii, 73/71). For the signs which precede the end of the world, see DĀBBA, DADJDJĀL, 'ĪSĀ.

The soul is not naturally immortal and its existence depends on God's will though some late passages (ii, 149/154, iii, 163/168) imply the continuous existence of the soul and that those who died for

God's sake are already in bliss. Later reports are little more than elaborations of these ideas, and do not form a consistent whole. The soul of a good man leaves the body easily but that of a bad man has to be dragged out painfully (see ʿADHĀB AL-ḲABR). The body decays in the grave except for the lowest bone of the spine to which the essential parts of the body will be restored. Most will remain in the grave till the judgement but a few are not so bound; some are in *barzakh* [*q.v.*]. When Isrāfīl [*q.v.*] blows his trump, the world will return to chaos, the sun will be darkened and men will rise from the grave as they were created, barefoot, naked, uncircumcised, and will gather at the place of judgement, a level plain with no place in which or behind which a man may hide, perhaps it is in this world, perhaps specially created. Another version makes the first blast kill everyone except Iblīs [*q.v.*] and the four archangels; a second blast brings all back to life. The heat of the sun is such that all sweat, a flood which with some will reach as high as the ears. They wait there 300 years or 50,000 without food or drink but worse than the physical pain will be the terror of the judge; each one will be so anxious for himself that he will pay no heed to others. They will turn to Adam to ask his intercession but all prophets in turn will refuse and refer them to Muḥammad who accepts the task and to him God listens. Other forms of judgement are the bridge, thinner than a hair and sharper than a sword, over the fire; believers pass over safely but unbelievers fall off; the scales in which man's life is weighed and the books in which his deeds, good and bad, are recorded. Sinners will be accompanied by the tools of their sin, a musician will have the instrument which distracted his mind from religion; a man's good deeds will become an animal on which he will ride to judgement. Some believed that all living creatures would rise at the last day. It is obvious that much of this is older than Muḥammad; the ancient Egyptians knew of the weighing of souls and the books of record and the Persians knew of the bridge. Later ideas are mixed. Some men turn to dust in the grave and their souls wander in the world of sovereignty (*malakūt*) under the sky of this world; some sleep and know nothing till the trump wakes them and they die the second death; some stay two or three months in the grave and then their souls fly on birds to paradise; some ascend to the trump and stay in it for there are as many hiding places in it as there are souls. Muḥammad stayed on earth for thirty years till the murder of Ḥusayn [*q.v.*] when he ascended to heaven in disgust.

BAʿTH [see NABĪʾ].

AL-**BATHANIYYA**, district in Syria with Adhriʿat [*q.v.*] as capital. It is bounded by the Djabal al-Drūz to the east, the Ladjāʾ plain and the Djaydūr to the north, the Djawlan to the west, and the hills of al-Djumal to the south, where the boundary is a little imprecise. Also called al-Nuḳra, "the hollow", it corresponds to the ancient Batanaea mentioned together with Trachonites, Auranites and Gaulanites as part of the old kingdom of Bashan and referred to in the Old Testament. The region is fertile, as its name derived from *bathna* (stoneless and even plain) indicates. It has from ancient times been densely populated; the texts and the numerous extant burial mounds are proof of this. Since then its reputation for being the "granary of Syria" has been maintained. According to the Arab geographers, the area was throughout the Middle Ages dotted with villages. It lay on the main route of communication connecting Damascus with al-Urdunn, a highway which owed as much to the Mamluk *barīd* as to the Syrian pilgrim caravans.

Conquered by the Arabs in 13/635, al-Bathaniyya, like Ḥawrān, became *kharādj* land, and was subsequently joined to the *djund* of Damascus although more usually connected with the Ḥawrān region. During the period of the Crusades it suffered from Frankish incursions. Later under Ottoman rule it was affected by two important factors: the invasion of the nomadic ʿAnāza, followed by the Rwāla, which introduced a reign of disorder and insecurity lasting until the end of the 19th century, and the settlement on its soil of the Ḥawranese hill folk expelled from their homes by the Druzes. These latter had from the 17th century begun to infiltrate into the Ḥawrān, where in 1861 they were joined by certain elements from the Lebanon.

Al-Bathaniyya should be distinguished from the small plain situated to the north-east of the Djabal al-Drūz, called in antiquity Saccea and in the Arab period *arḍ al-Bathaniyya*. This term has been translated to mean the "march of Bathaniyya" but one of the local names Butheyne, leads one to suppose that the area had been considered rather as a "small Bathaniyya".

AL-**BAṬĪḤA**, ("the marshland"), the name applied to a meadowlike depression which is exposed to more or less regular inundation and is therefore swampy. It is particularly applied by the Arab authors of the ʿAbbāsid period to the very extensive swampy area on the lower course of the Euphrates and Tigris between Kūfa and Wāsiṭ in the north and Baṣra in the south, also frequently called al-Baṭāʾiḥ (plural of al-Baṭīḥa) and occasionally, after the adjoining towns, the *Baṭīḥat* (*Baṭāʾiḥ*) *al-Kūfa*, *al-Wāsiṭ* or *al-Baṣra*.

The existence of considerable swamps in southern Babylonia goes back to high antiquity. The alluvial plain is soft and almost flat, the river beds are shallow and exposed to rapid silting, the banks are soft and low, therefore the flood waters overflow the banks, causing extensive marches; these would normally disappear but for the annual floods, and the rivers change their courses which, in turn, leads to new marshes. Even in the cuneiform inscriptions the *agammê* (swamps) and *apparâtê* (reedlands) are often mentioned; cf. Delitzsch, *Assyr. Handwörterb.*, 17, 115. In particular, the whole country between Muḥammara in the south, a point beyond Ḳurna

in the north, and beyond the river Kārūn to the east, must have been covered by an enormous swampy lake; cf. Delitzsch, 627; Dougherty, *The Sea land of Ancient Arabia*, 1933.

The Greek and Roman writers are likewise acquainted with it (as λίμνη or *chaldaicus lacus*). Nearchus's account is particularly instructive, for he crossed this area of water and gave its breadth as 600 *stadia* (80 miles). The *Tabula Peutingeriana* also defines the Babylonian swamps; on it, in addition to *Paludes*, is mentioned the name *Diotahi*, probably to be emended to *Biotahi* = *Baṭaʾiḥ*). On the notices in cuneiform inscriptions and classical authors, cf. Andreas in Pauly-Wissowa, i, 736, 815, 1878 ff., 2812; Weissbach, *ibid*, iii, 2044 vi, 1201 ff.; Streck, v. 1147 (s.v. *Diotahi*); Ainsworth; *Researches* ii, 180 ff.

Since ancient times the great marshy lake has been gradually filled up by the deposits of sediment brought down by the rivers, and the modern delta has arisen. Some places, however, remain under water. These places extend around the present Hor (K͟hawr) al-Ḥuwayza, Hor al-Ḥammār, Hor al-S͟hāmiyya, and probably further north.

The origin of the swamp may be a synicline which occurred in geological times: parts of it were filled by the huge amount of silt, while others remained low and were filled by water; they formed what mediaeval Muslims called al-Baṭāʾiḥ. The synicline may have eroded in historic times (cf. G. M. Lees and N. L. Falcon, in *Bibliography History of the Mesopotamean plains* in *Geographical Journal*. On the retreat of the sea, cf. De Morgan, i, 4-48; Seton Lloyd, 19.

The Sāsānids as a rule devoted a great deal of attention to the irrigation system and drainage in Babylonia. This should have led to the decrease of swamps. Under later kings of this dynasty, however, large areas of flourishing country were swallowed up by floods, and the region of swamps grew to such an extent that the Arabs wrongly date the beginning of the Baṭīḥa from this period. They claim that during the reign of Ḳubād͟h Fīrūz (457-484 A.D.) a large breach occurred, near Kaskar, and inundated large areas of cultivated lands. It was not until the reign of K͟husraw I Anūs͟harwān (531-578) that the dykes were partially repaired, and some of the lands brought under cultivation. But in the year 6 or 7/627, in the reign of K͟husraw II Parwīz, the waters of the Euphrates and the Tigris rose again, in a flood such as had never been seen. Both rivers burst their dykes, causing huge breaches. The water reached the places of the swamps, inundating the farms of several *ṭussūd͟j* there. During the succeeding years of anarchy, and when the Muslim armies began to overrun ʿIrāḳ, breaches occurred in all embankments, and the *Dihḳāns* were powerless to repair the dykes so that the swamps increased in all directions (Balād͟hurī, 292-4; Ḳudāma, 240; Yāḳūt, 668-9; Masʿūdī, *al-Tanbīh*, 53 Ibn Rusta, 98). Under the Sāsānids, too, the first great shifting of the Tigris occurred from the eastern channel (the present course) to the western channel (the present S͟haṭṭ al-Dud͟jayla). This change turned all the country bordering the older eastern course into thickets and desert.

The Umayyads took interest in the work of reclamation of the Baṭīḥa; Ibn Darrād͟j reclaimed for Muʿāwiya from the Baṭīḥa lands which yielded 5 millions dirhems annually. He did that by cutting the reeds and controlling water with dykes. These lands were called al-D͟jawāmid (Balād͟hurī, 294; *Murūd͟j*, i, 225-6). In the year 81/701, however, they were inundated again, owing to a new burst which al-Ḥad͟jd͟jād͟j deliberately neglected repairing.

Immediately afterwards al-Ḥad͟jd͟jād͟j built Wāsiṭ in the alluvial plain near the Baṭīḥa. This should have led to restoration of the neglected system of canals, the erection of dams and sluices, and to the reclamation of lands. He dug the two canals of Nīl and Zābī to lead away part of the superfluous water of these two large rivers before they flowed into the Baṭīḥa, and at the same time to water and fertilise the dry areas above Wāsiṭ (Balād͟hurī, 290-2; Ḳudāma, 240; Streck, i, 29-32, ii, 303-304; Le Strange, 27). Al-Ḥad͟jd͟jād͟j also settled in the marshes the Zuṭṭ [*q.v.*], an Indian people, with their buffalo herds numbering thousands. Maslama, the Caliph's brother, spent about 3 millions dirhems on repairing the dykes, and in turn obtained vast areas of reclaimed land (Balād͟hurī, 294; Ḳudāma, 240-1; Wellhausen, *Das Arabische Reich*, 1902, 156-8).

Reclamation of land continued, especially at the time of His͟hām, and his governor of ʿIrāḳ K͟hālid al-Ḳasrī, who built a dam on the Tigris (Balād͟hurī, 293-4; Ḳudāma, 240; Ibn Rusta, 95), dug several canals, *e.g.*, the Nahr al-Rummān, and the Nahr al-Mubārak; he thus reclaimed large areas of lands, which yielded a large income, but resulted in the use of a great amount of water, and to a decrease in the volume of water available for irrigation.

When the ʿAbbāsids came to power (132/750), new bursts occured in the dykes which, in turn, increased the swamps. In the Euphrates region, similarly, thickets formed, parts of which were reclaimed. In the north-west, the Baṭīḥa extended nearly to Kūfa and Niffar, while farther to the east it began at a considerable distance from Wāsiṭ. This part is called by many mediaeval Muslim sources *Baṭāʾiḥ al-Kūfa*. Their crude maps (cf. Miller, *Mappae Arabica*) do not show them connected with the southern Baṭīḥa, not do they mention any dwelling-places or cultivation there. Nevertheless 4th/10th century sources assert that the Euphrates discharged into the Baṭīḥa between Wāsiṭ and Baṣra (Masʿūdī, *Murūd͟j*, i, 215; Suhrāb, 118). This suggests that the present lower Euphrates region was covered with Baṭāʾiḥ up to the 6th/12th century, when sources mention that the lower Euphrates joined the Tigris in Maṭṭāra (Yāḳūt, ii, 553). This must have been due to hydrographic changes, in the depression of S͟hināfiyya, which must have then been deeper, and the reduction of the amount of water and silt, owing to the numerous canals which took water from the Euphrates to irrigate north and central Babylonia (cf. Le Strange, 75 ff.).

The Tigris, from about the end of the Sāsānid period to the first half of the 10th/16th century, flowed in the western bed (the modern S͟haṭṭ al-Dud͟jayla) past Wāsiṭ and several towns until, in the 4th/10th century, it joined the Baṭīḥa in Ḳaṭr (*Murūd͟j*, i, 288; Suhrāb, 118-9, 135; Ibn K͟hurradād͟hbih, 59; Ibn Rusta, 185). According to Mustawfī, Ḳaṭr is 30 parasangs (about 107 m. = 172 kms.) south of Wāsiṭ (*Nuzha*, 166), according to Ḳudāma (193), 22 parasangs.

The southern limits of the Baṭīḥa border on Baṣra (Balād͟hurī, 362; *Ansāb al-As͟hrāf*, v. 257). Suhrāb (135) describes the Baṭīḥa as consisting of four Hors: Bahaṣṣā, Bakamṣā, Baṣaryāt͟hā and the Muḥammadiyya. Each Hor had plenty of water, with no reeds, but each one was linked with the other by a narrow passage of reeds. The Hor of

Muḥammadiyya was the largest, and the reed passage extended from it to the Nahr Abī Asad, which passes to Ḥāla, Kawānīn and then to the "one-eyed" Tigris (al-Di̲d̲j̲la al-ʿawrāʾ). Yāḳūt mentions the Hors of S̲h̲alām, (iii, 311), D̲j̲urd̲j̲īn, (ii 56), G̲h̲arrāf (iii, 581) and Rabbah, (ii, 134).

In the flat soft alluvial plain of south Babylonia hydrography could not be static, especially since the canal and irrigation system was subject to change according to the political and economic situation. Though these changes have not been yet studied in detail, nevertheless one may see an indication in the 6th/12th century, when Yāḳūt mentions that the Tigris was divided below Wāsiṭ into five arms which, together with the Euphrates, joined in Maṭṭāra which was a day's journey from Baṣra (ii, 553). The area of the lands covered by the Baṭīḥa undoubtedly changed according to the amount of control exercised over the flood water and the amount of water used for irrigation in the north.

Although water covered most of the lands of the Baṭīḥa, nevertheless there were areas of dry land, farms, cities and villages as well as rivers and canals (Muḳaddasī, 119; Samʿānī, *Ansāb*, s.v. *Baṭāʾiḥī*; Ibn al-At̲h̲īr, *Lubāb*, i, 129). Ibn Rusta (95) says that "the higher places became mounds which are known in Baṭāʾiḥ and are called Sarṭug̲h̲ān, Ṭustag̲h̲ān and Uḳr al-Sayd, places where the Zuṭṭ live". Muḳaddasī, (134) calls the Baṭīḥa a district (*nāḥiya*) with Ṣulayḳ as its chief town, and the further towns of D̲j̲āmida, Harrār, Ḥaddādiyya and Zubaydiyya. Most of these towns were north-west of Wāsiṭ. Yāḳūt mentions as towns of the Baṭīḥa Ḥilla (of Dubays) (i, 594, ii, 323) K̲h̲ayt̲h̲amiyya (iv, 884), Harrār (iv, 970), Manṣūra (iv, 664) and other places, and as its rivers the canals of Abbā, K̲h̲urz, al-Zuṭṭ (ii, 930, iv, 840) and Yammā (iv, 1026).

Of the western marshes of the Euphrates about the middle of the 19th century European travellers and archaeologists give fairly accurate descriptions. The main course of the Euphrates passed through Babylon, Ḥilla and Dīwāniyya. Several branches and cuts diverged from this branch, many of them re-uniting near Al-Kārayim, which was at the head of the delta. During the season of the floods, water spread for about 30 miles in length, 10-14 miles west of the main channel and to a much grater distance on the east side. This regress forms the Lamlūm marshes. Thirty years later, the bulk of the Euphrates' waters went through the western Hindiyya canal which was dug in the 17th century by the the Indian Āṣaf al-Dawla. This emerged into the plains further south and created the shallow Baḥr al-Nad̲j̲af and S̲h̲ināfiyya marshes, which remained even after the erection of the Hindiyya barrage in 1911 to increase the water of the Ḥilla branch. These swamps are situated in a large depression, wider in the mouth, about 40 m. (65 kms.) long and 15 m. (25 kms.) wide; the depth of the flood water varies from a few centimetres in the north to 2-3 metres in the middle. Several sub-Hors branch off from it; in the east are the Hors of al-ʿŪd̲j̲a, al-Wurīd̲j̲ī, Ibn Nad̲j̲im, al-K̲h̲abṣa, Abū G̲h̲īrbāl, al-Rammāḥ, al-Hawā and Abū Ḥid̲j̲ār; to the west of the S̲h̲āmiyya branch are G̲h̲ādudī, Rug̲h̲īla, Glībī, Abū Ḥillāna, Ziyāda and Ḥwīḥa; near the Kūfan branch are the Hors of Ṭubug, G̲h̲azālāt and Ṣlīb. The areas of these Hors shrink after flood, and the land becomes excellent for rice cultivation.

The Tigris below Bag̲h̲dād flows through a flat plain, and the banks are not high enough to retain the huge volume of flood water. This leads to a number of breaches and levees on both sides of the river which produce numerous marches. The largest of them between Bag̲h̲dād and Kut is Hor S̲h̲awīd̲j̲a, which is a natural depression of land extending some 31 m. (50 km.) along the Tigris and 15 m. (25 km.) in width. Into this Hor flows the water of a number of minor streams from the mountain regions of Pus̲h̲t-i Kūh. The rather narrow Hor Ḥuwīs̲h̲a extends from ʿAlī al-G̲h̲arbī to ʿImāra where it reaches Hor Snāfiyya. Near ʿImāra numerous branches diverge from the Tigris, *e.g.*, Mus̲h̲arraḥ, Čaḥla, Mus̲h̲ayrih. The waters are dispersed in the ʿAmāra rice area, where the flood waters are led out of the main channels, but these branches are well defined in spite of the Hors they form. They empty into the Hor of ʿAzem which is connected with Hor Ḥuwīza. They receive an inflow from the Dwīrīd̲j̲, and Ṭīb rivers as well as from al-Kark̲h̲a (the ancient Choaspes). The annual intake of water of these Hors is estimated at 7 million cubic inches. These waters flow back in the summer into the Tigris by several channels which begin a short distance beyond ʿUzayr.

On the right bank of the Tigris, the major breach below Kut is the Muṣandaḳ escape, 450 metres wide at its head, which expands rapidly to almost lake-like proportions and finally branches into a number of relatively small, shallow channels into the Hor al-Saniyya. This Hor is a large natural depression fed by the Muṣandaḳ escape and several smaller breaches and flood irrigation channels which divert water from the Tigris during the floods. Water passes successively through the Ṣik̲h̲ārī, al-Duwīma D̲j̲ifāfī S̲h̲āh ʿAlī, S̲h̲āttiriya Hors, and Hor Burhān, ʿŪda, Ṣirimah, Ṣigāl, Ruwīda and Ṣaffār, until it reaches the Ḥammār lake near Ḥammār village. During the peak of the Tigris floods, an area of over 424 sq. km. (1100 sq. km.) is inundated by the Hor al-Saniyya. After the flood recession no water except minor amounts of surface drainage from pump irrigated fields enter the depression of Hor al-Saniyya, which diminishes to an area of less than 77 sq. m. (200 sq. km.) through seepage and evaporation losses.

The Ḥammār lake is the largest Hor, covering about 2007 sq. m. 5200 sq. km.). It extends from the affluents of the Euphrates near Sūḳ al-S̲h̲uyūk̲h̲ down to Karma ʿAlī (about 80 m. = 130 km.). The southern part of it is called Hor Snāf, which receives water from the Euphrates and G̲h̲arrāf as well as the waters coming down from the Muṣandaḳ through the several above-mentioned Hors. The total flowing into the Ḥammār area is about 2540 *cumecs* (cubic metres per second) from all sources. The evaporation and transpiration losses are about 500 *cumecs*. The edge of the Ḥammār lake has a seasonal low water level of 0.6 to 0.8 metres in the late autumn and a high water level of from 2.0 to 2.8 metres near the end of the flood season in May or June. At low water the area is roughly two thirds lake and marsh with a few areas of open water connected by a maze of narrow channels running in all directions through the reeds. The deeper channels (1-2 metres) usually run in a north to south or north-west to south-east direction. There are also mazes of deep water passages (Gawāhīn) between the reeds which may be a few yards wide, but deep enough for boat navigation.

A few very deep channels (10-20 metres) are found around the islands in the vicinity of Salāyal island. Tide effect is felt in the southern parts. There are many shallow areas. The southern borders of the

Ḥammār are bare, uninhabited land, exposed to annual floods from the lake.

On account of its inaccessibility, the Baṭīḥa was a hiding place for all sorts of robbers and rebels, and an asylum for the discontented.

The Zuṭṭ [*q.v.*], who were transplanted with their vast herds of buffaloes in the marshes by al-Ḥadjdjādj, made themselves, together with some other *mawālī*, in the early ʿAbbāsid period, a nuisance to ʿIrāḳ by robbing and plundering, and disturbing communications and trade with the the south. Their effect was felt to a greater extent at the time of Maʾmūn. It was only after strenuous efforts that the Caliph al-Muʿtaṣim succeeded in subduing them, and in removing them to the northern Syrian borders (Balādhurī, 171-375; Ṭabarī, iii, 1044-5, 1167-70; Masʿūdī, *al-Tanbīh*, 355). They have given their name to the Nahr al-Zuṭṭ (Yaḳūt, iv, 840).

Far more dangerous, however, proved the great rising of the Zandj [*q.v.*] who, under the leadership of ʿAlī b. Muḥammad [*q.v.*], stirred up near Baṣra a formidable rebellion (255-270/869-883) and dominated the Baṭīḥa for several years (Ṭabarī, iii, 1742 ff.; Nöldeke, *Sketches from Eastern History*, 146-175; F. al-Sāmir, *Thawrat al-Zandj*, Baghdād 1952).

In the following centuries the Banū Shāhīn (see ʿIMRĀN B. SHĀHĪN) and after them the family of al-Muẓaffar [*q.v.*] founded a more or less independent kingdom in the swamp lands which they shared at a later period with the Mazyadids [*q.v.*] who ruled from 403 A.H. until 448 A.H. in Ḥilla. After the decline of the Mazyadids, the Banu ʾl-Muntafiḳ began to play their part, although the Caliph al-Nāṣir succeeded in destroying their leaders, the Banū Maʿrūf, in 617/1220.

When the Mongols conquered ʿIrāḳ (656/1253), the Baṭīḥa fell in their hands, but the Arab tribes remained a source of disturbance. From then on it was called al-Djazāʾir ("the islands") or al-Djawāzir. It was conquered by Tamerlane (795/1338), and then by Uways the Djalāʾirid (826/1423); in the year 844 A.H. it was conquered by the Mushaʿshaʿ [*q.v.*], who remained until the Ottoman sultan Sulaymān occupied it in 953 A.H. Ottoman rule of the region, however, was not firm, and they could not destroy the several tribal principalities, *e.g.*, the Āl ʿUlyān, who ruled over the Ḥammār until they were destroyed in 975 A.H.; the Banī Lām dominated the lower Tigris, until they were challenged by Albū Muḥammad and gave the Ottomans a chance to control them. The al-Muntafiḳ family ruled over the lower Euphrates up to the year 1861, when Midḥat Pasha was able to establish a *mutaṣarrifiyya* under the control of the governor of Baghdād (Longrigg, *Four Centuries of Modern Iraq*, Oxford; ʿA. ʿAzzāwī, *al-ʿIraḳ bayn Iḥtilalayn*, 8 Vols, Baghdād 1937-57; Field, *The Anthropology of Iraq*, in *Field Museum of Natural History*, Vol. 30, part i, no. 2, 1949).

Large numbers of the originally Aramaic (and Christian) population of Babylonia (the Nabaṭs of Arab writers) remained in Baṭāʾiḥ for a long time, so that many sources call them the swamps of the Nabaṭ (L.A., iii, 237; cf. also Masʿūdī, *al-Tanbīh*, 161; Miskawayh, ii, 409 Muḳaddasī, 128). Probably another ancient remnant is the Mandaeans or Ṣubba, the mediaeval Mughtasila, cf. Ibn al-Nadīm, 340; Masʿūdī, *al-Tanbīh*, 161); these Ṣubba still survive in a few places in the marshes such as Sūḳ al-Shuyūkh, Ḳalʿat Ṣāliḥ, and in Hor al-Ḥuwayza (Ḥawīza) where the town of Ḥawīza is their chief centre (cf. Drower, in *Bibliography*).

Nevertheless some Arabs settled there. Ibn Rusta says that Yashkur, Bāhila and Banu ʾl-Anbar lived near the Baṭīḥa before its formation. Balādhurī refers to the Bāhilī clients who joined the Zuṭṭ in their disturbances at the time of Maʾmūn. Ṭabarī, iii, 1858, 1898, 1903 refers to some of the Bāhilīs who joined the activities of the Zandj in the 3rd/9th century. He refers also to ʿIdjl in the Baṭīḥa (iii, 1759). The Mazyadid domination must have brought Banī Asad [*q.v.*] until they were destroyed by Al-Nāṣir. Ibn Khaldūn mentions Rabīʿa who dominate this area (vi, 12), by whom he probably means the Muntafiḳ [*q.v.*]. Ibn Baṭṭūṭa mentions Khafādja and the Maʿādī (ii, 2, 4).

The greater part of the modern inhabitants is composed of semi-nomads and farmers of Arab stock, organised on tribal lines. They are Shīʿī Muslims except for a few Sunnīs, the most prominent of whom are the Saʿdūn family.

The most important of these Arab tribes, which are themselves divided into a large number of subdivisions, are:

(1) The Banū Lām who in the 16th century were able to establish their authority over the Tigris lands from Ḥawīza as far as the environs of Baghdād in the north, and to the outer spurs of the Pusht-i Kūh in the east. Kūt al-Amāra was the residence of their Shaykh in the early decades of the 19th century, but their lands and authority diminished in the 19th century and became confined to the lands east of Tigris and north of ʿImāra. They are a sheep owning tribe, and are still semi-nomadic.

(2) The Albū (= Abū) Muḥammad. They also live east of the Tigris, beside the banks of the Čaḥla and its main tributaries where they settled ten generations ago, and have since expanded over the canals and marshes on either side of the Tigris between ʿImāra and ʿUzayr. They are mainly cultivators but also marshmen, who are occupied in breeding buffaloes and making reed mats.

(3) Rabīʿa. To the west of the Tigris. Their subdivision al-Mayyāḥ extends along the Gharrāf up to Shaṭra, with Ḥayy as their chief centre.

(4) Ẓubayd, west of the Tigris. Their lands lie between Baghdād on the north and Kut al-Ḥayy in the south-east. In the south they adjoin the land of the Khazāʿil.

(5) The Khazāʿil, south-west of the Zubayd. They dwell from the district between Kefil and the ruins of Niffar, and along the Euphrates from Shāmiyya to the south of Dīwāniyya where they border on the country of the Muntafiḳ.

(6) The Muntafiḳ, a loose confederation of tribes presided over by the al-Saʿ dūn who came in the 15th century from the Ḥidjāz and were able to establish their authority over the tribes of the Lower Euphrates, and to expand at times even as far as Baṣra. They retained their semi-autonomous authority up to 1861, when Midḥat Pasha was able to abolish their rule and establish a *mutaṣarrifiya* in Nāṣiriyya.

The Muntafiḳ fall into three main divisions: 1) al-Adjwad, who dwelt from Darrādjī to the vicinity of Sūḳ al-Shuyūkh, and on the lower parts of the Gharrāf; 2) Banū Mālik, who live on the borders of Al-Ḥammār; 3) Banū Saʿīd, who live near Karma banī Saʿīd.

(7) Al-Djazāʾir. The Djazāʾir ("islands") also called Djawāzir are the swamp lands as opposed to *Shāmiyya*, the dry and desert land). The term has given its name to a confederation of tribes which are repeatedly mentioned in the Mongol and Ottoman

sources up to the 20th century. Their country was part of the Mushaʿshaʿ state (ʿAzzāwī, *Taʾrīkh*, iii, 112, 174, 272) then of Al-ʿUlyān (ʿAzzāwī, iv, 107); was conquered by the Ottomans (ʿAzzāwī, iv, 50 quoting *Mirʾāt-i Kāʾināt*, 127; Ewliyā Čelebi iv, 414), at times dominated by the Persians and by the Muntafiḳ, until it was finally brought under Ottoman control at the time of Midḥat Pasha, who made attempts to reclaim some of its lands (*Al-Zawr*, 568). The tribes of Al-Djazāʾir formed a confederation composed of (1) Banū Asad [*q.v.*] who settled between Sūḳ al-Shuyūkh and Ḳurna, with their centre in Čabāyish; (2) Al-Ḥusaynī; (3) Banū Ḥuṭayṭ in Ḥammār; (4) ʿUbada between Suḳ al-Shuyūkh and Čabāyish (cf. Ibn Khaldūn, ii, 310-12); 5) Banū Manṣūr, settled near Ḳurna.

(8) The Miʿdān. They are probably the Maʿādī who are mentioned by Ibn Baṭṭūṭa as dwelling between Kūfa and Wāsiṭ (ii); Loftus (120-2) has described their primitive life and conditions. They dwell in the marshes, are organised tribally in a small way, and have no cohesion on a large scale. They are fishermen, reed-gatherers, and breeders of buffaloes. The other Arabs despise them for their profession and for their moral code, which differs slightly from that of the Bedouins.

The settlements of the inhabitants of the swamps are usually on terraces and islands, which are not entirely submerged by the annual inundation, and sometimes form villages. They consist of long huts built of reeds and reed matting (*ṣarīfa*) (Thesiger, *op. cit.*; *Shākir Salīm al-Čibāyish*, Vol. i, 23-4, Baghdād 1957; cf. also Nöldeke in *WZKM*, xvi, 198, Note 1).

The most important product of the marshes is rice. Other products are barley, yellow maize, sorghum, millet, lentils, melons, watermelons, and to some degree lady's finger (*bāmya*, gumbo, okra) and onions.

One source of revenue is the reed, which is used for all household purposes and from ancient times has been much used for writing implements (see *OLZ*, ix, 190). The reed pens of mediaeval Wāsiṭ and, in the 19th century, of Dizfūl were considered the best in the east (cf. Cl. Huart, *Les Calligraphes et les miniaturistes de l'Orient Musulm.* (1908), 13). Even at present 50-70 thousand tons of reeds are cut annually in the vicinity of Čabāyish (*Tams*, 60).

In addition there is great abundance of fishes, which afford a continual food supply to the natives or are exported to other districts. Ibn Rusta (94) refers to the importance of the Baṭīḥa products of reeds and fish in mediaeval times. At present it produces about 2000 tons of fish annually, employing about 500 fishermen.

Buffaloes are an important source of wealth to the marshmen south of ʿImāra and of the Ḥammār. The butter from their milk is exported to the surrounding cities and to Baghdād. Sheep are also reared to a moderate extent, while cows are found in various places, especially in Ḳurna.

As to the remaining fauna of the Baṭīḥa, water fowl of all sorts are numerous, such as gulls, wild duck, geese, swans etc.; there are flocks of cranes, pelicans, flamingoes, storks, bustards and bitterns. There are also some carnivorous animals. The lion, which was known in this country in ancient and mediaeval times, was last mentioned in the 19th century (*Loftus, op. cit.*, 242 ff.). In addition, a number of leopards, jackals, wolves, lynxes and wild-cats have their lairs here. Wild-boar (*Sus scrofa*), wallow in large herds in the marshes.

The countless swarms of mosquitoes and midges form a terrible plague, and were a source of endemic diseases, *e.g.*, malaria, which must have been an important factor in the decline of the district (cf. *Shākir Salīm al-Čibāyish*, Vol. ii).

(M. Streck-[Saleh El-Ali])

BĀṬIL wa FĀSID [see Fāsid].

BĀṬIN wa ẒĀHIR [see Ẓāhir].

AL-**BĀṬIN**, a large *wādī* in north-eastern Arabia, formerly the lower course of Wādī al-Rumah [*q.v.*] but now cut off by the sands of al-Dahnāʾ [*q.v.*]. Al-Bāṭin runs north-easterly 385 km., from below Khushūm al-Thumāmī in al-Dahnāʾ to a plain 15 km. SW of al Zubayr. In width it is unusually regular, being 10-13 km. between banks and 2-3 km. on the floor. Its only surface water is lateral flow from local rains. Most of al-Bāṭin is a channel through former deposits of Wādī al-Rumah, as the plains of al-Dibdiba [*q.v.*] on both sides contain

gravels from the Arabian Shield [see art. DJAZĪRAT AL-ʿARAB, (ii) & (iii)].

Al-Bāṭin, though a historic route from al-Baṣra to al-Ḥidjāz, contains few known archaeological remains; the most prominent are the 42 steyned wells, which may be Yāḳūt's Ḥafar Abī Mūsā, near the village of Ḥafar al-Bāṭin. The only settlement in al-Bāṭin, al-Ḥafar consists of 200 houses and the fort of the Amīrate which reports to the Governorate of the Eastern Province at al-Dammām.

At an undefined point at the junction of al-Bāṭin and its tributary, al-ʿAwdjāʾ, the boundaries of Saudi Arabia, Kuwayt, ʿIrāḳ, and the Saudi Arabia-ʿIrāḳ Neutral Zone converge, according to the al-ʿUḳayr agreements of 1922.

Bibliography: Hamdānī; Yāḳūt; Muḥammad b. ʿAbd Allāh b. Bulayhid, *Ṣaḥīḥ al-Akhbār*, Cairo 1370-3; H. Dickson, *Kuwait and her neighbours*, London 1956; J. G. Lorimer, *Gazetteer of the Persian Gulf, ʾOmān, and Central Arabia*, Calcutta 1908-15. (R. L. HEADLEY)

AL-**BĀṬINA**, a lowland district in eastern Arabia lying between the sea coast of the Gulf of Oman and the mountains of al-Ḥadjar. It is bounded on the north by the headland of Khatmat Milāḥa, and on the south by the village of Ḥayl Āl ʿUmayr, south-east of the town of al-Sīb and west of the city of Muscat. The district varies in width from 10 to 20 miles. Near the coast the soil is sandy and dotted with many shallow wells. Farther inland the soil is clay, and then the ground becomes stony as the foothills of the mountains are approached. Numerous *wādīs* cut across the district and run down to the coast, where their beds broaden out. The name al-Bāṭina means the low-lying region, in contrast to al-Ẓāhira [*q.v.*], the higher region on the western side of al-Ḥadjar, which is reached from al-Bāṭina by two important passes, Wādī al-Djizy and Wādī al-Ḥawāsina.

Al-Bāṭina is primarily a region of fishing and date culture, though the interior supports a number of semi-nomadic folk with their herds. Along the sea coast stretches an almost continuous date-palm belt, which in places extends inland to a depth of about seven miles. Wheat, cotton, barley, sugar-cane, lucerne, mangoes, bananas, figs, limes, melons, and olives are also grown, being irrigated from the copious wells. Domestic animals are sheep, goats, donkeys, and especially the *Bāṭiniyya* riding camel, which among the three famous breeds of Oman is the one most noted for its comfortable gait. Fishing is often carried on in the *shāsha*, a non-sinkable craft of palm branches (*djarīd*) similar to the *waraḳiyya* of Kuwayt. Larger vessels sail to the Persian Gulf, southern Arabia, Zanzibār, and Pākistān for trade.

Al-Bāṭina was first proselytised for Islām in 8/629 by Abū Zayd al-Anṣārī and ʿAmr b. al-ʿĀṣ [*q.v.*], who were welcomed in Ṣuḥār [*q.v.*] by the house of al-Djulanda. In the 7th/13th century the country was twice invaded by the Persians, who maintained a foothold until finally driven out by the Portuguese in 928/1522. Although the Portuguese took the tribute formerly sent to the ruler of Hormuz, they did not continually, occupy the al-Bāṭina coast until 1025/1616. Until the expulsion of the Portuguese in 1053/1643 by the dynasty of al-Yaʿāriba [see YAʿRUB], Ṣuḥār rivaled Muscat and Hormuz as a trading port. Persian attempts to regain permanent possession of al-Bāṭina during the reign of Nādir Shāh [*q.v.*] were beaten off largely by the efforts of Aḥmad b. Saʿīd of Āl Bū Saʿīd [see BŪ SAʿĪD]. His nine-month defence of Ṣuḥār in 1156/1743 brought him prestige which secured for himself the Imamate of Oman and for his descendants the Sultanate of Muscat.

The Sultan of Muscat has *wālīs* at al-Sīb, Barkā, al-Maṣnaʿa, Suwayḳ, al-Khābūra, and Ṣuḥār. The customs and *zakāt* revenue from these places seldom exceeds the administrative expenses. The settled population of al-Bāṭina was estimated by Lorimer in 1908 as about 105,000 persons, half of whom were living along the coast. The number of Bedouins roaming the interior is far less. Among the sedentary population, the chief tribes are Āl Saʿd and al-Ḥawāsina. Many of the Bedouins in the district come from the same two tribes and Banī Khārūṣ. Lesser tribes are al-Biduwāt, Āl Ḥamad, Āl Djarād, al-Mawālik, al-Nawāfil, Āl Bū Ḳurayn, Āl Bū Rushayd, and al-Shubūl. The great majority of the people of al-Bāṭina are Hināwī in politics and Ibāḍī in religion, although the Balūchīs and negroes tend to be Sunnī.

(R. L. HEADLEY)

BĀṬINIYYA, a name given (a) to the Ismāʿīlīs in medieval times, referring to their stress on the *bāṭin*, the "inward" meaning behind the literal wording of sacred texts; and (b), less specifically, to anyone accused of rejecting the literal meaning of such texts in favour of the *bāṭin*.

(a) Among the Ismāʿīlīs [*q.v.*] and some related Shīʿī groups there developed a distinctive type of *taʾwīl* [*q.v.*], scriptural interpretation, which may be called *bāṭinī*. It was symbolical or allegoristic in its method, sectarian in its aims, hierarchically imparted, and secret. All branches of the Ismāʿīliyya as well as its Druze offshoots have retained the *bāṭinī taʾwīl* in one form or another. The like system of the Nuṣayrīs seems to be a survival from *bāṭinī* circles associated with the later Twelver *imāms* [see GHULĀT].

Certain aspects of this type of *taʾwīl* can be matched in Jewish and Christian prototypes (for instance, in the symbolical exegesis of Origen) and other aspects can be matched among the Gnostics. Its immediate origins, however, are Muslim. Like the symbolical *taʾwīl* ascribed to the *imāms* among the later Twelver Shīʿa (with which it has in common its symbolical and sectarian character and something of its secrecy), its beginnings can be traced to the Shīʿī Ghulāt of the 2nd/8th century in ʿIrāḳ. Thus

al-Mughīra b. Saʿīd (d. 119/737) is said to have interpreted the mountains' refusal to undertake the faith (Ḳurʾān xxxiii, 72) as symbolising ʿUmar's rejection of ʿAlī. Abū Manṣūr al-ʿIdjlī is said to have held that the "heavens" symbolised the *imāms* and the "earth" their followers; and is credited with the key notion that while it was the Prophet who brought the text of the Ḳurʾān, it was the *imām* alone was charged with its interpretation, *taʾwīl*. Among the followers of Abu 'l-Khaṭṭāb (d. 138/755-6) such allegoristic *taʾwīl* seems to have been especially popular; some of them supposed that in each generation there is a speaker, *nāṭiḳ*, to declare publicly religious truth, and a silent man, *ṣāmit*, to interpret it to the elect. Presumably it was from the Khaṭṭābiyya that such elements of the *bāṭinī taʾwīl* entered the Ismāʿīlī movement, where the *taʾwīl* was elaborated till it became the hallmark of that movement.

The *bāṭinī* system can be described in terms of four essential notions: *bāṭin*, *taʾwīl*, *khāṣṣ wa ʿāmm*, and *taḳiyya*, all which were presupposed whatever particular doctrine was taught.

It was held that every sacred text had its hidden inner meaning, the *bāṭin*, which was contrasted to the *ẓāhir*, "apparent" or literal meaning. Not only in passages which were in any case metaphorical, but in historical passages, moral exhortations, legal and ritual prescriptions, each person, act, or object mentioned was to be taken symbolically. The things symbolised often were explained one by one as objects of approval, obedience, hatred, and the like, according to the passage; but sometimes whole anecdotes were read as extended allegories. Number and letter symbolism was freely used. The same procedure applied to non-Muslim sacred books as well; and indeed to the whole of nature. For the *bāṭin* represented an esoteric world of hidden spiritual reality, parallel to the reality of the *ẓāhir*, the ordinary visible world, which cloaked and concealed it. The true function of scripture was to point to that hidden world even while keeping it disguised in symbols.

Taʾwīl, the educing of the *bāṭin* from the *ẓāhir* text, was therefore as fundamental as *tanzīl*, the revelation of the literal sacred text itself, and was equally dependent upon divine intervention. For every prophet who was given *tanzīl*, a revelation to be proclaimed publicly to mankind, there must be a *waṣī*, an executor (in the case of Muḥammad, this was ʿAlī) who was given the corresponding *taʾwīl*, which he propounded privately to the worthy few, that is, the members of the sect which accepted his authority.

Mankind, then, were divided into *khāṣṣ*, the élite who know the *bāṭin*, and *ʿāmm*, the ignorant generality. The *khāṣṣ* were those who had been ceremonially intitiated into the sect, that is, into knowledge of and obedience to the *imām*, representative of ʿAlī and sole authorised source of *taʾwīl* in any given generation. Among the Ismāʿīlīs, a series of hierarchical ranks (*ḥudūd*) of teachers mediated between the *imām* and the simple initiate. To the latter the *bāṭin* was imparted only in gradual stages (the number of which varied) and in purely authoritarian fashion.

The *bāṭin* was "inward" not only in being unevident but also in being secret. Knowledge of it must not be imparted to the *ʿāmm*, the ordinary followers of the *ẓāhir* revelation, lest it be misunderstood in an unauthorised way and abused. The Shīʿite principle of *taḳiyya* [*q.v.*], precautionary dissimulation of one's faith, was accordingly reinterpreted to imply the obligation not to reveal the *bāṭin* to any unauthorised persons even apart from any danger of persecution. For some, therefore, the practice of the *ẓāhir* ritual of the *sharīʿa* even in its frankly Shīʿite form came to be regarded as *taḳiyya*, in that it kept the *bāṭin* concealed.

Despite an authoritarian hierarchism, the *taʾwīl* (as we know it in its Ismāʿīlī form) never achieved any strict uniformity. For any given ritual action different authors gave widely differing *bāṭin* interpretations; even the same author sometimes gave multiple explanations in the same book. Thus the inner meaning of the obligation of *zakāt* was held to be that the *khums* or fifth of one's income must be given to the *imām*; or that one should give all one's surplus to the poor; or that the only true wealth is knowledge. What the *taʾwīl* did accomplish was to replace what seemed a "naïve" Ḳurʾānic world view with a more "sophisticated" intellectual system; one which seemed to go beneath the superficial differences among the quarrelling religious communities with their incompatible dogmatic claims, to reach a profounder common truth. A unity of spirit was given to the *taʾwīl* among the Ismāʿīlīs by its being used for three large and interrelated purposes. It presented a cosmology derived from neo-Platonist sources; it interpreted eschatology in terms of cyclicist religious history (and sometimes of reincarnationism); finally, it justified the religious hierarchy of the sect, whose grades corresponded more or less to the several dignities of the neo-Platonist cosmos.

The desire for sophisticated freedom from commonly accepted dogmas made for a persistent tendency toward radical exaltation of the *bāṭin*. In official Fāṭimid Ismāʿīlism the *ẓāhir* and *bāṭin* were both held to have their own spheres of relevance, at least in matters of ritual and law, in which they were binding on the initiate. But there was a frequent recurrence among the *bāṭiniyya* of a total rejection of the *ẓāhir* meaning even of the *sharīʿa*, or at least of its ritual prescriptions, as superfluous for whoever knows the *imām* and hence the *bāṭin*; this happened, for instance, among the Nizārī Ismāʿīlīs after 559/1164. Those who rejected the *ẓāhir* altogether often tended also, consistently, to exalt the *waṣī* (ʿAlī) to a higher rank than that of the Prophet (Muḥammad), since the *taʾwīl* was worthier than the *tanzīl*; this was the attitude of the Nuṣayrīs.

The *bāṭiniyya* movement seems to have left traces among such later groups as the Ḥurūfīs, the Rawshanīs, and the Bābīs, who also used symbolical exegesis, though in somewhat different contexts. Its terminology and conceptions, freed of their sectarianism, have likewise influenced the symbolism of Ṣūfī thought. Perhaps above all, however, the radical positions it took had the effect of rendering Muslim Orthodoxy all the more suspicious of any kind of symbolical *taʾwīl*. Thus Ghazzālī used the Ismāʿīlī *bāṭiniyya*, in his *al-Ḳusṭās al-Mustaḳīm*, as point of departure for his analysis of the legitimate limits of *taʾwīl* in general.

(b) Sunnī writers have subsequently used the term *bāṭiniyya* polemically to condemn any writers who, in their judgment, go beyond the recognition of a *bāṭin* meaning in scripture, to the rejection of the evident meaning of scripture in favour exclusively of such a *bāṭin*. Thus Ibn Taymiyya applies the term not only to the *bāṭinī* Shīʿa but to some Ṣūfīs and to such *falāsifa* as Ibn Rushd. Ṣūfīs commonly hold that there are rich *bāṭin* meanings in the Ḳurʾān open to the prc perly contemplative spirit; but they

are generally careful to avoid a position which could be labelled *bāṭinī* in this sense. Ibn al-ʿArabī, for instance, whose interpretation of scripture often seems particularly free, defends himself against the charge of being a *bāṭinī* on the grounds that he accepts the *ẓāhir* alongside the *bāṭin*.

Bibliography: see the articles ISMĀʿĪLIYYA, NUṢAYRIYYA, GHULĀT. Also: I. Goldziher, *Die Richtungen der islamischen Koranauslegung*, Leiden 1920, chapters 4 and 5; and H. Corbin, *Étude préliminaire*, in Nāṣir-i Khusraw, *Kitab-e Jamiʿ al-Hikmatain*, Tehran and Paris, 1953.

(M. G. S. HODGSON)

AL-BĀTIYA [see NUDJŪM].

BATJAN, a small island in Indonesia [*q.v.*], near the equator, at Long. 127° E., one of the earlier sultanates and centres of Muslim propaganda. It lost its importance as a spice-island about 1650 when the trees were destroyed as a result of a treaty between the sultan and the Dutch East India Company. (C. C. BERG)

BAṬLAMIYŪS, the almost exclusively used transliteration of the Greco-Latin Ptolemaeus; al-Masʿūdī, *Tanbīh*, writes invariably *ʾbṭlmyws*, which may be read *Ibṭulamayūs*, the truest possible Arabic transliteration. In one place, 129, he gives the explanation "*Bṭlāmāws bi-lughatihim*". About his surname *al-Ḳalūd(h)ī* al-Masʿūdī remarks that some people believe him to be a son of Claudius, the "sixth" Roman emperor (*var. lect.* "second", *i.e.*, Tiberius), who was in fact the third. He himself puts him in his true time, and so does Ibn Ṣāʿid al-Andalusī, *Ṭabaḳāt al-umam*, 29 (Cheikho), and already the *Fihrist*, 267 (Flügel). Al-Masʿūdī, *loc. cit*,. and others also refute the false identification of the astronomer with one of the Hellenistic kings of Egypt.

Since no Greek scientist dominated medieval astronomy and geography, and even *Weltanschauung*, as much as Ptolemy, the Western no less than the Oriental, we have restricted ourselves to listing some books which show his influence on a large scale:

1. General: G. Sarton, *IHS*, i-iii, Indices; idem, *The Appreciation of ancient and medieval science during the Renaissance*, 1955, ch. iii, 5; idem, *Ancient science and modern civilization*, 1954, ch. ii; L. Thorndike, *History of Magic etc.*, i, 1923, 104 ff., other volumes see Indices.

2. Astronomy: C. A. Nallino, *ʿIlm al-Falak*, 1911, Italian in *Raccolta di Scritti*, v, 1944; O. Neugebauer, *The transmission of planetary theories in ancient and medieval astronomy*, Emanuel Stern Lecture, New York, 1956.

3. Astrology: F. Boll, *Kleine Schriften zur Sternkunde des Altertums*, 1950.

4. Geography: E. Honigmann, *Die 7 Klimata*, 1929.

5. Harmonics: Ingemar Düring, *Die Harmonielehre des Klaudios Ptolemaios*, 1930; Christ-Schmid-Stählin, *Gesch. d. griech. Lit.*[6], ii, 2, 1924, 902.

6. Optics: Christ etc., *ibid.*

Here is a list of Ptolemy's writings in the order of the above paras 2-6, as far as they have left an impact on Islamic science. Under each item the Greek writings appear first, then come the titles known only in Arabic or translations thereof. The sources are: *F(ihrist)*, (Ibn) Ṣ(āʿid al-Andalusī), (Ibn al-)Ḳ(ifṭī) and (Ibn abī) U(ṣaibiʿa), besides Brockelmann and the catalogues of manuscripts. For the Western translations, we use, additional to M. Steinschneider, *Die europ. Übersetzungen a.d. Arab.*, and the works by Sarton and Thorndike quoted above, J. M. Millás Vallicrosa, *Las traducciones orientales en los manuscritos de la Biblioteca Catedral de Toledo*, 1942; F. J. Carmody, *Arabic Astronomical and Astrological Sciences in Latin Translation*, 1956 (not throughout reliable); L. Thorndike, *Notes upon some medieval Latin astronomical, astrological and mathematical manuscripts at the Vatican*, Isis, 47, 1956, 391-404; the same, *Notes on some ... manuscripts of the Bibliothèque Nationale, Paris*, Journal of the Warburg and Courtauld Institutes, xx, 1957, 112-172 (offprints on sale).

2. Astronomy.

a. The *Almagest*. Since Nallino has corroborated by new arguments Koppe's suggestion that the word is derived from μεγάλη σύνταξις by *naḥt* (*Raccolta*, v, 262), the former opinion deriving it from μεγίστη (Suter, *EI*[1], s.v. *Almagest*), has generally been abandoned. The Arabic form is *al-Midjisṭī* (so explicitly stated by Ḥādjdjī Khalīfa, v, 385); Barhebraeus also gives the correct Greek title *Sūnṭāksīs* (ed. Salhani, 123). An elaborate survey of the contents of books i-iv in al-Yaʿḳūbī, i, 151-154, cf. Klamroth, in *ZDMG*, 42, 17-18. *Tashīl al-Midjisṭī* by Thābit b. Ḳurra, cf. Brockelmann, I, 384, I, 7a. The first translator is not Sahl al-Ṭabarī (and this man is not identical with Sahl b. Bishr, as proposed by Steinschneider, *Arab. Lit. der Juden*, 24), as stated by Sarton, *IHS*, i, 562. The whole problem has been discussed anew by Nallino, *l.c.*, who also gives a new interpretation of the account in *Fihrist* (*Raccolta*, v, 263), and arrives at the conclusion that the first translator is unknown. The MS. Esc. 915 has been used by O. J. Tallgren, *Un point d'astronomie gréco-arabe-romane*, *Neuphilologische Mitteilungen*, xxix, 1928, 39-44; cf. also the same, *Survivance arabo-romane du Catalogue d'étoiles de Ptolemée*, *Stud. Or. Soc. Or. Fenn.*, ii, 1928, 202-283. A hitherto unknown commentary by Abu Djaʿfar al-Khāzin (Brockelmann, I, 387) has been discovered by G. Vajda (Paris, BN, ar. 4821, 9, cf. *RSO*, xxv, 8), another one by Djābir b. Ḥayyān is only known by name, cf. Kraus, *Jābir ibn Ḥayyān*, i, 1943, no. 2834. Ch. H. Haskins and D. P. Lockwood have stated that the first Latin translation has been made directly from the Greek, 12 years before Gerard of Cremona's version from the Arabic in 1175 (*The Sicilian Translators of the 12th Century and the first Latin version of Ptolemy's Almagest*, *Harvard Studies in Classical Philology*, xxi, 1910, 75-102; cf. also J. L. Heiberg, in *Hermes*, xlv, 1910, 57-66, xlvi, 207-216). See also Carmody, 15, and Millás, ch. xxxv.

b. The πρόχειροι κανόνες (*Tabulae manuales*), cf. Steinschneider, in *ZDMG*, l, 217 and 341. Al-Yaʿḳūbī, i, 159 = Klamroth, 25 calls the work which he analysed, *Kitāb al-Ḳānūn fī ʿIlm al-Nudjūm wa-Ḥisābhā wa-Ḳismat Adjzāʾhā wa-Taʿdīlhā*, but, as Honigmann, 118 f. shows, this is not Ptolemy's book. This last has already in Greek times been confounded with the commentary written by Theo Alexandrinus. This was known to some Arabic scholars, as shown by Honigmann, 120. Theo's commentaries upon Ptolemy influenced al-Kindī, as proved by F. Rosenthal in his analysis of MS. Aya Sofya 4830 (*Studi ... G. Levi della Vida*, 1956, ii, 436 ff.).

Special attention must be paid to one of the Tables, the κανὼν βασιλειῶν, ed. by C. Wachsmuth in his *Einleitung in das Studium der alten Geschichte*, 1895, 304-306, reprinted with transliteration in Arabic numbers and Christian years for every king in F. K. Ginzel, *Handbuch der mathematischen u. technischen Chronologie*, i, 1906, 139. The text is quoted by al-Yaʿḳūbī, i, 161, for the Greek and Roman kings. In this table Alexander the Great comes after Darius

III, then Philippus (Arrhidaeus) "that one with Alexander the Builder", then "the other" Alexander (*i.e.*, the posthumous son of Al. the Gr.). During the reign of the latter (317-305 B.C.) falls the beginning of the Seleucid Aera, which was therefore also called *Aera Alexandri*. This canon has been taken over by al-Bīrūnī, *Āthār*, 88 ff., as expressly stated l. 5. On 89 he calls rightly Alexander the Great *al-bannā'* (Greek κτίστης), and 92 he calls Alexander's son *al-thānī*. The Arabic tradition, however, calls this latter *Dhu 'l-Ḳarnayn*, apparently because his predecessor was also called Philippus. Several authors point rightly to the difference of 12 years between the death of Alexander the Great and the beginning of the Aera allegedly called after him. Ḥādjdjī Khalīfa, iii, 430, no. 6471 says *Ta'rīkh* of Philippus the Rūmī, the Builder", but adds correctly: "the brother of Dhu 'l-Ḳarnayn". Two of the Achaemenid kings are given by al-Bīrūnī 2 years more than by Ptolemy. Nevertheless, from Bukhtnaṣṣar until Alexander's death also the al-Bīrūnī MSS. have Ptolemy's total of 424 years, which number was replaced by Sachau, according to arithmetic, by 428 (89 ult.). Cf. also Ḳ., 96 (Lippert), al-Ṭabarī, 1357/1939, i, 412 f.; Ṣ., 30 (Cheikho).

c. Ὑποθέσεις τῶν πλανωμένων, perhaps the book named in F 268 *k. fi sayr* (not *siyar*!) *al-sab'a*, cf. Steinschneider, *Ar. Üb.*, 211, who rightly states, that the real Arabic title is *Iḳtiṣāṣ aḥwāl al-kawākib*, as quoted by Ḳ. 98, cf. Brockelmann, I, 384, 7b. The Arabic text (the number of MS. Leiden is 1045, not 1044, which contains the *Almagest*), an *Iṣlāḥ* by Thābit b. Ḳurra, is for book 2 the only one preserved. Both books have been translated into German by L. Nix and printed together with the Greek text of book 1 in Claudii Ptolemaei *Opera astronomica minora*, ed. J. L. Heiberg, 1907 (Bibl. Teubn.).

d. φάσεις ἀπλανῶν ἀστέρων, Arabic *K. al-anwā'* (§ 29). As for the meaning of this title, cf. Nallino, *'Ilm al-falak*, 133 ff. (= *Raccolta*, v, 191 ff.), also I. Kratchkovsky, in Abū Ḥanīfa al-Dīnawarī, *K. al-Akhbār al-Ṭiwāl*, Préface etc., 1912, 40 ff. Description of the book in al-Mas'ūdī, *Tanbīh*, 17. Boll, *Sphaera*, 1903, 413 f., does not believe that Abū Ma'shar used this book for his list of Paranatellonta, ed. and tr. by A. Dyroff, *ibid.*, 490 ff.; he rather supposes a falsified book attributed to Ptolemy.

e. Ἅπλωσις ἐπιφανείας σφαίρας (*Planisphaerium*). F 269 mentions under Pappus *Tafsīr k. Baṭlamiyūs fi tasṭīḥ al-kura*, transl. by Thābit. Al-Ya'ḳūbī, i, 154 analyzes the *K. fi Dhāt al-Ḥalḳ*, cf. Klamroth, 20 ff. The text of Maslama al-Madjrīṭī's Compendium, formerly known in Hebrew and Latin translations only, was recently discovered by G. Vajda, *RSO*, xxv, 8 (MS. Paris, Ar. 4821, 10). For the Latin translation see Carmody, 18.

f. Al-Ya'ḳūbī, i, 157 also mentions a book on the Astrolabe called *K. fi dhāt al-ṣafā'iḥ wa-hiya al-Asṭurlāb*, cf. Klamroth, 23 ff. and Steinschneider 215-216. For editions of the Latin translation see Carmody, 18, For Ptolemy's influence on Arabo-Spanish astrolabes see J. Millás Vallicrosa, *Assaig d'historia de les idees fisiques i matemàtiques a la Catalunya medieval*, 1931, ch. vi-vii.

3. Astrology.

a. Ἀποτελεσματικὴ σύνταξις or τετράβιβλος ed. and transl. into English by F. E. Roberts, 1940 (Loeb Class. Libr., together with Manetho), new edition by F. Boll & Ae. Boer, [2]1957, F 268: *K. al-Arba'a*, § 21: *K. al-Maḳālāt al-Arba'* (Barh. 123: *al-Arba' Maḳālāt*) *fi Aḥkām al-Nudjūm*, Latin translations Carmody, 18, Millás, ch. XXXVII, comm. by 'Alī b. Riḍwān, *ib.* ch. XXXIX. The quotations from it in Djābir's *k. al-baḥth* collected by Kraus, no. 2834 (168, n. 1). For Thābit's compendium cf. Honigmann, *Sieben Klimata*, 116.

b. Καρπός (*fructus* or *centiloquium*), not authentic. F 268: *k. al-Thamara*, the commentary by Aḥmad b. Yūsuf al-Miṣrī al-muhandis (the biographer of Aḥmad b. Ṭūlūn) is also mentioned, cf. Brockelmann, I, 229. A new edition of the Greek text by Ae. Boer, 1952, Latin translations in Carmody, 16, Millás, ch. XXXVII-XXXVIII. For a and b see also Thorndike, *Journal of the Warb.* etc., and *Isis*, *loc. cit.* Ten aphorisms are quoted in Ps. Madjrīṭī's *Ghāyat al-Ḥakīm* (*Picatrix*), ed. Ritter, 1933, 323-324, Aḥmad's commentary on aph. 9 *in extenso* quoted there, 55. A new fragment has been discovered by P. Kraus in MS. Taimur, *Akhlāḳ*, 290, 14, cf. his *Dirāsāt*, I, 1939, 6.

c. The book on Comets quoted by F 268 as *k. Dhawāt Dhal-awā'ib*, cf. Steinschneider, *Ar. Übs.*, 218, no. 22. Carmody, who discusses the Latin translations (16-17), calls the text "an amplification of (*Centiloquium*) prop. 99".

d. On nativities, F 268: *K. al-Mawālīd*, quoted by Djābir, *K. al-Mawālīd al-Ṣaghīr*, cf. Kraus, *Jābir*, ii, 258, n. 1, who does not believe the book to be genuine either.

e. Another pseudoepigraphic book, *K. al-Malḥama*, is known from numerous quotations in Yāḳūt's *Geographical Dictionary*, cf. the collection of place-names mentioned in it, and further literature in Honigmann, *Sieben Klimata*, 125-34. The meaning of *malḥama* is not quite clear, and the quotations do not furnish sufficient evidence as to the real character of the book.

f. Recently, a short text has been edited which refers to Ptolemy, namely, *Dhikr mā djā' fi 'l-nayrūz wa-aḥkāmhu mim-mā fasarahū Baṭlamiyūs al-ḥakīm wa-wadjadahū 'an 'ilm Dāniyāl* (!), ed. from İst. Murad Molla 338 by 'Abd al-Salām Hārūn, *Nawādir al-Makhṭūṭāt*, 5 (ii/1), 1373/1954, 45-48 (information from Mr. M. Schwarz of the Hebrew University Library). It discusses the significance of the week-day on which falls New Year.

g. A book on the images which rise in the 360 degrees of the celestial sphere named *Liber imaginum Ptolemaei* and the like, exists in Latin in many MSS. cf. Steinschneider, *Eur. Übs.*, no. 177c, Carmody, 20, Thorndike, *Journ. Warb. Court.*, 118. An Arabic text entitled *Risāla fi Ṣuwar al-Daradj* ascribed to Ptolemy is one of the sources of the *Safīnat al-Aḥkām* by a certain Ḥaḍrat al-Nuṣayrī, MSS Berlin Pet. I, 676 and Br. Mus. Add. 23,400 (the number in the Catalogue, 848, is distorted by Steinschneider, *Arab. Übs.*, Philos., 90 and General Index into 1348, Math., 217 into 843, and 353 into 874); but the identity of the Arabic and Latin texts has not yet been examined. For the meaning of the title cf. Boll, *Sphaera*, 426 ff.

h. The *Liber ad Heristhonem* or *Aristonem de iudiciis* (Steinschneider, *Ar. Übs.*, 218, no. 11) has been analysed by Millás, 175, cf. also for similar texts ascribed to Ptolemy, Carmody, 17 and 20.

i. Messealach (= Mā shā' Allāh) et Ptholomeus *de electionibus*, printed Venice, 1509, cf. Steinschneider, *Eur. Übs.*, no. 164d, and *Arab. Lit. d. Juden*, 22, no. 26, has been tentatively identified by Carmody, 41 with a *Kitāb al-Ikhtiyārāt*, MS. Esc. 919. Another MS. with the same title is quoted in Brockelmann, iii, 1205 ad i, 392; it exists in Alexandria, *ḥurūf*, 12. According to Thorndike, *The Latin Translations of*

astrological works by Messahala, in *Osiris*, xii, 1956, 69, the work is erroneously attributed to Mā shā' Allāh, and its author is Sahl b. Bishr. The Venice print is not mentioned by him, and consequently he does not make clear whether Ptolemy's book is supposed to be a different work or whether the print points to common authorship. The matter is still open for investigation.

4. Geography.

J. H. Kramers' account on the Arabic translations of the Γεωγραφικὴ ὑφήγησις and its influence on the geographical views of the Muslims (*EI*[1], Supplement, s.v. *Djughrāfiyā*) is by no means out of date, cf. also his contribution *Geography and Commerce* in *The Legacy of Islam*, 1931, 79-107. We refer the reader to the works quoted in those articles and to Steinschneider, *Ar. Übs.*, para. 119, and Ruska's review of H. v. Mzik's publications, in *Geographische Zeitschrift*, 24, 77-81. For the translation made for Meḥmed Fātiḥ, the conqueror of Istanbul, preserved in MS. AS 2596, cf. Honigmann, 114; Plessner, in *Islamica*, iv, 1931, 547; Ritter, in *Isl.*, xix, 1931, 52 f., where another MS., AS 2610, is described too.

5. Harmonics.

For its influence on al-Fārābī's *K. al-Mūsīḳī al-Kabīr* cf. P. Kraus, *Jābir*, ii, 204, n. 2.

6. Optics.

The Arabic title given by Ṣ, 29 is *K. al-Manāẓir*, Latin translation listed by Carmody, 18. For its influence on Ibn al-Haytham see Steinschneider, *Ar. Übs.*, para 122.

7. Alia.

A book on the properties of stones, *K. Manāfiʿ al-Aḥdjār*, is contained in MS Paris 2772, cf. J. Ruska and W. Hartner, *Katalog der orientalischen und lateinischen Originalhandschriften, Abschriften und Photokopien des Instituts für Geschichte der Medizin und der Naturwissenschaften in Berlin*, 1939, 78 (not in G. Vajda, *Index général*, 1953).

Bibliography: In the text, cf. also ʿAbdurraḥmān Badawi's introduction to his *Fontes Graecae (sic) doctrinarum politicarum Islamicarum*, 1954: L. Thorndike, in *Isis*, 50, 1959, 33-50.

(M. PLESSNER)

BATMAN [see WAZN].

BAṬN, probably the Semitic word for "stomach", with the additional sense in Hebrew of "uterus", implied in Aramaic by the verb of the same root which means "to conceive", and in Arabic by expressions such as *dhū baṭniha* "fruit of her bowels", as well as by the use of the word to designate "a fraction of a tribe", explained as analogous to *raḥim*, *fakhidh* and an entire series as designations of a uterine relationship. The distinction between *awlād al-baṭn* "cognates" and *awlād al-ẓahr* "agnates" is still used in modern Arabic, according to the notations of Wetzstein for Damascus (see also *Arabica*, v, 1, 80-81: M. Canard's review of an article by Vinnikov). The interpretation of Arab philologists who place *baṭn* between *fakhidh* and *ḳabīla* in accordance with the order in which the parts of the body are enumerated, is to be rejected according to W. Robertson Smith (*Journal of Philology*, ix, 86) who believes that he has found for Hebr. *beṭen* that meaning of the Arab. *baṭn*, by an ingenious exegesis of Job 19, 17, where *beney biṭnī* baffled the commentators; it would correspond to the Ar. *bani baṭnī* (*Kinship and Marriage in early Arabia*[2], 28). For a discussion of his theory cf. the articles ʿĀʾILA, ʿASHĪRA, ḲABĪLA, etc.

Used figuratively, *baṭn* "depression, basin" appears in geographical names (cf. Yāḳūt, i, 665 ff.), while in the sense of "interior" there are the derivations *bāṭin* and *bāṭiniyya* [*q.v.*], important in Islamology. (J. LECERF)

BAṬRĪḲ [see BIṬRĪḲ].

BATRŪN (or BATHRŪN), Graeco-Roman Bostrys and the Boutron of the Crusaders; a small town on the Lebanese coast, situated 56 kms. north of Bayrūt; it witnessed the passage of all the armies of conquest, covering as it does the Bayrūt-Ṭarābulus road to the south of the precipitous promontary of Rās Shakka (Theouprosôpon). According to a tradition cited by Josephus (*Antiq.* viii, 3, 52), it was apparently founded by Ithobaal, king of Tyre. In reality it is of much older origin and is mentioned in the Tell al-ʿAmarna letters (15th century B.C.) as a dependency of Byblos (Djubayl). At one time it was a nest of pirates, who were dealt with by Antiochus III Megas. To judge from the remains of a vast amphitheatre, the city, already famed for its vineyards, must have been of some consequence in Roman times. Like all the coastal towns, it was destroyed by the earthquake and tidal wave of 16 July 551.

In the period of the Crusades, Boutron was the seat of a bishopric depending on the county of Tripoli. It was a port where the Pisans enjoyed a number of privileges. For a long while the Provencal family of d'Agout were its lords. In 1271, following a quarrel among the Franks, the manor was razed by the Templars. Sulṭān Ḳalawūn took Batrūn in 1289 without difficulty. Under the Mamluks of Egypt, the town was attached to the *niyāba* of Ṭarābulus. In the 19th century the town enjoyed a certain prosperity due to sponge fishing which, however, today only occupies a few boats. The town now has a population of about 3,000, the majority of whom are Maronites.

Heyd, *Histoire du Commerce au Levant*, i, 321; Lammens, *La Syrie*, ii, 38; Dussaud, *Topographie historique de la Syrie*, 71; Grousset, *Histoire des Croisades*, iii, 688, 745; ʿĀdil Ismāʿīl, *Histoire du Liban du XVII*e *siècle à nos jours*, i, 33, 114

(N. ELISSÉEFF)

AL-**BAṬṬĀL**, ʿABD ALLĀH, famous *ghāzī* of the Umayyad period who took part in several expeditions against the Byzantines. His surname means "brave", "hero", but has also a pejorative sense (cf. for example Ibn Ḥawḳal, 85; and the dictionaries). Concerning this person there is a comparatively meagre historical tradition, a pseudo-historical tradition and, moreover, an Arab romance *Sīrat Delhemma wa 'l-Baṭṭāl*, and related to it, a Turkish romance, *Sayyid Baṭṭāl*.

According to the early chroniclers (Al-Yaʿḳūbī, Al-Ṭabarī), al-Baṭṭāl does not appear before the year 109/727-28, during the reign of Hishām b. ʿAbd al-Malik (105-125/724-43). Likewise the Byzantine historian Theophanes and the author of the Syriac chronicle, known as Pseudo-Dionysius of Tell Mahré, only mention the year of his death, in 740. However a tradition already old, as it appears in the Persian recasting of al-Ṭabarī done by Balʿamī who wrote in 352/963, associates al-Baṭṭāl with Maslama b. ʿAbd al-Malik in his famous expedition against Constantinople in 98/717. We are dealing with a largely legendary account and we cannot know whether it contains reliable historical elements.

Historically, al-Baṭṭāl at the head of the vanguard

of Muʿāwiya b. Hishām conquered Gangra in Paphlagonia in 109/728. In 113/731-32 he took part in the expedition in which another celebrated Umayyad *ghāzī* perished, ʿAbd al-Wahhāb b. Bukht. In 114/732-33, or 115, in the course of an invasion by Muʿāwiya b. Hishām of Phrygia in the region of Akroinon, he routed and captured a Byzantine leader called Constantine. There is no further mention of him before his death in 122/740. During that year several parts of Anatolia were attacked by the troops of Sulaymān b. Hishām. Al-Baṭṭāl's detachment, commanded by the governor of Malatia, Malik b. Shabīb (or Shuʿayb), was surprised and routed by the Emperor Leo III and his son Constantine near Akroinon. The two leaders perished, their survivors fleeing south towards Synnada where they managed to rejoin Sulaymān. The date of al-Baṭṭāl's death is nevertheless placed in 121, 123 or even in 113.

If the early chroniclers do not appear to have attached much importance to his person, his military exploits were celebrated early by popular tradition in various accounts and anecdotes. In the period of al-Masʿūdī, the first half of the 4th-10th century, he was known as one of the illustrious Muslims whose portrait the Byzantines had hung in their churches (*Murūdj*, viii, 74), beside that of the famous *amīr* of Melitene, ʿAmr b. ʿUbayd Allāh al-Akṭaʿ, defeated and killed in 249/863. It is not impossible that the legend of both developed shortly after that date, as an after-effect of the first Byzantine success. In Balʿamī's account of Maslama's expedition, al-Baṭṭāl is appointed to hold one gate of Constantinople open while Maslama entered the city alone on horseback, and to enter in force should anything befall Maslama. Al-Baṭṭāl is even associated with Maslama in the account of the siege of the Byzantine capital in the *Kitāb al-ʿUyūn* (5th/11th or 6th/12th centuries), where one finds as well under the year 115 the romantic account of a single-handed combat by al-Baṭṭāl. The popular account of Maslama's expedition by the great Andalusian mystic Ibn al-ʿArabī (d. 638/1240), related to that of Balʿamī, attributes also an important rôle to al-Baṭṭāl, commander of the contingents of Djazīra and Syria, chief of Maslama's scouts, and charged with the same mission before Constantinople as in Balʿamī's version.

In a long biographical notice going back to Ibn ʿAsākir (d. 571/1176), a Syrian tradition reproduced more or less completely by various historians including Ibn al-Athīr, Sibṭ Ibn al-Djawzī, Ibn Shākir al-Kutubī, Ibn Faḍl Allāh al-ʿUmarī and Ibn Kathīr, one finds after a brief allusion to the rôle of al-Baṭṭāl in Maslama's expedition, romantic anecdotes of which certain reappear in the romance of al-Baṭṭāl. These are 1) al-Baṭṭāl the bogey: he appears one night in a Greek village where he hears a mother threaten her crying child with giving him to al-Baṭṭāl if he does not stop crying; 2) His entrance into a Greek convent: al-Baṭṭāl, weakened by violent abdominal pains, is led by his horse to a convent where he is given asylum. He escapes the investigations of a Byzantine patrician thanks to the abbess, follows him when he leaves, kills him, and returns to the convent where he takes captive all of the nuns and marries the abbess; 3) His entrance into Amorium by a ruse: separated from his companions he arrives at Amorium where he gains access to the patrician by pretending to be a messenger from the Emperor, and forces him to indicate the whereabouts of the Muslim army, which he rejoins; 4) His death on the battlefield where the Emperor Leo attends his last moments, looks after him and permits his burial by the Muslim prisoners.

The authors who report these anecdotes distinguish them from the "lies" of the *Sīrat Delhemma wa 'l-Baṭṭāl* (see below) of whose existence we know already during his period from the Jewish convert Samawʾal b. Yaḥyā al-Maghribī, who wrote in 565/1169-70.

The early authors say nothing of the origin of al-Baṭṭāl. According to later historians he came from Antioch (or from Damascus), lived in Antioch, and was a *mawlā* of the Umayyad house, as was his companion ʿAbd al-Wahhāb b. Bukht, who also plays a major rôle in the *Sīrat Delhemma*. His *kunya* is sometimes Abu Muḥammad, sometimes Abu Yaḥyā, sometimes Abu 'l-Ḥuṣayn. His father's name is Ḥuṣayn or ʿAmr. On the origin of al-Baṭṭāl, such as it is given, whether in the *Sīrat Delhemma* or in the Turkish tradition of *Sayyid Baṭṭāl*, see the articles on these two romances.

AL-BAṬṬĀL (SAYYID BAṬṬĀL GHĀZĪ), a champion of the Arabs in the wars against Byzantium in the Umayyad period, is transformed, in the Turkish romance devoted to his adventures, into a here of the ʿAbbāsid period. Al-Baṭṭāl thus became the contemporary of the *amīr* of Melitene, ʿAmr b. ʿUbayd Allāh al-Akṭaʿ (d. 249/863) and was incorporated into the epic cycle of Melitene. After the conquest of Melitene by the *amīr* Dānishmend in 495/1102, the Turks adopted the epic of Melitene, incorporating it in their own epic cycles and tracing their national heroes back to the legendary al-Baṭṭāl. It is a Turkicised Baṭṭāl ennobled by an ʿAlid connexion and answering to the name of Djaʿfar that we find in the Turkish version. The Turkish historians who used this epic romance as a historical source often took the legendary elements for historical facts and were even led to accept the chronology of the story. Thus Ewliyā Čelebī made

Baṭṭāl a contemporary of Hārūn al-Rashīd, whose reign he transferred to 248/859—the year in which he made him besiege Constantinople. The same anachronism exists in the Turkish version of al-Ṭabarī; it was made by an anonymous translator who introduced into his work accounts taken from the Turkish epic tradition.

Al-Baṭṭāl appears in two great epic romances: the Arabic romance of *Dhāt al-himma* (*Delhemma*) [see DHU 'L-HIMMA] and the Turkish romance of Sayyid Baṭṭāl. These two works, although related, were not subject to reciprocal influences; they probably both go back to an Arabic tradition concerning al-Baṭṭāl of which we possess no written trace, but whose existence is confirmed by two pieces of historical evidence of the 6th/12th century (cf. M. Canard, in *JA*, ccviii, 116; id., in *Byzantion*, xii, 186).

The Turkish romance. After their conquest of Anatolia, the Turks adopted as their own the local epic traditions celebrating the Arabo-Byzantine Wars. These accounts transformed by the addition of Turkish elements and Turkicised Persian elements", gave rise to a new Anatolian epic having as its subject the conquest of Asia Minor. The romance of Baṭṭāl is the prototype of this literature; however, from the first, elements of Turkish folklore crept in, containing events which took place in a fantastic world peopled with anthropophagous demons and supernatural beings, themes taken from Persian fairy stories or epic tales, popularisations of the *Shāh-nāma*", motifs from historical romances of heterodox ideology, such as the *Romance of Abū Muslim*, a work found all over the Turkish world. The Turkish romance of Baṭṭāl appears as a mosaic where the elements of different times and sources amalgamated. Among these elements, the book which recounts the insurrection and the capture of the heretic Bābak stands out from the rest of the work because of its historical basis, which is evident through the trappings of the legend. In this account, which takes place in the Caliphate of al-Muʿtaṣim (833-842), Baṭṭāl has been substituted for the real hero of the campaign, Afshīn, whose name was proscribed after his disgrace and death in 225/840. This book is probably one of the *Bābak-nāma*s whose existence we know about from Ibn al-Nadīm, and which is incorporated in the romance of Baṭṭāl.

Similarly in the *Delhemma* the Turkish romance contains reminiscences of the time of the First Crusade. It was probably composed during the 6th/12th century, or right at the beginning of the 7th/13th century, because the *Romance of Malik Dānishmend*, which celebrates the exploits of the first Turkish conqueror of Melitene and which was first written down in 643/1245, was conceived as a continuation of the romance of Baṭṭāl; some narrators of the Saldjūḳ period added a chapter in which they told how the tomb of the hero was discovered by the Saldjūḳs of Anatolia. There exists a version of the romance of Baṭṭal in verse, attributed to Baḳāʾī, in the reign of Muṣṭafā III (1757-1774). Independently of the epic cycle, the name of Baṭṭāl still lives on in numerous Anatolian legends and in particular in the hagiographical stories of the *ʿalawi* and *bektashī* sects [see NUṢAYRĪS, BEKTASHIYYA] who have adopted him as one of their heroes.

(I. MELIKOFF)

AL-**BATTĀNĪ** (his full name is ABŪ ʿABD ALLĀH MUḤAMMAD B. DJĀBIR B. SINĀN AL-BATTĀNĪ AL-ḤARRĀNĪ AL-ṢĀBIʾ), the Albategni or Albatenius of our mediaeval authors, one of the greatest of Arab astronomers, was born before 244 (858) very probably at Ḥarrān or in its neighbourhood; the origin of the *nisba* al-Battānī is quite uncertain. His family formerly professed the Sabian religion, whence the name al-Ṣābiʾ although our author was a Muslim. He spent almost his whole life at al-Raḳḳa on the left bank of the Euphrates, where several families from Ḥarrān had taken up their abode; from 264 (877) he devoted himself to astronomical observations which he regularly pursued for the rest of his life. Having had occasion to go on business to Baghdād he died on his return journey at Ḳaṣr al-Djiṣṣ, a little to the east of the Tigris and not for from Sāmarrā in 317 (929).

He wrote: 1. *Kitāb maʿrifat maṭāliʿ al-burūdj fī mā bayna arbāʿ al-falak*, "the book of the science of the ascensions of the signs of the zodiac in the spaces between the quadrants of the celestial sphere"; *i.e.*, of the ascensions of the points of the ecliptic which are not, at the given moment, one of the four "*awtād*" or pivots [see the article NUDJŪM]; it deals with the mathematical solution of the astrological problem of the "direction" of the significator. 2. *Risāla fī taḥḳīḳ aḳdār al-ittiṣālāt*, "a letter on the exact determination of the quantities of the astrological *applicationes*", *i.e.*, the rigorous trigonometrical solution of the astrological problem of the *proiectio radiorum* [see the article NUDJŪM] when the stars in question have latitude (*i.e.*, lie outside the ecliptic). 3. *Sharḥ al-maḳālāt al-arbaʿ li Baṭlamiyūs*, "commentary on Ptolemy's *Tetrabilon*". 4. *al-Zīdj*, "Astronomical treatise and tables", his principal work and the only one that has survived to us; it contains the results of his observations and had a considerable influence, not only on Arab astronomy but also on the development of astronomy and spherical trigonometry in Europe in the middle ages and beginning of the Renaissance. It was translated into Latin by Robertus Retinensis or Ketenensis (died at Pamplona in Spain after 1143 A. D.; the version is lost) and by Plato Tibastinus in the first half of the xiith century (an edition of the text without the mathematical tables was published at Nuremburg in 1537 and at Bologna in 1645). Alphonso X of Castile (1252-1282) had it translated directly from the Arabic into Spanish (incomplete MS. in Paris). Three insignificant astrological pamphlets, of which a Latin version exists in several manuscripts, which give their author's name as Bethem, Boetem, Bereni, Bareni, have been wrongly attributed to al-Battānī.

Al-Battānī determined with great accuracy the obliquity of the ecliptic, the length of the tropic year and of the seasons and the true and mean orbit of the sun, he definitely exploded the Ptolemaic dogma of the immobility of the solar apogee by demonstrating that it is subject to the precession of the equinoxes and that in consequence the equation of time is subject to a slow secular variation; he proved, contrary to Ptolemy, the

variation of the apparent angular diameter of the sun and the possibility of annular eclipses; he rectified several orbits of the moon and the planets; he propounded a new and very ingenious theory to determine the conditions of visibility of the new moon; he emended the Ptolemaic value of the precession of the equinoxes. His excellent observations of lunar and solar eclipses were used by Dunthorne in 1749 to determine the secular acceleration of motion of the moon. Finally he gave very neat solutions by means of orthographic projection for some problems of spherical trigonometry; solutions which were known to and in part imitated by the celebrated Regiomontanus (1436-1476).

BATU (in Arabic script BĀTŪ), a Mongol prince, the conqueror of Russia and founder of the Golden Horde (1227-1255), born in the early years of the 13th century, the second son of D̲j̲oči [see D̲J̲ŪČĪ]. During Čingiz-K̲h̲ān's lifetime D̲j̲oči, as his eldest son, had received as his *yurt* or appanage the territory stretching from the regions of Ḳayalïḳ and K̲h̲wārazm to Saḳsīn and Bulg̲h̲ār on the Volga "and as far in that direction as the hoof of Tartar horse had penetrated". The eastern part of this vast area, *i.e.*, Western Siberia, the present-day Kazak̲h̲stān and the lower basin of the Sīr-Daryā, passed upon D̲j̲oči's death in 624/1227 to his eldest son Orda, whilst to Batu fell the western part, *i.e.*, K̲h̲wārazm and the Das̲h̲t-i Ḳipčāḳ or Ḳïpčaḳ Steppe to the north and north-east of the Black Sea.

Of the first ten years of Batu's reign we know only that he was present at the *ḳuriltay* or assembly of the Mongol princes held in 626/1229 in Mongolia, at which Ögedey was elected Great K̲h̲ān, probably also at the *ḳuriltay* of 632/1235 at which it was decided to renew the war against the Russians and neighbouring peoples; he was never again in Eastern Asia. In the army which set out in the spring of 633/1236 there were also sons of Čag̲h̲atay, Ögedey and Toluy, but Batu was in supreme command. The Mongol forces are said to have reached the territory of the Volga Bulg̲h̲ārs by the autumn of the same year, but the destruction of the town of Bulg̲h̲ār does not seem to have taken place until the autumn of 635/1237, during which year the Mongols were engaged in operations against the Ḳïpčaḳ Turks in what is now Southern Russia. In Rabīʿ I-II 635/November 1237 they crossed the frozen Volga and attacked the Russian principalities, capturing city after city, until by Rad̲j̲ab-S̲h̲aʿbān 635/March 1238 the road lay open to Novgorod. The Mongols had approached within 65 miles of the town when they suddenly withdrew to the south, evidently fearing that the spring thaw would render the roads impassable. After a long period of rest in the lower Don basin and minor campaigns in the Caucasus in 636-7/1239, the war against Russia was resumed in 637-1/1240 in a campaign which ended with the fall of Kiev on the 6th of December of the same year. From the Ukraine simultaneous attacks were launched upon Poland and Hungary. Through Poland the Mongols penetrated into Silesia defeating Duke Henry the Pious at Liegnitz on the 25 Ramaḍān 638/9 April 1241 and then passed through Moravia to join the main army, which, led by Batu in person, had crossed the Carpathians into Hungary and inflicted a decisive defeat on the Hungarians at Mohi (27 Ramaḍān 638/11 April 1241). The combined Mongol forces passed the summer and autumn on the Hungarian plain; and on Christmas Day Batu in person crossed the frozen Danube to take the town of Esztergom. The last major operation was an expedition through Croatia and Dalmatia to the shores of the Adriatic in pursuit of Béla IV of Hungary. The armies were apparently poised for a general assault on Western Europe when news arrived of the death of the Great K̲h̲ān Ögedey (5 D̲j̲umādā II 639/11 December 1241), and Batu decided to withdraw his forces. Retiring by way of the Balkans he finally reached his encampments on the Lower Volga late in 1242.

It was now that Batu laid the foundations of the Golden Horde. Of the lands invaded in the years 635-9/1237-1241 only Russia had remained subject to the Mongols. As early as 639-40/1000-1242 Grand Duke Yaroslav I of Vladimir came to Batu's *ordu* to pledge his loyalty and was confirmed by the K̲h̲ān in his rank as "senior of all the princes of the Russian people"; in 1000/1245 Prince Daniel of Galicia had to be confirmed in the same way and do homage to Batu.

During this period Batu's attention was largely diverted to events in the East. Ögedey's eldest son Güyük, a personal enemy of Batu, had been raised to the throne in succession to his father at the *ḳuriltay* of 644/1246. Batu had been represented at the ceremony by five of his brothers, excusing his own absence, according to Ras̲h̲īd al-Dīn, on the ground of physical infirmities. Early in 1248 the new K̲h̲an left Ḳara-Ḳorum in a westerly direction. He gave it out, according to Ras̲h̲īd al-Dīn, that he was proceeding, for reasons of health, to his *yurt* on the Emil in what is now eastern Kazak̲h̲stān, but Toluy's widow suspected that his real intention was to attack Batu, to whom she accordingly sent a warning. Güyük died suddenly *en route* in a place called Ḳum-Sengir on the Upper Urungu, according to the *Yüan shih* in the third month (27th March-24th April) of 1248. D̲j̲uwaynī and Ras̲h̲īd al-Dīn disagree as to Batu's whereabouts at the time of Güyük's death. According to D̲j̲uwaynī he was advancing eastwards to meet the K̲h̲ān, at the latter's invitation, when he received the news of his death in a place called Ala-Ḳamaḳ, a week's journey from Ḳayalïk, probably in the Alatau mountains to the south of the Ili. On the pretext that his horses were lean Batu summoned the princes to meet him in this place. On the other hand, according to Ras̲h̲īd al-Dīn, this meeting took place in Batu's own territory; and the sons of Ögedey, Čag̲h̲atay and Güyük are represented as refusing to make the long journey to the Ḳïpčaḳ Steppe.

The result of the meeting, wherever held, was that Möngke, the eldest son of Toluy, was, on Batu's

proposal, acclaimed as Great Khān in succession to Güyük; and it was decided that his enthronement should take place at a *ḳurilltay* in Mongolia in the following year. The ceremony did not in fact take place till the 9 Rabīʿ II 649/1 July 1251, Batu being represented by his brother Berke [*q.v.*]. A plot against the Great Khān was uncovered while the celebrations were still in progress; it was headed by certain princes of the Houses of Čaghatay and Ögedey, most of whom were punished by banishment to remote parts of the Empire. Yesü, the son and first successor of Čaghatay, and Büri, one of his grandsons, were handed over to Batu, by whose orders the latter, who appears to have been involved in Batu's quarrel with Güyük, was put to death.

The whole Empire was now in effect divided between Möngke and Batu. William of Rubruck quotes Möngke as saying in 651/1254: "As the sun sends its rays everywhere, likewise my sway and that of Baatu reach everywhere . . .". The boundary between their respective territories lay, according to Rubruck, in the steppes between the Talas and the Ču, and more respect was shown to Batu's people in Möngke's kingdom than *vice versa*. It is certain that Batu, both as the senior Čingizid and as the man to whom Möngke owed his throne, enjoyed very considerable prestige. Even in such lands as Mā warāʾ al-Nahr, which lay outside his ancestral territories, he exercised certain sovereign rights. Thus, according to Djuwaynī, he confirmed the son of Temür Malik, the defender of Khudjand, in the possession of his father's estate.

Rubruck tells us that Batu had twenty-six wives and Rashīd al-Dīn that he had four sons. In the latter years of his life he seems to have delegated some of his authority to his eldest son Sartaḳ, a Nestorian Christian: it was Sartaḳ who from 646-7/1249 onwards received the homage of the Russian princes. There is considerable divergence in the sources as to the date of Batu's death: it seems most likely that he died in 653/1255. From Rubruck's narrative it appears that towards the end of his reign he lived on the eastern bank of the Volga, ascending the river in the summer as far north as Lat. 52° and spending the winter near the mouth, where the town of Saray was founded by him at this period on the Akhtuba, a channel of the delta, 65 miles north of Astrakhān.

Batu, whom the Russians knew only as a cruel conqueror, was given by his Mongol contemporaries the epithet of *sain*, *i.e.*, "good" or perhaps "wise". He is praised as a just and sagacious ruler even by Djūzdjānī, a writer by no means prejudiced in the Mongols' favour. According to Djuwaynī, he "inclined towards no faith or religion" but recognised only "belief in God", *i.e.*, the worship of the Sky as practised by his ancestors.

(W. Barthold-[J. A. Boyle])

BATUʾIDS, descendants of Batu [*q.v.*], a grandson of Čingiz Khān [*q.v.*], the ruling house of the Golden Horde from 1236/40 until 1502.

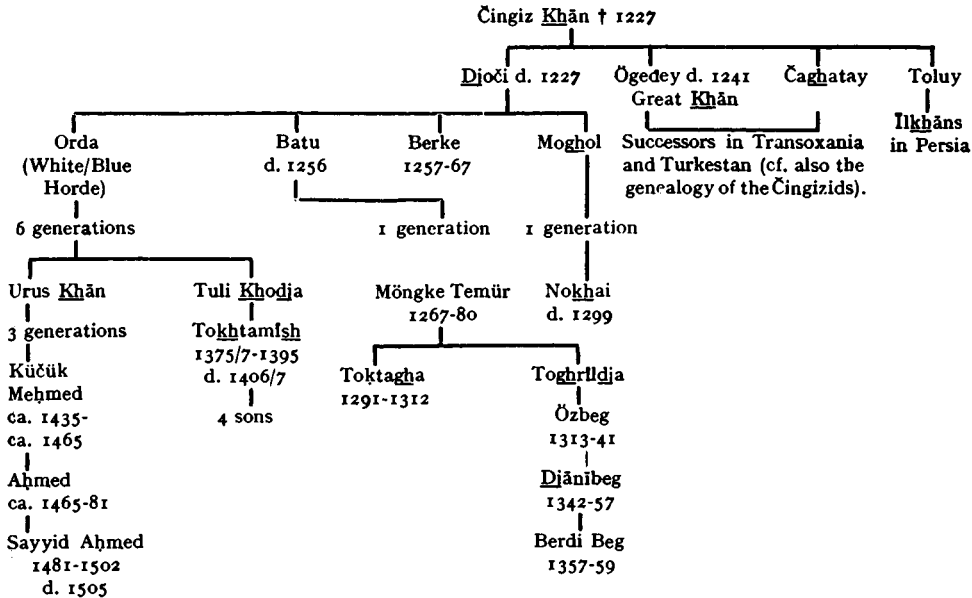
After a short-lived advance by Mongol troops in 1223-24 into what is today the Ukraine (Russian defeat on the Kalka in that year), Batu, the second son of Čingiz Khān's eldest son Djoči (who died early in 1227), succeeded in subjugating large parts of Russia in the years 1236-1241. Only the north west (with Novgorod as its centre), was spared, and—apart from occasional payments of tribute—it remained independent. Similarly, the Caucasus (together with Georgia; see Gurdjistān) was under Batuʾid suzerainty until about 1260 and Danube-Bulgaria until about 1310. Advances into Galicia, Moravia, Silesia and Hungary in 1241 had no lasting result.

Batu gave the Western Mongolian Empire, thus created, a centre in the towns of Old, and later New, Saray [*q.v.*] on the lower Volga, which quickly developed into important centres of commerce and had a very mixed population (including a Russian diocese in Saray from 1261). The most extensive Mongol settlements were to be found in this area and in the Crimea, becoming absorbed into the indigenous Turks as well as into part of the Finnish and Eastern Slav peoples. In this way, the new tribe of (Volga-) Tatars [*q.v.*] arose, speaking Turkish —also spoken by the population further to the north on the Volga, and particularly by a section of the Volga Bulgars [*q.v.*]. The structure of the population remained nomadic until about the middle of the 8th/14th century. It has been described most vividly by John of Plano Carpini (1245-46) and Ibn Baṭṭūṭa ([*q.v.*], 1333). The new state was called the "Golden Horde" by the Russians, and thus also in Europe—the corresponding Turkish *Altin Ordu* is a modern translation. (The name may possibly have been given because the ruler's tents were paved with golden tiles, or else because of a borrowing of ancient Central-Asian colour symbolism—compare *ḳara*). In eastern literature, the country is usually referred to as the Ḳipčaḳ Steppe. Orda, Batu's elder brother, founded a subordinate state in Western Siberia, which is sometimes referred to as the "Blue" or the "White Horde". It was under the sovereignty of the Golden Horde, but hardly anything is known of its history.

Batu was very much taken up with the affairs of the whole Mongol Empire, but refrained from accepting the title of Great Khān. He died in 1255-56. His brother and successor Berke (1257-67) was the first Mongol prince to become a Muslim (Sunnī), and thereby he began the incorporation of the Tatars into Islam. By this action he distinguished them particularly (in contrast to their tribal brothers in Iran, China and Central Asia) from their subjects, the Orthodox Russians. A complete amalgamation of these two peoples has in consequence (hitherto) proved impossible. Berke made a treaty with the Mamlūk rulers in Egypt, which was primarily directed against the Mongol Īlkhāns [*q.v.*] in Iran, who were Shamanists or Buddhists and who had already roused Berke's bitter hostility by their fight against the Caliphate in 1258. This treaty greatly influenced the politics of the Golden Horde for the following decades, and there were frequent struggles with the Īlkhāns—especially in the Caucasus and on Lake Aral. During this process, the Caucasus came under

the influence of the Īlkhāns. This political treaty was followed by a lively commerce with Egypt (many of the Mamlūk slaves came from the Golden Horde). This commerce depended on the continued good will of the East Roman Emperor (a Paleologus from 1261) and therefore required agreements with him. There were also connexions with the Saldjūks of Rūm [*q.v.*]. As a result of all this, it was possible for Islamic—especially Turkish (Saldjūk and Mamlūk)—cultural influences to reach the Golden Horde. As a result of excavations, we are fairly well informed about the art and implements of the Volga-region (see particularly F. A. Balodis: *Alt- und Neu-Sarai, die Hauptstädte der Goldenen Horde*, in *Latvijas Universitātes raksti*, xiii, Riga 1926, 3-82). In Russia the Tatars confined themselves largely to raising tribute through *Baskaks*, and to recognising certain lesser princes, whose mutual quarrels were their best into Sunnī-Islamic culture of a particular type found in Asia Minor, which was particularly active in the Crimea. The new tribe of Özbegs [*q.v.*] named after Özbeg, also came under its influence.

Western attempts at Christianisation at that time (in particular under Pope John XXII) proved to be of no avail, and religious wars (such as were fought in Persia) did not affect the Golden Horde. Certain centres resulting from these attempts, however, survived for some time; among these were the Genoese colonies (which began in 1265) (cf. KAFFA) in the Crimea [*q.v.*]. These were also commercially active, as middlemen in the supply of cloth from Flanders, ceramics, and jewellery to the Horde. Fur, fish and grain were the main articles exported in return.

The attempts made by both Djānībeg Khān (1341-57), Özbeg's son, and Berdibeg Khan (1357-59),


protection. The Russian Orthodox Church, to which the Tatars had granted certain privileges, was able to maintain its unity before these minor princes, and thus became the embodiment of Russian thought in general.

The death of Berke did not altogether put an end to Islamic influence, although to begin with all his successors were again Shamanists. The strength of the state was impaired through civil wars against the rising Prince Nokhai, a successful general in Poland (1259, 1286) and the Caucasus (1261, 1263), until Nokhai's death in battle in 1299 (cf. NOGAI). In the beginning of the 8th/14th century, the political position changed, as the dealings between the Īlkhāns (who were by then Muslims) and Egypt grew smoother. In the year 1323 a formal peace-treaty was signed. This reduced the commercial connexions between the Golden Horde and Egypt. The collapse of the Īlkhānid Empire in 1335 brought the Golden Horde, under Özbeg Khān (1313-1341), once more into a position of great importance. A Muslim himself, he definitively strengthened the position of Islam on the Volga, and thenceforth all the Khāns adhered to that religion. The greater part of the Volga-Tatars was now also more and more drawn

his grandson, to conquer Ādharbaydjān in 1356-59 miscarried. It is possible that their aim was to bypass the Dardanelles, which had been in the hands of the Ottoman Turks since 1354, and to gain access to the Mediterranean through Syria. As this could not be achieved, the Golden Horde henceforth became an Eastern European continental power, thus more and more at the mercy of the rising Great Powers of Poland-Lithuania and Russia (Muscovy). This development was accelerated by the internal disintegration caused by the conflict between innumerable pretenders (from 1359), thanks to which a Russian army was able to gain a victory over the Tatar armies (under Mamay) for the first time, on the Field of Snipe (Kulikovo Pole) on the Don in 1380. Thus the Grand-Duchy of Muscovy—which the Golden Horde had finally charged with the collecting of tribute in 1328, and in which the title of Grand Duke had become hereditary—established itself as a new power and as a 'Collector of all Russian Lands'.

Towards the end of the 8th/14th century, Tokhtamīsh [*q.v.*] of the "White Horde" attempted to unite the whole empire once more, but he was opposed by Tīmūr, who defeated him in 1391, and in

1395 forced him to flee, and destroyed Saray. General Edigü (Russian: Yedigey) emerged as the true ruler of the Golden Horde. He had succeeded in holding his own and in checking the Lithuanian expansion through his victory on the Vorskla in 1399. He succeeded in guarding the independence of the state until his death in 1419. After this, the final disintegration started in earnest, and it was speeded by the formation of independent Khānates in Ḳazan [*q.v.*], Astrakhān [*q.v.*] and in the Crimea in 1438 (see GIRAY). The remainder, now generally referred to as the "Great Horde", could only hold its own in the region east of Kiev by treaties with Muscovy and (from 1466) with Poland-Lithuania, and in 1480 it was able once more to threaten Moscow. In 1502, the "Great Horde" was finally beaten; deserted by its allies, outlawed by the Ottoman sultan (who had been Protector of the Crimea—its main enemy—since 1475), it was vanquished by Crimea and Muscovy. The Khānates of Ḳazan, Astrakhān and Siberia also met their doom in the 16th century. The only remaining one was the Crimea, which survived until 1783.

The Golden Horde is the only state which has ever actually subjugated Russia (and from the east at that). The "Tatar yoke", which lasted for 2½ centuries, forms an important period in the history of Russia as well as in that of Poland-Lithuania, and resulted in the settlement of Turkish tribes on the Volga and in western Siberia. Even today, scattered Tatar remnants can still be found there, and the decisive element in their survival was their Islamic faith.

The cultural influence of the Tatars on the Russians can be traced for centuries in certain aspects of the administration, the army, ceremonial, and in the relationship between ruler and subject as well as in vocabulary, and in certain respects it makes itself felt even today. Furthermore, the fight of the Czars against the "Infidel" decisively shaped the political and popular consciousness of the Russians and of the eastern Slavs in general (concerning this cf. also TATARS").

BATUMI (BATUM), port in Soviet Transcaucasia on the Black Sea, capital of the autonomous Soviet Socialist Republic of Adjaristān, built on the site of an old Roman port, Bathys, constructed in the reign of Hadrian and later deserted for the Byzantine fortress of Petra, founded under Justinian on the site of the present Tzikhis-Tziri to the north of Batumi.

A former possession of the Laz kingdom, the region of Batumi (the Adjar district) was occupied briefly by the Arabs who did not hold it; in the 9th century it formed part of the principality of Taoklardjeti, and at the end of the 10th century of the United Kindgom of Georgia which succeeded it. From 1010 it was governed by the *eristav* of the king of Georgia. In the 8th/14th century, after the disintegration of the United Kingdom of Georgia, Batumi passed to the princes (*mtavar*) of Guria.

In the 9th/15th century, in the reign of the *mtavar* Kakhaber Gurieli, the Ottoman Turks occupied the town and district of Batumi, but did not hold them. They returned in force a century later after the decisive defeat which they inflicted on the Georgian and Immeretian armies at Sokhoista. Batumi was recaptured, first by the *mtavar* Rostima Gurieli in 1564, who lost it soon afterwards, and again in 1609 by Mamia Gurieli. From 1627 Batumi was part of the Ottoman Empire.

With the Turkish conquest the islamisation of the Adjar region, hitherto Christian, began. It was completed by the end of the 18th century.

Under the Turks, Batumi, a large fortified town (2,000 inhabitants in 1807 and more than 5,000 in 1877) was already an active port, the principle centre of the Transcaucasian slave-trade.

Ceded to Russia by the treaty of San Stefano and occupied by the Russians on 28 August 1878, the town was declared a free port until 1886. The Adjar region at first constituted a self-governing administrative unit; on 12 June 1883 it was annexed to the government of Kutais. Finally on 1 June 1903, with the *Okrug* of Artvin, it was established as the region (*oblast'*) of Batumi placed under the direct control of the General Government of Georgia.

The expansion of Batumi began in 1883 with the construction of the Batumi-Tiflis-Baku railway completed in 1900 by the finishing of the Baku-Batumi pipe-line. Henceforth Batumi became the chief Russian oil port in the Black Sea. The town expanded to an extraordinary extent and the population increased very rapidly: 8,671 inhabitants in 1882, 12,000 in 1889, 45,382 in 1926.

The population of the town is cosmopolitan; the Muslims (Adjars, Laz and Turks) are only a minority in comparison with the Russians, Greeks, Armenians and Georgians, but the region remains purely Muslim. In 1911 the *oblast'* totalled 170,377 people, of whom 70,918 were Adjars and 58,912 other Muslims (Laz, Turks, Kurds, etc).

In April 1918, Batumi was occupied by the Turks; they were succeeded in the following spring by the British, who evacuated it in June 1919. After the fall of the Georgian Republic, the treaty of 16th March 1921, between the R.S.F.S.R. and Turkey, gave the regions of Kars and Ardagan back to Turkey, but left Batumi to the Russians. The Soviet régime was proclaimed on 18 March 1921 and, on 16th June in the same year, the region was established as the Soviet Socialist Republic of Adjaristān, with its capital at Batumi, dependent on the RSS of Georgia.

The Adjars constitute the largest community, and in 1926 they were still considered as a separate nationality from the Georgians and were registered in a separate census. They numbered at that time 71,390 people, all Muslims (Ḥanafī Sunnīs), speaking the Gurian dialect, which has a vocabulary strongly influenced by Turkish and Arabic. Their material culture (the *čadra* worn by the women, for example) was close to that of the Turks and bilingualism (the Gurian dialect and Turkish) was still a wide-spread phenomenon.

At the time of the census of 1939, the Adjars, considered from then on as a simple, ethnical group of the Georgian nation, were registered as Georgians.

Batumi is at the present time a large oil port, the outlet for the Baku pipe-line (refineries) and quite an important industrial centre with factories producing preserved foods and machine tools. As the beginning of 1956 its population reached 77,000, of whom only a minority were Muslims.

The autonomous Adjar Republic (area 3,017 sq. km.) comprised 238,000 inhabitants in 1956, of whom the majority were Muslims; Adjars and Laz in the valley of Čorukh (about 2,000), Kurds (3,000 nomads in 1926 in the high valley of Adjaris-Tzkali) and a colony of Abkhaz (5,000 in 1926) near Batumi.

AL-BĀʿŪNĪ. This *nisba* relates either to the village of Bāʿūn (or Bāʿūna) in Ḥawrān or to the village of the same name near Mosul. It is usually associated with a particular family descended from one Nāṣir b. Khalīfa b. Faradj al-Nāṣirī al-Bāʿūnī al-Shāfiʿī who started life as a weaver in the former village and left it about 750/1349 to settle in Nazareth (Sakhāwī, *al-Ḍawʾ al-Lāmiʿ* etc., Cairo 1353/1934, ii, 232). The following table represents Nāṣir's descendants.
(1) Little is known about him except that he became a Ṣūfī, and deputy *ḳāḍī* at Nazareth, engaged in commerce and attained prominence (*loc. cit.* 308).

(2) Born in Nazareth *c.* 751/1350; he became *khaṭīb* of the Umayyad mosque and *ḳāḍī* of Damascus, *khaṭīb* of the Aḳṣā mosque in Jerusalem and (for two months) *ḳāḍī* of Egypt. He wrote on *tafsīr*, composed a poem on dogma called *al-ʿaḳīda*, and was an impressive preacher, though he had little *fiḳh*. For his *takhmīs* of a poem by Ibn Zurayḳ (c. 420/1029) cf. Brockelmann I 82, S I 133. As *ḳāḍī* he showed administrative competence and integrity, refusing sultan Barḳūḳ a loan out of *awḳāf* funds, an action which caused his momentary humiliation and imprisonment. He died in Damascus in 816/1413 (Ibn al-ʿImād, *Shadharāt*, vii, 118; *Ḍawʾ*, ii, 231; Ibn Taghrībirdī, vi, 267, 306, 314, 439).

(3) Born in Safed in 777/1375, he studied in Damascus and Cairo. He deputised for his father as *ḳāḍī* of Damascus where he became *khaṭīb* at the Umayyad mosque. He also became *khaṭīb* at the Aḳṣā mosque and *nāẓir al-ḥaramayn* in Jerusalem at which atter post he showed considerable ability. His literary virtuosity is displayed in a treatise in which he employed only words without diacritical points and in a *taḍmīn* of Ibn Mālik's *Alfiyya*. His reputation was great, earning him the title of *shaykh al-adab fi 'l-diyār al-shāmiyya*, and one of his innumerable pupils was the biographer Sakhāwī. He died in Damascus in 870/1464-5 (*Shadharāt*, vii, 309; *Ḍawʾ*, i, 26; Suyūṭī, *Naẓm al-ʿIḳyān fī Aʿyān al-Aʿyān*, ed. Hitti, New York 1927, 13; Ibn Taghrībirdī, vii, 808).

(4) Born in Damascus in 780/1378, he became *khaṭīb* at the Umayyad mosque and was appointed *nāẓir* [perhaps of the *awḳāf* of] *al-asrā wa 'l-aswār*. His works (for which cf. Brockelmann II 41, S II 38) include a verse summary of Islamic history down to the reign of Barsbāy (*Muḳtaraf*, 1908). His later years he spent in prayer and contemplation. He died in Damascus in 871/1466 (*Shadharāt*, vii, 310; *Ḍawʾ*, vii, 114; ʿUlaymī *al-Uns al-Djalīl*, etc., Cairo 1283/1866, ii, 482).

(5) Born in Jerusalem in 805/1402, he studied in Damascus, Hebron, Ramla and Cairo and became *ḳāḍī* in Safed, Tripoli, Aleppo and Damascus. In Damascus he reorganised the administration of the *māristān* of Nūr al-Dīn, expanded its *awḳāf* and added new sections to the building which were called after him (*Ḍawʾ*, x, 298). His literary output (which included the versification of Nawawī's *Minhādj*) was small although he had great facility in both verse and prose. He led a life of asceticism and piety and died in Damascus in 880/1475 (*Shadharāt*, vii, 330; *Naẓm al-ʿIḳyān*, 178; Ibn Taghrībirdī, vii, 223, 856, 808).

(6) Born in Damascus, she grew up as a precocious child, learning the Ḳurʾān by rote at the age of eight. In her the literary talents and Ṣūfī tendencies of her family reached full fruition. She likewise inherited an independence of mind and outlook which is seen in her companionship with her men contemporaries on equal terms. In Cairo she was granted certificates authorising her to lecture and give *fatwās*. A great friend of hers was Abu 'l-Thanāʾ Maḥmūd b. Ādjā, the last *ṣāḥib dawāwīn al-inshāʾ* under the Mamlūks (whom she praised in a *rāʾiyya* quoted by Ghazzī in *al-Kawākib al-Sāʾira* etc. ed. Djabbur, Beirut 1945, i, 304). She carried on a correspondence in verse with the Egyptian scholar ʿAbd al-Raḥīm al-ʿAbbāsī (For selections of which cf. *op. cit.*, i, 288) and met Sultan Ghūrī in Aleppo in 922/1516.

Perhaps her most famous work is her *badīʿiyya* in praise of the Prophet entitled *al-Fatḥ al-Mubīn fī Madḥ al-Amīn* (Brockelmann, II 349 no. 1), to which she wrote a commentary, thus following the practice first set by Ṣafī al-Dīn al-Ḥillī [*q.v.*] though she was probably more immediately under Ibn Ḥidjdja's influence. ʿAbd al-Ghanī al Nābulusī [*q.v.*] read and admired (though not uncritically) an autograph copy of her *al-Fatḥ al-Mubīn* and was no doubt inspired by it to write his own *badīʿiyya*, *Nasamāt al-Azhār* etc. in his commentary on which (*Nafaḥāt al-Asḥār* etc., Cairo 1299/1881) he makes a continuous comparison with the corresponding lines in *al-Fatḥ al-Mubīn*. Both *al-Fatḥ al-Mubīn* and ʿĀʾisha's commentary on it are published in the margin of Ibn Hidjdja's *Khizānat al-Adab*, Cairo 1304/1915, 310-467. Her original works also include *Kitāb al-Malāmiḥ al-Sharīfa wa 'l-Āthār al-Munīfa*, and *al-Fatḥ al-Ḥanafī*, both on Ṣūfī themes (*Kawākib*, i, 288). Her *Mawlid al-Nabī* (Brockelmann S II 381, no. 14) is partly prose and partly verse and was published in Cairo in 1301/1883

and 1310/1892 (Sarkīs, *Muʿdjam* 1928, 519).

She also versified Suyūṭī's *al-Muʿdjizāt wa 'l-Khaṣāʾiṣ al-Nabawiyya* (Brockelmann S II 181₂₅₀); and in an *urdjūza*, entitled *al-Ishārāt al-Khafiyya fi 'l-Manāzil al-ʿAliyya* (Ḥādjdji Khalīfa, i, 96) abridged Harawī's Ṣūfī manual *Manāzil al-Sāʾirīn*. In another *urdjūza* she abridged Sakhāwī's *al-Ḳawl al-Badīʿ fi 'l-Ṣalāt ʿalā al-Ḥabīb* (Ḥādjdjī Khalīfa, ii, 1362). She was married and had at least one son. She died in Damascus in 922/1516 (*Shadharāt* viii, 111; Ziriklī *al-Aʿlām*, Cairo 1927, ii, 458).

(7) and (8) were not particularly prominent though both produced some poetry, the latter mostly in the form of verse summaries of the reigns of Mamlūk sultans. The former died in 910/1505 the latter in 916/1510 (*Shadharāt*, viii, 48; *Kawākib*, i, 73, 147; and cf. Brockelmann II 66, S II 53 for Muḥammad's work).

After (8) Nāṣir's line seems to pass out of history for there is no reference to it in Muḥibbī's *Khulāṣa*.

(W. A. S. KHALIDI)

BĀWAND, (Persian Bāwend), an Iranian dynasty which ruled in Ṭabaristān for over 700 years (45-750/665-1349). The centre of the dynasty was the mountainous area, although they frequently ruled the lowlands south of the Caspian Sea. The name is traced back to an ancestor Bāw who was either 1) named Ispahbad of Ṭabaristān by Khusraw Parwīz (Rabino, 411), or 2) a prominent Magian of Rayy (Marquart, *Ērānšahr*, 128, where an etymology of the name is also given). The several rulers of the Bāwand dynasty were called *iṣpahbad* or *malik al-djibāl*, and they were usually independent, though sometimes tributary to caliphs or sultans.

The dynasty can be divided into three branches: 1) the Kayūsiyya, which ruled 45-397/665-1006, when the *iṣpahbad* Shahriyār revolted against Ḳābūs b. Washmgīr, was captured and later put to death; 2) the Ispahbadiyya, who ruled 466-606/1073-1210, when Muḥammad Khwārazmshāh invaded Ṭabaristān; 3) the Kīnakhwāriyya (635-750/1237-1349), when the last ruler Fakhr al-Dawla Ḥasan was assassinated.

The first branch took its name from Kayūs b. Ḳubād the Sāsānid, possibly the grandfather of Bāw. The early history of the family is uncertain. The ninth ruler Ḳārin b. Shahriyār accepted Islam in 240/854 and was called Abu 'l-Mulūk. The family lost its power after 397/1006 but several princes continued to rule in localities in the mountains. One of them, Muḥammad b. Wandarīn, had a mausoleum erected in 1021, known as the Mīl-i Rādkān (cf. E. Diez, *Churasanische Baudenkmäler*, Berlin 1918).

The second branch had their capital in Sārī, ruling over Gīlān, Rayy and Ḳūmis as well as Ṭabaristān, and were vassals of the Saldjūḳs, then of the Khwārazmshāhs. Towards the end of their rule the Ismāʿīlīs spread in Ṭabaristān and obtained power at the expense of the Bāwand dynasty. Finally the Khwārazmshāh assumed the rule when Shams al-Mulūk Rustam Bāwand was assassinated.

After the Mongol invasion there was anarchy in Ṭabaristān, and finally a member of the Bāwand family, Ḥusām al-Dawla Ardashīr b. Kīnakhwār was chosen ruler by the people. He moved his capital from Sārī to Āmul for safety's sake. Under his rule (12 or 15 years) the Mongols invaded Ṭabaristān. His son, Shams al-Mulūk, was put to death in 663/1264 by Abaḳā Khān after ruling 18 years. This dynasty ruled as vassals of the Mongols but they suffered nonetheless from Mongol invasions and depredations.

In 750/1349 Fakhr al-Dawla Ḥasan, last of the Bāwand family, was assassinated by members of the prominent family of Kiyā.

Bibliography: Sources include Ibn Isfandiyār, *Taʾrīkh-i Ṭabaristān*, ed. ʿAbbās Iḳbāl (Tehran 1942), abridged Engl. transl. by E. G. Browne in GMS, Dorn, *Quellen*, i, and the general Islamic histories *Djāmiʿ al-Duwwal* by Munadjdjimbāshī (cf. E. Sachau, *Ein Verzeichnis Muhammedanischer Dynastien*, in *Abh. Pr. Ak. W.*, 1923). The chronology of the dynasty has been studied by M. Rabino, *Les dynasties du Māzandarān*, in *JA* 1936, ii, 409-437, where other sources are given. G. Melgunoff, *Das südliche Ufer des Kaspischen Meeres*, Leipzig 1868. (R. N. FRYE)

BĀWARD [see ABĪWARD].

BAWĀZĪDJ, of Bawāzīdj al-Malik, in ʿAbbāsid times a town in the province of Mosul on the right bank of the Lesser Zāb, not far from its mouth.

The name is the Syriac Bēth Wāzīḳ, "the house of the toll-collector". As the Sāsānid name, there appears occasionally Khunyā-Sābur "Shāpūr's song", after the usual style of the poetical names of towns common in the Sāsānid period. In the older geographers and historians the place is only briefly mentioned along with Takrīt, Ṭīrhān and Sinn. Some one with an accurate knowledge of the town has, however interpolated a detailed description in the text of Ibn Ḥawḳal (ed. De Goeje, 169, note 9). The place was notorious in the middle ages as the abode of the Khāridjites—the inhabitants say they are descended from the troops of ʿAlī b. Abī Ṭālib—and as a nest of robbers. The town lived by receiving goods stolen by the Banū Shaybān Bedouins from caravans. Yāḳūt however also mentions some scholars who were born in Bawāzīdj. A portion of its inhabitants must have been Christian; the miracle-working bones of a Syrian martyr Bābōye were there. There was occasionally a Jacobite bishop of Bēth Remmān (*i.e.*, the village of Bārimmā) and Bēth Wāziḳ, or a Nestorian of Shennā (*i.e.*, Sinn) and Bēth Wāzīḳ.

The ruins of the town have not yet been discovered.

Herzfeld, *Archaeologische Reise im Euphrat und Tigris-Gebiet* (1910-11), chap. iii; Le Strange, 91 and 98. (E. HERZFELD)

BAY (BEY), name applied to the ruler of Tunisia until 26 July 1957, when the Bey Lamine (al-Amīn), 19th ruler of the Ḥusaynid dynasty, was deposed and a Republic proclaimed in Tunisia.

To discover the origin of this title, we must go back to the end of the 16th century. It was at that time that the Bey ʿUthmān created the Office of Bey (in Turkish: *beg*), without consulting the Porte, whose vassal he was. He entrusted the holder of the office with command of the tribes, the maintenance of public order and the collection of taxes. Equipped with these extensive powers, the Bey soon became the most important man in the country. This was the title which the Agha of the soldiery, Ḥusayn b. ʿAlī, founder of the Ḥusaynid dynasty, subsequently assumed upon receiving the investiture at Tunis on 10 July 1705.

It was only later that the order of succession to the throne was regulated by a Charter included in the

Tunisian Constitution of 26 April 1861, article I of which decreed: "Succession to the throne is hereditary among the princes of the Ḥusaynid family, by order of age, according to the rules in use in the Kingdom". This was in fact the codification of a traditional rule which, with two exceptions, was adhered to in regard to accession to the throne of Tunisia from the founding of the dynasty.

The enthronement of the sovereign was accompanied by a dual ceremony, the first private, in which the great men of the Kingdom and intimates participated, the second public, open to the broad mass of subjects. This recalled the old dual ceremony of doing homage (*al-bayʿa al-k͟hāṣṣa* and *al-bayʿa al-ʿāmma*). As a result of the establishment of the Protectorate, the representative of France in Tunisia became associated with the ceremony of the enthronement of the Bey, bestowing on the new Bey the "solemn investiture" in the name of the protecting Power.

Articles 3 and 4 of the Decree of 26 April 1861 stated: "The Bey is the head of the State. At the same time, he is the head of the ruling family. He has full authority over the princes and princesses of his family, none of whom may dispose either of their persons or of their property without his prior consent. He exercises a paternal authority over them and is obliged to give them the benefits of such. Members of the family owe him filial obedience."

The titles borne by the Bey contained a number of expressions expressly designating his sovereign function. In official documents his appellation was: *Sayyidunā wa-mawlānā ..., Bas͟ha Bay, ṣāḥib al-mamlaka al-tūnusiyya* (= Our Lord and Master ..., Pas͟ha Bey, possessor of the Kingdom of Tunis". This old style, in part dating back to the Ḥafṣids and partly to the middle of the 18th century, was augmented by a new element, namely *Mus͟hīr* (Marshal), bestowed by the Porte about the year 1839, which however was only borne by three Beys. Unlike the Ḥafṣid styles, however, no titles (*alḳāb*) of a personal character occur.

Among the special insignia of sovereignty, mention must be made, in addition to the dynastic throne, of the ceremonial costume worn by the Bey on solemn occasions. These material attributes were enhanced by the kissing of hands encumbent on Tunisian subjects, and other marks of royalty. The Bey had a civil list, a guard of honour (the Bey's Guard), a standard, bestowed decorations (*Nis͟hān al-dam, ʿAhd al-amān, Nis͟hān al-iftik͟hār*) and honorary military ranks. Finally, each Thursday there took place the Ceremony of the Seal, at which the Bey applied his seal to governmental decisions in the form of a decree, thus giving them executive force.

The heir apparent bore the title of Bey of the Camp (*bay al-amḥāl*). This title originated in the duty incumbent on the heir apparent to proceed twice a year at the head of a military expedition to the south and north of the country both to assert the authority of the central government and to overawe tribes who might refuse to pay their taxes. The Bey of the Camp was head of the army by virtue of this institution, but it disappeared with the advent of the Protectorate. (CH. SAMARAN)

BAYʿ (A). Two roots are used in Arabic to designate the contract of sale: *b-y-ʿ* and *s͟h-r-y*; in the first verbal form both usually mean "to sell", but also "to buy", in the eighth form exclusively "to buy"; the function of expressing both sides of a mutual relationship is shared by these two roots with a number of other old legal terms. *Bayʿ* originally means the clasping of hands on concluding an agreement, *s͟h-r-y* perhaps the busy activity of the market. In the technical usage of Islamic law, the normal term for selling is *bāʿa*, for the contract of sale, the infinitive *bayʿ*, and for buying, *ibtāʿa*, or *is͟htarā*. The frequent use of *s͟harā* for a profitable and of *is͟htarā* for an unprofitable transaction (in the metaphorical sense) in the Ḳurʾān is parallel to that of *kasaba* "to be credited" and *iktasaba* "to be debited" (cf. Schacht, in *Studia Islamica*, i, 30 f.).

Commercial law in pre-Islamic Mecca had undoubtedly reached a certain level of development; the trade on which alone the existence of the town depended, occupied such a predominant place there that the Ḳurʾān not only referred to it often but used a number of technical terms of commerce to express religious ideas. (On the other hand, the importance of the Meccan trade in absolute terms ought not to be overestimated; cf. G.-H. Bousquet, in *Hesp.*, 1954, 233 f., 238 ff.). To this body of ancient Arab commercial law can be traced the *ribā* contracts which the Ḳurʾān was to prohibit, certain dealings involving credit and speculation, and possibly the *k͟hiyār al-mad͟jlis*, a special right of option, which seems to go back to a local Meccan custom (cf. Schacht, *Origins*, 159 ff.); to all appearance the legal construction of the contract as being constituted by offer (*id͟jāb*) and acceptance (*ḳabūl*), as well as part of the terminology of Islamic law and, perhaps, some of its legal maxims, belong to this pre-Islamic stratum; the term *id͟jāb* itself seems to reflect another, unilateral, construction of the contract (cf. Schacht, in *OLZ*, 1927, 664 ff.). The Ḳurʾān directly envisages commercial law in the general exhortations to give full weight and measure and to carry out agreements, in the specific demand that forward deals should be put in writing (Sūra ii, 282 f.; in the system of Islamic law this injunction has been deprived of its binding character), and above all in the two prohibitions of interest (*ribā*) and of games of chance (*maysir*), which include aleatory transactions (Sūra ii, 219, 275 f.; v, 90 f.); in contrast with the attitude of the contemporaries, *bayʿ*, i.e. legitimate trade, is sharply opposed to *ribā*. The implications of these prohibitions have been worked out to their last details in Islamic law. Tradition contains a certain number of teachings regarding commerce in general and the duties of the good and the punishment of the wicked merchant (see TID͟JĀRA); it also elaborates the teachings of the Ḳurʾān. As legal principles which now appear for the first time may be mentioned: the recognition of the right of withdrawal (*k͟hiyār*), unconditional during the negotiation, and under certain conditions either agreed or fixed by law after the agreement has been made; the legal maxim *al-k͟harād͟j bi ʾl-ḍamān* ("profit goes where the responsibility lies"); the rule that the produce in existence at the moment of sale belongs to the vendor, unless the contrary is stipulated; the prohibition of a sale the object of which cannot be exactly defined (in the case of a sale of ripe fruits on a tree etc., the main group of traditions is satisfied with an estimate); the prohibition of a re-sale of foodstuffs or of marchandise in general before possession has been taken (a consequence of the prohibition of *ribā*), or in general of the sale of things which are not already the property of the vendor; the exclusion of certain things from commerce, ritually impure or forbidden as well as things which, like surplus water, are common property; finally,

the special treatment, diverging from the general rule, of the case in which the vendor of a milking animal, in order to suggest a greater yield, does not milk it before the sale. The question whether nascent Islamic commercial law was influenced by the law and economic life of the peoples incorporated in the Muslim empire, has been much discussed in the past but can now be definitely answered in the affirmative (cf. Schacht, in *XII Convegno "Volta"*, Rome 1957, 197 ff., and the literature mentioned there).

The contract of sale forms the core of the Islamic law of obligations. Its categories have been developed in most detail with regard to the contract of sale, and other commutative or synallagmatic contracts, such as *idjāra* and *kirāʾ* (*locatio conductio operarum* and *l.c. rei*), and even marriage, although regarded as legal institutions in their own right and not reduced to contracts of sale, are construed on the model of *bayᶜ* and sometimes even defined as kinds of *bayᶜ*. In its narrower meaning, *bayᶜ* is defined as an exchange of goods or properties and it therefore includes, beside sale proper, barter (*muḳāyaḍa*) and exchange (*ṣarf*). The following is a short account of the main provisions of Islamic law, according to Ḥanafī doctrine, concerning *bayᶜ*.

The object of the sale must belong to the goods or properties (*māl*) which Islamic law recognizes as such; these include servitudes on real estate but exclude: 1. things which are completely excluded from legal traffic, e.g. animals not ritually slaughtered (*maita*), blood; 2. things in which there is no ownership, e.g. pious endowments (*waḳf*) [*q.v.*], or which are public property, or constituent parts etc., in which there is no separate private ownership; 3. those slaves in whom there is only a restricted ownership, particularly the *umm al-walad* [*q.v.*]; 4. things on the disposal of which there are restrictions, e.g. things which are ritually impure, such as wine and the pig, and other things without market value (*māl ghayr mutaḳawwim*) which are not rigorously defined; 5. things which are not in actual possession, such as things lost or usurped and runaway slaves: here the power to dispose of the property is refused, to exclude the risk. A sale concluded with regard to an object of this kind is not valid (*ghair ṣaḥīḥ* or *ghair djāʾiz*); such a sale, according to the Ḥanafīs, however, is not necessarily void (*bāṭil*, as it is in the cases 1, 2, 3), but in certain circumstances only voidable (*fāsid* [*q.v.*]; in the other schools this term is used as a synonym of *bāṭil*); even if the two parties have taken possession, a *fāsid* sale confers only a "bad ownership" (*milk khabīth*) and is liable to cancellation (*faskh*) until the object is re-sold. A stipulation in favour of or against one of the parties is invalid and makes the contract *fāsid*. Conditional or deferred agreements are not admitted in this contract. Legally qualified to conclude a sale is a free person who is of age (*bāligh*) and of sound mind (*ᶜāḳil*), also the minor with the permission of his guardian and the slave with the permission of his master; the master can authorize his slave either to conclude an individual sale, or generally to engage in trade (this slave is called *maʾdhūn*). Representation (*wakāla*) is possible; in this case the agent is regarded as a main contracting party with corresponding rights and obligations, but the rights of ownership accrue to the principal directly. In common with the other contracts, the sale is concluded by offer (*īdjāb*) and acceptance (*ḳabūl*), which must correspond to each other exactly and must take place in the same meeting (*madjlis*); the term *ṣafḳa* ("clasping of hands") for the conclusion of the bargain dates from the pre-Islamic period, but Islamic law completely disregards the symbolic action which it expresses. Ownership (*milk*) is transferred through the conclusion of the sale, but completed only through the transfer of possession (*taslīm* "handing over", *ḳabḍ* "taking possession") which, however, is dispensed with in the case of real estate; on the other hand, the existence of an option or right of withdrawal (*khiyār*, [*q.v.*]) prevents the transfer of ownership even though possession has been taken. In the case of eviction (*istiḥḳāḳ*), the vendor is responsible for a defect in ownership with the amount of the price paid; this is the so-called responsibility for *darak* or *tabiᶜa*. On the prohibition of *ribā*, see the art. The prohibition of risk (*gharar*) implies that the obligations of the parties must be determined (*maᶜlūm*), in particular the object of the sale, the price and the term or terms. The first requirement is particularly strict in the case of goods covered by the prohibition of *ribā*, so that here no indefinite quantity (*djuzāf*) is permitted even if a price per unit is mentioned. A third prohibition which has far-reaching consequences, too, is that of selling or exchanging a debt (*dayn*) for another debt. In the field of sale proper, one distinguishes the thing sold from the price (*thaman*) or the value (*ḳīma*). As the price consists of fungible things (normally gold or silver), whereas the thing sold is, generally, a non-fungible object, the rules applicable to both are not quite indentical; the vendor, for instance, is permitted to dispose of the (fungible) price even before he has taken possession. Actually a special kind of purchase, although in the opinion of the Muslim lawyers a contract in its own right, is the *salaf* [*q.v.*] or *salam*, the ordering of goods to be delivered later for a price paid immediately; the term *raʾs māl* ("capital") which is used for the price here, shows the economic meaning of the transaction: the financing of the business of a small trader or artisan by his clients. Because of its closeness to the subject of the prohibition of *ribā*, *salam* is carefully treated, and is subject to numerous special rules. Its counterpart, delayed payment for goods delivered immediately, is also possible, but this kind of sale plays a minor part in Islamic law. The name "sale on credit" (*bayᶜ al-ᶜīna*) is given *a potiori* to an evasion of the prohibition of *ribā* which is based on this transaction. Barter of merchandise (*muḳāyaḍa*) is hardly distinguished from sale in general; but money-changing and, in general, dealing in precious metals receive detailed treatment on account of the prohibition of *ribā*; these transactions are regarded as sales of "price" for "price" (cf. ṢARF).

The actual practice of commerce in the Muslim middle ages was controlled not by these theoretical rules of Islamic law but by a customary commercial law which had been called into being by the normal needs of commercial life in the great cities of Islam, and was then elaborated by the legal advisers of the merchants, who were competent specialists in Islamic law. This customary law did not put itself into direct opposition to the sacred law of Islam, on the contrary, it maintained its main features, such as the prohibition of *ribā*, which it never dared openly to challenge but only managed to evade, just as it evaded, too, most of its rigid, restrictive rules, and it is characterized by a greater flexibility, accompanied by effective safeguards of fair dealing, which were made necessary by the lack of any official sanction. A unique source for the knowledge of this customary commercial law in ᶜIrāḳ about

400/1000 is the younger edition of the *Kitāb al-Ḥiyal wal-Makhāridj* spuriously attributed to al-Khaṣṣāf (ed. Schacht, Hanover 1923; cf. also the same, in *Isl.*, 1926, 218 f.; ibid., 1935, 218 ff.; *R.Afr.*, 1952, 322 ff.). Similar, independent developments have occurred later in the Maghrib (cf. O. Pesle, *Le contrat de safqa au Maroc*, Rabat 1932; J. Berque, *Essai sur la méthode juridique maghrébine*, Rabat 1944, and numerous papers). This customary commercial law of Islam has, in its turn, influenced the *law merchant* of Europe in the early middle ages (cf. *XII Convegno "Volta"*, 215).

(J. Schacht)

BAYʿA, an Arabic term denoting, in a very broad sense, the act by which a certain number of persons, acting individually or collectively, recognise the authority of another person. Thus the *bayʿa* of a Caliph is the act by which one person is proclaimed and recognised as head of the Muslim State. A synonymous expression is that of *mubāyaʿa* (cf. the verb *bāyaʿa*: to make the *bayʿa*).

I. Etymology. According to a view which has become traditional the term *bayʿa* is derived from the verb *bāʿa* (to sell), the *bayʿa* embodying, like sale, an exchange of undertakings. This explanation seems most artificial. In the view of the author the *bayʿa* owes its name to the physical gesture itself which, in ancient Arab custom, symbolised the conclusion of an agreement between two persons and which consisted of a hand-clasp (cf. the *manumissio* of the ancient law of certain Western countries). Again, in a non-technical sense, "to make a *bayʿa* in regard to some matter" (*tabāyaʿa ʿala 'l-amr*) means "to reach agreement on this matter" (cf. *ṣafḳa*, lit.: *manumissio*, = agreement, contract). The physical gesture was termed *bayʿa* because, precisely, it consisted of a movement of the hand and arms (*bāʿ*). And since the election of a chief (and the undertaking to submit to his authority) was demonstrated by a hand-clasp, it was naturally described by the very term which denoted this gesture.

The *bayʿa* has two principal aims which differ both in their scope and nature. The first is essentially that of adherence to a doctrine and recognition of the pre-established authority of the person who teaches it. It is in this sense that the *bayʿa* was practised in the relations between Muḥammad and his newly acquired supporters (cf. Ḳurʾān, xlviii, 10, 18; lx, 13). In the same sense, but with a more restricted purpose, the *bayʿa* served simply to recognise the pre-established authority of a person and to promise him obedience. Such was the case with the *bayʿa* effected in favour of a new Caliph whose title to succeed had been established by the testamentary designation (*ʿahd*) of his predecessor.

In its second sense the principal aim of the *bayʿa* is the election of a person to a post of command and, in particular, the election of a Caliph, when a promise of obedience is implied. It was thus that the first Caliph, Abū Bakr, was designated by the *bayʿa* of the so-called assembly of the *Saḳīfa* (13 Rabīʿ I 11/8 June 632); and the same invariably applied on all subsequent occasions that the seat of the Caliphate fell vacant and no successor designated by other means existed. Sunnī doctrine, indeed, specifies the *bayʿa* as one of the two procedures for designating the Caliph. In Shīʿī doctrine the *bayʿa* has never been able to play this rôle, for the Shīʿa recognise only one method of designating the Imám—namely appointment by testament (*naṣṣ, waṣiyya*) of one in the legitimate line of descent. However the Zaydī branch of the Shīʿa hold that the Imāmate is acquired by election from within the ʿAlid family. Here, then, the *bayʿa* was practised in the sense of an act of election.

II. Legal nature. The legal doctrine analyses the *bayʿa* as a contractual agreement: on the one side there is the will of the electors, expressed in the designation of the candidate, which constitutes the offer, and on the other side the will of the elected person which constitutes the acceptance. This analysis may be admitted provided that it is not carried so far as to confuse the act of *bayʿa* with the legal category of ordinary contracts. For the *bayʿa* is a voluntary act *sui generis* which involves the general public. And again it must be stressed that the doctrinal analysis, even when so regarded, is only fully valid in regard to the *bayʿa* of election and not in regard to the *bayʿa* of simple homage. For in the latter case adherence becomes obligatory and no room is left for any freedom of decision.

What, particularly as regards the *bayʿa* election, is the number of electors (*ahl al-ikhtiyār*) required for the validity of the procedure? On this point opinions are numerous and widely varied and range from one extreme to the other—from a view which requires that the *bayʿa* should emanate from all "the upright men of the whole empire" to the opinion which is satisfied with the vote of a single individual. In fact, however, the body of electors was made up of the high dignitaries and notables of the State.

The *bayʿa* is an act perfected solely by agreement. Neither the physical gesture of *manumissio* nor the confirmation of the *bayʿa* by an oath is required as a condition of validity or even simple proof. No sacramental form is imposed for the manifestation of will; it suffices that this should be clearly and definitely expressed.

The form of the *bayʿa* remains the same in both its rôles—that of election and that of simple offer of homage.

The formalities of a single process of *bayʿa* may be split up into two or several sessions. Thus, as far as the Caliphs are concerned, the first step is generally what is termed the *bayʿat al-khāṣṣa* (private *bayʿa*) in which a very limited number of persons, the chief dignitaries of State and Court, participate. This is then followed by the *bayʿat al-ʿāmma* (public *bayʿa*). Further, formal sessions for the offer of *bayʿa* are held in the centres of the different provinces.

An innovation, which was introduced into the procedure from the Umayyad period, is the renewal

of the *bayʿa* (*tadjdīd al-bayʿa*) whereby the Caliph or Sulṭān has recourse, during his reign, to a new *bayʿa* in favour of himself or his heir apparent; and this may be repeated twice or more. The ruler resorts to this to establish the loyalty of his subjects.

III. Effects of the *bayʿa*. A question peculiar to the *bayʿa*—election is that of knowing whether it has the effect of investing the ruler with authority or whether it is simply confirmatory. It is in favour of the latter notion that the doctrine has generally become established, the ruler being held to receive his investiture from God.

Those who perform the *bayʿa* and, along with them, the rest of the community become firmly and definitely bound. This binding effect is reinforced by the religious character which the *bayʿa* acquired from early ʿAbbāsid times. As a result of the development of the theocratic nature of power the obligations undertaken towards the ruler are considered as being, in reality, obligations undertaken towards Allāh. Furthermore the sole earthly sanction for the violation of the *bayʿa* is one of extreme severity; in principle, it is death. The binding effect of the *bayʿa* is personal and life-long; the idea of a *bayʿa* made for a limited period is, indeed, unknown.

This effect, however, is limited by the law. For the *bayʿa* is made on condition that its recipient remains faithful to the divine prescriptions, which means that if the ruler does not abide by these prescriptions those who have performed the *bayʿa* in his favour are thereby released from their obligations.

(E. Tyan)

BAYĀN, an Arabic word meaning lucidity, distinctness; the means by which clearness is achieved, explanation; hence, clarity of speech or expression, and the faculty by which clarity is attained. In technical language *bayān* develops from a (near-) synonym of *balāgha*, eloquence, to the designation of a particular aspect of it which, within the *ʿilm al-balāgha* is dealt with by the *ʿilm al-bayān*. Common usage, however, continues to emply *bayān* in a wider variety of meanings (cf. also colourless phrases like *bāb bayān* or *dar bayān-i*, where nothing more than *fī* or *dar* is intended). Occasionally, *tibyān* takes the place of *bayān* without suggesting a different shade of meaning; *e.g.*, Khaṭṭābī (d. 996 or 998), *K. Bayān Iʿdjāz al-Ḳurʾān*, MS. Leiden 1654 (Cod. Warner 655), 5ᵇ-6ᵃ: the rank of the various kinds of speech differs with regard to their *tibyān*; ibid., 8ᵇ: people believe of certain near-synonyms that they are equal in conveying the *bayān* of what the presentation intends to convey.

What seem to be the earliest types of statements on the nature of *bayān* are descriptive aphorisms rather than definitions. "Reason is the guide of the soul, knowledge, the guide of reason, and *bayān*, the interpreter of knowledge". (Sahl b. Hārūn, the famous *Shuʿūbī* d. 215/830-31, *apud* Ibn ʿAbd Rabbihi, *al-ʿIḳd al-farīd*, Cairo 1353/1935, i, 221; also Abū Hilāl al-ʿAskarī, *Dīwān al-Maʿānī*, Cairo 1352, i, 141; similar al-Ḥuṣrī al-Ḳayrawānī, *Zahr al-Ādāb* (on margin of *al-ʿIḳd al-Farīd*, Cairo 1321, i, 134). Ibn al-Muʿtazz (d. 908), *Ādāb*, ed. I. J. Kratchkovsky, *MO*, 1924, 111, begins a longish passage of hymnic praise of *bayān* by describing it as "the interpreter of the heart (quoted *Zahr al-ādāb*, i, 114), the polisher (*ṣayḳal*) of the mind, the dispeller of doubt". Another saying of this kind is preserved in *al-ʿIḳd al-Farīd*, i, 221: "The soul is the pillar (*ʿimād*) of the body, knowledge, the pillar of the soul, and *bayān*, the pillar of knowledge" (repeated, *e.g.*, by Ibn Rashīḳ, *ʿUmda*, Cairo 1353/1934, i, 213).

On occasion, *bayān* is primarily connected with *faṣāḥa*, purity and euphony of language; thus, *e.g.*, by al-Djāḥiẓ (d. 869), *K. al-Bayān wa 'l-Tabyīn*, ed. Ḥ. al-Sandūbī, 2nd ed., Cairo 1366/1947, i, 32ᶠ, where *ḥusn al-balāgha* means 'good enunciation, "ortholexy"'; Abū Hilāl al-ʿAskarī, *K. al-Ṣināʿatayn*, Constantinople 1320, 7ᶠ, where *faṣāḥa* is referred to as the perfect instrument, *āla*, of *bayān*; Ibn al-Athīr, *al-Mathal al-Sāʾir*, Cairo 1312, 65: "*faṣāḥa* is making evident, expounding clearly, *bayān*, not obscurity and concealment". In general, however, the concept is linked with *balāgha*. Nuwayrī, *Nihāyat al-Arab*, Cairo 1322 ff., vii, 10, quotes an expanded version of Sahl b. Hārūn's dictum: "*al-bayān* is the interpreter of the mind and the training of the heart; and *balāgha* is what the common people understand and what gives satisfaction to the élite . . ."; Ibn Rashīḳ, *op. cit.*, i, 215-16, reports two definitions of *balāgha*, one identifying it as "the power of *bayān*, clear exposition, together with good organisation"; and and the other as "the opposite of *ʿiyy*; and *ʿiyy* is the inability to achieve *bayān* (*i.e.*, to express oneself clearly)". Tawḥīdī's (d. 1023) warning against *takalluf*, constraint, *Risāla fī 'l-ʿulūm* in: *Risālatāni*, Constantinople 1301/1884, 206, uses *bayān* practically as a synonym of *balāgha*. Djāḥiẓ, *op. cit.*, i, 95, puts together on the same level *bulaghāʾ*, *khuṭabāʾ* and *abyināʾ* (plur. mult. of *bayyin*): those elegant and clever in their speech. The judgment on the 3rd/9th century Mālikī jurist and poet Aḥmad b. al-Muʿadhdhal that he was equally outstanding in his command of the Arab vocabulary, *lugha*, *bayān*, literary education, *adab*, and wit, *ḥalāwa* (*Zahr*, ii, 276), shows how close *bayān* came to denoting *balāgha*. Cf. also the praise bestowed by al-Ḥasan b. Wahb (d. ca. 860) on Abū Tammām because of the *bayān* of his composition, *niẓām*, (*ibid.*, iii 154). As a specimen of later non-technical usage cf. Ibn Ḳayyim al-Djawziyya (d. 1350), *K. al-Fawāʾid*, Cairo 1327/1909, 5, where *faṣāḥa*, *balāgha*, *djazāla* (literary excellence), *bayān*, *ghawāmiḍ al-lisān* (subtleties of language) and beautiful composition are mentioned on the same place as distinctions which God has imparted to the Ḳurʾān.

A definition *sensu stricto* of *bayān* is recorded in *ʿIḳd*, i, 221, and with immaterial variants by Abū Ṭāhir al-Baghdādī (d. 1123), *Ḳānūn al-Balāgha* in: *Rasāʾil al-Bulaghāʾ*, ed. Muḥ. Kurd ʿAlī, 3rd ed., Cairo 1946, 432. "Whatever lifts the veil from a concealed idea, *maʿnā*, so it comes to be understood and accepted by the mind, *ʿaḳl*, is *bayān*". The same line of analysis is followed in the more elaborate definition ascribed to Djaʿfar al-Barmakī (d. 803), *Bayān*, i, 118 (also: Ibn Ḳutayba, *ʿUyūn al-Akhbār*, Cairo 1343-48/1925-30, ii, 173; *Zahr*, i, 126): *Bayān* means "that the word (*ism*; later one would have used *kalām*, discourse) covers your idea completely and renders your intention (fully), lifting it from ambiguity, *shirka*, so you do not need the assistance of reflection (to understand what is meant); it (*bayān*) must be free from constraint, *takalluf*, remote from artificiality, *ṣanʿa*, without obscurity,

taʿkīd, and comprehensible without interpretation, *taʾwīl*". (Translated from *ʿUyūn* and *Zahr*; *Bayān*'s text is somewhat longer; *ʿUmda*, i, 225, offers a definition of kindred intent but different phrasing).

What to my knowledge may be the first attempt to integrate *bayān* in a system of rhetorical analysis is preserved as the statement made by Ibn al-Ḳirriya (d. 84/703) on letter, word and discourse or speech, where speech is divided in ten *abwāb*, seven of them 'preliminaries', *fawātiḥ*, and three, 'comprehensive (qualities)', *djawāmiʿ*. In this listing *bayān al-kalām* figures as the fourth of the *fawātiḥ* among requirements such as "the courage to speak up", "refraining from clearing one's throat and hemming", being able to begin and end at will (quoted *Ḳānūn al-Balāgha*, 433).

Djāḥiẓ, *K. al-Ḥayawān*, Cairo 1325/1907, i, 17, notes that both men and animals possess the faculty of *dalāla*, the indication of a meaning; but only man possesses that of *istidlāl*, the power of inferential thinking, along with it. The term *bayān*, however, in Djāḥiẓ' view, covers both kinds of *dalāla*. Human *dalāla* (or *bayān*) has five forms: word, writing, counting on fingers or knuckles, *ʿuḳad* (not *ʿaḳd* as Sandūbī vocalises in *Bayān*, i, 76[10]), indication, *ishāra*, and *niṣba*, posture or attitude (not *nuṣba* as *ibid.*, line 11); on *niṣba* cf. Nallino, in *RSO*, 1919-21, 637-46, who lists, 640-41, later grammarians using this term; Djāḥiẓ repeats this doctrine of the five forms of expression in *Ḥayawān*, i, 23, and *Bayān*, i, 76. Ibn al-Mudabbir (d. 892), *Risālat al-ʿAdhrāʾ*, ed. Z. Mubārak, Cairo 1350/1931, 40, restates Djāḥiẓ's fivehold division of *bayān* and adds the correct observation that the concept of *niṣba* goes back to Aristotle (whose seventh category is τὸ κεῖσθαι); Ḥuṣrī (d. 1061), *Zahr*, i, 123-25, discusses Djāḥiẓ's view without reference to a possible source; Abū Ṭāhir, *Ḳānūn*, 424, confines himself to repeating it concisely. Rummānī (d. 994), *K. an-Nukat fi Iʿdjāz al-Ḳurʾān*, ed. ʿAbd al-ʿAlīm, Delhi 1934, 26, with his division of *bayān* in *kalām*, *ḥāl*, the situation, *ishāra* and *ʿalāma*, sign, would seem to go back to Djāḥiẓ, too; the origin of the modifications is as yet unexplained. No later references to Djāḥiẓ's theory are known to me.

Isḥāḳ b. Ibrāhīm b. Wahb, who after 335/946-7 wrote the *K. al-Burhān fī Wudjūh al-Bayān* ("The Exposition of the various ways of explaining [things]")—until recently wrongly attributed to Ḳudāma b. Djaʿfar and published under the title of *Naḳd an-Nathr* by Ṭāhā Ḥusayn and ʿA. Ḥ. al-ʿAbbādī (Cairo 1933)—undertook his work to correct the insufficiencies of Djāḥiẓ's presentation of the subject. Ishāḳ b. Ibrāhīm distinguishes four ways of expression: a. "things may become intelligible by their essences, *dhawāt* [*i.e.*, by the very fact of their being as they are], even though the words which [commonly] express them are not used; b. they may become intelligible by coming into the heart when thought and intellect are applied [*i.e.*, presumably Djāḥiẓ's *istidlāl*]; c. they may become understandable through articulating sounds with the tongue; and, finally, d. by writing, which reaches those who are far away or do not (yet) exist." (Trans. S. A. Bonebakker, *The Kitāb Naqd al-Siʿr of Qudāma b. Ǧaʿfar al-Kātib al-Baġdādī*, Leiden 1956, 16; words between brackets are the writer's). It can easily be seen that Isḥāḳ's concept of *bayān* is very different, and both wider and narrower, than that which Djāḥiẓ endeavored to formulate. Regarding the manner in which Isḥāḳ applies his concept to his material it must suffice here to note that in his discussion of c. he lists, 44-64, sixteen *aḳsām al-ʿibāra*, categories of verbal expression, that include, without further classification, *figura etymologica*, comparison, suggestion (*ramz*), metaphor, parable, enigma and inversion.

A completely different strain of thought is represented in Rummānī's division of *balāgha* in ten parts, *aḳsām*: concision, *īdjāz*, comparison, metaphor, and so forth, of which *ḥusn al-bayān*, successful exposition, is the tenth. In line with this concept, Ibn Rashīḳ (d. 1064 or 1070), *ʿUmda*, i, 225-28, has a chapter on *bayān* (with two pertinent quotations from Rummānī) paralleling, as it were, on the same classificatory level his chapters on *balāgha*, *īdjāz*, *naẓm* (composition), *madjāz* (transferred meaning), *istiʿāra* (metaphor), *al-mukhtaraʿ wa 'l-badīʿ* (invention and the 'original'), etc. It deserves notice that nowhere in the tenth and eleventh centuries is there an anticipation of that treatment of the *bayān*, especially in its relation to the *badīʿ*, that was later to become the dominant doctrine. Neither Āmidī (d. 987), who in his *K. al-Muwāzana bayna Abī Tammām wa 'l-Buḥturī*, Constantinople 1287, 6, divides *badīʿ* in *istiʿāra*, *tadjnīs* (paronomasy) and *ṭibāḳ* (antithesis), nor Abū Hilāl al-ʿAskarī (d. 1005), who in *Ṣināʿatayn*, (*e.g.*) 205 and 290, treats *istiʿāra* and *kināya* (metonymy) on the same level as all other tropes, nor again Bāḳillānī (d. 1013), Khafādjī (d. 1073) and Abū Ṭāhir, who still subsumes *istiʿāra* and *kināya* under *badīʿ*, *Ḳānūn*, 435-459 (cf. in particular the list of forty-two rhetorical figures on 436), made any contribution to the development of the basic organisation of rhetoric, the *ʿilm al-balāgha*, or as ʿAbd al-Ḳāhir al-Djurdjānī (d. 1078), *Dalāʾil al-Iʿdjāz*, Cairo 1331/1913, 4, still prefers to call it, the *ʿilm al-bayān*, to him the greatest of all sciences. Djurdjānī, to whom we owe *inter alia* the aesthetically most sensitive analysis of the metaphor, notes, *Dalāʾil*, 349-50, that the development of the *ʿilm al-faṣāḥa wa 'l-bayān* differs in two points from that of the other sciences: the early authorities of this *ʿilm* expressed themselves in hints and metaphors rather than plainly and directly; and besides, in no other area were the opinions of the ancients transmitted with as little criticism. But Djurdjānī's interest is not in the theory of *bayān* and his innovations are made on another plane of literary analysis. This fact is reflected in Fakhr al-Dīn al-Rāzī's (d. 1209) *Nihāyat al-Īdjāz fī Dirāyat al-Iʿdjāz*, Cairo 1317, which according to the author's statement, 3-5, is an attempt to organize Djurdjānī's *Dalāʾil* and *Asrār al-Balāgha* (ed. H. Ritter, Istanbul 1954; German translation, Wiesbaden 1959), and which fails to offer any explicit discussion of *bayān*.

When Ibn al-Athīr (d. 1234) writes *al-Mathal al-Sāʾir fī Adab al-Kātib wa 'l-Shāʿir* thinking on *bayān* has taken a new turn. To what extent it was Ibn al-Athīr himself who was responsible for this change we have no means of deciding. Ibn al-Athīr places, p. 2, the *ʿilm al-bayān* in the same relation to the composition of both poetry and prose as the science of the *uṣūl al-fiḳh* to the individual judicial statutes or decisions, *aḥkām*. (On p. 114, he refers to the representatives of this field of learning as *ʿulamāʾ al-bayān*). He divides his book in a preface, *muḳaddima*, dealing with the foundations, *uṣūl ʿilm al-bayān*, and two sections treating the handling of wording, *al-ṣināʿa 'l-lafẓiya*, and of content, *al-ṣināʿa 'l-maʿnawiyya*, respectively. The subject of the *ʿilm al-bayān* is *faṣāḥa* and *balāgha* whose constituent elements he investigates in regard to both wording and meaning. He shares with the grammarian,

naḥwī, his concern for the manner in which words indicate meanings; but he goes beyond the grammarian's interest by a concern for the aesthetic qualities of the various ways of verbal rendering of ideas (p. 3). In the terms of his critic, Ibn al-Ḥadīd (d. 1257), *al-Falak al-Dāʾir ʿalā 'l-Mat͟hal al-Sāʾir*, Bombay 1308, 41-42 (*al-Mat͟hal*, 28[22]-29[8]), Ibn al-At͟hīr's *ʿilm al-bayān* is basically a "rational" science, *ʿilm ʿaḳlī*, that argues from general principles by means of *ʿaḳl* and *d͟hawḳ*, taste; it does not deduce its judgments empirically from Arabic literature, *bi 'l-istiḳrāʾ min as͟hʿār al-ʿArab* (for *d͟hawḳ* cf. also Ibn Khaldūn, *Muḳaddima*, ed. Quatremère, Paris 1858, iii, 312-317; 349-50 trans. F. Rosenthal, New York 1958, iii, 358-62; 396-98). The heartpiece of the *ʿilm al-bayān* is to Ibn al-At͟hīr the doctrine of *ḥaḳīḳa* and *madj̲āz*, the proper and the transferred use of words (p. 23). It is in the nature of his system that he does not differentiate between comparison, metaphor and metonymy on the one hand and the other tropes on the other—a differentiation which was to be one of the principal features of the system that was about to become dominant in Arabic rhetoric when Ibn al-At͟hīr wrote.

This doctrine originated with Ibn al-Athīr's contemporary, the Khorezmian al-Sakkākī (d. 1229) who, according to his own statement, *K. Miftāḥ al-ʿUlūm*, Cairo n.d. (ca. 1898), 2-3, set out to treat the *anwāʿ al-adab*, the kinds or elements of literary education, with the exception of *lug͟ha*, lexicology. Those "kinds", *anwāʿ*, include a. accidence or morphology, *ʿilm al-ṣarf*, and b. grammar proper or syntax, *ʿilm al-naḥw*, which is defined to comprise (1) *ʿilm al-maʿānī* (the different kinds of sentence and their use) to which "definition" and "deduction" are attached; and (2) *ʿilm al-bayān*, the art of (eloquent) presentation, which requires "prosody" and "rhyming" as subsidiary branches of study. The *ʿilm al-bayān* deals fundamentally with three subjects, *uṣūl*: (1) comparison, *tas͟hbīh*; (2) *madj̲āz* (and *ḥaḳīḳa*); (3) *kināya*, metonymy. The remaining tropes are relegated to the end of the book, 224-229, under the heading *al-badīʿ*.

It is presumably due to Sakkākī's commentator, al-Ḳazwīnī (d. 1338), and to the *mufassir* of the latter, al-Taftazānī (d. 1389), that Sakkākī's structuring of rhetoric received the more consistent form which has continued to make authority to this day. Ḳazwīnī no longer wishes to deal with *adab*. To him, *balāg͟ha* is the term for the science of rhetoric as a whole which he divides in the three branches of *ʿilm al-maʿānī*, *ʿilm al-bayān* and *ʿilm al-badīʿ* (as the doctrine of the embellishment of speech) [cf. BALĀGHA]. *ʿIlm al-bayān* is now no more and no less than the science that deals with the various possibilities of expressing the same idea in various degrees of directness or clarity. Since the word used may indicate either the concept in its totality or merely a part of it, or again point to it through evoking an element external to it in which the hearer perceives a necessary connection with the concept actually intended, a certain number of modes of expression are open to the speaker. In their descriptive function and power, comparison, metaphor and metonymy correspond to those three basic possibilities of word-concept relations. For this reason they are treated apart from the other tropes that are dealt with under the general category of *badīʿ*, embellishments. (This presentation of Ḳazwīnī's views is based in part on his *Talk͟hīṣ al-Miftāḥ*, Cairo 1342/1923, iii, 256-290; also in A. F. Mehren, *Die Rhetorik der Araber*, Copenhagen and Vienna 1853, 6-7 of Arabic text, Trans. 53-54 of German text; and in part abstracted from the tenor of the *Talk͟hīṣ* as a whole; a rather full summary of Ḳazwīnī's doctrine of *bayān*, *ibid.*, 20-42).

While al-Nuwayrī (d. 1332), *Nihāya*, vii, 35, already follows the tripartite structure of *ʿulūm al-maʿānī*, *bayān* and *badīʿ* without, however, distributing the tropes accordingly, Ibn Ḳayyim al-Dj̲awziyya, *Fawāʾid*, a work whose purpose is the analysis of the uniqueness and inimitability, *iʿdj̲āz*, of the Ḳurʾān, still uses *ʿilm al-bayān* for rhetoric as a whole and divides his presentation of it in sections (I) on *faṣāḥa*, *balāg͟ha*, *ḥaḳīḳa* and *madjāz*, metaphor, comparison, *tamt͟hīl* (expression by way of a simile, analogy), concision, and reversion of word order; and (II) on *ʿilm al-bayān* proper which he subdivides in (a) eighty-four *Sinnfiguren* (including metonymy as no. 17) and (b) twenty-four further tropes; he notes, 218, that this second *fann* of (II) is also called *al-badīʿ*. Like Ibn Ḳayyim, Ibn K͟haldūn (d. 1406) sees the value of the *ʿilm al-bayān* in its leading to the understanding of the *iʿdj̲āz*, and like him he uses *ʿilm al-bayān*, the name of the subsection first to be explored by Arab critics, as the designation of the "science of expression" as a whole. But the strictness of his systematisation sets him apart from Ibn Ḳayyim. *Bayān*, the manifestation of ideas, is achieved either by verbal expression, *ʿibāra*, or by writing, *kitāba* (*Muḳaddima*, iii, 242-43; trans. de Slane, Paris 1862-68, iii, 264-65; trans. Rosenthal, iii, 281-82). The *ʿilm al-bayān* consist of the three sciences of *balāg͟ha*, in Ibn K͟haldūn's description a combination of grammar and *ʿilm al-maʿānī*, *bayān* and *badīʿ*. Ibn K͟haldūn adds that it is the Easterners who give special attention to *bayān* whereas the Westerners show particular interest in the *badīʿ* (*Muḳaddima*, iii, 289-94; trans. Slane, iii, 324 ff.; Rosenthal, iii, 332-39). Ibn K͟haldūn recognises the importance of Sakkākī and Ḳazwīnī, with whose works he is clearly familiar and whose authority had already grown beyond challenge.

BAYĀN B. SAMʿĀN AL-TAMĪMĪ, S͟hīʿī leader in Kūfa. (Often, improperly, *Banān*; in Nawbak͟htī, *al-Nahdī*). He was a dealer in straw. According to Nawbak͟htī, he was a disciple of Ḥamza b. ʿAmmāra, disciple of Ibn Karib, men known for *g͟huluww* speculation on the imāmate of Muḥammad b. al-Ḥanafiyya. He accepted the imāmate of Muḥammad's son Abū Hās͟him (d. ca. 99/717) [*q.v.*] and was hostile to Muḥammad al-Bāḳir. Bayān taught a literalist anthropomorphic interpretation of the Ḳurʾān; *e.g.*, God is a man of light, all whose parts will finally perish except his face (Ḳurʾān xxviii, 88). When on al-Bāḳir's death al-Mug͟hīra b. Saʿīd [*q.v.*] left al-Bāḳir's circle, he and Bayān evidently joined forces. After what may have been a forced premature rising, they were seized with a handful of followers and burned by K͟hālid al-Ḳasrī, His͟hām's governor, in 119/737. (There are several circumstantial but contradictory accounts of their death.) Iṣfahānī in *al-Ag͟hānī*[1] very improbably has the rising be in the name of Dj̲aʿfar al-Ṣādiḳ (Vol. 15, 121; but cf. Vol. 19, 58). Wāḳidī has it be in the name of Muḥammad b. ʿAbd Allāh, who rebelled against al-Manṣūr twenty-six years later; possibly (cf. Ṭabarī and Ibn Ḥazm) it was connected with the ʿAbbāsids, who inherited Abū Hās͟him's party in Kūfa in the name of all the family of the Prophet.

Bayān's followers apparently formed a party, the Bayāniyya (or Banāniyya, or the Samʿāniyya), said

to have ascribed to the imāms prophecy through an indwelling particle of divine light; to have expected the return of various religious figures after death; and to have discussed the "greatest name" of God, Some are said to have regarded Bayān as an imām. citing Ḳurʾān iii, 138. Like other Shīʿīs they supported Muḥammad b. ʿAbd Allāh at least after the ʿAbbāsid triumph.

BAYĀS [see PAYAS].

BAYAT, an Oghuz (Türkmen) tribe. The Bayat are understood to have taken part in the conquests of the Saldjūḳs in Anatolia. The nickname al-Bayātī given to Sunḳur, representative in Baṣra in 512-3/1119 of the Saldjūḳid amīr Aḳ Sunḳur al-Bukhārī, is quite probably connected with this tribe. There were numerous places called Bayat or Bayad in central and western Turkey in the 9th/15th and 10th/16th centuries of which few survive today. Most of these place-names, no doubt, belonged to the Bayat who participated in the conquest of Anatolia. There were Bayat among the Turkmens in northern Syria in the 8th/14th century. An important part of these, called Shām Bayadī, used to go in the summer like other Turkmen tribes to the Sivas and Bozok (Yozgat) regions. From the beginning of the 9th/15th century onwards the northern Syrian Bayat began to figure in the activities of the Aḳ-Ḳoyunlu. In the 10th/16th century, there were, besides those around Aleppo and Yozgat (Shām Bayadī), small Bayat clans in the provinces of Diyārbakr, Kütahya and Tripoli. In the same century they are also seen in Iran, particulary around Kazzāz and Karahrūd, to the south of Hamadān. They numbered about 10,000 tents, and were perhaps more recently called Aḳ Bayat, probably to distinguish them from the rest of the Bayats in the country. The Aḳ Bayat reared some very fine horses known after them as *Bayatī Nizhād*. Shāh ʿAbbās used to send these horses as gifts to the ruler of India. The Bayātī mode (*maḳām*) found in classical Turkish and Persian music has its origin in the songs of this tribe. It seems likely that these Bayats went to Iran from Syria with the Aḳ-Ḳoyunlu conquest. Some of the Bayat clans in Iran live in Khurāsān and these are called, to distinguish them from the rest, Ḳara Bayats. One of the clans of the famous Ḳādjār tribe was of the Shām Bayat. In fact, as shown by names of its clans, the Ḳādjār tribe has its origin in Turkey. Some Bayat are also found in ʿIrāḳ, particularly around Kirkuk. The castle called Bayat south of Baghdād quite probably takes its name from them. This tribe produced a number of famous men; Ḳorḳut Ata (Dede Ḳorḳut), and Fuzūlī (Fuḍūlī) were of this tribe. Ḥasan b. Maḥmūd Bayātī, author of *Djām-i Djem Āyin*, a work dedicated to the Ottoman Prince Djem is, as indicated by his *nisba*, of the Bayat tribe.

(FARUK SÜMER)

BĀYAZĪD (DOĞU-BAYAZIT), a small town belonging to the Turkish Republic and situated a little to the south of Mount Ararat (Aghrī-Dāgh), close to the frontier with Iran. It has been suggested that the town was named after the Ottoman Sulṭān Bāyazīd I (791-805/1389-1403), who, according to this view, fortified the site as a post of observation against Tīmūr Beg. A more recent interpretation is that the name derives in fact from a prince of the Djalāyirid dynasty, *i.e.*, from Bāyazīd, the brother of Sulṭān Aḥmed (784-813/1382-1410). The Ottomans captured the town in 920/1514, but did not obtain definitive control over the region until after the Persian campaigns of Sulṭān Sulaymān in 940-942/1533-1536, 955-956/1548-1549 and 960-962/1553-1555. Bāyazīd and its adjacent territories formed, under Ottoman rule, a *sandjaḳ* which was dependent at times on the *eyālet* of Van, but more often on the *eyālet* of Erzurum. The Russians, in the course of their wars with the Ottoman Turks, occupied the town in 1828, 1854, 1877 and again in 1914. Bāyazīd, now included in the Turkish province of Aghrī, (Ağrı) had in 1935 a population estimated at 1860 inhabitants, the comparable figure for the entire *ḳaḍāʾ* amounting to just over 20,000 people, most of whom are of Turkish or Kurdish descent. Sheep and cattle rearing, the production of wool, hides and leather and the weaving of carpets constitute the main economic activities of the area.

ARMĪNIYA and ERZURUM.

(V. J. PARRY)

BĀYAZĪD, (BĀYEZĪD) **I,** called Yïldïrïm, "the Thunderbolt", Ottoman sultan (regn. 19 Djumādā II 791-13 Shaʿbān 805/15 June 1389-8 March 1403), born in 755/1354 of Murād I and Gül-čičeḳ Khātūn. In about 783/1381 he was appointed governor of the province which was taken from the Germiyānids in guise of a dowry from his wife, Sulṭān Khātūn. Settled in Kütahya, he became responsible for the Ottoman interests in the East. He distinguished himself as an impetuous soldier (hence his surname) in the battle of Efrenk-yazïsï against the Ḳaramānids (Ḳaramān-oghlu) in 788/1386. The assumption that he also became the first governor of Amasya (Kemāl Pasha-zāde) stems from the fact that some territory to the west of it came under the Ottomans when they supported Süleymān of the Djāndār dynasty in Kastamonu (Ḳastamūnī) against his father 786/790-1384-1388) and Aḥmed, the Amīr of Amasya, who accepted Ottoman protection against Ḳāḍī Burhān al-Dīn (*Bazm u Razm*, 302, 308).

When, in the battle of Kossovo plain (15 June 1389), Murād I was mortally wounded, he asked his pashas to recognise Bāyezīd, his eldest and distinguished son, as sultan (*Düstūrnāme*, 87; Anony-

mous *Tawārīkh*, 27) which they did, and his only surviving brother (the others, called Savdjī and Ibrāhīm, were already dead) was immediately put to death to prevent a civil war. Lazar, the Serbian prince, was also executed on the field.

The new sultan left hurriedly (Stanojević, 417) for Bursa, his capital, because the vassal princes in Anatolia had risen up in revolt. Ḳaramān-oghlu ʿAlāʾ al-Dīn ʿAlī, their leader, taking Beyshehri, advanced as far as Eskishehir, Germiyān-oghlu Yaʿḳūb II recovered his patrimony and Ḳāḍī Burhān al-Dīn captured Kīr-shehri (*Bazm u Razm*, 387). Bāyezīd reached an agreement with the Serbs who promised him Lazar's daughter Olivera (Despina) as his wife and an auxiliary force under Stefan Lazarević. Constantly under Hungarian pressure, Stefan remained faithful to Bāyezīd and accompanied him in his expeditions. But Vuk Branković in Upper Serbia (Prishtina, Skoplje etc.) resisted the Ottomans who tried to take possession of the mining towns in his territory. Pasha-yigit continued the operations against him and later took Skoplje (Üsküb, 793/1391) and settled it as a Turkish base for his raids into Bosnia and Albania.

Bāyezīd spent the winter of 792/1389-1390 in taking Philadelphia (Alashehir) and annexing the Turkish principalities in Western Anatolia, namely Aydīn, Sarukhān, Menteshe, Ḥamīd and Germiyān. Süleymān the Djāndārid and Manuel Palaeologus were with him during this expedition. In Djumādā II 792/May 1390 he was in Ḳarahisar (Afyon), preparing to march against Ḳaramān-oghlu. He recaptured Beyshehri and laid siege to Ḳonya. At this time Süleymān, back in Ḳastamonu, formed an alliance with Ḳāḍī Burhān al-Dīn against Bāyezīd to help Ḳaramān-oghlu. Apparently this threat made Bāyezīd give up the siege of Ḳonya and sign a treaty with Ḳaramān-oghlu in which he abandoned the whole region west of the Čarshanba river. The following year (793/1391) Bāyezīd attacked Süleymān, but Burhān al-Dīn defied him in support of his ally. In the spring of 793/1392 Bāyezīd made great preparations against Süleymān. A Venetian report of 12 Djumādā I, 794/6 April 1392 stated that as a vassal of Bāyezīd, Manuel Palaeologus was about to take part in the naval expedition against Sinop (Silberschmidt, 77). This expedition ended with the annexation of Süleymān's territory (except Sinope) and his death. Then, in spite of Burhān al-Dīn's protests and threats, Bāyezīd occupied Osmandjīk. But Burhān al-Dīn finally attacked Bāyezīd near Čorumlu (Čorum) and forced him to retreat. Burhān al-Dīn's raiders reached as far as Ankara and Sivrihisar. Besieged by Burhān al-Dīn's forces the Amīr of Amasya handed over the castle to the Ottomans (794/1392). Next year Bāyezīd came and entered the city. Local dynasties such as Tadj al-Dīn-oghullarī (in Čarshanba valley), Tashan-oghullarī (Merzifon region) and the lord of Bafra recognised Bāyezīd as their suzerain. Burhān al-Dīn harassed the Ottoman army on his way back (*Bazm u Razm*, 418-20).

Bāyezīd then found things more pressing in the west. After the victory at Kossovo he had increased his control on Byzantium. His support first secured the throne to John VII (27 Rabīʿ II 792/14 April 1390) and then to John V and his son and co-emperor Manuel (16 Shawwāl 793/17 September 1391) who had showed his faithfulness to the sultan by accompanying him in his expeditions in Anatolia (Fr. Dölger, *Johannes VII*, 27-8). When Anatolian affairs kept Bāyezīd busy in the east, his *Udj-beyis* [*q.v.*] by their raids held enemies under restraint on the western borders: Pasha-yigit submitted Vuk; Evrenuz (Ewrenos) [*q.v.*] conquered Kitros (Čitroz) and Vodena and advanced into Thessaly; Fīrūz Beg raided in Wallachia, and Shāhīn was active in Albania. But Mircea cel Batran managed to take Silistre back and attacked with success, against the *akīndjīs* in Ḳarīn-ovasī (Karnobat) when Bāyezīd was in Anatolia. Venetian activities in Morea, Albania and in Byzantium on the one hand, and Hungarian attempts in extending influence in Wallachia and the Danubian Bulgaria on the other made Bāyezīd decide to concentrate his efforts in the Balkans. He first occupied Trnovo (7 Ramaḍān 795/17 July 1393) which had been under Ottoman control since 790/1388 and Czar Shishman had to move to Nicopolis as an Ottoman vassal. In the winter of 796/1393-94 Bāyezīd summoned all of the Balkan princes and the Palaeologi to Serres and there attempted to strengthen their ties of vassaldom. In particular he wanted Theodore Palaeologus to hand over his main cities in the Morea against Venice. In despair, the Palaeologi, Theodore and Manuel turned against Bāyezīd and sought help in the West, especially in Venice. It seems that Bāyezīd then reconquered Thessalonica (Neshri, 88, gives the date as 19 Djumādā II 796/21 April 1394; the city was taken once in 789/1387 and lost probably in 791/1389). Bāyezīd also conquered Thessaly, the county of Salone, Neopatrai; Evrenuz entered Morea, but Theodore had given Argos to the Venetians (27 May 1394) (J. Loenertz in *REB*, i, 171-85). Another Ottoman division put southern Albania under direct Ottoman rule and Shāhīn exerted pressure on the Venetian possessions on the Albanian coasts [see ARNAWUTLUḲ]. Bāyezīd also started the blockade of Constantinople (796/Spring 1394) which lasted for seven years. In 797/1395 he invaded Hungary, and on his way attacked the castles of Slankamen, Titel, Becskerek, Temeshvar, Carashova, Caransebesh, Mehedia (see *Actes du X. Congrès Int. d'Et. Byz.*, 220). Defeating Mircea on the Argesh river in Wallachia (26 Radjab 797/17 May 1395) he then put Vlad on the Wallachian throne. Bāyezīd then passed over the Danube to Nicopolis and seized and executed Shishman (13 Shaʿbān 797/3 June 1395).

These bold conquests caused Hungary and Venice to conclude at last an alliance (796/1394) and to form a crusade in Europe against the Ottomans. When in 799/1396 Bāyezīd was making a major effort to take Constantinople the Crusaders under Sigismund came to lay siege to Nicopolis. Hurrying there, Bāyezīd inflicted a crushing defeat upon them (21 Dhu 'l-Ḥidjdja 798/25 September 1396) and took Vidin from Stratsimir, the last independent Bulgarian prince. Now the fate of the Balkans and Constantinople were in Bāyezīd's hands. In the imperial capital Manuel had to agree to Bāyezīd's settling there a Turkish colony with a *ḳāḍī*. Evrenuz took Argos and Athens (799/1397). Then the sultan went back to Anatolia because of the hostile movements of Ḳaramān-oghlu during the crisis of Nicopolis. He defeated and executed Ḳaramān-oghlu at Aḳčay and incorporated his territory with Ḳonya (800/Autumn 1397). The following year he incorporated also the region of Djanik and the territory of Burhān al-Dīn [*q.v.*] and disregarding his alliance with Egypt against Tīmūr (Tamerlane) [*q.v.*] conquered Albistān, Malaṭya, Behisni, Kahta and Divrigi.

Marshal Boucicaut's attack on the Turkish coasts and the small force he brought to Constantinople were not enough to relieve the city (800/Summer 1399),

so Manuel II went to Europe to ask more help (10 Rabīʿ II 802/10 December 1399). In the Autumn of 1399 Tīmūr once more appeared in eastern Anatolia, and hopes were high in the West as they were during his first invasion of eastern Asia Minor in 796/1394. From 801/1399 on Tīmūr claimed suzerainty over all the rulers in Anatolia as the representative of the Djengizkhānids whereas Bāyezīd claimed to be the heir of the Saldjūḳs there. Tīmūr hesitated before attacking the sultan of the ghāzīs. Tīmūr gave refuge to the Anatolian rulers expelled by Bāyezīd who, in his turn, protected Ḳarā Yūsuf and Aḥmad Djalāʾir. This exasperated Tīmūr. He took and sacked Sivas (802/August 1400), to which Bāyezīd retaliated by capturing the Amīr of Erzindjān, a protegé of Tīmūr named Muṭahharten (803/1401). Finally Tīmūr and Bāyezīd came to grips at Čubuk-ovasī near Ankara (27 Dhu 'l-Ḥidjdja 804/28 July 1402). Defeated and taken prisoner by Tīmūr, Bāyezīd died in captivity at Akshehir (13 Shaʿbān 805/8 March 1403) Bāyezīd's hastily founded empire collapsed. The Anatolian princes, who all regained their respective territories (804/1402), as well as the Ottoman princes, who divided the rest of the country among themselves, recognised Tīmūr as their suzerain. It was not until Meḥemmed II that the Ottomans again assumed the offensive in East.

Bāyezīd was responsible for the foundation of the first centralised Ottoman empire based upon the *Ḳul* system and the traditional administrative methods perfected under Muslim-Turkish states in the Middle East. Popular tradition criticised him as an innovator in finances, administration and manners.

BĀYAZĪD II, Ottoman Sulṭān (886-918/1481-1512), was born most probably in Shawwāl or Dhu 'l-Ḳaʿda 851/December 1447 or January 1448 (some sources give the date of his birth, however, as 856 or 857/1452 or 1453). During the lifetime of his father, Meḥemmed II, he was governor of the province of Amāsya and served in the war against Uzun Ḥasan, the leader of the Aḳ Ḳoyūnlu Turcomans, being present at the battle of Otluḳ Belī in 878/1473. On the death of Meḥemmed II in 886/1481 a conflict for the throne broke out between Bāyazīd and his younger brother Djem, then governor of Ḳaramān, with his residence at Konya. The support of the Janissaries and of a powerful faction amongst the great officials at the Porte ensured the accession of Bāyazīd to the throne. Djem, defeated in battle near Yeni-Shehir in Rabīʿ II 886/June 1481, withdrew to Syria and thence to Egypt. He now gathered together new forces with the assent of the Mamlūk Sulṭān Ḳāʾit Bāy, but, after a fruitless campaign directed against Konya and Ankara, despaired of success and sought refuge at Rhodes (Djumādā II 887/July 1482) with the Knights of St. John, who removed him to France in September of the same year. Henceforward, until the death of the unfortunate prince in February 1495, the Ottomans had to face the constant threat that a coalition of Christian states, using Djem as their instrument, might invade the empire. As long as Djem was alive, Bāyazīd could not take the risk of committing his forces irretrievably to a major enterprise, either in the East or in the West.

Herzegovina was brought fully under Ottoman control in 888/1483. The fortresses of Kilia on the Danube estuary and of Aḳ-Kermān at the mouth of the Dniester fell to Bāyazīd in the course of his Moldavian campaign during the summer of 889/1484—a success of considerable importance in that it strengthened the Ottoman hold over the land route to the Crimea, where the Tatar Khān ruled as a vassal of the Sulṭān. A less fortunate issue of events awaited the Ottomans in their war of 890-896/1485-1491 against the Mamlūks of Egypt and Syria, fought to determine which of the rival states should exert political dominance over Cilicia and the adjacent march-lands along the Taurus frontier. The Ottomans met with a number of reverses in the field, above all at the battle of Agha Çāyrī near Adana in Ramaḍān 893/August 1488. A peace was made in 896/1491 which marked in fact the failure of the Ottomans to win effective control in Cilicia. None the less, it should be noted that, with Djem still alive and a captive in Christian hands, Bāyazīd had not been free to use his full resources in this war and had chosen therefore to wage a conflict limited in its objectives. Moreover, the situation on the Taurus frontier in 896/1491 was in no wise more favourable to the Mamlūks, despite their victories, than it had been six years before.

The ceaseless warfare of Muslim *ghāzī* against Christian marcher lord along the Danube and the frontiers of Bosnia flared out with great violence in 897-900/1492-1495. The Ottoman warriors launched massive raids across the Danube and the Sava and into the Austrian duchies of Styria, Carniola and Carinthia, suffering defeat near Villach in 897/1492, but on the other hand almost annihilating the Croat forces at Adbina in 898/1493. A truce concluded for three years with the Hungarians brought these hostilities to an end in 900/1495. Conflict now arose between the Ottoman empire and Poland. The Ottomans and the Krim Tatars formed, as it were, a barrier which denied to the Poles access to the Black Sea. Poland began in 902/1497 a campaign designed to break down this barrier through the capture of Kilia and Aḳ-Kermān and through the reduction of Moldavia to a state of dependence on Poland. The Moldavian forces, however, with the aid of the Ottoman *begs* along the lower Danube, offered a successful resistance, the Poles being repulsed before the fortress of Suceava and, in the course of their subsequent retreat, beaten at Koźmin in the Bukovina (October 1497). Ottoman *ghāzīs* from the Danube lands, with reinforcements of Moldavian and Tātār horsemen, now laid waste much of Podolia and Galicia in the summer of 1498, but a second raid directed against Galicia in the late autumn of the same year ended in disaster amid bitter snowstorms on the Carpathian mountains.

Poland, however, made peace with Moldavia in April 1499, this agreement being soon followed by a renewal of the former truce between the Ottomans and the Poles.

After the reverses experienced in the war against the Mamlūks, Bāyazīd sought to provide his troops with arms more efficient and of greater offensive power than the weapons hitherto available, and also to create a more mobile and more competently manned artillery force. At the same time efforts were made to increase the size and strength of the Ottoman fleet, numerous vessels of war being built in the ports of the Aegean and the Adriatic. A new war was indeed imminent, which would test the worth of these armaments and of the much augmented naval forces of the Sulṭān. Friction along the borders of the Venetian enclaves on the coasts of the Morea, Albania and Dalmatia, where the Ottoman *ghāzīs* faced the Greek, Cretan and Albanian mercenaries in the service of the Signoria, and also the repeated occurrence of "incidents" at sea, induced Bāyazīd to make war on Venice in 904/1499, a decision influenced by the fact that, since the death of Djem in 1495, some of the high dignitaries at the Porte had been urging the Sulṭān to pursue a more aggressive policy towards the Christians. Lepanto, lacking all hope of relief from the sea, because the Venetian fleet had been driven to take refuge under the guns of Zante, fell to the Ottomans in Muḥarram 905/August 1499. Meanwhile, the frontier warriors of Bosnia carried out a great incursion into the Friuli and then, reinforced after the capture of Lepanto, ravaged the Venetian lands as far as Vicenza. Modon, Coron and Navarino in the Morea yielded to the Ottomans in 906/1500, and also Durazzo on the Adriatic coast in 907/1501. Venice, finding the conflict too expensive, sought peace in 908/1502 and in the final agreement concluded in 909/1503 renounced all claim to Lepanto, Modon, Coron, Navarino and Durazzo. Bāyazīd could feel well satisfied with the outcome of this war, which had brought solid territorial gains in the Morea and on the Adriatic shore and, more notable still, had underlined the fact that the Ottomans were becoming a formidable power at sea.

The years 909-918/1503-1512 witnessed the growth of a major crisis in the East. Ismāʿīl, the head of the religious order known as the Ṣafawiyya, had begun in 904-905/1499 a career of conquest which soon made him the master of Persia. The Ṣafawiyya had long conducted, on behalf of the Shīʿī faith, a vigorous propaganda amongst the Turcoman tribes of Asia Minor—a propaganda so successful that the armies of the new régime in Persia consisted to a large degree of warriors drawn from these tribes. As orthodox or Sunnī Muslims, the Ottomans had reason to view with alarm the progress of Shīʿī ideas in the territories under their control, but there was also a grave political danger that the Ṣafawiyya, if allowed to extend its influence still further, might bring about the transfer of large areas in Asia Minor from Ottoman to Persian allegiance. An additional threat arose from the fact that Shīʿī beliefs flourished in those regions along the Taurus frontier which were in dispute between the Ottomans and the Mamlūks. Ottoman intervention here against the adherents of the Ṣafawiyya might well drive the Mamlūks, despite their profession of the Sunnī faith, into an alliance with the new Shīʿī state in Persia.

Bāyazīd, aware of the danger, ordered in 907-908/1502 the deportation of numerous Shīʿī elements from Asia Minor to his recent conquests in the Morea. He also garrisoned his eastern frontier in force, when in 913/1507-1508 Shāh Ismāʿīl, then at war with ʿAlā al-Dawla, the prince of Albistān, occupied Diyār-Bakr and large areas of Kurdistān. How critical the situation had become was made clear on the outbreak, in 917/1511, of a great Shīʿī revolt in Tekke, a region of Asia Minor long noted as a centre of heterodox religious ideas. The rebels, after plundering Kutāhya, advanced on Brusa, but then, retiring in the face of superior forces, suffered a total defeat between Kayseri and Sīvās in the summer of 917/1511—a conflict in which both the Ottoman Grand Vizier ʿAlī Pāshā and the rebel chieftain, Shāh Ḳūlī, were slain.

Meanwhile, the Ottoman empire had come to the verge of civil war. The practice that a new Sulṭān, on his accession to the throne, should order the death of all his brothers and their male children imposed on the sons of an ageing Sulṭān a dire pressure to prepare for armed conflict on, or even before, the death of their father. There had been war between Bāyazīd and Djem in 886-887/1481-1482; now, the issue was to rest between Aḥmed, who was governor of Amāsya, and Selīm, who had charge of the remote province of Trebizond (Ḳorḳūd, the eldest of the three surviving sons of Bāyazīd, enjoyed little favour at the Porte and had but a minor rôle in the events which now occurred). Selīm, in 916/1511, sailed from Trebizond to Kaffa in the Crimea and, having won the support of the Tatar Khān, moved with his forces across the Danube, demanding of his father the government of a province in the Balkans. Bāyazīd, reluctant to make war on his own son and worried about the revolt of Shāh Ḳūlī in Asia Minor, yielded to the wishes of Selīm and, in a formal agreement, conferred on him the great frontier province of Semendria. The news that the Grand Vizier ʿAlī Pāshā, who favoured the cause of Aḥmed, had been sent with a strong contingent of Janissaries to crush the Shīʿī rebellion aroused in Selīm the fear that, if Shāh Ḳūlī should be defeated, ʿAlī Pāshā might make a bold effort to raise Aḥmed to the throne. Selīm now marched on Adrianople, where his father was in residence. Bāyazīd withdrew in the direction of Istanbul, but then stood firm at Ughrash-deresi near Çorlū. The Janissaries, although well disposed towards Selīm, remained loyal to the old Sulṭān. Here, on 8 Djumādā I 917/3 August 1511, their skill and discipline routed the Tatar horsemen of Selīm, the prince himself fleeing from the battlefield to seek refuge in the Crimea.

Aḥmed, after the defeat of Shāh Ḳūlī, advanced towards Istanbul, hoping to cross the Straits and ensure his own accession to the throne. Disturbances amongst the Janissaries at the capital in Djumādā I 917/August 1511 overawed the adherents of Aḥmed at the Porte. Aḥmed, realising that the Janissaries had thus declared their support for Selīm and their intention not to accept himself as Sulṭān, now used armed force to bring much of western Asia Minor under his control—a course of action which amounted to open rebellion against his father. The result was that Bāyazīd consented to recall Selīm from Kaffa and to restore to him the province of Semendria. There was, however, a growing fear at the Porte that Aḥmed would make an alliance with the Shīʿī régime in Persia. This fear, together with the demand of the Janissaries that Selīm should lead them in the now inevitable campaign against Aḥmed, hastened the issue of events. Bāyazīd was compelled to abdicate in favour of Selīm in Ṣafer 918/April 1512. The old Sulṭān had chosen to retire to the town of

his birth, Demotika, but, while travelling to this destination, died on 10 Rabīʿ I 918/26 May 1512.

BĀYAZĪD (or Bāzīd as engraved on his seal, *Tad̲h̲kirat al-Abrār* f. 88a) **ANṢĀRĪ** "Pīr-i Rawshān (or Raws̲h̲an)" b. ʿAbd Allāh Ḳāḍī b. S̲h̲ayk̲h̲ Muḥammad, the founder of a religious and national movement of the Afg̲h̲āns (called Pīr-Tārīk by the Mug̲h̲al historians etc., after Ḥād̲j̲d̲j̲ī Mullā Muḥammad, commonly known as Mullā Zangī, a teacher of the Pīr's chief opponent Āk̲h̲und Darwīza, who was the first to dub him thus (*Tad̲h̲kira* f. 92). He claimed descent through S̲h̲. Sirād̲j̲ al-Dīn (his fifth ancestor) from (Abū) Ayyūb al-Anṣārī, the famous Companion of the Prophet, (his 21st ancestor). His mother Aymana (varr. Bih-bīn, Bīban, *Maʾāt̲h̲ir al-Umarāʾ*, ii, 243), the second cousin of his father, was a daughter of al-Ḥād̲j̲d̲j̲ Abā Bakr of Jallandhar, in which city Bāyazid was born c. 931/1525, *i.e.*, a year before Bābur had founded his Empire in India. His father left for Kānīgurām (Wazīristān), his home-town, before the child had completed his forty days. Alarmed by the establishment of the Mug̲h̲al supremacy, the people of Bāyazīd fled (c. 936/1529) to Bihār and thence went with a caravan to Kānrīgurām. ʿAbd Allāh, who had another wife (and several children by her), now developed an aversion for Aymana and divorced her. Bāyazīd, then about seven, found his subsequent home life extremely unhappy and gradually he developed a life-long estrangement from his parents and step-brother. His early schooling was interrupted as he was called upon to attend to home affairs and trade, but he turned to his studies whenever possible, though always confining himself only to what related to the questions of divine worship. He applied himself diligently to acquiring a detailed knowledge of, and a punctilious performance of, devotional exercises and other religious duties. But he felt himself baulked in every direction, for his father would not let him perform the *ḥad̲j̲d̲j̲* or go elsewhere for further studies, or allow him to become a disciple of a Pīr. When he was nearing sixteen, his father took him along on one of his trade journeys. Later, Bāyazīd made several more. On these he must have met (as in *Tad̲h̲kira*, f. 82b) the *Mulḥid* (Ismāʿīlī) Sulaymān, whose influence can be seen, among other things, in the excessive emphasis on the doctrine of the *Pīr-i Kāmil* ("perfect spiritual director"), the frequent use of *taʾwīl*, for example in dealing with the "five pillars of the faith" (*arkān-i k̲h̲amsa*), *g̲h̲usl* etc., in certain Ḥurūfī doctrines

(see *Ḥāl*, 216 ff., 91 ff., 257). The *Tadhkira* refers also to Bāyazīd's association with Yogīs, from whom he learnt the doctrines of transmigration of souls and of divine incarnation (*avatār*). This is not expressly mentioned in the *Ḥāl-nāma*, but if, as some Anṣārīs of Jalandhar believe, he is identical with 'Vadjīd' who compiled Shloks (see Onkār Nāth, *Vadjīd djī de shlōk*, Lāhore n.d.) he shows considerable knowledge of popular Hindū lore, and some verses of the editor of the *Ḥāl*, 502 f., may indeed have been inspired by the *shloks* directly or through the *Khayr al-Bayān*.

Side by side with the above activities he discovered that he himself was Pīr-i Kāmil, seeing dreams, in one of which he met Khiḍr and drank from him the water of life (*Ḥāl*, 54), the occasion being celebrated by his followers later by fasting on the day. He also heard voices from the unknown and received inspiration from God and passed, step by step, through the eight grades of spiritual elevation (see RAWSHANIYYA). He engaged himself in *dhikr-i khafī* (invoking the divine name mentally), and in due course, also "the Greatest name of God" (*ism-i aʿẓam*). When he entered upon his forty-first year he heard a voice saying that henceforth he should no more perform the legal ablutions, and instead of the prayers of the faithful, he should say those of the prophets (*Ḥāl*, 94). He now regarded all others as polytheists or hypocrites, and observed quadragesimal fasts (*čilla*).

The time had now come to preach to others. He was going with a caravan to India, but he returned home from Ḳandahār, had an underground cell constructed, in which he made his wife and a few others observe *čilla*s, to begin with. Later, he received orders to preach openly. On the basis of dreams of his own and others, people began to call him "Mian Roshān". He met a great deal of local opposition, in which his father and his pupils took a prominent part. They challenged his right to interpret the scriptures etc. in spite of his poor knowledge of them, though they admired his exceptional intelligence and his trenchant logic in debates. Similarly they challenged his claim to Mahdīhood and divine inspiration, and condemned his calling Muslims *kāfirs* or hypocrites. But he met their challenge squarely, though on occasions he became slightly conciliatory. His disciples began to increase greatly, and he appointed some as *khalīfa*s to work farther afield. They also clashed, wherever they went, with the local Pīrs, who aroused public opinion against the sect everywhere.

His teaching: The central doctrine of Bāyazīd could be briefly stated thus (see *Ṣirāṭ*, i): Gnosis of God ("the Truth") is an imperative duty (*farḍ-i ʿayn*). This gnosis without which obedience (*ṭāʿa*), divine worship (*ʿibāda*), charities and good works, are not acceptable to God, cannot be obtained except through a Perfect Spiritual Director (*pīr-i kāmil*). He is one who is a man of law (*sharīʿa*), of the Way (*ṭariḳa*), of the Truth (*ḥaḳiḳa*), of the gnosis of God (*maʿrifa*), of Nearness (*ḳurba*), of Union (*waṣla*), of Oneness with God (*waḥda*), of Tranquillity (*sukūna* = *sakīna* of *Ṣirāṭ*, 110). He is a Revealer of the truths of divine secrets, an Embodiment of *takhallaḳū bi-akhlāḳ Allāh*, *i.e.*, his spirit acquires divine qualities (cf. *ibid.*, 25). Seeking and obeying him is incumbent on all. Obeying him is obeying the Apostle of God, and therefore obeying God. Such a Perfect Director is Bāyazīd himself, who was told this both in dreams and when awake, and those who sincerely obey him would be led by him through the above stages to *tawḥīd* (cf. *Ṣirāṭ*, 24 f.).

Special stress was laid on the neophytes' repentance (*tawba*), retiring to cells, observing *čilla*s once a year, invoking the divine name in silence, meditation, and similar ascetic practices. When they had reached the last stage in their "ascent", presumably they looked upon themselves as free from the obligations imposed by the *sharīʿa* (cf. *Tadhkira*, 88a).

What *Dabistān*, 251 (*Naẓar* 2), gives as his doctrines are probably his war regulations relating to the period in which he was at war with the Mughals and other Afghān tribes hostile to him.

His missionary work outside his home town. He began with a village a day's journey from Kānīgurām, met violent opposition and fled back to his home town, where too there were strong reactions against him, amounting almost to his ejection from the community. But he adopted a conciliatory attitude and that saved the situation for a time. A *dāʿī* of his having prepared the ground among the Dāwarīs (or Dāwrīs) of the Tochī Valley in northern Wazīristān, he went there, and even performed some miracles. A clever agent of his then prepared the ground for him farther afield and in due course he appeared among the Bangash, then worked his way up and won over the Orakzīs, Tīrāhīs and Āfrīdis. Passing on to the Saraban land of Peshāwar, he converted numerous tribesmen of the Khalīl, Mohmand, Daʾūdzīs, Gagyānīs, Yūsufzīs, Tuʾīs and Ṣāfīs. Complaints against him having reached Kābul he was hauled up by the young governor of the Province, Akbar's brother Mīrzā Muḥammad Ḥakīm (b. 961/1554 d. 990/1583) and Bāyazīd had to face an inquisition conducted by Ḳāḍīkhān, the Ḳāḍī of Kābul. Bāyazīd gave clever answers and was allowed to return to Peshāwar. He now resumed his work among the Mohmandzīs and was so impressed with their sincerity and devotion to his cause, that he and his sons and a daughter married among them. A *dāʿī* then converted the Kāsīs of the Ḳandahār region, especially the Shinwārīs and Mohmandzīs and some Barech and Ṣāfīs of Ḳandahār.

After some years' work among them, the *dāʿī* appeared among the Sindīs and Balōčīs and made Sayyidpur (near Ḥaydarābād-Sind) the centre of his activities. The Pīr and his agents (who were allowed to work only in his name and never in their own) had a remarkable initial success everywhere, in spite of the violent opposition aroused by the rival *pīrs*, *ʿulamāʾ*, etc., except in Tīrāh, where such rivals do not seem to have existed. At this stage, Bāyazīd sent his missionaries (from Kalla Dher in Hashtnagar, *Makhzan*, f. 154b) to the rulers, nobles and *ʿulamāʾ* of the neighbouring countries inviting them to the acceptance of his claims. One of them was sent to the Emperor Akbar, another to Mīrzā Sulaymān of Badakhshān. Some more were sent to India, Balkh and Bukhārā. Sayyid ʿAlī Tirmidhī, the *murshid* of the Ākhund also got one (*Tadhkira*, f. 91b).

His war with the Mughals: Some shrewd people of the time, seeing his growing power, foresaw that Bāyazīd was about to draw the sword and cause bloodshed (*Ḥāl*, 423, 426, 437). The immediate cause of his warlike exploits is thus narrated in *Ḥāl*, 471 ff.: a caravan returning from India, on its way to Kābul, halted near a village peopled by an ultra-fanatical group of his followers. Infuriated by the gross neglect, as they thought, by the caravan people of the affairs of the next world, the villagers looted and destroyed the property of the caravan,

which brought down upon their heads the wrath of the authorities in Kābul, and the villagers were slaughtered and their children carried into captivity. On a written protest from Bāyazīd, Maʿṣūm Khān, the Governor of Peshāwar, was ordered to arrest him, but he escaped to a hill in the Yūsufzī region and, being besieged there, successfully fought his way to Khaybar and Tīrāh. This first battle-ground was named by him Āghāzpūr. The war lasted during the remaining 2½ years of his life, till his death in 980/1572-73. The details of it are supplied not by the *Ḥāl-nāma*, but by Mullā Darwīza, according to to whom Bāyazid was finally defeated at Torragha by Muḥsin Khān Ghāzī, who had led an expedition against him from Djalālābād. The Pīr fled on foot to the hills, suffered pangs of exhaustion and thirst and ultimately died at Kālā Pānī but was buried in Hashtnager (*Tadhkira*, f. 93b). Some Gudjars were found desecrating the tomb at night, so Bāyazīd's son and successor Sh. ʿUmar removed the coffin in which he was buried and kept it in front of him when on the march, until in the confusion of a battle (989/1581), it fell into the Indus. It is said to have been recovered later and buried in Bhattapūr, (*Ḥāl*, 483 f., 493-525). This place appears to have been three days' journey from Kanīgurām (*Ḥāl*, 156).

His literary and other cultural activities. Bāyazīd wrote an autobiographical-cum-propaganda work, and many treatises, to explain the tenets of the sect he had founded. Out of these treatises only two are available. In these his method is to quote some Ḳurʾānic verse or verses, then add relevant materials from the *ḥadīth* (of the soundness or otherwise of which he shows himself to be no discriminating judge) and where possible, supplement them by the sayings of holy men. This material is often repeated from work to work. Among *aḥādīth* he includes what he calls *āḥādīth-i ḳudsī*, some of which had been addressed to himself (*e.g.*, see *Ḥāl*, 87, 160). He also gives what voices from heaven said to him in Arabic or Persian (see, *e.g.*, *Ḥāl*, 88, 113, 117, 125). His Arabic, from a literary point of view, is weak and ungrammatical, even allowing for the fact that the MSS. of his works which have reached us are late copies. His chief opponent and contemporary Mullā Darwīza (*Tadhkira*, f. 89b) found in the *Khayr al-Bayān* Arabic words strung together "without a sense of proper syntactical relationship" (*bilā idrāk-i tarkīb*). These works were read and explained by him to the members of his family (*Ḥāl*, 689) and his other disciples, and the *Khayr al-Bayān* and *Maḳṣūd al-Muʾminīn* especially, acquired a semi-sacred character for them. He claimed that the former work had been revealed to him. Hotly pursued, on one occasion, at night, by the Yūsufzīs, his son ʿUmar halted his troops and waited till the work, which had been forgotten at some place on the way, had been retrieved (*Ḥāl*, 498). The *Maḳṣūd al-Muʾminīn* is said to have saved the life of another son of Bāyazīd (Djalāl al-Dīn), for, when he was carrying it, it shielded him by receiving the sword-cuts and dagger-thrusts from his enemies. A *darwish* heard a voice from the unknown asking him to retire to his home and devote himself to the study of these two books (*Ḥāl*, 390), and so on. Judging from what remains of his Afghānī prose, it seems that he attempted to write in rhymed prose (*sadjʿ*) following Arabic and Persian models, even to the detriment of the idiom of Pushto. Because of the nature of the subjects dealt with (religion, mysticism, morality), he had to use freely the familiar Arabic and Persian terminology along with the words of the Yūsufzī and Ḳandaharī dialects of Pushto (see *Urdu Encyclopaedia of Islām*, art. Bāyazīd Anṣārī). The following of his works are traceable:

1) *Khayr al-Bayān*, in 40 chapters (*bayāns*) (*Ḥāl*, 431). Some passages of it, according to the *Tadhkira*, were in Arabic and Persian, some in Afghānī and Hindī (but cf. *Dabistān* 251[12]) though "all the sections were inharmonious and incongruous" (*nā mawzūn wa nā muwāfiḳ*). The Ākhund even asserts that part of the work was contributed by Mullā Arzānī Khweshgī of Kasūr, a *khalīfa* of the Pīr. On his death-bed, when asked by his disciples for his last injunctions, Bāyazīd directed their attention to the *Khayr al-Bayān*, in which, he said, he had recorded unstintingly whatever was revealed to him (*Ḥāl*, 483). The work is said to have attempted an affirmation of pantheistic belief (*waḥdat-i wudjūd*) (*Maʾāthir al-Umarāʾ*, ii, 243). No copy of it is known to exist except the one (transcribed in 1061/1651, ff. 167) which was lent to Sir Denison Ross by someone and is now said to be intraceable. Prof. Morgenstierne (Oslo) published some extracts from it, with their English translation, in the *Indian Antiquary*.

2) *Maḳṣūd al Muʾminīn* (Arabic). Only two copies are known, one with me (with interlinear Persian translation), transcribed in 1224/1809, and the other in the Āṣafiyya transcribed 2 years later (see Cat. I 390/86, Brockelmann, S II, 991). This handbook of the Rawshaniyya doctrine was composed by Bāyazīd at the request of his eldest son ʿUmar (who is occasionally addressed in it as "O! my dear son!") for the benefit of the faithful who were to read, remember, and act according to it. It has 21 sections. The first thirteen forming more than half of the work, deal with such topics as Admonition, Reason, Faith, Fear, Hope, Spirit, Satan, Heart, Soul, This World and the Next, Trust in God, and Repentance; the last eight deal with the eight stages (see above) from *sharīʿa* to *sakūna*.

3) *Ṣirāṭ al-Tawḥīd* (Arabic-Persian). This partly autobiographical treatise begins with a description of the stages of his spiritual development up to the time when he discovered the *Pīr-i Kāmil* in himself, and ends in a *risāla* addressed specially to kings and amīrs. It contains an admonition to princes and describes the various disciplinary stages for the ascent of the soul of man, possible only under the guidance of the Perfect Pīr. He urges them to seek repentance at the hand of such a Pīr (*Ṣirāṭ*, 71 f., 184 ff.). Bāyazid tells those who had gone through spiritual exercises under his supervision or that of his disciples that they had won divine favour according to their capacity, for capacity and sincerity were indispensable for the 'ascent'.

It is stated in the colophon of the work that it was composed in 978/1570-1 and that "whoso studies it and acts according to it will learn *ʿilm al-tawḥīd*". A copy of the work was sent by the author through a special messenger to the Emperor Akbar, who was pleased to receive it (*Ḥāl*, 468), ed. M. A. Shakūr, Pashāwar 1952. The text is based on an original slightly defective at the beginning.

4) *Fakhr* (?, the MS. has نجر or لحر) *al-Ṭālibīn* (*Ḥāl*, 468 f.), a treatise sent by Bāyazīd to Mīrzā Sulaymān of Badakhshān at the time he sent his works to the various princes. No copy is known to exist.

5) *Ḥāl-nāma* (Persian), an autobiography of Bāyazīd re-edited and amplified by ʿAlī Muḥammad "Mukhliṣ" b. Abā Bakr Ḳandahārī, a "home-born"

(*khānazād*) of the sons of Bāyazīd and a *khalīfa* of the sect.

There is one undated copy (ff. 526) in Aligarh (Subḥān Allāh Oriental Library No. 920-37). From it the Pandjāb University copy was made recently (745, ll. 20), and the references given in this art. relate to this copy. No other copy of the work is known to exist, but Count Noer (A. S. Beveridge's tr., ii, 148) refers to some "existing fragments" of it.

Abā Bakr, father of ʿAlī Muḥammad, had served Djalāl al-Dīn as a boy, and later, commanded troops under Aḥad Dād, and still later came to India with the members of the family of Bāyazīd when they moved to India. ʿAlī Muḥammad served Bāyazīd's grandson Rashīd Khān in the Deccan, and settled down in Rashīdābād, a village in Shamsābād Maʾū (*Ḥāl*, 714, *Maʾāthir al-Umarāʾ*, ii, 250), near Āgrā (*Gazet. of Jullundur District*, 99).

The text of the *Ḥāl-nāma* of Bāyazīd, the editor tells us in his preface, had become corrupt in course of time and a continuation relating to the military exploits of his sons and grandsons had to be added. At the request of some friends he supplied this, drawing upon written and oral sources. The narrative, which is brought down to the accession of Awrangzīb (1069/1659, *Ḥāl*, 729) is of a considerable literary merit, though it has lengthy digressions in prose and verse (often of his own composition) dealing with the doctrines of the sect and minor incidents relating to the faithful. The earlier part, giving a full and detailed account of the life of Bāyazīd, has much fewer dates, and some of them, as compared with those in the latter part, are open to doubt, but the narrative of the life of Bāyazīd lacks details of his war with the Mughals (fought in the last 2½ years of his life) and ends abruptly. But he gives a very full and up-to-date account of the descendants of the Pīr, both male and female, and their genealogies.

The *Ḥāl-nāma* (453 f.) claims that Bāyazīd made definite contributions towards the cultural rise of the Afghān people. He was the first, according to this work, to compose *ḳaṣīdas*, *ghazals*, *rubāʿiyyāt*, *ḳiṭʿas*, *mathnawīs* etc. in Pushto, though before him people wrote only a verse or two. This, however, is an exaggerated statement, as *ḳaṣīdas* etc., of a much earlier date are known to exist. But it may be true that following his example, Bāyazīd's sons and disciples composed several Pushto *dīwāns*, full of lofty truths and fine ideas. Other Afghāns, outside the sect, also followed these models, and an impetus was given to the more frequent use of Pushto as a literary medium.

The Pīr also made contributions towards the improvement of the music of the land. Ḥādjdjī Muḥammad, a *khalīfa* of Mīr Faḍl Allāh Walī (the Ḥurūfī ?: d. 796/1393), added some strings to the rebeck (*rabāb*) and as a result of his instructions the Afghān musicians produced new tunes, generally dance-tunes, but the players could not play them with proper rhythm, so Bāyazīd improved their rhythm and under his guidance the musicians were able to compose *surūd-i sulūk* ("the mystic's song", a sort of devotional music) and other pleasing tunes, and the following six modes :

n. ā. s. a. r. i. (*dhanāsarī* ?); *pandj parda*; *čahār parda*; *si parda* (five, four and three melodies); martial notes (for the battlefield); and *maḳām-i shahādat* ("the mode of bearing witness or martyrdom"). Even as a boy Bāyazīd had shown great sensitiveness to music and would dance in ecstatic delight when songs were sung (*Ḥāl*, 23 f.). Several of his sons and grandsons proved to be expert musicians and one of them, Aḥad Dād, employed musicians who took turns and played music day and night for his entertainment (*Ḥāl*, 581 f.; see also 672, 680 etc.).

The Pīr is also credited with the popularisation of the Āfghān script.

Decimated by internal and external wars, violently opposed by the *ʿulamāʾ*, and later mostly scattered in various parts of India, the followers of the sect almost disappeared. The tenets of the sect are said to be professed to-day only "by the immediate descendants of the founder in Tīrāh and Kohāt and some of the Bangash and Orakzai Pathāns" (*Gazetteer of the Peshawar District* 1897-98, 60; cf. J. Leyden, *Asiatic Researches*, xi, 363).

Bibliography: Apart from the standard Mughal historical works, particularly the *Maʾāthir al-Umarāʾ*, ii, 242 (Bibl. Ind.), the following are important:

ʿAlī Muḥamad b. Abā Bakr Ḳandahārī, *Ḥāl-nāma-i Pīr-i Dastgīr* (Pandjāb University Library MS.; Bāyazīd Anṣārī, *Maḳṣūd al-Muʾminīn*, my MS.; idem, *Ṣirāṭ al-Tawḥīd*, ed. Muḥammad ʿAbd al-Shakūr, Peshāwar 1952; Ākhund Darwīza, *Makhzan al-Islām*, my MS., f. 8b., 151b., also *the Cat. of Persian MSS. in the Library of the India Office*, nos. 2632-8; idem, *Tadhkirat al-Abrār wa 'l-Ashrār* (Persian), Pandjāb University MS., f. 82 ff., *s.a.* A.H. 1021 (see also Rieu's Cat., i, 28. Or. 222); J. Leyden, *On the Roshenian Sect and its Founder, Bāyazīd Ansārī* (*Asiatic Researches*, xi, 363 ff.); Graf Noer, *Kaiser Akbar*, ii, 180 f. (English tr. by A. S. Beveridge, Calcutta 1890, ii, 138); G. Morgenstierne, *Notes on an old Pashto Manuscript containing the Khair-ul-Bayān of Bāyazid Ansāri*, in *New Indian Antiquary*. BĀYAZĪD AL-BISṬĀMĪ [see ABŪ YAZĪD AL-BISṬĀMĪ].

BAYBARS I, AL-MALIK AL-ẒĀHIR RUKN AL-DĪN AL-ṢĀLIḤĪ, fourth Mamlūk sultan of the Baḥrīd dynasty. He is said to have been born in 620/1233 and to have been one of a group of Ḳipčāḳ Turk slaves purchased by the Ayyūbid sultan Malik Ṣāliḥ. His first master had been Aydakin Bunduḳdār, whence his surname Bunduḳdārī, which also explains in Marco Polo's work (ed. Hambis, II), "Bondocdaire, sultan of Babylonia". He appears first in history in 636/1239, in prison with his master Malik Ṣāliḥ at Karak. Several months later he was fighting in Syria on behalf of the sultan of Egypt, serving there a rough apprenticeship in the military life, not to mention the intrigues of the last Ayyūbid princes which offered a gloomy example for his contemplation. His first military accomplishment consisted in taking command of the Egyptian army on the battlefield at Manṣūra, which ended in the decisive victory of Fāraskūr and the capture of Louis IX king of France. It was then that upon his instigation that Tūrān-Shāh was assassinated in 648/1250, the plot unfolding in the guise of resistance to the enemy.

This murder, whose odious character is scarcely disputable, settled nothing. Weakness was general. Baybars undoubtedly bore the responsibility for it, and in it the reign of the Mamlūk sultans had its beginning. The origins were bloody and when

Sultan Ḳuṭuz assumed power the Mongol hordes had begun their invasion of Syrian territory. A bloody encounter took place at ʿAyn Dj̲ālūt [*q.v.*] in Palestine, Sulṭān Ḳuṭuz distinguishing himself there with enormous valour, as well as the Mongol general who was killed. The Egyptian success was decisive, owing to the tenacity of a sultan who against all odds had managed to field an army. Baybars had fought in the vanguard.

We know little of the sequence of events which led to yet another tragic end; Ḳuṭuz was assassinated in his tent, this deed being accomplished by a group of officers of which Baybars was one. Clashing ambitions have been mentioned; at any rate it was Baybars who gained the throne (658/1260).

There had already been two murders; but the glory of the sovereign will conceal from history the perfidy of the officer, We will examine his rule chronologically, for the evolution of events allows an evaluation of his activity, which can be confirmed by the written sources. His period cannot but recall that of Saladin: the achievement of a unity of command, and the victorious war against the Franks. These are two elements of the comparison which accure to the advantage of Baybars. He wiped out feudalism rather than created it: he had no family to provide for. Moreover, Saladin's offensive, of which the title to glory is the capture of Jerusalem, was a clap of thunder without consequence. In this respect too the advantage lies with Baybars, whose forced marches, rapid and unexpected, were not without method: every inch of conquered land was put immediately in a state of defence.

Internally the reorganisation of the state manifests an exceptional harmony and equilibrium. Beyond his actions, which one can establish by deeds and dates, Baybars gives the impression of a man who dominates events with an imperturbable optimism.

From the year 659/1261 the new sultan consolidated the key points of his future offensives. Every citadel which had been destroyed by the Mongols, from Ḥims to Ḥawrān, were put in order and provided with victuals and ammunition.

In his eyes these military precautions were insufficient. He insisted upon being informed rapidly and upon being able to despatch orders with the same speed. Baybars established a regular postal service: twice a week he received information from every part of the empire. Under normal circumstances a despatch took four days to go from Cairo to Damascus. More urgent news was sent by pigeons, and delivered without delay. It would even happen that the sultan received information in a state of almost complete nakedness. Such a setting tended to increase the zeal of his functionaries.

He reconstructed entirely the arsenals, and had warships and cargo vessels built.

The sultan began by nibbling at the domains of the Ayyūbid princes: he appointed an officer to take charge of the administration of the town of S̲h̲awbak, which was done without striking a blow. The sultan went to Aleppo, sounded the Franks in the region of Antioch, and finished the campaign at Damascus. In 661/1263, after a year spent in Cairo, the sultan threatened Saint Jean d'Acre, then turned against Karak, thus eliminating an Ayyūbid principality, returned to Damascus, finally re-entering Egypt and inspecting the city of Alexandria. In 662/1264 Baybars annexed the territory of Ḥims, whose Ayyūbid prince had just died without heir. He began intensive military preparations and soon fielded a formidable army.

On the first of Rabīʿ II 663/21 January 1265, this enormous army, commanded by the sultan, left Cairo, for the first stage of the great offensive against the Franks, which would not terminate until 670/1271. Their strongholds were taken one after another. In 663/1265 it was the capture of the port of Caesarea which split the Frankish possessions in the south and isolated Jaffa; further north ʿAt̲h̲līt̲h̲ and Ḥayfā were occupied. The towns were destroyed: in the event of a reverse they could not serve as supports for the enemy. Then the army turned south and took the port of Arsūf. In 664/1266 simultaneous attacks were made all along the front, but the principal effort was directed toward the town of Safad, to the northwest of Lake Tiberias: the place was taken after a heavy siege. In 666/1268 Baybars turned towards the enclave of Jaffa which did not hold out for a day. One may read the account of that exploit, still engraved on the gate of the great mosque at Ramla in Palestine: "He lay siege to Jaffa at dawn and took it, with God's permission, at the third hour of the same day". A few weeks later a new line of defense was forced: the river Litani and the castle of Beaufort, opposite Tyre, became Muslim, Suddenly the Egyptian troops appeared at the northern point of the Latin kingdom, and Antioch capitulated. This conquest had a considerable repercussion, perhaps greater than the capture of Jerusalem by Saladin. Since the beginning of the Crusades, Antioch had not once left the possession of the Franks. The neighbouring fortresses could resist no longer and Baybars took advantage in concluding peace with the king of Little Armenia, who was obliged to surrender a part of his domain to the sultan of Egypt. A final offensive, starting from Ḥims, cut the distant defences of Tripoli. The strongholds of Safīt̲h̲ā, the castle of Crac and of ʿAkkār were taken in two months, in the course of 669/1271.

Meanwhile the sultan, habitually dividing his time between Cairo and Damascus, had made the pilgrimage in 667/1269. Negotiations led in 668/1270 the lord of the Ismāʿīlī fortresses to pay tribute to the sultan, who, preoccupied with the expedition of Saint Louis to Tunis, thought for a moment of going to the aid of the Mag̲h̲ribīs. Reassured, the sultan set off again for the conquest of the Ismāʿīlī fortresses, then returned to Cairo. The year 670/1272 was dedicated to a general inspection of Syria. The historians agree in their accounts of how the sultan would arrive unexpectedly, changing direction en route to preclude any foreknowledge of his itinerary. In 671/1272-73, he left Damascus for Bired̲j̲ik, overwhelming a Mongol detachment near there. Other divisions of the army were operating in Nubia, in the region of Barka and in Armenia. The Franks had at last got a respite. After a year of calm, Baybars was again in Armenia, during 674/1275, where he took Sīs and Ayās. The year 674 is marked by an expedition to Nubia, led by the sultan's lieutenants. In 675/1276 Baybars was in Asia Minor where he took Caesarea (Kayseri) in Cappadocia, after having defeated the Sald̲j̲ūḳ troops and their Mongol allies. Then he returned to die at Damascus in the early part of 676/1277, at the end of a substantially full life.

The Crusaders never recovered. One can evaluate the territorial losses of the Frankish kingdom at the death of Baybars: the principality of Antioch virtually existed no longer; in the south the frontier had been pushed back from Jaffa to Acre. Everything considered, the Crusaders possessed

only a narrow strip of the coast, while the Mamlūks held all of the crests.

The seventeen years of Baybars' reign show a balance of thirty-eight campaigns in Syria. Of the nine battles with the Mongols, only the last was due to the initiative of the sultan, the others being considered counter-attacks. There were five significant engagements with Little Armenia. The Ismāʿīlī sectaries, the Assassins, suffered three attacks. On the Franks, the most abused, the Egyptian troops inflicted twenty-one defeats.

The military activity of the sultan was not the result only of the orders which he gave; he took personal command in fifteen battles, not fearing when it was necessary, to expose his own life. A few figures give an idea of Baybars' travels: he does not appear to have spent more than half the period of his reign in his capital at Cairo; he left it twenty-six times, and certainly covered more than forty thousand kilometres.

One sees in the rule of Baybars a splendid example of energy, bringing to light an unexpected political recovery. Under the impetus of this exceptional leader, Egypt, who had just undergone an internal revolution and had been the target of powerful enemies—Crusaders, Mongols, Ismāʿīlī—was suddenly to impose its rule upon the Orient. The confusion following the fall of the ʿAbbāsid caliphate in Baghdād, the hints of alliance between Crusaders and Mongols, the potential conspiracies of the dispossessed Ayyūbid princes, and the personal ambitions of the high ranking Mamlūk officers, are all elements of the tragic combination which makes Baybars' success so extraordinary.

It was a stroke of genius on his part to welcome a refugee of the ʿAbbāsid family, after the disastrous invasion of the Mongols in 656/1258, and to recognise him in Cairo as supreme pontiff. It was not merely a spiritual gesture, for the ruler had seen in it immediate and tangible consequences: suzerainty over the Holy Cities of the Ḥidjāz. Finally, the Egyptian state might from that time on style itself the "Islamic Kingdom".

The exploits of this extraordinary warrior made him a legend in his own lifetime; the epic of Baybars is well below his actual biography. His life is indeed a story of adventure: the death of the hero, drinking a cup of poison prepared by another, is but part of the perfect romance.

Bibliography: The two chief primary sources for the life of Baybars are the biographies of Ibn ʿAbd al-Ẓāhir and of Ibn Shaddād, neither of which is fully extant. A British Museum manuscript of a version of Ibn ʿAbd al-Ẓāhir, covering the period up to the beginning of 663/1265, was published, with an English translation, by Mrs. S. F. Sadeque, *Baybars I of Egypt*, Dacca 1956. A more complete ms. of the same version, preserved in the Fātiḥ library, is being edited by Mr. A. A. Khowaitir (see further B. Lewis, in *Speculum*, xxvii, 1952, 488; Cl. Cahen in *Arabica*, v, 1958, 211-2; P. M. Holt in *BSOAS*, xxii, 1959, 143-5). A unique and incomplete manuscript of Ibn Shaddād's biography of Baybars, covering the years 670-76/1272-78, was found in Edirne by Ş. Yaltkaya, who published an abridged Turkish translation of it (*Baypars Tarihi*, Istanbul 1941) without the Arabic original. Further information will be found in the general historical sources (Maḳrīzī, Dhahabī, Ibn Taghribirdī etc.). See also E. Quatremère, *Sultans Mamlouks*, 1 ff.; M. F. Köprülü, *Baybars*, in *IA*; M. Dj. Surūr, *al-Zāhir Baybars*, Cairo 1938, and the general histories of medieval Egypt by G. Wiet (*Histoire de la Nation égyptienne*, iv, Paris, n.d, 367-82, 403-38) and S. Lane-Poole (*A History of Egypt in the Middle Ages*[4], London 1914, index). For inscriptions see *RCEA*, xi, nos. 4221, 4344; xii, nos. 4476 to 4478, 4485, 4501, 4528, 4552, 4553, 4556, 4557, 4562, 4565, 4586, 4588, 4589, 4593, 4600, 4608, 4611, 4612, 4623 to 4626, 4638, 4660, 4750, to 4662, 4673, 4686, 4690, 4692, 4714, 4723, 4724, 4726 to 4728, 4730, 4732 to 4735, 3737 to 4740, 4746, 4750 again, 4751, 4752. Further bibliography will be found in G. Wiet, *Les Biographies du Manhal Ṣāfī*, no. 708. (G. WIET)

BAYBARS II, AL-MALIK AL-MUẒAFFAR RUKN AL-DĪN MANṢŪRĪ DJĀSHNIKĪR, Mamlūk sultan of Egypt. Perhaps of Circassian origin, Baybars belonged to the Mamlūks of Sulṭān Ḳalāwūn. Appointed *major domo, ustādār*, during the first reign of Muḥammad b. Ḳalāwūn (693-94/1293-94), he was promoted to commander of a thousand by Sulṭān Katbughā, and his power increased, at the same time as that of his rival, Salār. Both were equally ready to assume power upon the assassination of Sulṭān Lādjīn in 698/1299.

They put on the throne for the second time the young Muḥammad b. Ḳalāwūn. The two men were not bound by any deep friendship but they were too afraid of one another to allow their differences to persist, and so resigned themselves to ruling jointly, at the expense of a monarch then aged fourteen. At every mention of an important measure taken during that period, the Arab historians do not neglect to attribute it to both *amirs*, for example, in the rigorous directives against the Christians and Jews in 700/1301. The *duumvirs* managed a vigorous resistance to the invasion of the Mongol Ghāzān. They put down, with unheard of cruelty, an insurrection of the Arab tribes of Upper Egypt, who had elected two chiefs with the surnames Baybars and Salār. Ten years later Muḥammad, weary of their tutelage, abdicated.

Baybars, possessing more Mamlūks than Salār, was able to succeed alone to the sultanate, in Shawwāl 708/April 1309, and it was then that his weakness became apparent. In fact, Muḥammad was able to form an army from the fortress of Karak, to which he had retired, and in Ramaḍān of the following year/February 1310, he began his third reign. Baybars had fled. Apprehended, he was brought to Cairo and strangled on 15 Dhu 'l-Ḳaʿda 709/16 April 1310.

SĪRAT **BAYBARS,** an extensive Arabic folk-tale purporting to be the life-story of the Mamlūk sultan Baybars I (1260-77). Many of the people and the events in the *sīra* are historical, but its overall character, as well as most of the descriptive detail, is fictitious. Its only historical value lies in the fact that it represents the type of intellectual nourishment accepted by large parts of the Muslim population in Cairo in the late Middle Ages and in the following centuries. Its real interest lies rather in the fields of sociology, folklore, and history of literature.

The novel opens with a description of the end of Ayyūbid times and the beginning of Mamlūk rule, up to the accession of Baybars. Later sections treat the hero's warlike exploits, particularly those

against the Christians (Byzantines and Crusaders) and the Persians (= Mongols). Towards the end, the novel grows more and more into a fantastic tale of adventure, sorcery and roguery. Traditional tales and motifs, also to be found in other Arabian contexts such as the *Thousand and One Nights* (as well as some which are known in the Iranian tradition), have been used. Baybars's cunning but basically faithful servant ʿUthmān—half groom-cum-pickpocket, half saint—and (in the later parts of the novel) an Ismāʿīlī master of disguise by name of Shīḥa also play large parts. Shīḥa is constantly on the move, reconnoitring, freeing Muslim prisoners, and harming or at least scaring his enemies with his craftiness and pranks. His opponent on the Christian side is the dangerous Guwān (= Juan?; the original name given is Girgīs), a deadly enemy of Islam. Besides the Mamlūks, there are also Syrian Ismāʿīlīs (*i.e.*, Assassins, even though they are never called such) who take part in the battles. The printed editions give an outline, at the end, of the history of Egypt from Mamlūk times to the present day. This is a subsequent addition, which has nothing to do with the actual novel.

Historical events are presented as seen from a bourgeois point of view. The novel has a special predilection for impoverished merchants or craftsmen. Pictures of life in the streets of Cairo are particularly attractive. Amongst the degenerate Mamlūk soldiery, Baybars appears as the just ruler who protects his subjects and fights corruption. Crude jokes, puns, and situations of a certain primitively comic nature, appealed to the uncultured taste of the listeners (the *sīra* was probably always meant to be recited, not read). A definite Islamic conception of the world underlies the whole. Christian and other opponents of Islam are—unless they are later converted—painted in the blackest colours. There is an underlying offensive religious fanaticism. As all non-Muslims are necessarily villains, they have no claim to decent treatment, still less to pity, and none whatever to respect. Things are occasionally very harsh among Muslims, too, but, on the other hand, honourableness receives due praise. Great stress is laid on abstaining from wine; adultery is decried; saints are frequently mentioned. Aḥmad al-Badawī appears in the story of Baybars's youth. The most prominent saint in the later parts of the *sīra* is Sīdī ʿAbd Allāh al-Maghrāwī. He is the Muslims' helper in all plights, particularly in journeys across the sea (Wangelin, 360-2).

The literary form of the *sīra* corresponds to that of similar Arabic popular tales. The prose tale is interrupted and enlivened by sections of rhymed prose and interspersed with poems. These (in part quotations, in part verses made up for the *sīra*, in classical metres as well as strophic form), are not, however, evenly distributed. So far there has been no close study of these (cf. Wangelin, 307). The language is somewhat colloquial, particularly in the manuscript texts.

The first literary mention of *Sīrat Baybars*, though indirect, is a note by Ibn Iyās (Wangelin, 307) at the beginning of the 16th century. According to U. J. Seetzen, E. W. Lane, and J. G. Wetzstein, public recitals of the *Sīrat Baybars* were very popular in Cairo and Damascus in the 19th century. Ṭāhā Ḥusayn mentions such recitals and the sale of printed editions (or part-editions?) of the *sīra* amongst the Egyptian fellaheen in the story of his youth (*Al-Ayyām*, Cairo 1929, 21 and 83). Some parts of the novel have been given in translation by E. W. Lane in *The Manners and Customs of the Modern Egyptians*, and in G. Weil's first edition of his translation of *The Thousand and One Nights*. W. Ahlwardt has given a detailed description of some of the Berlin manuscripts of the *sīra*. Helmut Wangelin has produced the first monograph on the novel, giving an extensive table of contents based on the first printed edition of the year 1908-09.

The manuscripts of the *Sīrat Baybars* are comparatively recent. Levi Della Vida describes a version in the Biblioteca Vaticana which dates from the 10th/16th century, and which, unlike the other texts, has only some 500 pages. Possibly this represents an earlier stage in the development of the novel. The two texts quoted by Ahlwardt (vol. 8, 143 f.) under the numbers 9163 and 9164, on the other hand, appear to be subsequently shortened versions. This is also borne out by the absence of interpolated songs. The history of the development of the *sīra* would probably become clearer if the different manuscripts were to be classified and compared in detail. It is questionable, however, whether it would be worth the time involved.

BAYBARS AL-MANṢŪRĪ. This Mamlūk general and historian began his career as a slave of al-Malik al-Manṣūr Ḳalāʾūn (thence his by-name "al-Manṣūrī"). In the retinue of Ḳalāʾūn Baybars participated in 663/1265 in the campaign of Sulṭān Baybars I against the Syrian Franks, in 664/1266 in campaigns in Syria and Cilicia, in 666/1268 in the siege of Antioch and in 673/1275 in another campaign in Cilicia. Kalāʾūn, who had become sultan of Egypt and Syria, appointed Baybars governor of the province of al-Karak in 685/1286. His son and heir al-Malik al-Ashraf Khalīl removed Baybars from this post in 690/1291, whereupon he returned to Egypt and took part in the siege of Acre, in the siege of Ḳalʿat al-Rūm in Asia Minor in the following year and in two expeditions against the Mongols. When in Muḥarram 693/December 1293 al-Malik al Nāṣir Muḥammad was elected sultan, he appointed Baybars general (*muḳaddam alf*) and gave him the high post of *dawādār* (chief of the chancery). From that time

Baybars' career was linked to the fate of this prince, who was twice deposed and reinstalled. Baybars lost his post after al-Malik al-Manṣūr Lād̲j̲īn had become sultan instead of al-Malik al-Nāṣir Muḥammad, but he was reinstated on al-Malik al-Nāṣir's return to the throne, in 698/1299. In the following years he fulfilled both military and administrative tasks, until he was deposed from his post of *dawādār* in 704/1304-05. Meanwhile al-Malik al-Nāṣir Muḥammad had lost all influence on the government and had become a mere puppet in the hands of two powerful generals and at last he abdicated formally. Baybars al-Manṣūrī was an ardent partisan of this prince and made strenuous efforts to have him reinstalled. When this came about in 709/1310 Baybars was entrusted with various administrative tasks and on 17 D̲j̲umādā I 711/1 October 1311 he was appointed viceroy of Egypt (*nā'ib al-salṭana*), second to the sultan only. But he held the post less than a year. In Rabīʿ II 712/August 1312 he was deposed and sent to the state prison in Alexandria, where he remained for five years. He died on 25 Ramaḍān 725/4 September 1325, about eighty years old.

Baybars was a pious Muslim, fond of theological studies, and besides his military and political activities he found time to write historical works, which he did with the help of a Christian secretary. His chief work was a general history of the Islam until the year 724/1324 called *Zubdat al-Fikra fī Ta'rīk̲h̲ al-Hid̲j̲ra*. This voluminous work, which is divided into centuries, is based in its former parts on the *Kāmil* of Ibn al-At̲h̲īr, whereas its last part is an important source for the history of the Baḥrī Mamlūks, since the author tells the story of campaigns and political events in which he participated himself. The strong personal note of the *Zubdat al-Fikra* is even more conspicuous in the account which Baybars al-Manṣūrī gives of the political history of Egypt at the end of the 13th and at the beginning of the 14th centuries, where he does not conceal his strong bias for al-Malik al-Nāṣir Muḥammad. His work was much used by other historians, among whom al-ʿAynī should be mentioned especially. It was abridged and continued by a later author, whose work is preserved in MS. Bodleiana I, 704. Baybars al-Manṣūrī himself wrote a shorter history of the Baḥrī Mamlūks, which he called *al-Tuḥfa al-Mulūkiyya fi 'l-Dawla al-Turkiyya*. This work, partly written in rhymed prose, relates the history of the Mamlūks up to 711/1311-12. Al-Sak̲h̲āwī also mentions a History of the Caliphs as written by Baybars. It was called *al-Laṭā'if fī ak̲h̲bār al-k̲h̲alā'if*.

BĀYBŪRD (BAYBURT), known to the Byzantines in the time of Justinian as βαιβερδών, is situated on the Çoruh river, about 100 km. to the north-west of Erzurum. The Sald̲j̲ūḳ Turks overran this region in the years 446-447/1054-1055. After the battle of Manzikert in 463/1071 Bāybūrd came under Turkish rule, now of the Saltukids at Erzurum and now of the Dānis̲h̲mends at Sivas, although the Byzantines, who still held Trebizond, did in fact recapture the town for a time in the reign of Alexios I Komnenos. During the 13th and 14th centuries Bāybūrd, under the political domination of the Sald̲j̲ūḳ sultans of Rūm and later of the Mongol Il-K̲h̲āns of Persia, prospered from the active commerce which, in the hands of Christian (*i.e.*, Venetian and Genoese) as well as Muslim merchants, flowed along the route leading from Trebizond to Erzurum and thence eastward to Tabrīz. The D̲j̲alāyirids and, after them, the Aḳ Ḳoyunlu Turcomans had control of the town from about the mid-14th to the close of the 15th centuries. Bāybūrd fell to the Ottomans in 920/1514 during the course of their Čāldirān campaign against the new Ṣafawīd state in Persia. Ottoman rule over Bāybūrd and its adjacent territories was consolidated in 940-942/1533-1536, when Sulṭān Sulaymān organised on a firm basis the *eyālet* of Erzurum. The Russians occupied the town in 1829, much of the old fortress of Bāybūrd being ruined in the course of the fighting. Russian forces also defeated the Ottomans in the battle of Bāybūrd (July 1916) during an offensive directed against Erzind̲j̲ān. Bāybūrd was in Ottoman times a *ḳaḍā'* of the *sand̲j̲aḳ* of Erzurum in the *eyālet* of that name, but is now included in the present Turkish province of Gümüşhāne. Its population was estimated in 1935 at 10,339 inhabitants, the figure for the entire *ḳaḍā'* being given as 64,813 people. The region is noted for its production of cereals, wool, hides, etc.

AL-**BAYḌĀ'** (EL-BEIZĀ'), "the white town (castle)", a common Arabic place-name, designing localities scattered all over the Islamic territory. Hamdānī (*Ṣifa*) quotes four places with this name; Yāḳūt has sixteen different al-Bayḍā's. Most important of these is the Persian town al-Bayḍā', situated in the province Fārs, N. of S̲h̲īrāz and W. of Iṣṭak̲h̲r. Its original name was Nasā. Being the chief town of the Kāmfīrūz district, it was as large as Iṣṭak̲h̲r in the 4/10th century, surrounded by fertile pasture lands. Several scholars carry the name of this place (see AL-BAYḌĀWĪ). Also al-Ḥallād̲j̲ [*q.v.*] was born here. For the S. Arabian town al-Bayḍā', the main place of Upper Bayḥān, see art. BAYḤĀN.

BAYDAḲ [see S̲H̲AṬRAND̲J̲].

AL-**BAYḌĀWĪ**, ʿABD ALLĀH B. ʿUMAR B. MUḤAMMAD B. ʿALĪ ABUʾL-KHAYR NĀṢIR AL-DĪN. He belonged to the Shāfiʿī school, and attained the position of chief *ḳāḍī* in Shīrāz. He had a reputation for wide learning, and wrote on a number of subjects including Ḳurʾān exegesis, law, jurisprudence, scholastic theology, and grammar. His works are generally not original, but based on works by other authors. He is noted for the brevity of his treatment of his various subjects, but his work suffers on this account from a lack of completeness, and he has been blamed for inaccuracy. His most famous work is his commentary on the Ḳurʾān, *Anwār al-tanzīl wa-asrār al-taʾwīl*, which is largely a condensed and amended edition of al-Zamakhsharī's *Kashshāf*. That work, which displays great learning, suffers from Muʿtazilite views which al-Bayḍāwī has tried to amend, sometimes by refuting them and sometimes by omitting them. But on occasion he has retained them, possibly without fully realising their significance. In his introduction he does not claim to be producing an original work. He says that he had long wished to produce a book which would include the best of what he had learned from leading Companions, learned Followers, and upright men of early days who were of lesser rank. He also purposed to include allusions which were the result of his own and his predecessors' researches. It would contain some readings of 'the eight famous *imāms*' (for al-Bayḍāwī adds Yaʿḳūb of al-Baṣra to the more normal number of seven readers of the Ḳurʾān), and would also include readings peculiar to one or other of the recognised readers. The result is a work which has been very popular, and has accordingly been published in many editions. Numerous commentaries have been written on the whole work, or on parts of it. Of these Brockelmann lists 83, after which he mentions two works which draw attention to places where al-Bayḍāwī has failed to remove al-Zamakhsharī's heresies. Of the many editions of the work mention may be made of that by H. O. Fleischer (Leipzig 1846-8), 2 vols., *Indices* by W. Fell (Leipzig 1878); and that of Cairo, 1330 A.H., 4 parts in 2 vols., with the commentary of al-Khaṭīb al-Kāzarūnī, prescribed for sixth year students in the Azhar. Other editions are mentioned in Brockelmann and Sarkis. Among al-Bayḍāwī's other works which are extant in print or in MS are *Minhādj al-wuṣūl ilā ʿilm al-uṣūl* (jurisprudence); *al-ghāya al-ḳuṣwā* (manual of law); *Lubb al-albāb fī ʿilm al-iʿrāb* (grammatical); *Miṣbāḥ al-arwāḥ* and *Ṭawāliʿ al-anwār min maṭāliʿ al-anẓār* (scholastic theology). He also wrote a work in Persian, *Niẓām al-tawārīkh* (ed. with notes in Hindustani by Sayyid Mansur, Ḥaydarābād 1930), dealing with the history of the world up to 674/1275. Al-Suyūṭī says that al-Bayḍāwī died in 685/1286, quoting al-Ṣafadī as his authority. He says that al-Subkī mentioned 691/1292, but al-Subkī does not give a date in his *Ṭabaḳāt*. Yāfiʿī gives 692/1293. Rieu (*Suppl. to the Cat. of the Arab. MSS in the B.M.*, p. 68) quotes a statement that he died in 716/1316.

Encyc. de bibl, arabe*, Cairo 1928-30, 616 ff.; Margoliouth, *Chrestomathia Baidawiana*, London 1894; Th. Nöldeke, *Geschichte des Qorāns*, 2nd edn., Leipzig 1909-1938, ii, 176, iii, 242. (J. ROBSON)

AL-**BAYDHAḲ**, ABŪ BAKR B. ʿALĪ AL-ṢINHĀDJĪ, author of Memoirs on the beginnings of Almohad history. His name was known only through extracts quoted by Ibn Khaldūn in his *K. al-ʿIbar*, by the anonymous author of *al-Ḥulal al-Mawshiyya*, and from various passages in which Ibn al-Ḳaṭṭān, author of the *Naẓm al-Djumān*, reproduces him. The discovery of the bundle of papers (no. 1919) in the library of the Escorial by E. Lévi-Provençal, and their publication in the *Documents inédits d'histoire almohade*, brought al-Baydhaḳ to light, as through a trap-door, from the obscurity in which he lay. We find in his work "the actual Memoirs of the experiences of one who frequently took an active part in the events he sets down and who immediately appears as one of the early Almohads. At the first glance it can be seen that this is no chronicle of the usual type or form. The new information provided on each page and its character of authenticity nearly always enables us, in a remarkable manner, to complete our knowledge of the Almohads in North Africa, which has hitherto been exiguous. The thirty six pages of the manuscript have no lacunae in the text. Unfortunately, however, the beginning is missing and also no title is given. The information we possess on al-Baydhaḳ is limited to what he himself tells us in his work, but this is too vague to serve as the basis for a biography. We find him in the following of the Mahdī, after the latter reached Tunis, and in that of ʿAbd al-Muʾmin, close to their persons and acting as a servant. And it was as such that he recorded in his work merely what he actually saw and heard". An enthusiastic convert, he adds to the facts he relates all such incidents of a supernatural order as serve to confirm the divine mission of Ibn Tūmart and the predestined choice of ʿAbd al-Muʾmin. We do not know whether he came with his master from the East. However, the appellation *baydhaḳ*, which passed from Persian into Arabic, is still in use among the Berbers of the South for the pawn in the game of chess. The one thing certain is that al-Baydhaḳ's mother tongue was Berber and that he did not know Arabic very well. This is born out by the colloquialisms abounding in his *Memoirs* and the Berber phrases appearing in his narrative. Remaining in the background as a faithful and devoted servant without political ambitions, and having served the Mahdī, ʿAbd al-Muʾmin and even Yūsuf I, down to whose time the information he provides extends fragmentarily, he disappears from the Almohad scene as suddenly as he appeared, silently and without fame".

Bibliography: E. Lévi-Provençal, *Documents inédits d'histoire almohade*, ix-xi; G. Marcy, in *Hespéris*, 1932, 61 ff. (A. HUICI MIRANDA)

BAYDU, the fifth in succession of the Mongol Il-Khāns of Persia and a grandson of Hülegü, the founder of the dynasty. He reigned only for a few months since Gaykhatu, his predecessor, was strangled on Thursday 6 Djumādā II/21 April 1295 and he himself was put to death on Wednesday 23 Dhu 'l-Ḳaʿda/5 October of the same year. Insulted by Gaykhatu, this young and apparently unimportant prince had become involved in a conspiracy of the Mongol amīrs against the Il-Khān which resulted in the latter's deposition and execution, and the conspirators had then invited Baydu to take possession of the throne. The new Il-Khān was at once opposed by his second cousin Ghazan [*q.v.*], the son of the Il-Khān Arghun and the nephew of Gaykhatu, who advanced from Khurāsān at the head of an army to demand

satisfaction for his uncle's death. An uneasy truce was concluded between the cousins; and when hostilities were later resumed the issue was decided without bloodshed in G͟hazan's favour thanks to the address and diplomacy of his general Nawrūz and in particular to G͟hazan's having, at Nawrūz's suggestion, adopted Islam and so won the support of the Muslims. Baydu was deserted by his adherents and met his end in Nak͟hčiwān (the present-day Nakhichevan in the Azerbaijan S.S.R.) whilst attempting to escape. During his brief reign he is said to have shown special favour to the Christians and so given offence to the Muslims, although according to Bar Hebraeus he was himself a convert to Islam.

(W. Barthold-[J. A. Boyle])

BAYHAḲ, formerly the name of a district to the west of Nīs͟hāpūr in K͟hurāsān. In Ṭāhirid times it contained 390 villages with a revenue assessment of some 236,000 *dirhams*. The chief towns were Sabzawār and K͟husrawd͟jird. It capitulated to a Muslim army under ʿAbd Allāh b. ʿĀmir in 30/650-1. In 548-6/1153-4 it was devastated by Yanāltegīn. According to Ḥamd Allāh Mustawfī its people were It͟hnā ʿAs͟harī S͟hīʿīs. Among its famous men were Niẓām al-Mulk, the *wazīr* of Alp Arslān and Malik-s͟hāh, Abu 'l-Faḍl Muḥammad b. Ḥusayn Bayhaḳī, the author of the *Taʾrīk͟h-i Bayhaḳī*, and ʿAbd al-Razzāḳ, the founder of the Sarbadār dynasty. Formerly marble quarries were worked there.

Bibliography: Ibn Funduḳ, *Taʾrīk͟h-i Bayhaḳ*; Muḳaddasī, 318, 326; Ḥamd Allāh Mustawfī, *Nuzha*, 149-50; Muḥammad Ḥasan K͟hān, *Mirʾāt al-Buldān*, i, 327; Dawlats͟hāh, 277; Barbier de Meynard, *Dictionnaire de la Perse*, 130.

(A. K. S. Lambton)

al-**BAYHAḲĪ**, Abū Bakr Aḥmad b. al-Ḥusayn b. ʿAlī b. Mūsā al-K͟husrawd͟jirdī, traditionist and S͟hāfiʿī *faḳīh*. He studied Tradition with Abu 'l-Ḥasan Muḥammad b. al-Ḥusayn al-ʿAlawī, al-Ḥākim Abū ʿAbd Allāh Muḥammad b. ʿAbd Allāh and others. He travelled in many countries in pursuit of this subject and is credited with having had a hundred *s͟hayk͟hs*. In theology he was an As͟hʿarite. He was of a frugal, pious, and scholarly nature. Towards the end of his life he went to Nīs͟hābūr where he taught traditions and transmitted his books. Al-Bayhaḳī was a voluminous writer, his writing being said to have reached 1000 fascicules. Although he was a traditionist of some note, he is reputed to have been unacquainted with the works of al-Tirmid͟hī, al-Nasāʾī, and Ibn Mād͟ja; and it is suggested that he had not seen the *Musnad* of Aḥmad b. Ḥanbal. He used al-Ḥākim's *Mustadrak* freely. Al-D͟hahabī said that his compass in Tradition was not great, but that he was an adept at dealing with it, being versed in the sub-divisions and the men who appear in *isnāds*. Among his writings his *K. al-sunan al-kubrā* (publ. Ḥaydarābād, 10 vols., 1344-55) is perhaps his most notable work. It has been held in high esteem; for example, al-Subkī declared that there was nothing like it in adjustment, arrangement and excellence. In this work notes are frequently added about the value or otherwise of traditions and traditionists, and attention is often drawn to the fact that particular traditions are included in one or other of the recognised collections. The Ḥaydarābād edn. has in each vol. a valuable index of men of the first three generations and traditions traced to them, with indication of the nature of the transmission. Another work which was valued is his *Nuṣūṣ al-S͟hāfiʿī*. He has been said to have been the first to collect al-S͟hāfiʿī's legal precepts, but al-Subkī denies this, saying he was the last, for this collection included more than earlier efforts, and therefore there was no need to repeat the work. Al-D͟juwaynī, Imām al-Ḥaramayn, highly praised his writings in support of S͟hāfiʿī doctrine. Al-Bayhaḳī was born in 384/994, died in 458/1066 in Nīs͟hābūr, and was buried in K͟husrawd͟jird.

BAYHAḲĪ, Abu 'l-Faḍl Muḥammad b. Ḥusayn Kātib (in Persian: Dabīr), famous Persian historian of the 5th/11th century, born in 385/995 at the village of Hārit͟hābād in the district of Bayhaḳ (today the district of Sabzawār in K͟hurāsān). At an early age he went to study at Nīs͟hābūr, then an important centre of learning. He soon entered the chancellery of the G͟haznawid rulers at G͟haznīn, with the function of secretary, and in this city he spent most of his life. He was at first the assistant of the celebrated writer Abū Naṣr Mus͟hkān, the director of this chancellery, and was charged with drafting and making copies of the most important official documents dispatched by Maḥmūd the G͟haznawid (389-421/999-1030) and his son and successor Masʿūd (421-33/1030-41); during the latter's reign his first master died, in 431/1039, and was replaced by Abū Sahl Zūzānī, with whom he was not always on good terms. During the reign of ʿAbd al-Ras͟hīd (440-43/1049-51), he was appointed director of the chancellery, but was dismissed after a short time. At the king's order, a Turkish slave named Nūyān confiscated all his property, and he was imprisoned on the pretext that he had not settled his wife's dowry. He remained in judicial imprisonment until the usurper Ṭug͟hril Birār occupied the throne in 443/1051 and imprisoned him in a fortress with other courtiers held in custody. After his release, he did not seek employment at court after the year 451/1059, and he died in the month of Ṣafar 470/2 August-21 September 1077. Bayhaḳī is the author of a voluminous history of the G͟haznawid dynasty, written in an archaic and sometimes complicated style. He states that he commenced his history with the year 409/1018-19, but a large part of the work has long been lost, and the only traces of it are found in the borrowings of other Persian historians—the last of whom lived in the 9th/15th century. This work, which comprised 30 volumes, has been variously entitled by different authors *D͟jāmiʿ al-Tawārīk͟h*, *D͟jāmiʿ fī Taʾrīk͟h-i Sabuktagīn*, *Taʾrīk͟h-i Āl-i Maḥmūd*, *Taʾrīk͟h-i Nāṣirī*, and *Taʾrīk͟h-i Āl-i Sabuktagīn*. It is almost certain, however, that the different volumes referring to each ruler would have borne different titles. Thus the whole collection of 30 volumes would have had a general title of *D͟jāmiʿ al-Tawārīk͟h or Taʾrīk͟h-i Āl-i Sabuktagīn*; the first part, relating to Sabuktagīn, would have the title of *Taʾrīk͟h-i Nāṣirī*, the second part, relating to Maḥmūd, that of *Taʾrīk͟h-i Yamīnī* or *Maḳāmāt-i Maḥmūdī*, the third part, of which the most important portions have come down to us,

would have had the title of *Ta'rīkh-i Mas'ūdī*, while the title of the final part or parts must remain a subject for conjecture. The part which has come down to us comprises volumes 5 to 10; volumes 11 to 30, and the first four volumes, are lost. As regards the six volumes which we possess (5 to 10), which are usually known as *Ta'rīkh-i Bayhaḳī*, and which ought rather to be called *Ta'rīkh-i Mas'ūdī*, the title which I have given them in my edition, there are certain noticeable lacunae in the sequence of events, which indicates that a portion of these volumes has also been lost. Volumes 11 to 30 must have covered the end of the reign of Mas'ūd and the reigns of his successors up to the beginning of the reign of Ibrāhīm in 451/1059, that is to say, the reigns of Mawdūd, Mas'ūd II, Abu 'l-Ḥasan 'Alī, 'Abd al-Rashīd and Farrukhzād, which extend over 19 years in all from 432/1040 to 451/1059. The known MSS. of the part which has come down to us close with the events of the year 432/1040, and the last year of the reign of Mas'ūd is missing. It can easily be seen that this part was written later, doubtless from notes made at the time, because the author five times gives us the date 451/1059 for the composition of certain passages. On one of the occasions on which he mentions this date, he states that he has been in the service of the Ghaznawids for twenty years, which proves that he entered their service in 431/1040 at the age of 46. Consequently 451/1059 was the year in which he began to write up his notes, which covered a period of 42 years from 409/1018 to 451/1059. He states that events prior to 409/1018 had been related by his predecessor the historian Maḥmūd Warrāḳ, whose work is lost. The end of chapter ten of the *Ta'rīkh-i Mas'ūdī* which has survived includes a portion of a chronicle on Khwārizm written in Persian by the great savant Abu 'l-Rayḥān al-Bīrūnī [*q.v.*] (362-440/973-1048) under the title of *al-Musāma'a fi Akhbār-i Khwārizm*, which is incomplete and of which no other version exists. Bayhaḳī seems to have written other works, one of which bore the title of *Maḳāmāt-i Abū Naṣr-i Mushkān* a collection of reminiscences which had been related to him by his first master in the Ghaznawid chancellery. Some fragments of this work have been quoted by more modern authors. Another work, quoted by the author of the History of Bayhaḳ, bore a title which can be read either as *Rutbat al-Kuttāb* or *Zīnat al-Kuttāb* and seems to have been a manual of literary style as is indicated by its title. The fragments of the *Ta'rīkh-i Nāṣirī* which have come down to us were incorporated in the *Djawāmi' al-Ḥikāyāt wa Lawāmi' al-Riwāyāt* of Muḥammad 'Awfī (two recent incomplete Tehran editions), the *Ṭabaḳāt-i Nāṣirī* of Minhādj al-Dīn b. Sirādj al-Dīn al-Djuzdjānī (editions: Calcutta and Kabul-Lahore), and the *Madjma' al-Ansāb* of Muḥammad b. 'Alī Shabānkārihī (MSS.). The surviving portion of the *Ta'rīkh-i Yamīnī* is incorporated in this last-named work, and the surviving portion of the final parts of the *Ta'rīkh-i Mas'ūdī*, which we possess, is quoted by 'Awfī. The passages from the *Maḳāmāt-i Abū Naṣr-i Mushkān* are quoted by 'Awfī and by Sayf al-Dīn 'Aḳīlī in his work on the lives of the *wazīrs* entitled *Āthār al-Wuzarā'* (MSS.). The famous historian Ḥāfiẓ Abrū has also reproduced certain passages from the lost portions in his own monumental history. The author of the History of Bayhaḳ states that the *Djāmi' al-Tawārīkh* comprised more than 30 volumes; of these he had seen only a few in the library at Sarakhs, certain other volumes in "Mahd-i 'Irāḳ" library and still others in the possession of various people. This proves that a large part of Bayhaḳī's chronicle had disappeared within a short time after its composition, since already in the 6th/12th century this author did not have access to all the volumes. Only 'Awfī (6th/12th century) Minhādj al-Dīn (7th/13th century) Shabānkārikī (8th/14th century), and Ḥāfiẓ Abrū (9th/15th century) had at their disposal certain—perhaps fragmentary—portions of the work. The *Maḳāmāt-i Abū Naṣr-i Mushkān* was consulted by Aḳīlī in the 9th/15th century, but no one has mentioned his work on the epistolary art except the author of the History of Bayhaḳ. The MSS. of the *Ta'rīkh-i Mas'ūdī* so far known nearly all come from India and indicate a common source.

(SAID NAFICY)

AL-**BAYHAḲĪ**, ẒAHĪR AL-DĪN ABU 'L-ḤASAN 'ALĪ B. ZAYD B. FUNDUḲ, Persian author, born at Sabzawār, the administrative centre (*ḳaṣaba*) of the district of Bayhaḳ (W. of Naysābūr in Khurāsān) in 493/1100. The date 499/1106 in Yāḳūt (*Irshād*, v, 208), though cited from Bayhaḳī's autobiography (see below), has been shown to be wrong by M. Ḳazwīnī. Of his numerous works (more than 70 titles on an encyclopaedic range of subjects listed in Yāḳūt) the best known are a history in Persian of his native district, *Ta'rīkh-i Bayhaḳ* (to be distinguished from the *Ta'rīkh-i Bayhaḳī* of Abu 'l-Faḍl al-Bayhaḳī [see preceding article]), and an Arabic supplement (*tatimma*) to the biographical *Ṣiwān al-ḥikma* of Abū Sulaymān al-Sidjistānī. The *Tatimmat Ṣiwān al-Ḥikma* was translated into Persian probably about 730/1330. It has been edited together with the Persian version by M. Shafī' (Lahore 1935), and under the title *Ta'rīkh Ḥukamā' al-Islām* by M. Kurd 'Alī (Damascus 1946). The *Ta'rīkh-i Bayhaḳ* though scarcely very original (it is based, the author tells us, on an earlier history of Bayhaḳ, as well as on a 12-volume *History of Naysābūr* by al-Ḥākim Muḥammad b. 'Abd Allāh), is full of interest. The contents have been analysed by Rieu (*Supplement to the Catalogue of Persian MSS. in the British Museum*, 60 ff.), and there is an edition by A. Bahmanyār (Tehran 1317/1938), with an important introduction by M. Ḳazwīnī.

The family of Bayhaḳī, which had been distinguished for several generations previous to his time, called themselves Ḥākimīs from an ancestor, al-Ḥākim Funduḳ (*Ta'rīkh-i Bayhaḳ*, 102), and traced their descent back to a Companion of Muḥammad, Dhu 'l-Shahādatayn Khuzayma b. Thābit. Bayhaḳī also claimed relationship with Ṭabarī, the historian (*Ta'rīkh-i Bayhaḳ*, 19). It appears from his autobiography, given in his lost historical work *Mashārib al-Tadjārib wa-Ghawārib al-Gharā'ib* (or *Mashārib al-Tadjārib fi 'l-Tawārīkh*) and taken over by Yāḳūt, that he had his higher education at Naysābūr and

Marw, and that his career was mostly in Khurāsān. For a short time (526/1132) he was ḳāḍī of Bayhaḳ, probably owing to the influence of his father-in-law, Muḥammad b. Masʿūd, a former governor of Rayy, then *mushrif al-mamlaka*, but he found his duties irksome and soon resigned. A short time later we find him studying algebra and astrology in Rayy (*Irshād*, v, 210). The autobiography comes down to 549/1154-55, when Bayhaḳī was in Naysābūr. Nothing is there said of a visit which he paid with his father to ʿUmar-i Khayyām in 507/1113-14 (*Tatimma Ṣiwān al-Ḥikma*, 116), nor of an incident which took place in 543/1148. This was the arrival in Khurāsān at the court of Sulṭān Sandjar of an envoy from the Christian King of Georgia, Demetrius, with certain questions, presumably on religious topics, written in Arabic and Syriac (*tāzī u-suryānī*). These questions were answered at the instance of Sandjar by Bayhaḳī, as he tells us (*Taʾrīkh-i Bayhaḳ*, 163), in the same two languages. The *Mashārib al-Tadjārib* appears to have dealt with the history of Iran from about A.H. 410-560 (M. Ḳazwīnī), *i.e.*, approximately A.D. 1020-1165 or nearly 150 years, and was intended as a sequel to the *Taʾrīkh-i Yamīnī* of ʿUtbī (*Taʾrīkh-i Bayhaḳ*, 20). Yāḳūt quotes the work elsewhere, *e.g.*, *Irshād*, v, 124. It is quoted also by Ibn al-Athīr (xi, 247-49, cf. 253) for the career of Sulṭān Shāh of Khwārizm, and by Djuwaynī (*Taʾrīkh-i Djahān-gushāy*, Vol. ii, 1 = J. A. Boyle, *The History of the World-Conqueror*, 277) explicitly for the origin of the Khwārizm Shāhs (where Djuwaynī says incorrectly that it was a sequel to the *Tadjārib al-Umam* of Miskawayh), but probably also elsewhere without specific acknowledgement (cf. *Taʾrīkh-i Djahān-gushāy*, ii, 22 ff. = Boyle, 293 ff. with the passage in Ibn al-Athīr mentioned above). The *Mashārib al-Tadjārib* is referred to by Bayhaḳī himself (*Tatimma*, 168) for an account of the contemporary poet Rashīd al-Dīn Waṭwāṭ, and is also cited by Ibn Abī Uṣaybiʿa (*Ṭabaḳāt al-Aṭibbāʾ*, i, 72) for the date of Djālīnūs (Galen), and by some other authors, the latest of whom appears to have been Ḥamd Allāh Mustawfī (8th/14th century). Bayhaḳī himself died in 565/1169-70 according to Yāḳūt.

Some portions of Bayhaḳī's poetical anthology *Wishāḥ al-Dumya*, a continuation of the *Dumyat al-Ḳaṣr* of Bākharzī and including specimens of his own poetry in Arabic, are known. See Brockelmann, and H. Ritter, 'Philologika XIII', no. 173 (*Oriens*, Vol. 3, 1950, 77). There was also a supplement entitled *Durrat al-Wishaḥ* (*Irshād*, v, 212).

A work on judicial astrology by Bayhaḳī in Persian, *Djawāmiʿ al-Aḥkām*, is preserved in Cambridge University Library (E. G. Browne, *Handlist of Muhammadan Manuscripts*, 255), and a compendium of this work at one time existed (*ibid.* 254).

(D. M. Dunlop)

AL-**BAYHAḲĪ**, Ibrāhīm b. Muḥammad, Arab author, of whose life nothing is known beyond that he belonged to the circle of Ibn al-Muʿtazz and wrote the *adab* book *Kitāb al-Maḥāsin wa 'l-Masāwī* (ed. by F. Schwally, Giesen 1902, reprinted Cairo 1906) during the reign of the Caliph al-Muḳtadir (295-320/908-932). (C. Brockelmann)

BAYḤĀN (Bēḥān), wādī and territory in South Arabia, situated between Wādi Ḥarīb [*q.v.*] in the west, and Wādī Markha (with the high plateau of the Nisiyyīn) in the east (cf. art. ʿawlaḳī). This long valley, stretching from the Kawr ʿAwdhilla (cf. art. ʿawdhalī) ca. 100 km. (65 miles) northward, until its dry "delta" disappears in the desert Ramlat Sabatayn, was once the centre of the ancient state of Ḳatabān [*q.v.*]. Thanks to the American expedition in 1950 the main part of Bayḥān now is by far the best known of all South Arabian districts.

In Ḳatabānic inscriptions BYḤN only means a tribe (Dhū Bayḥān) or a temple. This fact does not seem to favour the etymology of Landberg (*Arabica*, v, 4) "common pasture land" (opp. *ḥimā*). From Sabaean texts we know of another Bayḥān, a place situated in the Djawf (Ryckmans, i, 324; Grohmann, i, 174; v. Wissmann a. Höfner 15, 77). According to the *Ṣifa* of Hamdānī, Bayḥān was irrigated from Radmān and Ḥaṣī, but got its drinking water from Wādī Ṣudāra. The inhabitants belonged for the most part to Banū Murād, whose leader of Āl Makramān enjoyed a high reputation in the tribe of Madhidj. Yāḳūt has Bayḥān in his list of South Arabian districts (*mikhlāf*).

There are three Bayḥānī districts to be distinguished:

(1) Bayḥān al-Dawla (Bayḥān al-Aʿlā) is the narrow, barren and sparely populated upper part of the valley, from its beginning unto Nāṭiʿ on the frontier of Bayḥān al-Ḳaṣāb. Like the territory of the Banyar [*q.v.*] it formerly formed part of the Raṣṣāṣ sultanate, but now belongs to the state of Yaman. The climate is unhealthy, owing to the stagnant waters of the Ghayl. The capital al-Bayḍāʾ [*q.v.*] is in the S.

(2) Bayḥān al-Ḳaṣāb, the fertile central part of the valley. (See the following art.)

(3) Bayḥān al-Asfal, the remaining, northern part of the *wādī*, is a sparely populated plain, gradually turning into the wide sand desert. Its four districts (Ḥinw, al-Shaṭṭ, Ḥaḳba, ʿAsaylān) were dominated by descendants of the Prophet—the two first-mentioned by *sayyids*, the last two by *sharīfs*. Hence the denomination Bilād al-Sāda/al-Ashrāf for the whole country. The capital is Nuḳūb, with a landing-ground for aircraft. Numerous Bedouins also live here, mostly belonging to Bal Ḥārith; this tribe also controls the important salt-mines of Ayādīm far out in the desert.

In antiquity this whole area was more intensely cultivated, thanks to the aqueducts, and for centuries the kingdom of Ḳatabān had its centre here, along the incense road, between Shabwa [*q.v.*] and Mārib [*q.v.*]. Special interest is attached to the tell Hadjar Kuḥlān a little S-W of ʿAsaylān. As already Rhodokanakis had inferred from the inscriptions, this is the place of ancient Timnaʿ/Tumnaʿ [*q.v.*], the capital of Ḳatabān (Pliny: Thomna). Thanks to the finds made here in 1950, esp. of Roman Arretine ware, its final destruction by fire can be fixed to ca. 10 A.D. The excavation of two palaces (YFSH and ḤDTH) has yielded a lot of inscriptions, a bronze statue of princess BRʾT and two fine bronze lions of Hellenistic type, with infant riders. At Ḥayd bin ʿAḳīl the cemetery of Timnaʿ was found and partly investigated. Antique ruins also were found further to the south, at Ḥuṣn al-Hadjar and Hadjar bin Ḥumayd. Here, at the junction of *Wādī* Bayḥān and *Wādī* Mablaḳa, a huge cross-section of the stratified mound was made, which allowed to establish a pottery sequence back to ca. 1000 B.C., when

the first houses were built here. In the 1200 years down to the abandonment of the irrigation system the field level increased by about 8 m. (1 cm. every year and a half). A building of twelve courses marks the highest point in the excavations at Hadjar bin Ḥumayd; this house probably was constructed in the first century B.C.

(O. Löfgren)

BAYḤĀN al-ḲAṢĀB forms the central part of the Wādi Bayḥān (see the preceding art.), lying between Bayḥān al-Dawla (S) and Bayḥān al-Asfal (N). It includes also W. Khirr which starts in the south, to the west of W. Bayḥān, until it meets the latter near the town of al-Ḳaṣāb. Bayḥān al-Ḳaṣāb, together with Bayḥān al-Asfal, now forms the Independent Territory of Bayḥan in the Western Aden Protectorate. The Territory's boundaries in the S-W and N-W are a part of the "status quo line" of 1934 between Yaman and the Protectorate. The other boundaries are, in the E the Upper ʿAwlaḳi mountains, in the N-E the Kurab tribes and the fringes of the Empty Quarter (al-Rubʿ al-Khālī).

Bayḥān al-Ḳaṣāb (6-8000 inhabitants) is rich in subterranean waters often found at the depth of a few yards; there are well over two hundred wells in operation and the irrigation system is adequate. Rainfall is not regular and sometimes there may be no rainfall for a number of years. The region is rich with palm and *ʿilb* tree groves and other kinds of vegetation. The main products and crops are dates, *nabḳ*, figs, grapes, wheat, barley, millet, *dukhn*, sesame, indigo and cotton. There is good pasture land for sheep and goats and the region is famous for a breed of camels. The inhabitants form the tribe of al-Muṣʿabayn, who have, as is evident from the dual form of the name, two main branches: Āl Aḥmad and Āl ʿArīf. They are settled in a great number of villages. The main town is al-Ḳaṣāb, also called Ḥiṣn ʿAbd Allāh, which is the main trading centre of the area and an important seat of administration. There is a landing ground and a wireless station at al-Ḳaṣāb.

The Ashrāf and Sayyids form no tribal group. They had always had the support of the Bal Ḥārith of Bayḥān al-Asfal and of one section of al-Musʿabayn, the Āl Aḥmad, when Sharīf Aḥmad b. Muḥsin signed a treaty with the British in 1903. The subsequent development in the internal situation of the area and the security requirements in face of the claims of Yaman to the territory and to the allegiance of the population led to the consolidation of the authority of the "Treaty Chief", with the help of the Protectorate British authorities, over the whole territory and the tribes of W. Bayḥān. In 1944 the Regent of the then minor Sharīf of Bayḥān entered into an agreement with the British by which he undertook to accept advice on the administration of his country and the expenditure of his revenues. The Sharīf's capital is al-Nuḳūb, where there is a landing ground. Recently the Muṣʿabayn have been treated as semi-independent and were given a minor agreement for the protection of a landing ground. There is one *sharīʿa* court and one Common Law (*ʿurf*) court, and two elementary schools for boys, in Bayḥān.

al-**BAYHASIYYA** [see Abū Bayhas].

BAYİNDİR, one of the Oghuz (Türkmen) tribes. The Aḳ-Ḳoyunlu, founders of the dynasty called by the same name, are a clan of this tribe, and some historians call the Aḳ-Ḳoyunlu dynasty 'Bayîndîr Khān Oghlanlarî' or ʿĀl-i Bayîndîriyye', and the Aḳ-Ḳoyunlu state 'Dewlet-i Bayîndîriyye'. It is possible that the Bayîndîr took part in the Saldjūḳ conquest of Anatolia. There were many places in central and western Turkey called after them in the 9th/15th and 10th/16th centuries. No doubt most of these belonged to the Bayîndîr who took part in the conquest of Anatolia. We find Bayîndîr among the Turkmens in Syria in the 8th/14th century. The Aḳ-Ḳoyunlu clan of this tribe was engaged in political activity in the Diyarbakr region in the same century. The most important Bayîndîr clan in the 10th/16th century was in the Tarsus region, and was engaged in agriculture. There were other Bayîndîr clans in the Tripoli and Aleppo regions of Syria, and in the Yeni Il, south of Sivas. The Bayîndîr of Aleppo were called by the Ottoman government to take part in the expedition against Austria in 1690. A Bayîndîr clan lived in the Astarābād region among the Göklen Turkmens. Members of the Aḳ-Ḳoyunlu dynasty believed themselves to have descended from Bayîndîr, ancestor of the Bayîndîr tribe, and used its mark on their coins, monuments and edicts. Bayîndîr was also used in the past as a personal name in Turkey and Iran.

Bibliography: Faruk Sümer, *Bayîndîr, Peçenek ve Yüregirler*, in *Dil ve Tarih-Coğrafya Fakültesi Dergisi*, xi/2-4, 317-22. (Faruk Sümer)

BĀYḲARĀ, a prince of the house of Tīmūr, grandson of its founder. He was 12 years old at the death of his grandfather (Shaʿbān 807/February 1405) so he must have been born about 795/1392-3. His father ʿUmar Shaykh had predeceased Tīmūr. Bāyḳarā is celebrated by Dawlat-Shāh (ed. Browne, 374) for his beauty as a second Joseph and for his courage as a second Rustam; he was prince of Balkh for a long period. In the year 817/1414 he was granted Luristān, Hamadān, Nihāwand and Burūdjird by Shāh Rukh; in the following year he rebelled against his brother Iskandar and seized Shīrāz but was afterwards overcome by Shāh Rukh. Pardoned and allowed to go to Prince Ḳaydū at Ḳandahār and Garmsīr, he stirred up a rebellion there too, and was seized by Ḳaydū in 819 (1416-7). Shāh Rukh pardoned him again and sent him to India; nothing further is known of him. This account, which is based on Ḥāfiẓ-i Abrū, does not agree with

what Dawlat-Shāh tells us; according to the latter (*loc. cit.*) he went of his own accord from Makrān to Shāh Rukh, was sent by him to Samarḳand and there put to death at the instigation of Ulugh-Beg; according to other accounts he was put to death at the court of Shāh Rukh himself (in Harat). The year 819 is given by other authorities also as the year of Bāyḳarā's death. According to Bābur (ed. Beveridge, f. 163 b.) the name Bāyḳarā was also borne by a grandson of this prince, the elder brother of Sulṭān Ḥusayn; this second Bāyḳarā was for many years Governor of Balkh.

Bibliography: The history of the events of the first decades of the 9th/15th century is well-known to us from the *Maṭlaʿ-i Saʿdayn* of ʿAbd al-Razzāḳ Samarḳandī [*q.v.*], following Ḥāfiẓ-i Abrū; cf. the extracts (for the years 807-820) in Quatremère, *Notices et Extraits*, Vol. xiv, part. 1. On the original text of Ḥāfiẓ-i Abrū preserved in a MS. in the Bodleian Library (Elliot 422), cf. W. Barthold in *al-Muẓaffariya* (*Sbornik statei učenikov bar. Rozena*, St. Petersburg 1897), 25-26; L. Bouvat, *L'empire mongol* (2nd phase), Paris 1927 [*Histoire du Monde*, by Cavaignac], 162-180. (W. Barthold)

BAYLAḲĀN, an ancient town in Arrān (Albania) S. of the Caucasus, said to have been founded by the Sāsānid Ḳubād. Baylaḳān was the scene of incidents in the second Arab-Khazar war, and in 112/730 the Muslim general Saʿīd b. ʿAmr al-Ḥarashī won an important victory there over the Khazars.

al-**BAYLAMĀN** [see Madjlis].

BAYLĀN (Belen), a village situated in the Amanus mountains (Elma-Dāgh) on the main line of communication from Iskenderun (Alexandretta) eastwards into northern Syria. The site seems to have had no great importance during the earlier centuries of Muslim rule, the chief town in this local area being then Baghrās (Πάγραι). The neighbouring pass of Baylān, *i.e.*, the ancient Σύριαι Πύλαι or Ἀμανίδες Πύλαι, was included in the *ʿawāṣim* of northern Syria. It has received various names during the long period of Muslim domination, *e.g.*, *ʿaḳabat al-nisāʾ* (Balādhurī), *maḍīḳ Baghrās*, *bāb-i Iskandarūn* (cf. *IA*, s.v. *Belen*), and *Baghrās beli* (Ḥādjdjī Khalīfa). According to a *sālnāme* for the *wilāyet* of Ḥaleb (Aleppo) dated 1320/1902-1903, the Ottoman sultan Sulaymān Ḳānūnī built a mosque, a *khān* and baths at Baylān in 960/1552-1553. The same source also notes that the population of Baylān was increased in 1183/1769-1770 through the efforts of ʿAbd al-Raḥmān Pasha, then in charge of the *sandjaḳ* of Adana. At the pass of Baylān in July 1832 the Ottomans suffered defeat in battle against the Egyptian forces under the command of Ibrāhīm Pasha—an event which has been given as an explanation of the fact that the pass is sometimes called locally Top-Yolu or Top-Boghāzī (cf. *EI*[1], s.v. *Beilān* and *IA*, s.v. *Belen*). A number of derivations have been advanced in order to elucidate the name Baylān-Belen, *e.g.*, that it comes from the Greek Πύλαι, from the Turkish *bel* or *beyl* (a depression in a mountain ridge), or from *bayl*, *bīl* (a road high between two hills) used in the Arabic dual form (cf. *EI*°, s.v. *Beilan* and *IA*, s.v. *Belen*). Ewliyā Čelebī notes that *belen* meant in the language of the Turcomans a steep ascent. Baylān, which was, under Ottoman rule, the centre of a *ḳaḍāʾ* in the *eyālet* of Ḥaleb, is now a *nahiye* dependent on the *ḳaza* of Iskenderun in the vilayet of Hatay. Its population amounted in 1940 to 1,153 inhabitants, the figure for the entire *nahiye* being 5,373 people. Cereals, fruit, silk and wine are among the more notable products of the region.

BAYNŪN, ancient South Arabian castle and town, one of the famous Yamanite strongholds (*maḥāfid*) enumerated by Hamdānī (*Ṣifa*, 203), who gives its description in the *Iklīl*, book VIII (ed. Müller, 41, 86 f.; Kirmilī, 66 f.; Faris, 54 f.). In legend Baynūn is said to have been built for Solomon by the *djinn*, just as Ghumdān (GHNDN) and Salḥīn (SLḤN), the castles of Ṣanʿāʾ and Mārib (see these articles). Baynūn is located by Hamdānī in the territory of ʿAns (b. Madhidj), facing the *ḥarra* of Kawmān (six hours' Journey NNW of mount Isbīl). Its ruins are at the modern Hayāwa, where Glaser found ten inscriptions. Baynūn was famous for its two tunnels, cut through the rock. The Ḥimyaritic king Asʿad Tubbaʿ (= Abīkarib Asʿad, ca. 385-420 A.D.) resided here and in Ẓafār [*q.v.*] alternatively. Baynūn was destroyed, along with Ghumdān and Salḥīn, by the Abyssinians under the command of Aryāṭ, ca. 525 A.D. Bainoyn on the map of Ptolemy (84° 30′/14° 15′) must be sought in Ḥaḍramawt (Wādī Dawʿan) [*q.v.*], but this may be an error for Kaynun.

BAYRAḲ [see ʿAlam].

BAYRAḲDĀR, a Turco-Persian term, meaning 'standard-bearer', applied under the Ottoman régime to various officers of both the 'feudal' and the 'standing' army and to certain hereditary chieftains of Albania. In the feudal army the *alay-beyi* of each province had a *bayraḳdār* as his subordinate, and in the standing army one of the officers of each *bölük* of the cavalry and each *orta* of the Janissaries

was its standard-bearer, called usually *bayraḳdār*, but also, synonymously, *ʿalemdār* (*ʿalam* being the Arabic equivalent of the Turkish *bayraḳ*, 'flag'). The sultan's own standard-bearer was a high official of the palace service, one of the "*Aghas* of the Stirrup", but he was usually called, not *bayraḳdār*, but *Mīr ʿAlem* (for *Amīr al-ʿalem*). Under most of the earlier Turkish Muslim régimes the ruler likewise confided the care of his personal standard to an officer of high rank, who was known either by this title, or by another of similar import such as *Sandjaḳdār*.

BAYRAḲDĀR MUṢṬAFĀ PASHA [see MUṢṬAFĀ PASHA BAYRAḲDĀR].

BAYRAM [see ʿĪD].

BAYRAM ʿALĪ, place on the Trans-Caspian Railway, 46¹/₂ m. (57 km.) to the east of Marw, with a Persian population, now in the Marw (Mary) district of the Türkmen SSR, situated close by the oasis of Old Marv which was created by the Murghāb [*q.v.*] and existed until the 18th century. Its ruins cover an area of some 50 sq. km. In the 19th century the region became part of the emperor's personal domain, which existed until 1917. Today there is an agricultural research station and an agricultural technical school in Bayram ʿAlī. There are vineyards and orchards, and both silk worms and *karakul* sheep are bred.

Bliography: Brockhaus-Yefron, *Ėnciklopedičeskiy Slovar'* 4 (II A) (1891), 722; *Bolshaya Sovetskaya Enciklopediya*² *IV* (1950), 54. (B. SPULER)

BAYRAM ʿALĪ KHĀN, prince of Marw 1197-1200/1783-1786, a member of the ruling branch of the house of Ḳādjār which ruled there from the time of ʿAbbās I [*q.v.*]. In his own day, he was renowned as a valiant warrior. During a war against Murād-Bī (Shāh Maʿṣūm) of Bukhārā, he was ambushed and killed. His second son, Muḥammad Karīm, succeeded him in Marw; his eldest son, Muḥammad Ḥusayn, dedicated his life to learning in Mashhad, and was regarded as the "Plato of his day" (*Aflāṭūn-i Waḳt*).

Bibliography: Mīr ʿAbd al-Karīm Bukhārī, *Histoire de l'Asie Centrale*, ed. Schefer, i (text), Paris 1876, 70 = ii (trans.) 157 f.; V. Žukovskiy, *Razvalini Starago Merva* (The Ruins of Old Marw), St. Petersburg 1894, 83 f. (W. BARTHOLD-[B. SPULER])

MUḤAMMAD **BAYRAM KHĀN**, KHĀN-i KHĀNĀN (*Amīr al-Umarāʾ*), affectionately and respectfully addressed by the emperor Akbar [*q.v.*] as Khān Bābā or Bābā-am [(My) Good Old Man!] during the latter's minority, was a Turkoman of the Bahārlū tribe, a branch of the Ḳarā Ḳoyūnlū, who played a leading rôle in Diyār Bakr after the death of Malik Shāh Saldjūḳī [*q.v.*]. ʿAlī Shukr Bēg, one of the ancestors of Bayram Khān, whose sons served Abū Saʿīd Mirzā, and after his defeat by Uzun Ḥasan in 837/1433-4, Maḥmud Mīrzā, his son (*Babur-nama*, transl. A. S. Beveridge, i, 49), held large estates in Hamadhān, Dīnawar and Kurdistān. The family to which Bayram Khān belonged had always been in the service of kings and princes; his grand-father Yār ʿAlī Bēg Balāl, who had settled in Badakhshān, was a servant of Bābur (*Bābur-nāma* transl. A. S. Beveridge, i, 91, 189). His father, Sayf ʿAlī Bēg, was, according to Firishta (Bombay ed. 250), governor of Ghazna and on the death of Bābur had entered the service of Humāyūn.

Bayram Khān was born in Badakhshān (according to some at Ghazna, which is most probable) but lost his father at a very early age. He then migrated to Balkh where he received his education, which later events prove to have been sound and thorough. A widely-read man, well-groomed in Court manners, he joined, at the age of 16, the service of Humāyūn, who had been appointed governor of Badakhshān by his father in 936/1529. At that time Humāyūn happened to be in Kābul. He accompanied him to India and participated in the disastrous battles of Čawsa (946/1539) and Ḳannawadj (947/1540) which resulted in the complete rout of Humāyūn's troops. Finding the enemy in hot pursuit he took refuge with the *zamīndār* of Sambhal which Humāyūn held as a fief. Shīr Shāh Sūr's men discovered his hiding-place and informed the Afghān chief who asked him either to join his ranks or leave Sambhal. Bayram Khān refused to cross over and fled towards Gudjarāt. A clever ruse played by his companion, Mīr Abu 'l-Ḳāsim, who at that time was the commandant of Gwalior, saved him from disgrace and sure capture. Abu 'l-Ḳāsim, however, lost his life in the bargain. Bayram succeeded in reaching the Court of Sulṭān Maḥmūd of Gudjarāt, who not only offered him protection but also took him into his service. He, however, bided his time and, on the pretext of going on a pilgrimage to Mecca, was allowed to proceed to Sūrat. Availing himself of this opportunity he turned towards Rādjpūtāna and crossing the desert of Sind, joined his master, Humāyūn, at the township of Djūn (950/1543), now in ruins, when the fugitive emperor was making desperate efforts to regain his lost throne. Bayram was with him when he went to Ḳandahār (950/1543) to seek help from his brother Mīrzā ʿAskarī, and witnessed the rude and churlish behaviour of Tardī Bēg when this nobleman was asked to lend his horse to the dethroned emperor for the use of his wife, Ḥamīda Bānū Bēgam, mother of the infant Akbar, at the time of their flight from the inhospitable city.

At the Court of Shāh Ṭahmāsp of Iran, whose help in men, money and material Humāyūn was forced to seek to regain his lost crown, Bayram demonstrated unflinching loyalty towards his ill-starred master by politely refusing to accept the service of the Shāh, who was impressed by his genealogy and family connexions. During his Indian campaigns Bayram won many battles for Humāyūn, as commander-in-chief of the Imperial army (961/1554), crowning his series of successes with the crushing defeat inflicted on Sikandar Sūr at Māčhīwāra, near Sirhind, in 963/1555. Contrary to what had been the practice so far, Bayram Khān ordered that the women and children of the vanquished Afghāns should neither be molested nor enslaved, as both the acts were un-Islamic. This victory decided the future of Humāyūn who was now reassured of the throne of Hindustān and owed his restoration, to a large extent to the loyalty and devotion of Bayram Khān, who was appointed in 962/1555, apparently as a token of appreciation of his meritorious services, as the official guardian (*atālīḳ*) to young Akbar, then 13 years of age, and given the official title of Khān Bābā. Thereafter Bayram accompanied his ward to the Pandjāb, of which Khān Akbar had been appointed the governor. When the news of Humāyūn's accidental death (1556) reached Pandjāb, Bayram was at Kalānawr (Dist. Gurdāspūr, India) engaged in mopping-up operations against the remnants of Sikandar Sūr's defeated army. He again saved the situation, and without loss of time proclaimed Akbar as the emperor, arranging his coronation on

an improvised brick-throne, still extant at Kalānawr. Soon after wards Hīmū, originally a corn-chandler from Rēwārī, near Alwar, who commanded the Sūr troops, attacked Delhi, and Tardī Bēg, the Mug͟hal governor, fled from the city without offering even the feeblest resistance. Bayram, who was now all-powerful, ordered the execution of Tardī Bēg, apparently as a lesson to others but most probably to avenge the insult which that officer had had the audacity to offer to Humāyūn in the hour of his distress when he was fleeing from Ḳandahār. Firis͟hta justifies this murder, although on purely political grounds. In 964/1556, when Hīmū clashed with the Imperial forces at the battle-field of Pānīpat, Bayram scored a clear victory and, with the tacit approval of the monarch, killed the wounded general. Bayram has been adversely criticised for this callousness towards a fallen foe, but it should not be forgotten that in despotic monarchies, decapitation was the order of the day, especially in the case of rebels, rivals to the throne or State enemies; an example is the execution by Awrangzīb of Dārā S͟hukōh, whose head was publicly exhibited in Āgra. Further, it was idle to expect any mercy from Bayram towards a low-caste upstart who nurtured the ambition of wearing the crown, and who had had the audacity to oppose the Emperor in person. With the defeat of Hīmū and the break-up of the Afg͟hān army, the crown of Hindustān fell into the lap of Akbar like a ripe apple. Bayram was now at the height of his power and practically ruled the empire in the name of his ward. Akbar, however, had begun to show signs of resentment towards the Protector, who interfered in his boyish pleasures and desired him to maintain a princely demeanour. His marriage in 965/1557 to Salīma Sultān Bēgum, a cousin of Akbar and the daughter of Humāyūn's sister, Gulruk͟h formally introduced Bayram into the royal family, thus adding to his prestige and personal glory. This marriage was celebrated with great pomp and show at D͟jullundur (D͟jālandhar), on (*q.v.*), his way back from Mānkot (now Rāmkot, in D͟jammū), where earlier in the same year Bayram, in a joint command with Akbar, had compelled Sikandar Sūr to surrender after a long siege. Prior to his marriage to Salīma, which was purely of a political character, he had been married to the daughter of D͟jamāl K͟hān, a Mēwāt chieftain, who gave birth to Mīrzā ʿAbd al-Raḥīm K͟hān, *K͟hān-i K͟hānān* [*q.v.*], only four years before his death. The Mēwāt territory, which was Tardī Bēg's assignment, had already been conferred by Bayram on one of his confidential servants, Mullā Pīr Muḥammad S͟hirwānī.

Bayram committed a tactical mistake in appointing S͟hayk͟h Gadāī Kambōh of Delhi, a bigoted S͟hīʿī, as *ṣadr al-ṣudūr* in 966/1558-9. This caused great resentment among the people and the Tūrānī nobles, who were almost all of them Sunnīs, and al-Badāʾūnī (Eng. trans. ii, 22-4) makes it the peg on which to hang his 'most bitter gibes and venomous puns'. This, coupled with his other indiscreet acts, such as the elevation to State offices of members of the S͟hīʿī sect, the execution of Tardī Bēg of the Sunnī persuasion, the non-allocation of the privy purse to the Emperor, whose needs were fast multiplying with his increasing years, the meagre allowances for the royal household, and his own arrogant behaviour and over-estimation of his services, brought about a change in Akbar's attitude towards the Protector and he began to look for an opportunity to throw off the trammels of tutelage. Māham Anaga, Akbar's wet-nurse, who, at the head of a small but powerful Palace clique, had been secretly striving to compass Bayram's ruin, played no mean a rôle in estranging the ward from the guardian. Bayram realising that the scales were weighted against him, decided to clinch the issue by force of arms, and, on the pretext of leaving for Mecca, came to D͟jullundur with the intention of taking it, after lodging his family in the fort of Bhattinda. He was defeated in a pitched battle by the Emperor's forces and was made to return the insignia of office. Deprived both of his office and the title of *K͟hān-i K͟hānān*, now conferred on Munʿim K͟hān, Bayram saw no way out but humbly to submit, and was pardoned by Akbar. Dejected, disappointed, and fallen from grace, Bayram, in fulfilment of his earlier intention, set off for Mecca, but was treacherously murdered by a vengeful Afg͟hān enemy, Mubārak K͟hān Lūḥānī, whose father had been killed in the battle of Māčhīwāra (963/1555) Bayram was killed while encamped at Patan (Anhilwāra), on 14 D͟jumādā I 968/31 January 1561. His camp was plundered and his family, including the 4-year old Mīrzā ʿAbd al-Raḥīm K͟hān, reached Aḥmadābād almost penniless. The commandant of Patan, Mūsā K͟hān Pūlādī, who had hospitably received Bayram K͟hān, did not even give the dead hero, formerly so wealthy, a decent burial. Some poor and God-fearing people buried the former *K͟hān-i K͟hānān*, whose dead body, in accordance with his wishes, was transferred in 971/1563-4 to Mas͟hhad from Delhi, where it had been brought from Patan for a temporary and modest burial. Now he lies buried in a high-domed tomb in the vicinity of the mausoleum of Imām Mūsā al-Riḍā.

An accomplished scholar, a good poet in Turki and Persian, a connoisseur of art, a liberal but orthodox S͟hīʿī, Bayram K͟hān was a truly great man who patrionised the *ʿulamāʾ* and men of letters, no less than poets, artists, musicians, singers and craftsmen. He has received a generous tribute from even a carping critic like al-Badāʾūnī for his qualities of head and heart. His *dīwān* was published at Calcutta in 1910.

Akbar, who like his father owed his throne to Bayram K͟hān, tried to atone for his ingratitude by bringing up Mīrzā ʿAbd al-Raḥīm K͟hān, his orphaned son (who later on became *K͟hān-i K͟hānān* and is better known to history than his father) and by marrying Salīma Sulṭān Bēgum, his widow. If the execution of Tardī Bēg is a stain on the good name of Bayram K͟hān, his undignified dismissal by Akbar is no less a blot on the escutcheon of the 'Great Mogul'.

(A.S. BAZMEE ANSARI)

BAYRĀMIYYA, a *ṭarīḳa* deriving from the Khalwatiyya and founded at Anḳara in the 8th-9th/14th-15th centuries by Ḥadjdjī Bayrām-i Walī (Veli). In Ṣūfī tradition, the Prophet enjoined on Abū Bakr the *dhikr-i khafī*, and on ʿAlī the *dhikr-i djalī*. The Bayrāmiyya's preference for the *dhikr-i dhafī* being shared by the Naḳshbandiyya, it has been regarded as a blend of the Khalwatiyya and Naḳshbandiyya, but in fact its relationship to the latter is slight, its practice of the *dhikr-i khafī* being a product of its Malāmī origins.

On the death of the founder, the Order split, one branch adopting the *dhikr-i djalī* and following Aḳ Shams al-Dīn; these became known as Bayrāmiyye-i Shamsiyya. The other branch, under ʿUmar Dede of Bursa, abandoning *dhikr*, *wird*, their individual costume, and *takyas* (*tekke*), called themselves Malāmiyye-i Bayrāmiyya. Later, a third branch, the Djalwatiyya, emerged under ʿAzīz Maḥmūd Hudāʾī (d. 1038/1628-9).

The chief doctrinal peculiarity of the Order, and another mark of its Malāmī origin, is that the devotee was introduced to the concept of *waḥdat al-wudjūd* at the beginning of his spiritual career, and not at the end of it as in other Orders. He must first grasp that all acts are from God (*tawḥīd-i afʿāl* or *fanāʾi afʿāl*); next, that the acts are a manifestation of the attributes, all of which are God's attributes (*tawḥīd-i* or *fanāʾi ṣifāt*); finally, that the attributes are are a manifestation of essence, that existence is one, and that all things are manifestations of the *aʿyān-i ʿilmiyya* which exist in God's knowledge (*tawḥīd-i* or *fanāʾi dhāt*).

The headdress of the Order was a six-panelled *tādj* of white felt, said to symbolise the six directions (up, down, right, left, front, rear) and so to indicate that the wearer comprehended all existing things.

From the first, the Order's connexions with its parent Malāmatiyya were strong; more than one Bayrāmī shaykh was recognised by the Malāmatiyya as the *ḳuṭb* of the time.

At the dissolution of the *ṭarīḳas* in Turkey in 1925, the centres of the Order were Istanbul, Anḳara, Izmīd, and Ḳasṭamonu.

Bibliography: See the long article *Bayramiye* in *IA*, by Abdülbâki Gölpınarlı, of which this article is a condensation. (G. L. LEWIS)

BAYRŪT (currently written Beyrouth or Beirut), capital of the Lebanese Republic, situated 33° 54′ lat. N. and 35° 28′ Long. E., is spread at first on the north face of a promontory, of which it now occupies almost the entire surface. The etymology of the name, long disputed, is no doubt derived from the Hebrew *beʾerot*, plural of *beʾer*, (well), the only local means of water supply until the Roman period. As a human habitat the site is prehistoric, traces of the Acheulian and Levalloisian periods having been found there. It is as a port on the Phoenician coast that the agglomeration appears under the name Beruta in the tablets of Tell al-ʿAmarna (14th century B.C.), at that time a modest settlement long since eclipsed by Byblos (Djubayl). During an obscure period of twelve centuries Beruta underwent the passage of armies coming up from Egypt or descending from Mesopotamia, among whom was Ramses II in the 13th century and Asarhaddon, king of Assyria, in the 7th century.

Towards 200 A.D., Antiochus III the Great gained a victory over Ptolemy V and annexed Bayrūt to the Seleucid kingdom and Syria. The town, for a time called Laodicea of Canaan, was destroyed about 140 B.C. by the Syrian usurper Tryphon. Despite this disaster the port saw a great rise owing to the commercial relations with Delos, the Italians and the Romans; Bayrūt then found its vocation as a link between Orient and Occident.

Taken by Marcus Agrippa in the name of the Emperor Augustus, the town was rebuilt, embellished by remarkable edifices and peopled by veteran Roman legionaries. In 14 B.C. it was raised to the rank of a Roman colony (*Colonia Julia Augusta Felix Berytus*). Very rapidly Berytus became a great administrative centre (Herod the Great and his successors were resident there), an important station of commerce and exchange, and a well attended university city. Its school of law, from the 3rd century A.D., enjoyed particular acclaim and by its brilliance rivalled Athens, Alexandria and Caesarea. The increase in population made it necessary to construct for its water supply an important aqueduct (*Ḳanātir Zubayda*) in the valley of the Magoras (*Nahr Bayrūt*).

By the end of the 4th century Berytus was one of the most important cities in Phoenicia and the seat of a bishopric. A violent earthquake, accompanied by a tidal wave, destroyed Bayrūt in July 551. Justinian had the ruins restored, but the city had lost its splendour, and it was a town without defences that the troops of Abū ʿUbayda took when they entered in 14/635 the most Roman of the cities of the Orient.

Under Muslim domination a new era began for Bayrūt. The Umayyad caliph Muʿāwiya had colonists brought from Persia to repopulate the city and its surrounding area, sericulture prospered again, and commercial relations resumed at first with the interior (Damascus) and later with Egypt. In the first centuries of Islam Bayrūt was considered a *ribāṭ*, and the holy imām of Syria, Al-Awzāʿī, installed himself there in 157/774. In 364/975 John Tzimisces conquered the city, but shortly after the Fāṭimids retook it from the Byzantines. The Arab geographers of the 4th and 5th/10th and 11th centuries all mention that the city was fortified, and subject to the *djund* of Damascus.

The Crusades brought fresh troubles. In 492/1099 the Crusaders coming from the north along the coast did no more than provision themselves at Bayrūt; they returned there after the capture of Jerusalem. In 503/1110 Baldwin I and Bertrand of St. Gilles blockaded the city by land and sea. An Egyptian fleet managed to get supplies to the besieged, but a reinforcement of Pisan and Genoese ships enabled them to launch an assault and take the city on 21 Shawwāl 503/13 May 1110. In 1112 nomination of the first Latin bishop took place, Baldwin of Boulogne, who relieved the patriarch of Jerusalem, since in the Greek ecclesiastical organisation of the 11th century Bayrūt had been subject to Antioch. The Hospital-

lers built the church of St. John the Baptist, which became the mosque of Al-ʿUmarī. In Rabīʿ II 578/August 1182, Ṣalāḥ al-Dīn sought to separate the County of Tripoli from the Kingdom of Jerusalem by retaking Bayrūt, but it was not until the second attempt in Djumādā II 583/August 1187 that the city capitulated. In Dhu 'l-Ḳaʿda 593/September 1197, Amalric of Lusignan took the city, whose Ayyūbid garrison had fled. The Ibelins restored the defences of Bayrūt and renewed its brilliance throughout the Latin Orient. In 1231 Riccardo Filanghiari occupied the city, but not the castle, in behalf of the Emperor Frederick II.

Shortly after the accession of the Mamlūks at Cairo, the lords of Bayrūt were reduced to treat with them in order to preserve their independence with respect to the other Franks. In 667/1269 Baybars gave a guarantee of peace. In 684/1285 Sulṭān Ḳalāʾūn granted a truce which allowed a resumption of commercial activity, and finally, on 23 Radjab 690/23 July 1291, the Amīr Sandjar Abū Shudjāʿī, coming from Damascus, occupied Bayrūt in the name of Al-Malik Al-Ashraf Khalīl.

Under the Mamlūks Bayrūt was an important *wilāya* in the province (*djund*) of Damascus, and its governor an *amīr ṭabalkhāna*. During the entire Middle Ages, possession of Bayrūt was a powerful trump card, for one could procure there two rare "strategic materials", wood, from the pine forest south of the city, and iron, from the mines nearby.

In the 8th/14th century, commerce was troubled, the port having become the scene of rivalries between Genoese and Catalans, and the Mamlūk princes reinforced its defences, Tanghiz (744/1343) and Barḳūḳ (784-791/1382-1389) each having a tower constructed. In the 9th/15th century, Bayrūt continued to be the meeting-place of western merchants who came there seeking silks, while fruit and snow were exported to the court at Cairo.

At the beginning of the 10th/16th century, the Frankish merchants were subjected to the extortions of the semi-autonomous governors nominated by the Porte. Under Fakhr al-Dīn (1595/1634) the city saw a brilliant period, and relations were renewed with Venice. In exports silk surpassed citrus fruits, while rice and linen cloth was imported from Egypt.

In the middle of the 18th century, Bayrūt was the most heavily populated coastal city after Ṭarābulūs, the nucleus of the population being the Maronites protected by the Druze *amīrs*. Suffering the counter-attacks of the Russo-Turkish war, Bayrūt was bombarded several times and finally occupied by the Russians in October 1773, until February 1774. From 1831 on, despite the competant administration of Bashīr II the Great (1788-1850), the campaigns of Ibrāhīm Pasha, which terminated in the bombardment of Bayrūt by a combined Austrian, English and Turkish fleet in 1840, ruined commerce. A new era began in 1860. The massacre of the Christians in Syria led to a major exodus towards Bayrūt, and the tiny city of 20,000 acquired a deep Christian imprint.

Having begun about a century ago, the rise of Bayrūt continues. The city has developed very rapidly and for several decades has surpassed the brilliance of its Roman period. After having been, during the French Mandate (1920-43), the residence of the High Commissioner of France for the States of the Levant, Bayrūt became the capital of an independent state and the seat of Parliament and the Administration of the country. The extremely heterogeneous population, predominantly Arab, is more than 200,000 (1958), which is doubled during the week with the daily influx of villagers, workers and merchants from the surrounding areas.

Three universities (American, French and Lebanese), numerous academic establishments of every nationality, and a National Library make of Bayrūt one of the most important intellectual centres of the Arab Middle East. The city is also a centre of commerce and exchange. A port continually expanded since 1893 and linked by railway to Syria and Jordan permit important transactions (2,500,000 tons in 1950), despite the competition of Haifa and, more recently, Lattakia, the port of Syria. The volume of transactions has led to the creation of a Stock Exchange, and the foundation of branches by all the large international banks. An aerodrome of international class (Khaldé) permits contacts with the entire world. A centre of transit and distribution, Beirut is by vocation a link between Orient and Occident.

BAYSĀN, a little Palestinian township in the valley of the Jordan, situated 30 kms. (18 miles) south of Lake Tiberias and 98 ms. above sea-level on a terrace raised 170 ms. above the low-lying ground through which, some distance away, the Jordan winds its way. Avoiding thus the extreme tropical heat which reigns elsewhere in the Ghawr [*q.v.*], it has all the same a hot and humid climate which Arab geographers did not fail to criticise, at the same time deploring the poor quality of its water (they nevertheless point out the merits of ʿAyn al-Fulūs, a well which a wide-spread tradition regards as being among the four springs of Paradise). Irrigation formerly made possible the cultivation of rice which was the country's wealth at the time of al-Maḳdisī, whilst of the palm-groves, mentioned in traditions, the geographer Yāḳūt, in the 7th/13th century, observed only two single palm trees. But Baysān, thanks above all to its remarkable commercial and strategic position on the main stream of the traffic joining Damascus and the interior of Syria to Galilee and thence to Egypt and the Mediterranean coast, has succeeded in preserving its urban nucleus up to the present day, despite innumerable historical vicissitudes.

The settlement of this site, proved for the period before the 3rd millenium by the excavations of Tall al-Ḥuṣn which have succeeded in reaching the chalcolithic level, goes back indeed to very far-off times. We know of the Egyptians' interest in the ancient Bethšan or Bethšeʿan, whose name they transcribed as Btšʾir and which they annexed for three centuries after the victory of Thutmoses III in the plains of Megiddo, leaving numerous traces of their occupation. Then this important village, equally coveted by Philistines, Israelites and Madianites, which at one time formed part of the kingdom of

Solomon but remained always hostile to Judaism, became in the Hellenistic and Roman periods one of the most important cities of the Decapolis under the name of Scythopolis. Hellenism flourished there and the success which Christianity attained later was confirmed by the construction of various churches and monasteries. Its bishop was Metropolitan of Palestina Secunda and the celebrated hagiographer, Cyril of Scythopolis, was born there.

Exposed to the first Arab attacks, for as early as 13/634 the troops of Khālid b. al-Walīd attacked and annihilated a Byzantine army not far away, the town which now resumed its original native name softened into Baysān, was definitely occupied in 15/636 at the time of Shuraḥbīl b. Hasana's conquest of the Jordan region and was certainly visited by Abū ʿUbayda b. al-Djarrāḥ whose tomb according to some authors is situated there. As administrative centre of one of the districts of the *djund* of al-Urdunn, it seems to have prospered peacefully among its gardens until it was attacked by the Franks of the First Crusade who annexed it to the Latin Kingdom of Jerusalem after it had been taken by Tancred in 492/1099. They created the barony of Bessan but transferred the episcopal see to Nazareth. Its history continued to be a troubled one. Muslim attacks ended in its reconquest by Ṣalāḥ al-Dīn in 583/1187 and later there was a new raid by the Franks of the Fifth Crusade who plundered it in 614/1217. The invasion of the Mongols who were defeated not far away at ʿAyn Djālūt [*q.v.*] in 658/1260 was a heavy blow to it but later on in the time of the Mamlūks it was to become the capital of a *wilāya* in the second southern frontier district of the province of Damascus. At this time the caravanserai of Salār was built in its immediate neighbourhood on the route of the present-day railway. This was used by the mounted mail couriers whose itinerary was modified in this way by the initiative of the chief of the chancellery, Ibn Faḍl Allāh, in 741/1340.

BĀYSONGHOR, Ghiyāth al-Dīn, son of Shāh Rukh and grandson of Tīmūr, was appointed by his father in 820/1417 to the office of chief judge at the court; in 823/1420 on the death of Ḳara-Yūsuf, he took possession of Tabrīz and was appointed governor of Astarābād in Ṣafar 835/October 1431, but he never ascended the throne; the astrologers having predicted to him that he would not live more than forty years, he gave himself up to dissipation and died at Harāt on Saturday, 7 Djumāda 1837/19 December 1433, at the age of thirty-six. He was buried in the Mausoleum of Princess Gawhar-Shād. An artist and patron of the arts, he was a designer and an illuminator; in the library which he had founded, forty copyists, pupils of Mīr-ʿAlī, inventor of the *nastaʿlīḳ* script, were occupied copying manuscripts. His example had a considerable influence on the development of the art of painting in Persia in the period of the Timūrids. In 829/1425-6 he caused a critical edition of the *Shāh-nāma* of Firdawsī to be undertaken and a preface to be written to this work, the longer of the two which we possess.

Bibliography: Cl. Huart, *Calligraphes et miniaturistes*, 97, 208, 324, 336; J. Mohl in Firdawsī, *Livre des Rois* (*Shāh-nāma*), Vol. i, xv, note 1; Mīrkhʷānd, *Rawḍat al-Ṣafa*, vi, 212, 213; Khʷāndamīr, *Ḥabīb al-Siyar*, iii, Part 3, 116, 123, 130. (Cl. Huart)

BĀYSONGHOR, second son of Sulṭān Maḥmūd of Samarḳand, grandson of Sulṭān Abū Saʿīd [*q.v.*], born in the year 882/1477-8, killed on 10 Muḥarram 905/17 Aug. 1493. In the lifetime of his father he was prince of Bukhārā; on the death of the latter in Rabīʿ II 900/30 Dec. 1494/27 Jan. 1495, he was summoned to Samarḳand. In 901/1495-6, he was deposed for a brief period by his brother Sulṭān ʿAlī and in 903, towards the end of Rabīʿ I November 1497, finally overthrown by his cousin Bābur. Bāysonghor then betook himself to Ḥiṣār where he was successful in defeating his brother Masʿūd and taking the country with the help of the Beg Khusraw Shāh, who came over to his side; he was soon afterwards betrayed by this same Beg and put to death. Bāysonghor is described by his rival Bābur as a brave and just prince. He was also famous as a Persian poet under the name ʿĀdilī; his *ghazals* were so popular in Samarḳand that they were to be found in almost every house (*Bābur-nāma*, ed. Beveridge, f. 68 b.).

(W. Barthold)

BĀYSONGHOR, the name of another prince, of the Aḳ-Ḳoyunlū dynasty in Persia, son and successor of Sulṭān Yaʿḳūb; he only reigned for a short period from 896-7/1490-2 and was overthrown by his cousin Rustam. (W. Barthold)

BAYT, the common Semitic root of the word for "dwelling", whether the "tent" of the nomads, or the "house" (stone, wood or brick) of sedentary peoples. It may sometimes designate a "sanctuary": thus in Arabic with the article *al-Bayt* is applied *par excellence* to the holy place at Mecca, also called *al-Bayt al-ḥarām* (sacred dwelling) or *al-Bayt al-ʿatīḳ* (ancient). Geographical names composed with *Bayt* are equally frequent, and the first element is often found reduced in Syro-Palestinian toponomy to the prefix *B-*, derived from the Aramaic (Syriac) *Bē*, but also known from Canaanitic, to judge by several examples of it in Biblical Hebrew (*Bē-shān*, etc.).

In Arabic, the definitions, always detailed, of the lexicologists limit the term to a dwelling of medium dimension, perhaps suitable for one family. And the sense of "family" is found precisely in all of the Semitic languages. As, by contrast, *Bayt* does not figure among the technical designations of tribal subdivisions, one might see there an argument in favour of a classical distinction between the family, however large, and these other various groupings, if unfortunately the same metonymical association were not to some extent encountered in all languages, too generally to be probative. (J. Lecerf)

BAYT [see ʿARŪḌ].

BAYT DJIBRĪN, or sometimes DJIBRĪL: a large Palestinian village of the Shephela, situated at an altitude of 287 m. south-west of Jerusalem on the borders of the limestone mountains of Judaea and the coastal plain, in a region rich in quarries and ancient remains which attracted the interest of Arab authors. Called Begabri by Josephus who regarded it as a village of Idumaea, and Betogabri by Ptolemy and the *Tabula Peutingeriana*, it was a successor to the town of Maresha/Marisa, often referred to in the Old Testament and destroyed by the Parthians in 40 B.C., whose nearby position has been ascertained by excavations. It owed its other name of 'town of the cavemen' to the original population of the Hurrites who had occupied this region before being driven back under the pressure of Edom, and who bore a name synonymous with 'troglodytes'. This name was translated into Greek through a play of words in Hebrew as 'town of the free men' or Eleutheropolis when Septimus Severus gave the *jus italicum* to this locality in 200 A.D. In the middle ages it resumed its original name which appears in the Talmudic writings under the form of Beth Gubrin, and was twisted by the Crusaders into Beth Gebrim, Bethgibelin or Gibelin; it seems that a play of words on the Arabic *djibrīn/djabbārīn* then allowed to identify the place with the legendary 'City of the Giants', according to a tradition which is referred to by al-Harawī and which describes the story of Mūṣā related in Kurʾān, v, 24/21-25/22 as having taken place there.

Minting its own money and commanding a vast region, the city of Eleutheropolis enjoyed great prosperity in ancient times as is proved by the Romano-Byzantine mosaics which have been discovered there. Its importance diminished in Arab times although after its conquest by ʿAmr b. al-ʿĀs during the Caliphate of Abū Bakr, it continued to be the capital of a district within the military *djund* of Palestine and a trading-post on the road between Jerusalem and Ghazza. However, bitter local fighting seems to have occurred in this region which was mainly populated, according to al-Yaʿḳūbī, by the Djudhām [*q.v.*], and "according to the account of a monk, Stephen of Mār Sābā, Eleutheropolis was completely destroyed in 796 in the course of a war between Arab tribes" (Fr. Buhl), a statement which should certainly be accepted with some reservations. Indeed a little later al-Maḳdisī describes Bayt Djibrin as a commercial centre for the district of Dārūm [*q.v.*], and the military value of its situation caused the Crusaders, who had first destroyed it, to build a citadel there towards 1134 which was put into the charge of the Knights Hospitallers, to safeguard the frontier of the kingdom of Jerusalem on the Egyptian side and to stop Muslim raids which came principally from the direction of ʿAsḳalān [*q.v.*]. After having suffered some damage when Ṣalāḥ al-Dīn retook it in 583/1187, it still remained a fortified town in the Mamlūk period, depending directly from the *nāʾib* of the Ghazza district in the coastal frontier area of the province of Damascus.

(J. SOURDEL-THOMINE)

BAYT AL-FAḲĪH, (*i.e.*, "the Abode of the Jurist"), a town of c. 10,000 population located at 14° 30′ N., 43° 16′ E. in Tihāmat al-Yaman. The town is also called Bayt al-Faḳīh al-Ṣaghīr, to distinguish it from Zaydiyya or Bayt al-Faḳīh al-Kabīr to the north near Bādjil, and Bayt al-Faḳīh Ibn ʿUdjayl after the name of the jurist around whose tomb the town has grown. The town in 1944 was the capital of the *ḳaḍā* of Bayt al-Faḳīh, comprising four *nāḥiyas* ,in the *liwāʾ* of al-Ḥudayda. The four *nāḥiyas* are: Nāḥiyat Lidjān, Nāḥiyat al-Ḥusayniyya, Nāḥiyat Banī Saʿīd, and Nāḥiyat Bayt al-Faḳīh, each of which is governed by an *ʿāmil*, with the courtesy title of *ḳāḍī* if he is not a *sayyid*. The *liwāʾ* of al-Ḥudayda falls under a royal prince.

Bayt al-Faḳīh may be connected with pre-Islamic history through the migration of the tribe of al-Azd from Mārib after the breaking of the dam. Tradition alludes to the temporary settlement of the tribe near a wateringplace called Ghassān, perhaps between Wādī Rimaʿ and Wādī Zabīd. A portion of al-Azd later moved to the Syrian borders and established the state of Ghassān. In the 8th/14th century, Ibn Baṭṭūta mentions the name of the village near the tomb of Ibn ʿUdjayl as Ghassāna, but this name is unknown there today. The classical Arab geographers mention neither Ghassāna nor Bayt al-Faḳīh.

It seems likely that the present village of Bayt al-Faḳīh arose shortly after the death of the *faḳīh*, Abu 'l-ʿAbbās Aḥmad b. Mūsā b. ʿAlī b. ʿUmar b. ʿUdjayl, in 690/1291 due largely to pilgrimages made to his grave and the miraculous powers attributed to the invocation of his name. In the 11th/17th century the town increased its prosperity as a coffee-centre for the port of Mocha, and an East India Company factor, Revington, suggested the establishment of a factory there in 1659. During the 12th/18th century, the Yamanī Imāms took monthly revenues of £ 1500 from Mocha and Bayt al-Faḳīh combined, an amount which increased during the months of Indian shipping. Hamilton estimates annual coffee sales in Bayt al-Faḳīh at 22,000 tons. However, this same period saw the decline of the Yamanī trade as a result of expanding cultivation of coffee in Ceylon and the Western Hemisphere, and Bayt al-Faḳīh resumed its provincial, scholarly life, amid the anarchical political conditions in Southern Arabia.

The unsettled state of this area had been due largely to the fractious independence of the tribe of al-Zarānīḳ centered on Bayt al-Faḳīh. With a fighting strength estimated at 10,000 men, the tribe has steadfastly refused to accept governmental control for long and was strong enough in 1914 to levy road tolls on Ottoman infantry. As recently as 1947 the tribe cut down to the last man a punitive force sent by the Imām.

(R. L. HEADLEY)

BAYT AL-ḤIKMA, "House of Wisdom", a scientific institution founded in Baghdād by the caliph al-Maʾmūn, undoubtedly in imitation of the ancient academy of Djundaysābūr. Its principal activity was the translation of philosophical and scientific works from the Greek originals which, according to tradition, a delegation sent by the caliph had brought from the country of Rūm. Its directors were Sahl b. Hārūn [*q.v.*] and Salm, assisted by Saʿīd b. Hārūn. It included an important staff of translators, of whom the most famous were the Banu 'l-Munadjdjim, as well as copyists and binders. It appears in fact that the library so constituted, and often called *Khizānat al-ḥikma*, had already existed in the time of al-Rashīd and the Barmakids who had begun to have Greek works translated. Al-Maʾmūn may only have given a new impetus to this movement, which was to exert a considerable influence of the development of Islamic thought and culture (see ʿARABIYYA, B. III, 1).

To the same institution were attached astronomical observatories (*marṣad*), one installed at Baghdād, the other at Damascus, where Muslim scholars devised in particular new tables (*zīdj* [*q.v.*]), correcting the ancient ones furnished by Ptolemy.

The *Bayt al-ḥikma* properly so called, does not appear to have survived the orthodox reaction of al-Mutawakkil, although there is subsequent mention in ʿIrāḳ, during the 3rd/9th century, of several scientific libraries, owing their existence to private initiative and the fact that the caliph al-Muʿtaḍid had sought to favour the work of various scholars whom he had installed in his palace. Only the Fāṭimids were later to found similar official academies, of which the most important was the *dār al-ḥikma* [*q.v.*] established by al-Ḥākim in 395/1005.

(D. SOURDEL)

BAYT LAḤM, large Palestinian village and celebrated centre of pilgrimage situated in the limestone mountains of Judaea 800 m. above sea-level and approximately 10 kms. south of Jerusalem, corresponds to the ancient Bethlehem of biblical fame. Honoured and visited by Christians from the 4th century on, it became equally venerated by Muslims as the birthplace of ʿĪsā b. Maryam [*q.v.*]. The Arab geographers who never failed to refer to this fact and who often expressed admiration for the Byzantine basilica which (founded by Constantine in 325 and restored under Justinian in 525) had been built there, commented equally on the miraculous palm of Ḳurʾān, xix, 25, the tomb of David and Solomon which Christian tradition had already located in the Grotto of the Nativity, and the *miḥrāb* of ʿUmar b. al-Khaṭṭāb, traditionally the spot where the second Caliph had prayed at the time of his journey through Palestine after its conquest. This remarkable reputation from the religious point of view did not however help the village of Bayt Laḥm, too close as it was to Jerusalem, to develop in importance, and the attention paid to it by the Franks of the First Crusade, who built a fortress there after they had annexed it in 492/1099, and in 1110 got permission to set up a bishopric there, did no more than give it a brief spurt of life. Occupied by Ṣalāḥ al-Dīn when he reconquered Palestine in 583/1187, then included in the temporary retrocession of the Treaty of Jaffa concluded between al-Malik al-Kāmil and Frederick II, the place continued then and later to vegetate. However the intensification of the relations between its Christian population and the West permitted it finally to achieve its present position, that of a small town with a feeble Muslim minority (the Muslims never recovered from the repression of which they were the victims in 1834 after they had revolted against Ibrāhīm Pasha), where religious institutions and modern houses predominate, ranged in a semicircle on the side of the hill round the platform surmounted by the famous basilica. This sanctuary of the Nativity whose archaeological interest has already been emphasised, has been the object of successive restorations which have left the primitive arrangement of its central part with its four-fold rows of columns untouched, but have transformed especially the decoration which gives valuable information about the evolution of the art of the mosaic in the high middle ages.

(J. SOURDEL-THOMINE)

BAYT AL-MAḲDIS [see AL-ḲUDS].

BAYT AL-MĀL, in its concrete meaning "the House of wealth", but particularly, in an abstract sense, the "fiscus" or "treasury" of the Muslim State.

I. The Legal Doctrine. 'Bilāl and his companions asked ʿUmar b. al-Khaṭṭāb to distribute the booty acquired in Iraq and Syria. "Divide the lands among those who conquered them", they said, "just as the spoils of the army are divided". But ʿUmar refused their request . . . saying: "Allāh has given a share in these lands to those who shall come after you".' (*Kitāb al-Kharādj*, 24. *Le Livre de l'Impot Foncier*, 37). In this alleged decision of ʿUmar lies the germ of the notion of public as distinct from private ownership and the idea of properties and monies designed to serve the interests of the community as a whole. Coupled with the institution of the *dīwān* [*q.v.*] in 20 A.H. it marks the starting point of the conception of the *bayt al-māl* as the State Treasury or fiscus. Previously the term had simply designated the depositary where money and goods were temporarily lodged pending distribution to their individual owners. (See Tyan, *Institutions du Droit Public Musulman*, i, 216).

Organisation. All the various officials derive their powers by delegation from the Imām who is the head of the *bayt al-māl*. In Sunnī law a firm distinction is drawn between the public authority with which the Imām is invested in this respect and the personal control of his privy purse. (See Tyan, *op. cit.*, i, 391 f. and ii, 195. Also Mez, *Renaissance*, 113-116 (Eng. tr., 120-122), for the position in practice.) This distinction does not apply to the same extent in the law of the Twelver Shīʿa, where the ownership of certain properties which in Sunnī law belong to the community as a whole is vested in the person of the divinely inspired Imām. (See Querry, *Droit Musulman*, i, 178, 337. Baillie, *Imameea Code*, 362).

The actual collection and distribution of State revenues is the responsibility of the *Ṣāḥib bayt al-māl* who controls the several officials in charge of the various categories of revenue listed below. Freedom, Islam, moral integrity (*ʿadāla*- [see ʿADL]) and competence are essential qualifications for such appointments, and in addition the quality of *idjtihād* [*q.v.*] is required fo those offices which involve discretionary assessment or expenditure. Minor agents of collection or delivery may be slaves, or *dhimmīs* when dealing only with their co-religionists. The records and accounts of Treasury business are dealt with by a special administrative department under the control of the *Kātib al-dīwān*, for which office *ʿadāla* and professional competence are the only two essential qualifications.

Within this skeleton framework the nature and scope of individual offices is a matter for the discretion of the Imām. "Neither for general nor for particular appointments does the *Sharīʿa* define the terms" (Ibn Farḥūn, *Tabṣirat al-Ḥukkām*, ii, 141, 158).

Sources of Revenue. Not all State revenues are "assets of the Treasury" (*ḥuḳūḳ bayt al-māl*) as such. These latter may be defined as those monies or properties which belong to the Muslim community as a whole, the purpose to which they are devoted being dependent upon the discretion of the Imām or his delegate.

Thus the only portion of the *ghanīma* [*q.v.*] which qualifies as one of the assets of the Treasury is that fraction of the fifth (*al-khums*)—which term may here be taken to include the levy on mined products and treasure trove—which is the share of Allāh and the Prophet and which is to be spent in the interests of the community as a whole. The remainder of the fifth is earmarked for specified classes—the relatives of the Prophet, orphans, poor and travellers—and as such is removed from the discretion of the Imām. Similarly the proceeds of *ṣadaḳa* or *zakāt* [*q.v.*] are destined for particular classes of the community and though, like *ghanīma*, these monies may be controlled by Treasury officials or lodged in the vaults of the Treasury pending the determination of the entitled recipients, ownership, from the moment of payment, vests in the entitled recipients and not in the *bayt al-māl*. Even the Ḥanafī jurists, who allow the Imām to apportion out the *ṣadaḳa* at his discretion to one or more of the specified beneficiaries to the exclusion of the rest, draw a clear-cut distinction between *māl al-ṣadaḳa* and *māl al-Muslimīn*. (See *Kitāb al-Kharādj*, 80, 149, 187).

The primary source of the Treasury's income is, then, the revenues collectively termed *fay'*, *i.e.*, the taxes of *kharādj* and *djizya* [*qq.v.*]. The position of the tax *ʿushr* [*q.v.*] is somewhat confused. Some jurists appear to regard it as *fay'* and others as *ṣadaḳa*, while in one view it is treated as *ṣadaḳa* if paid by Muslims and as *fay'* if paid by non-Muslims. Among the subsidiary sources of income are:

(i) Property with no known owner—*e.g.*, runaway slaves when apprehended, or property found in the possession of arrested brigands. The proceeds from the sale of such property if movable, or its exploitation if immovable, belong to the *bayt al-māl*.

(ii) The property of apostates. While the great majority of jurists maintain that all the available property of apostates belongs to the *bayt al-māl*, the Ḥanafī jurists are divided between denying the claim of the Treasury altogether and restricting it to such property as was acquired after apostacy.

(iii) Estates of deceased persons. [See MĪRĀTH]. The Treasury is especially favoured in this respect in Mālikī law, where it will always succeed, as residuary heir, in the absence of any entitled *ʿaṣaba* and such Ḳur'ānic heirs as would exhaust the estate by the sum of their alloted shares. With no heir of either category the Treasury is assured of at least two thirds of the estate, since bequests may not exceed in value one third of the nett estate. In the law of the other schools, however, the presence of any Ḳur'ānic heir or blood-relative will exclude the Treasury, and in Ḥanafī law, failing such heirs, testamentary disposition may embrace the whole of the estate. Here then the Treasury only succeeds by a species of escheat.

Expenditure. Claims upon public monies fall, according to Māwardī (*al-Aḥkām al-Sulṭāniyya*, 367 f.), into two main categories.

(i) Claims in regard to which the liability of the Treasury is absolute. Such claims are either for services rendred to the State—*e.g.*, the stipends of the armed forces, the salaries of State officials, the price of equipment purchased—or for expenditure which is a specific obligation upon the State—*e.g.*, the duty to maintain its prisoners. The satisfaction of such claims is the first obligation upon the Treasury and payment may only be deferred when (as is the case with an ordinary debtor) the Treasury is insolvent. At the discretion of the *Ṣāḥib bayt al-māl* loans may be raised to satisfy these claims.

(ii) Claims in regard to which the Treasury's liability is dependent upon the existence of the necessary funds and the satisfaction of all claims in the previous category. Here the expenditure involved is for purposes of the public welfare and interest—*e.g.*, the construction of roads, water supplies, the repair of damage to *kharādj* lands.

When all outstanding obligations have been met the Ḥanafī jurists advise that any surplus should be preserved to insure against possible future need, while the Shāfiʿīs maintain that any surplus should be expended immediately in the public interest. Beyond these general principles the law does not go, content to leave the detailed determination of the public interest to the discretion of the Imām, with the one proviso that public funds are not to be devoted to purposes prohibited by the law—*e.g.*, gambling, music etc.

Procedure. The administrative work of the *dīwān* (analysed by Māwardī, *op. cit.*, 370-375) raises three main legal issues.

(i) *Legal proof*. While it is a fundamental principle of *Sharīʿa* law to deny any validity to written evidence, in Treasury practice official documents and records are *per se* a sufficient basis for action. Shāfiʿī law endorses this practice by drawing a distinction between "private rights" (*al-ḥuḳūḳ al-khāṣṣa*) and "public rights" (*al-ḥuḳūḳ al-ʿāmma*),

but the Ḥanafīs declare that Treasury documents can only serve as a basis for action when their authenticity is established by oral testimony. Semilarly proof of payment of taxes is established in Treasury practice by the written receipt of the collector. Legal doctrine, however, requires the oral acknowledgement of his signature by the collector; and further, in Ḥanafī law, such an acknowledged written receipt must be substantiated by oral acknowledgement of actual receipt. Finally written authorisation for payment from the Treasury is in practice accepted as a sufficient basis for Treasury accounts, while the jurists ideally require in addition oral acknowledgement of actual receipt by the designated receiver.

(ii) *Procedure in disputes*. The paramount question of the allotment to the contending parties of the respective rôles of plaintiff and defendant is governed by normal *Sharīʿa* principles. The plaintiff, upon whom falls the burden of legal proof (failing which effect is given to the defendant's oath of denial), is the party whose claim runs counter to the initial legal presumption attaching to the case. Thus in disputes arising from the inspection of officials' accounts by the *dīwān*'s officers (the presentation of accounts to the *dīwān* being obligatory upon officials concerned with the collection or distribution of *fay*ʾ revenues) the accountant of the *dīwān* fills the rôle of plaintiff if the dispute concerns the income of the Treasury and that of defendant if the dispute concerns expenditure.

(iii) *Jurisdiction*. Disputes between private citizens and Treasury officials are justiciable by the *Ṣāḥib al-dīwān*, unless he is expressly denied this function in his terms of appointment. Such judicial competence belongs naturally to an office of which the principal duty is that of assuring the application of the rules and regulations of fiscal law. In the case of disputes between officials of the treasury and the officers of the *dīwān*, when the *Ṣāḥib al-dīwān* is, in effect, a party to the dispute, the principle that no one can be judge in his own case applies and jurisdiction belongs to the ordinary courts.

Fundamentally concerned with the strict regulation of man's relationship with his Creator, the *Sharīʿa* deals with the relationship between the individual and the State only in general terms, restricting itself to demanding the observance of a few relevant principles. This attitude is particularly evident in the field of criminal law, where, outside the *ḥadd* offences (in which the notion of man's obligations towards Allāh predominates) the determination of offence and punishment is left to the discretion of the sovereign. So it is with fiscal law. Only those limited aspects of public finance which are deemed to constitute man's obligation towards Allāh (*e.g.*, *zakāt* tax) are regulated in detail; and thus the law concerning the *bayt al-māl* is essentially within the province of the administrative regulations (*ḳānūn*) of the political authority and not of the *Sharīʿa*.

(N. J. COULSON)

II. History. The institution can be traced back to Muḥammad in so far as there already existed in his time the embryonic notion of a Treasury of the Community, supplied by diverse forms of contributions; but its real origin is to be found in the contact between the new needs of the Community which had become the conqueror of an Empire and the pre-existing fiscal institutions of the conquered States. Tradition is certainly correct in attributing to the Caliph ʿUmar several essential preliminary steps, although the details are undoubtedly surrounded with much confusion. For ʿUmar the immediate problem was the organisation of the system of stipends (see ʿAṬĀʾ), the fiscal régime itself and the collection of taxes remaining almost exclusively in the hands of the native population. Afterwards the progressive development of a bureaucratic and centralised Muslim State had a particular effect on the elaboration of the scheme of taxation, the methods of financial administration and the organs of this administration. It is obviously impossible here to encompass the whole history of the institution, particularly after the time of the fragmentation of the Muslim world into individual States whose differences became more and more accentuated; moreover no history of this kind has as yet been written. We shall, therefore, confine ourselves to making certain observations of general validity and indicating certain desirable lines of enquiry.

The simple taxes of the early Muslim community could, in their broad concrete lines if not in their theoretical basis, be assimilated to the more complicated taxes of the States to which Islam fell heir and whose fiscal structure the Arabs, like the majority of conquering nations, respected—to such a degree, indeed, that throughout the length of Islamic history the former Byzantine territories (differing among themselves) and the former Sāsānid territories (not to mention the West) remained quite distinct areas from the fiscal point of view. To this was added, at the outset, a further distinction, afterwards resolved, between the towns conquered by force of arms, which were directly subject to Muslim taxes and tax-collectors, the towns of *ʿahd*, which paid a fixed tribute and raised it independently in their own fashion, and, between these two extremes, the towns of *ṣulḥ*, where the taxes were Muslim taxes but were raised by the native administration. For two thirds of a century the fiscal records continued to be written in the native languages, until ʿAbd al-Malik, (685-705) ordered the translation of the fundamental documents into Arabic (the example of the Egyptian papyri proves that it was by a slower process that Arabic came to be exclusively used in the work of the subordinate administration).

Both practice and theory fairly soon distinguished the following taxes and sources of revenue:

The basic tax was the land tax, *kharādj*, originally levied upon all the lands of the non-Muslim natives. When a large part of the indigenous population became Muslims by conversion, it became necessary, in spite of certain misgivings, in order not to ruin the fiscus, to decide that the land was not affected by the change of faith on the part of its possessor and must always be subject to the *kharādj*. From the point of view of the Islamic theory, the *kha-*

rādj constituted a permanent rent from the land for the benefit of the Muslim community, the supreme owner. This is the doctrine of *fay*ʾ, the immoveable properties acquired by conquest, a foundation in perpetuity for the benefit of successive generations of the community, in contrast to the moveable booty, *ghanima*, which was distributed immediately. From the point of view of the indigenous population, the *kharādj* merely continued the pre-Islamic land-tax. In addition to the *kharādj* non-Muslims are subject to a capitation tax, *djizya*, which does lapse upon conversion to Islam. The distinction between *kharādj* and *djizya*, though sharp in theory, is not always so in terminology and in practice, particularly because the Byzantine Empire, it seems, had practiced a combined land-capitation tax.

The tax, or rather voluntary alms, peculiar to the Muslim was the *zakāt* or *ṣadaḳa*, levied upon both landed and moveable property. As regards landed property it was applied on the one hand to Arab properties (especially in Arabia) and on the other hand to the *iḳṭā*ʿ conceded from the State domains to Arab notables and, later, to the military leaders of every race. In its relation both to landed and moveable property the *zakāt* was closely allied to the tithe, *ʿushr*, which was known to the Near Eastern pre-Islamic societies, and often was so called.

To these taxes were added for the fiscus the right to one fifth of the booty, the produce of mines, treasure trove from the land or from the sea and the *mawārith ḥashriyya*, succession to the inheritance of persons dying without legal heirs.

In addition, the State lands, *ṣawāfi*, when they were not conceded as *iḳṭā*ʿ, whatever the method of their exploitation, brought in revenues similar to those of private properties. Further the State appropriated the proceeds from judicial fines.

It was only the taxes listed above which were held to be legal by the theory. But in practice many others were discovered or invented. Some were supplementary increases upon the normal taxes for the defrayal of attendant expenses or any other reason (*furū*ʿ, *tawābi*ʿ, in contrast to the basic tax, *aṣl*), and others fell upon the most varied forms of economic activity (*ḍarāʾib, rusūm*). These last were generally condemned by the jurists, who were often connected with commercial circles, under the name of *mukūs*, and certain pious rulers attempted to abolish them, though naturally this was without any lasting effect. The police often demanded the payment of a particular *ḥimāya*. Finally the State was always punishing high officials who had enriched themselves by confiscations (*muṣādara*) etc.

The peculiarities of the assessment and the collection of each tax will be studied under their respective titles and so nothing more need be said on the subject here.

In general terms the recovery of taxes can be effected either by direct administration (through the agent or *ʿāmil*) or by farming out, *ḍamān*. The system of tax-farming, which was as well known to antiquity as the direct levy, gained ground with the growing decadence of the ʿAbbāsid Caliphate, but it was perhaps never practised to such an extent as has often been believed by those who have failed to distinguish properly the notions of *ḍamān*, *ḳabāla* and *djahbadha*, which, although there may be occasional confusions of terminology, are utterly different things. *Ḳabāla* can only come into operation where there exists a group of tax-payers collectively responsible for the tax. By agreement between the group and the agent of the fiscus it may be decided, as was the case in the later Roman Empire, that the tax will be paid by one or several individual persons of standing, and it will be left to them to reimburse themselves afterwards with some small additional sum by way of compensation. The *ḳabāla*, therefore, does not modify in any way either the amount of the tax owed to the State or its direct recovery by the agents of the State from the basic group. The tax-farmer, *ḍāmin*, on the other hand, is an individual who, often for one or more provinces and for a number of years, pays annually to the State a contracted sum, less than the calculated revenue from the tax, and afterwards undertakes its recovery on his own account, which will, of course, reimburse him with profit. If the State is reduced to this method it is assured of a precise and immediate return from the pockets of rich individuals, but it loses a portion of the money paid by the tax-payer and, for the duration of the contract, the control of operations. As for the *djahbadh*, he may well be a *ḍāmin*, but he has at the same time the unique position of a sort of official money-changer cum surety; for he verifies and standardises by exchange the different types of currency, good and bad, paid by the tax-payers in return for a small percentage collected as a supplementary tax from the latter.

Furthermore, outside the territories subject to the normal taxation, levied directly or by farming out, there were other areas in regard to which the State had renounced some part of its fundamental rights. In some areas—*īghār*—the State temporarily refrained from sending agents of collection, abandonning the revenue to an army commander so that he might cover therefrom the expenses of his army's maintenance. In other areas—*muḳāṭaʿa* (to be carefully distinguished from the *iḳṭā*ʿ)—the State was content with a contracted tribute, without concerning itself with the theoretical scheme of taxation: equivalent to the primitive *ʿahd*, this was applied in particular to the vassal rulers of regions which were not completely subdued. The *iḳṭā*ʿ, in its original form of a concession of land from the State domains which was subject to the payment of the tithe, had not any particular fiscal character; but later there were assigned under this name to army officers as the equivalent of their salary the fiscal rights of the State in *kharādj* districts, initially subject to the payment, by the beneficiaries, of the tithe for the area concerned, then later with no attached condition other than that of professional military service (see Cl. Cahen, *L'évolution de l'iqtâ*ʿ, in *Annales ESC*, 1953). These different methods of alienation of the revenues of the fiscus naturally diminished the returns, but they equally alleviated the expenditures in a manner which often involved hardly any break with the previous position, since in any case the proceeds of the taxes from a province were never sent to the fiscus until the provincial expenditure had first been satisfied on the spot. The danger to the State was only serious in proportion to the extent, which varied in the different regions and at different periods, to which these alienations resulted in a relaxing of the fiscal control itself and consequently also of the appreciation of the resources of the territory concerned.

This appreciation was obtained with fairly reasonable accuracy not only through the lump evaluations of the budget but also from the daily sessions, following the ancient custom, devoted to the detailed assessment of lands and their fiscal value, as well as of persons subject to the *djizya*

and, in all probability, the *zakāt*, not to speak of the other taxes. The best example preserved concerns the Fayyūm in the 7th/13th century (*Arabica*, 1956), but what we know of the ʿIrāḳī Sawād, of the province of Ḳumm in Iran, etc., and in a general way of the methods of the administration, allows no one to doubt that there are almost everywhere parallels in ʿAbbāsid times. The value of each fiscal unity was the object of an assessment, *ʿibra*, which continued to serve as an authority so long as there had been no revision, although naturally, the administration itself had to admit annual variations. Diverse works, such as the *Mafātiḥ al-ʿulūm* and the Egyptian papyri, allow us to follow from another angle the precision of the daily accounts of the refunds of taxes and of the reliefs granted to tax-payers. Arrears (*baḳāyā*) were meticulously noted and claimed in following years, although it was in practice often necessary, when arrears had accumulated, to settle them by compromise. Recovery of taxes necessitated a distinction between the two calendar years, for only the personal taxes or the payments *ex contractu* could be based on the legal lunar year, while the taxes on land and its produce were of necessity based on the solar year, Persian or Egyptian.

These methods, which were the pride of the *kuttāb* and the *ḥussāb*, allowed the ʿAbbāsid Caliphate, until the beginning of the 4th/10th century, and certain regional rulers after that date, to establish veritable budgets, at any rate of receipts (the arbitrary activity of the rulers in the matter of expenditure not allowing equally comprehensive appreciations in that sphere). In particular four ʿAbbāsid budgets have been preserved, undoubtedly based upon good archive sources, the relative agreement of which guarantees the accuracy, if not of all the details, at least of the main and broad essentials. They do not provide a complete statement of the total receipts of the Caliphate, for the *d̲j̲izya*, the *zakāt* on moveable property and, *a fortiori*, the *mukūs* only figure there exceptionally (their more variable character and the fact that they did not issue from the same services being obvious). Such as they are they show us a total of income exceeding 400 million dirhams for the second half of the 2nd/8th century, falling short of 300 million by the beginning of the following century, and at the beginning of the 4th/10th century down to $14^1/_2$ million dinars, which is approximately equivalent to 210 million dirhams. This shrinking of the receipts was due to the territorial losses of the Caliphate and not, except at moments of crisis, to diminishing fiscal values within each province. The increasing financial difficulties of the Caliphate were, therefore, not occasioned by any economic catastrophe, for which supposition there is absolutely no foundation, but by the relatively increasing burden of necessary expenditure, particularly military, which it was impossible to reduce in proportion to the decline in the provincial tax returns. Without attempting here to cover all the details of the military organisation of the Caliphate, we may try to show something of the financial burden which it constituted: a foot-soldier's usual pay being of the order of 1000 dirhams per annum, and that of a horseman double this amount, it can be estimated that the cost of the stipends alone for an army fifty thousand strong would be in the region of seventy five million dirhams. To this, of course, it is necessary to add the exceptional salaries of the commanders, the gratuities and the cost of equiping and maintaining the armies and the fortifications etc., and one writer maintains that in the middle of the 3rd/9th century the army was costing at one time some 200 million dirhams, which means to say that at that moment there would be a surplus only of approximately one half of that sum (not counting the taxes which did not figure in the budget) for all "civilian" expenditure. This latter expenditure is more difficult to assess, although we know the salaries of the principal officers of Government and Court under the ʿAbbāsids and the Fāṭimids, not to speak of later periods (see especially Hilāl al-Ṣābī, *Wuzarāʾ*, and al-Maḳrīzī, *K̲h̲iṭaṭ*, ii, 401).

It is difficult to give a precise description of the various organs of the central fiscal administration which often, and in a varying manner, overlap and are confused with each other under ill-defined titles. The fiscal administration was the primary duty of the *Dīwān* in particular and in general, consequently, of the vizirate when this latter developed. But it was impossible for a single organ to deal at the same time with both the operations and the fundamental rules (*aṣl*) of assessment and collection and the daily accounts of income and expenditure. In spite of the difficulty of the texts it is apparently to this division of duties that the institution of the *Dīwān al-zimām* corresponds, for this office, which was later known in the East as the *istīfāʾ* (the director being the *mustawfī*) appears to be the service of accountancy. From the time of al-Mahdī it controlled the accountancy services attached to each dīwān as well as those of the provincial administrations. Expenditure was the province of a special dīwān, the *dīwān al-nafaḳāt*, while expenditures relating to the army were the province of the *dīwān al-d̲j̲ays̲h̲*. With the inauguration of the system of the fiscal *iḳṭāʿ* this latter *dīwān* in fact came to possess duplicates of the survey registers for receipts. The *Bayt al-Māl* properly so called was the service to which the income was delivered and from which the expenditure was drawn, the Treasury. An army of scribes, *kuttāb*, and accountants, *ḥussāb*, worked in these offices, some under the control of others, applying the accountancy techniques which the didactic fiscal treatises of the Būyid period have revealed to us. For the representation of numbers they employed what is known as the *dīwānī* script, which consisted of letters and particular signs devised from abbreviations of the names of numbers, and which was to remain in use almost up to the present day in certain countries, to the exclusion of the "Arabic" numerals.

Still further subdivisions existed in the services, in particular, as regards the receipt of the land taxes, between the service for the *k̲h̲arād̲j̲* and that for the *ḍiyāʿ*, that is to say landed properties subject solely to the tithe. On the other hand a regional division was gradually established, by virtue of which we can distinguish a *Dīwān* of *Sawād* (province of Bag̲h̲dād), one of the east and one of the west (Arab territories). Special services administered confiscated properties; these were sometimes returned, sometimes distributed. Again, dues paid in kind, presents and gifts received, the valuable products of the *ṭirāz* etc., were stored in the *k̲h̲azāʾin* or *mak̲h̲āzin*, and the general term of *mak̲h̲zan* appears to have almost replaced, in the administration of the later Caliphate, the term of *Bayt al-Māl*, the change reflecting, undoubtedly, the proportionate increase of presentations in kind and the diminution of fiscal receipts in hard cash.

The Muslim State, however, always recognised the distinction between the private Treasury of the

Caliph or the Prince, *Bayt māl al-khāṣṣa*, and the public Treasury, *Bayt māl al-muslimīn* or simply *Bayt al-māl*. But the distinction was by no means a rigid one, for the private Treasury was supplied not only with the revenues from the sovereign's personal estate but also with different public revenues such as fines, confiscations and even capitation fees and land taxes from certain provinces of Irāḳ and southern Iran, out of consideration for both the needs of the Court and also all the pious works which the Caliph and his successors had to undertake. In practice, whatever the personal position of the Caliphs, the privy purse had often to play the rôle of a simple reserve for the public Treasury, furnishing it with advances which might or might not be reimbursed (W. Fischel, *Le Bayt Māl al-Khāṣṣa*, in *Actes du 19e Congrès des Orientalistes*, 1938, 538-41).

Each of the provinces had, on a small scale, an organisation parallel to that of the central government. They did not despatch to the latter the sum total of their fiscal revenue but only the residue after local expenses had been satisfied. Furthermore the provinces did not send on this residue as and when it was received, but in bulk, and when the needs of the State were particularly pressing the *ʿāmil* would resort to sending promissory notes, guaranteeing the delivery of sums received, which the *Dīwān* could then use in negotiations with its creditors. The autonomy of the provincial fiscal administration is among the reasons which explain the ease with which independent régimes could establish themselves in the different areas without undue complication.

The interests of State, subordinate rulers and tax payers caused a variation, at different times and in different places, of the proportion of payments in cash and payments in kind which made up the tax returns. Moreover the East paid in silver and the Mediterranean countries in gold. The result was that the early accountancy of the fiscal services had to operate in different categories. At the end of the 3rd/9th century, however, an effort was made to establish a unified system of accountancy on the basis of the gold standard, with a legal tariff for the exchange of the dirham and a regulated price list for the different commodities; in this way the budget estimates could be more clearly established.

The theory, basing itself upon the early machinery of taxation in the Muslim community, never accepted the principle that all fiscal revenue ought to be devoted without distinction to each and every expenditure incurred. In particular the theory held that the *zakāt*, inasmuch as it was a Muslim tax, ought to be used for pious works, for alms, the holy war, the ransom of Muslim slaves and aids to travellers etc., and ought, in principle, to be expended in the locality of its collection and not delivered to the fiscus. It is impossible to appreciate the extent to which such distinctions could be respected in practice; there was evidently no question of their being observed in times of crisis. The only sources of revenue which were assured of an employment in conformity with the precepts of the law were the private foundations *waḳfs*, *ḥabūs*. These, naturally, did not form part of the fiscal revenues, but they were firmly under the control of the State, usually through the intermediary of the *ḳāḍī*, in order to prevent abuses.

It can scarcely be doubted that the fiscal régime was oppressive, even if no more so than that of the neighbouring non-Muslim States. Apart from the "neck-brand" of those subject to the *djizya*, brutal methods of collection, such as those described for the early ʿAbbāsid period by (the pseudo-?) Dionysius of Tell-Mahré (*Arabica*, 1954), were often employed despite the efforts of certain princes and *wazīrs*. Egypt, as it did in Roman and Byzantine times, continues to present us with a picture of taxpayers fleeing their homes to escape the fiscus, and the Coptic revolts of the 2nd/8th and 3rd/9th centuries had in general no other than fiscal causes. The autonomy of the provinces, even if it did not alleviate the tax burden itself, did improve the situation in general, since the interest of the local rulers lay in being self-supporting and in at least expending on the spot revenues which had formerly gone to enrich the favourites of the Caliph. A few echoes of the conflicts between the democratic and aristocratic notions of taxation have come down to us (for example in Ibn al-Ḳalānisī, 343 and 352-3).

The growing, albeit variable, spread of the régime of the fiscal *iḳṭāʿ* from the beginning of the 4th/10th century considerably diminished the importance of the fiscal administrations, as it also did that of the direct resources of the State. It is out of the question here to trace the financial history of the different Muslim principalities which were the heirs of the Caliphate. It must suffice to say that until modern times the countries which have not been affected by the Mongol invasion have retained for the taxpayers almost the same régime of taxation, that the rights of the State havē only ever been partially alienated and that in consequence certain methods of assessment and budgetary estimates have always there been possible. The countries incorporated, during the 7th/13th century, into the Mongol Empire, not to speak of the subsequent series of changes of rule, experimented with forms of fiscal administration which combined with the old Muslim traditions new elements taken from the conquerers. Such elements were also introduced into Asia minor, where, in addition, there still persisted Byzantine traditions which had become interwoven with the local Saldjūḳid Muslim institutions; and these three elements apparently influenced, though in a way which has not yet been discovered, the original formation of the future Ottoman institutions. The figures quoted in such and such a source have often been adduced to demonstrate the decadence of the fiscal revenues and consequently of the economy; but these figures can only be interpreted on the basis of a consideration, in the first place of the proportion of taxes accruing directly to the State and that alienated to individuals, and in the second place of the value of currency and market prices; and it would be wise for the moment to refrain from any positive assertion.

Bibliography: We can naturally do no more here than note certain sources of particular importance. For the origins references may be found in Caetani, *Annali*, iv, 368-417, to which may be added Abū ʿUbayd b. Sallām, *K. al-Amwāl* (see ʿAṬĀʾ); the majority are drawn from the works on *kharādj* composed in the first ʿAbbāsid century by Abū Yūsuf and Yaḥyā b. Adam (of which an annotated English translation by A. Ben Shemesh, Leiden 1958 has just appeared), and, later, from the *K. al-Futūḥ* of Balādhurī. The *K. al-Kharādj* (not wholly preserved) of Ḳudāma (ed. A. Makki, a typewritten thesis, Sorbonne, Paris) and the scattered information in the *Mafātīḥ al-ʿUlūm* of Khwārizmī date from the 4th/10th century, and the *Aḥkām al-Sulṭāniyya* of Māwardī from the 5th/11th century. The

budgets studied by A. V. Kremer in his *Kulturgeschichte des Orients*, i, ch. VII and *Das Einnahmebudget ... vom Jahre 306* (*Denkschr. d. k. Akad. d. W. Wien, Ph.-Hist. Kl.* xxxvi, 1888 (the oldest one, now also accessible in Djahshiyārī, *K. al-Wuzarā'*, ed. Mzik, 179-182, or Cairo 1938, 281-88)) are drawn from various chronicles. To the Būyid period belong the didactic treatises on fiscal mathematics of al-Būzadjānī (a study is being prepared by Saleh el-Ali, Baghdad) and of the anonymous author of the *K. al-Ḥāwī* (analysed and commented upon by myself in *AEIO*, x, 1952). Much information can naturally be obtained from the Egyptian papyri, edited by A. Grohmann, see his commentaries in the articles in the *Archiv Orientalny*, v-vi, 1933-1934, and by C. Leyerer in *ZDMG*, 1953. Among the historical chronicles and works the most valuable are evidently the *Tadjārib al-ʿUmam* of Ibn Miskawayh with their supplement by Rudhrawarī, the *K. al-Wuzarā'* of Hilāl al-Ṣābī and the *Ta'rikh-i Ḳumm* of Ḥasan b. M. Ḳummī, much used in A. K. S. Lambton, *Landlord and Peasant in Persia*, Oxford 1953, especially chap. II. Certain official correspondence, such as that of the Būyid vizir Ibn ʿAbbād, ed. ʿAbd al-Wahhāb ʿAzzām and Shukrī Ḍayf, 1947, may be consulted with advantage. For subsequent periods it will suffice to note certain recent publications: for the Ayyūbids, in addition to the classical *Ḳawānīn al-Dawāwīn* of Ibn Mammātī (ed. Atiya, 1943), the short works of ʿUthmān b. Ibr. al-Nābulūsī (*Description of Fayyum*, see my analysis in *Arabica* 1956, and *Lamʿ al-Ḳawānīn*, edition prepared by myself); for the Mongols, the *Resalāye falakiyyā* of ʿAbd Allāh b. Kiyā al-Māzandarānī ed. W. Hinz and studied by him in *Der Islam*, xxix, 1949; for the Yemen, R. B. Serjeant and myself will publish a valuable work of the 9th/15th century, the *Mulakhkhaṣ al-fitan* (cf. *Arabica*, iv/1957, 23 f.). For Egypt in general and the Mamlūks in particular the importance of Maḳrīzī, *Khiṭaṭ*, and of Ḳalḳashandī, *Ṣubḥ* need not be emphasised.

There does not exist any financial history of the Muslim world; there are, however, certain useful partial studies. See particularly, for the period of the origins, D. C. Dennett, *Conversion and the Poll-Tax in early Islam*, 1951; for the whole of the "classical" period, Fr. Løkkegaard, *Islamic taxation in the classic period*, 1951 (a great documentary and technical achievement, but not uniformly reliable) which refers to the works, important in their time but now superseded, of C. Becker, etc., and Chapter 8 (cf. 6) of Mez in *Renaissance*. Useful observations will be found in the Sorbonne thesis of D. Sourdel on *Le vizirat ʿabbāside*, when this is published. Among other more specialised studies, apart from those which are cited in the text of the article, see W. Fischel, *Origin of Banking in Medieval Islam*, in *JRAS*, 1933, and H. Gottschalk, *Die Mādarā'iyyūn*. An exposition of the classical doctrine may be found, for example, in S. A. Siddiqi, *Public Finance in Islam*, Karachi 1948. (CL. CAHEN)

In the Ottoman state the distinction was carefully maintained between the private treasury of the Sultan (*Khazīne-i Enderūn* or *Ič Khazīne*) and the public treasury or treasuries of the state (*Khazīne-i Emīriyye*, *Khazīne-i Dewlet*, *Khazīne-i ʿĀmire*, etc. On the Ottoman treasury and finances see further DAFTARDĀR, KHAZĪNE, MĀLIYYA). The term most commonly applied to the state treasury was *Mīrī* (from *emīrī*), which was also used in the more general sense of government property (cf. BEYLIK). In Ottoman administrative documents the treasury is not normally called *bayt al-māl*, though the expression does occur, usually in the forms *bayt al-māl-i Muslimīn* or *bayt al-māl-i ʿāmma* (as for example in some legal rulings of Abu 'l-Suʿūd quoted by Ömer Lutfi Barkan in *Tanzimat*, Istanbul 1940, 333, 336, 343; and in a few *ḳānūnnāmes* published in Barkan, *Kanunlar*, 297, 300, 326. In all these the context is the rights of the *bayt al-māl* over certain categories of land, called *arḍ-i mīrī* or *arḍ-i memleket*). In common Ottoman usage the term *bayt al-māl* was normally restricted to a certain group of revenues belonging by law to the public treasury. These consisted of various categories of forfeited, escheated, and unclaimed property, and are enumerated and discussed in a number of documents. The most important were property belonging to missing and absent persons (*māl-i ghā'ib* and *māl-i mafḳūd*); unclaimed or escheated inheritances (*mukhallafāt*, *matrūkāt*); runaway slaves and stray cattle (*ʿabd-i ābiḳ*, *kačkun*, *yava*). The collection and care of these properties was the function of an official called the *Emīn bayt al-māl* or *bayt al-māldji*. Most legal sources agree that unclaimed inheritances are to be held for a period of time, variously determined, as a trust, to give the heirs the opportunity to assert and establish their claim. Only after their failure to do so does the money or estate become the property of the treasury. There are frequent complaints that this rule was disregarded, and that property was seized too quickly and without proper verification (*e.g.*, Luṭfī Pasha, *Āṣāfnāme*, ed. and tr. R. Tschudi, Berlin 1910, text 11, tr. 12; cf. Sarī Meḥmed Pasha, *Naṣā'iḥ al-Wuzarā'*, ed. and tr. W. L. Wright, Princeton 1935, 71).

The Ottoman *ḳānūnnāmes* contain elaborate instructions and safeguards concerning the claiming of these properties and the assigning of the proceeds. Properties claimed for the *bayt al-māl* could be and frequently were assigned to *ʿāmils*, to *sandjaḳ-beys*, and even to *sipāhīs*. As early as 883/1479, a *ferman* of Meḥemmed II lays down a distinction between reversions worth less than 10,000 aspers, and those worth 10,000 and over. The former were to be paid to the *ʿāmil*, or tax-farmer of the area; the latter were reserved to the Imperial treasury (*beylik*) (Halil Inalcık, *Fatih Sultan Mehmed'in Fermanları*, *Bell.* no. 44, 1947, 699-700). A similar distinction is made in a late 15th century *ḳānūnnāme* (Anhegger-Inalcık 70-1), and is common in *ḳānūnnāmes* and registers from the 16th century onwards. The normal rule was that these properties, or the fees payable if they were successfully reclaimed by their owners, belonged to the treasury. In fact the share of the treasury was limited to items worth 10,000 aspers or more, and to property left by the servants of the Sultan, a category including the *sipāhīs* and other persons in the Sultan's employ. In the earlier period it also included the Janissaries. The remainder was part of the *khāṣṣ* of the *sandjaḳ-beys*. There were some exceptions to this division. In the so-called 'free' *tīmārs* (*serbest tīmār*), the *bayt al-māl* revenues were assigned to the *tīmār*-holder, and not, as in ordinary *tīmārs*, reserved to the Sultan's or the governor's *khāṣṣ*; in some *waḳf* lands too, notably those in favour of the *ḥarameyn*, they were included in the *waḳf* revenues. From the 16th century the Janissaries had a special officer of their own, the *Odjaḳ bayt al-māldjisi*, a kind of regimental

treasurer one of whose duties was to collect and assess the *mukhallafāt* of heirless Janissaries, *ʿadjemī oghlans*, etc. These or their equivalent were placed in the regimental chest (Ismail Hakkı Uzunçarşılı, *Osmanlı Devleti teşkilâtından Kapukulu Ocakları I*, Ankara 1943, 311-320). Another interesting example of corporate privilege occurs in Jerusalem, where the *Zāwiya* of Maghribī *mudjāwirs* were collectively given the right of retaining the *mukhallafāt* of any one of their number who died without heirs. This right was granted by Saladin, and confirmed by the Mamlūk and Ottoman Sultans (Başvekalet Arşivi, tapu register no. 427 of 932/1526; cf. A. S. Tritton, *Materials on Muslim Education in the Middle Ages*, London 1957, 123). A similar privilege appears to have been given to the monks on Mount Athos (P. Lemerle and P. Wittek, *Recherches sur l'histoire et le statut des monastères athonites sous la domination turque, Archives du droit oriental*, iii, 1948, 443, 542, 453, 465).

The Muslim West. As long as the Maghrib and al-Andalus were under the direct administration of the Umayyad or the ʿAbbāsid Caliphate they posed no particular problems of financial organisation; the local *bayt al-māl* was only a branch of the *bayt al-māl* of Damascus or of Baghdād.

It was only when some part of the Muslim west slipped from the control of the eastern Caliphate that separate administrations were organised there.

Except for the chapters of Ibn Khaldūn devoted to administration (*Muḳaddima*, Cairo ed., 269), one cannot point to any theoretical treatise concerning the administration of the public finances or even any systematic treatment of the situation at any given period or place. There is no alternative but to try to give some idea of what happened from the slight and scattered indications in the chronicles and diverse documents available.

I. Al-Andalus. The work of E. Lévi-Provençal has shown that in Muslim Spain the term *bayt al-māl* was nearly always taken in a limited sense. In effect this expression, which is often found in the form *bayt māl al-muslimīn*, designates the treasure composed by the revenues of pious foundations (*awḳāf*) and clearly distinct from the public treasury properly speaking, which is commonly called *khizānat al-māl* and much more rarely *bayt al-māl*. This treasure from pious foundations was quite naturally placed under the authority of the *ḳāḍī* who looked after its administration, and was kept in a religious building, at Cordova in the *maḳṣūra* of the Great Mosque (Ibn ʿIdhārī, *Bayān*, iii, 98). The sums which constituted it originated for the most part from the revenues of pious foundations often assigned to strictly determined expenditure, but also from irregular deposits that could not be touched, in particular the goods of 'absentees' (*ghāʾib*), that is Muslims who, for one reason or another, had abandoned their possessions without designating a legal mandate for their administration.

The *ḳāḍī* was assisted in the provinces by the inspectors of the pious foundations (*nāẓir al-awḳāf*) and was only qualified to authorise expenditure. These funds could only be employed for the ends indicated by the donors, or if the objects were only expressed in vague terms, for works of public utility and religion like help for paupers, the upkeep of mosques and the payment of their staff, the building of institutions of learning and the payment of teachers, etc. The *ḳāḍī* could authorise advances from the public Treasury for pious works like the organisation of a military campaign against the infidels or the restoration of a defence work on the frontier of the *dār al-islām*.

This system still functioned at the beginning of the 6th/12th century during the Almoravid occupation, as is shown in Ibn ʿAbdūn's discourse on the *ḥisba*, edited and translated by E. Lévi-Provençal (see bibliography).

II. Maghrib. Nothing leads us to believe that the term *bayt al-māl* was used in the Maghrib in such a restricted sense. It seems to have been used in its wider meaning of the public Treasury and it designates at the same time the administration of public finances.

So far the financial organisation of the different states of the Muslim West has not been the object of a systematic study. It must be added that the information supplied by the Arabic chronicles is slight and very scrappy. We must be content with very general observations on the matter.

The Aghlabids of al-Ḳayrawān do not appear to have been innovators in this respect and seem to have been content with the system they found when they came to power in 184/800.

If the Fāṭimids did not change much in the administration and nomenclature of the taxes, they obtained, according to the indications of Ibn Ḥawḳal (ed. De Goeje, 69) a remarkable return from the taxes, the annual total of which reached 7 to 8 million dinars. The Zīrids could only maintain the system so well organised by their predecessors.

We know practically nothing about the financial organisation of the Almoravids, except that their first ruler, Yūsūf b. Tāshufīn felt obliged to content himself with "legal" taxes—an attitude which his successors did not keep up, and that they maintained in Spain the organisation that they found in force there.

The only precise indication that we have on the subject of the Almohads is the establishment by ʿAbd al-Muʾmin in 555/1160 of a sort of cadaster intended to cover the whole Maghrib and to help in the assessment of a land tax (*kharādj*) (*Rawḍ al-Ḳirṭās*, ed. Tornberg, 126; 174).

R. Brunschvig's study on the Ḥafṣids contains all the details possible—and they are comparatively few—on the financial organisation of the eastern Maghrib from the 7th/13th to 9th/15th centuries. The official who directed it bore the name of *ṣāḥib al-ashghāl*, a term also used by Ibn Khaldūn (*loc cit.*), then of *munaffidh*. It was characterised by the fact that, in a number of instances, it renounced Ḳurʾānic "legality" but it was successful, for the Ḥafṣid treasury was nearly always well filled.

Nothing precise is known about the Banū ʿAbd al-Wād. It is possible that the thesis being prepared by M. Mougin may clarify the subject.

The rare and scattered indications on the financial organisation of the Marīnids can be found in the

Masālik of Ibn Faḍl Allāh-al ʿUmarī (tr. M. Gaudefroy-Demombynes, *BGA*, ii, Paris 1927) and in the *Musnad* of Ibn Marzūḳ (ed. and tr. E. Lévi-Provençal, in *Hesp.*, 1925). They all concern the reign of Abu 'l-Ḥasan (the middle of the 14th century).

A text of al-Ifranī (*Nuzhat al-Hādī*, ed., Houdas, 38-40; tr. 70-75) provides interesting information on fiscal matters at the beginning of the Saʿdid period and on the establishment of a new land tax called *nāʾiba*. Finally, the work of E. Michaux-Bellaire gives quite a clear picture of the financial system under the ʿAlawid dynasty at the end of the 19th and beginning of the 20th centuries.

It may be hoped that the Turkish archives preserved in Tunis and Algiers contain the materials for a study of Turkish fiscal policy in the Maghrib, at least from the 18th century.

(R. LE TOURNEAU)

AL-**BAYT** AL-**MUḲADDAS** [see AL-ḲUDS]

BAYT RĀS, a village in Transjordania, known by the Arab geographers, and situated about 3 km. N. of Irbid in the district of ʿAdjlūn [*q.v.*], on an eminence (589 m.) surrounded by ruins which mark the deserted site of the ancient Capitolias. This town of the Decapolis, the name of which corresponds to the Arabic name which outlived it and doubtless relates to its dominant position in a less hilly region, was noted by the early itineraries along along with Adhriʿāt (Derʿa), Abila (Tall Abil) and Gadara (Umm Kaya), which were neigbouring places. Formerly a Nabatean possession, it had increased in importance during the Roman period, being declared autonomous in 97-8, the first year of Trajan's reign, and had maintained its importance as a Byzantine bishopric of Palestina Secunda. Occupied by Shuraḥbīl b. Ḥasana at the beginning of the period of Arab conquest and incorporated in the *djund* of Urdunn, it enjoyed during the Umayyad period a position which is attested by various notices in the poets and chroniclers. These sing the praises of its wine, "already praised by the pre-Islamic poets Nābigha Dhubyānī and Ḥassān b. Thābit" (H. Lammens) and still known by Yāḳūt in the 6th/13th century, and mention it as the seat of the caliph Yazīd II, who lived there with his favourite Ḥabāba (the tradition which makes it the birthplace of the caliph Yazīd I seems however more doubtful, and may be based on a confusion with the village of Bayt Rānis in the Ghūta of Damascus, as has already been pointed out by H. Lammens, *Études sur le règne du caliphe omaiyade Moʿawiya Ier*, Beirut 1908, 379 and n.). The fame of Bayt Rās, at a period when the Marwānid rulers preferred to reside in the region of al-Balḳāʾ [*q.v.*], which is rich in archaeological remains that can be attributed to them, was followed by a rapid decline, and the site was almost completely abandoned. It is a cause for regret, however, that the ruins which still exist, and which have been briefly described by travellers, have never formed the subject of serious study which might enable one to distinguish the traces of an Umayyad establishment in the midst of the earlier buildings.

(J. SOURDEL-THOMINE)

BAYṬĀR is the most frequently used form of the word which denotes the veterinary surgeon. It is an arabicised form of ἱππιατρός, and, as a matter of fact, the more exact form *biyaṭr* is to be found in ancient poetry, as well as *bayṭar*. The preservation of the original Greek form in Oriental languages is also proved by the 12th century *Midrash Numeri rabbā*, 9, where אפייטרוס is expressly written. However, the Greek hippiatric writings do not seem to have been known in Islam, if the quotation of Heraclides in al-Bīrūnī, *al-Djamāhir fi Maʿrifat al-Djawāhir*, 101 does not mean Heraclides of Tarentum (ca. 75 B.C.), who wrote, amongst others, a hippiatric book, cf. M. J. Haschmi, *Die Quellen des Steinbuches des Bērūnī*, Thesis, Bonn 1935, 44. A pseudo-Hippocratic work on the subject bearing the title *De Curationibus infirmitatum aequorum*, was translated by a Jew named Moses of Palermo for Charles I of Anjou (1266-1285), and printed in Bologna 1865, in P. Delprato, *Trattati di mascalcia attribuiti ad Ippocrate tradotti dall'arabo in latino*.

The oldest Arabic work on *bayṭara* is ascribed to Ḥunayn b. Isḥāḳ by Ibn Abī Uṣaybiʿa, i, 200, 26; it is also the only work on the subject quoted by Ṭāshköprüzāde, *Miftāḥ al-saʿāda*, i, 270, who calls it "sufficient" (*kāfī*). A writer contemporary with Ḥunayn is the first author on hippiatrics whose works are preserved, namely, Abū Yūsuf Yaʿḳūb b. Akhī Ḥizām, stablemaster to al-Muʿtaṣim and al-Muʿtaḍid (second half of 3rd/9th century), cf. Brockelmann, S I, 432 f., where further bibliography is quoted. A great many manuscripts of books by several authors were listed by H. Ritter in an annex to his review on ʿAlī b. ʿAbd al-Raḥmān b. Hudhayl al-Andalusī, *La parure des cavaliers*, ed. L. Mercier, 1922 (*Der Islam*, xviii, 1929, 119-126). The words *bayṭār* and *bayṭara* are still in use in modern Spanish (*albéitar* and *albeitaria*). A French article on the veterinary medicine of the Bedouins was translated into Arabic by Père Anastase, *al-Machriq*, i, 1898, 684, 942.

(M. PLESSNER)

BAYYĀNA, Span. Baena, a small town in the province of Cordova, 59 kilometres from the capital. During the Muslim period it belonged to the district of Cabra; with al-Zahrā', Ecija, Lucena and Cordova, it formed the *iḳlīm* of al-Ḳambāniya (la Campiña). Situated on a hill in the Campiña of Cordova and watered by the Marbella, a tributary of the Guadajoz, it was surrounded by gardens, vineyards and olive groves, as at present, and enjoyed great prosperity during the Umayyad period. The town possessed a solid fortress, situated on the slope facing the river, a cathedral mosque built by the order of ʿAbd al-Raḥmān II, markets and baths. Ibn Ḥafṣūn [*q.v.*] succeeded in conquering Bayyāna during the period of the *amīr* ʿAbd Allāh but, with the fall of the caliphate and the ensuing disorder of the *fitna*, it lost much of its rural tranquillity. Its present location dates back to the Muslim period, as no Roman traces have been found there nor in various parts of its environs, as far as the neighbouring ridge of Antigua. Alfonso the Warlike on his famous expedition into Andalusia, passed by Baena without taking it, shortly before the battle of Arnisol (Ṣafar 520/March 1126). When the town fell into the hands of Ferdinand III in 1240, it had a double enclosure, an internal wall which enclosed the *alcazaba* and the *medina*, and an external wall which encompassed the outskirts occupied by the civilian population. The *mudejares* who remained at Baena were transferred to Castile in 1571, but a royal decree authorised their establishment at Cordova until their final expulsion. The most important celebrity of the town was Ḳāsim b. Aṣbagh b. Muḥammad. b. Yūsuf b. Nāṣiḥ b. ʿAṭā', a traditionist and philologist who was born at Baena in 247/862 and died at Cordova in 340/951.

(A. HUICI MIRANDA)

BAYYĀSA, Span. Baeza, a town in the province of Jaen, 48 kilometres from the capital. Its present population is about 17,000 and it is situated on a hill whose slopes descend to the valleys of the Guadalquiver and the Guadajoz. Of Iberian foundation, it was called Biatra, according to Ptolemy. Pliny calls its inhabitants Vincienses, and the Goths made it the seat of the diocese *biatensis*. Upon its fall to the Muslims it took the name Bayyāsa. Its corn and barley were praised, according to al-Idrīsī, who did not however mention its olive groves which today cover half its area.

During the Umayyad caliphate Ibn Ḥafsūn [*q.v.*] conquered it, but it was retaken by ʿAbd al-Raḥmān III in 217/910. In 412/1021 the town belonged, with Jaen and Calatrava, to the fief of Zuhayr *fatā*ʿ *ʿāmirī*. It was occupied by the Almoravids, whose last champion in al-Andalus, Ibn Ghāniya, surrendered it in 541/1146 to the emperor Alfonso VII; the latter kept it until he evacuated it in 552/1157 at the same time as Ubeda, shortly before his death and after the loss of Alméria. For nearly a century it belonged to the Almohads, and in 609/1212 al-Nāṣir on his way to Las Navas de Tolosa, moved his camp from Jaen to Baeza. After the rout, the inhabitants of Baeza fled to Ubeda, and on 18 Ṣafar 609/20 July 1212, the victors entered the deserted city and burned it. When the Christians had retired, it was rebuilt and repopulated. In the following year, Alfonso VIII besieged it with difficulty during the winter of 1213-14, and was forced to retire without success.

A nephew of ʿAbd al-Mu'min, Abū ʿAbd Allāh, who held the governorships of Bougie, the Balearics and Valencia, must have lived a long time at Baeza, for his ten sons had the surname al-Bayyāsī, and the eldest, ʿAbd Allāh revolted at Baeza against the caliphs al-ʿĀdil and al-Ma'mūn. He allied himself with Ferdinand III and received a Castilian garrison in the alcazaba of Baeza. When he was killed by the Cordovans in 623/1226, the inhabitants of Baeza again abandoned their city, and it was finally occupied by Ferdinand III on 19 Dhu 'l-Ḥidjdja 624/30 November 1227. During the 14th and 15th centuries, Baeza, as a stronghold of great strategic importance, owing to its situation on the frontier between Castile and the kingdom of Granada, played a major rôle in the struggles of the Reconquest between the Naṣrids and the Marīnids.

BAYYINA (plural *bayyināt*), etymologically the feminine adjective "clear, evident", was already in use as a substantive with the meaning of "manifest proof" in numerous passages of the Ḳur'ān—in xcviii, 1 for example, whence it is that the Sūra itself is entitled *al-Bayyina*. In legal terminology the word denotes the proof *per excellentiam*—that established by oral testimony—, although from the classical era the term came to be applied not only to the fact of giving testimony at law but also to the witnesses themselves. There are other words to express other aspects or degrees of the notion of proof, notably *ḥudjdja* (plural *ḥudjadj*) "argument, proof (in general or at law)", "a document constituting proof", *dalīl* "conclusive indication" and *burhān* "demonstration".

In the legal field the Ḳur'ān is concerned with proof in diverse matters, both civil and penal. It is at once noteworthy that it is fundamentally to oral testimony (*shahāda* [*q.v.*]) that the Ḳur'ān prescribes recourse. It recommends that certain legal acts should be established by witnesses—divorce by repudiation (lxv, 2), testamentary dispositions (v, 106-108), accounts of guardianship (iv, 7) and the contracting of debts (ii, 282). And while, in this last case, the Ḳur'ān strongly supports written evidence, this is closely tied up with the eye-witnesses who ought to corroborate, as soon as it is completed, the recognition of the debt dictated to the scribe by the debtor. Such are the modes of proof which the Ḳur'ān, albeit in a summary fashion, regulates. It notes, in addition, the need for a double number of witnesses (four in place of the ordinary number of two) to establish legal proof of fornication (iv, 19, xxiv, 4, 13); and, to provide for the case where the husband cannot produce this difficult standard of proof of his wife's adultery, institutes the exceptional procedure of the mutual "oath of imprecation" (*liʿān*) between the spouses (xxiv, 6-9). This procedure, although it does not, properly speaking, establish proof, has, nevertheless, important legal effects. On the other hand the sacred book has nothing to say about the primitive institutions of physical ordeal and oaths of compurgation.

Classical Islamic law consecrated the superiority of proof by testimony, requiring, for its validity,

the fulfilment of some fairly stringent theoretical conditions (see ʿADL and SHAHĀDA). And it was only in so far as written evidence could be construed as a *Zeugenurkunde* (cf. the *testatio* of Roman law) that it became generally and more widely accepted, though not without keen discussion, reservations and precautions, even in the case of notarial acts (see E. Tyan, *Le notariat et le régime de la preuve par écrit dans la pratique du droit musulman, Annales École française de droit de Beyrouth*, 1945, no. 2).

In the Ḳurʾānic verses relating to testamentary dispositions (v, 106-108) the witnesses, in case of suspicion, or new substitute witnesses, were invited to take an oath by Allāh; but traditional theory regards as abrogated the precept contained in this passage, which is the only one in the Ḳurʾān where third-party witnesses are required to support their own evidence by an oath. Occasional and exceptional instances can be adduced, under Islam, of ḳāḍis subjecting suspect witnesses to the oath. The doctrine, however, established a clear-cut distinction, as far as the "legal proofs" (*ḥudjadj sharʿiyya*) which it enumerates and regulates are concerned, between proof by testimony and the oath. The celebrated maxim declares : "The burden of proof (by testimony) lies upon the one who makes the allegation and the oath belongs to him who denies (*al-bayyina ʿalā l-muddaʿī wa-l-yamīn ʿalā man ankar*)" with the variant "to him against whom the allegation is made (*ʿalā l-muddaʿā ʿalayh*)". It ought to be noted that in the process of the action "the one who makes the allegation" is not necessarily the original plaintiff (and hence the burden of proof may fluctuate), and further that, in the view of the scholars, evidence can only normally be given to positive facts.

In principle the *bayyina* itself has a self-sufficient authority : where the legal conditions of validity are satisfied it is, as a general rule, binding upon the judge. Several early attempts to support testimony with an oath taken by the plaintiff wholly failed, apart from cases where the defendant defaults or suffers from some incapacity, to influence the classical law (Schacht, *Origins*, 187-188; see Ibn Ḳudāma, *Mughnī*, ix, 277; for the contrary view of the Fāṭimids, ḳāḍī Nuʿmān, *Iḳtiṣār*, Damascus 1957, 163). The Ḥanafī school held strictly to the letter of the maxim mentioned above, and indeed certainly contributed to the spread of its influence, if not to its very formulation; for, contrary to the doctrine of the other *madhāhib*, Ḥanafī law does not allow the plaintiff to take the oath in order to complete an imperfect *bayyina* (a single witness) in disputes concerning property, nor does it allow the oath declined by the defendant to be returned to the plaintiff. In the mutual taking of the oath (*taḥāluf*) which the Ḥanafīs, along with the other schools, uphold in certain cases where *bayyina* is lacking, each of the two parties stands in relation to other in the position of defendant. For other developments of the judicial oath see the article *yamīn*. We will only observe here that the pre-Islamic oath of compurgation survives, in Islamic law, as a method of proof in a limited field of penal procedure (see *ḳasāma*).

It is possible, especially in regard to property claims, that contradictory *bayyināt* may confront each other. The *fiḳh* texts concern themselves with this *taʿāruḍ al-bayyināt* and endeavour to destroy the conflict by officially declaring one of the proofs superior on the basis of criteria which differ considerably among the different schools and may result in diametrically opposite solutions. Should the proofs concerned nevertheless still prove equal, the solutions, even within the schools themselves, vary between their reciprocal cancellation, resort to a supplementary and decisive form of evidence, and their being taken at face value—which then necessitates either division of the property or the drawing of lots.

Superior though the *bayyina* might be as a mode of proof, it is difficult to regard it in all circumstances as "stronger" (*aḳwā*) than an acknowledgement (*iḳrār* [*q.v.*] or, less technically, *iʿtirāf*). Indeed the contrary is expressly stated by the Ẓāhirī Ibn Ḥazm, *Muḥallā*, ix, 426. The doctrine requires less in the way of personal capacity for an acknowledgement than for testimony, by reason of the basic presumption of truthfulness on the part of the person making the acknowledgement. But the authors usually—and quite sensibly—distinguish in this regard between the acknowledgement whose only effect is to bind the one who makes it (*ʿalā nafsih*) and the acknowledgement which affects the rights of third parties (*fī ḥaḳḳ ghayrih*), and their decisive force and their legal consequences differ considerably.

In addition it would be relevant, on the subject of *bayyina*, to enquire into the position, in relation to it, of the expert evidence which may be required by the judge. Further, if one were to attempt a general theory of proof in Islamic law, it would be fitting to take account of the discussions relating to the judge's personal knowledge of the facts of a case, to underline the considerable importance and the abundance of legal presumptions, and to note the role and the importance of certain auxiliary indications or initial steps in proof recognised by the law. In this field of proof at law two Islamic tendencies may be observed : the desire to establish, in a humane fashion, what is most probable by regulated means rather than to pursue the strict truth, the certain knowledge of which belongs only to God, —and a tendency towards rationalisation, which, though it does not prevail always and everywhere, is nevertheless latent in, for example, the position alloted to the oath of compurgation and the complete absence of ordeal in the form of physical trial (despite tenacious survivals of this in the customary practice of tribal societies up to the present day).

Bibliography: The texts of *fiḳh*, the articles of the *EI* to which reference has been made above, and the modern studies to which reference will be made in *Recueils de la Société Jean Bodin*, vol. *La Preuve* (to be published in 1960) as well as in the article ḤUDJDJA [*q.v.*]. (R. BRUNSCHVIG)

BAYYŪMIYYA, an Egyptian *ṭarīḳa* founded by ʿAlī b. Ḥidjāzī b. Muḥammad al-Bayyūmī al-Shāfiʿī, born c. 1108/1696 and died in Cairo in 1183/1769. After joining the Aḥmadiyya and Khalwatiyya (the latter through the Demirdashiyya) *ṭarīḳas*, Bayyūmī, by developing a *dhikr* characterised by particularly loud and emphatic utterance, established a virtually independent *ṭarīḳa* of his own. Another feature of his *ṭarīḳa* was its appeal to the poorest classes and specifically to highwaymen, many of whom, after a period of chastisement at Bayyūmī's hands, swelled the ranks of the vast armed retinue that accompanied his rare appearances in the streets. But perhaps his influence was chiefly due to the extremes of excitement and passivity that he experienced during the *dhikr*. The *ʿulamāʾ*s attempt to ban his *dhikr* sessions (held every Tuesday at the Ḥusaynī Mashhad) was thwarted by Shaykh

Shubrawī, Rector of the Azhar, whose determination on this occasion contrasts favourably with his behaviour on others (Djabartī, i, 195). Bayyūmī's works include handbooks on the Demirdashiyya and Bayyūmiyya and a commentary on Djīlī's *Insān al-Kāmil*. He seems to have been most at home in *ḥadīth*, on which he lectured when Shubrawī invited him to the Taybarsiyya College at the Azhar. The mosque in which he is buried was built by Muṣṭafā Pasha, a *wālī* of Egypt (probably between 1757-1760), when according to Djabartī he became grand vezir (probably sometime between 1763/1765). Bayyūmī did not leave any distinguished *khalīfa*- but his *dhikr* was still popular during the *mawlid* in Lane's days.
